So far we have been speaking of structure exclusively in its relation to the subject-matter of literature, in its signification as thought structure. It is impossible, however, in considering any work of art, to make an absolute separation between the subject-matter expressed and the manner of its expression. And in lyric poetry this is pre-eminently the case. The characteristic of a lyric is that in it not only the matter—the particular feeling or idea expressed, but also the manner—the mode of combination of words and phrases and sentences, the metrical structure, the sound and cadence of the verse, should proceed directly and intimately from the personality of the author: in it there should be a complete fusion between the writer's personality and his subject alike on the side of its matter and of its manner, each of which is to be regarded as but an aspect of the other. For this reason the relations that subsist between these two sides of literary art, the matter and the manner, are more intimate, and may be more easily demonstrated, in the case of a lyric poem than in any other poetic form. As lyric poetry is now, on the side of its subject-matter, an instrument of many strings, expressive of all kinds of sentiment and thought, such an instrument is it too in the variety of its modes of expression: corresponding with the variety of the themes that it sounds there is a similar variety of metre and movement. Than lyric poetry, therefore, as represented in any of the many good anthologies now available the teacher will find no better medium for impressing upon the pupil a sense of the intimate relation that subsists in literature between the matter expressed and the manner of its expression: for instance, in the reading of an anthology there will occur innumerable opportunities for explaining such points as the use and value in poetry as formal aids to the expression of the subject-matter, of assonance, of onomatopœia, of alliteration, or the characteristic effects that are produced in particular poems by the employment of certain metres, and in a single poem by variations of metre within itself. And in drawing attention to these points the teacher will frequently employ the method of comparison. Obvious differences in theme between two or more lyrics will lead to the observation of corresponding differences in sound and metre and movement, and the number of lyrics that may be studied within a short time makes possible a wide comparison of different types.

The reference that has just been made to the comparative method leads naturally to the consideration of a further point that defines the distinctive place of lyric poetry in the teaching of English literature. Lyric poems may be compared not only individually with one another, from the standpoint of their matter and of their manner, but also as falling into certain groups according to the periods in which they were written. The use of an anthology as a text-book ought to help us in our teaching of the history of literature. In the course of three or four terms' work an adequate selection of lyrics ranging from the Elizabethan period to our own, written by many different authors, and showing a wide variety of style, may be read—affording opportunities for the study of biographical and critical details concerning the authors, and for drawing comparisons between the different tendencies that have marked our literature at different epochs of its development. The usefulness of the anthology in this respect is suggested by Mr. Palgrave in his preface to "The Golden Treasury" (First Series), where he tells us that "the poems have been distributed into Books corresponding (1) to the ninety years closing about 1616, (2) thence to 1700, (3) to 1800, (4) to the half century just ended. Or, looking at the poets who more or less give each portion its distinctive character, they might be called the Books of Shakespeare, Milton, Gray, and Wordsworth. The volume in this respect, so far as the limitations of its range allow, accurately reflects the natural growth and evolution of our Poetry." We have only to read Mr. Palgrave's short but highly suggestive "Summaries" to perceive how easily the study of lyric poetry allies itself to the historical study of our literature.

But against this plan of using an anthology as a means of correlating the teaching of literature with the teaching of literary history the objection may be urged that the chrono-

logical order in which the poems are given and the degree of difficulty which they present to the pupil do not correspond.

In reply to this objection, it may be admitted at once that, if an anthology is used as a means of illustrating the historical development of our literature, the poems that it includes must be read in chronological order; and it may be admitted, too, that in "The Golden Treasury," for example, many of the lyrics given in the first part of the book are just those that are likely to present most difficulties to young pupils. Nevertheless, even in the First Book of the "Treasury" there will be found many simple lyrics which may be understood and rightly appreciated by young pupils—such poems as Nos. 5, 15, 24, 27, 34, 42, 46, 47, 50, 51, 54. The teacher who uses "The Golden Treasury" as a text-book may use his discretion in selecting from each Book poems adapted to the age of his pupils; and, still preserving the chronological order, he may, if he will, combine the reading of the selected poems with the teaching of literary history. In a second review of the book the more difficult numbers may be read, and the correlated teaching of literary history will be elaborated.

As a further reply to the objection under consideration, it may be added that there are certain anthologies which, while preserving the arrangement in chronological order, yet give only such poems as are suitable for young readers. Such an anthology is the "Lyra Heroica," edited by the late Mr. W. E. Henley. Another similar collection (which includes within its scope, however, poems other than those purely lyrical) is to be found in the "English Poetry for the Young," edited by Mr. S. E. Winbolt. This latter volume the writer has used with classes of boys of the average age of thirteen or fourteen, and through it has correlated quite effectively the reading of poetry with the teaching of literary history. On the other hand, with a class of pupil-teachers of the average age of seventeen or eighteen the writer has used "The Golden Treasury" as a text-book, taking the poems in the order in which they are given: and the results have been equally satisfactory.

Such are the chief considerations that seem to justify the claim that at a certain stage of the curriculum lyric poetry possesses a distinctive value as a medium for the teaching of English literature; and these considerations determine the particular methods that should be employed in using an anthology in class. In the remainder of this article it is proposed to describe briefly a method that may be used in the treatment of individual lyric poems. As the lessons described deal with individual poems, the general question of correlating the teaching with instruction in literary history will not be considered.

The writer has selected for the purposes of illustration two lyrics that he has recently read with one of his classes. As an example of the method applied to the study of a short and simple poem, the unity of which is overlaid by little or no detail, take the case of a lesson dealing with Tennyson's "Bugle Song" in "The Princess."

The teacher begins by calling upon one or two members of the class to read the poem aloud. He then asks: "What is the subject, the main theme, of this lyric?" The pupils are required to give particular lines in support of their answers. The main theme, it is concluded, is the effect produced on a lover and his mistress by the echoing sounds of a bugle; the poem may be classed as a love lyric.

"In order that we may understand this more clearly," continues the teacher, "we shall read the poem again." The explanations that have just been given are such as will concentrate the pupils' attention, in this re-reading, upon the essential subject-matter of the poem.

The pupils now proceed, under the teacher's guidance, to trace in detail, verse by verse, the development of the main idea. The poem is written in three verses. The first conveys to us ideas of the place and time that are involved. The imagery of the first part of the verse is expressed in terms of the sense of sight. The last lines sound the main theme of the poem. In the second verse this keynote is further elaborated. Here the imagery is expressed in terms of the sense of hearing. The verse expresses the sound effects of the echoes as they gradually recede, until at length, coming faintly from afar, they are like thin clear notes blown from fairy bugles. In the third verse the poet passes from the effects produced upon the outer senses, and suggests the more intimate feelings of the two listeners; the echoes faint and die, but always soul will speak to soul.

The poem having been thus read and explained verse by verse, it is re-read as a whole, after which the teacher may ask the pupils to supply such epithets as seem to them to describe appropriately the mood in which it is written—adjectives such as “tender” and “dreamy” and “fanciful” suggest themselves. The attention of the class is then directed to the more formal aspects of the poem. Its movement is light and graceful, and the music is characterized by grace and delicacy. Alliteration occurs in “snowy summits,” “the long light shakes across the lakes,” &c. The metre is chiefly iambic, but there is a variation in the last two lines of each stanza. What is the effect produced by this variation? Are there any imitative sounds in the poem? Show how the formal characteristics that have been mentioned are in harmony with, and aid in the expression of, the main theme and the mood of the lyric.

To illustrate further the application of this method to longer and more complex varieties of lyric poetry, let us now suppose a class to be studying Tennyson's “Ode on the Death of the Duke of Wellington.” Here, as before, the teacher's first object is to secure that the pupils should discover for themselves the main theme. The poem is therefore read as a whole (either at home or in class) and the subject is briefly stated.

The mode in which the general theme is developed through all the particular details has next to be studied. The subject may be said to unfold itself in two main aspects. In the first place, there is a gradual evolution of the theme from the standpoint of “local colour”—the categories of “here” and “now”; there runs throughout the poem a vein of sensuous imagery suggestive of place and time—the thronged streets of London, the booming of the cannon, the wail of the organ, the tears of the crowd, the last rites. In the second place, there is a gradual evolution of the theme regarded from a less sensuous and more purely intellectual standpoint; the poet celebrates the Duke's achievements as a military leader, his high character as a patriot and a man, and the greatness of his soul. The poem may be divided structurally into four sections, each of which marks a development in these two aspects of its main theme. Stanzas 1 to 4 suggest to the reader the funeral procession passing through the crowded streets, and refer in general terms to the Duke's high character and great deeds. Stanza 5 suggests the arrival of the procession at St. Paul's, “under the cross of gold that shines over city and river,” and introduces the subject of Wellington's greatness as a soldier. Stanzas 6 to 8 suggest (by allusion only) the interior of the Cathedral, and elaborate the previously introduced theme of Wellington's military genius. The last stanza suggests the closing scene “ashes to ashes, dust to dust,” and concludes with a reference to the life beyond.

After the first general reading and statement of the subject-matter, the poem will be re-read in sections as above, a pause being made at the end of each section to enable the pupils to trace in it the development of the theme in its two aspects. The attention of the class will be called specially to certain passages in which the two threads that run through the poem are seen to be connected with one another, as to the lines—

And the volleying cannon thunder his loss.
He knew their voices of old,

where, by a natural transition, the poet passes from the present place and time to the celebration of the Duke's great achievements on the battlefield. Again, in stanza 6, the allusive manner in which the interior of the Cathedral is suggested is worthy of note.

When, by such help as is above indicated the structure of the “Ode” has taken shape, and its content has been enriched to fulness in the pupils' minds, the poem will then be treated from the formal point of view; and here considerable use may be made of the comparative method. If the “Bugle Song” has been read immediately before the “Ode,” the teacher may ask for a comparison between the moods in which the two poems respectively are written. While the mood of the former was characterized as “tender” and “dreamy,” that of the latter might be described as “earnest,” “exalted,” and “spiritual”; and, corresponding with this difference in mood, there are differences in the metrical features of the poems. The metre of the ode is more complex and irregular than that of the song. Its movement is not “light” and “graceful,” but “dignified” and “solemn.” The frequent recurrence of long vowels, the use of assonance, the repetition of words and phrases will also

be noted: and it will be shown how these characteristics are in harmony with the main theme and the mood of the poem: here, as always in the study of poetry, such formal or metrical characteristics will be studied not as being in abstract separation from, but as being vitally connected with, the main subject-matter that is expressed.

W. MACPHERSON.

THE HERR DIRECTOR'S VISIT.

WE had been students together at Bonn. That was fourteen years ago. At the bright and aristocratic little University town on the Rhine he was then finishing a University course which had included residence at Berlin, at Leipzig, and at Göttingen, and I was having a delightful year, learning German by means of lectures at the University and the kindly and generous help of my student friends, who talked with me and corrected me all the day, and drank with me and corrected me half the night. And in the *Kneipe* I learned as much as in the lecture-room—perhaps more. It must have been dull work for those young Germans listening to my halting phrase in our discussions on English schools and education and games and drilling and on rival armies and navies; but we were all young and full of life and high spirits, and they politely concealed their feelings if they were hurt, and were always ready to accompany me on the long tramps which we had in place of football and cricket. And what a district for tramps! The Seven Mountains and Godesberg, and the Laacher See. And all that was fourteen years ago. And now that splendid *Burschen Leben* had given place to the humdrum life of a schoolmaster. We had not met since we parted at the little festival after he had blossomed into a Herr Doctor. He was now the Herr Director of a modern school (a *Realschule*, or is it by now an *Oberrealschule*?).

At last he had promised to come and see me. It was his first visit to England, his first visit to an English school. I was very anxious to know how our school would impress him. What would a German head master think of a Welsh dual school? A keen, thorough German pedagogue, how would our discipline strike him? And what would he think of our mixed staff, boys and girls in the same classes, the comparative liberty of our curriculum, our examination system, our games? I knew something of German schools from the reports of our Education Intelligence Department, and something from visits to schools in the Rhineland; but I felt I could hazard but a very vague guess as to what my Herr Director's impressions and opinions would be, what features would win his approval, and what things he would either condemn or politely wonder at.

Our school day began at nine, by which time the German schoolmaster has an hour's work accomplished. I hardly expected him to come to “prayers”; but he declined my suggestion that he should wait in my private room till the lessons began, and joined the staff on the platform. The keen, spectacled face, fair hair brushed back *en brosse*, the elaborate bow when introduced to my colleagues, aroused the pupils' attention and showed we had a foreigner amongst us. As to our “Prayers,” they did not greatly differ from the form in Germany; but there it is a weekly, and not a daily, function.

A history lesson came first. It led us to an interesting discussion. German schoolmasters are expected to inculcate monarchical principles, and the history lessons should teach reverence for kings. The royal virtues must be proclaimed, and, I suppose, the royal weaknesses concealed. Out of respect for the Lord's anointed such a poor specimen as our King John would be whitewashed. But this monotonous picture of kings uniformly good brings inconveniences to the teacher. It is necessary in describing the work of a great king to show, for example, how he introduced order where formerly was chaos. Now it is excellent to magnify the work of the good king, but it is necessary to explain that the chaos was caused by another king, and the German schoolmaster must beware lest in faithfully depicting the misrule of a German monarch he fail to develop the monarchical sentiments of his pupils. It was a Belgian schoolmaster who once explained to me how the respect for kings and patriotism was to be instilled in the hearts of Belgians. The State demands it. The little Belgian must

admire the Belgian army? To admire the army he must remember its glorious achievements, and so I learnt that the Belgians covered themselves with glory at Waterloo (and everywhere else, while it was the English who galloped off the field at the commencement of the battle. Historical accuracy must be sacrificed when the history lesson is to be an instrument for teaching lofty principles like patriotism.

Our playing field and tennis lawn aroused his admiration. For manual instruction and our wood workshop he evinced no enthusiasm. German schoolmasters had once shown some zeal for Sloyd, "aber das hat sich nicht gehalten." Our physical and chemical laboratories left him cold. "You begin science too early," he said, "and spend too much. £100 a year covers all that a German school would spend on science materials." But on pupils' and teachers' libraries they spend far more than we do.

The curriculum would, I feared, arouse his cheerful contempt: there were so much chopping and changing, such confusing alternatives between Latin and extra English, so many devices to enable different classes to use the laboratories at different times. Our time-table was as confusing as Bradshaw's, while in German schools the whole curriculum was so beautifully definite. Each type of school had its curriculum drawn up by experts, and all was so fixed, so definite. But, no: my Director had had enough system and uniformity, he pined for greater freedom and a more elastic curriculum; he desired for the schoolmaster power to say whether a pupil should do three languages or two. The burden easily borne by a bright pupil is for another too heavy. A. can do six subjects in the year; B. can only do four. If he tries six, he fails; he has to repeat or "double" the year, and finally abandons school in despair. Nor did I find him a severe critic of our discipline. It was not of the type to appeal to a Prussian corporal; but he found it admirable. The free intercourse between staff and pupils delighted him. In Germany the schoolmaster has something of the judge: he discharges functions which in England belong to the examiner, and the relationship reveals itself in the discipline. In England schoolmaster and pupil are allies against the examiner: he is the enemy against whom master and boy make common cause. But is it not rather our games which produce the friendly relationship existing in English schools?

We discussed the vexed topic of corporal punishment: this had lately been a burning question in at least one Welsh county. The assistant teachers in the elementary schools asserted successfully their right to inflict corporal punishment themselves, the Education Committee wishing to reserve the power to the head teachers. In the discussions, of which our newspapers were full, Germany was frequently referred to. Corporal punishment was barbarous, and no German schoolmaster ever resorted to this outrageous and demoralizing system. But my Director was highly amused when he heard that there was no corporal punishment in Germany. "Why, we say there is no corporal punishment in England. You treat the English boy as a gentleman, and he responds to the treatment by behaving as a gentleman." "But, surely," I said, "corporal punishment is not permitted in German schools?" "Oh, no! it is not permitted; but it is very common indeed. Dueling is not permitted in Germany; but it occurs. And parents are not very anxious to complain; for the German schoolmaster has great power in influencing a boy's school career, and, indeed, sometimes his subsequent career." "But, surely," I said, "in the elementary schools there is no corporal punishment?" "Ach, du lieber Gott, in den Elementarschulen wird fürchterlich gehauen."

The French and Germans often twit us with our hypocrisy and with our prudery, which has gone so far, I was once told in Bonn, that in good English society trousers are always referred to as "unmentionables." In our singing lesson, however, I learnt that it is not the English alone who can err on the side of "delicacy." Our song-book contains translations of many German *Volkslieder*. German drinking songs our pupils sing with innocent delight (their parents are frequently staunch teetotallers); but these songs would not be tolerated in a German school. In one verse of a German *Volkslied* a little bird brings to a maiden a note from her lover. This was altered for the German school; in the bowdlerized version the little bird brings the maiden a note from her mother.

Our examination system excited horror. "What! Questions set by a stranger who knows nothing of the teaching?"—

"Papers packed up and despatched to a stranger; the schoolmaster never to see them after they were corrected and marked; the teacher to have no opportunity of expressing a judgment upon the examiner? Are examiners, then, infallible?" I admitted that they not infrequently proved that they were very fallible. "The remedy?" I assured him there was no remedy, but that the examiner would probably not make the same mistake next time. "Gott im Himmel! we should appeal to the Minister." Appeal to Mr. Birrell against a paper set in an examination! "And you, in free England, have such a system as this! But why do you trust the examiner?" "Well," I replied weakly, "we must trust some one." "In Germany we trust the schoolmaster." Who would in England?

The methods of appointing head masters in England and Germany afforded an interesting contrast. To the German Director our system seems lacking in respect for the dignity of the schoolmaster. The selected half-dozen wait in an ante-room (like servants—*Hausknechte*), and are called in for a ten-minutes interview; and what can the governors know of a man in ten minutes—a man who has to answer trivial questions by incompetent questioners? The German procedure is much more elaborate. The short list having been made, those selected are informed by letter, and requested to call at their convenience on the several electors. The applicant, having fixed a convenient day, proceeds to visit the various members of the committee at their houses. He is ceremoniously attired—i.e., in evening dress. A cab conveys him from house to house, and in these private interviews much fuller knowledge of the candidate is acquired than in the few minutes during which the Englishman faces some twenty people seated round a table. The result is conveyed to each applicant by letter.

The appointment of assistants is a very serious matter in a country where tenure is absolutely secure. In many schools the head has practically the appointment of the staff in his hands. Dismissal is almost impossible. In spite of gross incompetence and a life of dubious respectability, the German assistant master is securely embedded in his post. It would seem to be as difficult to evict him as to remove a clergyman from his benefice in England. In making an appointment the German director is not content with academic records, testimonials, or interviews. He hears the teacher give a lesson. By means of the system of *Hospitiren* he is able to visit the school where the applicant is engaged and to hear him teach. Permission to hear a lesson in these circumstances is never refused. As to salaries, assistants fare better in Germany, head masters worse, than in England.

For our system of educating pupil-teachers in county schools he had nothing but praise. Some such method might be introduced into Germany by the free cities of Lübeck, Altona, and Hamburg, where there is more liberty in scholastic matters than in Prussia, and where there is greater scope for educational experiments. Many pupils from *Realschulen* become elementary teachers. Before passing to their course at the normal school they go to a sort of training school, where they are re-taught many subjects which they have already studied in the *Realschulen*. We are not unfamiliar here with a certain distrust entertained by many elementary teachers as to the teaching capacity of their colleagues in the secondary schools. This distrust is equally strong in Germany, and equally unfounded. Pupils should certainly remain at the German secondary school till they go to the normal school. The gulf between the elementary school on the one hand and the secondary school and the Universities on the other hand is greater in Germany than in England. German teachers will watch with interest all attempts to develop the training of the elementary teachers in the secondary schools.

Dual schools are, of course, unknown in Germany. In some small towns there are elementary schools in which boys and girls are taught together, and there is a tendency to follow England and America in the matter of co-education. Some Germans are enthusiastically in favour of dual secondary schools in the smaller towns, and our experiences are watched with considerable interest. There is, at any rate, small trace of the horror which co-education seems to arouse in the breasts of many French and Belgian teachers.

With characteristic German thoroughness, my Herr Director loaded himself with reports, school magazines, prospectuses, plans of work with which to amplify and correct his impressions

gained from personal observation. It was consoling to know that, while there was much in our school that puzzled him, there was also much that he heartily admired, and, not least, the tone, the moral atmosphere of the school, the spontaneity and initiative which he professed to observe everywhere. And, if our schools are very different, it is not surprising, since he was continually finding remarkable differences in our manners and institutions. One experience will bear repeating. We had made a little expedition by train. When we returned I learned that I had in a short time committed three offences each of which would have laid me open to a fine in Germany. I had got out of the train while in motion, I had kept my hand on the carriage door of the moving train and walked along by the side of the train while I talked to a friend, and I had crossed the line without permission.

The German State watches over its citizens with the care of a nervous grandmother. The Englishman must look out for himself. The English boy enjoys much greater freedom than the German boy. "Perhaps your pupils," said my friend, "do not know as much as ours; perhaps they are not so ready to try and learn foreign tongues, nor so eager to acquire the knowledge which the school prescribes for them. They have not the enormous incentive which our pupils have, since an extra year in the army is the fate of the German boy who has not satisfied the school demands. But your English boys have more initiative than our German boys. All over the world Englishmen are at the head of great businesses largely staffed by Germans. The German system equips the boy to occupy efficiently a subordinate position. The German is too docile, too ready to accept the second place. You have something to learn from us, but we have a great deal to learn from you. Your English pupils are not worse educated than ours: they are differently educated." ("Sie sind nicht schlechter gebildet: sie sind anders gebildet.") T. R. DAWES.

AVENCHES (AVENTICUM).

AN odd sensation, compounded of sharp contrasts, to be deposited at a modern railway station, however small, within the walls of a Roman town! The train enters the *enceinte* of the walls of Aventicum at their north-west corner, and for a minute or two, as it draws up ponderously after the manner of Swiss trains, skirts the crumbling ramparts that once guarded the northern side of the town. The mere sight of these without other warning from signboard or porter is enough to make the traveller for Avenches aware that he has reached his destination. They bear so unmistakably the massive imprint of Rome.

A bitter north-east wind was blowing in our faces as we looked down the somewhat melancholy plain of Broie towards the scarce seen lake of Morat—a wind which, before the day was out, in spite of the near approach of April, pelted us with stinging showers of snow. It prisoned us, as we turned our faces to the south and breasted the hill on which is huddled the modern, or rather mediæval, town. I see that the preface of the excellent guide published by L'Association pro Aventico recommends the later spring for a visit because of the suggested contrast between the renewal of Nature in green leaf and flower and the lifeless ruins of the old town. But these are adventitious aids to the imagination which the easterly winds and grey sky of March sternly denied us. We had to be content with bare stones and their appeal to historical associations.

A conscientious traveller who makes a point of consulting his authorities before his visit could in a quarter of an hour learn all that ancient history has to say of a city once so important from its size and position. Some notices in Caesar's "Commentaries" (which do not really concern the Romano-Helvetian town), two chapters in the first book of the "Histories" of Tacitus, and a sentence in Ammianus Marcellinus—the rest is silence and conjecture.

Caesar tells us that it was one of the twelve towns, or town-villages, which he encouraged the Helvetians to rebuild after he had frustrated their attempted emigration *en masse* at Bibracte—so that its history may be said to date from this event. Between this and the references of Tacitus intervenes

a century only faintly illumined by dug-up coins. In the year 69 A.D.—the terrible year of the three Emperors—Aventicum, so Tacitus tells us, came very near to destruction. The Helvetians became embroiled with the XXI. Legion, stationed at Vindonissa, who were partisans of Vitellius, and were easily defeated by them and Caecina at the head of his troops from Germany. The unfortunate city of Aventicum was menaced with the horrors of pillage, but Caecina contented himself with putting to death a ringleader—Julius Alpinulus—and left the fate of the city and its inhabitants in the hands of Vitellius, who, swayed by the eloquence of one of its citizens, decided that it should be spared.

The fossil history of the ground proves that in the period which followed under the Flavian Emperors Aventicum reached the zenith of her prosperity. But in 265 A.D. the fierce Alamanni broke through the line of Roman defence and descended upon Helvetia. After a comparatively short respite a second invasion swept through the country in 354, doing its work of pillage and destruction so thoroughly that Ammianus Marcellinus, the historian, who travelled through these parts a few years afterwards, sums up the past and present history of Aventicum in the melancholy lines: "desertam quidem civitatem, sed non ignobilem quondam ut aedificia semirutata nunc quoque demonstrent."

These are all the documentary facts that history has to teach; and it may be said at once that Avenches offers a splendid field for the conjectural historian or archæologist. The certainties are few—the walls (about half of the *enceinte* remains), the eastern gate, the one surviving tower which watches over this gate, the amphitheatre, the theatre, and, of course, most of the objects contained in the Museum. Ample scope for further investigation is given by the doubts that hang over the position and limits of the Forum, the site of the public baths, the foundations of the temples, the probable size of the population, and, among many other questions, by the especial mystery that clings to the Cicognier—that solitary pilaster that stands upon what is deemed the threshold of the Forum.

By a lone wall a lonelier column rears
A grey and grief worn aspect of old days—
'Tis the last remnant of the wreck of years.

We took the precaution first to ascertain the hour of lunch at the Hôtel de Ville, and then walked down the street to look into the hollow of the amphitheatre which lies just below. Though Nature has re clothed in green the arena and the slopes which once contained the spectators, and, though fruit trees are dotted here and there, it is impossible not at once to recognize the artificial character of the central depression and of the elliptical shape of the whole. Of masonry there is practically nothing left. The marble and stone seats, the massive arches and substructures and walls formed a tempting stone quarry for many generations. The archway at the eastern end by which the gladiators entered looks ancient from the opposite side (more than 340 feet away), but is really modern, except in material, though it leads into a vaulted chamber which is said to contain evidence of Roman masonry. Ten or twelve thousand spectators might easily have mustered in the vanished seats: for at a dramatic representation in 1894, dealing with the legendary Julia Alpinula, an audience of six thousand filled seats erected on only half the slopes.

The ugly walls of the Museum look down into the amphitheatre on its eastern side. Naturally we took this in our course, the keen wind not allowing us to linger on the terrace on which it is built, whence the wandering eye can take in the distant lake of Morat, and the tracery of the walls. The three rooms of the Museum contain in their ill-lighted cases much of great interest—mosaics, *amphorae*, pottery, lamps, statuettes, rings, keys, &c.—the flotsam and jetsam of the once busy household life of Aventicum—and some few articles of absorbing interest like the votive hand with its curious appeal to four divinities, two of the West and two of the East. But the mind cannot go on jumping from article to article, all detached from their vital surroundings, without feeling after a time the lassitude peculiar to museums. The hour of *déjeuner* happily provided for us a not wholly unwelcome break.

A short sharp walk takes one down from the terrace of the Museum to the upheaped earth and masonry which marks the site of the theatre. Here we can tread on solid facts. Modern masonry has been called in to outline and to raise the traces of

foundation work, so that on the lower level the semicircle of the *podium* and *orchestra*, the *postscænium* and small rooms adjoining stand prominently above the surface of the soil. The *auditorium* rises pretty sheer above the *podium*, almost too sheer for the visitor to climb without a helping hand. The *cunei* into which it was divided are fairly easy to make out, except on the south-west side, where the commune conducted some bewildering and "brutal" excavations in 1846 for the sake of finding work for some "unemployed" of that date. This theatre is unique in one respect, that it has in the *podium* a sort of small vaulted cave or grotto (discovered in 1901) just opposite the centre of the stage. It may have formed a support to a special box or tribune allotted to some high functionary : but this is conjecture only.

Another walk, less short, leads uphill to the excavated eastern gate and the one surviving tower—the Tornallaz. The last survivor of probably sixty to eighty brethren as massive as itself, it turns a threatening front to the invader from central or eastern Helvetia, and must have witnessed the desperate resistance of the legionaries of Rome against the fierce Alamanni. To preserve it the hand of the restorer has worked so cunningly that it is difficult to distinguish the work of the ancient and modern mason. Seen from the distance, it looks for all the world like the four-square tower of some English country church. About a hundred feet away lie the remains of the eastern gate, whose foundations, discovered beneath the soil, have been raised by the Pro-Aventico Association to a height of 3 or 4 feet above it, so as to give the visitor a very fair idea of its massive proportions. Compared with the well known Herculaneum Gate at Pompeii, it has the advantage of more than 16 feet in breadth, while its position on the summit of a considerable slope added to its strength and picturesqueness.

A question of more than archaeological importance soon suggests itself as we turn round and survey the fields beneath us which have only partly yielded up their secrets. What has Aventicum to say of early Christianity? It is only natural to expect something from a city that was contemporaneous with the first three and a half centuries of our religion. The answer is somewhat disappointing. One authentic piece of evidence, and one only, has emerged from the ground. In digging the foundations of a condensed milk manufactory in 1872 the workmen came across the fragments of a coffin, close to which lay a jawbone and some trinkets that had once belonged to a young girl. With them were two glass goblets, on one of which the words "VIVAS IN DEO" were distinctly legible, and on the other the first two or three letters of *Ιησους*—on both of them was engraved a rough representation of a palm. The catacombs of Rome prove the fact that these were the Christian formula *par excellence* belonging to the middle of the third century. It was hoped that this was the prelude to the discovery of a Christian cemetery, but it still remains the only evidence of the existence of Christianity at Aventicum.

Intensely interesting as a visit to Avenches is, one must not expect to find the almost giddy contrasts between past and present that are experienced at Pompeii. At Pompeii the visitor suddenly divests himself of eighteen centuries when he enters the gate of the ancient town. He passes from street to street, from house to house, so obsessed by the eerie reality of the place that he almost expects to find in some chance Italian guide whom he may meet round the corner a Pompeian revisiting his ancient haunts. At Avenches, as at Silchester, there is need of the archaeological knowledge and imagination that from foundations or substructures or crumbling walls can reconstruct the vision of ordered edifices. But for that very reason the field for the archaeologist, especially for one who has ample money at his command, is a large one. Excavations proceed slowly and intermittently for want of cash, and the soil, once examined, reverts to the production of grass, wheat, and tobacco. Nature and the Swiss farmer have other things to think of.

H. R. WOOLRYCH.

"THERE is a fair prospect that after another ten years have elapsed no master will be appointed to a large school who is not acquainted with what the best minds have thought upon the occupation of his life, and who has not undergone a formal apprenticeship for his work."
—Mr. Oscar Browning, paper read before the Royal Institution, January 1, 1878.

SCHOOL AGENCIES AND THE SCHOOL WORLD.

MR. FRED CHARLES, in the *School World*, runs a tilt against school agencies. These are of two kinds—profit-earning agencies and agencies conducted on the co-operative principle. Both kinds are, according to Mr. Charles, evil, though in differing degrees, and both are unnecessary evils.

He has been led to this conclusion by the analogy of domestic servants and of elementary teachers. "The good plain cook does not pay even when using an agency." As a matter of fact, she does, if she goes to a high-class registry for servants. "The elementary teacher has not, and never has had, any use for the agent. He has the *Schoolmaster*." True; but the conditions under which he and the secondary teacher work are widely disparate. Primary education is comparatively homogeneous: the schools are all day schools; the hours of work are the same in all; there is little differentiation in the subjects taught, at least in respect of the teachers; salaries vary within narrow limits. We need not stay to point out how different in each of these particulars is the case of the secondary master. The form of application that he has to fill in for an agency must contain at least a dozen headings.

We hold no brief for the business agencies, but they can hardly be so bad as Mr. Charles paints them, or they would not continue to live and flourish as they do. Those engaged in secondary education may be "children in business," as Mr. Charles euphemistically calls them, but they are not absolute fools. An agency that systematically "busted into a post" an unfit candidate, knowing that he will have to move on at the end of a term, and that tempted "fixtures" to move on in order to multiply its percentages, adopting as its motto "pence rather than principles," could not continue for half a century to command the confidence of head masters. There can be no reasonable doubt that the profit-earning agencies do supply a real need, and that some of them, though black sheep may abound, do their work honestly and well.

But how are we to explain the preference that the profession has hitherto shown for those agencies which charge 5 per cent. commission or more over agencies which charge 2½ per cent. or less? Fatuity is too simple an explanation to be convincing. The reasons are various, but among the principal we may note that this difference in cost does not affect the head masters, and it is no good to establish a labour bureau if it is unsupported or actually boycotted by the employers of labour. "Beati possidentes"; a long-established firm has an enormous pull, and tends to become a monopoly. Moreover, Mr. Charles's estimate of the profits (it works out at over 200 per cent.) is absurdly exaggerated. The agents tell us, and we have no reason to doubt their word, that this part of the business barely pays its way, and that their substantial profits come mainly from the placing of pupils and the transfer of schools.

But on one point we fully agree with Mr. Charles. Agencies of either kind are "dependent on the personality of the agent: he must be a *persona grata* to both heads and assistants; he must possess the confidence of both; he must intuitively recognize what each wants and help him to get it." Nothing could be truer or better put. It is a sort of matrimonial agency, and its success depends on the sagacity and tact of the *προμηστρία*. But how is it possible to reconcile with these premisses Mr. Charles's practical conclusions? In the millennium that he prophesies, when every teacher will have been trained, when heads and assistants are united in a vast federation "with a weekly paper and a habitation of its own," there will perhaps be no room for an agency; but even Mr. Charles sees that till his prophecy is fulfilled we must provide for present needs. And this is his proposal:—"A press-cutting agency to collect notices of vacancies advertised and send them to his clients." In fact an automatic machine: the assistant puts his penny in the slot and out comes an advertisement. It is enough to point out the contradiction: further comment would be superfluous.

There is still an alternative suggestion, which seems to us even wilder than the last. "An enterprising organizer might earn the gratitude of his clients by arranging, about the middle of each term, an afternoon assembly of heads wanting assistants and assistants seeking posts—a kind of hirings 'at home.'"

Let us try to visualize the scene. Place, the Albert Hall (no smaller building would serve); time, April 1, 2 p.m.; characters, to right of stage a hundred head masters, to left five hundred assistants, in centre Organizer *loquitur*: "Mr. Smith, Head Master of Little Peddlington Grammar School, will interview in Box No. 1 Messrs. Brown, Jones, and Robinson; time allowed, five minutes a candidate. Refreshments will be served at 4 o'clock; and gentlemen not suited will be paired for a second trial."

Solvuntur risu tabulae; tu missus abibis.

We should not care to take shares in either of Mr. Charles's prospective agencies. Teachers may be children in business, but business is not justified of one of its children.

CORRESPONDENCE.

THE SPECTATOR ON THE PROFESSIONAL WOMAN.

To the Editor of The Journal of Education.

SIR,—The subject of professions for women and their effect upon character has been discussed in public less than might have been expected from its intrinsic importance, but the adverse criticism to which professional women have been recently subjected in the columns of the *Spectator* seems to demand some explanation, if not a defence, of their position. The writer, who remains anonymous, but is unquestionably a man, deplores the existence of the professional woman, and asserts that a love of independence is at the root of the desire of women for a professional career. It may, however, be questioned whether independence is not the inevitable outcome of the educational movement of the last century, rather than an end which is sought for itself. Modern education has enabled women to grow beyond the life of mere domesticity and narrow interests to which the majority of them were condemned in the past. It is hard to overrate, either for man or for woman, the pleasures of efficiency, and it is in the last fifty years that women have tasted those pleasures to the full. It is only recently that the prolonged specialized education of women has given them the power of bringing mature minds to the treatment of definite intellectual problems, or of testing their practical ability in dealing with the organization of various branches of work on a large scale. It would be strange indeed if they did not feel acute pleasure in the exercise of these powers, often amounting to a sense of exhilaration in their work, which causes them to lose in some degree a sense of proportion, much to be deplored, but easy to forgive. Friends, as well as foes, are willing to allow that women are hyperconscientious, and that many work "not wisely, but too well." It is, however, love of the work, not love of independence, which lies at the root of the mischief. That the independence which implies an absence of claims on the time or interests of the individual has very few attractions, *per se*, for a woman may be proved by the fact that professional women are constantly to be found making homes for their mothers or sisters, or encouraging the claims of those who are not bound to them by any natural ties.

The love of work for work's sake can further be demonstrated by the large and increasing amount of voluntary work done by women. This defeats the argument that the second motive determining a professional life for them is the desire of gain. Many have to work, if it is only to repay to their parents the cost of an education extended beyond the ordinary limits of school life, or to try to provide a competence for old age; but few work with the object of amassing a fortune, as has been suggested, and they would indeed be foolish to do so. Prizes in the professions open to women are exceedingly rare, and reference to the admirable volume on "Educated Working Women," by Miss Clara Collet, will show that it is hard for the average professional woman to save enough to enable her to retire at the age of sixty with an income sufficient to keep her from the workhouse or the charity of friends. The average income of the professional woman approximates to that of the bank clerk, and not to that of the successful barrister. It has been regretted that no woman can hope to succeed in any profession without "having a great deal taken out of her." This is hardly to be wondered at under the circumstances, and is due

not to the work of the profession, but to the anxiety attendant upon an inadequate income. The cheap lodging or hostel, insufficient food, and few pleasures have more to answer for in the worn and weary faces of women than the absence of leisure or the strain of work. It is not work, but worry, that ages a woman. The whole nature of woman demands variety which the routine of work, with all its recognized advantages and all its interests, cannot bring. There should be a margin of income to provide for change of scene as well as for change of occupation; the weary sameness of life tells far more heavily on a woman than on a man, with his less sensitive and emotional temperament. The thought of the future is apt to become an obsession, and may be put amongst those things which

Must not be thought

After these ways; so it will make us mad.

With reference to the charge of an unattractive manner developed by professional women, it must be admitted that education is only one factor in culture, and that only refinement of feeling and associations produce good and attractive manners; but there is no manner common to professional women as a class any more than to professional men. Each profession has its own peculiarities, and we know well the doctor's bedside manner, the pulpit manner of the preacher, just as we know the didactic manner of the woman lecturer and the curtness of the Civil Service clerk. We had hoped that this antiquated idea concerning the loss of feminine grace had died a natural death, and that the individuality of women, which has, of late, been allowed to express itself more freely than heretofore, had done so in manner as in other ways. Further, if her manners are individual, so are her opinions, and both must have individual expression; she is too much occupied to pose, and is not tempted to argue or talk for effect, since she no longer regards herself as an object of special interest, but as a member of a class which now includes the majority of the middle-class population of England. If she gives her opinion with decision on some subjects on which she is qualified to speak, she will probably be reticent about many on which she feels her limitations of knowledge and experience.

It is true that professional women do not commonly marry, but it is also true that their education and attainments admit them to a much freer and more congenial comradeship with men and bring them into such relations with men as have been hitherto impossible. We venture to think that the comradeship of which we speak explains the undoubted fact that men are content to remain unmarried longer than used to be the case. The standard of comfort has risen while incomes have not risen in proportion, and it is only natural that men who can enjoy without difficulty the society and friendship of educated women should postpone the day when they take upon themselves the responsibilities and expenses of married life. Women, too, no longer find it necessary to live the life of the heroines of Miss Austen's novels, in a state of alternate elevation and trepidation with regard to the impression they are creating, since they have, in addition to the interests of their work, opportunities for the pleasant companionship and society of men either in their business or leisure.—Yours, &c.,

A PROFESSIONAL WOMAN.

SCHOLARSHIPS FOR AMERICAN WOMEN.

To the Editor of The Journal of Education.

SIR,—In your issue of April I note that you say: "The Society of American Women in London [not "England"] is promoting a scheme under which English lady students shall be encouraged, by means of scholarships, to study in American Universities; and American lady students shall, on the same terms, come to Girton and Newnham." I should like to say, by way of correction, that it is not intended to limit the scholarships to the Cambridge Colleges for Women. The three Universities chosen by the Education Committee of the Society of American Women in London, which has the working of the scheme, are Oxford, Cambridge, and London.—Yours faithfully,

K. THAYER,

Corresponding Secretary and late Chairman of
Education Committee, Society of American
Women in London.

April 10, 1906.

COLLOQUIAL LATIN.

To the Editor of The Journal of Education.

DEAR SIR,—In reply to the inquiry from "An Assistant Mistress," on page 263 of the April *Journal of Education*, for a book dealing

with colloquial Latin, we would suggest that Scott and Jones's "First Latin Course" is probably the book wanted. The main idea of the book is to avoid translation in any form, and by making use of a single medium to facilitate pupils thinking in the language. The exercises are put in the form of question and answer, and words omitted have to be supplied: in fact, the whole book might be designated as an application of modern methods of teaching modern languages to Latin, and the success which has attended its use in many prominent public schools goes far to prove its general correctness.

We might add that the Classical Association at their last meeting expressed their approval of the method suggested in Jones's "Teaching of Latin," which latter should be used as a guide to the "Latin Course."

—Yours faithfully,
BLACKIE & SON, LIMITED.
50 Old Bailey, E.C., April 12, 1906.

TEACHERS' GUILD NOTES.

[By a resolution of the Council, of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but "The Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

THE question of the moment, for the Teachers' Guild, and for several other bodies of teachers, is, of course, the proposed abandonment of the Teachers' Register. We were all prepared for material changes in the Register, and the Guild is deeply pledged to work for a Register which shall classify teachers mainly according to their *professional*, as distinguished from their *academic*, qualifications, and with reference to their individual credentials, not to the class of school in which they may happen to teach. We are pledged, by our constitution, "to take such measures as shall lead to the registration of duly qualified teachers of all grades," which means, of course, "in all grades of schools, we are pledged, as our Summary of Objects puts it, to endeavour 'to obtain for the whole body of teachers the status and authority of a learned profession.'" The Register, as it stands, is, therefore, not of a character that we can approve; but we are not able to sit still and see the present Register swept away and no better Register put in its place. We have framed our own alternative scheme of registration, which is set out in our last Annual Report. The postponement, *sine die*, of the formation of an amended Register is the destruction of our hopes for the building up of a learned profession of teachers and leaves the door open for making the vast majority of teachers a kind of Civil Servants.

The reasons for the dislike of the present Register by the teachers in primary schools are patent. We share their feelings. They have been put on it automatically, without application and without fee, and, consequently, have been set apart in a special column which to a large extent neutralizes the advantage attaching to the single alphabetical list which was intended, we believe, to be the *one* list under the Act of 1899; but the grievance of some ten thousand secondary-school teachers is quite as serious. They have been induced in many cases to devote time and money to qualifying themselves for Column B, and can never have expected that, by a clause in a Bill framed to deal with the religious difficulty in primary schools, they should be told that all their pains are to be thrown away, and by a memorandum by the Board of Education that their guineas will be returned, and that they may find comfort in the fact that by qualifying for the Register they have made themselves better teachers than formerly.

Statesmanship can surely devise some better plan than this for meeting the equities of the case. It can keep the present Column B for *what it is worth*, and gradually build up a new Register in accordance with the intentions of the Board of Education, and draft on to it all Column B teachers, with a distinctive mark to show on what basis of qualifications they were admitted. It is a necessity that the formation of an ideal Register should be a gradual process, and should present anomalies in that process; but the Board should make a point of keeping faith with all whom it has induced to qualify under conditions of its own framing.

The view of the Council of the Guild on their first learning the terms of clause 36 of the Government's Education Bill, that

"any obligation to frame, form, or keep a Register of Teachers under paragraph (a) of Section 4 of the Board of Education Act, 1899, shall cease," were formulated at the meeting of Council on April 7 as follows:—"The Council of the Teachers' Guild, while agreeing with the President of the Board of Education that the present scheme of registration has not been found workable and had better be terminated, hope that the Bill will confer powers on the Board of Education to prepare and put in force a revised scheme for the registration of teachers." This resolution was at once forwarded to the President of the Board of Education. At the next meeting of Council the matter will doubtless receive further consideration.

THE proposed abandonment of the Register of Teachers naturally occupied a prominent place in the thoughts of the Teachers' Guild Conference at Sheffield on April 24 and 25, though the programme of the Conference, arranged some time ago, and mainly of a pedagogic character, did not allow it to be to the front in discussion except in the afternoon and evening of one day. The Register was the subject of very careful consideration at the officers' meeting at Sheffield, over which the Chairman of Council presided, being supported by twelve of his colleagues and several provincial officers of the Guild. This meeting reaffirmed the resolution of Council on April 7, and expressed an unanimous opinion in favour of a Register on the model laid down by Council last year, and published in the last Annual Report of the Council. It was ready to forego, if found desirable, the distinction between graduate and non-graduate registrars, being anxious to obtain a really comprehensive Register of all professionally qualified teachers. The meeting of the Conference in the evening of the same day showed a general sympathy with the view of the officers' meeting, though the opener of the discussion, Prof. J. A. Green, of Sheffield University, advocated in his opening remarks a simple alphabetical list of teachers, with qualifications and training to give *higher* instruction, but ultimately was prepared to accept a more comprehensive Register, provided that all qualifications should be set out. It seems clear, to judge from the feeling of the Conference, that the Council of the Guild has the majority of members with it in advocating the registration of teachers on grounds of personal qualification and without reference to the class of school in which an individual may be engaged; also that the Guild will support a comprehensive scheme which will admit the primary-school teacher and the kindergarten teacher along with the otherwise qualified graduate. It is certain that the Guild is most strongly opposed to the abandonment of the present Register without guarantees for the formation of another on such a basis as to establish a roll of members of a true profession.

COLONIAL AND FOREIGN NOTES.

FRANCE.

The holiday courses at Grenoble this year have the date and extension July 1 to October 31. The University sets itself, as for some years past, the task of meeting the requirements of those who would learn and teach modern languages on the newest system. Last year the holiday courses were followed by 370 students. Those who read our "Foreign Notes" will know that the University of Grenoble has supplemented instruction in theoretical phonetics by a laboratory of experimental phonetics with apparatus that should enable the learner to account to himself for the faults of his pronunciation and give him the means of correcting them. This year the theoretic course will be illustrated by *projections photographiques de graphiques de prononciation*. As before, the phonograph will facilitate repeated exercises in the production of sound, whilst the exercises of the phonetic laboratory will be combined with exercises in reading. A course of commercial French is again offered; as to which we allow ourselves to say that, if commercial French bears the same relation to French that commercial English does to English, it is a thing to be avoided rather than acquired—even by commercial men. Lectures will be given dealing with French literature from the seventeenth century to the present day. And, with regard to the lighter elements in a holiday course, days are reserved for excursions into the mountains. The charge is 40 francs for six weeks, with

10 francs extra for each additional fortnight, or 60 francs for the complete course. But we cannot find space for all the details. They are to be learned from M. Marcel Reymond, Président du Comité de patronage des Etudiants étrangers, Grenoble.

In ancient times, we will not deny it, men taught French in English schools who themselves knew not the language. These holiday courses furnish a means by which the teacher may equip himself to do the business at least without grave injustice to his pupils. Let us

look at Dijon, a little nearer to us than Grenoble. There the old *certificat d'études françaises*, established in 1903, has just been resolved into (1) *un brevet de langue française*, and (2) *un diplôme d'études françaises*. Candidates for the *brevet* must enrol themselves in the Faculty of Letters and follow the courses of it for at least half a year. But this half-year's attendance is dispensed with in the case of students who show that they have taken the holiday courses of the University of Dijon for three months. In either case the candidate undergoes an oral and a written examination. The oral examination requires the reading of a passage of French with fair accent and intonation, the grammatical explanation of a piece of French, and the power to converse about the matter read. The written test consists in a composition done without the aid of book or manuscript. Examinations are held four times a year—in January, March, June, and October. Now let a young man, let us say one who has just completed his University studies, apply himself to French with all earnestness, under the guidance of a native teacher, until he has got "some entrance into the language" and can understand spoken French tolerably well. Then let him attend a three months' holiday course and gain the *brevet*. If it be practicable for him, he should go on to earn the higher *diplôme*. But even with the *brevet* he may justly claim to take lower forms in French. At least he will have raised himself to a higher plane than that on which moved the generality of Englishmen who, in ancient times, taught our boys French. He will surpass them in that he has not learned, but begun to learn, a language difficult indeed, but to be got by labour and worth getting as most winsome in melody and unrivalled in the precision with which it can express thought.

We shall be told that nothing will serve but a long sojourn in France. Well, we are thinking only of those for whom that is impossible. There are, moreover, means by which we can, as it were, breathe a little of the foreign air at home. What follows will

show how this may be done. Students of German at the University of Paris have lately formed a *cercle d'études germaniques*, with its seat at 45 rue d'Ulm. The object of the club is to bring its members into close contact with contemporary German life and thought. German daily newspapers and political, literary, and artistic periodicals are taken; there is a library of contemporary authors; meetings of all sorts are held; Germans give *causeries* upon questions of art as it is practised and life as it is lived in the actual Germany of to-day; and German artists living at Paris exhibit their works at the club. And you may move in this German atmosphere for an annual subscription of 6 francs!

GERMANY.

The new Prussian scheme for the higher education of girls is provoking much heated discussion. Germans of the old school contend that the character of the girl's education must be determined by her destiny as *Hausfrau und Mutter*, or, to put it shortly, as cook. To them nothing were so odious as the Americanizing of German women. On the other hand, young Germany favours the free development of the woman to fit her for an independent life, or for true and intimate companionship with an educated man. To judge from the Prussian scheme, this higher estimate of woman's mission would seem to be prevailing. Let us set forth briefly what the new proposals are. Side by side with the present *Höhere Mädchenschulen* are to be called into existence lyceums (*Lyzeen*). A lyceum will be essentially a *Realschule*, giving an education at least equal to that conferred by a six-class boys' school. The minimum age for admission is to be nine years, and the qualifications therefore are to be the same as those for *Sexta* of such a boys' school. A lyceum will have seven classes, one year being spent in each, whilst a preparatory school of three classes may be attached to it. The work of the lyceum is to be continued by a higher lyceum (*Oberlyzeum*) of four classes. It will offer three courses of study corresponding severally to those of the boys' *Oberrealschule*, *Realgymnasium*, and *Gymnasium*. Admission to it is to be only for those who have passed through a lyceum; as a result of its final examination a Leaving Certificate (*Reifezeugnis*) will be granted, entitling the holder to study at a University. Private lyceums are to be allowed in addition to those of the State. The management of higher girls' schools—this, from a German point of view, is the most revolutionary of changes—is to be put chiefly into the hands of women. The weight to be laid on various subjects in the lyceum is

shown by the following figures, which are reached by adding together the hours a week allotted to the subject in each of the seven classes:—German, 34; religion, 17; French, 34; English, 16; history and geography, each 12; arithmetic and mathematics, 21; natural science, 15; drawing and gymnastics, each 14. Pupils who intend to pass on to the Latin or Latin-Greek *Oberlyzeum* must further have special Latin lessons in the lyceum to prepare them for the studies of the higher institution.

Such a scheme would commend itself to most Englishmen as one of abundant promise. In Germany it is undergoing criticism, some of which carries us back to the days when women had to write treatises in proof that

they, no less than men, had souls. Many see in it an attempt to unsex the German woman. Leaving the wilder talk aside, we judge the strongest argument against it to be the economic, interpreted, of course, in the light of German relations. The completion of a University course and the passing of a State examination give in Germany, if not a legal, yet a sort of prescriptive, right to employment by the State. It is urged that women, having got the qualification, would claim the employment, and that every woman who filled an office would deprive another woman of the opportunity of marriage by shutting out a man from the means of supporting a wife. It might be answered that she would at the same time reduce by one the number of women for whom marriage is an economic necessity. As to the contention, once more set up, that higher education can be got only at some cost of youthful freshness, health, and bodily charm, we confess that it irritates us. An "education" that impairs physical efficiency or physical beauty is not education at all. If the Germans will send a commission of inquiry, let us say, to Lord's on the days of the Oxford and Cambridge cricket match, they will learn how tall and straight and shapely the most highly educated girls can be. The report of the commission would prove, we guarantee it, a weapon of strength in the hands of those who are striving to raise the mothers of German sons above the kneading-trough.

It is strange that Germany, whose educational institutions in most other respects command general admiration, should in this one thing be, as we hold, behind England and the United States. Perhaps it is chiefly

because German girls' schools have not yet learned to temper the flowing cup of conic sections with a little allaying hockey! But it is our business here to seek lessons from our neighbours rather than to criticize them. A useful hint comes to us from Württemberg. At the last meeting of the *Gymnasiallehrer-Verein* it was resolved to ask the Ministry to abandon the supplementary examination in English hitherto deemed necessary for boys from the *Gymnasium* about to study for the *Baufach* (included are building, civil engineering, machine construction, electrical engineering, &c.) at a polytechnic. But it is the reason assigned that forms the pith of the matter. The supplementary examination in English should be dropped because England is no longer supreme with regard to the technics of the professions concerned. We count it no shame to return—with good cause—to a subject on which we have often dwelt. Whilst Germany has, and is further developing, magnificent technical *Hochschulen*, we are multiplying Universities. The consequence is that some of the colleges at Oxford and Cambridge (where classics, for example, can best be taught) lack students, and in technics our rivals outstrip us.

In a recent number of this journal we wrote about the increasing

diffusion of the title "professor" among German schoolmasters. A pamphlet issued by the Committee of German Teachers educated at a University has proposals to make on the subject. Formerly, as our readers will know, a German teacher, if a University man, was a *Gymnasiallehrer*, a *Realgymnasiallehrer*, or a *Realschullehrer*, as the case might be. Then, lest the University man should be confounded with the teacher from a training college (who was *Lehrer am Gymnasium*, *Lehrer an der Realschule*, &c.), he received the generic name of *Oberlehrer*. The pamphlet referred to suggests a kind of grading scheme of titles and rank, as thus: *Studienreferendar*, *Studienprofessor*, *Studienrat*, *Geheimer Studienrat*. In opposition to this, *Oberlehrer* Sebald Schwarz, of Lübeck, recommends that teachers should simply assume, upon passing their examinations, the—to German thinking—unpretentious style of "Doctor." All that we need remark is that, whether these titular distinctions be properly or improperly used at home, they will hardly bear exportation.

UNITED STATES.

The mid-winter meeting of the National Educational Association, Department of Superintendence, was held (February 27 and 28, March 1) at Louisville. The President of the Ohio State University delivered an address on the effect of moral education upon the civic life of the community. We quote from it a paragraph dealing with a neglected aspect of moral education:—"It is important now to notice that morals should not be confounded with mere external con-

formity. There is a tendency for the school-room, and for life in general for that matter, to be satisfied with an external form as a substitute for the substance of morality. Now morality is the result of choice. The ideal must be re-enacted by each individual; the law must be personally accepted; self-legislation must be provided; every individual in that sense must make his own law and determine his own character. The statute: 'Thou shalt not steal' doubtless has the intellectual assent of the multitudes. That is a good form of sound words. It becomes vital in life only when each individual makes it the law for himself. Personal choice must therefore become a factor in every educational process that looks toward education in morals. The school-room cannot be satisfied with a mere exhibition of mottoes. It may not rest with the intellectual assent of the pupil to the truth. These methods and these principles must be re-enacted into the life of every pupil before education in morals makes any great progress. Just here is where we succeed or fail. The fact that a boy has been educated in a school where the highest ideals were cherished, where the best precepts were taught, proves only that he was educated in a good environment. In order that he may be benefited by such an opportunity he must be trained to make his own choice, to reach his own decisions, to enforce self-legislation, to determine his own conduct."

It is because this principle is ignored that we sometimes find boys from moral homes turn out ill. And it must be observed that a school gives more frequent occasions for making a choice than does the home. We pass on, however, to another theme. Commissioner Draper has drawn up a paper on illiteracy in the State of New York. He discovers that New York, unlike the United States in general, has not materially reduced the percentage of illiteracy in the last thirty years. It was 7.1 in 1870 and 5.5 in 1900. The illiterates are, strangely enough, more numerous in proportion among the children of native-born parents than among those of foreign-born.

The Commissioner has to deplore an indifference in his countrymen about school attendance, and he pronounces the United States to be behind the leading nations of Europe with regard to the diffusion of ability to read and write. His calculations are interesting:—

"The data for determining our relative standing in this matter with that of the best educated foreign nations are lacking, but such as we have are more illuminating than comforting. The Imperial Bureau of Statistics, Berlin, informs us that of all the recruits in the army in 1903 for the whole German Empire but 1 in 2,500 was illiterate, and in more half of the States or provinces there was no illiterate at all. In Denmark it was but 1 in 500, in Sweden and Norway 1 in 1,250, in Switzerland 1 in 166, in the Netherlands 1 in 40, in France 1 in 16. In England and Scotland in 1902, 1 man and 1 woman in about 80 were unable to sign the certificate when married, the illiterate women slightly outnumbering the illiterate men. The fairest comparison we can make with these figures is by using our census statistics concerning voters, *i.e.*, men twenty-one years of age and over. We have about 1 illiterate in 9 voters in the United States, and 1 in 18 in the State of New York."

INDIA.

In the United Provinces of Agra and Oudh education, according to the Director of Public Instruction's Report, "may be backward, but it moves." Where there are shortcomings he ascribes them to the inadequacy of the sums allotted for educational purposes. The number of scholars in public institutions exhibits a satisfactory increase, whereas private institutions have declined. Progress, especially in primary vernacular schools, has been hampered by the plague, which during the year (to March, 1905) has been more general and more severe than ever before. "Indeed, the Muttra district in the latter half of the year lost about 10 per cent. of its population, chiefly rural, and many villages lost 20 or 30 per cent. Almost all the plague-infected villages were, sooner or later, emptied of their inhabitants, who left for other places or encamped in the surrounding fields, and school attendance naturally decreased or ceased altogether. In some cases teachers were directed to hold schools under trees, but parents were unwilling to send their children to congregate thus with others and run more risk of catching plague. Several teachers died of the disease." The percentage of children of school age receiving instruction is 7.02; for boys it is 12.91, and for girls .75. The latter figure is distressingly small; but the Director has some hopeful signs to report. "Marked progress has been made in Moradabad and other districts in the first circle, as also in Lucknow. The people are beginning to desire education for their girls and to ask for schools for them in many parts of the province. The Collectors of Bareilly and Bara Banki report that public opinion is undergoing a great change: the prejudice against educating girls is giving way and parents wish to have their daughters taught. The hillmen of the Kumaun division would be glad to have their girls as well as their boys taught, if they had the facilities."

With regard to teachers, better terms are being offered, with the design of inducing men of superior education to enter the public service. But these, says the Director, must be trained. "It is necessary that such men should have all the advantage that can be derived from special training for the work to which they are going to set their hands, and in this respect there is a step forward to chronicle. The Training College for English Teachers at Allahabad has been enlarged, and the teaching accommodation greatly improved; while, in order that the ardour of the students might not be damped by pecuniary cares, deputed teachers under training have been treated with the utmost reasonable liberality in the matter of allowances. For vernacular teachers a fine new normal school has been opened at Gorakhpur; the schools at Agra, Moradabad, and Lucknow have been enlarged; and five other normal schools have been sanctioned, and are to be charged to the six lakh grant, thus bringing the number of these institutions up to ten. Moreover, we are now starting a training class in each district for lower primary teachers, with a short course limited to one year."

We have our private opinion as to the sufficiency of one year's training for primary teachers. Nor does the Education Authority in the United Provinces deem it enough, accepting it only as better than none. And to the experiment of opening these classes for the training of lower primary teachers another has been added, of which the Report itself shall tell. "It is impossible either to bring to a training class, or to displace, the thousands of untrained teachers who are now employed in village schools. To meet their case we have adopted a scheme to hold teachers' meetings annually at several centres in each district, under a trained Deputy or Sub-Deputy Inspector of Schools, each meeting to be attended by not more than fifteen teachers from the neighbourhood, with the object of acquainting them with approved methods of teaching, and of giving them practical illustrations, with criticisms of lessons, and the reading of papers on professional and general subjects. These meetings last ten days—which is, however, found to be too short a session. Sometimes the Chairman of the District Board gives the encouragement of his presence. The success that has attended the scheme under the management of capable inspecting officers has been notable, and much valuable work has been done; with a little more experience still better results may be anticipated. We have here discovered the means of giving the village schoolmaster a little more culture than his neighbours, and of making him generally a better informed person."

MODERN LANGUAGE HOLIDAY COURSES, 1906.

Compiled from information supplied by the Special Inquiries Office of the Board of Education.

The information is given in the following order:—Place, date, fees, and address of Secretary.

Germany and Austria.

GREIFSWALD.—July 9–28. 5–15 marks. For both sexes. Conversation Classes on modern methods. Prof. Dr. Bernheim, Ferienkurse, Greifswald.

JENA.—August 6–18. Entrance, 5 marks; 12 Lectures, 10 marks; 24 Conversation Classes, 30 marks. For both sexes. Renowned for its Course of Pedagogy. Frau Dr. Schnetger, Gartenstr. 2, Jena.

KÖNIGSBERG.—Date not yet fixed. 15 marks. Special Language Courses for Foreigners. Ferienkurse, Königsberg.

MARKBURG.—First Course, July 9–28; Second Course, August 5–25. 40 marks for each Course, or for both 60 marks. Special German Courses (elementary and advanced): 3 weeks, 20 marks; 4 weeks, 30 marks. For both sexes. Conversation Classes; Preparatory Courses from Easter; Special German Courses. W. G. Lipscomb, Esq., Grammar School, Bolton, Lancs.

NEUWIED.—August 3–24. 42 marks. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.

SALZBURG.—September 1–15. Registration, 1 krone; membership, 5 kronen; entrance fee for a Course of 3–6 hours, 2 kronen, of 8–10 hours, 4 kronen. For University students and others. Lectures by University Professors. The Secretary, Local Committee for the University Vacation Courses, Salzburg.

Switzerland.

GENEVA.—July 16–August 28. 40 francs, and 6 francs for special Conversation Classes and correction of written work. Intended

(Continued on page 370.)

OXFORD UNIVERSITY PRESS.

Books set and suitable for Candidates at OXFORD LOCAL EXAMINATIONS, 1907.

RELIGIOUS KNOWLEDGE.

- The Oxford Helps to the Study of the Bible.** With copious Tables, Concordance, and Indices, and a Series of Maps. New, Enlarged, and Illustrated Edition. Pearl 16mo, 1s. net; Nonpareil 8vo, 2s. 6d.; Large-type Edition, 5s.
- Oxford Helps to the Study of the Book of Common Prayer.** By the late W. R. W. STEPHENS. 2s. 6d. net.
- Revised Version of the Holy Bible—**
Pearl 16mo, 10d.; Ruby 16mo, 3s.
- Revised Version of the New Testament—**
Nonpareil 32mo, 3d.; Brevier 16mo, 6d.; Long Primer 8vo, 9d.
- The Greek Testament,** with the Readings of the Revisers and with Marginal References. 4s. 6d.; on India Paper, 6s.
- Evangelia Sacra Graeca.** Fcap. 8vo, 1s. 6d.
- Old Testament History for Schools.** By the late T. H. STOKER. In three Parts. With Maps, 2s. 6d. each.
- Manual of the Four Gospels.** By the same. 3s. 6d. Or, separately, Part I, *The Gospel Narrative*, 2s.; Part II, *The Gospel Teaching*, 2s.
- Life and Letters of St. Paul.** By the same. 3s. 6d. Or, in two Parts, each 2s.
- First Days and Early Letters of the Church.** By the same. 3s. Or, separately, Part I, 1s. 6d.; Part II, 2s.
- Graduated Lessons on the Old Testament.** By U. Z. RULE. Edited by L. J. M. BEBB. In three volumes, 1s. 6d. or 1s. 9d. each.

ENGLISH.

- Matthew Arnold.—Merope;** with The Electra of Sophocles, translated by ROBERT WHITLAW. Edited, with Introduction and Notes, by J. CHURTON COLLINS. 3s. 6d.
- Selections from Addison's Papers in the Spectator.** Edited by T. ARNOLD. 4s. 6d.
- Byron.—Othello Harold.** Edited by H. F. TOZER. 3s. 6d.
- Burke.—Reflections on the French Revolution.** Edited by E. J. PAYNE. 5s.
- Spenser.—Faery Queens, Book I.** With Introduction and Notes by G. W. KITCHIN, and Glossary by A. L. MAYHEW. New Edition. 2s. 6d.
- Johnson.—Life of Milton.** Edited by C. H. FIRTH. Cloth, 2s. 6d.; stiff covers, 1s. 6d.
- Johnson.—Vanity of Human Wishes.** Edited by E. J. PAYNE. Paper covers, 4d.
- Milton.—Samson Agonistes.** Edited by J. CHURTON COLLINS. Stiff covers, 1s.
- Milton.—Lycidas.** Edited by R. C. BROWNE. Paper covers, 3d.
- Milton.—Lycidas.** Edited by O. ELTON. Paper covers, 6d.
- Shakespeare.—Coriolanus.** Edited by W. ALDIS WRIGHT. 2s. 6d.
- Shakespeare.—Twelfth Night.** Edited by W. ALDIS WRIGHT. 1s. 6d.
- Shakespeare.—As You Like It.** Edited by W. ALDIS WRIGHT. 1s. 6d.
- North's Translation of Plutarch's Coriolanus, Julius Caesar, Brutus, and Antony.** Edited by R. H. CARR.
- Scott.—The Talleman.** Edited by H. B. GEORGE. 2s.
- Kingsley.—The Water-Babies.** Slightly abridged. With Introduction, Notes, and Illustrations.

LATIN.

- Tales of Early Rome.** Edited, with Notes, Maps, Vocabulary, and English Exercises, by J. B. ALLEN.
- Caesar.—De Bello Gallico.** Edited by C. E. MOBERLY. Second Edition. Books III-V, 2s. 6d.; VI-VIII, 3s. 6d.
- Horace.** Edited by E. C. WICKHAM. *Odes, Carmen Seculare, and Epodes.* Second Edition. 6s. *Satires, Epistles, and De Arte Poetica.* 6s.
- Livy.—Book V.** Edited by A. R. CLUER. Revised by P. E. MATHESON. 2s. 6d.
- Virgil.—Aeneid. Book IX.** Edited by A. E. HAIGH. 1s. 6d.
- An Elementary Latin Grammar.** By J. BARROW ALLEN. 208th thousand. 2s. 6d.
- A First Latin Exercise Book.** By the same. 2s. 6d.
- A Second Latin Exercise Book.** By the same. 3s. 6d.
- Anglice Reddenda;** or, Extracts, Latin and Greek, for Unseen Translation. By C. S. JERRAM. Fourth Edition. 2s. 6d.
- Anglice Reddenda.** Second and Third Series. By the same. 3s. each.
- Reddenda Minora;** or, Easy Passages, Latin and Greek, for Unseen Translation. For the use of Lower Forms. Composed and selected by the same Editor. Sixth Edition. 1s. 6d.
- Abridged from Lewis and Short's 4th Edition:
- An Elementary Latin Dictionary.** Square 8vo, 7s. 6d.
- An Intermediate Latin Dictionary.** Small 4to, 12s. 6d.

GREEK.

- Greek Reader, Vol. I.** Selected and adapted, with English Notes, from Professor VON WILAMOWITZ-MOELLENDORFF'S *Griechisches Lesebuch*, by E. C. MARCHANT. 2s.
- Scenes from Sophocles.—Antigone.** Edited by C. E. LAURENCE. With Illustrations. 1s. 6d.
- Sophocles.—Antigone.** Edited by LEWIS CAMPBELL and EVELYN ABBOTT. 2s.
- Thucydides, Book III.** Edited by H. F. FOX. 3s. 6d.
- Euripides.—Medea.** Edited by C. B. HEBERDEN. 2s.
- Plutarch.—Coriolanus.** With Introduction and Notes.

GREEK (continued).

- An Elementary Greek Grammar.** By J. BARROW ALLEN. 3s.
- A Primer of Greek Prose Composition.** By J. Y. SARGENT. 3s. 6d.
- A Greek-English Lexicon,** abridged from LIDDELL and SCOTT's 4th Edition. Square 12mo, 7s. 6d.
- An Intermediate Greek-English Lexicon,** founded upon the Quarto Edition of LIDDELL and SCOTT's Greek Lexicon. Small 4to, 12s. 6d.

GERMAN AND FRENCH.

- Short German Plays.** Second Series. *Der ungebetene Gast*, and other Plays. Edited, with Notes and Vocabulary, by E. S. BUCHHEIM. 2s. 6d.
- Hoffmann.—Heute mir, Morgen dir.** Edited by J. H. MAUDE. 2s.
- Chateaubriand.—Mémoires d'Outre-Tombe.** Edited by LOUIS SEKS. (Oxford Modern French Series.) 2s. 6d.
- Gozian.—Le Château de Vaux.** Edited by A. H. SMITH. (Oxford Modern French Series.) 1s. 6d.
- A Concise French Grammar.** By A. H. WALL. Contains the simplifications allowed by the French Minister of Public Instruction in 1901. 4s. 6d.
- A French Primer.** By the same. 2s.

MATHEMATICS.

- Geometry for Beginners.** An easy Introduction to Geometry for Young Learners. By G. M. MINCHIN. 1s. 6d.
- Experimental and Theoretical Geometry.** By A. T. WARREN. Third Edition. Cloth, 2s. (Following the plan recommended by the Mathematical Association.)
- Elementary Modern Geometry.** Part I. Experimental and Theoretical. (Ch. I-IV.) Triangles and Parallels. By H. G. WILLIS. 2s.
- Euclid Revised.** Edited by R. C. J. NIXON. Third Edition. 6s.
- Book I, 1s.; Books I, II, 1s. 6d.; Books I-IV, 3s.; Books V, VI, 3s. 6d.
- Geometrical Exercises from Euclid Revised.** By A. LARMOR. 3s. 6d.
- The Junior Euclid.** By S. W. FINN. Books I and II, 1s. 6d. Books III and IV, 2s.
- Arithmetic.** By R. HARGREAVES. 4s. 6d.

NATURAL SCIENCE.

- An Elementary Treatise on Heat.** By BALFOUR STEWART. Sixth Edition. 8s. 6d.
- First Lessons in Modern Geology.** By A. H. GREEN. Edited by J. F. BLAKE. With Forty-two Illustrations. 3s. 6d.
- Woolcombe.—Practical Work in General Physics.** By W. G. WOOLCOMBE. 2s. each Part.
- Part I. GENERAL PHYSICS. Part II. HEAT. Second Edition, Revised.
- Part III. LIGHT AND SOUND. Part IV. MAGNETISM AND ELECTRICITY.
- A Class-Book of Chemistry.** By W. W. FISHER. Fifth Edition, Revised and Enlarged. 4s. 6d.
- Elementary Chemistry. Progressive Lessons in Experiment and Theory.** By F. R. L. WILSON and G. W. HEDLEY. 8vo, with many Diagrams. Part I, 3s. Part II, *In the Press*.

MISCELLANEOUS.

- Companion to English History (Middle Ages).** Edited by F. P. BARNARD. With Ninety-seven Illustrations. 8s. 6d. net.
- A School History of England.** By O. M. EDWARDS, A. J. CARLYLE, R. S. RAIT, and others. With Numerous Maps. 3s. 6d.
- Historical Geography of the British Colonies.** By C. P. LUCAS, C. B. CROWN 8vo.
- INTRODUCTION: ORIGIN AND GROWTH OF ENGLISH COLONIES. With Eight Maps. By H. E. EGERTON. 2s. 6d. Also in binding uniform with the Series. 3s. 6d.
- Vol. I. THE MEDITERRANEAN AND EASTERN COLONIES (EXCLUSIVE OF INDIA). With Fifteen Maps. Second Edition, Revised and brought up to date. By R. E. STUBBS.
- Vol. II. THE WEST INDIAN COLONIES. With Twelve Maps. Second Edition, Revised and brought up to date. By C. ATCHLEY, I.S.O. 1905. 7s. 6d.
- Vol. III. WEST AFRICA. With Five Maps. 7s. 6d.—Vol. IV. SOUTH AND EAST AFRICA. HISTORICAL AND GEOGRAPHICAL. With Eleven Maps. 9s. 6d. (Also Part I. HISTORICAL, 6s. 6d. Part II. GEOGRAPHICAL, 3s. 6d.)—Vol. V. HISTORY OF CANADA. Part I (New France). 6s.
- Oxford Geographies.** By A. J. HERRBERTSON.
- Vol. I. THE PRELIMINARY GEOGRAPHY. *In the Press*.
- Vol. II. THE JUNIOR GEOGRAPHY. Second Edition. With 166 Maps and Diagrams. 2s.
- Relations of Geography and History.** By H. B. GEORGE. With Two Maps. Second Edition. 4s. 6d.
- Geography of Africa South of the Zambesi.** By W. P. GRESWELL. With Maps. 7s. 6d.
- A Music Primer.** By J. TROUTBECK and R. F. DALE. Third Edition. 1s. 6d.
- Chart of the Rules of Harmony and Chart of the Rules of Counterpoint.** By A. SOMERVILLE. 1s. net each.
- Elementary Political Economy.** By E. CANNAN. 1s.
- Elementary Politics.** By Sir THOMAS RALEIGH. 1s.
- Remarks on the Use and Abuse of some Political Terms.** By Sir G. CORNWALL LEWIS, Bart. New Edition, with Notes and Introduction by Sir THOMAS RALEIGH. 3s. 6d. and 4s. 6d.
- Book-keeping.** By Sir R. G. C. HAMILTON and J. BALL. 2s.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS, AMEN CORNER, E.C.

for advanced students of both sexes. M. Bernard Bouvier, Administrateur du Séminaire et des Cours de Vacances de Français Moderne à l'Université, Geneva.

LAUSANNE.—July 19–August 29. 40 francs. For both sexes. M. J. Bonnard, Avenue Davel 7, Lausanne.

NEUCHÂTEL.—First Course, July 16–August 11; Second Course, August 13–September 8. 30 francs for each Course, or for both 50 francs. For both sexes. Elementary and Advanced Courses. M. P. Dessoulavy, Académie de Neuchâtel.

BASLE.—No Course this year.

ZÜRICH.—Last fortnight in July. Particulars not yet to hand.

Spain.

SANTANDER.—August 4–25. £2. 2s. if name is entered before July 1; otherwise, £2. 5s. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.

France.

BESANÇON.—(a) Holiday Courses, July 10–November 15; (b) other Courses during the year, September 10 to the end of June. 30 francs, 1 month; 40 francs, 2 months. Lectures on Literary, Commercial, and Scientific Subjects. M. le Secrétaire de l'Université, 30 Rue Mégevand, Besançon.

DIJON.—(a) July 1–October 31 (Holiday Courses); (b) other Courses during the whole year. (a) 30 francs for first 6 weeks and 10 francs for each subsequent fortnight, or 60 francs for the 4 months. Examinations for University Certificates. M. Ch. Lambert, Professeur à l'Université, 10 Rue Berbisey, Dijon.

GRENOBLE.—Holiday Courses: July 1–October 31 (4–5 hours per day); other Courses during the whole year. 40 francs for the first 6 weeks and 10 for each subsequent fortnight, or 60 francs for the whole Course. Performance of Classical French Tragedy in the open air; Roman Theatre at Orange. M. Marcel Reymond, The University, Grenoble.

NANCY.—(a) During the academic year; (b) Holiday Courses, July 1–October 31. (a) 50 francs for the half year, 70 francs for the whole year; (b) 40 francs for the first month, 10 francs for each following month—maximum, 60 francs. Preparation for Examinations of Alliance Française and University Certificates. M. Laurent, à l'Université, Nancy.

BOULOGNE-SUR-MER.—August 1–30. 40 francs for each Course. For both sexes. Classes: Elementary and Advanced. M. Bornecque, Professeur à l'Université de Lille, 70 Rue de Turenne, Lille.

ST. SERVAN—ST. MALO.—August 2–29. £2 for the whole month; £1. 4s. for half the month. For both sexes. Examinations for Diplomas. M. Gohin, Professeur agrégé au Lycée de Rennes.

PARIS (1).—First Course, July 1–31; Second Course, August 1–31. 100 francs both Courses; 55 francs single Course. Elementary and Advanced Courses; Conversation Classes. M. le Secrétaire, l'Alliance Française, Boulevard St. Germain 186, Paris.

PARIS (2).—July 2–28, August 1–28, September 3–29. 75 francs for 1 month, 140 francs for 2 months, and 200 francs for 3 months. Use of Reading Room at International Guild for Students. The Secretary, Guilde Internationale, 6 Rue de la Sorbonne, Paris.

PARIS (3).—Christmas and Easter Holidays Successive series of 8 Lessons: 12 francs each series. Preparatory to Summer Courses of the Alliance Française, &c. M. Louis Jadot, Université Hall, Boulevard St. Michel 95, Paris.

TOURS.—August 3–24. £2. 2s. if name is entered before July 1; otherwise, £2. 5s. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.

HONFLEUR.—August 3–30 (i.e., 20 days—5 days a week). £2. 2s. if name is entered before July 1; otherwise, £2. 5s. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.

BAYEUX AND GRANVILLE.—August 1–24. £2. 2s. Students allowed to go from Granville to Bayeux, and *vice versa*, without extra fee. For both sexes. Elementary and Advanced Classes. John A. Nichols, Esq., Stanley Mount, New Mills, Stockport.

CAEN.—Easter Holidays, July 2–31, August 1–30; other Courses during the whole year. £1 for 1 week; £1. 12s. 2; £2. 4s. 3; £3 for 1 month. Lectures by well known writers. Evening Courses and Conversation Circles. Walter Robins, Esq., St. Brelades, Preston Road, Leytonstone, N.E.

LISIEUX.—July 3–28, August 2–28; a Private Course during the whole year by M. Féquet. £1. 14s. Conversation Circles. J. Stott, Esq., Pulteney Grove, Bath.

VILLERVILLE-SUR-MER (near Trouville).—£2. 5s. For both sexes. Conversation Circles. M. L. Bascan, Professeur, Rue Caponière, Caen.

Programmes of most of these Courses may be seen at the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, London, S.W.

IT IS IMPOSSIBLE

for Messrs. J. M. DENT & Co. to tell in this small advertisement one-tenth of the advantages accruing from the use of their numerous Educational Books. "To handle such books is a pleasure, to recommend them is a pleasure, to sell them is a pleasure" (*Book Monthly*), and, if you give them a trial, you will soon find that to use them is not only a pleasure, but also a profit. Messrs. DENT will be pleased to send you, post free, their full Educational Catalogue, which includes their famous Modern Language Series. Below they give a very small selection of Books suitable for Schools.

THE TEMPLE LITERARY READERS.

Book I. ...	10d.	Book III. ...	1s. 3d.	Book VI. ...	1s. 6d.
Book II. ...	1s.	Book IV. ...	1s. 6d.	Book VII. ...	1s. 9d.
		Book V. ...	1s. 6d.		

THE TEMPLE NATURE READERS.

Book I. ...	10d.	Book II. ...	1s.	Book III. ...	1s. 3d.
-------------	------	--------------	-----	---------------	---------

THE TEMPLE GIRLS' READERS.

Book I. ...	10d.	Book III. ...	1s. 3d.	Book V. ...	1s. 6d.
Book II. ...	1s.	Book IV. ...	1s. 6d.	Book VI. ...	1s. 6d.

THE TEMPLE HISTORY READERS.

Beautifully and profusely Illustrated in Black and White.

Book I. (Standard III.)	Stories from English History.	1s.
Book II. (Standard IV.)	The Making of England.	1s. 3d.
Book III. (Standard V.)	The Building of the Empire.	1s. 6d.
Book IV. (Standards VI. & VII.)	History of the British Empire.	1s. 9d.

DENT'S CONTINUOUS READERS.

The Story of Drake.	The Story of Magellan.
The Story of Raleigh.	The Story of Vasco da Gama.
9d. each. Good paper, bold type, strong binding.	

MATHEMATICAL AND SCIENTIFIC TEXT-BOOKS.

Edited by W. J. GREENSTREET, M.A., F.R.A.S.

Volumes marked thus (*) are now ready. Others follow immediately.

*PRACTICAL NATURE-STUDY FOR SCHOOLS. By O. WALD H. LATTER, M.A. Part I. (Pupil's Book), 2s. 6d. net. Part II. (Teacher's Aid and Answers), 6s. net.

*FIRST BOOK OF GEOMETRY. By W. H. YOUNG, S.D., and Mrs. YOUNG, Ph.D. With many Illustrative Diagrams (Three Coloured). 1s. 6d. net.

*PRACTICAL PHYSICS. By F. J. TRISTRAM, M.A. 1s. 6d.

LIGHT. By F. E. REES, M.A., late Demonstrator of Physics, Bangor.

TRIGONOMETRY. By CECIL HAWKINS, M.A., Haileybury College, Hertford.

GEOMETRICAL CONICS. By Prof. BRYAN, F.R.S., and Prof. PINKERTON, M.A.

ANALYTICAL CONICS. By Prof. Miss C. A. SCOTT, D.Sc.

MECHANICS. By C. S. JACKSON, M.A., and R. M. MILNE, M.A.

ALGEBRA. By Prof. FANSEN, F.R.S., and W. J. GREENSTREET.

PRACTICAL MATHEMATICS. By J. E. BOYT, B.A., B.Sc.

FRENCH SCIENTIFIC READER. Compiled by W. J. GREENSTREET, M.A.

GERMAN SCIENTIFIC READER. Compiled by C. R. DOW, M.Sc.

MATHEMATICAL TABLES. By Prof. G. H. BRYAN, F.R.S.

Further Volumes to follow.

Please write at once for full Catalogue of Books suitable for both Elementary and Secondary Schools.

OCCASIONAL NOTES.

EACH day's discussion makes it increasingly apparent that the Education Bill (Part I. at least) has no reference to education, but is an attempt to find a remedy for the open sore of sectarian differences.

The Ratepayer's Freedom of Choice.

The militant party of the Free Churches insist that under the Act of 1902 the Church of England was placed in an unduly favourable position. The conqueror of to-day, with the bitterness evolved during his period of subjection, insists, now that the tables are turned, that the spoils shall go to the winner. No farthing must be contributed by the ratepayer in support of any form of religious teaching of which his conscience disapproves. The tenet, if pressed, will land us in pure secularism, a conclusion from which most of the Free Churches happily shrink. In a democratic country the minority must more or less suffer: there must be give and take. The Church of England insists just as rigidly and just as illogically upon its privileges. An established Church is likely to be less open to change than political institutions. But the Church has suffered changes as the centuries have passed on, and it has been gradually shorn of the pretensions that it has from time to time claimed. It avows itself the National Church: it follows that it should be the expression of the religious views of the nation. It now claims that every parent has an inalienable right to have his children instructed in the articles of his own faith. This is a curious use of the word "right." And its application beyond the pale of the Establishment is of course impossible.

ONE of the most startling contributions to the education debate has been Mr. Chamberlain's bold advocacy of a purely secular system. We should like to discriminate:

Secular Education.

if secularism means that every teacher must be muzzled on the very subject which he feels to be of primary importance, if, for fear of offending the religious susceptibilities of one or other of his audience, he is to be eternally silent on the great rules of conduct and the basis of their sanction, then a system of secular education could never commend itself to a majority of the nation, and could never be accepted as a final solution to our difficulties. If, on the other hand, each teacher were free to inculcate the moral lessons that he or she thought advisable, without reference to any particular creed, then secular education would be accepted by most. To muzzle the teacher is to make the teaching dead, and therefore ineffective. To allow freedom to the teacher implies, of course, the possession of a certain amount of tact and good feeling. It is obvious that no teacher should take advantage of his position to abuse or ridicule the religious sentiments of others. Teachers can be trusted as well as any other section of the community. Fanatics or Agnostics might here and there arise; but they could be admonished or, if necessary, dismissed. We cannot recommend what is called the secularization of education, because we know that it means that every word that might possibly offend the prejudices of a Romanist, an Anglican, a Jew, a Unitarian, an Agnostic, a Materialist, &c. (we could continue the list for pages) must be rigidly excluded from the teaching. Nominally the bulk of the nation is Christian. If Christians cannot agree upon a common form of teaching suitable for all children, the problem is hopeless, and we must just muddle along and continue to squabble.

ACCORDING to the latest returns available, the Church of England has 11,817 schools, the Wesleyans have 450, the Roman Catholics 1,063, the Jews 13; other denominational schools, including British, amount to 739. This makes a total of 14,082 voluntary schools, as against 6,145 Council schools.

Voluntary Schools.

These figures are used as an argument in favour of retaining voluntary schools. But it seems to us that there is another side to the matter. It is not possible for the Church of England to claim that, in the districts served by its 11,817 schools, it has succeeded in winning the adherence of all the parents of children using the public elementary schools. The larger the number of these schools, and more especially the larger the number of single district schools, the greater the grievance of the people. Many of the parents are lukewarm towards the National Church, and some are actively hostile. So long as the country is a democracy we shall want what our noisiest spokesmen tell us we want: it is no argument to tell us that the Church of England has the largest number of schools, and, therefore, must receive the greatest amount of consideration. And, if such an argument were permitted, it would be checked by the fact that, although the National Church possesses so many schools, yet most of these are comparatively small. The whole number of children educated in Church schools is 2,350,176; while the number of children in Council schools is 2,946,511.

AMID the fiery denunciations of the Education Bill that many Churchmen are uttering, it is a pleasant relief to meet the wise words of Bishop Percival, who utters a much needed warning to his colleagues.

Dr. Percival pleads for Peace.

"I am convinced," he says, that this hostility, stimulated and embittered by the fiery declamations of some earnest but short-sighted zealots, and likely to be used by politicians for party purposes, can bring no benefit to our Church or to the cause of religious education, and is only too certain to bring serious and last-

ing injury." People who are sure of their rights do not raise shrieks of horror when those rights are threatened. The more violent the opposition of the Church, the weaker does it feel its position and its claims to be. All transference of property carried out by Parliament is legalized robbery. All through its history Parliament has been from time to time authorizing legalized robbery at the expense of some members of the community for the benefit of others. The Church has had a long innings. During that period it has not secured the affections of the whole nation. It has allowed or had to suffer the splitting off of sectional bodies. It has not adapted itself to modern changes in thought which are only irreligious when judged by dogmas that have ceased to convince. Granted that Mr. Birrell is a compound of Henry II., Oliver Cromwell, and Archbishop Laud, the moral to be drawn by the Church is that the time has arrived to set its house in order, lest worse befall.

IT is quite clear that the Education Bill throws an increased burden upon both the taxpayer and the ratepayer. It is to the credit of the country and speaks well for the public spirit of the present time that we hear little of complaint or opposition on this score. The Parliamentary

**The L.C.C.
and the Bill.**

Committee of the London County Council has issued a report in which the probable sources of additional cost are clearly set out. But this is not made an argument for opposition to the Bill. The Council will have to bring the buildings of the transferred schools up to the standard of its own regulations; it will be responsible for all repairs and for all wear and tear, to teachers' houses as well as to school buildings; it will have to pay rent, and of the million provided by the Government for this purpose Londoners will probably pay about a quarter in the form of taxes; finally, it will have to pay rates on the transferred schools. At present voluntary schools are not ratable, but the Act granting this privilege is to be repealed. Although the Committee does not shrink from the additional payments to be incurred by the Bill, yet it has a grievance against the Government which it states with clear emphasis. London, it is asserted, does not receive its fair share of national grants. Not only in respect of one particular grant does London receive 7s. 9d. per scholar while the average for the whole country is 9s. 3d., but no account is taken of the higher cost of education in London. It is proposed to take steps to approach the Board of Education at once on these points. The Education Committee has approved the Bill so far as it provides for public control and the freeing of teachers from creed tests; but a number of small amendments are suggested.

PENDING a fuller discussion while the Bill is in the Committee stage, or a statement by Mr. Birrell, the explanation of the Lord Mayor of Cardiff as to the precise

**The Proposed
Welsh Council.**

powers of the proposed Council for Wales holds the field. The Lord Mayor states that no legislative powers are to be accorded to the Welsh Council. Its functions are to be purely administrative. It will consequently reflect the views, or in other words carry out the orders, of the Government of the day. Yet the Bill certainly proposes that, subject to such exceptions as His Majesty may make by Order in Council, the powers and duties of the Board of Education shall be transferred to the Welsh Council. If these powers are once transferred *en bloc*, it is difficult to see how the Council can remain a purely administrative body carrying out the instructions that the Board of Education may from time to time issue. It seems that the wording of the Bill will require amendment. It is certainly wise to give to

Wales a full measure of local authority; but it would be unwise to cut off the educational system of the Principality from the general current of British opinion. Some regret will be felt at the absorption of the Central Welsh Board into the proposed Council. For the sake of uniformity it must be so; yet no one would wish to deny that this Board has had an influence for good on secondary schools that is quite unparalleled in the action of other administrative bodies. The Board has done excellent work: the one drawback has been that it was not necessarily and formally in touch with the University on the one hand and with the elementary schools on the other.

MR. BIRRELL has a charm of manner and a magic use of words that enable him to give sound advice in a palatable form, at any rate in a form likely to be remembered without animosity. Like George Bernard Shaw, he appeared to be convinced that the only way to get an Englishman to accept an idea is to make

**Head Masters
and Education
Authorities.**

him laugh. Sometimes the idea may seem in danger of being lost in the laugh. It remains for the commentator to dot the *i*'s and cross the *t*'s. Mr. Birrell said the other day that no pride of place could ever make him otherwise than nervous in the presence of head masters. After the laughter caused by this remark had subsided, he went on to say seriously that head masters when once appointed should be trusted by the Local Authorities, and should be allowed to be in charge of their own quarter-decks. The warning is not without significance at the moment. Local Authorities who give grants of public money rightly wish for a certain amount of control. But there is a danger lest in the administrative temptation towards uniformity to which an Education Committee, and more especially its secretary, is liable, the individual initiative and freedom of action of the head master should be unduly curtailed. "Appoint a good man and then trust him" should be the motto; for it must be remembered that with inspectors and regulations controlling him a head master can no longer be an absolute autocrat. The Board of Education seem to have adopted the policy of endeavouring to strengthen the hands of the governing bodies as a set off to the claims of the Local Authorities. This is a vain attempt. Governing bodies of schools in receipt of local grants must be shorn of much of their old powers. The better policy is to admit and welcome, and at the same time to control, the power of the Education Committee.

THE London County Council has not acceded to the request that a number of Council school children should attend in the grounds of Chelsea Hospital for the purpose of receiving a Union Jack on behalf of their respective schools. We do not know on what grounds the Council

**Patriotism and
Militarism.**

based its refusal, but we welcome it as tending to show that the Council is not to be carried away by the wave of militarism that is passing over the country—militarism which masquerades as patriotism. The true aim of education is to curb the fighting instinct of the boy, and to develop civic virtue, which is a later growth. This false patriotism seeks to produce a nation of soldiers—men of good physique who can obey orders, kill anything, and never think. Physical training is an urgent need in all town day schools. We have taken away from their natural healthy recreations little fellows whose muscles crave for exercise and stuck them down to a desk for several hours a day without making any provision for games or gymnastics. Here is opportunity for reform; but it is mischievous to base that reform upon an obsolete militarism and a mis-

applied patriotism. But we have a further charge to bring against rifle shooting and military drill. No muscular exercise attains its object unless it is enjoyed. The new exercise proposed in some influential quarters will only interest boys and so secure enjoyment under two conditions. The first is that it is a novelty. After the novelty has worn off, rifle shooting, except to a few enthusiasts, will become dull and monotonous. The second incentive is the dread of an invasion. If our boys can be got to believe that, military drill will remain popular; but a scare must be renewed at frequent intervals.

ALMOST every one who has considered the matter is agreed that the education given in public elementary schools is largely unsuitable, and fails, therefore, in its object. We have always maintained that

Cookery. book learning is predominant solely by reason of its cheapness. But many individuals and some educational authorities are boldly taking the matter in hand, and are devising a more rational curriculum. This will certainly include a greater amount of hand and eye training, a fuller attempt to develop the body, and an endeavour to make the education suit the circumstances, *i.e.*, to give the child that knowledge and skill that he needs to enable him to adapt himself more suitably to his environment. Among the subjects that will be taught to all girls, and not merely, as at present, to a select few, will undoubtedly be cookery. At a recent meeting of the Northern Union of Domestic Economy Associations, Miss Dunn read a paper entitled "Science in the Kitchen," which was as full of good things as a Christmas pudding. She repeated a statement that is often made nowadays, but which needs to be said again and again until it has impressed itself upon the national consciousness, and then become reflected in the practice of cooks and housekeepers. It is that the indifferent health that seems to be the curse of the time is more often than not due to faulty nutrition, the direct result of errors in diet. The thermometer and the scales must become kitchen utensils: the chemical changes involved in the cooking of food must be understood. Perhaps more important still is the possession of a simple knowledge of the value of food from the point of view of nutrition, and of the processes of its digestion and absorption.

THE Chairman of the Governors of the new County School at Acton was quite right in urging that more public money should be devoted to secondary schools. The

Racers and Cart-horses. admitted reason for the expenditure of public money on education is that such expenditure brings an adequate return to the nation in the form of increased efficiency of its workers. And it is clear that the more skilled the work and the higher the moral and intellectual qualities involved the more costly will be the period of preparation. A skilled mechanic is worth more to the nation than a road-mender; a skilled man of science is worth more than either. On the children whose formal education ends with the public elementary school the nation spends the minimum that at any given moment is considered necessary. On those children who are considered likely to profit from a further education in a secondary school the nation must pay more and for a lengthened period. University education is still more costly. Mr. Morison said that you cannot make racers out of cart-horses. That is to say, it is of no use to give to the agricultural labourer the education that is needed by a medical man. Mr. Birrell's comment on this, to the effect that all the boys at Eton and Harrow were not race-horses, any more than were all the children in elementary

schools cart-horses, was beside the question. The racers are to be found, probably, quite as often in the one grade of school as the other. The urgent point is that sufficient money should be found to secure that the training of the racer that has been well begun in the public elementary school should be adequately and effectively continued in the secondary school.

A CORRESPONDENT in the *Morning Post* gives an interesting account of educational progress in China. The whole system of requiring students to learn by heart

Educational Progress in China. long passages of which no explanation or commentary was given is being superseded by an education approximating more nearly to Western ideals. The rapidity with which the new plan is being carried out is striking. In one province—that of Chihli—there are 124 districts; each district has already about twenty primary schools, with some thirty boys in each. Each district has also one low- and one high-grade elementary school with an average attendance of fifty boys, who, in addition to the study of their own language, are started in history, geography, arithmetic, and simple science. Sixteen middle schools have been opened in which the study of English is added to more advanced courses in the subjects mentioned above. There is a provincial college with 320 students, and, finally, the University of Paoting-fu, with 200 students. It will be noticed that in all this there is no mention of the education of girls. The movement that is producing this progress in education seems to be based mainly on the desire to increase the military efficiency of the nation. Physical drill and military training are important parts of the curriculum. In the words of the correspondent: "The new text-books put into the hands of the boys impress on the youth of China the duty of developing the power of their country; they show how military weakness has brought bitter humiliations in the past; and they preach the doctrine that the ease, wealth, and life of individuals must be readily sacrificed to national interests."

THE great meeting of City Churchmen (including Sir B. L. Cohen, Sir P. Magnus, and Lord Rothschild) "to protest against the Education Bill" did not much

Mr. Balfour and City Churchmen. advance measures. Mr. Balfour, as usual, was nothing if not critical. The Bill was illogical; it deprived parents of their inalienable right to have their children taught their own creed; it failed to give public control; it was double-faced—trying to please both Dissenters and Churchmen, it failed to please either; if submitted to a plebiscite, it would be torn to shreds and cast to the winds. Of constructive criticism—how the Bill should be amended or what should be substituted for it—there was not a word. Yet even Mr. Balfour acknowledged that the Bill of 1902 was not perfect. "It left two anomalies—that of the single area and that of the Cowper-Temple clause." The Scotch system Mr. Balfour commended as logical; but whether it is a good or bad system he would not or could not say. The Chamberlain scheme is "something very different"; but whether Mr. Balfour is a Chamberlainian none can tell. After all, it is a signal testimony to the Government's impartiality that it has tried to please all parties and that no party is completely satisfied.

IT was a well deserved compliment that the Government paid to their ex-Minister of Education in selecting Mr. Acland to announce their intention of defraying by Treasury grants three-fourths of the expense that any Local Authority may incur in founding new local training colleges.

Training Colleges.

County Councils will not be slow to avail themselves of the offer, and thus not only will the supply of trained teachers be largely augmented, but a very real and substantial grievance of Nonconformists will be removed. Let us hope that this provision will not be restricted to primary education.

THE letter on the abolition of the Register signed by Mrs. Sidgwick and Mrs. Bryant deserves the prominent place assigned to it in the *Times* (May 28); but we

**A Register for
Secondary
Teachers.**

see no call to modify or alter our article on the subject, which was in print before the letter appeared. It tells us, first, that the Consultative Committee were not consulted in the matter; secondly, that the two ladies, whom Mr. Birrell did consult informally, did not "advocate a reorganization which would amount to an abolition of the Register now existing." They beg emphatically to state that, in their opinion, the abolition of the Register would be a great mistake. So far the letter only confirms and aggravates our charge of precipitancy; but in the last paragraph we must part company with the writers. The argument that the moment selected for abolition is ill-timed because it is only this year that the permanent regulations come into force seems to us double-edged. If only a tithe of the teachers entered by the open door, what fraction is likely to enter by the strait gate? "Not one per cent.," Mr. Birrell will answer—and quote the authority of the Registration Council. This point is arguable: but the final counsel of the letter—the maintenance of an exclusive Register of Secondary Teachers—however desirable in itself, is not practical politics. Even Mrs. Bryant would not have the courage to introduce a Bill to that effect in the present House of Commons.

THE Greek Conservatives have again triumphed at Cambridge, and this time the Trojan Radicals have been completely routed. The votes were: *placet*, 241; *non-*

**Greek
at Cambridge.**

placet, 747. On the last occasion, in March, 1905, the voting was: *placet*, 1,063; *non-placet*, 1,527. Various causes contributed to this defeat. Many thought that the question should not have been so soon reopened; many free-traders in studies disliked the compromise proposed in the second report of the Examinations Syndicate, and in particular the illusory distinction of degrees; lastly, there was a strong whip on the Conservative side, and none on the Liberal. We deeply regret, but are not surprised at, the decision. We are convinced that Greek will not gain: the quality of Greek is not strained; and Cambridge will undoubtedly lose by excluding the brightest wits of the lower middle classes, who are, with few exceptions, educated in schools where Greek is not taught.

LOCAL AUTHORITIES.

THE Report of the Birmingham Education Committee for 1905 begins with the statement that, owing to the dearth of applicants for certificated assistant mistress-ships, it has been found necessary to amend the scale. The revised scale begins at £5, or in some cases at £10, above the old one, and the maxima are increased by from £5 to £15. One result of the issue of the amended scale was a communication from the Birmingham Certificated Class-Teachers' Association calling attention to the disabilities suffered by teachers in the service of the Committee and appointed under the previous scale. The Committee agreed to set this right by raising the salaries in the cases under consideration. When all the readjustments are made a sum of upwards of £4,000 will be required to meet the additional cost. The Committee now employs over two thousand adult teachers,

an increase of nearly seventy over the previous year. In addition, there are some seven hundred pupil-teachers and candidates, and about seventy teachers of special subjects. The children in average attendance numbered fifty-seven thousand in Council schools and twenty-five thousand in voluntary schools. There are also eleven special schools departments, with forty teachers and eleven nurses and attendants. The average cost of these schools is as follows:—A deaf child costs £13 a year; a feeble-minded child, £8; a cripple, £16. The total average cost in an ordinary school is £3. 6s. 8d. There are 2,268 boys and 228 girls holding licences for street trading. Of these not less than 1,823 are still attending school, being under the age of fourteen.

AT the Central Secondary School, Birmingham, the cost of the teaching staff amounts to over £8 per child in average attendance; while the total cost per child is £13. 17s. 1d. At the George Dixon Boys' School the staff costs over £10 per boy, but the total cost is only £11. 18s. 1d. The additional cost of the former school is mainly owing to money given in the form of scholarships and prizes. The George Dixon Girls' School costs less than £5 per head for teaching staff, while the total cost is £6. 5s. 1d. This implies an enormously disproportionate payment of women teachers. At this latter school there are two hundred and fifty girls; the report tells us that "a tennis court has been established in the playground, which afforded the girls a good deal of healthy enjoyment." No doubt this is quite true; but what is one court among so many girls? At the George Dixon Boys' School we learn that one hour of the school week is devoted to gymnastic exercises. Again, we might ask, what is one hour? It is like a Christmas dinner given to the poor as a specific against starvation. But the Birmingham Education Committee is quite alive to the necessity for games and gymnastics. As a beginning, a field of seven acres has been rented for school games. New buildings are being erected for the George Dixon Schools, and "it is hoped that playing fields will shortly be secured for the use of the students." We all believe nowadays that physical fitness is no less important than intellectual agility. To provide for the former in large towns is a costly business, but it is an expenditure that brings valuable results.

WE have received a copy of the Handbook of the Somerset Education Committee, which, among other interesting matter, contains the conditions under which grants are made to secondary schools. The general principle is a capitation grant of £2 for each scholar up to 100, and £1 for each scholar between 100 and 150. As a rule a school of less than forty pupils will not be eligible for any grant at all. The minimum grant to any school will be £100; the maximum will be such that the total income of the school, apart from any payment in the nature of rent, does not exceed £12 per pupil. In a very small school, however, this limitation will not operate. It must be allowed that Somerset is not ambitious to establish schools of the character that Prof. Sadler urges, in which the cost would be from £18 to £25 per head. Further conditions specify that the grant must go towards salaries of head teachers of technical subjects. No such teacher must be appointed until the Education Committee has expressed approval. The fifteen secondary schools working in connexion with the Education Committee received last year the sum of £2,162, upon a total attendance of 1,120 pupils. Two new schools are urgently needed for boys, at Frome and in the Minehead district; and six for girls, at Frome, in Langport district, at Clevedon, in the Midsomer Norton and Radstock district, in the Minehead district, and at Wellington. The previous issue of this handbook contained particulars of an inquiry into the educational resources of the county, including private schools; but, in the issue before us, it seems that all grants are strictly reserved for schools with a body of governors upon which the County Committee is represented.

THE report of the General Education Committee of Wiltshire includes a survey of the secondary education of the county, which has been carried out by the Director of Education, Mr. Pullinger. There are three first-grade schools for boys and one for girls. A first-grade school is defined, for the purpose of this report, as one that gives a suitable preparation for a University career, and in which a considerable proportion of the pupils is well over sixteen years. A second-grade school is said to be one at which the leaving age is lower, and which has a less ambitious aim. Of this latter grade there are in the county ten of a public character (these are already aided by the county funds) and twenty schools of a private or semi-private character. The third class of schools consists of those in which the bulk of the teaching is essentially elementary. Mr. Pullinger adds: "The pupils who linger at these schools after reaching the age of fourteen years receive what may be regarded as secondary education." All the schools in this class are in private hands. "Speaking generally, and fully recognizing the existence of exceptions, these schools, as regards buildings, equipment, and staff, are distinctly

below the requirements of a good public elementary school." Altogether in the county, omitting the schools of Class 3, there are 44 secondary schools. Omitting the first-grade schools, which are largely non-local, we have 40 schools with an attendance of 1,670 pupils. Mr. Pullinger shows that further provision is needed, although in a thinly populated area a child may expect to have to go some miles to a secondary school. As to the kind of education that should be provided, Mr. Pullinger says: "It must be of a kind which will develop all the faculties of the pupil, in such a way as to make him or her a good and useful citizen. A true balance must be struck between mental and physical development; the provision of playgrounds as well as class-rooms must be looked to."

Domestic Economy. The Wilts School of Cookery and Domestic Economy appears from the report that has just been issued to be doing valuable work in a successful and satisfactory manner. The number of resident pupils has increased to 51, and the attendances at the day classes at Trowbridge have risen to 513. In addition, forty classes have been held by itinerant teachers. But, in spite of this work, the Committee "deplore the apathy which still exists in the rural villages of the county as regards technical instruction for women." The management from the point of view of the ratepayer gives opportunity for congratulation. The Committee has applied for a grant of £600 from the County Council: this is £100 less than the last year's grant, and £200 less than the grant of the preceding years. The work of the school includes the training of teachers in domestic economy, of adult pupils in domestic training, and of the training of young girls for domestic service. The report of the examiner recognized by the Board of Education states that, "although it ranks only as one of the smaller training schools, the Wilts Technical Training College for Women has an excellent reputation. The students who present themselves for examination are carefully and thoroughly taught. Both the practical and theoretical work are very good, and the examination results almost invariably satisfactory."

THE REGISTER ONCE MORE.

OPPPOSITION to the proposed abolition of the Teachers' Register is increasing both in weight and volume. It began with the protest passed by the Committee of the Head Mistresses' Association published in our last number. Since then the Incorporated Association of Head Masters, the Association of Assistant Masters, the Teachers' Guild, and the College of Preceptors have all passed resolutions against the discontinuance of the Register, or in other ways expressed their dissent. The Registration Council, on whose opinion contained in their last annual report the Board of Education in their justificatory Memorandum most relied, have repudiated the construction put on their Report. What they then urged, and urge again, was that a "comprehensive Register" should be framed in accordance with the Act of 1899—not that they should be bowed out with a polite expression of regret for consigning to the ragman their four years' labour.

Last, and most important, as it combines and concentrates these various protests, comes the resolution passed at a conference of representatives of Universities and educational associations convened by the University of Oxford on the 12th ult. Not only all the Associations named above, and others not named (e.g., the Head Masters' Conference), but all the English Universities, sent delegates, and a resolution was passed, with only three dissentients, categorically demanding the withdrawal of Clause 36.

The unanimity of secondary teachers, generally so divided in opinion, must needs make Mr. Birrell hesitate in applying the guillotine. If it is permissible to interpret that obscure palimpsest, the mind of a Cabinet Minister, Mr. Birrell was influenced partly by the dissatisfaction that the existing Register had excited in the whole body of primary teachers, as shown at the Scarborough Conference, and partly by the views of his permanent officials, who did not hit it off with the Consultative Committee, and desired a free hand for the Board to deal with all teachers and their training as it now deals with elementary teachers. He omitted to consult the views of secondary teachers, and we allow that in the absence of a Federated Council it is not easy to consult them. What is less excusable, he omitted to consult the Registration Council, which represents teachers far more than does the Consultative

Committee, and deserved at least a hearing before its death sentence was pronounced.

There is little new to be said on such a thread-bare subject, and we will not inflict on our readers a restatement of the position that we have maintained from the very beginning of the movement; but we would call attention to some statistics given in the Oxford memorial which traverse one of the main contentions of the Whitehall Memorandum, viz., that, in promoting the training of teachers—at any rate, of men teachers—the Register has proved a complete failure. "In Oxford alone the number of men taking a course of professional instruction during the current academic year has increased to fifty. At Cambridge since 1902 the number of candidates examined in the Theory of Education has steadily risen year by year from 145 to 262." The reasons are added why this increase in the number of trained teachers is not reflected in the Register. There has not been time since the Register came into operation for men who commenced residence at the University in that year to complete their course of training for a diploma, and Honours men cannot even have begun it. Further, it is only human nature to put off doing what may be done at any time; and the Board have not stimulated registration by affixing any official sanction.

We will quote the concluding words of the document:—"It will be apparent that the representatives present were unanimous in desiring that steps should be taken at this juncture to preserve the training of secondary teachers from any set-back or discouragement."

Numerous minor difficulties are involved in the abolition of the Register which Mr. Birrell did not foresee, or, at any rate, failed to forestall, when he announced his *coup d'état*. Recent schemes for endowed schools will need redrafting, as we pointed out last month. The promise to return the registration fee when made by a public Department which rarely disburses moneys received has an air of generosity; but suppose the proffered guineas are refused? Will not the registered in that case be legally entitled to style themselves registered teachers? And what of the claims already advanced for expenses incurred in order to qualify for the Register, in accordance with the express recommendation of the Council? Surely in equity they are equally valid. What, again, is to become of the Council's staff who were engaged, "quoad se bene gesserint," on the implicit understanding that the posts were permanent? What will be done with the material Register, the folios and cards on which the names are inscribed? Will they be preserved at Whitehall, or presented to the British Museum as a curiosity?

These may seem trifles hardly deserving the consideration of a Minister of State, but they all go to show that the decision was arrived at in a hurry. There is ample time before Clause 36 of the Bill is reached for Mr. Birrell, who has already given proof of his fairness and broad-mindedness, to repent at leisure. The main issue that he has to decide is plain. Are English teachers to become a branch of the Civil Service or one of the learned professions? Policy, as well as justice, pleads for a year's delay before passing sentence. It is surely prudent to lighten an overloaded Bill and abandon a most contentious and impertinent clause, even if its author regards it merely as a tub to the whale.

THE SCHOOL AS A SOCIAL CENTRE.

DURING the last few weeks the tariff (or fiscal) reformer has been shelved and the social reformer has taken his place. We have rejected the prosperity of the hothouse and have preferred the improvement which can be effected by social legislation. The present agitation has made it clear that no traditional point of view, no hitherto accepted principle is too sacred to be criticized; that no proposal is in danger of being refused a hearing on *a priori* grounds. When a Liberal Administration hints at a Load Line Bill for foreign ships, at old age pensions and a "back to the land" policy, and when a Minister of Education advocates in public the feeding of school-children, we may safely conclude that the last vestiges of *laissez faire* have disappeared, and we may accordingly pluck up courage to put forth ideas in our own special sphere which might well be called revolutionary.

The electorate seems, indeed, to be swinging back to an earlier point of view—to be regaining that consciousness of a national existence and of national weaknesses which was the dominant note in our ante-free-trade period; and, although we have accepted the contention of the individualists that full individual development is the goal we must reach, we are, nevertheless, prepared to interfere more than we should have done while our conception of liberty was poorer and more negative than it now is in the details of individual development.

Another strand which has woven itself into our political thinking is the conception which has brought order into so many other fields of thought—the conception of evolution. Much time and attention must, of course, be given to the setting right of existing difficulties and grievances; but this is after all hardly anything more than the mere patchwork of legislation. Real social progress is seen to be increasingly bound up with the welfare of the rising generation. Our schemes for advance become coherent and ordered when they are viewed from this standpoint, and by keeping in sight the good of the child we are likely to avoid mutually destructive conclusions and two-edged remedies. The social reformer has already realized that prevention is better than cure where the drink traffic is concerned, and there are signs that he is prepared to deal with other questions on the same lines. The interest in childhood is now greater than ever it was; but much of this interest will either evaporate or else waste itself in misdirected efforts unless it can be steadied and guided into useful channels. In other words, if machinery existed, or if there were known to be even the beginnings of a machinery, for turning this energy into effective work, social advance would rapidly become organized. But, as it is, one guild, union, or society after another springs up to do something for the children, each blessed with much enthusiasm, some money, little experience, and less skill in handling boys and girls in masses. These institutions flourish and wane and give place to others without their moving spirits ever realizing, apparently, that they are, to a great degree, wasting their energy and resources. Charity organization has made considerable strides of late; similar organization is much needed among those who wish to improve childhood.

Now the nucleus of such organization already exists: there are institutions which leave no child in the land untouched, and which are managed by those who in the lifetime they have devoted—devoted; for the payment they receive in no way represents the sacrifice and strain of the work—to the service of childhood have acquired an unrivalled knowledge, skill, and experience in dealing with the difficulties of the work. The schools are there; but the societies are enthusiastic, and would apparently rather fail gloriously than submit themselves to the cold, experienced guidance of the professional man.

But as time goes on enthusiasm begins to wane, and the earlier workers are prepared to leave their self-imposed tasks to the constituted authority, which has been awakened by their efforts to the necessities of the work they undertook. So at last the matter ends where it might have begun—as part of the business of the school. School banks, *cantines scolaires*, are *en* *ces* in point; and soon the teaching of temperance will be a part of the schoolmaster's duty.

Public departments which find that their researches and operations are not complete without reference to children have been far more ready to press the schools into their service. The Health Committee, the Poor Law Guardians, the Distress Committee make use of the school in different ways; and the Tramways Committee finds itself mysteriously (and often unwillingly) entangled in the education question by reason of the eternal shifting of population which it facilitates and the immobility of school buildings; also because of the increasing demand for excursions to parks and places of public interest that is being constantly made by teachers.

All this increased usefulness of the school is to the good, and there is no reason why a halt should be called at any given point. It is, however, necessary to remember that the schools were built and designed, and the courses and time-tables planned, from a very different point of view, and that grave difficulties arise if the newer conception of the functions of a school are merely placed, like Pelion upon Ossa, upon the older conception. It is undoubtedly because a modification of existing school organization has not accompanied the growth of the newer activities of the schools that teachers now view almost

with dismay the growth in the number of their cares and duties. They do not scorn these as mere fads or as beneath their dignity; but they simply cannot work at the continually lengthening list of subjects which utilitarians and faddists crowd into their time-tables, and at the same time serve dinners, examine eyes, measure chests, and do the hundred and one odd jobs, to say nothing of clerical returns, that have now become part of their daily duties. If the newer duties are so important—as they undoubtedly are—they should be allotted their due place in the school time-table, so that they may be done well, and without dislocating other work; and superfluous subjects, of which there are many, should be cleared out to make room for them, unless, indeed, authorities are prepared to raise the school age again. It might also be noted, perhaps, in passing, that the simplification of the time-table would be an educational as well as a social gain to the schools, and would do much to bring that alacrity and intelligence which Mr. Graham Wallas found in Parisian schools within our school walls also; while a brisker method of teaching and a rate of progress adapted to the needs of the head rather than to the needs of the tail of the class would do still more in the same direction.

If the school becomes a social centre, the schoolmaster becomes a repository of social information and a director of social inquiries—an official whose usefulness, responsibility, and professional integrity would give his pronouncements as much weight as those of, let us say, the Medical Officer of Health. Unfortunately, the schoolmaster does not, as a rule, desire such prominence. The original schoolmasters were monks—retiring individuals who kept themselves unspotted from the world—and teaching always seems to have attracted the monastic unworldly type of man.

This is a pity, not only because education in its fullest sense suffers loss thereby, but also because it has resulted in the public looking upon education as a thing apart—upon teachers as specialists who live in their own world and have little in common with their fellow-men, beings to be regarded with a mixture of awe and amusement, and who make ordinary men they meet uncomfortable because they themselves are ill at ease outside the schoolroom. Education has suffered much from the saint-like self-effacement of its professors: if, however, the schools become the recognized centres of the all-important juvenile movement, another type of man will be attracted to the work; and not only will the social usefulness of the schools increase rapidly, but their educational effectiveness will also go up by leaps and bounds as the men who wished to direct the real stream of progress take up teaching and convince the public that they are fit to enjoy full liberty and liberal support in their daily work, and are too strong and vigorous to be crushed by it into the common mould of the wistful pedagogue. At present, of course, the very reverse is the tendency; few men willingly become teachers, and many men of energy and enterprise drop continually out of the work of teaching to seek a wider range for their abilities. Thus, to keep good men where they are most needed—if for no other reason—the scope of the school should be enlarged, and the prospects, social and financial, of teaching brightened. The capital value of a great head master must be enormous. How often do the names of, say, Arnold and Temple occur in the biographies of their old boys! If men such as these were more common in our schools, the public would be in no danger of forgetting that education is but the early stage of the very complicated social question which it has to deal with, painfully and incompletely when it is fully developed; more easily, perhaps, in its earlier stages.

Even as things stand at present the schoolmaster inevitably comes into possession of a mass of facts which should prove of great value to social reformers; and, although these facts can be obtained also from other sources—although the relieving officer, the police court magistrate, the medical officer of health, the rate collector, the sanitary inspector, and many another has each his accumulation of experience, yet the schoolmaster's view is as a rule less one-sided, less prejudiced, and more humane than that of any other official. If he is a sympathetic, approachable man, he becomes the recipient of innumerable confidences, and is often asked for advice upon most unexpected subjects—the position attained by a village schoolmaster who has had two generations of children through his hands is as good an illustration of the value and significance of the teacher as any. In towns he is easily lost sight of; but the knowledge he acquires may well be of even greater value

to the authorities, especially as he reaches those who are not touched by other agencies—the quiet, shy, self-contained people who are painfully afraid of “officiousness” or “patronage” or “charity,” but who are nevertheless keenly interested in the welfare of their children, and who feel that they are “within their rights” in calling upon their children’s teacher—to whom they can consequently talk at their ease. In getting to know the thoughts and difficulties of these parents, the schoolmaster has an advantage even over the visiting curate.

Now all this knowledge ought not to remain locked up within his bosom: he has gained it in the public service, and in a very real sense it belongs to the public. He ought therefore to welcome any public use that can be made of it; and there is no harm in his calling public attention to its existence.

The teacher in an urban school realizes, more keenly perhaps than anybody else, the effect of city life upon a population. He is confronted by the fact that children ought not to be allowed to live within great cities; that a town-bred child is at a disadvantage comparable only with the inferiority of the cage-bred lion to his forest-bred relative. He knows very well that, even if the purely physical deficiencies of town-reared children can be made good by improved feeding, housing, clothing, and medical inspection, yet the vitality of his pupils must suffer as long as towns are what they must necessarily be under our modern industrial system. Overcrowding is not merely a matter of floor space and air volume per unit of population: the “towniness” of towns increases directly as, let us say, the square of their populations; and directly this “towniness” has reached a point at which town life is divorced from Nature—that is, directly a town becomes so large that a child of ten cannot reach fields and lanes in about a twenty minutes’ walk—the town begins to cripple and stunt its children, to dull them with its roar and blacken their lungs with its smoke, to suck in from the country side more vitality than it produces, and tends thus to lower the vital force of the race as a whole.

We know very well that our race cannot afford, in its competition with other races, so to handicap itself; and we need to be made to consider, as a people, whether we may not be buying our industrial prosperity at too high a rate—whether we are not paying our dividends out of our national capital, the vitality of our people.

I often wonder what the vintners buy
One half so precious as the goods they sell.

This wastage of the wine of life must be pointed out; and the schoolmaster has unique opportunities of proving his case.

The thoughtful teacher is not deceived by the apparent brightness of the urban child: he knows the percentage of dull-eyed, vacant-minded, listless, and exhausted children in his school; he knows also that the superficial smartness of the minority is, or may readily become, mere diffusiveness, inconsequence—the first stage, indeed, of mental degeneracy. The precocity of the street urchin is not a thing to give him pleasure.

In the matter of nervous stamina, of games, of interests natural to childhood, in the absence of all that slow growth of wonder and quiet pleasure which are of the essence of real, prolonged upbuilding childhood the teacher sees with more seeing eyes than the majority of his fellow-citizens; and he often marvels at the wonderful way in which natural instinct prevails over adverse circumstances. To him a skipping-rope across the pathway or a hoop entangling his feet are more than things to be cursed *sotto voce*. They are portents—and not comforting ones. Who, if not the teacher, shall speak up for children’s rights; shall call the attention of those who are neither hard of heart nor wanting in thought, but simply blind through use and wont, to the sinister significance of it all—to the vital importance of healthy childhood?

And may not the teacher venture further? May he not point out that any change in our fiscal system which stimulates manufactures will increase the size, and therefore the “towniness,” of towns; that wealth is more desirable in the form of a healthy population than in the form of increased industrial dividends?

If he were very bold, he might take even a step further and suggest that the protection of agriculture might, if accompanied by certain changes in our system of land tenure, tend towards the re-establishment of national physique; and he might even use his knowledge of the domestic economy of the poor to

explode certain popular misconceptions on the subject of “cheapness” and the “pleasures” of suburban and slum life as compared with the “dullness” of life on a large farm within reach of a great city. But such questions, together with the readjustments that would follow any modification of our present fiscal system, cannot yet, I suppose, form part of a paper in an educational journal; although they seem to me to be so closely interwoven with purely educational questions that I find it difficult to draw the line and say: “Thus far and no farther.”

Finally, if the English are the practical people they claim to be, they must consult the teachers on the religious question. It is, of course, quite natural that the leaders of the various sects should wish to capture the schools for their own purposes and should resent the intrusion of the State into a region which was designedly a forcing ground for their peculiar views. But now that the reawakening of a national consciousness (with its accompanying realization of national weaknesses) has made education a public matter, and since the State cannot prejudice the minds of its children in favour of any particular dogma—which, by the way, the children would neither understand nor feel any interest in—it behoves the practical man to ask the teacher what *he* thinks upon the subject. What would be the effect, one wonders, if the teachers’ answer were to take a form similar to that of the manifesto which several thousand doctors signed recently on the teaching of temperance?

Whatever a teacher’s own religious views may happen to be, he has, I think, a perfect right to challenge the assumption that religion can be boxed up into a lesson apart from the rest of the work of the school; and to protest against the use of the terms “religious” and “secular.” There is no such thing as secular education. If the clergy of all denominations are always urging us to bring our religion into our daily lives, they ought not to separate it from school work; to make it into a drug administered for the cure of some specific complaint—presumably original sin. We need, on the contrary, a religious atmosphere—not a sacerdotal atmosphere—the tone which pervades a school in which honest, hard, happy work is going unhurriedly forward. If the teachers are a monastic race, and consequently too retiring for the noise and strife of “religious” controversy, they can at least quote the old monastic motto: “To labour is to pray.” And in so doing they will arouse many sympathies. It is almost comic to let a man say what he will for four and a half hours a day, and then to watch and check every word he utters in the other half-hour. The definiteness of the “definite religious instruction” can be estimated by anybody who takes the trouble to look over Scripture papers written by school-children. And who can wonder at their lapses when one remembers that the whole subject is an abstraction to them, uneducationally taught of necessity? Has not a well known cleric recently confessed that as a boy he used to pray thus into his hat on Sunday mornings: “Lincoln, Bennett, & Co., Hat makers to Her Majesty the Queen. Extra quality. Sackville Street, Piccadilly, London. Honi soit qui mal y pense. Dieu et mon droit.—Amen.” And what would Prof. Armstrong say to the bishop who recently maintained, when speaking on religious instruction, that all teaching rested simply on the authority of the teacher?

If some of the attention which is now given to so-called religious instruction were given to the actual conditions of school work, a more religious tone would prevail in many a school. The most orthodox theology is as a mere feather-weight in the scale in comparison with the demoralizing effect of some practices—the mark system, for instance—that an ignorant or misguidedly sentimental public opinion forces upon schools of all grades.

FRANK J. ADKINS.

THE Princess Royal has consented to become patroness of a performance of Mr. Swinburne’s “Atalanta in Calydon” which is being organized, with the author’s permission, by Miss Elsie Fogerty for the benefit of the fund being raised to procure a new site and building for Bedford College for Women, University of London, York Place, London, W. The performance will take place on Monday, June 11, at 3 p.m., at the Scala Theatre, Charlotte Street, Tottenham Court Road. This will be the first time that Mr. Swinburne’s tragedy has been publicly performed in England.

A DAY'S CORRESPONDENCE ON THE BILL.

WE took last month a single issue of the *Times* as a sample of the education controversy, and that of April 30 tempts us to repeat our analysis. The Bishop of Southwark leads off by a declaration that "the Education Bill has sent a thrill of indignation through the whole Church of England, and is calling out a determined and united opposition from Churchmen." That will suffice. The Bishop of Hereford, who follows, shows that even the Bench is not united. He appeals to thoughtful Church people, both lay and clerical, to take no part in "the sweeping, uncompromising, and reckless opposition to the whole Bill, stimulated and embittered by the fiery declamation of some earnest, but short-sighted, zealots." Public control and the abolition of tests followed inevitably on the acceptance of rate aid, and the outcry against the supersession of trusts should have been directed against the Government of 1902. "The wild ecclesiastical outcry against Bible teaching to be given by the regular school teachers casts an undeserved reflection on the profession of teachers and an equally undeserved suspicion upon the members of our Local Education Authorities." The wise policy of Churchmen is to accept the second reading of the Bill and seek to secure amendments in the Committee stage—e.g., (1) liberty for the staff to give denominational teaching voluntarily and not as a part of their duties, (2) facilities for such teaching to be extended to all schools, (3) in schools with extra facilities a provision to secure that teachers shall belong to the same denomination as the majority.

The Bishop of Chichester states that in 1902 the Church of England raised for its schools six times as much as all the dissenting bodies put together, and yet the Bill "sweeps away practically all these schools."

Mr. Chamberlain would personally prefer secularism, but he will oppose a Bill which "transfers the grievance in an exaggerated form from the shoulders of Dissenters to those of every other sect in the country, and provides a million a year in the endowment of a new religion." Will Churchmen welcome as an ally a Secularist who looks on the Church of England as one of the sects?

The Bishop of Ripon proposes a *concordat*. He advises acceptance of the Bill with a slight amendment: "Facilities for denominational teaching to be given in all schools once or twice in the week—such teaching to be given (a) at the cost of the denomination, (b) at the usual hour for religious instruction, (c) by an authorized representative of the denomination, or by any member of the school staff who may be willing to undertake it under agreement with the denomination." We welcome the letter as a *sors Vergiliana*—

via prima salutis,
Quod minime reris, Graia pandetur ab urbe.

Lastly, the Dean of Norwich writes to point out that there is no connexion between the religious test that he would retain and the Test Act repealed in 1828. All he demands is a guarantee that the teacher of religion is competent to give religious instruction, just as the French teacher is required to give proof of his knowledge of French. But is not the Dean himself playing with words? No one would object to a test in Biblical knowledge; but, if every French teacher were compelled to declare himself a follower of Gouin or Alge or Berlitz, the Modern Language Association would protest no less strongly than the N.U.T. has protested.

SOCIETY OF FRIENDS ON THE REGISTER.—The Central Education Committee of the Society of Friends has heard with regret of the intention of the Government to abolish the present Register of Teachers without proposing any adequate substitute. For more than fifty years the Society of Friends has laid stress on the importance of training for the teaching profession, and, in the experience of the schools under its care, the present Register has not only proved a strong incentive to teachers to obtain full qualifications, but has also impressed them with the essential value of professional training. Three of these schools have been recognized for the training of teachers, two of them for men. The Committee therefore earnestly urge on the Government the need of maintaining some form of Register which will do justice to those who have made efforts and sacrifices in order to obtain a position on the present Register, will continue to emphasize the importance of training for teachers, and will help to raise the status of the profession.

COLONIAL AND FOREIGN NOTES.

FRANCE.

Of "methods" for teaching modern languages there is no end; and in the rapturous welcome of each new-comer we are liable to forget the real serviceability of many old-fashioned processes. But over this general truth we must not here linger. We will but call attention to one particular method, or auxiliary of a method, which seems to be gaining ground in France: boys are encouraged to conduct debates in the modern language that they are studying. Thus at the *lycée* of Le Havre, a debating society, over which one of the teachers of English presides, holds weekly meetings for the discussion of such questions as vegetarianism, the relative merits of country and town, a comparison between tennis and football, or the duration of the holidays. The subjects are announced a fortnight in advance, and the speakers are likewise chosen beforehand. Members of the society take turns in drawing up minutes of the proceedings. Such exercises seem to us likely to be productive of good for pupils who have gone far with their studies in the language. As to another form of debating, we have the most honest doubts. At the *Lycée Michelet*, of Paris, the "Académie"—a society of the pupils that has been formed to organize literary and musical *matinées*—lately arranged a polyglot discussion: a French boy, an English, a German, and a Spanish boy holding forth, each in his own tongue, on the unforeseen subject "*Le bouton à quatre trous: son origine, son utilité.*" There are English public schools at which the performance would hardly have made for true education.

Foreigners who have taken the doctor's degree at Paris have appealed to the University for authority to assume in their native land some emblem that may show their rank. The Council of the University has granted them permission to wear over the gown of any foreign University *Péplage à trois rangs d'hermine* in the colours of the town of Paris. If the doctor be not entitled to the gown of any University, he may adopt the ordinary black gown of French public instruction.

But we pass to a more important topic. It looks as if France were really about to introduce some scheme of free secondary education. M. Massé had prepared a bill, which was referred to the Education Committee, for giving effect to the aspirations for this vital change. His project falls to the ground for the present, owing to the dissolution of the Chamber. But we shall hear of it again; so that the details are interesting. The preamble sets forth that at present the system of secondary education in France is not in harmony with the political régime, which is at once democratic and republican. The *lycées* and *collèges* are practically reserved for paying customers. If there are scholarships and remissions of fees, they are but the concessions of wealth to poverty. It is only incidentally, and in isolated cases, that the people profit by an institution that imposes a burden on the national exchequer. Yet the Republic should choose indiscriminately from all classes of society those choice minds that are fittest for its highest work. What it does in fact is to sell secondary education like an article of luxury. The paying *clientèle* has its place in the *lycées*, but only the second place; the first belongs to those who are capable of transmitting to the people down to its lowest stratum the lessons of science and modern thought. As to its actual proposals, the bill is of a tentative character. It would organize two free sections in one or two *lycées* of every *académie*, and only for the second cycle. Each section would comprise four classes: *troisième*, *seconde*, *première*, and *Philosophie* or *Mathématiques*. The sections specified are A (which studies Greek and Latin) and D (science and modern languages). They would be formed of pupils selected by competition from the primary and secondary schools of the *académie*.

M. C.-A. Laissant, Examiner at the *Ecole polytechnique*, dedicates to the friends of childhood a book that he calls "*Initiation mathématique*," in which he employs amusing questions as a means of exciting the curiosity of children and so instilling into them first notions of mathematics. Thus geometrical progression is introduced through the story of a man who, having a house reached by 26 steps, required a purchaser to place one centime on the lowest step and to double the amount for each succeeding step. It is an example of progression that has appeared in many forms. New to us is the following problem. Ask pupils what is the largest number that can be formed with three 9's. They will reply 999. No; the answer is 9⁹⁹; that is to say, 9 raised to the power 99, or, as M. Laissant calculates, 387,420,489. These things are puerilities, we shall be told. That is true; but it is just with puerilities that a child may often be most fitly approached. It is senilities (Greek "trees," for example) that we would banish from our class-rooms, not puerilities, so long as they be aptly chosen and applied.

Attractions to Mathematics. M. C.-A. Laissant, Examiner at the *Ecole polytechnique*, dedicates to the friends of childhood a book that he calls "*Initiation mathématique*," in which he employs amusing questions as a means of exciting the curiosity of children and so instilling into them first notions of mathematics.

GERMANY.

Those who are weary of the "religious difficulty" may perhaps be willing to turn their minds for a few moments to the

The New Pedagogy.

pedagogy, a science about which the manipulators of the aforesaid difficulty care little and know less. The watchword of the New Pedagogy in Germany is *Persönlichkeit*, personality, and its aim is *die Pflege der Persönlichkeit*, the cultivation of the personality. What it would realize is determined not by religious and moral considerations, not by political and social circumstances, but by the child himself. The child is to be educated not for some external purpose or to fit him for use as the instrument of others, but for himself and his own perfecting. This perfecting is not directly with a view to his happiness—that was the scope of the old Eudæmonistic Pedagogy. Nor does the New Pedagogy seek to convert its objects into normal men, harmoniously developed, as Early Humanism sought. It begins with the assumption that every child has a distinct personality, to preserve and foster which must be the end that the educator pursues. Since Nature plainly requires variety of type, it is contrary to Nature to shape all children with the same mould, as if uniformity of mind and character were a legitimate goal. Diversity rather than uniformity is to be approved. And the individual personality must not be fashioned from without by such an artificial enlargement of the circle of thought as Herbart, for example, prescribes: it must only be stimulated by education and must, in the main, unfold itself, as a flower grows from its innate life. The method of instruction must be accommodated to the object proposed: it must not cram dead knowledge in, but incite to attainment. Neither catechesis, with artful arrangement of question and answer, nor preservative instruction (*darstellender Unterricht*) will serve the purpose. Instruction must, as far as possible, start with little problems that the child can solve for himself. His right to put questions to the teacher must be freely conceded; and, once stirred to think, he must then be at liberty to follow untrammelled the direction of his thought and to draw his own conclusions.

Our readers will see that the New Pedagogy is essentially a reaction against that uniform training often alleged to be one of the chief faults of our English public schools.

Thoughts about it.

Boys are educated in large groups from a quite prosaic regard for economy, and the system inevitably results in a certain sameness of type. But the stamp is frequently a good one. And education in a society to be a loyal member of it is a fit preparation for the larger life of a community of citizens. Time is doubtless often wasted in a conflict with Nature. But we are liable to underrate her power to care for herself. William Morris could go through Marlborough and Oxford and remain William Morris, with small distinctive impress of either institution. Even in the schools where boys are most fully occupied there are intervals when they may follow the bent of their own thoughts and inclinations. Those who are keen in scenting out "religious difficulties" will observe, by the way, that the New Pedagogy overlooks or rejects the doctrine of original sin.

Both in France and Germany there is much talk of the means to be employed for the training of primary teachers. In France it is urged that the normal schools are useless, since the *lycées* and the Universities combined could do their work. Multiplying Universities, as

The Training of Primary Teachers.

we are multiplying them in England, we may perhaps be rendering some other parts of our educational machinery superfluous. In Germany, Dr. Richard Seyfert's proposals are attracting no little attention. He does not suggest the abolition of the *Seminare* (training colleges), but he would transform them. After the *Volksschule*, raised and improved, he would put a *Seminar* of five classes, having for its aim not special, but general, education, and seeking above all—this is the New Pedagogy—to develop the personality of its pupils. They would proceed from this institution to a pedagogic academy (to be newly created), having a two years' course, in which the future teachers would receive their professional training. The obligatory subjects in such an academy would be philosophy, German, and pedagogy; whilst there would also be instruction in *Realien*, languages, and music. Secondary teachers would likewise be trained in the pedagogic academy. The matter interests us as a sign of the growing tendency to demand for primary teachers a wider and more liberal education. If we are indeed to have a national education, no educational advantages should be grudged to those who will have to educate the great majority of the nation.

From the making of teachers we pass to the making of officers. The regulations for the *Fähnrichprüfung* (examination for the rank of ensign), to which we are about to refer, are, if not exactly new, none the less instructive. First of all, they show that the German military authorities have small love for army crammers. "The requirements," it is stated, are so measured that a young man who has undergone regular school instruction and is qualified for admission to *Prima* (say sixth form) does not need to attend any special place of preparation before presenting himself for the examination. If he finds it necessary to revise or supplement what he has learned, he can easily do so by himself." Seven subjects are set for those coming from each of the three higher schools.

Those from the *Gymnasium* must offer German, Latin, Greek, French or English, history, geography, and mathematics; those from the *Realgymnasium*, German, Latin, French, English or Russian, history, geography, and mathematics; and the *Oberrealschüler*, German, French, English or Russian, history, geography, mathematics, and natural science. This last-mentioned subject is accepted now for the first time as a full equivalent for Latin: the examination in it is oral, and embraces chemistry and physics. But what heavy doses of languages! Those who contend that verbal subjects have received an undue share of attention in schools may draw justifying examples in abundance from Germany. It will be seen that for the *Fähnrichprüfung*, in the case both of the *Gymnasium* and the *Realgymnasium*, five subjects belong to the category of verbal studies and only two to the department of mathematics and science; and this for future officers!

But now enough. Germany, as the newspapers will make clear, has also her own "religious difficulty" just at present. We will not expatiate thereon, deeming one "religious difficulty" at a time to be enough for any man or any nation.

UNITED STATES.

So far as educational institutions are concerned, the partial destruction of the Stanford University has been perhaps the most striking effect of the earthquake at San Francisco. Founded by Senator Leland in memory of a child, who died at the age of sixteen, it was laid out on the plan of the old California missions. An inner quadrangle surrounded a court, whilst a series of outer quadrangles, consisting of two or three storied buildings, were connected with the main quadrangle by means of arcades. Opened to students in 1891, the infant University, owing to legal and other difficulties, had at first to fight hard for life. It had grown to strength before this latest blow fell, and possessed an endowment estimated at thirty-three million dollars. The trustees will thus be able to proceed at once with the work of restoration; and the earthquake will doubtless be remembered only as an episode in the history of a hardy and adventurous youth.

The National Educational Association had arranged to meet at San Francisco this summer. It seems that the design of assembling there will be carried out unless the citizens declare themselves unable to entertain

The Teachers of San Francisco.

visitors. As to the teachers of the cruelly ravaged city, it is satisfactory to learn that they enjoy an unusually favourable position. Supervisors of music and drawing receive 135 dollars a month, of manual training and physical culture 150 dollars. The principals of high schools are paid 250 dollars a month, heads of departments 150 dollars, whilst assistants begin at 100 dollars, this salary rising by annual increments for four years to 140 dollars. The *School Journal*, to which we owe these details, gives the following account of the educational system:—"In San Francisco, in addition to the scholarship test, before it is possible to obtain an appointment each candidate must pass a competitive written besides an oral examination on the theory and practice of education. All obtaining a passing mark are listed and ranked according to their marks, and substitutes are taken from this list in strict order. Only the grammar and primary schools are under the civil service régime. After appointment, all teachers are on probation for two years; then, if their work is satisfactory, they have a life position, unless found guilty of immoral conduct, insubordination, &c. Certificates are valid for six years, and after five years in the city of San Francisco and throughout the State certificates can be made permanent. While the examinations are not very difficult, especially for those who have had some experience in teaching, they are sufficiently so to keep the teaching force up to a high mark of efficiency."

Bishop Woodcock told at Louisville the story of an Australian ranch "run" by four men, one a graduate of Oxford, one of Heidelberg, and one of Leipzig, the fourth being a man who could neither read nor write, but who owned the ranch and employed the other three. We feel bound to believe the story, since it was sponsored by a bishop, although it looks like an old acquaintance in a new dress. We venture to hope that Bishop Woodcock added a few words of pity for the ranch owner, whose sorry figure in the presence of his subordinates must serve as a continual advertisement for schools and colleges. That, we take it, is the true point of the story.

A Bishop's Story.

CANADA.

The Minister of Education for the province of Ontario, in concluding his annual report for the year 1905, regrets that the general tone of it is not more optimistic. An educational system depends for its efficiency on

Of Teachers.

nothing so much as on the teacher. In this respect the present situation of the Province is not reassuring. The proportion of men teachers is rapidly decreasing, while the new male recruits for the educational service are so few that they may almost be disregarded. Often it is hard to get even women teachers for rural schools, because of the isolation and other unfavourable conditions. They will accept less remuneration in a town school. In this lack of qualified persons the pernicious system of granting temporary certificates or "permits" to unqualified applicants

is still in vogue. The Minister appeals for united action on the part of parents, school officials, and all concerned in school administration to aid him in overcoming an evil of the magnitude of which he seems quite conscious. The average salary of a man teacher is 485 dollars; of a woman teacher, 335 dollars. The best remedy for the evil would be to double the figures.

If the number of public schools shows a slight increase, there is a falling off both in the number of enrolled pupils and in the average daily attendance. It is satisfactory to observe that the number of kindergartens has risen from 123 to 129. The secondary schools (high schools and continuation classes) have added a small percentage to their pupils. Of the schools in general, the rural schools show the greatest decline, principally owing to the movement, now for many years in progress, of the farming population to North-Western Canada and to the cities and towns of Ontario itself.

INDIA.

The Madras Educational Department has decided to award a hundred and eighty scholarships annually in recognized technical, industrial, or art schools or classes in the Presidency. The scholarships range in value from one rupee to ten rupees a month, and will be tenable in some cases for one year and in others for two years. And, as to India generally, a movement is on foot to induce the Government to make substantial grants for the establishment of technical colleges and schools throughout the peninsula, and for the foundation of at least one great central polytechnic institute.

The Report of Public Instruction in Jaipur State (1903-4) shows that of the boys of school-going age 96 per cent. were enrolled as scholars; of girls 37 per cent. Those who seek to discredit the use of books in schools will regard the Director of Public Instruction as being of reactionary tendencies. He writes: "The largest numbers of the indigenous schools were the Hindi Chatsalas. Their one common defect is that they use no printed books. The Joshis begin with multiplication table and arithmetic, and their only aim is to make their students good calculators and adepts in bazaar accounts. It has been my endeavour to gradually introduce the use of printed books into these schools, and to do this Hindi readers are distributed *gratis* as prizes to the students of such schools at the time of inspection." Turning to the Report for Gwalior in the same year, we observe that girls there are better off. Of boys of school-going age 85.3 per cent. are under instruction; of girls 53.4 per cent. The Report explains why the relative proportion of girls at school is larger. "Under the fostering care of his Highness, female education is growing more and more popular in this State. Popular reluctance is being overcome by explaining the advantages of female education in public meetings, and by showing to village people the work in sewing and knitting done by the girls of the Maharani's Girls' School."

AUSTRALIA.

There is likely to be a lull in educational legislation in the bigger States of the Australian Commonwealth for a year or so, though sectional agitation for further instalments of reform and expansions of University activity will go on without remission of energy. The Queensland Government, now headed by a Labour Premier, Mr. Kidston, has shelved the responsibility of grappling with the proposal to reintroduce official Bible teaching in State schools by announcing that, with the co-operation of the Federal Authorities, a referendum will be taken at the Commonwealth elections at the end of this year. The South Australian Government, which recently parted with one of its smartest educational servants, Mr. Neale, who became Director of Education to the island State of Tasmania, is now complaining that Mr. Neale is tempting away to "the garden State" others of its clever and ambitious teachers. The South Australian Government has a Labour Premier, Mr. Price, but that fact does not prevent the liveliest of objections being entertained by the Local Ministry to a fluid State educational service.

Most of the Australian Rhodes Scholars for 1906 have now been selected. As usual the majority of them graduated from State elementary schools. Mr. J. A. Seitz, the Victorian scholar, a lad of twenty-two, now one of the assistant masters in a Melbourne suburban grammar school, began in a State school and rose by means of scholarships. Australian democracy is proud to know that Oxford is to be leavened with ex-State-school boys. Mr. Seitz is a "sport," and in 1904 made 195 runs in a match between Trinity and Ormond Colleges here (Melbourne).

Military and naval training is greatly interesting the Australian Universities just now. Sydney has decided on a Chair of Military Studies. Melbourne is to go one better with a Chair of Naval Science. At a meeting of the University Council held on March 5, Dr. Barrett moved, Mr. H. B. Higgins, M.P., seconded, and it was unanimously resolved: "That the Minister of Defence be respectfully requested to afford him facilities for obtaining the necessary information and for reporting to the Government and to the University respecting the best method of establishing a School of Naval Science in the University of

Melbourne." Captain Cresswell, the Australian Naval Director, now on a visit to England, was, Dr. Barrett said, willing to carry this out. If the Minister acquiesced, it could be put in form, and Captain Cresswell could be advised at once. It seemed that Australia was going to be a maritime nation, and that therefore naval architects would be wanted.

At the same meeting at which the naval resolution was passed another most interesting motion was carried. It called on the Professorial Board to "advise the Council respecting the desirability of organizing a method of physical training and of military instruction for all undergraduates at the University." This is eloquent testimony to the growth of the movement in Australia for the compulsory training of the young in the use of arms and simple drill. By means of this movement, the widespread rifle clubs, and the numerous cadet corps the bogey of conscription is being fended off.

The new State Boards in Victoria set up for the registration of all secondary teachers and for the classification of State teachers have begun their existence under favourable auspices. It will be a few years before their work effects a complete weeding out of incompetent pedagogues, but their mere initiation has already had a good influence in "tuning up" the existing small secondary schools and preventing the spread of sweated suburban dames' schools.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council, of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but the "Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

THE Committee met on April 7. Present: The Rev. H. Wesley Dennis (Chairman), Miss H. Busk, Mr. R. F. Charles, Mr. H. V. Dawes, Mr. C. Granville, Mr. J. N. Hetherington, Mr. H. A. Nesbitt, Miss E. Newton, Miss E. J. Notcutt, Miss M. Penstone, Mr. F. Storr, Mrs. J. S. Turner, and Mr. Trevor Walsh.

The heads of the twenty-second Annual Report of the Council were settled.

On the subject of the proposed abandonment of the Teachers' Register the following resolution was carried and sent to the President of the Board of Education:—"The Council of the Teachers' Guild, while agreeing with the President of the Board of Education that the present scheme of registration has not been found workable and had better be terminated, hope that the Education Bill will confer powers on the Board to prepare and put in force a revised scheme for the registration of teachers."

Forty applicants were elected to membership of the Guild: viz., Central Guild, 16. Branches: Bath, 7; Bournemouth, 1; Cheltenham, 2; Dublin and Central Irish, 1; Guernsey, 11; Oxford, 2.

The arrangements for the Annual General Meeting and the Presidential Address were settled.

Reports from the Finance and Organizing Committees, and a Report from a joint sitting of the latter with the Political Committee, were received and adopted.

The Council met again on May 10. Present: The Chairman, the Rev. J. O. Bevan, Mr. H. C. Bowen, Miss Busk, Miss F. Edwards, Mr. Granville, Mr. Hetherington, Prof. W. H. H. Hudson, Mr. A. Kahn, Prof. Lyde, Miss Penstone, Mr. Storr, and Mr. J. S. Wise.

The draft Annual Report of the Council, to be presented to members, with the accounts, at the General Meeting on May 22, was read out and discussed, clause by clause, and settled.

The hearty thanks of the Council were voted to the Sheffield Branch for their reception and entertainment of the Guild at the General Conference in April.

Reports from the Finance and Holiday Resorts Committees were received and adopted.

The proceedings of the Officers' Meeting at the Sheffield Conference were also reported.

Ten applicants for membership of the Central Guild were elected.

The Preliminary Committee to consider the desirability of organizing a General Education Congress to meet annually in London in the Christmas holidays met in the National Society's offices, Westminster, on May 17. The Guild had selected twenty educational associations, including itself, to be asked to take part in this meeting. Of these fifteen appointed representatives. There was an attendance of thirty persons, representing fourteen out of the fifteen. The Chairman of the Guild Council was voted to the chair, and on his leaving, near the end of the sitting, the President of the National Union of Teachers succeeded him, on his invitation. The meeting agreed, *nem. con.*, that the establishment of such a Congress to deal with purely educational

questions was desirable, and the representatives present undertook to report this decision to their respective associations, with a view to the appointment of a Provisional Committee to make detailed suggestions.

The Annual General Meeting of the Teachers' Guild for the year 1906 was held in University College, Gower Street, W.C., on May 22, at 7.30 p.m., the Chairman of Council (the Rev. H. Wesley Dennis) presiding. There were about eighty members present. The Annual Report of the Council and Statement of Accounts were presented. It was agreed to take them as read.

Attention was called to the attitude of the Council, as explained in the introductory paragraph of the Report, towards the proposal to abandon the Teachers' Register and especially to the opinion expressed that "The Guild and all associations of teachers that are like-minded on this subject should press strenuously for the establishment of a Statutory Educational Council," as suggested by the Bryce Commission in its Report (1896), "to which the formation of a comprehensive Register shall be entrusted, and for the drafting, in the first instance, into that Register of all who are already on Column B of the Register of 1902, and of such members of Column A as possess the credentials to be required by such a Council, on payment of the same fee as has been paid by Column B members."

On the subject of schemes for secondary endowed schools, dealt with on pages 8 and 9 of the Report as circulated at the meeting, Mr. Thomas Allen (Worcester) proposed that the schemes to be collected by Council, as announced, should be sent down to the Central Guild and to all Branches.

The Report, as printed, with the statement of accounts, was approved for circulation, *nem. con.*

An explanation of the loss on the subscriptions for *The Journal of Education* supplied to members was given in response to an inquiry from Mr. Allen. The explanation showed that on a proper adjustment of the statement of accounts current and the balance-sheet the loss under this head in the year 1905 was £11. 19s. 11d., of which £7. 10s. represented the cost of supplying *The Journal* to twenty-five life members, whose subscriptions had been paid in past years, and were in part capitalized in the Endowment Fund, leaving £4. 9s. 11d. not fully accounted for, but mainly the result of unavoidable wastage, owing to the subscriptions for *The Journal* allowing no margin over the cost of supplying copies to those who paid for it.

The second resolution on the agenda, dealing with the election of new general members of Council, and of an auditor of the accounts of 1906, was carried *nem. con.* Under this resolution the following were elected to the Council:—Augustus Kahn, Esq., M.A., Lecturer at University College, and Head of Commercial Department, University College School, W.C. (a member of Council co-opted since last Annual General Meeting); Miss Mary Cocking, L.L.A., Head Mistress of the Holborn Estate Girls' School, W.C.; the Rev. R. Hudson, M.A., Principal of St. Mark's Training College, Chelsea, S.W.; Miss Emily E. Kyle, B.A., Vice-Principal of the Home and Colonial Training College, Highbury Hill, N.; Miss M. W. Tullis, Principal of Leatherhead Court, Leatherhead, Surrey; and Mrs. Harold Cox, accountant and auditor, 6 Raymond Buildings, Gray's Inn, W.C., was appointed Auditor of the accounts of 1906.

On the motion of Mr. Allen the meeting expressed the following opinions as to amendments that should be incorporated in all schemes of the Charity Commissioners and Board of Education:—(1) That the clause entitled "Dismissal without cause assigned" should be expunged. (2) That to the clause entitled "Dismissal for cause assigned" there should be added the words "Before the first meeting (of Governors) there shall be sent to the Head Master a copy of the charge or charges he has to meet." (3) That the clause entitled "Declaration of Head Master" should be expunged. (4) That the schemes should provide for both head and assistant masters a right of appeal, in case of dismissal, to the Board of Education.

On the conclusion of the business of the meeting members went to the Botanical Theatre of the College, where other members were waiting, for the Address of the President of the Guild, Dr. Alex. Hill, Master of Downing College, Cambridge, on "The Acquisition of Language and its Relation to Thought." The address, which occupied more than an hour, was listened to with the closest interest throughout. A hearty vote of thanks to the President for his address was moved by Mr. H. C. Bowen, seconded by Mr. J. N. Hetherington, and carried by acclamation. Members of the Guild will have the advantage of reading it in full in the *Teachers' Guild Quarterly*, June number. (Price of the *Quarterly* to non-members, 6d.)

We append a short summary of the Annual Report. The introductory paragraph, from which an extract has already been taken, deals with the Teachers' Register at some length, and examines some of the arguments set out in the unsigned memorandum of the Board of Education on the subject of the abandonment of the Register. It attempts to show that, even if from the point of view of the Board, in regard to its own requirements, the Register may be of no service, it is essential for the purposes of a teaching profession, as such, and suggests a constructive plan of action as already set out in the account of our Annual General Meeting.

Short reference is made to the Education Bill, apart from Clause 36 (abandonment of Register). The Report points out that the Guild, being an undenominational body, is not likely to be able to come to any general agreement as to the merits of the Bill in so far as Part I., which raises the religious difficulty, is concerned. "The Chief Work of the Year" is the title of a long paragraph, which contains the real kernel of the Report viewed as a claim on the continued support of members. The paragraph sets out the memorandum of the Council on "The Remuneration and Tenure Conditions of Teachers in Secondary Schools"—in many ways, perhaps, the most important utterance of the Council, and one which has secured wide-spread attention. It passes on to mention the auspicious start made by the new Education Society of the Teachers' Guild in lectures by prominent authorities—Prof. Lloyd Morgan, Mr. Keatinge, and Mr. Arthur Sidgwick, and in discussions and observations on "The Teaching of English" and "The Teaching of Mathematics." It then mentions the scheme for an Annual Congress of Educational Associations, and the proposal to appoint a Scottish and an Irish Committee of Council, in order that the Council may be "kept in better touch with the educational needs of the sister kingdoms," the Guild being "The Teachers' Guild of Great Britain and Ireland." Reference is made to the action of the Council in connexion with the new schemes for Ipswich and for Tiverton. The Chairman's letter to the President of the Board of Education on the subject of "The Teaching of Thrift in Schools" is set out in full, also the memorandum on the question of excluding from primary schools children under five years of age.

An account of the General Conference at Sheffield in April, 1906, forms the next paragraph, which is followed by a statement on the subject of the Modern Languages Holiday Courses organized by the Guild, with an attendance of 130 students in four centres, French, German, and Spanish, in 1905.

The next subject is the Special Deficit Reduction Fund, which stands at £405. 9s. 9d., and has proved sufficient to wipe out, very nearly, the adverse balance which seriously hampered the Council at the beginning of the year. The arrangements for further retrenchment to avoid the accumulation of a new deficit are explained.

The resignation of the Chairmanship of Council by Mr. S. H. Butcher, on his election to Parliament, is mentioned, with regret at losing his valuable help; and the death of four prominent friends of the Guild who have held official positions in its organization is noted.

The Benevolent Fund, Library and Bureau of Information, Legal Advice, and Investment and Assurance departments, and the *Teachers' Guild Quarterly*, supply the next headings of the Report, and are followed by a short paragraph on "The Central Guild and the Branches."

The concluding paragraph expresses the feeling of the Council that "the two main immediate objects at which they and the whole Guild should aim are professional unity and the training of all teachers," and adds that "it was chiefly for the purpose of promoting professional unity and training, with their consequences, that the Guild came into existence."

BRANCHES.

Bath and East Somerset.—A revival of interest in the work of the Guild has lately been shown by this Branch. The Annual General Meeting was held on Wednesday, February 7. There was a fair attendance of members, and the following were elected officers for the current year:—President, Mr. A. Trice-Martin, M.A., F.S.A.; Vice-President, Mr. W. P. Workman, M.A.; Hon. Librarian, Miss Hulland; Hon. Secretary and Treasurer, Mr. H. T. Barnard Hodges, B.A. General regret was expressed by the Committee and members at the resignation, owing to stress of other duties, of Mr. S. Edwards, who for many years past has done such good service to the Guild both as member of the Council and also as Hon. Secretary and Treasurer of the local Branch. With regard to the communication from the Council respecting representation being made to the Local Authorities as to the proper remuneration of teachers and the system of tenure, it was unanimously resolved (upon the proposal of Miss Blake, Principal of the Royal School, Bath): "That the Branch expresses its hearty support of, and sympathy with, the general purport of the suggestion of the Council; but regrets that the question of pensions was not included in the same." Mr. E. W. Symons, M.A. (Head Master of King Edward VI. School), was elected as corresponding member of the Education Society, and the names of seven new members were received. The second meeting of the Branch took place on March 28, when a considerable number of members attended. A visit was first made to the well known Roman Baths, permission to view them having been kindly accorded by the Mayor of Bath (Mr. C. Oliver). There the members had the pleasure of listening to a very interesting address by the President upon the historical side of the subject, which was followed by a lengthy inspection of the Baths themselves under the guidance of Mr. A. F. Taylor, the City Architect, to whom the members are deeply indebted for the benefit of his practical knowledge and wide local research. An adjournment was made for tea, which was kindly provided by the Hon. Secretary; and afterwards a visit was paid to the

noble Abbey Church of Bath, over which the party were personally conducted by the Rector, the Rev. Prebendary Boyd, M.A., who gave a most interesting and detailed account of the Abbey from the earliest times, and pointed out the remains of the original Norman church, which are now mostly underground. The third meeting was held on Wednesday, May 16, at the Literary Institution, when a large number of members attended to hear a most able and instructive address by Mr. R. H. Chope, B.A., upon the "New Geometry." Mr. Chope pointed out many drawbacks and inconsistencies in the methods of Euclid, and maintained that when mathematicians could agree upon a uniform and suitable sequence of propositions the New Geometry would be recognized as a thoroughly efficient system, more practical—though, perhaps, somewhat less logical from a philosopher's point of view—than that of Euclid.

Glasgow and West of Scotland.—The Branch held its Annual Meeting on May 15, in the Church of Scotland Training College, Glasgow, Mr. Dan. G. Miller, M.A., the President, in the chair. There was a good attendance of members present when the Honorary Secretary rose to read the Committee's report for the year. The report shows that the Branch is in a most prosperous condition. The session just closed has been marked not only by an excellent series of lectures and discussions, but also by a steady increase in the membership. The Treasurer's accounts also show a handsome balance to the credit of the Branch. During the year the Committee have been able to co-operate with the committees of two other educational associations in Glasgow, so that joint meetings with these were arranged and carried through. The Branch continues to take an active interest in current educational problems. "The Teaching of Geography and its importance in Commerce"—a question which has been much before the public lately—was the subject of a special paper in November, and since then resolutions, embodying suggestions which the Branch believes would tend to make the teaching of geography more effective and place it on a basis more commensurate with its practical value and utility have been adopted by the Committee and submitted to the Scotch Education Department and other public bodies interested. The question of public libraries and their accessibility to the teacher was also before the Branch, and overtures have been made to other educational institutions and associations in Scotland to co-operate with the Branch in discovering how the wants of the profession in this direction may be best satisfied. The Branch is also in communication with the Royal Scottish Geographical Society, and it is hoped that before the beginning of next session members of the Branch will have the privilege of becoming members of the Society on special terms. The Branch welcomes the formation of an Education Society in connexion with the Guild in London, and looks forward with much interest to its work. On May 19 the Branch held its annual excursion to Millport Marine Biological Station, and through the courtesy of Dr. I. F. Gemmill and his assistant, Mr. J. G. Connell, the members had an opportunity of seeing the various tank rooms and living specimens. The special classes for teachers in this institution are growing in popularity every year. The following office bearers were elected for the coming session:—President, Mr. Dan. Geo. Miller, M.A., Church of Scotland Training College, Glasgow; Honorary Secretary, Mr. A. Pender Crichton, M.A., The University, Glasgow; Hon. Treasurer, Mr. Wm. Reid, M.A., Glasgow High School.

JOTTINGS.

PROF. WILLAMIN, of Epinal, has established a Bureau d'Échange des Jeunes Gens et des Enfants, and sends us a pamphlet embodying the results of the first year's work. The main business has been in exchange for the holidays, and the testimonials both of parents and pupils prove the success of the scheme. Some of the advertisements sound odd—"Französischer Lehrersohn, 18 Jahre alt, wünscht ausgetauscht zu werden gegen Mädchen"—but we feel sure that many English parents would gladly avail themselves of the Bureau if it were known in England. The great obstacle is difference in time and length of holidays.

THE British Association meets this year at York on August 1; and Section L, Educational Science, will devote the principal sessions to School Curricula and allied questions, such as the training of teachers and the inspection and examination of schools. The presidential address will be delivered on August 2 by Prof. Sadler. It is to be hoped that the convenient place and date will attract a large attendance of teachers. Offers of papers should be addressed at an early date to Prof. R. A. Gregory, 10 St. Martin's Street, London.

THE Neuphilologentag meets this year at Munich on June 6. Prof. Fiedler, who was appointed to attend as representative of the Modern

Language Association, is unfortunately detained by official business at Oxford; but it is hoped that Prof. Robertson will take his place.

THE movement for a federation of secondary teachers progresses slowly. The Council of the College of Preceptors have decided that they cannot actively co-operate without the sanction of a general meeting of the members. The Head Masters' Conference have resolved to withdraw their representatives on the ground that the present moment is not opportune. On the other hand, the Incorporated Association of Head Masters are sending delegates in spite of the resolution passed at their last general meeting.

THE scheme of the Teachers' Guild for the organization of an annual educational conference, supported by all the chief associations of teachers, has, so to speak, passed its second reading. Of the nineteen associations approached, fourteen returned favourable answers; and at the preliminary meeting of representatives held on May 17 a general resolution in favour of the scheme was passed unanimously, with a rider that the meeting should be of a purely educational character, excluding the administrative and economic aspects.

THE Association of Head Mistresses will hold its annual conference on June 8 and 9 at the Clapham High School by the kind invitation of Mrs. Woodhouse.

THE Vacation Term for Biblical Study, which has been held in past years at Cambridge and Oxford, will be held this year at Durham, where the University has kindly consented to place its beautiful buildings at the disposal of the students. The lecturers will be men of different schools of thought, but all experts in their subjects. It is hoped that the following among others will take part:—Dr. Burney, Archdeacon Fearon, Canon Foakes Jackson, Dr. Knowling, Dr. Hodgkin, Dr. Jevons, Rev. C. W. Johns, Rev. J. H. Moulton, Dr. Anderson Scott, and Rev. F. R. Tennant. The main subject of the courses of lectures will be the belief in a future life as it appears in the Old and New Testaments, whilst certain lectures will deal with the influence of the surrounding nations upon Israel. Readings on special books of the Bible will also be held among the students. The term will last from July 23 to August 11, but the subjects are so arranged that students who can only come for a week will be able to attend a complete course. The total cost, including lecture tickets, will be from 35s. a week. Further information can be obtained from the Secretary, Miss Creighton, Hampton Court Palace.

PROF. HAECKEL'S "The Evolution of Man," the library edition of which was last year issued at two guineas, is now being published by Messrs. Watts, slightly abridged and much simplified, in two shilling parts. Each part consists of nearly two hundred pages, with over two hundred illustrations. It would be difficult to surpass this for cheapness.

MESSRS. THOMAS NELSON & SONS are issuing the complete works of Shakespeare in their "New Century Library," India Paper Series. The whole will be complete in six volumes, and will be published at the regular prices in cloth, limp leather, and leather boards. Each of these pocket volumes will contain an original coloured frontispiece.

MESSRS. SONNENSCHNEIN & CO. will shortly publish a volume of essays by Mr. J. E. G. de Montmorency, entitled "National Education and National Life." It includes an essay tracing the evolution of the religious questions in schools from early days to the present time and carefully analyzing the clauses of the new Bill that deal with religious education. This is followed by an essay on "The Educational Outlook," dealing in detail with the position of secular education regarded as an organic whole in England to-day.

MR. E. A. VIRGO, formerly Assistant Secretary of the Assistant Masters' Association, has been appointed Registrar of the Joint Agency for Men Teachers in succession to the Rev. F. Taylor.

THE memorial to the memory of Miss Eleanor Grove, the first Principal of College Hall, Byng Place, is to take the form of a loan fund to enable poor students to take up residence in the Hall. There are already similar loan funds in connexion with Newnham College and the Ladies' College, Cheltenham.

THE Kensington Vacation Course for Kindergarten Teachers will be repeated this year at the Froebel Institute, Talgarth Road, W., to last from July 30 to August 11. The morning lecturers will be Miss M. Macmillan, Miss Findlay, Miss Holmer, and Mr. A. W. Read; and Prof. Earl Barnes and Miss Ravenhill have promised their assistance. Applications for prospectus, tickets, &c., should be made to Miss Findlay, Hadleigh Road, Leigh Village, Leigh-on-Sea.

(Continued on page 395.)

IS YOUR PENCIL A KOH-I-NOOR OR ONLY AN IMITATION?

There are no better pencils made than L. & C. Hardtmuth's Koh-i-Noor Pencils. Many manufacturers have tried to equal this wonderful Pencil--and have failed. The merit lies in the lead, in the selected wood, and in the workmanship. Using a Koh-i-Noor is like drawing silk over paper--so smooth.

Koh-i-Noor Pencils are one price everywhere--4d. each or 3s. 6d. for one dozen. Of Stationers, Photographic Dealers, and Artists' Colourmen. Dainty Booklet on Pencils post free from L. & C. HARDTMUTH, 12 Golden Lane, London, E.C.

TO TEACHERS AND SCHOOLS.—Suitable selection PARCELS OF MUSIC to value of one guinea, sent on approval on condition that at least one third of value of parcel is kept. Returns and settlement at the end of the term. Catalogue gratis.

ASK YOUR BOOKSELLER TO SHOW YOU Qu'est = ce que cela veut dire?

By H. P. Sligo de Pothonier.

Published by Sands & Co., 23 Bedford Street, London.

"It is refreshing nowadays to find a Book of Phrases not written for schools, and such is certainly the case with the volume before us. It is, as Mrs. de Pothonier tells us, for the use of those 'who have left school, but still retain their taste for study.' But it is a study that must be pursued either in France itself, or at least in the company of a good dictionary, for the words, though included in good sentences, do not in most cases explain themselves. It seems doubtful, therefore, whether the gain of having so much concentrated information compensates for the loss of interest and facility of comprehension found in the reading of a piece of good modern prose. Still, the book is an excellent one of its kind: the sentences are idiomatic and well chosen, and the whole easy of reference. Any one who has mastered its contents may boast a fairly thorough knowledge of current French idiom."—*The Journal of Education*, February, 1906.

FONETIK, BOU-LA-REINE, FRANCE.

"W. O." WRITES to us: "My *masseur* is a very communicative gentleman, and amuses me with accounts of his other patients. One of them is a City alderman afflicted with chronic rheumatism. When I inquired after him to-day I was told: 'He's very sorry for himself, is Mr. X. He said to me yesterday: "I say, Jones, I call this d—d hard lines. Look here, man; I've been a churchwarden the last thirty years, and this is the return I get. But, never again, if I know it—never again!"' I was irresistibly reminded of a similar denunciation of the Education Bill that I read this morning's *Telegraph*."

HERE are a few gems from the M.A. Examination of a Scotch University:—"Audax omnia perpeti"—"Bold enough to apply for any office." "Tormenti genus"—"The race of the damned." *Μὴν διὰ κακοδαίμονιν δ' Ἡρακλῆς τὸ δέρμα μόνον ἔχων περιέχει*;—"Was it from pure devilry that Hercules went about with nothing on but his skin?"

VISIT OF FRENCH PROFESSORS AND TEACHERS.—The Modern Language Association will entertain during Whitsun week representatives of the Société des Professeurs de Langues Vivantes and of the Guilde International, and the University of London will, in conjunction with the Association, welcome at the same time the officials of the Université de Paris and the Collège de France. The programme is as follows:—Monday, June 4: 8.30, informal at home at University College, Gower Street. Tuesday, January 5: noon, Reception at Foreign Office by Lord Fitzmaurice and Mr. Thomas Lough, M.P.; 3-5, addresses in the Great Hall, Imperial Institute, by Sir Edward Busk, M. Liard, Sir A. Rücker, and Prof. Sadler; 7.30, dinner of M.L.A. at Trocadéro. Wednesday, June 6: morning, visits to London County Council institutions and schools; afternoon, visits to Eton, Harrow, Mill Hill, and other schools near London; 10 p.m., reception at French Embassy. Thursday, June 7: 11 a.m., addresses in the Great Hall, Imperial Institute, by representatives of the French University Faculties and of the Professeurs; afternoon, reception by H.M. the King at Windsor Castle, garden party at Royal Holloway College to meet T.R.H. Prince and Princess Christian; 8.30, *conversazione* at University of London, given by the University to both sections. Friday, June 8: visits to Oxford and Cambridge.

UNIVERSITY OF WALES.—The Vice-Chancellor of the University of Wales has been in correspondence with the Board of Education with reference to the acceptance after 1906 of the Matriculation Examination of the University as qualifying students entering training colleges to be prepared for degree examinations. Pending a final decision on the point, the Board has expressed its willingness so to accept the Matriculation Examination in the case of students admitted to training colleges in 1907, provided that they pass in all the five subjects required at the same examination. This proviso will come into effect concurrently with a recent amendment in the regulations made by the University tending in the same direction. The privilege hitherto enjoyed by all candidates who pass the Matriculation Examination in four subjects of entering upon degree courses in the colleges prior to completing their matriculation is to be confined (from September, 1907) within narrow limits, and to extend only to those who make good a claim for special recommendation by their colleges. On the other hand, larger opportunities for matriculating before entrance upon degree courses, as thus required, will be afforded to students by the holding of a second Matriculation Examination in September in and after 1907, in accordance with a decision of the Court at its recent meeting.

THE Annual Conference of the British Child-Study Association was held at Cheltenham, May 10 to 12, under the presidency of Miss Beale. "The Reform of Infants' Schools" was discussed at an open meeting, Sir John Cockburn in the chair, a paper on the subject being read by Miss Byett. Lectures were delivered by Dr. Slaughter, Lecturer in Psychology in the University of London, and by Dr. Walter Jordan, of Birmingham. Dr. Slaughter took for his subject "The Meaning of Interest," treating the subject as a part of the scheme of evolution. Dr. Slaughter showed that the sources of interest lie in the racial endeavours to meet the requirements of life. Dr. Jordan outlined a scheme for the medical inspection of children in elementary schools. It was claimed that the adoption of such a scheme would necessarily result in an improvement of the general health of the community. Among the subjects discussed at the Council Meeting was a proposal to amalgamate the Association with the Childhood Society. The General Meeting of the Conference passed a motion that "there should be an official Register of Teachers."

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE BILL IN COMMITTEE.

THOUGH the Education Bill has passed into the Committee stage, and the Government has every reason to be satisfied with the majorities it has hitherto secured, the only principle that has so far been definitely and irrevocably determined is that of public control. All the other matters involved—the status of the teacher, the definition of the religious teaching to be given in the common public school and the time at which it shall be given, the extent to which special facilities shall be allowed, the terms of transference for non-provided schools—all these vital points have still to be discussed, and most of these are still open to concessions on the part of the Government, and to compromise.

In a monthly journal it is not possible to report on a campaign in active progress when the disposition and strength of the contending forces are shifting from day to day, and it might seem wiser to follow the cautious policy of the Teachers' Guild, and, adapting the language of its annual report, to say: "The Journal is an undenominational paper and its readers are not at all likely to agree as to the merits of the new Education Bill; moreover, the issues dealt with in Part I. are not strictly of a kind to call for the criticism of an educational paper." But such a policy appears to us weak and pusillanimous. We are teachers first, but we cannot sever teaching from religion, and on a school question which is exercising the whole nation we cannot stand aside as neutrals or bid the rival sects fight it out and leave us in peace to teach the "three R's."

And there are, we believe, points on which teachers *qua* teachers may agree whatever their religious differences. The first of them, and it cuts very deep, is that the teacher is the dominant factor of the problem. As is the teacher such will be the school.

It is on this ground that teachers would with practical unanimity reject Mr. Chamberlain's amendment to Clause I. The effect of it would be to divorce entirely the secular from the religious teaching, and to commit the latter to the amateur teachers appointed by the several sects. Mr. Balfour with strange inconsistency followed his leader, but Mr. Butler, an ex-teacher, condemned the scheme on the ground that it would

lead to the State's dissociating itself entirely from religious education, and would leave the children of the slums untouched by any religious influences. Dr. Macnamara, from the opposite benches, objected on the professional ground that "the right of entry" would subvert all discipline; that new pandemonium-alism was but old pandemonium writ large.

It is well to escape from the dust and heat of the battle that is raging, and hear the still small voice of a man who was not only a great educator, but an active member of the Church of England. In the memoir of Sir Joshua Fitch that has just appeared we read:

This teaching (such as that prescribed by the London School Board) was simple and practical, and was founded upon a study of the most devotional parts of the Bible refracted through that minimum of dogmatic conception which is the common medium of their religious faith for practically all English laymen. It was, besides, given by teachers who could teach, who understood the mind and character of children, who in nearly all cases believed in that religion and conceived of it through the simple theology of the ordinary layman, who undertook the Scripture lesson in a spirit of earnestness and reverence and with a deep sense of its value to the educational work of the school and to the formation of the children's character.

We claim, then, as teachers, that we shall not be robbed of our highest and most highly prized privileges. Tests must go. As the *Educational Times* has well said, they are as futile as they are immoral. But, as Mr. Birrell has definitely stated, it is not the intention of the Bill to prevent the Local Authority from inquiring into the competence of the teacher to impart religious instruction. Elementary teachers will still be "tested" in exactly the same way as the masters at Eton, Winchester, and Marlborough, all religious foundations, are now tested. They will, let us hope, continue in the vast majority of cases to give such religious teaching as is commended by Sir Joshua Fitch, the simple Bible lessons that are given in all our great public schools. The common enemy whom all teachers should resist is the ecclesiastically minded layman who tells us that simple Bible teaching is a misnomer—"it is not simple, not Bible, not teaching"; it is "an emasculated Bible"; it is "Parliamentary undocrinal Puritanism" (we quote from the last number of the *Saturday Review*). With such extremists, ignorant alike of child nature and of existing schools, there can be no parley.

Let us, in our turn, frankly confess that the ideal we have set forth—the teaching of our common Christianity imparted in school hours by school teachers—is incompatible with absolute public control. There must be compromise. We must call in aid that "common sense and something of the give and take which accords so well with the national temper" to which Fitch trusted as a way of escape from secularism. The Established Church claims as its members the majority of the nation; it must have faith that the bodies elected by popular suffrage will do it justice. Dissenters, on their side, must not insist on what seems to us a shibboleth, that no penny of public money shall go in support of an alien creed. To both parties we are inclined as teachers to say, as Mr. Rogers of Bishopsgate said to his clerical brethren, "Hang theology, and let us get to business."

THE GYMNASTIC TEACHERS' INSTITUTE.—The annual display by the members of this Institute was held in the large hall of the Northampton Institute, Clerkenwell, on May 19. The display was a most successful one, the whole of the work shown by the members of the Institute and their pupils being exceptionally good. Mr. A. Bradley led a section of members of the Institute on the rings, Mr. Connor a section on the vaulting horse, Mr. Arnold a section on the parallel bars, and Mr. Davies a section on the horizontal bar. The lady members of the Institute showed advanced Indian club exercises, the leaders being Miss Tollemache, Miss Berry, and Miss Klett; and exercises on the vaulting horse—leader, Miss Berry. Other items were free exercises by members of Crawford Street, Camberwell, Gymnastic Centre, L.C.C., directed by Miss E. Cranbrook; a very fine Indian club solo by Miss J. H. Andrew; skipping by pupils of Miss E. Hassell, including three very good solos; quarterstaff exercises by members of Portland Road Ladies' Gymnastic Club, under Miss J. Tollemache's direction; tactical marching and evolutions by the London Gymnastic Society (Ladies), directed by Mr. R. Oberholzer; a solo dance by Miss E. Hassell; fencing lesson—Prof. J. L. Danguy and the Baroness de Meyer. A cymbal figure drill by the children of the Recreation School from the Passmore Edwards Settlement, Tavistock Place, under the direction of Miss Beatrice Stempel, was very pretty and effective, the children (the youngest aged six) performing their exercises splendidly.

CORRESPONDENCE.

"RELIGIOUS EDUCATION IN SECONDARY DAY SCHOOLS."

To the Editor of The Journal of Education.

DEAR SIR,—I hoped that some abler pen than mine would deal with the very sweeping assertions made in your April supplement by the writer of a short article with the above title. As, however, no rejoinder has appeared in your May number, will you grant me a little space in which to protest against the pessimism of the article?

I have known many parents who have made most careful inquiry about religious teaching before deciding on a school for their boys or girls, and who take a real interest in the Scripture lessons and exercises given to their children, as well as in the tone and "atmosphere" of the school generally.

Again, it is quite possible to teach the Bible on the moral and spiritual side, even when preparing for the University Local Examinations. To know the history and geography accurately need not necessarily exclude appreciation of the more important lessons, any more than exact scholarship prevents enjoyment of the beauty of any literary masterpiece. In reading the "Aeneid" or the "Antigone" or "Hamlet," would the writer of the article dispense with all notes on grammar and philology and allusions, and direct the attention of his pupils solely to the characters and the ethical lessons or the beauty of the style? The Bible becomes more interesting to children as they learn to look on the patriarchs and prophets as real people who lived at a definite time and in a real place, and who had a definite message to their own generation, as well as general moral lessons for us. Vagueness about the meaning even of *Libertines* and the *Syrtes* does not tend to edification, nor is the habit of thorough work encouraged if the student is allowed to pass over "the blessed word Mesopotamia" in respectful ignorance. Of course a sense of proportion is needed, in examiners, teachers, and pupils alike; but, if examiners neglected the critical points and asked only for moral and spiritual lessons, there might be danger of encouraging superficial study and the worst kind of cram.

The examples given of questions set on the Acts are scarcely typical. I find in Oxford Local papers some of quite a different kind. Here, for instance, are three consecutive questions in a paper on St. Matthew's Gospel:—"In what ways do our Lord's parables illustrate the outward and inward aspects of the Kingdom of Heaven?" "Give a short account of the Transfiguration. What do you suppose our Lord intended to teach His Apostles by it?" "Mention any sayings or parables of our Lord (a) as to forgiveness of injuries; (b) against hypocrisy. What do you understand by hypocrisy?" Again, on the Acts:—"Comment on 'They rehearsed all things that God had done with them, and how that He had opened a door of faith unto the Gentiles.'" "The Acts has been described as the Gospel of the Holy Ghost. Illustrate this by quotations." "What do we learn from the Acts of the qualifications, work, and authority of an Apostle?"

May I venture to quote from the report of the examiner in Holy Scripture of the school in which I have the happiness of working? He writes:—"Many of the papers are admirable, showing full knowledge and great power of expression. . . . Moral and practical lessons are drawn naturally, as forming an essential part of Christian doctrine, and a spirit of reality in faith and of devotion to duty pervades the papers."

In spite of examinations, and in spite of the little time that can be given to the subject in the short hours of our secondary day schools, religious teaching, if given by those who really care about it, may be of inestimable value, and bring forth "fruit unto life eternal."—Yours faithfully,

May 14, 1906.

A SECONDARY TEACHER.

AN ANGLICAN ON THE BILL.

To the Editor of The Journal of Education.

SIR,—As an Anglican and a "parson" who does not go the whole way with extreme clericalism, and as an educationist who is anxious to see your journal hold its proper place as chief moderator in the clash of conflicting opinions, may I put it to you whether you are quite fair in your May "Notes" to the Anglican position?

It is incontrovertible that there are within the English Church differences of interpretation both as to Scripture and doctrine. But where is the seat of authority in matters of religious opinion? Whatever divergences there might be in the answer to this question, all professors of any religion at all would agree in saying: "Not in a popularly elected local council." There is no guarantee whatever that the same gentlemen who are chosen as authorities on street improvements and drains have necessarily any qualifications for the other function. When, therefore, we commit to them the task of expurgating the Bible, and of saying what interpretations are, and what are not, legitimate, we are admittedly committing a most delicate and difficult task to an obviously unqualified adjudicator. They may at will expurgate the words "the Son of God," or they may instruct that these shall be explained away. Christianity may be right or wrong, but, if retained at all, it must surely be defined by some body which at least professes to believe it. And you will hardly, Sir, apply tests to the popularly elected local councillor.

Again, Anglican religious teaching, like much other teaching, may be bad. But, when up to the year 1905 large sums of money have been subscribed voluntarily on the understanding that religious teaching shall be Anglican, have not the subscribers cause for complaint when Parliament proposes to divert the buildings provided by these subscriptions to the teaching of an unguaranteed religion? It is well known that Bradlaugh employed the Bible as his text-book to teach atheism.—Yours faithfully,

E. C. OWEN.

St. Peter's School, York.

[We gladly admit an Anglican's letter, but it raises too many points to be dealt with in a note. We can only suggest answers. (1) The Church of England is not differentiated in doctrine from some dissenting bodies. (2) County Councils are no more experts in religion than in the other three R's, but they are presumably men of sense and character; and the same objection applies to Parliament. (3) Mr. Birrell, the tenant, says to the Church landlord: "We give you notice to close our tenancy, and offer you a million in compensation for loss of prospective claims. We'll buy the property at a valuation, or leave it on your hands, subject, of course, to the heavy mortgage already upon it." The terms offered, we allow, may need modification, but it is absurd to talk of spoliation.—ED.]

"ENGLISH."

To the Editor of The Journal of Education.

SIR,—May I ask the hospitality of your columns to set forth one or two considerations as to the teaching of English? The meeting held at London University last month affords a suitable opportunity. At that meeting it was quite clear that English teaching was interpreted in different senses by different speakers. To some it meant phonetics and dialect, historical and comparative grammar, with analysis and parsing as the chief method in earlier stages and textual criticism in the higher. To others it meant an acquaintance with literary history, rising from the perusal of the better class of boys' tales up to some criticism of subject matter in greater works. Some there may be who, like myself, take a different view.

The object of any subject in a school curriculum is not the production of a number of specialists in that subject: it must justify its presence there by producing some distinct and indispensable effect upon the general mass of children subjected to it. Disentangle this effect so far as may be and clearly define it, and the problem of teaching becomes correspondingly simple.

It seems to me that the final aim of all the English work in a school should be just this—to teach a boy how to use his own language as the implement and the vehicle of thought. The most excellent ideas are of no earthly use to anybody so long as they remain in the brain that generated them; they must be translated into action to become valuable. Rarely the thinker can act out his own thoughts without an intermediary; but the normal condition is that he must act through others. And he will not secure their loyal and capable collaboration unless he can express his thoughts, by speech or pen, clearly and convincingly. Further, without asking whether speech precedes thought or thought speech, a speculation as unprofit-

able as the enigma of Rabelais about thirst and drinking, it is sufficiently clear for practical purposes that we do actually think in words, and that, unless the fitting words come naturally, the process of clear thinking is hindered.

It seems best, then, looking beyond all intermediate steps, to go straight to the final end. Grammar alone will never teach a man an easy mastery over his own tongue: phonetics will do it in a physical sense, but in no other. The study of our own classics may do much, for the instinct of imitation is strong; but it is of little use to be acquainted with all the nobilities of thought and felicities of language that we have inherited from our fathers if our own thoughts remain petty and our own language obscure and inappropriate. On the principle that the proof of the pudding is in the eating, on the principle that an engineer cares more for the output of his engine than for its intake, although the one is connected with the other, I say that the object, as it is the test, of sound work in the teaching of English is that boys should leave school able to express themselves in clear and well knit language, formed freely and instinctively.

Is it necessary to point out how far we are from any such result? In most schools composition is neglected save for an occasional period, while the literature lesson is considered to have been satisfactory if the boy can pass muster in the dates of his author and the context of a few picked passages. There are signs of a change; but even yet the methods of teaching composition are but little known in this country, and we have to borrow from France or the States, or meet difficulties as they arise by inventing our own methods. Shifting the central point of the English work from grammar or from literature to composition means much more than might at first thought be imagined: it means creation, instead of assimilation; it means doing a thing, instead of seeing it done or hearing it talked about; it means constantly falling back on the appeal to the active, rather than the receptive, functions of the mind.

Effort means growth of power. We shall never turn out all our boys as so many Miltons and Burkes—I am by no means sure it would be desirable to do so, even if we could; but constant effort in this direction means a raising of the general level of the plateau from which those mountain peaks emerge.

If the new English Association will take as its central aim the development of this faculty of knitting words to thought, it has before it an almost boundless field of virgin soil, into which workers hastening from all sides may drive the willing spade. There is room for them all without staking out of plots, and there is every reason to expect an abundant harvest.—Yours very truly,

R. T. BODEY.

ATHLETICS AND THE TUCK SHOP.

To the Editor of The Journal of Education.

SIR,—Those among us who believe in our public-school system, and in particular in the value of athletics as an element in education, are sometimes hard put to it to defend our faith. And it is well, I think, that we should occasionally raise a protest against that common species of idolatry which glorifies physical recreation as an end in itself, quite apart from any effect that it may have upon the body or soul of any human being. It is this kind of fetish-worship (together with the increasing prominence of the spectator) which in the school and nation alike threatens to degrade and stultify athletics, and gives to the enemy abundance of occasion to blaspheme.

It seems worth while to draw the attention of those who concern themselves with these matters to an article by Mr. George A. Wade, B.A., entitled, "Eating one's Cake and having it," which appeared in the May number of the *Badminton Magazine*. The article is written with a naive simplicity and obvious good faith which almost disarm criticism. But, as a symptom of something which appears to be radically wrong both in principle and practice in the organization of many of our public schools, it deserves careful and critical attention.

Mr. Wade's theme is a certain "feature in the life of our chief schools" which to him, and doubtless to the great majority of his readers, is a source of quite unalloyed satisfaction. "It has been made a definite rule," he tells us, "at most great schools that the profits derived from the confectioner's shop—which are often not by any means small—shall be apportioned annually to something or other connected with the games and sports of the school."

Mr. Wade proceeds to review the notable results which have been achieved at different schools under this system. Haileybury, which makes about £200 a year out of the facilities for "grubbing" which it affords, is placed "very high up on the list," "both from the large annual profits it receives from the shop, and from the splendid use it makes of them." Shrewsbury, again, is "one of the finest examples," where new cricket seats, a pavilion, and five courts have been erected almost entirely out of funds thus provided. "Salopians," we are told, "not only patronize their own establishment for sweets, cakes, &c., but they patronize it well." At Bradfield, sums amounting to £2,500 have been spent from this source on five courts, pavilion, and cricket field, in addition to large donations for an extra cricket professional. Malvern College is more faintly praised; for it does not, in Mr. Wade's opinion, make as much of its tuck shop as it might. "Neither in external appearance, nor in its position, is it singularly attractive." The Blue-coat School "tuck shop," again, while it is "an excellent establishment, well designed, and always well supplied," has "one noticeable fault, viz., that it is not nearly large enough." The Wellington shop, on the other hand, is described in a strain of almost lyrical enthusiasm as "an erection that the school may be legitimately proud of for its size and beauty."

Athletics and confectionery—is it possible to conceive a more preposterously unholy alliance? The value of school games for health and physique is obvious enough; and they have a higher, though less obvious, value, in so far as they make for such virtues as self-control and public spirit. It is hard to imagine anything more blindly incongruous than a system under which games are made to depend for funds upon the tuck shop—an institution which can only thrive by enfeebling boys' stomachs, and pandering to their self-indulgence. A famous head master is quoted as having put the matter to Mr. Wade "in a very happy epigrammatical way." "When boys over-eat themselves at the tuck shop they are automatically providing a remedy for their disease." The aphorism deserves to rank as a masterpiece of complacent cynicism. When Peer Gynt was convinced of the immorality of his trade in idol-images for China, he provided a remedy by also exporting missionaries and Bibles. The mental and moral attitude of the famous head master appears to indicate a fundamental kinship.

It is to people with a reasoned belief in school games that the facts revealed in Mr. Wade's articles are most distressing. Almond of Loretto, whose school has, I suppose, a unique record as a nursery of athletics, was in the habit of making trenchant remarks on this subject. "Grubbing," he wrote to a correspondent—"isn't it worthy of one of Dante's circles that they actually boast of buying a cricket field by the profits of the tuck shop at lower schools. How can the chest extend properly without good blood? How can this be made if the stomach gets no rest? And, if it is always craving for something, is it not a source of future tipping which sends all schemes of improvement down to the bottomless pit?" "The tuck shop," he wrote elsewhere, "is, I believe, a most objectionable institution. Putting health aside—and I think I can tell the extent to which 'grubbing' flourishes at a school by the complexion of the boys—this licensed spending of money on unnecessary eating is debasing both to intellect and to character. High thinking is quite consistent with the athletic spirit, but not with that of luxury and self-indulgence."

It is possible, no doubt, to run a school tuck shop under such conditions and restrictions that it may be comparatively or altogether innocuous. But, in such cases, unless the school authorities fail in their duty of providing an adequate diet, the "shop" is not likely to build pavilions or acquire playing fields. The only imaginable defence of the tuck shop as it appears ordinarily to be managed is that boys are certain in any case to spend a considerable portion of their pocket money on things to be eaten between meals; and that it is better to obtain profits from a licensed shop than to have illicit grubbing. It is a poor and wholly unjust plea for the continuance of a thoroughly bad custom. School boys are not such greedy and contemptible little beasts. There is no reason why any head master who is capable of governing his school should not abolish the habit of promiscuous grubbing as completely as Almond abolished it at Loretto.—I am, Sir, yours faithfully,

C. RUSSELL.

Broadlands, Petersfield, May 25, 1906.

"AMBIDEXTERITY."

To the Editor of *The Journal of Education*.

SIR,—In a letter headed "Ambidexterity" Mr. C. G. Watkins gives a quotation from "The Infants' School," by J. Gunn. Why the letter should be headed "Ambidexterity," I fail to discover, as the suppression of a pronounced one-handedness, be it sinistral or dextral, can surely never be considered as symmetrical or ambidextral culture. This phenomenon of stammering or deterioration in the powers of speech resulting from the crippling of one hand in order more fully to develop its fellow is no new discovery, many authenticated cases being on record where serious injury has resulted from this absurd practice (see "Left-handedness," by Sir Daniel Wilson, M.D., &c.). "The Cultivation of Ambidexterity in School-Children" (or the absolutely equal education and training of both hands—as in piano and violin playing) has never led to the slightest diminution in the powers of articulate speech, but, on the contrary, as the late Dr. G. V. Poore remarks in his "Nervous Diseases of the Hand" the tendency is (by doubling the speech centre) to increase the facility of speech and the power of acquiring different languages. Strange to say, Dr. Gould, of America, has fallen into the same mistake as your correspondent Mr. Watkins in confusing and confounding the suppression of *left-handedness* with the cultivation of *two-handedness*. I think, in justice to the great subject of symmetrical physical development, this correction of the error cannot be made too emphatic and public. The question is fully discussed in medical and other literature recently published.

In conclusion the advantages accruing from an equal two-handed training are not confined to the speech centre, but they relate to and materially promote the development of the entire individual.—Yours faithfully,

JOHN JACKSON.

"THE SOUNDS OF SPOKEN ENGLISH."

To the Editor of *The Journal of Education*.

DEAR SIR,—Allow me to thank you for the appreciative way in which you have referred to my little book on "The Sounds of Spoken English," and to your interesting criticisms. May I correct your reviewer on one or two points? I do not state that *law* and *lore* are identical in sound; on page 66 I state that they are often pronounced differently, to avoid ambiguity; in *folklore*, on the other hand, I believe the second part is usually identical with *law*, very slightly shortened. There are at least three pronunciations of *brougham*, of which I condemn one; and I do not know how many of *pedagogy*, of which I only give two pronunciations. "When two pronunciations are given, both may be considered as common; the first is generally to be preferred (page 98)." It is difficult to say which form of *golf* is to be considered correct; I am inclined to regard the southern form without *l* as a poor imitation of the Scotch form. The word lists were very difficult to compile, and I hope that by the time the next edition is called for I shall have received many suggestions for rendering them more satisfactory. It will interest your reviewer to know that *algebra* and *balsam* are words which have been found to give trouble in the training colleges. The words *octopus* and *lichen*, which he missed, occur in the word list on pages 106 and 105 respectively.—Yours faithfully,

WALTER RIPPMAAN.

COLLOQUIAL LATIN.

To the Editor of *The Journal of Education*.

DEAR SIR,—In answer to your correspondent, "An Assistant Mistress," in your April number, I should like to recommend two little books that we have found useful. They are "Ora Maritima" and "Pro Patria"—Latin stories for beginners, with grammar and exercises, by Prof. E. A. Sonnenschein, of the University of Birmingham. The publishers are Messrs. Swan Sonnenschein, and the price 2s. each. The stories are classical in form, but modern in setting; the "preparations" bring in the necessary grammar gradually, as required, and the "oral drill" and exercises are excellent. We find that the pupils gain some amount of facility colloquially, and their composition at the end of two years is certainly better than that of pupils trained on the usual isolated grammar sentences. "Ora Maritima" perhaps goes a little slowly for an intelligent pupil, but "Pro Patria" has proved quite satisfactory. The story is interesting, and, besides the grammar, a good deal of historical information is imparted by the way.—Yours faithfully,

E. H. STURGE.

Cheltenham Ladies' College, May 10, 1906.

OLD FRENCH AS A SCHOOL SUBJECT.

To the Editor of *The Journal of Education*.

SIR,—In *The Journal of Education* for May Mr. Chaytor refers to an article contained in the April number advocating the withdrawal of Latin from the curriculum of secondary schools. He argues that Latin should be retained because it is so useful in the teaching of French. May I point out that my article was written rather with the idea of supporting the study of German than of decrying the value of Latin as

a subject, when time allows? I am so charmed to find a well known French scholar speaking in favour of teaching historical French philology that I am willing to confess my own belief that, if only one is possible, the teaching of French historically is of more value than the teaching of French phonetics. Perhaps I may also be allowed to say that "The Primer of Old French" will not appear again in exactly the same form when it is republished.—Yours truly,

THE WRITER OF THE APRIL ARTICLE.

THE FRY TENURE COMMITTEE.

To the Editor of *The Journal of Education*.

SIR,—I should be obliged if you would allow me to call attention to an error in one of the "Occasional Notes" in your last issue. You state that "on the subject of tenure Head and Assistant Mistresses have arrived at an agreement, and that without calling in a judicial arbiter, as did the Masters." It is a mistake to say that the Associations of Head and Assistant Masters submitted their case to an arbiter. Sir Edward Fry, who did us the honour of presiding over our deliberations, and whose presence was a great advantage, was a chairman, not an arbiter; nor is the existing agreement between the Associations his award or in any way due to his suggestions. The concordat was from first to last the work of the representatives of the bodies concerned.—I am, &c.,

G. F. BRIDGE,
Hon. Sec. Assistant Masters' Association.

27 Great James Street, W.C.,
May 10, 1906.

SCHOLASTIC AGENCIES.

To the Editor of *The Journal of Education*.

SIR,—My attention has been directed to the notice in your current issue of my article in the *School World* for March. Kindly allow me the opportunity of saying that I had ample data to justify all the statements therein. They may be astonishing, but they are statements of fact like that "absurdly exaggerated estimate" which was no estimate at all, but the result of a simple sum:—If the cost of a piece of work is £3. 4s. (the charge of the Joint Agency), what is the profit per cent. of a firm which charges £10 (the charge of the 5 per cent. agency)?—Truly yours,

FRED CHARLES.

May 10, 1906.

[If the cost of a dress suit is £3. 4s. (the charge of a country tailor), what is the profit of Messrs. Poole, of Savile Row, who charge £10? By Mr. Charles's reckoning it is over 200 per cent.—ED.]

OBITUARY.

C. M. BULL.

IN Mr. Charles M. Bull, whose death took place last week, the profession lost a very notable member. Educated at Rugby in Dr. Cotton's house, he followed his old master to Marlborough College, and formed one of the energetic band of lieutenants which, under the guidance of that wise Head Master, succeeded in raising the college from the depressed condition into which its early difficulties had landed it. A Scholar and Fellow of University College, Oxford, Mr. Bull, whose means were not large, had been called upon to exercise firmness and self-restraint in that somewhat wealthy and boisterous society. His character had gained fresh firmness in the struggle, and, though a spice of severity had no doubt resulted from the lesson, and though his naturally large sympathies had been a little narrowed, the gain in solidity and self-command was invaluable to him in the difficult work which met him at Marlborough. His consistency, courage, and love of justice enabled him to take a foremost place in the regeneration of the school. He himself always remembered the stirring times with pleasure: they were times, he used to say, when life was worth living. The important position on the staff of the college which he had thus early won he maintained under the rule of successive head masters. Each in turn recognized how strong a support was to be found in his firm and sensible character: each in turn gave him entire confidence. Mr. Bull as a teacher occupied several positions at different times of his career. He taught the Upper Fifth for years; the Sixth for some time; and even tried his hand as master of the Lower School—a post for which he was scarcely fitted—and, finally, settled down a second time as master of the Modern School. In that capacity and as master of the Army class he did good work. He married in 1865 a sister of Dr. Bradley, and for the later part of his life at Marlborough lived free from the

burdensome duties of a house master. In due course his time for retirement arrived, and he withdrew into useful, quiet life, still serving the college as a member of the governing body, on which a place was immediately found for him. Mr. Bull was a man of very clear intellect and many attainments; but it was to his strong character, conscientious industry, and high standard of life that his influence is to be attributed.

ENGLISH LITERATURE AND LANGUAGE ASSOCIATION.

A MEETING was held on April 28 at the University of London to discuss the formation of an association to promote the study of English. Sir ARTHUR RÜCKER presided.

The CHAIRMAN said the movement gave expression to a general conviction, in which he as an examiner shared, that there was something radically wrong in the teaching of English.

Mr. HARTOG moved the first resolution: "That there be formed an association of persons interested in the teaching of English, to be called 'The English Literature and Language Association.'" He read a list of names of the conveners of the meeting, which included several professors of English and distinguished head masters. He referred to reports of the Board of Education, the Scotch Department, and the Departmental Report on Army Education as proving that the average English schoolboy was utterly unable to use his mother tongue and that English was scarcely taught in public schools. Nor could he accept Dr. Warre's excuse that Eton boys had been taught how to write English, but had lost the power under the stress of examination. It was as true now as it was in Locke's day that, if a man could write his mother tongue, he owed the power to anything but the schoolmaster. Mr. Lyttelton, when he was at Haileybury, had asked him to go down and talk to his staff about English composition. At that time there was no English taught in the school, but a fortnight afterwards Mr. Lyttelton had written to tell him that it was being taught in every form of the school. There were not many head masters like Mr. Lyttelton, and a united opposition was needed to overcome the passive resistance of head masters.

Miss CLARA THOMSON, who seconded, said that as an inspector she had found that the English teaching was generally assigned to the least qualified member of the staff.

Dr. HEATH moved an amendment approving the aim and objects of the association and empowering a committee to inquire into the best means of compassing this end, to report, after consultation with the Modern Language Association, to an adjourned meeting to be summoned at a convenient date. For classical teaching in this country there was a long and continuous tradition; for modern teaching there was none, and to establish one was an aim in which all present would sympathize. He doubted, however, whether the promoters of this association had taken sufficient counsel or counted the cost. He had only been informed of the meeting two days ago, and had not then a copy of the agenda. To succeed in its object the association must enlist the teachers of modern subjects throughout the country, and it must have an organ of its own. But there was already in the field an association supported by a large body of modern-language teachers which possessed two flourishing organs. Was there room for a third? Were assistant teachers, an overworked and underpaid race, likely to find time to read a third publication or to pay a second subscription? The most influential promoters of the proposed association were already members of the Modern Language Association—contributors to its *Review*. He feared that differentiation might prove fatal to both associations, and thought that, before proceeding further, there should be consultation to see whether co-operation were not possible.

Mr. STORR seconded. He stated that at every public meeting of the Modern Language Association it had been directly or indirectly proclaimed that "modern languages" included English, and in the *Modern Language Review* English was allotted its full share.

Dr. FURNIVALL thought that the promoters had been in too much of a hurry. Pioneers in the cause of English study had not been consulted, and London had been left out in the cold. An enormous lot of time was wasted at school in the study of the classics. His friend Dr. Abbott had told him that one reason why he laid so much stress on English teaching in the City of London School was that he could not get his boys to think in any other language. He remembered that William Morris said to him one day: "I say, Furnivall, d—n the classics; what do you say?"

Prof. GOLLANZ considered that the fact of the Modern Language Association's paying some attention to English was an argument in favour of founding a separate association. English could not submit to be a junior partner. Greek and then Latin would soon become

optional studies in schools and then pass away altogether, and English must take their place.

Canon BELL counselled delay. It was easy to make a start; but to succeed it was necessary, as in a game of chess, to look two or three moves ahead. As a schoolmaster, he had long been convinced of the importance of English, but the majority of his brethren still needed conversion. He remembered arguing the point with a classical head master who was giving eighteen hours a week to Latin and Greek and none to English. "Give," he said to him, "a reasonable amount of time to English in your lower forms and encourage it in preparatory schools by means of your entrance examination, and you will soon find it tell on the classics of the upper forms."

Mr. BOAS and Mr. COXHEAD, one of the secretaries, opposed the amendment, which was then put and lost by 25 to 29 votes.

Ultimately the resolution was carried with the omission of the last words; but the rest of the agenda was deferred for a joint committee, representing the association and the Modern Language Association, to consider and report upon to a meeting to be subsequently convened.

The joint committee met in May, and decided provisionally on a title, "The English Language Association of Great Britain and Ireland." It was further resolved that the first business of the next meeting should be to consider the feasibility of amalgamation with other existing associations.

UNIVERSITIES AND SCHOOLS.

BEDFORD COLLEGE FOR WOMEN.

Dr. John Lawrence, Lecturer in English Language and Literature at Bedford College for Women, has been appointed Professor of English Language and Literature at the Imperial University of Tokio. Mr. Sawayanagi, the official representative of general education in Japan, is at present in London, and visited Bedford College last week, inspecting the laboratories and attending several lectures. The College now numbers among its resident students a distinguished lady from Japan, Miss Sumi Miyakawa, who is pursuing a course of scientific instruction in hygiene, and has just passed an examination qualifying for sanitary inspectors in this country. Miss Miyakawa has been sent to England by the Japanese Government to study the teaching of domestic science; and on her return to her own country is to organize a Domestic Training College, a branch of the great Training College for Women in Tokio.

Four scholarships are offered for the course of secondary training beginning in October. Application should be made by July 2, to the Head of the Training Department, from whom forms and information can be obtained. Four entrance scholarships for degree courses in Arts and Science—viz., Deccan Scholarship in Science, value £60 for three years; Deccan Scholarship in Arts, value £40 for three years; Pfeiffer Scholarship in Science, value £48 for three years; Clift-Courtauld Scholarship in Arts, value £31. 10s. for one year and £28. 7s. for two years—will be awarded on the result of an examination held June 27 to 29. Forms of entry for the examination must be returned to the College by June 21.

WESTFIELD COLLEGE.

The office of President of the College has been accepted by Lord Alverstone. Sir C. Ernest Tritton, Bart., and Mr. J. F. W. Deacon, have been elected Vice-Presidents, and Mr. Rowland Story has been elected a member of the Council. Mr. Rowland Story has also been appointed Hon. Treasurer of the College on the resignation of Mr. Master, who had acted in that capacity for twenty-two years. The Council have appointed as resident Assistant Classical Lecturer Miss Constance Parker (Class. Hon. Mods., Lit. Hum., Oxford), M.A. (Dub.), who has for several years been Assistant Lecturer in Greek at Bedford College, London.

OXFORD.

As March and April only contained a few days of the closing Lent Term and a few days of the opening Easter Term, there is a longer gap than usual in my correspondence, owing to the vagaries of the date of Easter. This accounts for the comparatively long list of deaths, as three months have elapsed since my last letter, though May alone has been a month of continuous "full term."

The most deplorable loss is that of W. F. Weldon, formerly of St. John's, Cambridge, afterwards Professor of Zoology at University College, London (1890), and Linacre Professor of Comparative

Anatomy in Oxford (1899), succeeding in both appointments Prof. Ray Lankester. He was among the first of living zoologists, the practical founder of scientific statistics of living things, an indefatigable researcher, and inspiring teacher. His death at forty-six is an irreparable loss to Oxford and to science. In the obituary list there are several other distinguished names:—The Ven. R. Thornton (late Fellow of St. John's), Archdeacon of Middlesex, on April 15, aged eighty-one; Sir J. B. Peile, K.C.S.I. (formerly Scholar of Oriel, sometime Member of the Council of India), April 25, aged seventy-two; Dr. Maclure, Dean of Manchester, of B.N.C. (May 8, aged seventy-two); C. M. Bull, formerly Fellow of University College, for forty years master at Marlborough (May 3, aged seventy-seven); and Rev. W. Wynne Wilson, late Fellow of St. John's. To these must be added the untimely loss of two undergraduate scholars—A. Duthie (Pembroke) and G. Fanshawe (Exhibitioner of Lincoln and Boden Sanskrit Scholar).

The first event at the end of the Easter Vacation is always the Honour list in Classical Moderations. As to the comparative successes of the colleges—which excites some local interest—out of the 36 Firsts Balliol has 5, Corpus and Magdalen 4, Brasenose, New, Hertford, and University 3, and eight other colleges 2 or 1; amongst these is a solitary candidate from that distinguished institution the Jesuit Hall, which has nine undergraduates only. The new system introducing a fourth class has now been tried for five years, and the effect may be briefly shown by a few figures. In the last year (1901) of three classes the distribution of the honours among the three was as follows (in percentages):—Class I., '21; II., '46; III., '33. In the last five years the distribution among the four classes has been, on the average, as follows:—Class I., '19; II., '36; III., '33; IV., '12. These figures clearly suggest that the Third Class retains its old percentage, but that the standard of I. and II. has been slightly raised. If future years confirm this proportion, the object of those who promoted the change will have been exactly attained.

The first *Gazettes* of the term would be wholesome reading for the critics of Oxford; for they contain, first, an announcement from New College to endow further the Chair of Physics, and ultimately to take over the whole charge of £800 a year, to which the professor's income is to be raised; and, secondly, the arrangements made for the current term's teaching in five subjects, all of recent creation, outside the regular degree course—viz., Geography, Economics, Anthropology, Military Instruction, and Forestry. It is interesting, again, to note that in the first three of these subjects no less than twenty-three lecturers' names occur who are regular teachers in the Honour Schools and who have been impressed into the service of these newer studies. The list includes several of the most distinguished Lecturers in *Literae Humaniores* and Modern History, besides specialists in other branches of allied subjects.

As to University legislation, there have been various minor measures of adjustment carried, such as are constantly required in the complex machinery of the University, especially in a time of growth like the present. Two statutes were thrown out, in comparatively small houses—one dealing with Pass Moderations, the other with the duties and mode of appointment of the Registrar—which may be briefly explained. In the former, the present rule is to prescribe three books in Latin and Greek. The examination is unsatisfactory in the standard of the papers and the time allotted; and many thought a better kind of study would be encouraged if two books instead of three were prescribed and papers of a higher standard substituted. The second statute proposed to transfer the election of the Registrar from Convocation to the Council. The real mischief was that these reasonable proposals were made in the Summer Term, when everybody is distracted with business, visitors, and so-called pleasure; and it is difficult to get together the Masters of Arts to the meetings. The full strength of Congregation is about 450; and the members voting on these two occasions were 73 and 90 respectively. These figures are sufficient in themselves to show the difficulties of legislation in the Summer Term. One minor measure, which seems likely to pass, has some interest, as another step towards educational progress in the matter—small in appearance, but really important—of reducing superfluous examinations. That is the proposal to accept, in lieu of Responsions, the Certificate of the Joint Matriculation Board of the Universities of Manchester, Liverpool, Leeds, and Sheffield, provided the candidate has passed in Latin, Greek, and elementary mathematics. The Oxford Responsions standard is really (as George III. said about Shakespeare to Fanny Burney) "sad stuff, sad stuff, only one mustn't say so." If every English University accepted the entrance examination of every other as exempting from its own, it is not Oxford which would suffer. However this may be, each step towards mutual acceptance of each other's preliminaries is welcomed by all interested in education.

The Summer Term is the period of reports of the University finance, the Bodleian Library, and the various institutions. A few facts may be suggestive to your readers. The Bodleian report of 1906 shows a record number of books and MSS. received within the year, namely, 79,539. There is an increase in every item—gifts, receipts under the Copyright Act, and purchases. It may not be known to all your readers that (from the Librarian to the carpenter) there are forty-one

persons employed at the Library. Largely owing to recent help from the colleges, a debit balance of £660 has been converted into a credit of over £1,000. The Museum report is equally elaborate, extending to twenty-five quarto pages of donations and other additions to the various collections. The financial difficulties of the University as a whole are best conveyed to the intelligent reader by the simple statement that this year, on a total expenditure of over £74,000, they have been able, by care and liberal aid from the colleges, just to make both ends meet. The demands on the University are increasingly heavy, as any member knows who has looked into the facts. The benefactor, though he increases the efficiency of the University, often involves it in further supplementary expenditure. Oxford has, so far, neither appealed to its own public for endowment, as Cambridge recently did with substantial success, nor asked for State aid, as the modern Universities have legitimately done. How long this policy can be safely continued remains to be seen.

The two new Professors of Poetry (Mr. Mackail) and of Colonial History (Mr. H. E. Egerton) have both delivered their inaugural lectures—which are published—and begun their courses. Prof. Mackail, one of the most brilliant Balliol men of the last twenty-five years, and particularly well known in Oxford, was very happy in his first two lectures on Homer, delivered to very appreciative audiences. Prof. Egerton's inaugural lecture was exceedingly skilful and interesting, and particularly noticeable was the skill and tact with which he handled questions that approached the region of political controversy. In both cases the University is to be congratulated on the accession to its professoriate.

The University Prizes awarded this term are as follows:—The compositions which are recited at the Commemoration: Latin Essay, H. L. Henderson (Fellow of New College); Latin Verse, F. S. Pater (Scholar of University); English Poem (Newdigate), G. Scott (Exhibitioner of New College); English Essay, A. H. Sidgwick (Fellow of University). Other University Scholarships and Prizes: Arnold Historical Essay, W. A. P. Mason, M.A. (Trinity); hon. mention, K. M. Vickers (Exeter). Stanhope Historical Essay, R. H. Holt (University). Gladstone Prize, C. B. Martin (Rhodes Scholar of Balliol); hon. mention, E. C. C. Stevens (Christ Church) and D. du B. Davidson (Balliol). Lothian Essay, D. W. B. James (Scholar of Pembroke). Ellerton Theological Essay, C. B. Young (Lincoln); hon. mention, W. Temple (Fellow of Queen's) and G. L. A. Way (late Scholar of Corpus Christi).

MANCHESTER.

Only a month or two ago we quoted in this column a statement made in the Manchester Education Committee by the Dean of Manchester, to the effect that "the Manchester Grammar School never stood higher in its long history than under its present distinguished High Master." There was no idea then that this would be the last public utterance of Dean Maclure, who has been such a prominent figure in the educational life of the city for fifteen years. Of the many honours that fell to him there was not one he valued so highly as the chairmanship of the governing body of his old school; and he was wont to boast that it was he who proposed the election of the present High Master a few years ago. He is more widely known as having been for twelve years Chairman of the Manchester School Board, Chairman of the School Boards Association of England and Wales from its foundation to its dissolution, and a member of the Royal Commission on Secondary Education and of the Consultative Committee of the Board of Education. It is no small testimony to the worth of a man who has successfully filled such difficult posts that the many notices of him that have appeared since his death vie with one another in praising his personal qualities. "He was one of the few men of distinction of whom it may be said that they had no enemies."

The Committee of the Brunswick Street Practising School, over which Miss Dodd presided so ably for a number of years before her removal to Oxford, and which is carried on with the approval of the Council and Senate of the University, is about to make an appeal for funds. A meeting is to be held in the Lord Mayor's Parlour early in June, when Prof. Findlay—who was asked three months ago to become Director of the school—will present the report he has prepared and make definite suggestions as a basis for an appeal for public support. Among other changes it is proposed that the school should be removed from its present site to one adjoining the Fielden Demonstration School. It may be explained that the Brunswick Street institution undertakes the work of a primary school and kindergarten, and Miss M. G. Findlay, M.Sc. (late Head Mistress of the Royal High School, Madras), has been appointed Head Mistress. The work of the Fielden School, on the other hand, corresponds rather with that of a higher-grade school. The Head Master, Mr. W. J. Deeley, B.A., has recently been appointed Special Demonstrator in School Teaching to the University. Prof. Sadler's name appears on the Committee of the Primary Schools, and

the Chairman of Committee is Mr. T. C. Horsfall, who has from the first taken a lively interest in the work.

Mr. E. C. Burgis, M.A., D.C.L., LL.B., Mr. H. C. Dowdall, LL.D., Mr. T. G. Russell, LL.B., and Mr. G. B. Hertz, M.A., B.C.L., have been appointed to the recently instituted Law Lectureships. Mr. F. M. Powicke, M.A., formerly University Fellow and at present Assistant Lecturer in History at the University of Liverpool, has been appointed Assistant Lecturer in History and Tutor to supervise the work of the Civil Service students. The work of Mr. J. S. Westlake, B.A., who has accepted the Professorship of English at Aberystwyth, is being taken temporarily by Mr. J. W. H. Atkins. The post of Lecturer in Philosophy (the work of which is being temporarily taken by Mr. Norman Smith, B.A.) has been filled by the appointment (from commencement of next session) of Mr. H. B. Wallis, B.A. The Rev. Mr. Hassé has resigned the Lectureship in the History of Doctrine. A Professorship of Metallurgy has been instituted. The first occupant of the chair is Dr. H. Cort Carpenter. Dr. R. Hutton is to succeed Dr. C. H. Lees as Director of the Physical Laboratory.

At the Grammar School the Musical Societies concluded their labours for the session on May 5, when, in addition to "The Ancient Mariner," the programme included the first movement of Beethoven's Pianoforte Concerto in C. The annual athletic sports were held on the 29th; the number of entries being the largest on record, the preliminary events had to be taken on six previous days. The system of "sports without prizes," which worked so well last year, when it was instituted, was followed out this year with even better results. An interesting article on this subject from the pen of Mr. A. Pickles, of Trinity College, Cambridge, appeared in the *School World* for last month. The Rowing Club continues to make steady progress, and is greatly assisted by the enthusiastic interest taken in it by a number of the new masters. This year two camps have been arranged for the Whitsuntide vacation. Mr. Paton will have his usual cricket camp for a fortnight on Lord Stanley's estate at Alderley, and there will be a boating camp on the river Dee under the superintendence of Mr. Vamish. Founders' Day was May 31, when the sermon was preached by the Bishop of Carlisle, who is himself an Old Mancunian. At the annual Old Mancunians' Dinner, Colonel Kelly, who presided, mentioned Mr. Birrell's recent reference to the Grammar School as the one institution he envied Manchester, as compared with Liverpool, the city of his birth. Mr. Paton, in replying to the toast of "Prosperity to the School," referred to the fact that, in spite of the number of new secondary schools that had recently been opened in Manchester and the surrounding towns, it was still difficult to find room for all the boys wishing to enter the Manchester Grammar School.

At the Manchester High School for Girls an interesting address was given by Miss Barbara Foxley in connexion with the meetings of the Old Girls' Association. Some disappointment, however, was felt that Miss Day, the first Head Mistress of the school, was unable to be present, as had been hoped. At the Broughton and Crumpsall High School for Girls some very successful musical and dramatic performances were given on the occasion of the "at home" to parents. The school recently had the privilege of a lecture by Miss Alice Greenwood. At the Pendleton High School for Girls the steady increase in number has made it necessary to remove the preparatory department to a large house adjoining the school premises. This has had the additional advantage of placing at the disposal of the school a garden and conservatory for purposes of Nature study.

The question of the feeding of school-children has recently been discussed at several meetings. At the annual meeting of the Women's Guardian and Local Government Association, held in Manchester some weeks ago, a somewhat critical attitude towards the practice was taken by a number of speakers. Mr. C. H. Wyatt, Director of Elementary Education, said he greatly dreaded large schemes of school feeding.

The Manchester Education Committee have arranged to open during the summer a number of playgrounds out of school hours, for the children's recreation. A highly satisfactory report on the School for Crippled Children has arrived from the Board of Education. At the opening of the Country School for Town Children, Sir James Hoy, Chairman of the Education Committee, referred to it as "a unique institution." Mr. T. C. Horsfall, in endorsing this view, said he had no hesitation in saying it was unique in the world. The nearest approach he knew to it was in the forest schools of Germany.

At the meeting of the Salford Education Committee the question of school fees has arisen once more. A resolution of the Committee recommending that fees should be charged at one school having been returned by the Council, the Education Committee decided to stand by the proposal.

A new school for the blind is to be erected at a cost of about £40,000. The school is to accommodate a hundred and fifty children.

A new school for the blind is to be erected at a cost of about £40,000. The school is to accommodate a hundred and fifty children.

WALES.

At the half-yearly meeting of the Board, which was held at Holyhead, Prof. Anwyl, M.A., of University College, Aberystwyth, was unanimously elected Chairman of the Board, in succession to the late Mr. Humphreys-Owen, and Lord Stanley of Alderley was elected Vice-Chairman.

Central Welsh Board. The following resolution of condolence with the widow of the late Chairman was unanimously passed:—"The Central Welsh Board for Intermediate Education desires to place on record its sense of the incalculable loss sustained by Welsh education in all its spheres, and especially in that of secondary education, through the death of its first Chairman, the late Mr. Arthur Charles Humphreys-Owen, M.P., and wishes at the same time to express its deep sympathy with Mrs. Humphreys-Owen and the family in their sorrow. In reviewing the services of the late Chairman to Welsh education, the Board recollects with affectionate remembrance the invaluable experience which he as one of the great pioneers of the intermediate system brought to bear upon the initial discussion of problems to which the Board itself was new, the patient and courageous thoroughness of method with which he guided the Board in seeking for their solution, the unfailing urbanity and impartiality with which he presided over its deliberations, the high aims and ideals from which he never departed, and the splendid devotion with which he ungrudgingly sacrificed himself to his people's service; in the abiding memory of these great qualities of the late Chairman, the Board mourns his loss, but rejoices to think that the example of his great service will ever remain in his country's annals as a standing incentive to others towards the furtherance of her highest aims."

The draft schedules for the year 1907 were exhaustively discussed; while several very important modifications in the regulations for the Honours Certificate were adopted. For some years it has been felt that some change in the existing regulations was necessary, as their undoubted tendency was to encourage extreme specialization in the schools, as a candidate was able to obtain a certificate by satisfying the examiner in two subjects only. Nor was the course prescribed under the old regulations found by experience to be the most suitable for those pupils who desired to enter one of the University colleges, or to embark on a professional or business career. The only pupils who really benefited were the pupils specializing for an entrance scholarship at one of the older Universities, and they constituted a very small minority of the two hundred candidates. The new regulations are so framed as to give an equal chance to both types of pupils, viz., those pupils for whom high specialization is necessary as well as those who desire to follow a wider curriculum. In each subject there will be two stages, and a candidate can obtain a certificate either by satisfying the examiners in two subjects at the higher stages, or in three subjects at the lower stage. After some discussion it was further resolved to adopt the recommendation of the Executive Committee to the effect "that no pupil shall be admitted to the Honours Certificate Examination in any subject unless the Executive Committee is satisfied that adequate provision for teaching that subject is indicated in the school time table." On the motion of the Registrar of the University College, Aberystwyth, a sub-committee was appointed to report on the old question of the differentiation of the schools. The Committee has set before it a very complex problem; and at first sight, its difficulties would appear to be well-nigh insurmountable. Suppose, for instance, that there should happen to be a pupil with a strong classical bent in a school in which science is the staple subject. Either he must suffer, or means must be devised whereby he can be transferred to another school, in which good classics are taught; and all this means money.

Miss Collin and Mr. J. Trevor Owen were re-elected members of the Executive Committee, and Mr. W. J. Russell was co-opted as a member of the Board.

Welsh County Schools Association. The Association met at Cardiff on Friday, May 11. In the interesting and suggestive address which he delivered at the opening of the session, Principal Griffiths dealt with many of the educational topics which provoke so much discussion at the present time. His refer-

ences to the excellent record of the Central Welsh Board were cordially endorsed, and so were his criticisms of the present attitude of many popular authorities towards the educational "expert." Dealing with the constitution of the Council of Wales, the Principal said that we must recognize the prevalence of this suspicion of professors and schoolmasters as an important factor in the situation; and he therefore counselled the Association not to seek for direct representation, but to go in for a Consultative Committee. Mr. R. W. Jones, in a closely reasoned paper, however, advocated the opposite view, expressing the opinion that it would not be possible to exert any effective influence over the Council, or to initiate any educational policy through such a Committee. After some discussion the following resolution, proposed by the Executive Committee, was adopted:—"That due provision shall be made for the election of representatives of head teachers of Welsh Intermediate Schools on the Council of Wales, such representatives to exercise the full powers, except that of voting, of the other

members of the Council." The Association afterwards proceeded to discuss business of a technical character, such as the syllabuses of the Central Welsh Board, alternative schemes, &c. Miss Collin, Mr. William Lewes, and Mr. T. R. Dawes were re-elected to their respective offices.

At the close of the session, the Lord Mayor of Cardiff held a reception at the Town Hall, to which members of the Association were invited. This function passed off very pleasantly, and his Lordship's kindness was much appreciated by all who attended it.

University Court. The two most prominent incidents at the recent meeting of the Court held at Bala, on May 17, were the attempt to oust Sir Isambard Owen from the Senior Deputy Chancellorship, and the attack on the power of recommending for honorary degrees possessed by the Senate. Ever since Sir Isambard was appointed to the Principalship of the Armstrong College, a certain section of the Court have resolved to try and secure his ejection from the Deputy Chancellorship; this, however, was the first occasion on which they took definite action by proposing another candidate in opposition to him. Though he was re-elected by a substantial majority, yet most members were surprised to find that the minority, as represented by the votes recorded in favour of Lord Kenyon, constituted such a large proportion of the Court. The loss to the University of the services of Sir Isambard would be well-nigh irreparable, as probably no other member of the Court possesses such intimate knowledge of its history, or has been more closely identified with its development. The recommendations for honorary degrees gave rise to a somewhat acrimonious discussion, during which the privileges of the Senate were rather fiercely attacked by the non-academic members. It seems that their dissatisfaction with the list submitted was solely due to the omission from it of the name of the ex-President of the N.U.T., and not to any objection to the three gentlemen suggested by the Senate as worthy to be the recipients of degrees *honoris causa*.

The Warden of the Guild, Sir Marchant Williams, is clearly determined that in future the exclusive privilege of the Senate in the matter of recommending for honorary degrees shall be abolished, as he has given notice that he will propose at the next Court that nominations for such degrees shall be made by a Joint Committee of the Senate, the Executive Committee, and the Guild of Graduates. Throughout all these discussions it was very evident that there exists a very distinct line of cleavage between the academic and the lay element on the Court, and the tone and temper of some of the speeches suffered in consequence. The above motion of the Warden will also, no doubt, tend to intensify this feeling of jealousy between the two sections.

The statutory resolutions for the establishment of a Faculty of Medicine were passed. Candidates for the degree of M.B. must be graduates of the University and must have followed a minimum course of five years. It was also resolved to hold a second Matriculation Examination in September in and after 1907.

Honorary degrees will be conferred next November, at Aberystwyth, on Dr. Fairbairn, Sir Lewis Morris, and the Rev. H. Elvet Lewis.

Glamorgan County Schools. The Glamorgan Education Committee have decided to divide mixed county schools, designed for three hundred or more pupils, into two departments, for boys and girls respectively. The reasons which Miss E. P. Hughes and Principal Griffiths, the chief supporters of this reactionary resolution, advanced in favour of splitting up the schools will not bear criticism for one moment. Thus Principal Griffiths, whose knowledge of the schools is not very intimate, is reported to have stated that the separate girls' schools are more efficient than the dual schools. This, however, is quite contrary to fact, as Central Welsh Board statistics, &c., prove conclusively. Nor is there any substance in Miss Hughes's contention that girls suffer under the present *régime*. The whole movement in favour of separating the schools is, as a matter of fact, due not to any doubt about the efficiency of the dual system; it has been engineered mainly in order that a few more head mistressships may be open to the assistant mistresses in the Welsh county schools.

"Western Mail" and the County Schools. The *Western Mail* has, once again, published certain anonymous letters which contain very serious reflections on the integrity of the supervisors at the annual examination of the Central Welsh Board. Now we believe that every fair-minded person will readily agree that the editor, in justice to all the masters and mistresses in the Intermediate schools, should either substantiate the charges or withdraw them unreservedly. One must also be allowed to doubt whether the publication of letters suggesting fraudulent conduct on the part of members of a great profession is strictly in accordance with the canons of honourable journalism.

The Drafting Committee meets at Llandrindod Wells on June 1. Several modifications of the original clause have appeared in the Press, but it remains to be seen whether they are sufficiently drastic to unite all sections in support of the Council.

Swan Sonnenschein & Co., Ltd.

PARALLEL GRAMMAR SERIES.

Edited by Prof. E. A. SONNENSCHN, M.A. Oxon.,

Dean of the Faculty of Arts, Birmingham University.

Uniformity of Terminology and **Uniformity of Classification** are the distinguishing marks of this Series; all the Grammars are constructed on the same plan, and the same terminology is used to describe identical grammatical features in different languages.

Latin, English, Spanish, Dano-Norwegian, Welsh, Greek, French, and German.

16-page Prospectus free. Keys to the Latin and German Readers and Writers may be had by Teachers direct from the Publishers.

By Prof. SONNENSCHN, D.Litt. Oxon.

ORA MARITIMA.

(FIFTEENTH THOUSAND.)

A Latin Story for Beginners, with Grammar and Exercises, covering the First Three Declensions and the First Conjugation (Active Voice). Crown 8vo, 2s. Subject to discount.

PRO PATRIA.

A sequel to "Ora Maritima," with Grammar and Exercises carrying the pupil to the end of the Regular Accidence. Crown 8vo, 2s. 6d. Subject to discount.

IN PREPARATION. On the same lines as "Ora Maritima."

The Greek War of Independence.

Being a Greek Story for Beginners, with Notes and Exercises, covering the Regular Accidence, by C. D. CHAMBERS, M.A., Lecturer in Classics in the University of Birmingham, formerly Assistant Master of Bromsgrove School.

In this book, as in the Latin volumes of this Series, special attention has been devoted to correctness of idiom in the text.

THE NEW CLASSICAL LIBRARY.

Edited by Dr. EMIL REICH. Cloth, 3s. 6d. net; leather, 4s. 6d. net each.

The following are now ready:—

1. **THE THEAETETUS AND PHILEBUS OF PLATO.** Translated by H. F. CARLILL, M.A.
2. **PLUTARCH'S LIVES OF ALEXANDER, PERICLES, CAIUS CAESAR, and AEMILIUS PAULUS.** Translated by W. B. FRAZER.
3. **THE ANNALS OF TACITUS. (Books I-VI.)** Translated by A. V. SYMONDS.

THE GIRLS' SCHOOL YEAR BOOK. (Public Schools.) The First Annual Issue, under the direction of the Editors of the "Public Schools Year Book," will be ready shortly. Crown 8vo, cloth 2s. 6d. net.

The G.S.Y.B. will give particulars of about 120 Public Secondary Schools for Girls, including the leading High Schools throughout the kingdom; and all those of the Girls' Public Day Schools Company, Limited, the Church Schools Company, Limited, and the Church Education Corporation.

A description will be given of each School which supports the scheme, giving full particulars of Staff, number of Girls, Education, Terms, Entrance Examinations, Scholarships, Fees, Games, Prizes, Honours, &c.

NEW VOLUME OF SONNENSCHN'S QUOTATION SERIES.

NOW READY.

DICTIONARY OF GERMAN QUOTATIONS. By LILIAN DALBIAC. Small demy 8vo, 7s. 6d.

"Lilian Dalbiac's work is more than a book of reference. Scholarship, thought, and interest fill these four hundred closely printed pages. The general reader may open the book at any part, and will find a wealth of matter to entertain and instruct."—*Scotsman*.

"No one can consult this admirably arranged, well-indexed book without being grateful to the compiler for the care, patience, and taste with which she has laboured to make it complete."—*Standard*.

ARITHMETICAL EXAMPLES. With Answers. By L. LOGAN, F.R.G.S., Head Master of Ormond School for Boys, Dublin. Crown 8vo, 1s.

ARITHMETICAL WRINKLES. By L. LOGAN, F.R.G.S., Head Master of the Ormond School for Boys, Dublin. Crown 8vo, 1s.

PRACTICAL HOUSEWIFERY. By C. F. PICTON-GADSDEN (Domestic Economy Teacher, London County Council Schools). Crown 8vo, 2s. 6d.

"A comprehensive and clearly written exposition of the elements of domestic economy, except cooking. . . . It follows the lines laid down by the Education Department, and should prove useful both to schools and for private study."—*Scotsman*.

THE STUDENT'S HYGIENE. Adapted to the Syllabus of the Board of Education. Stage I., 1905. By ERNEST EVANS, Natural Science Master, Municipal Technical School, Burnley. Author of "Botany for Beginners," "Biology of Poultry-Keeping," &c. With 125 Illustrations. Crown 8vo, 3s. 6d.

STUDIES IN ROMAN HISTORY. By E. G. HARDY, M.A., D.Litt., Fellow of Jesus College, Oxford. Crown 8vo, 6s.

"A book of a stamp too rarely produced in England; a book bearing witness on every page of the unremitting toil of the author. The whole work is that of a profound scholar and an enthusiast."—*Liverpool Post*.

SCHOOL GARDENING FOR LITTLE CHILDREN. By LUCY R. LATTER. Crown 8vo, illustrated, 2s. 6d. net.

NEW AND THOROUGHLY REVISED EDITION OF
INTRODUCTION to the STUDY OF ORGANIC CHEMISTRY. A Theoretical and Practical Text-Book for Students in the Universities and Technical Schools. By JOHN WADE, D.Sc. Lond., Lecturer on Chemistry at Guy's Hospital, University of London. Crown 8vo, 8s. 6d. net.

NEW EDITIONS OF
HANDBOOK OF SYSTEMATIC BOTANY. By Dr. E. WARMING. Edited by M. C. POTTER, M.A., Professor of Botany in the Durham College of Science. With 610 Illustrations. Demy 8vo, 15s.

AN ELEMENTARY TEXT-BOOK OF BOTANY. By Dr. SIDNEY H. VINES, M.A., D.Sc., F.R.S., Sherardian Professor of Botany in the University of Oxford. 483 Illustrations. Demy 8vo, 9s.

READY SHORTLY.

THE SCIENCE OF COMMON LIFE. By J. B. COPPOCK, B.Sc. Lond., F.I.C., F.C.S., Principal of the Schools of Science, Kendal.

SWAN SONNENSCHN & CO., LIMITED, 25 HIGH STREET, BLOOMSBURY, W.C.

IRELAND.

At the time of writing the names of the Commissioners appointed to inquire into the affairs of Trinity College have not been published. It is stated that Sir Edward Fry, who presided over the Commission on the Irish Land Laws bearing his name, will be the Chairman. It was at first believed that no member of Trinity College had been appointed; but it appears that the Board have been asked to nominate one member, and have done so. The most discouraging rumour we have had is that the Royal Commission will be merely a "reporting" Commission, and not the preliminary to a definite attempt to settle the whole Irish University question, which, though it does not cohere with Mr. Bryce's statement in the House when announcing the appointment of the Commission, is probably correct, as the Government have given no indication that they have any definite policy on the subject of Irish education, and the Liberal Party are extremely divided upon it.

At the recent meeting of the Synod of the Episcopal Church of Ireland the differences between the Church and Trinity College on the question of giving the former some control over the teaching in the Divinity School were again brought forward, and an influential Committee was appointed to take steps to have the present position of the Divinity School brought before the Royal Commission, and the claims of the Church in relation to it.

Last month a fine statue of the late Mr. Lecky, erected in the quadrangle of Trinity College, in memory of the historian, who was a graduate of Dublin University and her Parliamentary representative, was unveiled. Lord Rathmore, a personal friend of Mr. Lecky, delivered an eloquent address on the occasion.

The question of continuing the conferring of *ad eundem* degrees on women holding the Oxford and Cambridge Certificates is being raised, as the time limit imposed is approaching. It was intended that the privilege should be only accorded until it was possible for women desiring the Dublin degree to graduate in Dublin University itself; and over the signature "M." in the *Athenaeum*, a prominent member of the Board asks that the giving of such degrees shall now cease. The large number applying for the degree has astonished none more than the Provost and Board of Trinity College themselves. It is however desired by the women interested that the privilege shall be continued, and certainly, if they are to be treated as men graduates of Oxford and Cambridge are, logically this should be done. We are informed that the large sum accruing from fees has been set aside and ear-marked for women's education.

At a recent meeting of the Senate of the Royal University a resolution was passed directing the Standing Committee to "prepare a draft of such statutes and regulations as shall provide the necessary means to enforce academic discipline and to punish academic misconduct." It was also directed that the minutes of the Senate meetings, &c., relating to the disorders last October should be supplied to Government. The appointment of a successor to the Earl of Meath in the Chancellorship of the University has not, at the time of writing, been announced.

An important point in Irish intermediate education has been raised by the action of the Chief Secretary in the House of Commons on the 21st ult. The Rules and Programme for the Intermediate Examinations of 1907 have recently appeared. From one part of the courses Irish, as an alternative language with French and German, is removed. Mr. T. O'Donnell, in the House, moved an address asking that the "sanction of Parliament" or the "Royal assent" (it is variously reported) should be withheld from the new Intermediate Rules until they were amended in this respect by the restoration of Irish, and also by making domestic economy and hygiene compulsory for girls in the senior courses for exhibitions. The Chief Secretary, in reply, stated that the Intermediate Board was independent of the Irish Government, and that he would not interfere in any way, but would leave the matter to Parliament; he himself sympathized with the desire of Mr. O'Donnell to place Irish on an equality with French and German. Mr. Campbell, the only Unionist member present, protested strongly against the Rules of the Board, drawn up, it might be presumed, from carefully weighed reasons, being altered by Parliament, which was comparatively ignorant on the subject, and without the case of the Board being fairly stated by the Chief Secretary. The issue, however, was that each of the proposals was passed without a division, and, presumably, will now be embodied in the Rules. The latter have already received the sanction of the Lord Lieutenant, and are published.

It is somewhat startling to find that the House of Commons—a wholly incompetent body to decide such educational details—can make any changes it wishes according to the whims and circumstances of any given half-hour—changes which may have serious effects on education or greatly embarrass the schools. The rule compelling girls in the Senior Science Exhibition courses to take Domestic Economy and Hygiene is of this kind. It would necessitate special buildings and equipment, which, perhaps, in a year or two other changes would again make unnecessary. The competence of the House to decide such

educational questions was illustrated on the occasion by one member's announcing ironically that geometry, trigonometry, mechanics, and chemistry were actually appointed as subjects for girls to study, and asking what "earthly good such subjects would be to them," while the names of these subjects in the education of girls were received with loud laughter by other members.

Since no part of the funds of Irish intermediate education is derived from an annual Parliamentary grant, some of it coming from the funds of the Irish Church, and the rest from part of the Excise revenue, it is doubted that this unprecedented interference is valid, and there is much speculation as to what action the Board will take in regard to it.

The provisions of the Act which established registration for teachers were extended to Ireland through the efforts of the various Irish educational associations, and have been taken advantage of to a very considerable extent. The attitude of the Irish Roman Catholic Church in regard to the University question almost wholly prevented Roman Catholic teachers applying for registration, but, among the small Protestant minority, nearly four hundred teachers have registered in Column B, out of which about a hundred and fifty are teaching in England, though trained in Ireland and belonging to the Royal University. The chief Protestant schools in Ireland all applied for "recognition." Largely in consequence of registration being established, a department for the training of teachers has been established in Trinity College, Dublin, Alexandra College, and Queen's College, Cork, and is about to be started in Queen's College, Belfast, while almost all students preparing to become teachers have been intending to fulfil the requirements for registration. In view of these facts, the abolition of the Register by a clause in the present Education Bill, without any provision for another scheme of registration, is regarded as retrograde and injurious by Irish educationists, and memorials have been presented to the Chief Secretary, protesting against it, from the Irish Association of Women-Graduates and the Central Association of Irish Schoolmistresses, while a third is being signed by the Irish teachers who have already registered.

On three occasions during the last month the financial injustice suffered by Irish primary education has been brought prominently forward. In the House of Commons, in an able speech on the general financial relations of the two countries, Mr. Redmond drew attention to the fact that in the increased expenditure on education during the last ten years, calculated on the Scotch scale, Ireland should have received £310,000 more than she did; on the English scale, £234,000 more; also that, while subsidies for buildings, &c., were formerly given as a special additional grant, they were now taken from the Development Grant—a fund which in England and Scotland was devoted wholly to education, but in Ireland was diverted to other purposes.

The Provost of Trinity College, recently speaking in the North of Ireland, gave details of practical evils and difficulties arising from the want of funds to supply sanitary school-houses and the consequences of closing or amalgamating small schools in districts with a very scattered population.

At the Synod of the Episcopal Church of Ireland, Dr. H. Moore showed that, even calculated on the basis of the contribution of Ireland to the Exchequer, Irish primary education should receive £200,000 a year more than she does; on the basis of population—the proper basis—the grant at present, instead of being not quite £1,400,000, should be upwards of £1,800,000. By the Estimates of this year Scotland, with about the same population, will receive £500,000 more than Ireland for primary education.

SCHOOLS.

CHELTEMHAM LADIES' COLLEGE.—Scholarships: At St. Hilda's Hall, Oxford—(1) the Hay Scholarship of £35 a year for three years, awarded to Mary Grice; (2) the St. Hilda's College Scholarship of £40 for three years, awarded to Margaret Bernard Cooke. The degree of Mus.Bac. of the University of Durham has been gained by the Misses Grace and Janet Salisbury, teachers of music in the Ladies' College. Associated Board of the Royal Academy and the Royal College of Music Local Centre Examination: Advanced Grade—Mary Ross (Pianoforte), Elise Jarvis (Singing). Intermediate Grade—Lilian D. Stainer (Honours in Harmony), Ethel M. Hodgins (Pianoforte), Elizabeth Reynell (Harmony). Elementary Grade—Edna W. Jardine and Agnes S. Cresswell (Rudiments of Music).

HAILEYBURY COLLEGE.—The Greek and Latin Prose Prizes, the Hanbury Divinity Prize, and the Brisbane Butler Shakespeare Prize have been won by C. H. Gidney, the Latin Translation Prize by W. M. Wace, and the Jackson Art Prize by C. F. Battiscombe and G. R. Nothmann. R. L. Yorke has been elected a scholar of Lincoln College, Oxford; W. M. Wace an exhibitor of Selwyn College,

THE "A.L." SCHOLAR'S ENGLISH DICTIONARY.

WITH SELECT LISTS OF
ABBREVIATIONS AND FOREIGN
WORDS AND PHRASES.

Specially prepared for School use by

THOMAS PAGE and ALFONZO GARDINER.

CONTAINING NEARLY 14,000 WORDS.

Third Edition, Revised, 100 pp., net 2d.; in cloth-lined cover, net 8d.

For years teachers have been seeking a suitable **English Dictionary** for the upper classes—one that would be (1) helpful in the reading of ordinary current literature; (2) a guide to the peculiarities of spelling and pronunciation; (3) free from all objectionable words and meanings.

It is believed that in the "**A.L.**" **Scholar's English Dictionary** the above wants have been met.

No pains have been spared to produce a thoroughly *reliable* and *practical* book of reference.

With many new Plans and other Illustrations. Large 8vo, cloth gilt, containing 556 pp., with 450 Illustrations, 25s. net.

MODERN SCHOOL BUILDINGS. ELEMENTARY AND SECONDARY.

A Treatise on the Planning, Arrangement, and Fitting of Day and Boarding Schools.

HAVING SPECIAL REGARD TO SCHOOL DISCIPLINE, ORGANISATION, AND EDUCATIONAL REQUIREMENTS.

By FELIX CLAY, B.A., Architect.

School.—"Felix Clay's masterly volume will prove indispensable to architects and to educational authorities, and we trust that it will be placed at the disposal of teachers. It is a remarkable contribution to architectural knowledge, and it takes high rank also as a contribution to the study of education."

School World.—"To the architect and the schoolmaster alike it will prove an invaluable work of reference. Every type of secondary and elementary school is fully illustrated and adequately described. . . . There is no detail pertinent to its wide range of subjects on which the reader may not gain prompt and trustworthy information."

Spectator.—"Mr. Clay's lucid and well illustrated volume will be indispensable to all who have to deal with the building of new schools, whilst we should gladly see its perusal made a necessary condition for holding the office of manager."

B. T. BATSFORD, 94 High Holborn, London.

Spoken French, already optional, will soon be compulsory for Junior and Senior Locals.

To teach Spoken French you must employ the **Direct Method**, and the best book by far for this purpose is **ROSSMANN and SCHMIDT'S**

FRENCH BY THE DIRECT METHOD

[now complete], of which nearly 200,000 copies have been sold.

Dr. GRAY, Warden of Bradfield College, Berks, writes:—"A valuable work, and infinitely superior in system to the old grammars."

D. L. SAVORY, Esq., of Marlborough, writes:—"Certainly the best First French Book on Reform lines that I have yet seen."

"This little book [*livre de lecture*] brings us into touch with the men who have made France, and is calculated to arouse a living interest in them and their language."—*The Journal of Education*.

"Nothing seems to have been omitted that could help and interest the most apathetic British child, and we confidently recommend the book [Part III.]."—*The Journal of Education*.

Part I., 1s. 6d. Part II., 1s. 8d. Part III., 2s. 6d. Part IV.—*Livre de Exercices*, 2s.; *Livre de Lecture*, 2s.; *Grammaire Française en Français*, 8d.

Each Part consists of a carefully planned year's work.

ENGLISH FOR JUNIOR FORMS.

Books I and II., 2d. Books III.-V., 3d. Books VI. and VII., 4d.

"Well suited for the lower forms of secondary schools, and may provide hints on method that will even be of some value to masters in middle and upper forms."—*Guardian*.

JUST ISSUED.

T. C. & E. C. JACK,

34 HENRIETTA STREET, LONDON, W.C., & EDINBURGH.

Swedish Institute and Clinique,

91 Cromwell Road, and 27 Emperor's Gate,
LONDON, S.W.

UNDER DIRECT MEDICAL SUPERVISION.

Private Patients treated daily at 91 Cromwell Road, or at their own Homes. Free Clinique for Poor Patients at 27 Emperor's Gate.

One or two years' Training for Students. Entrance in January and September. Course as in Sweden, in Massage, Medical Gymnastics, and allied subjects.

This is the only Institute in Great Britain modelled on exactly the same lines as the Central Institute, and Dr. Orvedson's Institute, Stockholm.

Methode Intuitive pour apprendre le Français.

LECONS DE CHOSES. CONVERSATIONS.

COMPOSITIONS ET GRAMMAIRE.

120 pages. Crown 8vo, cloth, 1s. 6d. each.

The main object of this book is the acquisition of French through the medium of French by means of a careful arrangement of Object Lessons and Dialogues. The child must be taught from the beginning to think in French. The foreign tongue is used from the start, and English only at the teacher's discretion. Such a course is by no means difficult, even in the grammatical exercises, where rules and explanations are expressed in clear and simple language. By associating observation with objects and actions, the child acquires the language without the intervention of English.

J. W. BEAN & SON, 17 Boar Lane, Leeds.

HACHETTE & CO.,

LONDON: 18 KING WILLIAM STREET, CHANCERY CROSS.

Cambridge; and T. H. E. Baillie a scholar of Pembroke College, Oxford. A scheme for considerable additions to the school buildings is under the consideration of the Council. The Speech Day has been fixed for Wednesday, June 27.

NORTH LONDON COLLEGIATE SCHOOL FOR GIRLS.—Empire Day was celebrated first by a short service. Prayers appropriate to Ascension Day were read and then the pupils sang the Old Hundredth. Mrs. Bryant then gave a short address on the unity of the Empire as maintained "by the golden link of the Crown," which was followed by the singing of the National Anthem. The hall was decorated with flags and the Union Jack waved from the roof of the building. An exhibition was held in the Gymnasium of articles lent by the pupils to illustrate the productions and characteristics of the different parts of the Empire. These included a great variety of specimens of historical relics and beautiful lace of the United Kingdom; the cereals of Canada; specimens of the work of the native races, products, and animal life of South Africa; natural products and native implements of Australasia; embroidery, carving, and brass work of India and the East; charts and other illustrations of the different races and varying modes of life in nearly all the colonies and dependencies. On Wednesday, May 23, a lecture was given to the pupils by Miss Aitken, a former mistress of the school, on her impressions of South Africa and its needs.

UNITED WESTMINSTER SCHOOL.—Dr. E. H. Stevens, Ph.D. Heidelberg and B.A. London, was appointed to the vacant Head Mastership. There were no less than 138 applicants. The post is worth about £600 a year with house rent and rate free. Dr. Stevens has been for the last five years second master at Brighton Grammar School.

UNIVERSITY COLLEGE SCHOOL.—The Court of the Worshipful Company of Fishmongers have granted the sum of a hundred guineas to the fund for the new buildings of University College School at Hampstead. Subscriptions have now been received, or promised, amounting to £65,828, leaving a balance still to be raised of £44,172. Further subscriptions should be sent to the Treasurer (Dr. Collingwood Andrews), University College School, Gower Street, W.C., or to one of the Secretaries of the Fund, Mr. Harold Wace, or to Mr. Blyth, at the same address.

WINCHESTER COLLEGE.—The date of the annual match with Eton, which takes place this year at Winchester, is July 6 and 7.

PRIZE COMPETITIONS.

The Translation Prize is awarded to "Pseudonym." *Proxima*, "Occiput."—The winner of the Translation Prize for March is Miss Marion Little, St. Winifred's, Eastbourne.—One of the winners of the Extra Prize for March is M. B. Bean, 111 St. George's Terrace, Jesmond, Newcastle-on-Tyne.—The winner of the Translation Prize for April is W. G. Macpherson, Esq., Artillery Mansions, Victoria Street, S.W.

M. Atilius Regulus, cum consul iterum in Africa ex insidiis captus esset, duce Xanthippo, Lacedaemonio, imperatore autem patre Annibal Hamilcare, iuratus missus est ad senatum, ut, nisi redditi essent Poenis captivi nobiles quidam, rediret ipse Karthaginem. Is cum Romam venisset, utilitatis speciem videbat; sed eam, ut res declarat, falsam iudicavit: quae erat talis: manere in patria, esse domi suae cum uxore, cum liberis; quam calamitatem acceperat in bello, communem fortunae bellicae iudicantem tenere consularis dignitatis gradum. Quis haec neget esse utilia? Quem censes? Magnitudo animi et fortitudo negat. Num locupletiores quaeris auctores? Harum enim est virtutum proprium nihil extimescere, omnia humana despiciere, nihil, quod homini accidere possit, intolerandum putare. Itaque quid fecit? In senatum venit; mandata exposuit; sententiam ne diceret, recusavit; quamdiu iure iurando hostium teneretur, non esse se senatorem. Atque illud etiam—o stultum hominem, dixerit quispiam, et repugnantem utilitati suae!—reddi captivos negavit esse utile: illos enim adolescentes esse et bonos duces; se iam confectum senectute. Cuius cum valuisset auctoritas, captivi retenti sunt; ipse Karthaginem rediit neque eum caritas patriae retinuit nec suorum. Neque vero tum ignorabat se ad crudelissimum hostem et ad exquisita supplicia proficisci: sed ius iurandum conservandum putabat. Itaque tum, cum vigilando necabatur, erat in meliore causa, quam si domo senex captivus, periurus consularis remansisset. "At stulte, qui non modo non censuerit captivos remittendos, verum etiam dissuaserit." Quomodo stulte? etiamne, si rei publicae conducebat? Potest autem, quod inutile rei publicae sit, id cuiquam civi utile esse? Pervertunt homines ea, quae sunt fundamenta naturae, cum utilitatem ab honestate seungunt. Omnes enim expetimus utilitatem ad eamque rapimur nec facere aliter ullo modo possumus. Nam quis est, qui utilia fugiat? aut quis potius, qui ea non studiosissime persequatur? Sed, quia nusquam

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

Mr. Edward Arnold's New Books.

SIR JOSHUA FITCH.

AN ACCOUNT OF HIS LIFE AND WORK.

By A. L. LILLEY, M.A.

With Portrait. Large crown 8vo, 7s. 6d. net.

STANDARD.—"Mr. Lilley is to be congratulated upon his production of a memoir which does justice to a notable figure in nineteenth century English life and thought. The book should be read by all who have any interest in educational questions."

EPOCHS OF ENGLISH LITERATURE.

By J. C. STOBART, M.A.,

Assistant Master at Merchant Taylors' School.

An entirely new series, which may be said to have three purposes:—first, to teach the history of our literature in a rational and orderly manner; second, to illuminate the history of England by exhibiting the thoughts of its men of letters in their own words; and, third, to display, as if in a gallery, some specimens of the inheritance into which every English-reading boy and girl has entered.

LIST OF THE SERIES.

- | | |
|---|---------|
| VOL. I. The Age of Chaucer, 1215—1500. | [Ready. |
| " II. The Age of Spenser, 1500—1600. | [Ready. |
| " III. The Age of Shakespeare, 1600—1635. | |
| " IV. The Age of Milton, 1625—1660. | |
| " V. The Age of Dryden, 1660—1700. | |
| " VI. The Age of Pope, 1700—1750. | |
| " VII. The Age of Johnson, 1750—1798. | |

Crown 8vo, cloth, 1s. 6d. each.

ARNOLD'S MODERN FRENCH BOOK I. Edited by H. L. HUTTON, M.A., Senior Modern Languages Master at Merchant Taylors' School. Crown 8vo, cloth, 1s. 6d.

This book is written on reformed methods, and contains a series of graduated Reading Lessons, followed by a carefully arranged *Questionnaire*, with Exercises for retranslation.

GRAMMAIRE FRANCAISE. A l'usage des Anglais. Par E. RENAULT, Officier d'Académie; Assistant Lecturer at the University of Liverpool. viii + 360 pages. Crown 8vo, cloth, 4s. 6d.

GRADUATED FRENCH UNSEENS. Edited by Professor VICTOR OGER, Professor in French at Bedford College for Women, London. In four parts. Limp cloth, 8d. each.

A FIRST GERMAN READER. With Questions for Conversation, Grammatical Exercises, Vocabulary, &c. Edited by D. L. SAVORY, B.A., Lecturer in the University of London, Goldsmiths' College. Crown 8vo, cloth, 1s. 6d.

The reading lessons in this book are simple in style, but not too childish in matter, being intended for pupils beginning German at about fourteen. The instruction is given on reformed lines entirely in German, excepting the Vocabulary and the Exercises for retranslation from English into German.

DER BACKFISCHKASTEN. By FEDOR VON ZOBELTITZ. Edited, with Notes and Vocabulary, by GUSTAV HEIN, German Master at the High School for Girls, Aberdeen, N.B. Authorised Edition. Crown 8vo, cloth, 2s.

This is probably the most entertaining story of all Herr Zobeltitz's popular works. It describes the experiences of two girls at a German boarding school, and is extremely lively and brightly written.

DIES ROMANI. A new Latin Reading Book. Edited by W. F. WITTON, M.A., Classical Master at St. Olave's Grammar School. Crown 8vo, cloth, 1s. 6d.

Designed to give pupils whose study of Latin is limited to two or three years a representative selection from the best authors within their range.

ELEMENTARY SOLID GEOMETRY. By F. S. CAREY, M.A., Professor of Mathematics in the University of Liverpool. Cloth, 2s. 6d.

TEST PAPERS IN ELEMENTARY MATHEMATICS. By A. CLEMENT JONES, M.A., Ph.D., and C. H. BLOMFIELD, M.A., B.Sc., Mathematical Masters at Bradford Grammar School. 250 pages. Crown 8vo, without Answers, cloth, 2s. 6d.; with Answers, 3s. Answers separately, 1s.

CATALOGUES ON APPLICATION.

London: EDWARD ARNOLD, 41 & 43 Maddox Street, W.

THE REFORM FRENCH COURSE.

FIRST YEAR (with or without Vocabulary.)

Première Année de Française. By F. B. KIRKMAN. A complete illustrated course of lessons for the first year. Price 2s. Two Wall Sheets have been prepared in connection with the above, size 45×35 inches. Price 3s., 5s., and 7s. 6d. net each.

possumus nisi in laude, decore, honestate utilia reperire, propterea illa et prima et summa habemus; utilitatis nomen non tam splendidum quam necessarium ducimus.

By "PSEUDONYM."

While in Africa during his second consulship, Regulus was taken prisoner in an ambushade by Xanthippus, a Spartan officer serving under Hannibal's father, Hamilcar, and was sent on a mission to the Senate under oath, to return in person unless certain captive Carthaginian nobles should be released. Once at Rome he could not be deaf to the dictates of self-interest, plausible enough, but in his judgment—as the sequel shows—misleading. "Abide in thine own country," it said; "enjoy at home the society of wife and child; account the reverse that thou hast suffered to be the common fortune of war; hold thou still thy high office of consul." Who will gainsay that such advice was for his interest? Who imaginably can deny it? Yet a lofty sense of honour and a resolute will say No. Can you wish for authority more ample? It is the prerogative of those high qualities to admit no fear, to condemn all human ills, to account unbearable no suffering that may befall a man. What then did Regulus? Entering the Senate, he delivered his message, but refused to record his vote, deeming that he was no senator while bound by an oath extorted by the foe. Nor was this all. He declared—O fool and blind, men may say—he declared the release of the prisoners to be inexpedient. They were young, he urged, and good officers; he a worn-out veteran. His advice prevailed. The prisoners were not given up, and Regulus returned to Carthage. No love of country or of kindred held him back. He knew full well that he went to a cruel foe, to exquisite torture. But he deemed his oath was binding. So at the very hour when he was being done to death by want of sleep, his was a nobler lot than if he had remained at home a prisoner of war in his old age, false to his oath, albeit a consular. It may be called folly that, far from advising the release of the prisoners, he argued strongly against it. Nay. Is an act folly which promoted the common weal? Can the interest of the individual profit where that of the State suffers? It is indeed a perversion of the fundamental laws of nature when men separate interest from right. We all seek our own interest. We are drawn to it. We cannot do otherwise. Would any man turn away instead of rather pursuing it heart and soul? Yet it is precisely because we cannot find our own interest, except in things noble, honourable, and right, that we account these last the chief and sovereign good, whereas in the word self-interest we recognize nothing higher than a natural instinct.

We classify the 107 versions received as follows:—

First Class.—Pseudonym, Menevia, Semel, Mysore, A.A.M., Occiput, Sterne, Den, Ravenna, E.P.A., Artaxerxes, H.W.H., Cunctator.

Second Class.—Prig, Eicarg, Salopian, Deodar, Bocardo, Dido (Edin.), Borealis, Caractacus, Ptolemy, R.F.C., J.H., Lethe, Theta, Quinapalos, E.S.B., Cluvienus, Pontus, Bia, Gawan, Hector, Lambinus, Dido, Vlaamsche Meisje, Spitzbergen, Alpha, Shakspere.

Third Class.—A.B.C., Tweedside, Theodora, Page 350, Cicero, Saucy Jane, Great Western, *obtus*, Old Moon, Tactaria, Narcissus, Necessitas, C.H.T., Eheu fugaces, Utilitas, Tiphaine, J.D.L., Odetta.

Fourth Class.—Glis, E.M.B., D.B., H.M.L., E.T., M.P., S.L., Membro, N.U.T., Vardy, Colophon, Snap, D.O.N., G.A.T., Outfit, A.A.S., Fille, Vaaman, Coll, Rosetta, Marcus, Odena, P.M., Davus, R.S., Quisante.

Fifth Class.—Nusquam, Tiro, Fifth Form, N.U., Arabis, Tully, P.Q.T., Nesto, Girlie, M.B., Matric, Slap, Salvia, T.E., Bis, Fils, Tic, Ohme, F.L.S., Rara, O.O., Phui, Mater, L.S.O.

The passage of Cicero is taken from "De Officiis," III. 26, 99. It does not need the context to show that Cicero is discussing *utilitas*—"utilitarianism" in modern phrase—and the difficulty is to find a substantive with corresponding adjective which will serve throughout. Several solutions are possible, but consistency is almost essential. So, again, there are many ways of turning the complex first sentence and making it read like English; but the worst of all ways is to follow the Latin order—"Regulus when he was in his second consulship in Africa taken in an ambushade." *Utilitatis speciem videbat*: "he felt all the glamour of self-interest, but he did not mistake the shadow for the substance; policy advised," &c. The imperfect *videbat* expresses his state of mind, and *species* has the double notion of falseness and attractiveness. *Quem censes?* "Who can deny? Whom do you think?" was a common blunder in English. *Magnitudo animi* is general: to drag in Regulus weakens the argument. *Sententiam ne diceret*: the technical word for "to vote"; the next sentence shows it cannot mean "to express an opinion." *Tum ignorabat*: the prize version omits "even then." *Vigilando necabatur*: "he was dying of sleeplessness" suggests disease, not torture; and "he was tortured by the extraction of his eyelashes" is an unwarrantable gloss. "He was kept without sleep, and so killed by inches" is the best we can suggest. *Si domo senex*: here the prize version misses the full force—"if he had spent his last years at home, a Roman with the brand of slavery, a consular who had

PRIVATE TUITION.—Tutor Coaches by Correspondence for Matriculation, B.A., A.C.P., &c. Classics, French, German, English, Mathematics, thoroughly taught for all Examinations. Highest references. Terms moderate.—Tutor, at Horncastle's, 61 Cheapside, E.C.

HAT BANDS, CAPS, AND BADGES

At Wholesale Prices through Manufacturer's Agent.

Quotations for any Quantity, Design, or Colour. Write—SCHOOLS AGENT, 1 Arundel Villas, Chelmsford Road, South Woodford, N.E.

broken faith." *Laude, decore, honestate*: "in things of good repute, honourable and virtuous"—a Ciceronian triplet without precise desynonymization; we must recognize the climax. *Utilitatis nomen*: the majority went hopelessly astray. Literally, "The word 'expediency' implies something we cannot do without, but it carries no distinction"; more freely, "Self-interest is an indispensable motive to action, but it confers no distinction."

A Prize of Two Guineas is offered for the best translation of the following extract from Théophile Gautier:—

Dans les époques classiques, lorsque les écrivains s'efforcent de retrouver par l'étude les lignes simples et sévères des anciens poètes, ils retombent souvent dans un excès fâcheux, dans l'ennui, dans la sécheresse. Une idée de fausse noblesse semble les poursuivre, le familier les effraye, ils écrivent dans un dialecte savant comme celui des brahmes de l'Inde. Le bon goût est une belle chose; cependant il n'en faudrait pas abuser: à force de bon goût, on arrive à se priver d'une multitude de sujets, de détails, d'images et d'expressions qui ont la saveur de la vie. La belle et riche langue du XVI^e siècle, blutée et vannée par des mains trop méticuleuses, pour quelques mauvaises herbes qu'on en a retirées, nous paraît avoir perdu beaucoup d'épis pleins de grains d'or. Nous sommes de ceux qui regrettent que Malherbe soit venu. Un grand et admirable poète, Mathurin Régnier, a exprimé la même idée en vers d'une énergie et d'une vigueur surprenantes. L'influence de Louis XIV n'a pas toujours été heureuse sur la littérature et les arts de son temps. La perruque du grand roi y domine trop. La majesté, l'étiquette, la convention, ont quelque peu chassé la nature. Les arbres du parc de Versailles portent des boucles et des frises comme les courtisans; les poèmes sont tracés au cordeau comme les allées. Partout la régularité froide est substituée au charmant désordre de la vie; la volonté d'un seul homme remplace le caprice individuel; Louis XIV, qui se laissait bénévolement personifier sous la figure du soleil, avait plutôt l'amour du faste que celui de l'art. Il n'était pas doué de l'intelligence passionnée des Jules II, des Léon X. Il savait qu'il entre dans la composition de tout beau règne une certaine quantité de poètes, de prosateurs, d'architectes, de statuaires et de peintres, et il se procura les artistes dont il avait besoin pour sa gloire, car les grands rois font les grands artistes; ils n'ont qu'à vouloir: un regard d'attention, une bonne parole et une poignée d'or suffisent pour cela.

"R.J.B." sends us the following "amended problem":—

John Robinson, writing A.D. 2050, says: "At midnight on the day I was born the number of days which had elapsed since the century began was a divisor of the number of days which the century contains. If my grandfather, Alfred Jones, had not been born just a day too late,

he would have been able to make the same remark. Alfred Jones and I were born on the same day of the week and in the same month of the year." On what days, respectively, were John Robinson and Alfred Jones born?

Answer: May 7, 2005, and May 3, 1902.

Solution.

The twentieth century contains 36,525 days, the twenty-first century 36,524 days. Tabulating the possible dates of birth, the months in which they occur, indicating in the case of Alfred Jones the number of days in excess of a multiple of 7 since the beginning of the twentieth century, and in the case of John Robinson the number of days in excess of a multiple of 7 since the beginning of the twenty-first century, plus 6 (6 being added because the twentieth century contains 6 days in excess of a multiple of 7), we get

A. J.	Index No.	J. R.	Index No.
4 Jan.	4	2 Jan.	8
5 Jan.	6	4 Jan.	10
16 Jan.	2	23 Jan.	8
26 Jan.	5	46 Feb.	10
76 Mar.	6	92 April	7
488 May	5	397 Feb.	11
1462 Jan.	6	794 Mar.	9
2436 Sept.	0	1538 May	12
7306 Jan.	5	9131 Dec.	9
12176 May	3	18262 Dec.	12

We have to choose an index number from each table (affixed to the same month in each case) such that the difference between the two numbers is 7 or 0. The only pair satisfying these conditions is A. J. May 5 and J. R. May 12. Hence A. J. was born on the 488th day of the twentieth century and J. R. on the 1538th day of the twenty-first century.

N.B.—Unity has been omitted from the enumeration of possible divisors, but this was not necessary.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

Those in the First Class are entitled on application to a copy of "Essays in Translation."

All competitions must reach the Office by June 16th, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

These School and Teachers' Advertisements are continued from page 413.

SALE OR TRANSFER.

LADIES AND GENTLEMEN SEEKING TO PURCHASE
SCHOOLS AND SCHOOL PARTNERSHIPS
should apply to

Messrs. TRUMAN & KNIGHTLEY,
Educational Agents,
6 HOLLES STREET, CAVENDISH SQUARE,
LONDON, W.

who have on their books a considerable number of very excellent and financially successful SCHOOLS to sell and PARTNERSHIPS in Schools to negotiate.

For particulars of a few TRANSFERS and PARTNERSHIPS placed in Messrs. TRUMAN & KNIGHTLEY's hands for negotiation, see below.

A Complete List, giving information respecting a large number of openings, will be forwarded on application.

All applications and inquiries are treated as strictly private and confidential.

No charge of any kind is made to Purchasers.

FOR SALE.—High-class SCHOOL FOR GIRLS on the South Coast. Established over 40 years. 27 Boarders (fees £75 to £95, exclusive of extras); 4 Day Pupils (fees £26 to £47). Accommodation for 36 Boarders and 10 Day Pupils. Gross receipts last twelve months £4,077. Profit of £1,000 easily made. Price asked for goodwill £1,500, only part of which need be paid down. For further particulars apply—T 266, Messrs. Truman & Knightley, Educational Agents, 6 Holles Street, Cavendish Square, London, W.

TRANSFER of high-class SCHOOL FOR GIRLS in Derbyshire. Present Principal retiring from the profession. 53 Pupils. Receipts

£3,441; net profit £800. Goodwill £1,000; furniture at valuation. Splendid premises and grounds. Very strongly recommended. For further particulars apply—T 334, Messrs. Truman & Knightley, Educational Agents, 6 Holles Street, Cavendish Square, London, W.

FOR SALE.—Middle-class BOARDING AND DAY SCHOOL FOR GIRLS on the South-East Coast. Recognized. 20 Boarders and 70 Day Pupils. Receipts £1,224. School in splendid working order. Growing neighbourhood. Small sum accepted for goodwill from immediate purchaser. For further particulars apply—T 245, Messrs. Truman & Knightley, Educational Agents, 6 Holles Street, Cavendish Square, London, W.

GIRLS' BOARDING HOUSE for Sale (licensed by G.P.D.S.Co.). Charming London suburb. Detached house, shady garden. Goodwill and furniture, £200. Address—No. 7, 230.*

FOR SALE, in South Devon, long-established Recognized DAY SCHOOL FOR GIRLS, with KINDERGARTEN. Large house, with accommodation for Boarders. Healthy situation. Good garden. Terms for goodwill moderate. School and furniture, if desired, at a valuation. Address—No. 7, 272.*

SCHOOL TRANSFER.—Near London. High-class and successful DAY and BOARDING SCHOOL FOR GIRLS (Recognized). 45 Pupils. One Principal has married, the other retiring. In healthy neighbourhood. Large detached house in large garden. Gross receipts, £1,020; net, £329. Goodwill, school, and household furniture, £900. Address—No. 7, 289.*

GOOD GIRLS' SCHOOL (residential) for TRANSFER, owing to ill-health of Principal. Healthy neighbourhood near London, bracing climate. Large, well appointed house, good garden. Address—No. 7, 283.*

SCHOOLS FOR SALE.—MRS. SHOOPER, Educational Agent, 13 Regent Street, London (established 1881), has the following Schools to offer and Partnerships to negotiate:—(Seaside.) First-class, 12 Boarders. Good fees. Fine premises, facing sea. 20 rooms. Rent £100.—(London, N.W.) Good middle-class. 35 Day Pupils, 6 Boarders. Commodious premises. Rent £70. Goodwill £200.—(Midlands.) Superior Day connexion. Income over £600 to £700.—(Near London.) Finishing School. Established 1867. Boarders only. Income about £2,000. Senior Partner retiring. School for Sale, or present Junior Partner would like to meet with qualified Lady to join her.—(Seaside.) Girls' Day and Boarding. Established over 50 years. 23 Boarders, 40 Day Pupils. Senior Partner retiring. Junior Partner wishes Lady competent to take management of the Educational side. Half-share £250.—(North of England.) Flourishing Girls' Day and Boarding. Established by present Principal's mother in 1861. Ladies now wish to retire. Good Evangelical Church connexion. Will accept capitation fees amounting to about £300.—(South Devon.) Nucleus of Girls' Day and Boarding. Capitation fees accepted.—(Northampton.) Good middle-class, successful Girls' Day and Boarding. Over 50 Pupils. Commodious house, 18 rooms. Rent only £45. Goodwill £160.—(London, W.) Superior Day connexion. 56 Day Pupils, 2 Boarders. £400, including furniture.—(Near London.) English Lady, with Degree, to join French Lady. Day and Boarding School. Gentlemen's Daughters only. Half-share about £300.—(Ireland.) First-class Day and Boarding. Splendid opening. Many other genuine openings. Some of the Schools Mrs. Hooper has been in close touch with for over 25 years. Valuable advice and all information free in reply to confidential statement of requirements. Absolutely no charge to purchasers.

KINDERGARTEN WANTED.

LADY would like to take over a KINDERGARTEN in suitable neighbourhood. Address—No. 7, 240.*

* Replies to these Advertisements should be addressed "No. —, The Journal of Education, 3 Broadway, Ludgate Hill, E.C." Each must contain a loose stamp to cover postage on to advertiser. Post Cards will NOT be sent on.

REVIEWS AND MINOR NOTICES.

- (1) *Western Europe in the Fifth Century.* An Aftermath by the late E. A. FREEMAN, M.A., Hon. D.C.L., Regius Professor of Modern History in the University of Oxford. (Macmillan.) (2) *Western Europe in the Eighth Century and Onward.* By the late E. A. FREEMAN, M.A., Hon. D.C.L., &c. (Macmillan.)

Unfinished work of a scholar who has been taken from us by death should in all cases be treated with respect. These volumes, however, do not stand in need of any pious indulgence, for, if they exhibit some flaws characteristic of their distinguished author's copious productions, they afford perhaps stronger proofs of the wide extent of his learning and the quality of his intellect than are to be found in any of his earlier writings. This is specially true of the first of these two books, which contains a series of lectures on the tangled and obscure history of Gaul from the invasion of the Vandals, Alans, and Suevians in the first decade of the fifth century to the overthrow of the last traces of the Roman rule by Chlodowig (Clovis) the Frank. Slight and scattered notices of events are gathered from many historians, and are criticized and fitted together with extraordinary skill, and narratives are formed out of materials sufficient, indeed, as Freeman shows us, but so difficult to arrive at and so awkward to handle that only a master could have used them with a successful result. A large part of the history centres round the career of the second Constantine who went forth from Britain to win the Imperial crown. He carried the legions with him, and his invasion of Gaul brought the Roman power in Britain to an end. The generals of the reigning Emperor, Honorius, seem to have fled before him, and, though he had to encounter some resistance from the barbarian invaders of Gaul, he soon made himself master of the eastern portion of the land, and reigned at Trier from the Channel to the Mediterranean over all the country which still remained under the Roman sway. He added Spain to his dominions, and became the sole representative of Roman power beyond the Alps. Honorius was forced to acknowledge his claim; he reigned at Arles as a lawful Augustus, and his son Constans as Caesar ruled over Spain at Zaragoza. Then a new pretender to Empire was set up by Gerontius, one of his generals: he lost the corner of Spain which had escaped barbarian ravage and was finally overthrown by the great captain and future Augustus Constantius. The story ends with the dramatic scene of the death of Gerontius and his heroic wife Nunechia. A large part of Gaul and by far the greater part of Spain were in the hands of the barbarians, but for a time Honorius was free from Roman rivals. By the settlement of the Western Goths in Aquitaine, of the Burgundians in the central east, and the Franks in the north-east, the Roman power in Gaul was confined to a strip of country passing through the central portion of the land. It was finally destroyed by the defeat of Syagrius.

The relations between the barbarian conquerors in Gaul and the Empire, a matter of supreme importance, both politically and in the history of Western civilization, are exhibited at some length. For two generations after the settlement of the barbarians Roman dominion survived in Gaul. Constantius so far revived the power of Rome that it is doubtful whether any one barbarian king could have destroyed it. He forced the Goths to evacuate the country, and the barbarians learnt that Rome could still strike hard. Yet it was not long before the Goths under Wallia established their rule in Aquitaine, and the continuance of the Roman dominion thenceforward depended rather on the will of the barbarians than on its inherent strength. It did continue because the magic of the Roman name enabled Rome to find allies and champions among her conquerors. Atawulf the Goth, the husband of Placidia, reigned in Narbonne as a Roman officer, faithful to the Empire, though not to the Emperor, for he maintained a puppet Emperor against his brother-in-law Honorius. Wallia and his people received "the second Aquitaine" as a territorial possession to hold as soldiers and subjects of Rome, and Gunthachar the Burgundian was an Imperial proconsul. Though, so far as practical dominion was concerned, Rome had sunk both in Gaul and Spain to be one power among many, and to hold only a part of those lands, yet "in the other parts of them the Roman life still goes on; the tongue, the law, the creed of Rome is [*sic*] still respected; the Roman bishop still keeps his church in the Roman city;

the Roman magistrate still dispenses the law of Rome to a Roman people."

The second of these volumes begins with an unfinished paper on the affairs of Neustrian Gaul in the seventh century, with special reference to the life of St. Balthild, the English-woman who rose from slavery to share the throne of a Merwing king; it ends with the Imperial coronation of Otto the Great in 962. Taken together, the two volumes may best be described as fragments of a projected history of Western Europe which was to have covered the six centuries between the barbarian invasion of Gaul, the beginning of the decay of the Empire in the West, and the restoration of the Empire in a new form—the Holy Roman Empire of the German nation. The main subject of this second series of papers is the transference of the Frankish monarchy from the Merwings to Pippin and his house, together with the wars of Pippin against the Saracens and the Lombards. The part taken by Pope Stephen in the negotiations which led to Pippin's interference in Italy is represented in a somewhat unusual light. That the Pope invoked his help against the Lombards is, of course, a matter of common knowledge. It is not so generally known that the Pope, in so doing, acted as a representative of the Emperor, and that it was as the Emperor's representative that he conferred on the Frankish King the title of Patrician of the Romans. Yet, while Stephen persuaded him to promise to recover lands for the Roman Republic (as the Empire was still called), he did not intend that these lands which were to be reconquered from the Lombards by the Franks should be restored to the Empire: they were to be conferred on his see. The Emperor, Constantine, considered that the Exarchate was his—as, indeed, it was legally; the Lombards had conquered it from the Empire, and to the Empire it ought to be restored. But the Papal policy triumphed, and "the Republic of which Pippin was the Patrician was clearly shown to be a republic of which not the Emperor, but the Pope, was to be the practical head." A large number of long *excursus* deal exhaustively with certain special points in the history. In both volumes the author's verbosity and inflated style of writing detract from the reader's enjoyment; but such drawbacks will not deter the student from seeking to profit by the excellent matter which they contain. The editor's work seems to have been done carefully, though the indexes leave much to be desired.

Greatness in Literature, and other Papers. By W. P. TRENT. (6s. Geo. G. Harrap & Co.).

Mr. William P. Trent is Professor of English Literature in Columbia University. In the volume before us he has reprinted eight papers delivered before University audiences and other kindred gatherings during the last four years and which have appeared in various American magazines in slightly amended shape. They are all more or less connected with the teaching of English literature; and are put before us as the views of a well read and catholic-minded man on topics with which he has to deal in University work. He discusses each with moderation and good judgment, and is on his guard against making extreme statements of any kind, but not without a temperate enthusiasm for the claims of literature. Indeed, he is so well balanced in his views that sometimes we have found it difficult to gather precisely what he would have us do. But this is not often; and, on the whole, he gives us a well thought-out opinion on the various difficulties of this most difficult subject. His first paper discusses the question of "Greatness in Literature." Here the first thing to do is to arrive at some agreement as to the standard to be adopted. After a very interesting discussion, he divides his writers into supreme, very great, great, important, and minor; and he gives good and weighty reasons for so doing. In the first he gives very few writers who appeal to all nations and times—Homer, Sophocles, Vergil, Dante, Shakespeare, Milton, Goethe, Molière, Cervantes; but is doubtful whether to include Scott, Victor Hugo, and Balzac. We should substitute Sophocles, Isaiah, and St. John. Then follows a much larger class, the "very great," who do not appeal to all nations—Pindar, Lucretius, Petrarch, Tasso, Ariosto, Chaucer, Spenser, Schiller, Heine, Voltaire, Rabelais, Montaigne, Swift, and Gibbon. But here we are not so definite, and would probably have to include several others. The difficulties increase as we descend; but in the main the "supreme" writers stand firm—at least as far as Cervantes.

The next paper has a word to say for smaller authors, and for

popular judgment; and we are shown that there are many who, though on general grounds we have to omit them, have nevertheless produced some poem or piece of prose of such excellence that they have to be included—at least, as far as the piece in question is concerned. But we will turn rather to speak of the two papers which have attracted our attention more than any of the others—"Literature and Science" and "Teaching Literature."

There should not be any rivalry between science and literature: both are wanted. In the last analysis both aim at making the universe more intelligible; both are founded on careful observation and careful experiment. At least literature, when it goes beyond fact and passes into the realm of imagination, should have no doubt on the point and should not allow any one else to have any—if it is to deserve the name of literature. This, or something very like this, is the ultimate outcome of a bright and very interesting argument, in which the plea for more tolerance and forbearance all round is excellently put.

"Teaching Literature" is also an admirable statement of the numerous difficulties which we meet with in dealing with this extremely puzzling question. We are fairly well agreed as to what ought to be the result of any system we employ; but are still very much in the dark as to how to produce that result. The consequence is we are told much more about what we ought *not* to do than what we ought to do, with the result that we are sometimes rather puzzled. But, on the whole, something like this is the outcome. We should use very little of the history of literature in the early stages, and a very little of the study of the selected text-books of good writers, with very few notes; and for the rest depend on the fostering and encouraging of reading for oneself to any extent—with perhaps a few words on linguistics and metres. We should use very little examining and very little essay-writing. This is as far as we can well go at present till the air gets clearer. We are conscious that this is a very poor account of an interesting and stimulative paper. But Prof. Trent warns us that it is not safe to attempt much more for a while. Some day we shall; and that soon. And then we shall hope to hear from Prof. Trent again.

A History of English Prosody. By Prof. SAINTSBURY. Vol. I.: *From the Origins to Spenser.* (10s. net. Macmillan.)

To charge a professor of rhetoric and English literature with inability to write English is a railing accusation that we will not bring; but we may, without offence, exhort our readers not to be repelled from a very thorough and conscientious study of English metre by an involved and unattractive style. The following extract—and we could pick a score like it—speaks for itself:—

Whether those who assert that Anglo-Saxon was, though doubtless, as Guest says, "sung to the harp," sung to a sort of recitative with stress-syllables only, are right, does not matter; that is another of our "previous questions," though it may be an actual one with other people. *Securi iudicemus* that in every example quoted above, except those survivals in Layamon (of which we would not get rid for anything, though it may be suspected that the other party would be only too glad to get rid of the rest), the "common and triple measures" have emerged, *have* disentangled themselves from the heap.

Prof. Saintsbury is an Oxford man. He tells us in his preface that the seed of this treatise was planted at Oxford when, by a happy coincidence, he discovered that Homer's hexameters went to the tune of "The Cornflower Waltz." He leaves it to some Cambridge man to calculate the infinite odds in his favour against Dr. Skeat in respect of a certain inference. If banter were permitted to University professors, Dr. Skeat might well retort that this appeal to Cambridge is appropriate; for none but a mathematician is capable of eliminating these brackets within brackets and elucidating these algebraical expressions.

The vocabulary is as complex and repellent as the structure of the sentence. We have simple compounds—as "echoes-before," "*prima-facie*, jump-to-the-eyes, prosodic character"—double compounds made with hyphens as in German, words half in italics and half in roman, foreign words on every page—a stop-gap is a *cheville*, a tag is a *cliché*, a tendency is a *nisus*, the fact and the reason are the *hoti* and the *dioti*, a standing quarrel is *eternum* [*sic*] *vulnus*—and monstrous new coinages such as Guestionianity, Bradshavians, tetramimeral, *délayage*, and *honorificabilitudinitas*. It is never too late to learn, and we

commend to Prof. Saintsbury's attention a volume by two Oxford men reviewed in another column.

To turn to the kernel from the husk over which we have delayed too long, the author sets forth with the laudable intention of working from the facts to the law, of examining the evidence with no preconceived theory. He has perused nearly all the printed stock of English verse before 1600, and every poet of the slightest repute since that date. Yet at the very outset he ranges himself on the side of the classical metricists, the scholars who scan by feet and analyze feet into long and short syllables, as opposed to the "dunces," like Mr. Swinburne, who "measures verse by ear and not by finger." He is careful to premise that for his trochee we may, if we like, substitute stressed and unstressed syllable, but he sticks to his foot as the unit, and maintains that in English accent is only one cause of quantity, and that not a stable one.

We have no intention of renewing the standing quarrel between accent and quantity, or reopening the "*eternum vulnus*." We have indicated our own view in the notices of Mr. T. G. Omond's "*Study of Metre*" and Mr. J. B. Mayor's "*English Metre*" no less clearly than Prof. Saintsbury has when he pronounces the latter a perfect exposition, if only it were fuller. We may, however, as a simple test take up a challenge thrown down by Prof. Saintsbury. He defies us to make anything of "humdrum," if correctly pronounced, but a spondee. How would the Professor scan?—

He chops up verses into longs and shorts,
A humdrum occupation for a bard.

The late Mr. Shilleto maintained that "beefsteak" was the one genuine spondee in English. A quantitative scansion of Shakespeare or Milton is no less preposterous than would be an accentual scansion of Homer or Vergil—witness Stanyhurst and Dr. Bridges.

We differ fundamentally from the author in his conception of English metre, but we gladly allow that those who differ most widely may none the less profit by his labours, that he has provided a rich storehouse of materials, especially in the specimens arranged in foot-notes, that he has mapped out arid tracts of literature where none but an explorer would care to follow him, and paved the way for the phoneticians and philologists whom he regards somewhat arrogantly as the Jebusites of literature.

The first volume takes us down to Spenser, who is treated with real insight, and for the lay reader, whose curiosity as to the scansion of Langland and Gower even Prof. Saintsbury will fail to excite, the work promises to increase in interest as it descends to more familiar poetry.

"Oxford Higher French Series."—Edited by LEON DELBOS.

- (1) *De l'Allemagne.* By Mme. DE STAËL. Edited by H. W. EVE. (2s. 6d. net.)
- (2) *Notre-Dame de Paris.* By VICTOR HUGO. Edited by LEON DELBOS. (3s. 6d. net.)
- (3) *Trois Grotesques.* By GAUTIER. Edited by H. J. CHAYTOR. (2s. net.)
- (4) *Salammbô.* By FLAUBERT. Edited by E. LAUVRIÈRE. (3s. 6d. net.)
- (5) *Jocelyn.* By LAMARTINE. Edited by E. LEGOUIS. (3s. net.)
- (6) *Mémoires de Mme. de Campan.* Edited by H. C. BRADBY. (2s. 6d. net.) (Clarendon Press.)

The Delegates of the Clarendon Press have gone a long way to wipe away what has hitherto been a standing reproach to modern-language teaching in England. The reformers have given us many excellent primers and a variety of reading books well adapted for the earlier stages; but, though they protest that the New Method is no less concerned with the pursuit of literature than the old—in fact, that it differs only in the way of approaching the study of letters—yet in practice they have stopped short of the final stage, and the highest honours of the French Professors may be gained by pupils who have never read a French book that dates back fifty years. The teacher, too, who is not content with mere linguistics, and desires to give his pupils a taste of the best foreign literature, finds himself hampered by the lack of suitable editions. There are novels galore, and he may take his pick among a dozen rival editions of the "*Roi des Montagnes*"; but the commentaries on standard authors are as much out of date as the Delphin editions of the classics, and the greatest of contemporary authors have hardly yet been sampled.

The present series marks a new departure. The volumes

have been chosen for their literary merit, and the annotation is mainly on literary lines. To each volume is prefixed an original study of the author and the particular work, sometimes in English and sometimes in French—all competent and some rising to excellence. The notes vary even more than the prefaces, and herein lies the weak point of the series. If we may tender a word of friendly advice to the general editor, he must drive his team with a tighter rein.

(1) The text gives, with a few omissions, the second, and far the most interesting, book of Mme. de Staël's "Germany"—a work of genius considering the time when it was written, and even now a stimulating introduction to the history of German literature. It is prefaced by an able sketch of the authoress's life. We could, however, have wished that Mr. Eve, who knows German literature so thoroughly, had omitted the politics, which are irrelevant, and discussed instead the mutual relations of French, German, and English literature. With the lady herself Mr. Eve deals tenderly: she herself "owns up" to three lovers besides Benjamin Constant. The notes—models of their kind—are hardly in conformity with the prospectus, half of them touching on grammar and meanings of words. Thus, on page 7 we have seven such notes, and we miss a note on English translations of German. We should hardly reckon Thomson's "Seasons" or Young's "Night Thoughts" as poems of domestic affections. On page 8, instead of a note on the French pronunciation of "Schiller," we want a reference to the passage quoted (similarly on page 141).

(2) Hugo's masterpiece in prose has been judiciously curtailed, but it still extends to 350 pages. M. Delbos has given a glowing appreciation of the poet, whom he personally knew, and of the romance. The notes are adequate. Some of the philology and the short construes might, without loss, have been omitted, and a map of old Paris would be a useful addition.

(3) The "Trois Grotesques" are Villon, Cyrano de Bergerac, and Scarron. The volume will be welcome to any who have been tempted by Mr. Chaytor's recent article in these columns to embark on Old French. The introduction supplements and brings up to date Gautier's "Life of Villon." An ideal Sixth Form Reader.

(4) We should not ourselves care to embark on "Salammbô" with a class. The merits and defects of the romance are impartially summed up by M. Lauvrière; but the unregenerate schoolboy will care nothing for the antiquarian research and little for the truth of local colour, while he will be painfully oppressed by the lack of human interest. On the other hand, the general reader will welcome a scholarly edition which gives him words not to be found in the dictionary and enables him to refer to documentary sources.

(5) M. Legouis's edition of "Jocelyn" is an eloquent appeal against English criticism—e.g., the sentence of Matthew Arnold that "Jocelyn" is without importance save for French readers. Arnold, sensitive as he was to the merits of French prose, on which his own was largely modelled, had no ear for the melody of French verse and could not appreciate the limpid smoothness of Lamartine's verse, which flows on like a broad river reflecting earth and sky. This quality is well brought out by the editor, and he has tempted us to reperuse a poem which we never thought to read again. Yet we must own that the sentiment still seems to us *maladif*, and even the death scene which forms the climax leaves us dry-eyed. Nor can we agree with M. Legouis that for exactitude and grandeur Lamartine's Alpine pictures are unrivalled. He is rhetorical like Byron, like Coleridge in his great "Hymn"; but he never brings Switzerland before our eyes as Arnold does in his "Marguerite."

"Et ses vastes rameaux de granit et de marbre
Craquaient et se tordaient comme les bras d'un arbre"

—lines that M. Legouis italicizes as a perfect description—appear to us a bombastic hyperbole. The notes are brief and to the point; but was it *tant* to give all the variants?

(6) This volume gives Mme. Campan's "Memoirs" from 1785 to 1792. Mr. Bradby disposes of the writer in a page, and throughout he errs on the side of parsimony. He might well have added some details—that Jeanne Genet had Albanese to teach her singing, Goldoni for Italian, and Marmontel for literature; or that "créer des mères" was Napoleon's *mot d'ordre* when he appointed her as directress of his school for officers' daughters. Surely, too, "l'affaire du collier," which occupies the first chapter, called for a note on recent historical researches. On the other hand, there are some superfluous construes—e.g., "parterre et loges." The name of Mme. Campan's sister was Angière, not "Auguié."

The King's English. (5s. net. Clarendon Press.)

It is a rare pleasure to come across an original work on orthoepy compiled by authors of keen logical acumen who can themselves write English. Except in the chapter on Punctuation, where Beadnell's "Spelling and Punctuation" is taken as the *corpus vile*, no reference is made to preceding treatises. The work gains thereby in freshness and independence of

thought, and we are spared the stock examples, familiar as those of the "Eton Latin Grammar," but we miss the pleasure of controversial argument. From Dean Alford and Mr. Washington Moon, who may be reckoned the gossips of the book, the authors have little to learn; but Dr. Hodgson, though his "Errors in English" dates back half a century, is still a worthy antagonist.

The two books are composed much on the same plan, but the execution is widely different. Dr. Hodgson collected for years cuttings of faulty English, mainly from newspapers, and tabulated them with a few running comments. Our authors have drawn their illustrations mainly from recent numbers of the *Times*, but the bulk of the book is didactic, and the exceptions (if we may venture on this dangerous phrase) serve to prove the rule.

It is, in our judgment, a mistake to have drawn the materials almost exclusively from the current press, though it was wise to select the *Times* as representing the highest standard of newspaper English. It is a further mistake not to distinguish editorial matter from correspondence. An editor cannot be held responsible for his correspondents' English; and it is a moot question how far he is at liberty to correct the faulty grammar and constructions of a letter. The mixed mob who took part in the "Do we believe?" correspondence of the *Daily Telegraph* cannot be reckoned among the "reputable authorities" to whom the authors profess to limit themselves. Moreover, even leading articles, written generally at night between 10 and 2 o'clock, cannot be taken to represent standard English as does a deliberate composition, even a novel or a book of travels. We might further object that the author most often quoted is Emerson, and Emerson is an American.

These preliminary strictures do not greatly affect the body of the work. The blunders pointed out, though common, are rarely obvious, and the rules laid down, though strictly logical, are founded on usage, not on *a priori* conceptions. For example, "reliable" our authors freely accept, and "than whom" is acquitted with a (surely unnecessary) caution. Now and again we find ourselves differing, mainly on points of taste which cannot be argued. We take no exception to the words "distinguished," "distinction," "banality," "meticulous," and to say that a vase sold at Christie's "realized the record price" does not sound to our ears as slang; nor should we call the confusion of "wait" and "await," "rise" and "arise" malaprops.

We will note in conclusion a few disputable corrections.

Knowledge to the certainty of which no authority could add, or take away, one jot or tittle [corrected: "to or from the certainty"].

This sounds stilted: we mentally supply "from it" in the parenthetical clause.

He was leaving his English business in the hands of Bilton, who seemed to him, the more he knew him, extraordinarily efficient [corrected: "whose efficiency impressed him the more, the more he knew him"].

Here similarly "the more so he seemed" is easily supplied.

"If you will pardon me reminding you" is corrected to "my." Here usage undoubtedly justifies "me," and it may be defended as strictly grammatical, = "si mihi ignoscere vis te monenti." We should likewise be prepared to defend "so far from this being the case." We had marked several other doubtful corrections, but to discuss them would exceed our limits.

Let us end, as we began, with pure commendation. No author, however punctilious and accomplished he may be, can peruse this treatise without some searchings of heart, and (if we may speak for ourselves) some qualms of conscience. We tremble as we write at the thought that this very review may furnish for a second edition more errors in English drawn from *The Journal of Education*.

Matthew Arnold's Merope. With the Electra of Sophocles, translated by R. WHITELAW. Edited by J. CHURTON COLLINS. (3s. 6d. Clarendon Press.)

All—whether classicists or moderns—will sympathize with the attempt "to introduce and to bring home to modern readers who are not Greek scholars Attic tragedy in its most perfect form"; but we cannot think that the editor has gone the right way to work. He has annotated "Merope" "as elaborately as text-books prescribed for examination necessarily are." Arnold, we read in the introduction, has produced a poem which is the nearest approach possible in any modern language to Sophoclean

tragedy; has achieved all that Sophocles, writing in English and retaining the limitations of Greek dramatic art, could himself have achieved. This seems to us extravagant praise; but, even if we let it pass, what it amounts to is this—that Arnold has done in English what Jebb, in his Pindaric odes, did in Greek. The one reveals Sophocles to an Englishman no less and no more than the other reveals Browning to a Greek. “Merope” is a most meritorious prize poem. Scholars may admire it as a faithful echo of the Greek; but, assuredly, it will not move the English schoolboy, or, if he is compelled to get up the learned notes—the geography of Pausanias, the mythology of Lemprière, the variants from the first edition—he will be moved to loathing. Worst of all will he loathe the scansion. Arnold’s ear for poetry was not of the finest, and sometimes his unrimed verse jars on us like the grating sound of a stick across park palings. His choruses are either a monotonous amble of anapests or prose cut into lines by capitals. Yet Prof. Collins has thought it worth his while to scan with longs and shorts all the choric metres, and would presumably set as examiner such questions as: Write in lines, indicating the quantity of each syllable—“Another sacrifice on this day ye witness, ye new-built towers! when the white-robed, garland-crowned monarch approaches, with undoubting heart, living, his own sacrifice block, and stands, shouting for a slaughterer’s axe.” He actually gives us the full rules of scansion of iambic trimeter acatalectic, and tells the English scholar that the Shakespearian line—

Hath power enough to serve our turn: but who comes here?

is its metrical equivalent! Prof. Collins holds that Sophoclean drama is, as a work of art, superior to Shakespearian drama. He has, it seems to us, mistaken the husk for the kernel, and his edition of “Merope” will not sustain his thesis. It is the tincture of romance, the modern touches—all too rare—that give the play such life as it has: for instance, the children plucking wild gooseberries in the thorn-choked gullies—a perfect gem, marred in the text by an unfortunate misprint, not the only one.

From a College Window. By A. C. BENSON. (7s. 6d. net. Smith, Elder.)

Mr. Andrew Lang must look to his laurels, or he will not long hold the record for literary prolificness. When Mr. Arthur Benson’s own life comes to be written, even if he fails to reach the old age to which he looks forward with the tranquil philosophy of a Laelius, the bibliography will fill many pages, and we who reckon ourselves among his constant readers should find it hard to estimate the amount of his literary output during the past year.

We note the fact without prejudice, as the lawyers say, and, to remove any suspicion of persiflage, will state at starting that we read in the *Cornhill* and have reperused in their collected form his latest volume of essays with unabated interest. It is true, in one sense, that there is nothing new in them. On the subject with which we are, as Mr. Benson was, most concerned, all of us, whether pedagogues or laymen, know from formal tractates, magazine articles, and the daily press Mr. Benson’s views on education. We know what he thinks of Eton—a Holy Roman Empire with Dinos as Emperor; what he thinks of the public-school curriculum—a classical autocracy tempered by an invasive but unorganized Duma of modern studies; of compulsory Greek and of games—both typical corruptions of the best. We know all this; yet he succeeds in the present volume in composing a new variation on the old theme, and the secret of his success is given on the first page in two words—personality and charm.

What adds a special zest to the essays is that he himself takes off the domino—tells us that he left Eton, partly in order to write the life of the late Queen, refused the offer of the head mastership of Eton, and has never regretted having preferred Pepys’s library to Holy Henry’s shade. To be told all this adds point and piquancy to the essays; yet they appeared—most of them—as the contributions of an anonymous college don. This seems to us the perfection of egotism, when the author can so divide his personality as to impart to the public only that half which will interest them—not himself alone. Yet we would tender our parting counsel to the essayist: let Eton lie fallow for a year.

Darwinism and the Problems of Life. By CONRAD GUENTHER. Translated from the Third Edition by JOSEPH MCCABE. (12s. 6d. A. Owen & Co.)

This is a handsome and well printed work, somewhat remarkable amongst books of its class on account of the absence of illustrations—an absence which we are not alluding to as a defect. We are not familiar with the German original; but the translation appears to be smooth and sufficient, though in a few places it is a little difficult to discover the real meaning of the writer. But it is highly probable that this is a defect inherent in the original and is not due to carelessness on the part of the translator. In another respect than that above mentioned this book differs from those of its class; for its plan is of quite a novel character. Instead of taking *seriatim* the various points, such as natural selection and the like, and illustrating them by examples drawn from different classes of animals, the author has preferred to adopt another plan. He devotes a chapter to each of the great classes of animals, and in connexion with each deals with some one problem, or perhaps more than one problem, of life. Thus the function of play is connected with the study of the Mammalia; Birds lead to a consideration of the instinct of love and of migration; Insects introduce us to the subjects of protective coloration and the fertilization of flowers; and so on. It is quite certain that this method of attacking the subject brings very vividly before the reader the points which the author has desired to introduce to his notice. On the whole the writer must be set down as an adherent of Weismann, though in one place he states that the theory of germinal selection must be abandoned. But at other points he seems inclined to look upon it with a more lenient eye, and, in fact, his attitude towards this and towards Lamarckianism cannot very clearly be made out. However, this is not to be set down as a disadvantage. It is rather a relief to meet with a scientific writer who is not cock-sure of his own or some one else’s theories and who is prepared to allow that there is considerable room for doubt as to whether any of our present biological dogmata will really hold water. In the instances from Nature we have, of course, a great deal of the surmise which is so marked a feature of modern biological writings of a popular character. It is an interesting and a fascinating occupation to form theories explaining how different animals came to be as they now are; and so long as the real value of such surmises can be estimated by the reader as well as by the writer there can be no objection to the pursuit, but rather the contrary. But one feels as one reads books of this kind that the inexperienced reader ought in fairness to be warned that, though things may have been as the author surmises, yet they may have been as Mr. Kipling depicts them in his “Just-So Stories” or in half a hundred ways quite different perhaps from anything that any writer has yet happened to conceive.

The latter portion of the book will perhaps be of greatest interest to thoughtful readers, and is certainly the portion in which it is most difficult to follow the writer’s meaning and, in places, to discern his own views. In this part philosophical questions are dealt with, commencing—in connexion with the chapter on the Protozoa—with a discussion as to the origin of life. It cannot be said that we get much help in this difficulty. “We may now picture to ourselves the first development of life. We begin with the living substance, the origin of which we have outlined above. In the beginning were the biogens.” But as to how the biogens came into existence we have naturally no information except that they are assumed to have been produced from inorganic matter under physical conditions not now existent; in other words, we come back to the old Huxley view, which is only a surmise and rests on no assured basis of ascertained fact. Subsequently, the interesting question as to the relative value of variations and mutations is discussed, but perhaps scarcely as closely as this matter, which has been so fully brought before the scientific world by the writings of de Vries, really deserves.

Next, the question of mechanism and vitalism receives attention and the limits of the mechanical system are discussed, and here the writer appears to reveal himself as an idealist; for he tells us that “the material world can only be conceived as a content of consciousness.” But here, again, the question—of course one of vast dimensions and importance—is rather briefly dealt with. Finally, the writer, in a very interesting chapter, discusses the relation of science to history and to ethics, and treats, as others have done before him, of the results which would follow from

a rigid application of Darwinian theories to social conditions. He points out the limitations of science and the dangers which are encountered when scientific men try to extend the boundaries of their subject beyond their lawful limits.

Briefly, we see that science lands itself in contradictions the moment it goes beyond its sphere. Its task is merely to give us a knowledge of the world. In doing this consistently, it has attained marvellous results, and has formed a "monistic" or unified view of the world. The foundation of the monistic structure and all the columns and buttresses that support it imply a disregard of all values. Hence, monism cannot frame an ethic unless it abandons all its supports, which are inconsistent with values. In that case monism breaks down. When, therefore, we find practical counsels, aims, and values in monistic works we have no longer monism before us, but dualism—dualism, in fact, of the most positive character. We cannot recognize two systems as equally valid: we must leave only one standing. But we destroy it when we turn to the second, even though we demand that it shall be based on the first.

And again:—

We are justified in believing in a sense of life, and that there must be duties, since the idea of duty precedes all knowledge. But science has nothing to do with these problems. It is of its very nature to pass no judgment on the value of other methods of investigation. It presses on to its goal—the comprehension of the world—regardless of all else. It gives an impulse to the human mind that bears it on to ever greater heights. The vision steadily enlarges. The individual disappears; the world lies at the feet of the spectator in its broadest outline. But we press onward. It bears us beyond the world to a height whence we can survey the entire universe. He who would see over the whole world must pass beyond it. There, in pure ether, the mind is able at last to grasp the infinite all.

Introduction to the Study of Colour Phenomena. By J. W. LOVIBOND (Spon.)

This book contains an account of glass standard colour scales by means of which a colour sensation can be measured, recorded, and reproduced. It was found that red, yellow, and blue glasses were the only colours suitable for systematic work, and that any colour could be produced by their combination. There is, however, no definite information as to how these standard glasses were selected beyond the mere statement that they were compared with solutions of known strength of certain chemicals. More details ought to have been given concerning the nature of the glass used, the thickness of the unit, and the solutions to be used for recovering these units. The author then proceeds to state a new colour theory which he calls a "Six-Ray Theory," the basis of which is that "white light" is composed of the six primary colours red, orange, yellow, green, blue, and violet in equal proportions, and "a normal vision is considered as being furnished with a six-colour perceiving apparatus." There is no reference to the wave theory of light in this book.

Chemistry Lecture Notes. By G. E. WELCH, B.Sc. (rs. 6d. Blackie.)

This little book will be found useful by students who are revising for an examination, as it contains a large amount of information concerning the subjects treated in Stage II. of the Board of Education syllabus in Inorganic Chemistry. The definition of vapour density on page 6 is not exact and requires the addition of the words "under the same conditions of temperature and pressure." There is a misprint in line 7, page 23, where CO_2O_3 should be CO_2O_2 .

Second Stage Inorganic Chemistry. By G. H. BAILEY, D.Sc., Ph.D. (4s. 6d. University Tutorial Press.)

This is the third edition of Dr. Bailey's well known text-book, which has been rewritten, enlarged, and brought up to date.

A Three Years' Course of Practical Chemistry: Third Year. By G. H. MARTIN, M.A., F.C.S., and E. JONES, M.A. (2s. Rivingtons.)

This book comprises the Third Year's work in a progressive course of chemistry. In the First Year the simple chemical processes are studied and followed by researches on air and water. The Second Year's work includes a study of the reacting weights of the elements, leading up to the use of simple equations. In this book the systematic study of certain of the compounds of the commoner non-metallic elements is taken up. The instructions for experiments are concise and such as would readily be followed by the scholars. The questions with regard to the practical work are framed in such a manner that they do not prompt the answers, but merely stimulate thought. At the end of each section are a number of examples well calculated to ascertain if the students have thoroughly grasped the practical work which they have carried out. Certain experiments are marked as suitable for demonstration. In addition to the ordinary subjects an interesting series of experiments on combustion, temperature of ignition, and flame are introduced. Blank pages are interleaved for entering records of experiments. In line 5, page 6, "multiple" should be "submultiple,"

and in Examples C the pressure under which the solubility of oxygen is measured should be stated, as otherwise Question 15 is somewhat vague.

Dictionary of Indian Biography. By C. E. BUCKLAND, C.I.E., Indian Civil Service (retired). (7s. 6d. Sonnenschein.)

Mr. Buckland might have called his book "The Indian Who's Who." It is a handy volume of some 500 pages, "giving the main facts of the lives of about 2,600 persons—English, Indian, foreign men or women, living or dead—who have been conspicuous in the history of India, or distinguished in the administration of the country in one or other of its branches, or have contributed to its welfare, service, and advancement by their studies and literary productions, or have gained some special notoriety." The upper limit of date is about A.D. 1750; so that the work covers the period from the beginnings of the establishment of the British power down to the present day. The facts about each personage are indicated in the briefest form. Though it would be easy enough to note regrettable omissions, it would be less than generous to make complaint about them, especially as the compiler gives us so much, and the first issue must necessarily be tentative. The volume is bound to grow, and we reserve any detailed criticism for the second edition, which will no doubt soon be wanted. We must also recognize the extreme difficulty of obtaining information, at any rate without long delay, regarding many of the native Indian names included. The work will be extremely useful to readers of Indian history, and of current Indian movements. A serviceable bibliography is appended. That, too, will require expansion.

"Oxford Modern French Series."—General Editor, LEON DELBOS, M.A. (1) *Les Chouans*. BALZAC. Edited by C. L. FREEMAN. (3s.) (2) *Histoire d'un Homme du Peuple*. ERCKMANN-CHATRIAN. Edited by R. CHESSEX. (3s.) (3) *Jean Soggar*. NODIER. Edited by D. LL. SAVORY. (2s.) (Frowde.)

Three stories by famous authors well worthy of a place in this excellent series, whose aim is to lead students through the reading of nineteenth-century masterpieces to an interest in the whole of French literature. All three have a background of historical fact—"Les Chouans" being a romance of the Royalist rebellion against the Republic in 1799; "Histoire d'un Homme du Peuple," a popular account of the revolution of '48; while Jean Soggar, who gives his name to the book, is the hero of the revolt against the French conquests in Illyria. The first two are, however, more novels of adventure than the last, which tells of the tragic love between the bandit chief and a delicate girl whose mind finally becomes unbinged by her sufferings. The notes of this series are largely on historical and literary points, to the exclusion of the usual grammatical explanations, and in each case there is some critical discussion of the author in question. In (1) and (3), indeed, the preface gives evidence of literary criticism and research of a high order. Mr. Chessex, on the other hand, has contented himself with a very slight mention of the work of Erckmann-Chatrian. All are marked by careful annotation on the lines above mentioned, and (2) has, in addition, notes to correct or justify the homely phraseology deliberately adopted by its authors. Mr. Savory errs occasionally on the side of over elaboration—e.g., when he describes the anemone as a "genus of herbaceous perennials" or enumerates the departments of modern Brittany. "Les Chouans" is exceptionally well edited throughout.

Religion in Evolution. By F. B. JEVONS, Litt.D. (Methuen.)

This book consists of four lectures delivered at Cambridge. The principle on which they are brought together into one volume is a little hard to understand. The first lecture is a study of the early manifestations of religion among the Australian aborigines, while the last three are much more philosophical, and are concerned with the relations of science and religion. Connexion between the first lecture and the last three there is none. However, the second part of the book is an extremely able and suggestive statement of neo-Kantian theology. Religion is an experience involving, among other things, emotion and free will, of which science can take no account. The only criticism we should make is that the book leaves off where the real difficulties begin. If the sphere of religion is emotion and will, then what room is there in it for dogma, or for theology, "the queen of the sciences"? But, if Dr. Jevons had followed out his arguments in that direction, he might have been led into too dangerous ground.

Studies in Roman History. By E. G. HARDY. (6s. Swan Sonnenschein.)

We opened this book with eagerness; for Mr. Hardy's studies in Roman history are wont to be of a stimulating character. But, alas! the book is but a second edition, now called for, of "Christianity and the Roman Government," with a few essays reprinted from journals and reviews. How then are we to deal with it? Shall we set before our readers an analysis of its contents? But they will be familiar already therewith. Shall we examine curiously the soundness of its results? But critical hammers have been ringing on them for several years. Or, lastly, shall we, as might seem to be the proper course under the circumstances, proceed to inquire how far the author has taken into account the work done by others since his own was published? But here the road is barred. To our regret we learn that

the state of Mr. Hardy's eyes has prevented him from making even anything like a systematic revision of his essays. We trust that he is not suffering—like Polyphemus—from being bored; which is a doom that overtakes some of those who are compelled to read much. But, if, from whatever cause, he must now sit for a time in the twilight, he has in him the comfortable memory of good service performed for education and scholarship while the day was bright. Since he takes us into his confidence, we may be allowed to proffer him our sympathy. Had we known nothing of his achievement, the dedication of this volume would have won our hearts. The teacher inscribing it "To my pupils past and present" shows where the main interest of his life still lies.

Cicero: Pro Lege Manilia. Edited by W. J. WOODHOUSE.
(2s. Blackie.)

The Professor of Greek in the University of Sydney edits this much read speech for "Blackie's Illustrated Latin Series"; saying which, we have said all that it is necessary to say about the size, scope, and general equipment of the book. Indifferent to the fact that Mr. A. C. Clark was thought in some quarters to have over-estimated the value of the Harleian manuscript—collations from which he published in 1892—Prof. Woodhouse makes it the chief authority for his text, which thus presents a few divergencies from that commonly received. In the corrupt passage in § 18 he reads: "parvi refert, nos publicanis, his amissis, vectigalia alia postea victoria recuperare" as his own conjecture, adding another to guesses as numerous as were the tax-gatherers in the province of Asia or the tax-farmers in Rome. The notes that he furnishes do not contain, and could not be expected to contain, much that is new; but they are clear and sufficient. We observed in the pages a few slight errors of press or pen. The vocabulary has the worse form *intelligo*, the text the better *intellego*; so it gives *negligo* for *neglego*. If in § 14 for *quanto vos studio* we are to read with the Harleian *quanto vos studiosius*, then *studiose* should be entered in the vocabulary. Did the Romans really say for "two temples" *duo aedes*, and for "two letters of the alphabet" *duo litterae*? And is not *navicularius* (so the marking in the vocabulary) a false quantity? But such oversights are of rare occurrence; we point them out only because it is just to the boy that much care should be exercised in the making of his school-books. Prof. Woodhouse's little volume is quite fit for use in places of education, and worthy of the series to which it belongs.

School Prayers for Week-Day Mornings. With a Preface by the
ARCHBISHOP OF CANTERBURY. (Rivingtons.)

The compilation here printed is the work of a small Committee appointed "at a Conference of University teachers and schoolmasters, which has been held in each January for the last eight years, with an average attendance of something over one hundred." The Committee consisted of Sir Arthur Hort, the Rev. E. J. Palmer, Canon Lonsdale Ragg, and the Head Master of Repton (Rev. L. Ford). Forms of prayer "to be said on week-day mornings" are given for each of the days of the week (printed in full); also special forms for the first and last days of term, and for a saint's day. The structure and material of these follow the Prayer Book in simplified form: the Pater Noster, Versicles, Gloria; an O.T. Canticle or Psalm, Lesson, N.T. Canticle, Collects, Prayer of Thanksgiving. A careful selection of alternative Psalms is provided with the O.T. Canticle, and special Collects adapted for school use are included. An excellent feature of the book is the Table of Lessons (covering first and second years). These have been very carefully selected and are short. In addition there are a selection of "Prayers and Thanksgivings for special occasions," four Litanies (of Church and State, of Work, for the School, for Missions), and an appendix of Alternative Psalms. The whole compilation has been most carefully made on sound liturgical principles. As the compilers justly remark: "Only use can make liturgical forms adequate." The present collection ought to form a basis for real advance.

Old Testament History for Sixth-Form Boys. By the Rev. T. NICKLIN, M.A., Assistant Master at Rossall School. Part III. (3s. A. & C. Black.)

The author of this useful little manual explains in the preface his aims in writing another book on Old Testament history: "I have written for a sixth form, not for the middle forms, of a school," he says: "I have endeavoured to review everything from the standpoint of a Christian. The Divine preparation for the Advent of our Lord seems to be the sole reason for requiring our pupils to study Hebrew history." He adds: "I have remembered that, except for those who enter Holy Orders, the last definite instruction in religion that a public-school man receives is what he gets in the sixth form. I have therefore, while putting everything in a positive form, throughout based my narrative on the results of recent scholarship, and I entertain a hope that no reader of this book will have cause to admit that his conception of the course of Hebrew history was, except in unimportant details, erroneous or exploded." The narrative is divided into eighteen chapters, which cover the period from the death of Jehoshaphat to the return and rebuilding of the Temple. Critical results are assumed throughout. One most excellent feature is the use the writer has made of the prophetic writings. Large sections are quoted in full to illustrate the course of the narrative, and the prophetic writers are brought into close connexion with their historical surroundings, with the result

of making them at once more real and their teaching more alive. There are twenty-two illustrations, three most excellent maps, and a carefully arranged table of dates. The volume is one admirably adapted for its purpose and can be confidently recommended.

The Book of Psalms. With Introduction and Notes, by W. F. COBB, D.D. (10s. 6d. net. Methuen.)

In this volume Dr. Cobb has given us a distinctly unconventional commentary on the Psalter. He approaches it from a point of view which will be new to most English readers. This is explained in the preface as follows:—"In the absence of any extended work in English which treats the Psalms of David freely as documents of religion in its historical setting, apart from the after-thoughts of theology, and from the meaning read into them by Christian writers, the present work is modestly put forth. . . . The Psalter is treated as a collection of documents which, as the Hymn Book of the second Temple, illustrate the type of piety which immediately preceded the birth of Christianity." Without exactly being a specialist in this department the author has, in the performance of his task, known how to avail himself of the best critical help, and has produced a book at once stimulating and useful in the highest degree. It is a cardinal merit of the book that it recognizes the close connexion between the Psalter as a whole and the theology of Judaism, properly so called. "The theology is that of the Scribes, not that of polydemonism or even of monolatry." It, therefore, belongs wholly to the post-exilic period. "To transfer it, or any part of it, to pre-exilic times is to throw the history of the rise and growth of monotheism in Israel into as hopeless confusion as is caused when the ritual of Ezekiel, and the second Temple, is assigned to Moses, and the Tabernacle in the Wilderness." The commentary proper gives each Psalm in a translation based upon a critical text, with notes which cover a wide range of illustration drawn from post-canonical Jewish literature, comparative religion, and ecclesiastical lore. The whole is a model of conciseness—the amount of varied material compressed within the notes is astonishing—and exhibits real insight combined with critical acumen and wide learning. The author is at home in many departments of thought not usually met with in combination. His work is essentially one that will appeal to the cultivated layman who is free from prepossessions. At the same time it will prove an admirable discipline to the philological specialist.

Enchiridion Militis Christiani; or the Manual of the Christian Knight.
By ERASMUS. (3s. 6d. net. Methuen.)

The only fault we have to find with this charming little volume is that no introductory note tells us what we are taking into our hands. The book is a reprint of the translation of the "Enchiridion" published in 1533—a translation of unusual interest, because it is ascribed to William Tyndale. It is true the sceptical doubt whether Tyndale's version was ever printed; but we do not see any great improbability that what we have before us is actually the translator of the Bible's work. Intended apparently as a book of edification, the present edition has a modernized spelling. We observe that Erasmus approves a certain dalliance with heathen poets and philosophers as making a child apt to the understanding of Holy Scripture—"whereunto suddenly and irreverently to presume with hands and feet unwashed is in manner a certain kind of sacrilege." We commend the remark to those who would have our boys learn their Greek from the Greek Testament, as is the custom, we believe, of some modern divines.

The English Dialect Grammar. By Prof. JOSEPH WRIGHT.
(16s. net. Frowde.)

Grammar in the vulgar sense is confined to a single chapter which deals with accidence, and syntax is only incidentally touched upon. "Phonology" or "Phonetics" would, perhaps, have been a preferable title. It is a monumental work worthy of Browning's Grammarian, and Prof. Wright must be repaid for his huge toil by the satisfaction of knowing that he has done a job that no one else could have done and that will never need redoing. In stating his qualifications for the task Prof. Wright tells us an interesting piece of autobiography. He did not learn to read till he was nearly grown up. Hence he knew his native Westmoreland dialect pure from any literary tincture. When a *pays* said to him one day: "The rodz æ deti," "I said to him: 'Dunt jø sē up iær æt t' riadz æ; muki?' With a bright smile on his face he replied: 'Wi diu,' and forthwith he began to speak the dialect in its pure form." We look forward with even greater interest to the book on which Prof. Wright is now engaged, "The Philology of the English Tongue," in which the transitions of sounds from Old English to modern dialects will be fully treated.

Graduated French Unseens. In Four Parts. By VICTOR OGER.
(8d. each. E. Arnold.)

The print is large and clear: that is the first and most impressive feature. Next, there is no poetry. We may look for some in future parts, but we should have preferred a mixture of prose and poetry. Of prose there is a very fair variety, but not much graduation. The very first piece is fifty-three lines in length, and contains half a dozen words that one would hardly expect a fifth form boy to know. In the Latin on page 14 of Part IV. there is a confusing misprint.

Exercises for Parsing in Colour. By EDITH HASTINGS.
(1s. 6d. E. Arnold.)

To the orthodox grammarian colour parsing will seem as wild a freak as colour music; but there is no reason why we should not call in the aid of colour to make logical distinctions clear, just as we use it in maps to indicate physical features or political boundaries. It has stood a trial of ten years in the Wimbledon High School with excellent results, and Miss Hastings now generously makes a present to the public of her patent. The title hardly does justice to the volume, which includes simple analysis, to which the method is more applicable than to parsing in its limited sense.

The Romance of Mining. By ARCHIBALD WILLIAMS.
(5s. C. A. Pearson.)

The book is not simply one of adventure, though there is no lack of incident, but also a popular account of mining processes in all parts of the world. Mr. Williams has the gift of exposition, and, with the help of the numerous illustrations, the reader will get a good notion of what goes on in the bowels of the earth. On the subject of Chinese labour the author is discreetly reticent. It is somewhat fantastic to assign a date to Tubal-cain.

"Blackie's Little French Classics."—(1) *Nerval's La Main enchantée.* Edited by H. H. HORTON. (6d.) (2) *La Chanson de Roland.* Edited by S. BARLER and L. DUCHEMIN. (4d.)

The first of these volumes has too many hard words to please us—cantish phrases which it profits not to know. The notes have too many grammar tags, and some needless explanations, e.g., of "il a passé bien de l'eau sous le pont," "pilé de l'eau dans un mortier." The quintain was something more than a post. The second volume is a most desirable addition to French texts. The two authors have retold in simple, and at the same time poetical, prose the story of the great French epic. Notes there are none, and none are needed.

Marchand d'Allumettes. Par A. GENNEVRAYE. Edited by CLOUDESLEY BRERETON. (2s. Macmillan.)

A pretty little child's story, with less of the "Sandford and Merton" about it than most of its French congeners. It has been very thoroughly edited by Mr. Brereton, with all the modern apparatus of vocabulary, sentences for retranslation, &c. Sometimes we desiderate an extra note, as on "Je ne mangeais jamais à ma faim, nom d'une pipe."

Advanced Algebra. By H. E. HAWKES, Ph.D. (6s. 6d. Ginn.) According to English standards, more than half of this book would come under the heading of elementary algebra. It consists of three parts, the first a revision of the subjects which precede quadratic equations, the second "quadratics and beyond," the latter term including mathematical induction, binomial theorem (index a positive integer), and arithmetical and geometrical progressions. The third part, on "advanced algebra," occupies the latter half of the book, and contains chapters on complex numbers, theory of equations and determinants, as well as brief chapters on permutations, partial fractions, &c. We recommend teachers to possess this book, if only for the admirable manner in which the theory of the subject is explained. Graphic illustrations are frequently employed, never needlessly, and always with effect.

The Elements of Geology. By W. H. NORTON. (6s. 6d. Ginn & Co.)

Written by an American for American students, this volume naturally has special reference to the geology of the northern half of the New World, and its reception in this country will doubtless be influenced by that circumstance. It is true that, with certain exceptions, the phenomena dealt with are world-wide in distribution, and that illustrations taken from different countries will not differ materially; yet an Englishman would look with greater interest upon examples chosen from his own country. The American has an advantage over us in being able to point in his own continent to examples of every kind of land surface on a grand scale, and the author has laid every portion of the States under contribution. The reproductions of photographs, which must number at least two hundred, are excellent in technique and illustrate the text admirably. Two thirds of the volume are devoted to an exceedingly good account of Physical Geology, which is treated in two sections, entitled External and Internal Geological Agencies. The last third of the work is given up to Historical Geology, and this, being for the most part treated from the American standpoint, will not appeal so strongly to the elementary student in this country. In no part is the text overburdened with details, and the style is interesting throughout. The book is not one for advanced students of geology, but beginners interested in the physical side of the subject and those who wish to study geography in a rational way cannot do better than read the first two sections of the work.

Elementary Latin Writing. By CLARA B. JORDAN.
(American Book Company.)

The book is well printed and strongly bound. It is intended for second-year Latinists. Rules are briefly and clearly given and referred to by number in the sentences and exercises. *Hecōri* must be a misprint, and *Divitiāci* and *Dumnorigi* are surely wrong.

Chemical Analysis, Qualitative and Quantitative. By W. BRIGGS and R. W. STEWART. Fifth Impression; Fourth Edition. (3s. 6d. W. B. Clive.)

The syllabus in Practical Chemistry of the Intermediate Examination in Science of the University of London is covered by this book. It includes the usual tables for the analysis of inorganic salts of the commonly occurring metals and for mixtures of such salts, together with a short introductory course in quantitative analysis by means of a few simple operations in gravimetric and volumetric analysis. The reasons for the various tests and operations are clearly and carefully written, and we can recommend the book to those who are preparing for the examination mentioned.

Browning's La Saisiaz. A Lecture by T. S. OMOND. (1s. net. Tunbridge Wells: K. Pelton.)

The object of the lecturer is to shorten the preliminary stages which precede complete enjoyment of a great and difficult poem by an analytic summary. This has already been attempted in more than one primer of Browning, but never before so thoroughly and successfully. Incidentally, some obscure allusions are explained, and two curious slips of Browning pointed out.

Madame Geoffrin, her Salon and her Times. By JANET ALDIS.
(14s. Methuen.)

A chatty volume of gossip that will serve to wile away a leisure afternoon. Of no period is the *vie intime* so well known, and, as at a *conversazione*, we meet everywhere familiar faces, and converse with, or catch glimpses of, princes and ministers, wits and philosophers, painters and players, grand ladies and adventuresses. And, as in Mme. Geoffrin's *salon* all is decency and propriety, the naughty people are faint shadows in the background. There is no attempt to preserve a strict chronological order, and the chapters are grouped round individual names. Some of these, as Diderot and Necker, are too great to be hit off in a thumbnail sketch; to others, as Mlle. de Lespinasse and Fontenelle, the author does bare justice. Fontenelle is pronounced absolutely heartless, because he asks Mme. Geoffrin, a friend of more than twenty years' standing, whether it was the custom to give an executor a mourning ring; yet later on it is recorded that he made her his sole legatee. We cannot end without a mild protest against the abuse of the French language. Doubtless the total neglect or misplacement of accents is due to careless "reading," but the "reader" cannot be held solely responsible for such solecisms as "la royauime de la rue Saint-Honoré," "blonde et blanc," "she greatly delighted," "fermiers-général," "cette homme n'est pas bon qu'à manger du veau," "en second nocces," "valets de chambre," "eyes of the kind called *fleur de tête*"; nor, for that matter, for the annoying recurrence of *salonière* and *convives* for hostess and guests.

The Council School Hymn Book (Novello & Co.) is a selection of 150 hymns, with an appendix of prayers for the opening and closing of school and one or two additional forms. The editors have aimed "to include only those hymns which express the central truths of religion and which are at the same time within the comprehension and suited to the capacities of children." In such a collection the Cycle of the Christian Year is, of course, conspicuously absent. On the whole, however, it is comprehensive enough and includes many favourite hymns.

The Prayer Book: Morning and Evening Prayer, the Litany, the Catechism. Text and Notes, with Historical Introduction. By the Rev. F. MARSHALL, M.A. (1s. Gill & Sons.)

This compilation, "drawn up for the use of students preparing for the Oxford and Cambridge Local and similar examinations," is extremely well arranged. The notes are adequate, scholarly, lucid, and concise. It ought to be very useful for the special purpose it has in view, and is certainly one of the best specimens of its kind we have seen.

Famous Sayings and their Authors. By E. LATHAM.
Second Edition. (7s. 6d. Swan Sonnenschein.)

A new subject index has been added at the suggestion of the critics. It might be well, before a third edition of this useful book is called for, to revise Greek accents—e.g., on page 246.

Fictitious Creatures in Art. By JOHN VINYCOMB.
(10s. 6d. net. Chapman & Hall.)

The work is limited to the

"Gorgons and Hydras and Chimaeras dire"

that occur in British heraldry. The book is amply illustrated, and will enable those who care for this antiquarian lore to distinguish cherubim and seraphim, wyverns and cockatrices.

The German Classics. By F. MAX MÜLLER and F. LICHTENSTEIN.
2 vols. Second Edition. (8s. 6d. net and 5s. 6d. net. Clarendon Press.)

The volumes may be obtained separately. The second, which begins with the age of Frederick the Great, has been revised by Mr. F. L. Armitage, the Taylorian Teacher of German. It is a rare delight to be able to read the best of German literature in clear roman type.

Thoughts on Education. By MANDELL CREIGHTON. Cheap Edition, Abridged, with an Introduction by E. A. KNOX, Bishop of Manchester. (6d. net. Longmans.)

This little book appears very opportunely, and will doubtless furnish the combatants in the Armageddon which is raging with some winged words. The editor dots the *i*'s and crosses the *l*'s. We have already given our estimate of Bishop Creighton as an educationist—if we may without offence apply to him “that barbarous word.”

A New Arithmetic. By G. E. CHRISTIAN and GEORGE COLLAR. Twelfth Edition. (4s. 6d. Meiklejohn & Holden.)

The last and revised edition of this justly popular manual has been brought into line with the recommendations of the Mathematical Association, and the chapters on properties of numbers, factorization, interest by abbreviated methods, and mensuration of areas and simple solids have been virtually rewritten.

French Abbreviations: Commercial, Financial, and General. By EDWARD LATHAM. (2s. 6d. net. Efringham Wilson.)

A very careful and complete compilation. When we find that the letter *P* (large or small) may stand for twenty-four different words, the need of some further guidance than the ordinary dictionary is obvious. Again, how few English people use the proper abbreviations for the commonest words—*Madame, Mademoiselle, Messieurs!*

Brief Literary Criticisms. By R. H. HUTTON. Edited by ELIZABETH M. ROSCOE. (4s. net. Macmillan.)

It is a genuine pleasure to revive one's recollections of these “middles,” which formed one of the chief attractions of the *Spectator* in the days of dual editorship. Mr. Hutton's literary range was limited, and his admiration for his favourites J. H. Newman, M. Arnold, and Clough was not always on this side idolatry, but his admiration is whole-hearted and his analysis both subtle and sound. We wish that the articles had been dated. Even when the date can be inferred from the context, the reader resents having to fix a date for “Tuesday last.” It is a coincidence that among the misprints, which are not numerous, we should find “Fénélon.”

Manhood, Faith, and Courage. By Dr. HENRY VAN DYKE. (Hodder & Stoughton.)

These sermons, preached in the College chapels of Princeton and other American Universities, are fitly dedicated to the memory of Phillips Brooks. They are themselves manly, faithful, and courageous. “Their real aim is nothing else than to help people to be good, which is the hardest and the finest thing in the world.”

Matriculation Latin Construing Book. By A. F. WATT and B. J. HAYES. (2s. W. B. Clive.)

The first part gives briefly and pointedly so much of Latin syntax as is essential for making out a simple Latin paragraph. The second part is a selection of the passages set in the London University Matriculation. A lexicon completes the volume.

A View of the English Stage. By WILLIAM HAZLITT. Edited by W. SPENCER JACKSON. (3s. 6d. G. Bell.)

The footnotes are brief, but they give the reader just the information that he requires—dates of performances and first appearances, dates of birth and death of the actors, &c. For these particulars the account books of Covent Garden and Drury Lane Theatres and contemporary journals have been consulted. There is a full index, and the editor has done his part thoroughly.

They. By RUDYARD KIPLING. Illustrated by F. H. TOWNSEND. (6s. Macmillan.)

The illustrator has entered thoroughly into Mr. Kipling's humour—we use the word in the older meaning. Colour more than outline conveys an undefinable sense of mystery. The book, printed on alternate pages and bound in white buckram, is in every way a luxurious edition.

“Routledge's Miniature Reference Library.”—*Artists and Art Terms.* By ALBERT M. HYAMSON. (1s. net.)

The dictionary of names, giving birth, death, and birthplace, is very full. That of art terms is less complete, and it would have been better to keep it separate. We miss, in architecture, “soffit,” “billetry,” “beak”; and, in engraving, “aquatint”; also the names of Mr. Sherwin, the first English mezzotintist, and McARDell.

Kindergarten Bible Stories. By LAURA ELLA CRAGIN. (3s. 6d. net. F. H. Revell.)

We would refer Canon McColl and those who dispute the possibility of “simple Bible teaching” to this wise and pleasant little volume, which comes to us from America.

The Spiritual Teaching of “In Memoriam.” Six Lenten Addresses by the Rev. MORLEY STEVENSON, M.A. (2s. 6d. Wells Gardner, Darton, & Co.)

These addresses, written in a pleasant, devotional style, have nothing very distinctive about them. The theme is handled in a somewhat trite way, and there is no very obvious reason why they should have been published. They abound in quotations from well known divines and in prose renderings of some of Tennyson's stanzas.

BOOKS OF THE MONTH.

Biography.

Sir Joshua Fitch: an Account of his Life and Work. By A. L. Lilley, M.A. *Edward Arnold*, 7s. 6d. net.

Classics.

The Euthyphro, Apology, and Crito of Plato. With Introduction, Translations, and Notes. By F. M. Stawell. *J. M. Dent & Co.*, 2s. 6d. net.

Preparatory Papers: Latin Grammar. By W. J. Hawkes, B.A. *Longmans*, 1s.

Longinus on the Sublime. Translated by A. O. Prickard, M.A. With Introduction, &c. *Clarendon Press*, 3s. 6d. net.

The Latin Hexameter: Hints for Sixth Forms. By S. E. Winbolt, M.A. *Blackie & Son*, 2s.

Tickell's Latin Syntax. *O. Neumann & Co.*, 1s. 6d. net.

Greek Reader. Vol. II. Selected and Adapted, with English Notes, from Prof. von Wilamowitz-Moellendorf's *Griechisches Lesebuch*. By E. C. Marchant. *Clarendon Press*, 2s.

Words of the Ancient Wise, from Epictetus and Marcus Aurelius. By W. H. D. Rouse, M.A., Litt.D. *Methuen & Co.*

The Annals of Tacitus. Books I. to VI. Translated by Aubrey V. Symonds, B.A. *Swan Sonnenschein & Co.*, 3s. 6d. net.

Propertius. Translated by J. S. Phillimore, M.A. *Clarendon Press*, 3s. 6d. net.

THE TEACHERS' GUILD CONFERENCE AT SHEFFIELD.

WE give this month a fuller account of the papers and addresses delivered at the Sheffield Conference than was possible last month. The Conference opened on April 23 with an address from Dr. HILL, Master of Downing College, on "The Teaching of the Laws of Health in Schools." Dr. Hill thought that certain axioms could rightly be taught in schools. These were, for instance, the necessity for fresh air, the need for temperance and cleanliness, and the proper adjustment of physical and intellectual work. The proper aim in teaching children was to implant instincts in the mind. Care should be taken to avoid the direct application of this knowledge. It would be best if this kind

of teaching were given at home ; but unfortunately it was not always possible to trust to home teaching on the subject of the laws of health ; and it was natural that the school should be in advance of the home in this matter. At the same time, it was unwise to give rules that might clash with home customs. If, after a lesson on hygiene, a boy were to go home and propose to open the window at an inopportune time, he would probably get his ears boxed. In the matter of food the same argument held good. Children had to take the food provided by their parents. It was dangerous, continued Dr. Hill, to attempt to give reasons to children for the laws of health. These laws were founded on physiology, which was too big a subject for schools, and one of which the child had better be ignorant. A child ought to be entirely ignorant of its stomach and other organs. If you called its attention to its little wheels, those wheels were sure to become jammed. He spoke as a physiologist, and yet he would not teach this subject in schools. Information might be given, but the application should be avoided. But on one particular matter he thought instruction might safely be given : that was on the subject of germs. Children might be told that half the disease of the world was due to the entrance of germs into the body ; and that in many cases this was preventable. Pictures of germs as large as lions and tigers might be hung on the walls of the school. If a boy caught a common cold, he might care little that he was breathing out over his fellows millions of cold-germs ; but, if another boy had a cold, he might object to inhaling these germs.

Miss E. M. MORRIS, Inspector to the West Riding Education Committee, then read a paper on the same subject, taking a view opposed to that expressed by Dr. Hill. Miss Morris thought the subject one of very great importance, and expressed pleasure at the frequency with which the matter was now discussed. Two objections had to be met : the overcrowded time-table, that would not permit of the inclusion of another subject ; and the danger of making children too introspective. She thought that a fuller knowledge of the laws of health would make examining bodies and other authorities less exacting, and that therefore the teaching of the laws of health would ultimately tend to lighten the time-table. The other objection she thought to be purely imaginary when the subject was treated in such a manner as to inculcate reverence and care for the body. It was only too often the case that ignorance of these laws resulted in tragedies in later life. Just as the child with the broken toy said, with tears : "I didn't know it would break !" so the adult with weak lungs and shattered health learnt too late that Nature's laws cannot be transgressed with impunity, and said, with deep sincerity : "I didn't know it would break !" Public opinion, Miss Morris thought, wanted educating on this subject. The epithets, "grandmotherly," "molly-coddle" ought not to be applied in contempt to people who took proper care of their bodies, any more than ridicule should fall upon a boy who carefully cleaned his bicycle after he had ridden in the rain. Dr. Murray Butler's definition of education ran thus : "the adaptation of a self-conscious being to environment, a development of a capacity to modify and control environment." It followed from this definition that instruction in the laws of health had an undoubted claim in any complete scheme of education. Care of the body could no longer be left to the instinct of the child. It was a matter of common knowledge that the more artificial the conditions of life became the less control did instinct exercise upon life. That lack must be supplied by scientific knowledge. Health teaching should be begun in the kindergarten. Good health habits should be formed in very early life. Thus introspection would be avoided. "The faddist," continued Miss Morris, "has a much better chance of an innings in the case of young people who have had no adequate instruction in the laws of health during childhood. On reaching the verge of maturity there are many now who come under the influence of faddists, and they feel that they have been criminally neglected in respect of teaching as to the care of the body ; and at this age true perspective is apt to be lost, and faddism carries all before it. . . . At kindergarten age the activity and imagination of children may be turned to good account. Health teachers are supposed to be desperately prosaic, dry-as-dust specialists ; nevertheless I would suggest that this accusation need not be a true one, but that these characteristics of early childhood can be made use of to interest little ones. A capital health talk can be built on imaginary foundations, and it only needs imagination on the part of the adult to apply fairy stories, which form part of the romance of childhood, to useful ends. Little children love also to be useful, and stories can be supplemented with doing, and thus good habits can be inculcated." Miss Morris went on to say that simple experiments were worth more than facts learnt by rote from text-books. The need of air could be taught by watching plants, from some of which air and light had been excluded. In the same way an arithmetic lesson might take the form of measuring the cubic capacity of the room, and dividing the amount by the number of occupants, and thus the need of a certain amount of air could be demonstrated in such a way as to remain for ever in the children's memory. In conclusion, Miss Morris dealt with the question as to the best person to give this teaching in schools, and decided in favour of members of the staff as against the visiting health specialist.

Prof. FINDLAY continued the discussion, and posed as an entire sceptic on the matter. He doubted whether the whole subject of morals, including civics, were not too large for the teacher to tackle.

He pointed to the admitted failure in American schools to teach hygiene and temperance. He seemed to have chiefly in his mind schools in the poorer parts of large towns; and he hinted that, if children in these schools were taught that they had a right to fresh air, they might rise up and claim that right, thus causing a social upheaval. He thought that possibly a course in empiric physiology for the last year of school life would be useful; but, so far, all the talk was pure speculation: the first thing necessary was to demonstrate how the teaching had worked out and what had been its results on individuals.

Mr. TRICE MARTIN, Head Master of Bath College, strongly objected to Dr. Hill's advice on the subject of germs. He thought that to teach children about germs would, more than anything else, tend to make them introspective, and would cause worry and discomfort in the home.

Mr. HEAP, Head Master of Rotherham Grammar School, amused the audience by reading the following letter, stated to be a *verbatim* copy, and written by a mother to a teacher:—"Please do not teach Mary Ann any more about her stomach: it makes her so stuck up." Mr. Heap went on to show the need for teaching about diseases, instancing a case in which a number of school friends were invited to kiss the body of a girl who had died of scarlet fever.

When this discussion was closed it was claimed by a member of the audience that the laws of health demanded a short interval, both for the airing of the hall and for the refreshment of the listeners, before the next subject on the programme was taken.

When the members reassembled the Rev. R. HUDSON, Principal of St. Mark's Training College, opened a discussion on "What should be the relation of the Board of Education to Local Authorities in the matter of (a) finance, (b) training of teachers, (c) inspection of schools?" Mr. Hudson spoke at length about the relation of secondary schools to the Board of Education in the matter of finance. He thought that the locality should be entirely responsible for the cost of the buildings. Only in this way could variety and progress be secured. As to maintenance, the parents should pay a fairly high fee. He thought that the idea of parental responsibility was in danger of becoming weakened. When parents could not pay, and where there was a risk of a bright boy losing an education from which he could profit, then the scholarship scheme would step in and do all that was wanted. Fees should not, generally speaking, be lowered. But fees would not cover the cost of maintenance. He thought the deficit might be met by the locality and the Board in equal proportions. He also thought that the grants of the Board ought to cover the whole period of secondary education, and not be limited to a period of four years. As to inspection of schools, Mr. Hudson thought that the Board should be satisfied with a general inspection at fairly long intervals to secure that the school system was working properly and the education conceived on sound and generous lines. All questions of details should be left to the locality. The training of teachers, he thought, was more of a national than a local matter. If left too much in the hands of the locality, there would be a danger lest the teacher should be deprived of the width of experience which was a valuable part of training. It would be a mistake for a town boy to go from the town secondary school to the town training college.

Mr. T. P. SYKES, President of the National Union of Teachers, endorsed what Mr. Hudson had said as to the need of making the training of teachers a national matter.

The Rev. C. H. WESLEY DENNIS, who was in the chair, was also in favour of looking upon the question as a national one. He hoped there might be a conference of Local Authorities to consider the subject. He was rather afraid lest the enthusiasm of the localities should bring about an unnecessary increase in training colleges. At present the number of places in training colleges was within one hundred of the demand.

In the evening Prof. J. A. GREEN, of Sheffield University, introduced the subject of "Registration and Training." He said that since he had been invited to speak on this subject a dramatic event had occurred. The Teachers' Register was practically dead. And its death was determined upon in spite of the fact that it contained upwards of 10,000 names. But he admitted that the Register had failed in its primary object of encouraging the training of teachers. The many anomalies of the regulations, and the difficulty of defining secondary education, were partly responsible. Many schools had been recognized for the purpose of registration out of pity for the staff. The idea had got abroad that the Register was in favour of a particular type of school; hence its unpopularity with the teachers in the public elementary schools. The experience in connexion with the Register had shown the impossibility of defining a secondary teacher in the terms of his school. There were so many varieties of secondary schools; and the masters were shielded in the cloak of tradition and sheltered from the influence of new ideas. This partly explained the failure of the Register among secondary masters. Women and teachers in elementary schools were not so much under the influence of tradition. Still the four years of talk had done good and men were now less averse to the idea of training. The great difficulty, Prof. Green held, was the expense. If training were to become usual, one of two things must happen. It must be made cheap and easy for teachers to train, or it must be made worth their while. It was possible that the Board of Education intended to make further grants for this purpose, and that so

training might become easy. Mr. Birrell's letter to Sir W. Hart-Dyke might foreshadow this change. Clause 34 of the Education Bill contained no limitation in favour of elementary teachers, and, if the form of declaration for those entering training colleges were altered, public money might be as freely at the disposal of secondary teachers as it was at present at the disposal of elementary teachers. He doubted the utility of a general Register of a hundred thousand names, but suggested a Register of persons capable of giving higher instruction. Such a Register would be free from all objection on the score of social distinction, as it would be open to anyone who had the qualifications, and experience in any school would count.

A letter was then read from Mr. STORR affirming the principle that teachers must become a learned profession, and not a branch of the Civil Service. To effect this there must be a Register.

Miss CLEGHORNE, a member of the Executive of the National Union of Teachers, agreed with the views expressed by Mr. Storr, and said that her Association desired a comprehensive Register and would help in any movement to that end.

Prof. FINDLAY recalled the campaign in favour of training that had been started in Sheffield seventeen years ago, and thought the advocates of training had no need to feel discouraged in spite of the failure of the Register. The idea of the need of training had made great advance, as witness the fact that the University of Sheffield now possessed a Professor of Education. Seventeen years ago the authorities of the town would have scouted the idea that such a thing were possible. He urged that preaching was of little avail. The need was to show results. The study of education was in itself interesting, and it was becoming gradually possible to convince people that trainers were doing useful work.

On the following morning Mr. TRISTRAM, Head Master of Loretto school, spoke as to "The Best Arrangement of the School Day (including Home-work) and of the School Year." His experience had been with boarding schools for boys, and he limited his remarks to these conditions. He thought that considerations of health were paramount. The chief needs were a sufficiency of sleep, exercise in the fresh air, and a proper arrangement of meals and hours of work. He would have three terms of equal length. The Christmas holidays are inevitable, though he would make these as short as possible. The boys always came back in January in comparative ill-health. The Christmas holidays being necessarily fixed, the other holidays followed as a matter only of calculation. As to the arrangements for the day, Mr. Tristram did not believe in work before breakfast, nor did he approve breakfast by instalments; therefore he was opposed to early school. He thought that a boy's brain was not active and agile in the early morning. In summer boys required less sleep than in winter; therefore all meals could be put earlier. It was necessary to give a light lunch between breakfast and dinner. Under no circumstances should a boy need to supplement the school dietary. Such food should be given him as would satisfy him and keep him in robust health. Mr. Tristram especially emphasized the evil of hard exercise immediately after school and before dinner. This period should be devoted to exercise of a mild nature, just as the time immediately after dinner should be. The best time for really hard exercise was in the middle of the afternoon; and the best of all hard exercise was, in his opinion, Rugby football. After the hard afternoon exercise there should be a mouthful of food, and time to recover before work. In winter dinner would be at one o'clock: in summer it might well be at twelve o'clock. Tea would be at six o'clock. It was necessary, he thought, to watch that boys did not get overheated in the hot sun. The class rooms must be cool and well ventilated. The boys' clothing should be light; there could be no objection to taking off coats in the class rooms. "Discipline and dignity," he said, "that depend upon a coat are not worth much in the rough and tumble of the world." He ended with a warning against faddists; arrangements for boys should be made to suit them as they are, and not as we think they are or ought to be.

Mr. A. KAHN, University College School, London, spoke from the point of view of a large town day school. He thought the question resolved itself into one of brain hygiene. The brain required exercise, and the proper quantity of exercise varied according to the development of the boy. Too much physical exercise, imperfect physical conditions in day schools, over-long hours of work, were all active causes in the production of stupidity. The correct hours of work, as he thought, would be as follows:—Between the ages of six and eight, for boys and girls alike, two hours' work; from eight to ten, three hours; from ten to eleven, three and a-half hours; from eleven to thirteen, boys should have four hours of work, and girls rather less; from fourteen to sixteen, five hours; from sixteen to eighteen, five and a-half hours. These hours should be spread over a longer period, including both morning and afternoon, and should be broken up by intervals for recreation. In addition to the hours given, a small and graduated amount of home work might be given—from fifteen minutes at the age of six to three hours at the age of eighteen. Home work was necessary to cultivate independence. Mr. Kahn was strongly opposed to the system in German schools and in English high schools for girls, where all the day's work was done at a stretch. The ideal arrangement for the school year would be, in his opinion, to have three terms: the first

from January 2 to March 25, the second from April 16 to July 9, the third from August 25 to December 7.

The discussion after this point was mainly limited to criticism of the four years' course of the Board of Education as applied to girls' schools, and the opinion was freely expressed that more elasticity should be allowed. It was stated that the present regulations produced anæmic girls, and, in particular, anæmic pupil-teachers, who formed a very bad object lesson to the children whose charge they would have to undertake.

Prof. GREEN intervened with a useful caution that formal drill was not mental rest.

The CHAIRMAN concluded the debate by urging the head mistresses to press the point of a change in the regulations upon the Board of Education.

The second subject of discussion on Wednesday morning was as follows:—"The Value of School Life after fifteen years of age for Pupils not preparing for a University or Technological Career."

Prof. FINDLAY thought that secondary education was too often looked upon as intermediate to higher education. What we had to deal with now were children of fifteen who were not proceeding to places of higher education, and we had to decide if there was any justification for keeping them at school after the age of fifteen. He pointed out that it was a biological law that the more complete the development the longer was the period of helplessness—i.e., economic helplessness and leisure. Latterly there had been a great growth in the direction of increasing this period; and it seemed to be thought that this prolonged period of economic helplessness must be spent at a secondary school, whatever the future career might be. But this state of experience, commonly called school life, was not necessarily the best for all. As a head master in secondary schools, he had known cases where it would have been better for boys to have been in the school of life than in the secondary school. The only real justification for deliberately increasing the period of economic helplessness was to be found in the claim that in later life the pupil might render more valuable services to society in return for the longer period of nurture. It would therefore follow that only those who are morally and intellectually fit should remain at school after the age of fifteen. No lazy or stupid children should be encouraged to stay. Dr. Findlay also thought that the education given to boys and girls above the age of fifteen should have definite reference to a future career. He did not mean that it should be technological or technical; but that a boy of the age of fifteen should understand that his education was a preparation for life, and he should then decide on his future work. Hence there was a great need for variety of curriculum. He reminded his hearers that the Black Prince was fifteen at the battle of Crecy. Dr. Findlay then dealt with the difficulties involved in making so early a decision as to future career, and argued that these were not insuperable. He condemned the traditional liberal education: "a limited number of special subjects prepared according to a special receipt." Although literature was the most humane of all subjects, yet this could be omitted entirely from a liberal education. The real point was not the subject, but the treatment. Any subject could be treated in a liberal, as opposed to a mechanical, way. Even shorthand can be made a subject of scientific study. He again asked if our secondary schools gave the best training for all lads over fifteen; and suggested that for some boys in the upper classes a half-time arrangement would work well.

Miss ESCOTT, Head Mistress of the Sheffield High School, was, on the whole, opposed to Dr. Findlay. She quoted Prof. Sadler as saying that England was a hundred years behind Germany in intellectual life, and she argued that, therefore, secondary education should be prolonged as late as possible and given to as many children as possible. This education should be general, because it was not easy at the age of fifteen to decide upon a definite career. In her experience girls were developing later than was the case some fifteen years ago, and she thought the years after the age of fifteen were often the most useful. She had known girls who appeared stupid and unresponsive to their opportunities before this age change and develop rapidly and in a valuable manner if they were allowed to remain at school for a further period of two years. Miss Escott dealt chiefly with high-school girls whose education would cease on leaving school and who were probably not preparing for a profession.

In the afternoon the discussion on the subject: "What should be the relation of School Certificates to University Entrance Examinations?" was introduced by Mr. TRICE MARTIN, Head Master of Bath College. Mr. Martin took the view that a secondary school was an intermediate step to a University education and that for the average or "pass" boy the examinations for school certificates and for University entrance should be identical. There might be an additional test for sixth-form boys who intended to be honour students. He found that the existing system, owing to the multiplicity of school examinations, was destructive of the unity of the school curriculum. The second need for reform in Mr. Martin's judgment was found in the urgent necessity of maintaining a constant value in the matriculation examinations of Universities. He would not have the Board of Education interfere in the conduct of examinations or set up examinations of its own. But he thought the Board might do useful work in co-ordinating existing examinations and in insisting that a constant per-

manent standard should be maintained. The position of the Oxford and Cambridge Joint Board showed the possibility of amalgamation. It was necessary to go further and to relieve schools of the handicap caused by the numerous examinations.

Mr. T. RAYMONT, Vice-Principal of the Goldsmiths' College, was unavoidably absent, and his paper was read by the Secretary. Mr. Raymont dealt with the question as one involving the influence which a University inevitably brought to bear upon the curriculum of a secondary school by its matriculation examination and its school leaving certificates. The question he would ask was: How could the University exert that influence so that the education given in the school might be affected for good? Before answering the question it was necessary to consider certain points of fundamental principle. The question had been raised whether the Universities were the right bodies to exercise this influence. The Scottish and German plans, though differing in many respects, agreed in making the leaving certificate a State document. It had been argued that the practical man who needed to be impressed with the value of such certificates looked upon academic tests with some degree of contempt. Against this view, it might be shown that the work of the newer Universities was fast obliterating the traditional distinction between the academic person and the practical person. Mr. Raymont thought that this change of opinion was in the right direction, and that anything that brought Universities into closer touch with the rest of the social structure was to be welcomed. The argument that a new University was too fully occupied with other matters to conduct the examinations of schools with success was illustrated by the establishment of the Central Welsh Board. At the same time, Universities were bound to exercise some influence upon schools by their matriculation examinations. Mr. Raymont went on to ask what a certificate should stand for, and said: "In this country we have usually taken a certificate to mean that, in a certain month of a certain year, John Smith or Jane Robinson gave evidence of possessing a certain amount of knowledge (acquired no one knows exactly when or where, and no one thinks it necessary to ask exactly how) of certain portions of history, literature, mathematics, and the like. This knowledge may have been acquired in a good school or through a postal institution; it may be the sure product of years of steady work, or the fleeting, though showy, result of a few months of strained effort; it may be the outcome of sound teaching or of such judicious cramming that the examiner cannot refuse to pass the candidate. Now, before we are likely to effect much good in secondary education, this notion of a school certificate must be abandoned, or at least thoroughly revised. The certificate must mean that at the period in question the said John or Jane has given evidence of having duly profited by a course of instruction pursued regularly during the three or four preceding years. The examination must be simply the crown and completion of the regular course of study, which is the all-important thing. The examination must follow the curriculum; the curriculum must not be squeezed to the exigencies of the examination. Such a scandal should no longer be possible, for instance, as that reform in modern language teaching may be delayed simply because the new methods of teaching do not fit the old methods of examining. And there should no longer be any danger that pupils may be kept working down to the syllabus of a University entrance examination, which, after all, represents only the minimum requirements upon which degree courses may be pursued. If a boy can easily do more advanced work in certain directions, the examination should be shaped to meet his needs." Mr. Raymont made a powerful plea in favour of allowing the teacher a share in the branding of his own herrings. But he recognized that the state of public opinion on this matter would only allow of a slow and gradual progress towards the desired end. "We are so much accustomed," he added, "to the shopkeeper view of education, that it consists in handing over so much intellectual material to be duly measured and weighed by the machinery of examination that the strict code of professional honour prevailing amongst German teachers has had no chance of flourishing in this country." Mr. Raymont then gave a caution to the Universities not to forget that many subjects necessarily appeared in a school curriculum which did not directly lead to degree courses, and that these must not be neglected or discouraged in school examinations. He concluded by asserting that curriculum must govern examination rather than the reverse: that eventually the principle of co-operation between the teacher and the outside examiner must receive fuller recognition: that the school-leaving examination, as opposed to the University entrance examination, must be encouraged.

Prof. HUDSON, of King's College, London, said that no teacher ought to undertake to prepare for examinations except in one particular. He might undertake to see that the candidate was physically fit. Mr. Kahn argued that an entrance examination to a degree course was a thing quite distinct from a school-leaving examination. He would prefer that the latter should be in the hands of the Board of Education.

The proceedings then terminated with certain votes of thanks and complimentary speeches. Among these Mr. P. A. BARNETT made a charming and delightful speech, full of valuable matter. But, as Mr. Barnett especially alluded to the fact that, as the reporters had left the room he could speak freely, we respect his desire for liberty of prophesying in private.

OCCASIONAL NOTES.

THE Education Bill moves along slowly in spite of the exercise of the closure. The first three clauses passed in Committee on the understanding that the Government will so modify the subsequent clauses as to make extended facilities real, and capable of being enforced, should the need arise, against an arbitrary and unreasonable local authority. To this Mr. Birrell would tack on a provision virtually forcing every denominational school to hand itself over to the Local Authority. There will be great opposition to this proposal. But we cannot think the case of the denominational schools is strengthened by the exaggerated language of their supporters. "It will be no longer possible," says a circular issued by the National Society, "to point to the Church school and say: 'This is our school.' Quite so. It is the fact that Churchmen have used this term 'our school' of institutions the annual maintenance of which is derived entirely from public money that has embittered the controversy. Had they been content to call them National schools and to make them so in reality, much trouble might have been avoided. But, in spite of opposition from friends and foes, the Government show no signs of yielding. Altogether twenty-three days have been or are to be spent over the Bill in Committee. Parliament is to rise on August 4, but is to return to its duties in the autumn and to pass the Education Bill. Meantime it has been announced that Part II., dealing with endowments, is to be dropped, and rumour says that Part IV., dealing with the establishment of a Council for Wales, may also be omitted.

CLAUSE IV. in its amended form passed, though in the division on Mr. Evelyn Cecil's amendment to read "shall" for "may" the Government majority fell to

Clause IV.

103. Mr. Birrell, with some justice, complained that, while offending his own more ardent supporters by this "just but highly exceptional clause," from those whom he sought to benefit he received nothing but cold words or even abuse. The clause, as the Prime Minister frankly acknowledged, was drafted to meet the peculiar case of the Roman Catholics and Jews, and it is not denied by those sects that it will preserve intact three-fourths of their schools. When Mr. Balfour asks why the Church of England should be less favoured, the answer is that it has been more favoured in the past, and has enjoyed almost a monopoly of rural education. Four-fifths and 5,000 are arbitrary numbers, and hard cases, of which Sir W. Anson gave samples, will undoubtedly arise; but hard cases make bad law. Mr. Birrell's argument that an appeal to the Board of Education would be more satisfactory and more effective than an appeal to the Court of King's Bench was in our judgment unanswerable.

THE invasion of London by the Lancashire opponents of the Bill has had some effect on public opinion, in spite of the gibes which have been levelled at the "picnickers." Though on pleasure bent, the excursionists were evidently in earnest. and London, itself luke-warm, admires enthusiasm in others. The Unionist and the Church of England press will not allow the House of Lords to forget that this demonstration of Lancashire Churchmen may be used as an argument to justify the rejection of the Bill. But far more important and influential, though less noisy and importunate, are the opinions of the Local Authorities. They are in favour of the principles of the Bill, and it is they who will have to carry out its provisions. The opposition of the Free Churches to the facilities offered to those who do not approve of simple undogmatic teaching based upon the Bible ought to be modified by the plain sense of Mr. Lloyd-George's letter to a correspondent in Wales. He admits that Clause IV. is an encroachment on the symmetry of the Bill, but points out that the moral instruction provided under the Bill is bound to be an offence to the conscience of Catholics, and that therefore, so soon as it is decided to give the Local Authorities power to supply religious instruction in schools, it seems an inevitable corollary to afford extended facilities to Roman Catholic parents, and, he might have added, to certain sections of the Church of England. The only other alternative is for the State to concern itself solely with secular education. This alternative Mr. Lloyd-George, who knows the House of Commons, refuses to discuss, as he is convinced of its impossibility.

THE protests that have been raised against the abolition of the Teachers' Register have evoked from Mr. Morant a "Supplementary Note." The object of this Note is to make it clear that the Board, whilst adhering to the abolition of the Register, are determined to do something to encourage the training of teachers. Mr. Morant points out that the Board have taken steps to provide for a list of efficient schools which shall be issued periodically. It appears to be assumed that to be a teacher in such a school is almost equivalent to becoming a registered teacher. Even if we could grant this point, we should still have to inquire what would be the position of those competent teachers who happened to teach in a school that for one of several possible reasons did not apply to be placed on the Board's list of efficient schools. The Note further points out that

Column B
lives again.

the new Regulations for Secondary Schools will make it imperative in 1907 that a certain proportion of teachers on the staff of an efficient school must have undergone a course of training. In applying this regulation any person whose name has previously been entered on Column B of the Teachers' Register may be counted, "subject to the Board's sanction in each case." It may be some consolation to learn that to have been on Column B is better than not to have been trained at all; but there is a distressing vagueness about the phrase, and it may be that the Board's sanction will be limited to those who have gained the full qualifications according to the permanent conditions.

THE Dean of the College of Preceptors, in his official letter to the President of the Board of Education on the abolition of the Register, naturally lays most stress on the injury that will result to private teachers. By the Register they were put on an equality with the teachers in public schools and recognized as one branch of a great profession. If deprived of this hall-mark, they will be simply adventurers, each fighting for his own hand. Moreover, the Dean continues, there is a widespread apprehension that the Board is drifting towards an organization of secondary teaching in which private schools will cease to be recognized as an integral part of the available resources of the country. Yet another plea is urged in the letter which we have not noticed in any of the numerous protests. Formerly the majority of secondary teachers, being in Holy Orders, had an acknowledged status as members of another profession; now it is the exception for any save members of the Head Masters' Conference to be clerics, and there is a growing demand among teachers for a recognized status, which nothing but a Register can confer.

THE resolution passed unanimously at a meeting of the Heads of Training Colleges on May 26 was even more emphatic any we have hitherto recorded, and the protest they raise is not in behalf of training, which they allow may be promoted by other means, but on general grounds.

The first resolution runs: "That a grave injustice, amounting to a breach of faith, is threatened by the proposed abolition of the Register as regards all those teachers who have been registered; and that public confidence in the stability of the policy of the Board of Education has been seriously shaken by this action." The other resolution, which covers common ground, we need not rehearse; but we note with satisfaction the regret expressed at the extinction of a Registration Council nominated in part by the profession. One characteristic of a learned profession is the power of controlling entrance to its ranks, and such power, properly limited in the public interest, teachers justly demand. The alternative is "administrative regulations, which would end in ranking all members of the teaching profession in the lower grades of the Civil Service." It follows (though this is not definitely stated in the resolution) that the Council which administers the Register should have some voice in drawing up and modifying from time to time the regulations for admission.

THE Assistant Masters in their memorandum to the Board of Education deprecating the abolition of the Register urge (1) that the training of teachers was not

Assistant Masters on the Register.

the sole or even the primary end for which the Register was instituted—the first object was to furnish appointing authorities with a list of competent teachers from which to select and to guard the public against incompetency; (2) that the main reason why men teachers are slow to avail themselves of training is the inadequacy of salaries; (3) that the promised official list of efficient secondary schools would not be a guarantee of the teachers in those schools. Lastly, they ask for a respite. They allow the partial failure of the present Register and the difficulties of the Board, but urge that, if it is now abolished, there is no hope of its being ever revived.

A STROKE of the pen may cause a veritable revolution in practice. In answer to a question in the House, Mr. Birrell said that "the Board have come to the conclusion that it is desirable to allow the (training college) students' declaration of service to be fulfilled by service in any State-aided or rate-aided school, including therein schools other than elementary." It is clear that there is nothing in the wording of the clause (34) in the present Bill to limit the provisions of training to any particular grade of school or section of teacher. But the declaration signed by a student in a training college that he or she would teach in a public elementary school would limit the operation of this clause. We are glad, therefore, to have Mr. Birrell's assurance that the Board have come to a decision on this point. At the same time Mr. Birrell added that the alteration could not at once be carried into effect. Wide schemes are in the air. We have Mr. Morant's statement in the Supplementary Note on the subject of the Teachers' Register that the Board intend to institute "a system of grants in aid of courses of training specifically designed for the requirements of secondary teachers." The proposed change in the students' declaration will make it increasingly difficult for Local Authorities to secure a full supply of teachers for their elementary schools. As a result, salaries are bound to rise.

NO system is flawless. As a nation we have come to the conclusion that every child must have a certain dose of book-learning forced into him or her. This of itself is excellent. The trouble comes in because, for the moment, we, as a nation, have become convinced that education and book-learning are one and the same thing. It is true that in the case of children who are blind or dumb or mentally deficient we make an exception, and special care is taken. For the rest, every child is to learn from books. If the child is under-fed, under-clad, or over-tired, if it is quite clear to the teacher that no good, but on the contrary evil, must come, yet that child must have his daily dose of "education." Of course it is recognized that bodily health is important; but, if the child is weak, we say that it is the fault of the parent, and we must not run the risk of weakening parental authority and sense of responsibility. This point of view seems to have reached a climax. The London County Council can examine children as regards their eyesight, can prescribe glasses, and can say that without those glasses the child is in danger of ruining his eyesight; but the law does not allow the Council to supply spectacles. Consequently an association has been formed to supply spectacles at cost price to children for whom they have been prescribed, or to help in their purchase in the case of very poor children. We wish the association every success; but the need that has brought about its formation suggests that our legislators must take a wider view of

Spectacles for School-Children.

education if we are to bring up a race of healthy and capable citizens.

JUDGMENT has been given in favour of the Board of Education and against the West Riding of Yorkshire in the matter of the payment to teachers for religious instruction in non-provided schools. When the West Riding sent inquiries to the non-provided schools with a view of finding out what proportion of the teachers' time was occupied in giving religious instruction, and, later, when the Education Committee decided to withhold the proportion of salary which was estimated to be assigned for the giving of religious instruction, we described this action as needlessly irritating and hostile to the Church schools. And we still hold this opinion. No other Local Authority raised an objection to paying the full salaries of the teachers. As things are, under the Act of 1902, it seems to us trivial to raise this point. Such action bears the appearance of a deliberate attempt to exasperate the Church of England. But, if the present Bill is to become law, it will seem that the West Riding had a stronger backing of public opinion than was apparent at the time; for in the present Bill it is distinctly laid down that the Local Authority shall not pay for any religious teaching of a denominational character.

PRIVATE schools should welcome the recently issued Regulations for Secondary Schools, which make it possible for any school to be inspected and declared efficient whether or no that school is eligible for or desires to receive grants of public money. This inspection will be free, and will include inspection of premises as well as of instruction. But the Board must be satisfied as a preliminary to inspection that "there is a *prima facie* case for recognition." The Board must be satisfied from the reports of the Inspectors that the school has an adequate staff (this includes "a certain proportion" of trained teachers), provides efficient teaching, and possesses suitable premises and equipment. The report will be sent to the person responsible for the conducting of the school, and also to the Local Authority; but the latter body may not publish it without the consent of the school. The recognition will last for three years. This proposal applies equally to socially superior public secondary schools which do not seek for grants. The offer of inspection without cost ought to be widely accepted. On the other hand, in many schools inspection has become so frequent, and the various reports so non-committal or contradictory, that head teachers and governing bodies are growing somewhat weary.

"YOU think the children are listening to what you say; but, far more really, they are observing what you are." This passage occurs in Miss Mary Clifford's presidential address to the Association of Teachers of Domestic Science. It contains a truth that is often overlooked, though the same principle is embodied in the old saying that practice is better than precept. The fact probably is that the present generation of teachers, unless they are persons of exceptional strength of character, are oppressed by the thought of the coming examination—an examination in which the whole work of the teacher, prospects, salary, and position are decided by the ability of the pupils to put on paper certain proofs of intellectual agility or of a well stored memory. Consequently the teacher aims at implanting knowledge or developing the intellectual powers of the pupils. Yet it is, undoubtedly, what we teachers are, rather

than what we say, that really impresses the child for his future good or ill. The first object of education is to put the child into an environment where his character may develop in the way that the spirit of a given age has declared to be the best. The results of education cannot be estimated by written examination or even altogether by inspection. The mysterious thing called the "tone" of the school is the one thing of real importance, though, of course, the word "tone" (just as the word "character") is often grotesquely used.

THE Board of Education have issued a paper showing the age at which compulsory attendance at school begins in certain foreign countries. In these it is rare to find this age under six or over seven. Roughly speaking, we may say that in France, Germany, Switzerland, Holland, Japan, and Canada the years of compulsory education are those from six to fourteen; but in some countries arrangements are made for the admission of younger children. It is curious to note that in England the arguments in favour of admitting young children—those which have had real weight with our legislators—refer not to the young child, but to some one else. That very young children are the better for some kind of formal education is undoubtedly true; it is equally true that the large classes and the equipment of the public elementary schools do not allow them to give the requisite care to very young children. But, we are told, if these children are not admitted, the elder girls must be kept at home to look after them; for the mother, apparently, cannot do so. The mother has to go out to work, and at the best the child, if not in school, would be crawling, neglected, in the gutter. It will be an advance in educational feeling when we realize that a mother must have time and opportunity to look after her infants if we desire the nation to be healthy and prosperous. The point to decide is whether the infant can get at school the best possible education; if not, what arrangements can be made to ensure a healthy infancy. The next point would be to carry out the decision when it has been made.

A POWERFUL circular letter has been issued on behalf of the Association of Assistant Masters, calling upon the staffs of the public schools to give their support to a movement that is exercising considerable influence upon secondary education. The letter is signed by masters at Cheltenham, St. Paul's, Winchester, Charterhouse, and Eton; so it is clear that the Association is not entirely without the support of the socially superior members of the profession. A concise and modest statement of what the Association has already been able to accomplish is given; but, with regard to masters in the public schools, the letter says: "The Association is now maimed in all its efforts by their conspicuous absence, and can only partially and imperfectly carry on work which we believe to be at once for the welfare of our profession and also for the advancement of the public good." In reference to salaries, the circular states that the Association "has endeavoured to secure some improvement in salaries, which, in many smaller schools at any rate, are often unsatisfactory, and sometimes almost disgraceful." We are convinced that nothing but organization can ever improve salaries. Local Authorities will not pay more than the market price. They may reply to criticism: "We get excellent examination results and first-rate reports from Inspectors with masters paid as we pay them: why, then, should we increase the payments? We are not philanthropists, but guardians of the ratepayers'

money." The pressure will have to come from the profession itself. If the cry of trade-unionism is raised, it must be faced.

THE results of the recent examination for King's Scholarships show that 82·3 per cent. of the successful candidates are women. In some quarters this is looked upon with dismay. The paucity of candidates who are ready to enter the profession of teaching in the public elementary schools may be taken to show that there are other and more attractive professions and occupations than teaching. If more men are wanted, either entrance must be made more easy or the conditions of service must be improved. The former alternative is unthinkable at the present time. Therefore it follows that the latter must be adopted. Improved conditions of service include higher salaries, especially higher maxima; the salary at start is less important: greater security of tenure, more independence and freedom from the harrying of Inspectors and Local Authorities, and increased pensions. All of these will come, but come very gradually. For our part we are not sure that more men are wanted. In infant schools and in the lower standards it is admitted that women are the better teachers. With children up to the age of twelve there would seem no reason to have any men teachers at all, for boys or for girls. And for older children there is no need that the staff should be exclusively composed of men because the scholars are boys. Any one who is familiar with the intermediate schools of Wales will know that men and women can work together on the same staff and that women can efficiently teach boys up to the secondary leaving age. Seeing the early leaving age in the public elementary schools, we need feel no alarm that only about 20 per cent. of those entering the profession are men.

A GAIN and again we have seen the Bill denounced as a misnomer, as having nothing of education about it, and as inspired by anything rather than zeal for education. It is well that this slander should be rebutted by one who can by no possibility be counted a partisan. Prof. Sadler, writing in the *Independent Review*, finds the motive of the Bill not in religious controversy or denominational rivalry, but in the stir of a new conviction among the masses that in a new and better education lies the best chance for their children. This means that in future the people will do for itself what needs to be done, and no longer depend on charity; and, as a corollary, the private control of schools must cease. The one point of reform that Prof. Sadler presses home is the reduction of the size of classes. In a class of sixty children may be drilled, disciplined, crammed; but they cannot be trained to think, and there can be no individualization—like Wordsworth's cattle, they are sixty learning like one. On the second part of the article, which is entitled "The Future of Denominational Schools," we have touched elsewhere.

A SCHEME has been projected as a sequel to the Mosely Educational Commission which gives large promise for the future. By an arrangement concluded with the great steamship companies teachers will be conveyed across the Atlantic and back during the months of November to March next inclusive at a nominal fare of £5. Itineraries have been prepared for visitors by President Murray Butler, and facilities will be afforded to enable them to see typical schools of the United States and Canada. All that is needed to make the scheme effective

is the co-operation of County Councils and other school authorities, and we cannot doubt that these will see the wisdom of granting leave of absence without cessation of salary to such of their teachers as are likely to profit by so rare an opportunity. Hitherto for one English teacher who visits the States there have been a score of American teachers visiting England. The jubilee year is an American institution which we might well imitate. We have at least as much to learn from the New World as it has from the Old.

LOCAL AUTHORITIES.

THE thirteenth report of the Kent Education Committee states that the expenditure on elementary education for the past year has been, in round figures, £262,000; that is, between £4,000 and £5,000 less than the estimates. The Committee is able to take some credit for the saving effected by its Stores Department. For the convenience of teachers a sample room has been stocked, which is in reality an educational museum on a small scale. The want of a really complete educational museum in London, in which all the latest educational books and appliances could be inspected, has often been commented upon. Failing the establishment of such an institution, it is very useful for teachers in Kent—especially those living in remote rural districts—to be able to come to London on a Saturday morning and investigate at their leisure the supplies that the Education Committee is prepared to offer. An extract is given from a letter written by a head teacher bearing evidence to the value of the opportunity. On the subject of the saving in cost that is effected by a large purchaser the following paragraph from the letter may be quoted:—"Foolscap paper for which I formerly paid 5s. 6d. net per ream is now quite as good at 3s. 4d.; and round chalk, unobtainable under 1s. a box, is exactly the same quality at 4½d." A good deal of the difference is perhaps lost by the local tradesman; but, at any rate, the ratepayer gets the benefit. The expenditure on higher education for the past year has been £75,000—again a saving on the estimate; but for the coming year a large addition is allowed, to meet automatic increases needed for teachers' salaries and for scholarships.

DELAY in the opening of hostels in connexion with the Training Department of the Goldsmiths' College has occurred, owing to difficulties in obtaining suitable premises. The Kent Committee originally undertook to provide for 30 to 40 women, while Surrey was to provide accommodation for about 25 men. It seems likely that these figures will be exceeded, and the Surrey Report estimates the final provision as for 64 men and 120 women. This proposal makes Kent bear the major part of the cost, and it is now proposed by Surrey that the two hostels should be managed as regards their finance by a joint committee, and the cost shared equally between the counties. The Kent Committee propose that four houses in Granville Park, Blackheath, should be leased for the purpose of a hostel for women. It is hoped that both hostels will be opened in time for the beginning of the September term.

A LONG extract from the quarterly report of the Principal of Wye College is inserted in the report of the Kent Education Committee, from which it is evident that much valuable work continues to be done, not only in helping the farmers by analyses of soil, advice, and the results of experiments, but also in training up a body of potential scientific farmers. There are now in the College 101 students. The report gives an interesting table of the ratio of the grants paid by the Board of Agriculture to those given by the County Councils, from which it appears that no agricultural college receives so small a proportional grant as Wye. The Bangor Agricultural Department, for instance, receives a grant from the Board of an amount almost equal to that given by the counties of North Wales that support it. On the same basis of comparison Wye College receives about one-sixth from the Board of that which it receives from the two counties that maintain it. On the principle that the Government should help the locality in proportion to the amount that the locality is willing to pay, Wye College ought to receive far more generous support from the Board of Agriculture.

THE fifteenth report of the Surrey Education Committee contains a large amount of interesting matter dealing with the care of the body and the development of the physical powers of the children. A careful reading of the report makes it clear that a feeling exists among the members of the Committee that, if schools are content to

limit their work to the training of the intelligence, they will fall short by much of the really valuable results that could be produced. The Special Subjects Committee urges the need for further provision of opportunities of learning cookery, manual work, and gardening. The increase in the provision of these opportunities has already been great since 1902. But it seems that the Committee will not be content until much of the aimless studying of text-books has given way to practical instruction. The report of the Committee for Physical Training affords ample proof of the willingness on the part of the teachers to take up and develop this side of education. Major Norman has been appointed superintendent of physical training. He holds central classes for teachers, and goes round to the schools to help with advice and suggestions. The report of the medical officer shows that the children are now being subjected to careful scrutiny with the object of helping those who are ailing and separating those who require special schools for any reason. In his report the medical officer lays special stress upon the need for inculcating habits of personal cleanliness. In particular he refers to the care of the teeth. Perhaps he might have added that thorough use of the teeth by proper mastication of food is no less necessary than the proper cleansing of the teeth. As to personal cleanliness, he says: "It is not too much to say that, if thorough personal cleanliness could be so taught in early life as to become an instinct, most diseases would be lessened by a half and many would disappear altogether."

CHILDREN are growing scarce in Halifax, as it seems from the annual report of the Borough Education Committee. It is known that all who can reasonably be expected to attend are on the rolls, and the average attendance has improved. Yet the decrease on the last year was 510. The improvement in average attendance seems to be due either to the activity of the attendance officers or to the growing popularity of the schools; for the prizes by which regularity had been encouraged have been abolished. This saves a sum of £400 a year; but, in our opinion, far more important issues are involved. Prizes for regular attendance are vicious and immoral. An attempt is made, apparently, to bribe a child to attend. The child is therefore encouraged to expect a bribe in return for any effort he may make towards self-improvement or self-development. The contrary ought to be the case—namely, that it is felt to be a privilege to attend school and a deprivation to be absent. The system of bribes tends to fix the child's mind on the bribe and not on his education. Samuel Johnson, in speaking of his school-days, said: "By exciting emulation and comparisons of superiority you lay the foundations of lasting mischief." This is profoundly true. If children are to get the full benefit from school, they must come because they like school and feel that there they get an opportunity for the employment of their natural activities. In Halifax the age at which scholars leave school has risen, and from this it may be argued that the children or their parents are alive to the actual value of the education given. But there are still far too many half-timers in the Halifax schools, and too many children who, from want of proper food or clothing, or owing to work outside the school hours, are physically incapable of profiting from their lessons. Of half-timers there are 1,300 out of 15,000; of the others there are no actual statistics, but reports from head teachers show that they are numerous.

A POINT we like in the Halifax report is the recognition given to the teachers. Teachers have great responsibilities, and are as a rule fully alive to them. But it is not always that it occurs to the mind of a corporate employer to utter a few words of appreciation which may sweeten the work of the teachers for the whole of the year. We quote the following paragraph, not only because it recognizes the work of the teacher, but also because it deals with the influence of the teacher generally, beyond his class-room work:—"The devotion to the highest interests of the scholars displayed by the teachers of all grades merits the sincere thanks of the Committee; for it is largely through the deep interest in, and attachment to, their work which the teachers manifest year after year that the character of the future citizens is established. . . . Many teachers have spent much of their own time in superintending the outdoor games and swimming, thereby gaining a knowledge of their scholars and a power of influence for good over them which could not otherwise be obtained." A number of extracts from the reports of head teachers are given which afford interesting reading and also proof of the justice of the quotation given above. If further proof were needed, it is found in the reports of the Inspectors of the Board of Education. If Mr. Morant had time to read these reports from head teachers, he might conclude either that his "Suggestions" were unnecessary in Halifax, or that they had already produced a marvellous effect. Four schools in Halifax have swimming baths. The Corporation Baths are also used by the scholars. In spite of the facilities offered only one child in six has visited one or other of the baths during the year. More girls than boys have received certificates for powers of swimming.

WE have received from the Education Committee of the West Riding of Yorkshire a handbook giving particulars of holiday courses for teachers held during the ensuing summer. The West Riding likes to do things thoroughly. There are courses in the three foreign modern languages that are taught in schools—French, Spanish, German; a course in Handwork, in Theory and Practice of Education, and in Physical Instruction; a course in Geography, and one in Plumbing. Among the many competing courses for teachers in France the Committee has, perhaps wisely, limited its students to one—that at Boulogne. This makes organization and supervision more simple. Students going to Germany or Spain must go to Neuwied or Santander. In these two countries there is practically no alternative; for the courses at the German Universities are mostly on the lines of the English University Extension courses, and are not specially arranged for foreigners who have not full fluency in the language. Teachers who intend to apply for grants in aid of their expenses are apparently expected to attend a preparatory course held at Leeds for practice in speaking and in understanding. A most interesting programme is issued of the pedagogic course to be held at Scarborough. Prof. Findlay, Prof. Sadler, Prof. Earl Barnes, and many other well known teachers have undertaken to lecture.

LIKE many reports that we have received lately, the report of the Warwickshire Education Committee gives *pros* and *cons* for the admission of children under five years of age. As the arguments are so varied and so little in accord, the Committee have decided to continue to admit them, seeing "the large financial loss that would be entailed on the county by the exclusion" of such children. The Committee is quite right in saying that academic qualifications are not necessary for teachers of very young children. But there is much division of opinion among the managers as to whether the teachers should be "older and motherly women or bright young teachers." The best solution is, no doubt, where possible, to get bright young teachers with motherly and sympathetic instincts. The report continues: "The advocates for admission lay particular stress on the habits gained by children who enter school at a very early age—order, obedience, punctuality, good manners, neatness, and cleanliness—habits all important for their intellectual as for their moral growth, and which, they urge, are more easily learnt before five than after." "The majority of correspondents do not think that there is any strain on the 'babies' brain, . . . and several lay stress on the evident happiness of the children at school, and their anxiety to go there as soon as they are allowed to do so."

REVIEWS AND MINOR NOTICES.

The Cambridge Modern History. (1) Vol. VIII.: *The French Revolution.* (2) Vol. IX.: *Napoleon.* (16s. net each. Cambridge University Press.)

(1) The first of these volumes displays in 25 scenes the tremendous drama enacted in Paris throughout a decade towards the end of the eighteenth century, together with the secondary plot conducted under cover of the main preoccupation of the central European Powers by Russian ambition and intrigue. The regeneration of France and the dismemberment of Poland—these, with their accessories, are the themes that fill the ample volume. The causes that led to the overthrow of the old political and social order in France are traced fully and carefully. Mr. Willert reviews the principles that influenced the men of 1789 and 1793, and, in view of these, he essays to appreciate the part played by the French philosophers and other writers of the eighteenth century in preparing the way for the Revolution. What the philosophers did was to excite the fanatical fervour with which the people embraced the principle of individual freedom, and "it was because there is little that is original in their teaching that it was received with enthusiasm." "Even if we believe that the philosophers did not cause the Revolution, nor originate the ideas which determined the form it was to take," says Mr. Willert, "we must allow that they precipitated it by giving a definite shape to vague aspiration, by clearing away the obstacles which restrained the rapidly rising flood of discontent, by depriving those whose interests and position made them the defenders of the old order of all faith in the righteousness of their cause, and by inspiring the assailants with hope and enthusiasm." The political and social conditions that fostered revolutionary tendencies are set forth by Prof. Montague: a despotic central authority, arbitrary and capricious, ignorant and unsympathetic, enervating private

enterprise, voluntary association, and municipal energy; the corresponding weakness of such organizations as could be denominated local self-government; the multiplicity and confusion of laws and of tribunals; the close army system, with poor pay and hard usage; the close church system, embittering the inferior clergy and antagonizing the laity; a *noblesse* politically powerless, unpopular, disunited; a middle class intelligent, laborious, frugal, filling nearly all lucrative appointments and conducting the processes of industry and commerce, but practically excluded from political and municipal power, from the Army, the Navy, and the diplomatic service, and exasperated by constant and unintelligent official meddling; a peasantry partly comfortable, in great part "wretchedly poor and half-civilized," mostly leading "a very hard, pinched, insecure life," and all harassed by multiplied exactions, their condition being "undoubtedly a prime cause of the Revolution." "Among the varied influences which provoked the Revolution," says Mr. Henry Higgs, "vicious finance takes the first place"; and he describes concisely and pointedly the desperate situation—"chronic deficit, increasing public debt, increasing pressure upon the taxpayers, resulting in increasing exasperation, intensified by the unfairness of exemption." "In spite of the numerous reforms of Turgot and of Necker, the finances of France on the eve of the Revolution illustrate every possible defect." "The Revolution," writes Prof. Montague, "arose from the fact that the French people had entirely overgrown its institutions and must find new ones if its growth were not to cease." The whole investigation of the causes of the upheaval is sober and penetrating.

The decision of the Third Estate to assume the character and title of the National Assembly brought all parties to their bearings: the Revolution was begun. The action of the successive groups in power is fully and carefully described, with a steady regard to cause and effect: "society seems to be resolved into its elements, and the fortunes of the nation to depend on the caprice and idiosyncrasies of a few chance-selected men." The view, though concise, is luminous and ample for a general survey, and the names of the various writers guarantee its consistency with the latest accessible information. The outside European world, alarmed at the anarchy and terrorism developed in the struggle, begins to intervene. "France reacts to hostile pressure; institutions are extemporized in the midst of foreign and civil war; the organic unity of the French nation asserts itself; order succeeds to anarchy, fixed aims to vague aspirations, and wars of conquest follow wars of self-preservation." Mr. Oscar Browning describes effectively the foreign policy of Pitt down to the outbreak of war with France. Prof. Lodge traces the policy of the European Powers in Eastern affairs, especially the aggressive projects of Russia against Sweden, Poland, and Turkey, and the luckless efforts of Austria under Joseph II., notably in the Netherlands; and at a later point he narrates the successive partitions and the final extinction of Poland. The General War is chronicled by Mr. R. P. Dunn-Pattison, the Naval War by Mr. H. W. Wilson, and the early campaigns of Bonaparte (in Italy and Egypt) by Dr. Holland Rose. Final chapters summarize Revolutionary Finance (Mr. Higgs), French Law in the age of the Revolution (Prof. Paul Viollet), and the Influence of the Revolutionary Ideas in the principal Countries of Europe. The treatment throughout is comprehensive and thoroughly competent, and the appended bibliography and index are extremely serviceable.

(2) The ninth volume covers the period from the Consulate to the Congress of Vienna.

No other period in modern history [say the editors in their preface], no other historical period, it may be said, except those of Alexander the Great, of Julius Caesar, and of Charlemagne, was so completely dominated by a single personality. The ages of Charles the Fifth and of Louis the Fourteenth may in some respects be compared with that of Napoleon; but in neither was the personal influence of the sovereign so overpowering; in neither was the supremacy of the State or group of States under his immediate control so extensive or so decided.

The editors have surmounted with considerable, if not complete, success the difficulty of presenting in the best order situations so complex, and of selecting from material so profuse. The volume is divided into twenty-four chapters, distributed among sixteen writers. There is a good deal of overlapping, but none of a really harmful kind, and the remarkable freedom from discrepancy must be counted a proof of the success of the editors in reaching the aims and standards they

have prescribed for themselves. The volume opens with a chapter on the Consulate, by Prof. Pariset, of Nancy, who also contributes, in the fifth chapter, an account of the domestic affairs of France for the years 1804-1814. Taken together these two chapters form a very useful and natural introduction to the great European contest. Prof. Pariset is clear and readable. His first chapter is, perhaps, the more solid; his second the more interesting, though one would have wished a more thorough discussion of some of the topics it treats of, especially of the literary and philosophical movement that marked the period. This is more important than furniture and fashions. But Prof. Pariset suffers from lack of space, and we have nothing but praise for his compact account of the machinery of Government, the finance, the army, the economic conditions, the University and scheme of education, and the varied activities of that enlightened and impetuous despotism.

The second and third chapters deal respectively with Paul I. and the Armed Neutrality, and the Italian and German Wars; bringing the general narrative down to the Treaty of Amiens. Colonel Lloyd is responsible for two chapters on the Wars of the Second Coalition; General Kerin for the story of the 1809 campaigns; Prof. Stschepkin, of Odessa, for the Russian campaign of 1812; and Prof. von Pflugk-Hartung contributes a long and careful chapter on the War of Liberation. The account of the Peninsular War and the campaign of 1815 falls, as one would expect, to Prof. Oman, whose vivid style and sense of proportion make him more successful than his fellow-scholars to whom similar work is assigned. A single chapter is devoted to the Naval History from 1803 to 1815. Mr. Wilson's work has considerable merit, but at parts he overcrowds his canvas, and the inspiration of his subject scarcely saves him from some entanglement in details. Dr. Rose's chapter on the Continental System is a distinctly valuable piece of work, and more satisfactory in point of fullness than the article printed in his recent volume of "Napoleonic Studies." Dr. Rose is not burdened by the great amount of his information. His discussion of this central factor in Napoleon's policy—this amazing attempt to dragoon industry and commerce on so vast a scale—is exceedingly clear and well arranged.

State after State was flung into the crucible of his mighty experiment; yet the looked-for result never came. Finally, in his constant straining after the one final expedient that must assure the ruin of England, he came to the death-grapple with Russia. It is difficult to believe that this was the man who, in other domains of thought, sneered at *idologues*. He himself was the chief *idologue*, the supreme dupe, of the age. As he looked round on the Europe of his day, he took no count of the mighty forces of the industrial revolution that were then girding England with the strength of youth and were connecting all parts of the world by indissoluble ties: what he beheld was a mirage conjured up by his vivid fancy and boundless egotism.

The relations of Napoleon with the Papacy are dealt with in an earlier chapter. The story is told with some sense of its dramatic force, and Mr. Wickham-Legg's concluding paragraphs are very good.

We have little doubt that Mr. H. A. L. Fisher's work will be read with greater pleasure, and no less profit, than any other parts of this volume. In spite of the dry and technical nature of the subject, the chapter on the Legal Codes is attractive as well as sound; and these features mark all Mr. Fisher's work. There is width of outlook, and a style at once pointed and dignified. We had marked for quotation a passage from the chapter on the French Dependencies, sketching the ideal of colonial administration, but must content ourselves with a briefer specimen.

The Illyrian provinces were valuable, whether they were considered as a military march, or as a pawn in the game of diplomatic exchanges. The climate was delicious, the scenery romantic; and in the olive-gardens and vineyards of the coast the French were reminded of their beloved Provence. Yet Illyria was for the most part in a half-barbarous condition, without roads, without schools, without posts, plagued with brigands, and neglectful of the arts of agriculture and forestry. The woods which formerly clothed the Dalmatian mountains had been wilfully destroyed by the inhabitants in order that they might escape the burden of supplying timber to the Venetian navy; and the upland population, though splendid in physique and valorous in temper, was poor, superstitious, and paralysed into economic inertia by the raids of Turkish and Albanian brigands. In the interior there were still traces of archaic communism: justice and administration were alike venal, and, but for the active ministrations of the Franciscan

missionaries, the rural population would have been left in outer darkness.

This is concise—it could scarcely take up less room. Yet it is a picture whose light and colour come as a pleasant relief after many dry and difficult pages. We would gladly quote more from Mr. Fisher if space allowed, especially his admirable sketch of Louis XVIII. in his chapter on the First Restoration. What can a man know of history if he does not understand the character of eminent personages? And, if he does know their character, is anything more important than that he should explain it to his readers? Political history without these depictions is worse than a narrative of military operations without maps—of which none are allowed in this volume. We are grateful for Mr. Fisher's chapter at the end of the volume. Avoiding, as we suppose he must, any long estimate of the character and work of Napoleon, Mr. Fisher has with great skill gathered up their general features by the allusive method of placing in contrast to the actual that identical description of his aims which Napoleon made the fruit of his exile.

We do not conceal the fact that it is chiefly Mr. Fisher's work that reconciles us to this volume, and has enabled us to cut the leaves of the bibliography of 120 pages. We would not imply any lack of appreciation of the conscientious work to which other parts of the book testify, nor would we suggest any lack of respect for the judgment of the editors, who deprecate in their preface the idea that "a work of this nature should add to the number" of the judgments upon Napoleon's character, or the estimates of his work. "Our task," they say, "is rather to lay before our readers an impartial survey of the facts on which any fair conclusion must rest." At the same time the limitations of "a work of this kind," even in fulfilling that function, must be clearly recognized. It is a repertory rich in "facts," a compendium of solid information—but not a history. And the sections for which most readers will be grateful are of the nature of monographs, to which the individual specialist has brought his own vivid interest, and which he has lightened with some power and ease of style. With the progress of historical research we may expect not only calendars of MS. collections, biographies, and monographs, but also series, of which the "Cambridge Modern History" is at present in England the grand type, the product of much co-operation, offering the reader the results of the latest inquiry. We shall be fortunate if all such work attains the standard of the "Cambridge History"; but, unfortunate if, by subjection to an unreal standard of lifeless impartiality, mistaking a stage for the true end, and blinded by the attractions of a temporary fashion, it usurps the place of work that is more artistic and complete, and insinuates the belief that what is so rapidly becoming old-fashioned is no longer to be expected, or even desired, because it is no longer possible.

Was it not Lord Acton himself who said that a history written by a great man was all the better for the impress upon it of the author's individuality? That it excludes this individual impress is one of the great weaknesses of the "Cambridge History." It is sometimes too near the lapse into being only a magnified "text-book": just as the man who never adds other tastes to an honourable, and even enviable, appetite for facts is no more than a schoolboy, overgrown and a source of disturbance and perplexity to ordinary people. We can never afford to forget that it is by the judgment of the general intelligent mind, expressed in its interest, that historical work stands or falls. A narrative overcrowded with dry details, however accurate their relation, an exposition which fails to catch the spirit of the past, and is above any appeal to the imagination of the present—these may meet so far the temporary requirements of the student, but they cannot live: they have never been alive. From this point of view, many chapters of this history must appear of restricted value—one in particular. In the present volume, that by Mr. Gooch on Great Britain and Ireland, 1792-1815, cannot be read with satisfaction. Granted that it was wise to attempt something in so short a space, Mr. Gooch should have been content to be less "informing." Frankly, it may be doubted if work of this kind has any value of a genuine kind at all. History must not be modelled on a text-book of anatomy.

The subscriber to this series will know what to expect when he receives this volume. He will expect, and not in vain, much solid food in these 770 pages. He will read many of them with pleasure; he will venerate the bibliography (which is conveniently ordered into sections); but he will be very sensible of

relief when, at the close of many a chapter, the author, as his head clears the press of facts, "lets himself go" for a paragraph or two of generalization and reflection. And he will be inclined to ask himself whether he would not be more willing to read two or three times the amount, if it meant ease instead of construction, artistic presentation, valuable reflection, and a more vivid sense of reality.

Sir Joshua Fitch: an Account of his Life and Work.

By A. L. LILLEY. (7s. 6d. net. Edward Arnold.)

This memoir would not at all have satisfied George Eliot's Mrs. Linnet. That omnivorous gleaner of biographies would have searched in vain for infectious maladies or death-bed scenes, and found no refreshment by the way in the shape of "pony-chaise" or "plum-pudding." The fault, if it is a fault, lies partly in the biographer and partly in the subject. The biographer knew Fitch personally only for the last three years of his life; and his whole life was, in a sense, uneventful—the course of a smooth and ever broadening Midland river, with no by-channels or falls or cataracts; "vita uno tenore feliciter acta."

"I have tried," Mr. Lilley tells us in the preface, "to make a too little considered, but highly important, fragment of our national history tell the story of a man who was himself a chief part of it." The sentence is not happily worded, but the meaning is clear. What the writer intends is to show the part that Fitch played in the various educational reforms that mark the later half of the nineteenth century. The work so planned has been well executed. Central control through the Inspectorate; the various Commissions and Inquiries, beginning with the Taunton Schools Inquiry Commission of 1865; University reform, culminating in the new charter for a teaching University for London; University Extension and the foundation of local University colleges: the reform of women's education, beginning with the Girls' Public Day School Company and the admission of women to University examinations, followed by the founding of women's colleges at Cambridge and Oxford; the comparative study of education, as exemplified by Fitch's professional visits to France, Belgium, and the United States—all these subjects (and we might extend the list) are treated with masterly conciseness. In all these movements Fitch played the part of "guide, philosopher, and friend"—we cannot avoid employing a tag which in this case so exactly fits the man. Fitch is, indeed, the central figure of the panorama; yet we cannot help feeling that he is presented rather as a spiritual force than as a bodily presence. He is the King Arthur of the "Idylls," not of Malory. We are told what he did and thought, but we rarely get at close grips or hear his very words. There is but one letter in the whole volume.

It is at crises like the present that we miss "his controlled enthusiasm, his moderating temper, his shrewd and penetrating judgment," as the biographer well sums up his distinctive qualities, and we naturally seek to divine what would have been his pronouncement on the controversy of to-day. One quotation that we gave in our last number affords some indication, and we will add another. Writing of the Wesleyan schools of his Yorkshire district, he observes:

It is too commonly assumed by public speakers and writers who know little of the interior of a school that every place of primary instruction must be distinctly sectarian and teach a special creed, or be absolutely secular and non-religious; but I take leave to testify that the schools which fall under my inspection are neither one nor the other. They are, almost without exception, essentially Christian schools, in which the Scriptures are read and accepted as the rule of life, but in which no attempt is made to dogmatize or to fix the conviction of young children on those points on which Christian people differ from each other.

The two passages (and similar ones might be added) prove, at least, that Fitch would have welcomed the main provisions of the Bill; but we cannot, on the strength of this, claim him as a whole-hearted supporter. In the very next paragraph he states as his opinion that this religious atmosphere had been achieved by the care taken in selecting religious teachers, and adds that no religious atmosphere could be gained in any other way. The conditions of the problem have wholly changed since Fitch wrote this report, and it may well be argued that the appointment of teachers by public and non-religious bodies is irreconcilable with this apophthegm. On one point that we have frequently pressed we are glad to quote his authority—

religious teaching, if it is to be of any effect, must be given by teachers—by the regular staff, not by amateur outsiders.

The best tribute we can pay to the memoir is to say that it leaves us unsatisfied—that we ask for more. There is still room for a supplementary volume of remains. It would contain extracts from the numerous articles that Fitch contributed to the reviews and magazines, from his reports to the Education Department, from his unsigned minutes and memoranda, and from his unpublished lectures on art and literature. To this might be added some appreciation of his larger works—in particular, of his Cambridge lectures. Fitch was an eclectic, and he propounded no new philosophy of education; but he had a singularly attractive style—simple, unaffected, and rhythmical—and much of his unpublished work deserves to be known. We all remember his golden saying: "Teaching is the noblest of professions and the sorriest of trades."

T. Macci Plauti Comœdiæ, I. Edited by Prof. W. M. LINDSAY, of St. Andrews. (Clarendon Press.)

Plautus is probably less read than he deserves: however great his debt may be to the Greek of Diphilus and others, he is undoubtedly something of a poet and a good deal of a wit. Compared with him, Terence is little more than an elegant shadow. Prof. Lindsay's "Præfatio" is, as we should all expect, a piece of excellent Latinity, and its footnotes—especially "2" on the third page, "4" on the fifth, and "9" on pages 9 and 10—are most profitable (why, we wonder, is the *numeration* of these pages omitted?). In accordance with the law of the whole series the footnotes to the actual plays are purely textual, indicating differences of reading. It is, we suppose, too late to protest against the purely alphabetic order of the plays being preferred. Their chronological order is probably unascertainable; but it would greatly add to general convenience, and especially to that of studious youth, if the plays recognized as most presentable and best were put into the same volume. As it is, the cleanness of all the plays, the "Captivi," is sandwiched between the "Bacchides" and the "Carina"; while the "Rudens" and the "Trinummus" will drift, in Vol. II., into close neighbourhood with the "Pseudolus" and the "Truculentus"—"habent sua fata libelli"—but the alphabetic fates are very unkind to Plautus: the result is analogous to an edition of Shakespeare which should thrust together "The Tempest," "Timon of Athens," "Titus Andronicus," "Troilus and Cressida," and "Twelfth Night." For the chronological order almost any consideration should be sacrificed—for the alphabetic order none. But probably Prof. Lindsay had no choice in the matter. The print and paper with which in this series the Clarendon Press are familiarizing us are excellent. Probably few students of Plautus make much study of his metres; but here too the editor is not found wanting, but supplies a "schema metrorum" at the end.

Florilegium Tironis Græcum. By RONALD M. BURROWS and W. C. FLAMSTED WALTERS. (Macmillan.)

Mr. Burrows, from the Greek Chair at Cardiff, and Mr. Walters, from the Classical Professorship at King's College, London, have made an attempt to put together a book of passages for unseen translation from the Greek, which is a little more ambitious than the ordinary compilations. They have in view *literary interest*, which no doubt is very little encouraged by the ordinary collections of unseen passages, which are for the most part disconnected snippets of various writers, totally without coherence or consecutive interest. To put their plan into the concrete, it is that a boy, reading with preparation (say) a book of the "Iliad," should do unseens from Homer at large, so as "to form a conception of the general outline of the 'Iliad' and 'Odyssey.'" In other words, they aim at getting the student to see his author, not a circumscribed "book" of his author. They see, in fact, what is slowly dawning both on the friends and the foes of Greek, that the study of a language lives by its interesting matter, not by its grammatical peculiarities or its traditional dignity. They say (Preface, page vi, *note*) that "our volume of selections should not be used as a substitute for set books, but as auxiliary to them." They have, therefore, like "bold, bad men," omitted, wherever necessary, lines and phrases, . . . occasionally adopted the *facillima lectio* without regard to the weight of evidence, and, in a few cases, preferred making some slight simplification in an important piece to omitting it altogether." The verse selections have been made by Prof. Burrows, the prose by Prof. Walters, each, however, standing sponsor for the other. The result is that the book leads off with 84 passages from the "Iliad" and "Odyssey," about 25 from Aeschylus, 28 from Sophocles, 52 from Euripides, 15 from Aristophanes. Herodotus is represented by 23, Thucydides by 34, Xenophon by 40, Plato by 33—the remaining 64 are divided between Demosthenes, Aeschines, and Lucian. To us the plan seems admirable; the pity is that it cannot be used, we suppose, as compulsory on classical masters as well as on boys. Greek loses enormously by being so widely taught by persons whose main knowledge of Greek has receded to the study of Xenophon and the New

Testament, with a few scraps of Euripides. We are not apprised of the cost of the book: it is so well got up that we are afraid it cannot be as cheap as would be desirable.

"University Tutorial Series."—*Practical Physics.* By W. R. BOWER, A.R.C.S., and J. SATTERLY, B.Sc., A.R.C.S.

This book is intended for students who have matriculated, but it is assumed that they have done no practical work, and consequently aims at being a complete elementary manual. A distinctive feature of the book is a "Home Course" in which the experiments can be performed with inexpensive apparatus, and the descriptions are so clearly given that an intelligent student should have no difficulty in carrying them out, and would thus be able to obtain a preliminary training in practical work at home at a small cost. The book is divided into five sections—Mechanical Quantities, Heat, Sound, Light, Magnetism and Electricity. Part I. is devoted to the usual measurements of fundamental physical quantities; but we note in §70 no mention is made of the pressure of aqueous vapour where the volume of a gas, standing over water, is corrected for temperature and pressure. Part II. is divided into two sections, the one dealing with thermometers and expansion, and the other with calorimetry. The expansion of liquids and gases is very fully treated, but no experimental method of determining the coefficient of linear expansion of a solid is introduced. The fifteen pages allotted to Sound contain an interesting series of experiments, and a student after working through these should have obtained a useful knowledge of this subject. The place of electrolysis in the course has allowed of the early introduction of a simple demonstration of Ohm's law. Galvanometers are treated in a satisfactory manner, and attention is directed in the subsequent work to the kind of galvanometer which should be used for the various experiments. We are glad to see that great stress is laid on graphical work throughout the book. There is a misprint on page 348, where the numerator of the fraction should be $(R_2 \tan D_2 - R_1 \tan D_1)$, and again on page 349, where the numerator should be $(R_2 A_2 - R_1 A_1)$.

Practical Exercises in Chemistry. By G. C. DONINGTON, M.A. (Macmillan.)

This is a systematic and progressive course of practical work in which an attempt is made "to secure the advantages of modern research methods of study and yet to recognize the actual conditions of class teaching in school laboratories," and includes all the subjects in the syllabus in Chemistry for the London Matriculation Examination. The first chapters deal with those physical measurements which it is necessary for a student to understand before proceeding to the systematic study of chemistry. The course includes a very complete investigation of the chemical and physical properties of air, water, and chalk, and a useful chapter is devoted to the commoner organic substances. The directions for carrying out the experiments are clearly given, and questions direct attention to salient points. Additional exercises, which will be found useful for keeping the more rapid workers employed, are added at the end of each chapter. A satisfactory feature of the book is the printing in italics of the precautions which must be taken in handling certain substances.

Boy and Girl—should they be educated together? By "VIVIAN GREY" and EDWARD S. TYLER. (1s. net. Simpkin, Marshall.)

The authors' names are sufficient warrant that the vexed question of co-education will be treated discreetly and soberly. The conclusion reached is that the school of the future will be co-educative; but it is distinctly laid down that the common life does not necessarily imply identity of teaching for the two sexes. We must not expect, in an essay that may be read in a short hour, an exhaustive or comprehensive treatment; and we have, in fact, the reflections suggested by the observation of two or three experimental schools that have recently been started in England. The success of these is clearly established and deserves to be better known; but we feel that it is too narrow a basis to carry the broad generalizations of the authors. We need to distinguish day schools and boarding schools, town and country, social conditions, and other factors which are here entirely ignored. Moreover, on some matters of fact we join issue. Is it a fact that it was the example of America that first led to the experiment of the mixed system in England? It had prevailed in Scotland since the time of John Knox, and we doubt whether America had much to do with its adoption in the intermediate schools of Wales. Again, it is going too far to say that "co-education in America has been an unqualified success." That is not the report brought back by the Mosely Commissioners. Mr. Fletcher, who summed up dispassionately the *pros* and *cons*, stated that the leading educational authorities of America were divided in opinion and that there was a marked reaction against its universal adoption. Dr. Stanley Hall's grave indictment of mixed colleges should not be ignored even in an essay. Again, it is notorious that the mixed classes for pupil-teachers in London and other great cities have led to grave moral evils. We should be sorry to leave the impression that we are opposed to co-education. We welcome and endorse nearly all the arguments here adduced in its favour. We have, however, felt bound to point out that there is another side to the ques-

(Continued on page 462.)

MR. MURRAY'S LIST

Catalogues and Lists free on application

By W. MANSFIELD POOLE, M.A., *Senior French Master at the Royal Naval College, Osborne.* Crown 8vo, 2s. 6d.

GRAMMAIRE FRANÇAISE ÉLÉMENTAIRE

A New Elementary French Grammar on Modern Lines, written entirely in French, with numerous Exercises, and intended for the use of scholars up to 14 or 15 years of age. In use at the Royal Naval Colleges at Osborne and Dartmouth.

By Miss M. A. TUCKER,

Formerly Marion Kennedy Student at Newnham College, Cambridge.

School History of England 3s.

An Outline History for Middle Forms. From the Earliest Times to the Death of Queen Victoria. With many Coloured and other Maps, Plans, Tables, &c.

The Guardian.—"We can confidently recommend this book for use with middle forms. It is lucidly and concisely written, the author has aimed at the intelligent presentation of the facts of history, trusting the teacher to add picturesqueness of detail, and she has shown sound judgment in deciding what should be omitted, as well as what should be included, in a book of this type. The binding is strong, the type and spacing restful to the eye, and the price is by no means prohibitive."

By the Rev. A. S. WALPOLE.

Introductory History of Greece 2s. 6d.

With Maps, Plans, and Illustrations.

An attempt to tell the History of Greece in a clear, simple, and interesting manner.

By JOHN THOMPSON, M.A.,

Senior Classical Master at The High School, Dublin.

Elementary Greek Grammar 3s.

For Schools.

Part I. ACCIDENCE. 1s. 6d. Part II. SYNTAX. 1s. 6d.
COMPLETE, WITH FULL INDEXES. 3s.

The School World.—"Mr. Thompson's larger Greek Grammar has already won a place in the world of scholarship; this abridged work will, we think, win equal acceptance. Its good points are accuracy of scholarship and agreement with the canons of philological research. . . . The book is original; it is a new work, not an adaptation of others."

By G. NORWOOD, B.A.,

Lecturer in Classics in the Victoria University, Manchester.

Euripides' Andromache 2s. 6d.

Edited with Introduction, Notes, and Vocabulary.

For the 1907 Joint Matriculation Examination of the Universities of Manchester, Liverpool, Leeds, and Sheffield.

By A. C. AINGER, M.A.,

Late Assistant Master at Eton College.

Latin-English Dictionary 2s. 6d.

The tendency of the present day is to discourage vocabularies and annotated editions; at the same time a young pupil would be lost in the wilderness if he attempted to use a complete dictionary. This book has been compiled with the intention of carrying the above-mentioned principle into effect. It contains all that the learner will need in reading any ordinary Latin author, without unnecessary complications in the way of refinements of scholarship. It has been produced in a very attractive manner and at a low price.

By T. D. HALL, M.A.,

Fellow of University College, London.

Manual of English Grammar 2s. 6d.

With Exercises and Examination Papers. *New Edition, Revised and Enlarged.*

The Guardian (January, 1906).—"... we know of no work of the same modest compass that we can more heartily recommend for the upper forms of secondary schools as likely to arouse and stimulate interest, to give the student a firm grip of his subject, and to enable him to face the ordeal of examination with a confident hope of success."

By F. DE ARTEAGA Y PEREIRA, M.A.,

Taylorian Teacher of Spanish in the University of Oxford.

Practical Spanish 7s. 6d.

A Grammar of the Spanish Language. With Exercises, Materials for Conversation, and Vocabularies.

Part I. NOUNS, ADJECTIVES, PRONOUNS, EXERCISES. 3s. 6d.
Part II. VERBS, &c., WITH COPIOUS VOCABULARIES. 4s.

The two parts of this book may now be obtained separately.

By A. W. PORTER, B.Sc.,

Fellow of, and Assistant Professor of Physics in, University College, London.

Intermediate Mechanics 5s.

With Examples, Examination Papers, and numerous Diagrams.

This book has been written as an accompaniment to a First Year Course of College Lectures.

It has not been written from the point of view of Examinations. It, however, includes those portions of Mechanics required for the Intermediate Pass Examination of the University of London.

By A. CONSTERDINE, M.A., and A. BARNES, M.A.

Practical Mathematics 2s. 6d.

With 180 Diagrams, Answers, and Index.

The Educational Times.—"The volume provides specially for the needs of many of the students who attend such classes as those of our evening continuation and our technical schools and who require some general knowledge of elementary mathematics, although they have neither time nor opportunity for a prolonged study of the various branches. To these the course outlined in the little manual will be of great practical value."

By W. C. CLINTON, B.Sc.,

Demonstrator in the Pender Laboratory, University College, London.

Electric Wiring 2s.

A Primer for the use of Wire-men and Students.

With 88 Illustrations and a selection of Worked Examples.

New (4th) Edition, Revised and Enlarged.

This book is intended as an introduction to the art of Indoor Electric Wiring as practised in the fitting up of private houses, shops, &c., with lamp and bell circuits. In the Revised Edition an effort has been made to bring it up to date without unduly increasing its size.

SCHOOL PRIZES.

Mr. Murray will be happy to send his CATALOGUE OF BOOKS FOR SCHOOL PRIZES to Teachers post free on application. It contains a wide variety of books suitable for students of all ages

JOHN MURRAY, Albemarle Street, London, W.

tion; and we cannot accept the authors' view that separate schools are a relic of the Dark Ages, a survival of clericalism. Would they not in that case have disappeared from France?

Five Thousand Words frequently misspelt. By W. SWAN SONNENSCHN. (1s. net. Routledge.)

A very convenient little volume which all half-educated, and most educated, men and women will be glad to have at hand. Who does not now and again hesitate about a spelling? And the woman who hesitates is always, the man generally, lost. It is a radical mistake, from a pedagogic point of view, to incorporate wrong spellings in the text; and for the general reader it would be sufficient to indicate common errors under the word correctly spelt. Again, much space might be saved by disposing at starting of such vexed questions as *-ise* or *-ize*, or *-our*. We have noted a few omissions and oversights. "Reverent" should be recognized as well as "Reverend"; "sanitarium" as well as "sanatorium" (*vide* Mill's "Logic"). "Rime" should at least be admitted as an alternative to "rhyme." "Tiro," the only correct Latin spelling, should surely be preferred to "tyro." "Moral," the substantive, is not given, and it would seem as if the vulgar error "morale" were countenanced.

Anthology of French Poetry from the time of Froissart up to the beginning of the present Century. Compiled by FREDERICK LAWTON. (1s. 6d. net. Swan Sonnenschein.)

Mr. Lawton has taken a wide range. Over two hundred and fifty poets are represented, and of these (let us make a clean breast) three-fourths were unknown to us even by name. We cannot honestly say that the selections have stimulated us to enlarge our acquaintance. Lamartine and Victor Hugo are allotted each three short poems, and a few others have two; but one apiece is the rule. English is infinitely richer in poets than French, but an English anthology framed on these lines would give the foreigner a poor notion of English poetry. Difficulties of copyright have excluded Coppée, Sully Prudhomme, and Hérédia (here robbed of his accents); but why are Clément Marot, Leconte de Lisle, Dupont (we take at random three familiar names) wholly unrepresented? "One or two writers of other than French nationality have been put to contribution." We raise no objection (except to the slipshod English), but we do object to second-rate translations, as of Byron's "Dying Gladiator" and Goethe's "King in Thule." It is also a mistake to attempt to treat of French prosody in a couple of pages; and the information that *physiologie* and *préalable-*

ment are accentuated on the antepenultimate is not of much assistance towards the appreciation of French poetry.

The Bible and the Christian Life. By WALTER LOCK, D.D. (6s. Methuen.)

All that the Warden of Keble writes is worth attention, and we welcome this collection of papers, essays, and sermons which vary widely in scope and treatment, but are all connected more or less closely with Biblical inspiration. To us the exegetical portions appeal most strongly—for instance, the study of the prologue to St. John's Gospel and the sermon on Joseph. At times we are conscious of the special pleader, as in the discussion of the morality of the Old Testament. As we read the apology for the justification of Jael's cold-blooded murder we cannot help reflecting how far it fails to meet the indictment of a recent article of the *Hibbert Journal*. The suggested analogy of heathen divination through the sounds of animals may illustrate, but it cannot confirm, "the fact that God speaks to Balaam through an animal." Can it be truly said that science has adopted from Christianity the idea of natural selection? We merely note, without discussing, some of the *aporiai* which the volume raises.

Qualitative Chemical Analysis, Organic and Inorganic. By F. MOLLWO PERKIN. Third Impression. Second Edition. (4s. Longmans.)

The first edition of this excellent manual of qualitative analysis was the subject of a notice in these columns a few years ago. Since then it has undergone revision, and some few additions have been made, but the general plan remains unaltered. The theory of the various tests is always carefully explained, so that no excuse for unintelligent test-tubing exists. It is a good text-book for students who are working for such an examination as the Preliminary Scientific of the University of London.

Physical Laboratory Manual. By H. N. CHUTE. Revised Edition. (2s. 6d. Heath & Co.)

The first edition of this book dates back some twelve years, and is quite well known. In a comparatively small compass there are directions full enough to enable an intelligent student to perform a good selection of quantitative experiments in mechanics, sound, light, heat, and magnetism and electricity without requiring much attention on the part of the demonstrator. It is freely illustrated, and consider-

(Continued on page 464.)

MESSRS. METHUEN'S NEW BOOKS.

A New Trigonometry for Beginners. By R. F. D'ARCY, M.A., Lecturer at Gonville and Caius College, Cambridge. Crown 8vo, 2s. 6d.

Among the special features of this book are:—The introduction of experiments in practical geometry to lead up to many of the topics considered; the use throughout the book of four-figure tables; the relegation of the special consideration of the trigonometrical ratios of angles of 30, 45, 60, 120, 135, and 150 degrees to a few worked-out examples. At the end of each chapter are examples on the subject matter of the chapter. Some test papers on the book as a whole are placed at the end. These are numbered so as to form a set of miscellaneous examples.

Examples in Physics. By C. E. JACKSON, B.A., Senior Physics Master at Bradford Grammar School. Crown 8vo, 2s. 6d.

The object of this work is to supply a collection of suitable problems covering the average Physics course in Secondary Schools.

The contents—which are new—are divided into two parts: (1) a number of elementary examples intended for younger pupils and adapted to a three years' course under the present regulations of the Board of Education; and (2) a group of problem papers for the use of more advanced pupils, especially those who are reading for University Scholarships. An attempt has been made to cover the whole ground, and it is believed that any pupil who can work through these examples will be well up to the standard of a University Scholarship.

A New Junior Arithmetic. By H. BOMPAS SMITH, M.A., Head Master of King Edward VII. School, Lytham. Crown 8vo, with Answers, 2s. 6d.; without Answers, 2s.

This book is an attempt to lead the beginner to regard the learning of arithmetic as primarily the habitual application of common sense to questions involving number, not as the acquisition of mechanical facility in certain rules.

A Junior Geometry. By NOEL S. LYDON, of Owen's School, Islington. With 239 Diagrams. Second Edition, Revised. With additional Exercises. Crown 8vo, 2s.

"We do not know any book for beginners which deserves higher commendation."—*Nature*.

FOR OXFORD LOCAL EXAMINATIONS, 1907.

A Historical Geography of the British Empire. By H. B. GEORGE, M.A., Fellow of New College, Oxford. Second Edition, Revised. Crown 8vo, 3s. 6d. [*Set Book, Section 6.*]

The purpose of this work is twofold—to describe in outline the British Empire, with its component parts so grouped as to show forth the diversity of their relations to the mother country—and to point out the nature of the relations between the geography and the history of the British Islands from the beginning, elsewhere from the time of their becoming British possessions, or so much earlier as may be necessary for a clear understanding of the present conditions.

The Student's Modern and Historical Atlas of the British Empire. By C. GRANT ROBERTSON, M.A., Fellow of All Souls', Oxon., and J. G. BARTHOLOMEW, F.R.S.E., F.R.G.S. Quarto, 4s. 6d. net.

An Atlas for use with the above text-book.

A Junior English Grammar. By W. WILLIAMSON, B.A. With numerous passages for Parsing and Analysis, and a chapter on Essay Writing. Third Edition. Crown 8vo, 2s. [*Just ready.*]

Elementary Experimental Science.—PHYSICS, by W. T. CLOUGH, A.R.C.S.; CHEMISTRY, by A. E. DUNSTAN, B.Sc. With 2 Plates and 154 Diagrams. Third Edition. Crown 8vo, 2s. 6d.

"This useful work includes the elements of general physics, heat, and chemistry, which are treated with commendable simplicity, clearness, and accuracy. Some of the tips are especially good. The diagrams are clear, the worked examples are typical, and the set of tables very convenient."—*University Correspondent*.

Elementary Experimental Chemistry. By A. E. DUNSTAN, B.Sc., Head of the Chemical Department, East Ham Technical College. With 4 Plates and 109 Diagrams. Crown 8vo, 2s.

The Gospel according to St. Matthew. Edited by E. WILTON SOUTH, M.A. With 3 Maps. Crown 8vo, 1s. 6d.

The Acts of the Apostles. Edited by A. E. RUBIE, D.D. With 3 Maps. Crown 8vo, 2s.

These books contain many special features not to be found in other books. They are something more than mere cram books, while the concise introductions and carefully arranged notes containing the results of modern Scholarship render them excellent for class use.

Kindly write to Messrs. Methuen for their June Bulletin and Illustrated Holiday List.

METHUEN & CO., 36 ESSEX STREET, LONDON, W.C.

According to the

Direct Method of Teaching Modern Languages.

READY IN AUGUST.

Second French Book.

"The Second French Book is a continuation of the First French Book, and contains a Reader, English-French Exercises, Songs with Music in Staff and Sol-fa notations, and a Vocabulary with Phonetic Transcriptions.

By DUNCAN MACKAY, M.A., and F. J. CURTIS, Ph.D.

With Illustrations. 1s. 6d. net.

First French Book.

By the same Authors.

With 22 Illustrations. 1s. net.

This Edition contains enough matter for a whole Year's Course.

"A capital exposition of the principles of the reformers in modern language teaching."—*The Journal of Education*.

"Provides the most complete set of apparatus for the practice of the 'New Method' that we have yet seen in a single text-book."—*Guardian*.

A Specimen Copy will sent to Teachers who wish to introduce the Direct Method of Teaching French in their Classes.

able stress is rightly placed upon the form in which the worker should keep the record of his experiments. Some further revision is needed in the tables of physical constants at the end of the book, notably in that referring to melting points.

Elementary Chemistry: Progressive Lessons in Experiment and Theory. Part I. By F. R. L. WILSON and G. W. HEDLEY. (3s. Clarendon Press.)

It is the intention of the authors to complete the course in three volumes. This first part is largely preliminary, and the greater portion of it deals with physical matters such as mensuration, simple heat effects, density measurement, the simple gas laws, evaporation, and boiling. The chemical portion is practically restricted to two chapters, one on solution and the other on crystallization. The mode of setting out the exercises is identical in every case—the title, a list of apparatus required, directions full enough to render the pupil fairly independent of oral instructions, a scheme showing how results should be entered, and then a few searching questions directed to finding out whether the boy has understood what he has been doing and to what end his results lead. The whole scheme is well thought out, and the exercises are thoroughly practicable.

A Study of the Sky. By HERBERT A. HOWE. (2s. 6d. Macmillan.)

This popular astronomy by Prof. Howe, of the University of Denver, first appeared in 1897. It is well written, amply illustrated, and, unlike most books of American origin, extraordinarily cheap.

Longinus on the Sublime. Translated by A. O. PRICKARD. With Introduction, Appendix, and Index. (3s. 6d. net. Clarendon Press.)

We welcome this scholarly edition of a work too long neglected, but recently given its due prominence by Profs. Saintsbury and Collins. Mr. Prickard discusses fully the question of authorship; and in his translation, which is at once accurate and faithful, supplies references in footnotes. The book will be a boon both to Grecians and to "idiots."

The Boy's "Odyssey." By W. C. PERRY. Edited for Schools by T. S. PEPPIN. (1s. 6d. Macmillan.)

We should hardly have thought that this pretty simple book needed editing, but Mr. Peppin has written a sensible introduction, and an index marks the quantities of proper names. Why mark the first syllable of Oenops long and leave Hyperion, Ida, Irus unmarked?

Words of the Ancient Wise from Epictetus to Marcus Aurelius.

By W. H. D. ROUSE. (Methuen.)

These are arranged in the form of a diary, a sentence or more for each day. The passages are well chosen, and no heathen are worthier to be part of our daily bread.

I go a-walking through the lanes and meadows.

(2s. 6d. net. T. N. Foulis.)

This is a compilation from C. A. Johns's "British Birds" and other works. The illustrations from photographs by Charles R. Wishaw are a most attractive feature.

Admission Registers of St. Paul's School, 1876-1905. By R. B. GARDINER. (£1. 1s. net. G. Bell.)

The present volume records all admissions during Mr. F. Walker's reign, with biographical notes attached to each name. It also supplements the previous volume, published twenty years ago. Thus nearly a hundred names are added for the period between 1509 and 1748. The book appeals mainly to *alumni*, but there are many items of general interest. For instance, "William Frederick Pollock. Died Dec. 24, 1884. He really left in 1828; refusing to take a caning, he walked out of the school, and Dr. Sleath remarked, 'That boy has expelled himself.'" "Philip Rosenhagen, the celebrated 'Junius,' is at last discovered to be the Rev. Philip Rosenhagen." *Gazetteer*, January 24, 1774. And by a curious coincidence the next name in the list is Philip Francis.

Turbines. By W. H. STUART GARNETT. (8s. 6d. net. G. Bell.)

A popular account of the evolution, construction, and operation of the turbine. The author points out that it is hardly creditable to our technical institutions that the young engineer should leave them with full knowledge of the reciprocating steam engine, but in absolute ignorance of the simple mechanism which bids fair before long to supersede its earlier rival. The subject is treated historically, and the lay reader with a fair knowledge of mechanics and mathematics can appreciate the work, and trace a marvellous chapter in the history of mechanical invention.

Last Words on Evolution. By ERNST HAECKEL. Translated from the Second Edition by JOSEPH MCCABE. (6s. net. A. Owen.)

These three lectures, the latest utterance of the apostle of Darwinism in Germany, were well worth translating, and have been well translated. His righteous denunciation of Jesuit sophistry will not move us in England as it did the Berliners; but we have besides a clear and original exposition of evolution with a minimum of technological terms.

From GINN & COMPANY'S LIST.

FOR JUNIOR FORMS.

FIRST STUDIES OF PLANT LIFE. By G. F. ATKINSON. EDITED FOR THE USE OF ENGLISH SCHOOLS BY E. M. WOOD, Teacher of Botany and Nature Study to the Wallacey Technical Classes, Cheshire. Written with the view of bringing the life processes of the plant within the reach of the child. In this book the plant stands before the child as a living being with needs like his own. 280 pages. Fully Illustrated with over 300 Cuts. Price 2s. 6d.

THE MOTHER TONGUE. By G. L. KITTREDGE and S. L. ARNOLD.

BOOK I.—Lessons in Speaking, Reading, and Writing English. SPECIALLY REVISED FOR USE IN ENGLISH SCHOOLS BY J. W. ADAMSON, B.A., Professor of Education at King's College, London. The teaching of English is here based upon inductive principles, and the practice of composition—first oral, and then written—is encouraged at the very beginning of the lessons. Grammatical rules are gradually introduced as occasion for their use arises. xiv + 294 pages. Illustrated. Price 1s. 6d.

FIRST YEAR LATIN. By W. C. COLLAR and M. G. DANIELL. The book provides an average class of beginners with all material necessary for first year's work. Review questions and conversations are interspersed, and "Essentials of Grammar" prefixed to every lesson. Copious selections for reading at end of book. xiv + 311 pages. Illustrated. Price 4s. 6d.

FIRST YEAR GERMAN. By W. C. COLLAR. The aim of this book is to lay out in orderly progression, for beginners having not less than four lessons a week, one year's work in speaking, reading, and writing German. The facts and usage of the language are exhibited first in each lesson; then follow observations, rules, and practice. Selections in prose and poetry are freely interspersed, and at the end of the book are massed to the amount of forty pages. 336 pages. Price 4s. 6d.

COMPLETE CATALOGUE POST FREE ON APPLICATION.

FOR SENIOR FORMS.

AN INTRODUCTION TO THE HISTORY OF WESTERN EUROPE. By J. H. ROBINSON. Gives a clear and interesting account of the all-important movements, customs, institutions, and achievements of Western Europe since the German barbarians conquered the Roman Empire. 12mo, 714 pages, with Maps and Illustrations, 7s. 6d. Also in two volumes, dividing at the sixteenth century. Vol. I., 368 pages, 4s. 6d. Vol. II., 364 pages, 4s. 6d.

READINGS IN EUROPEAN HISTORY. By J. H. ROBINSON. Selections follow chapter by chapter the history given above, and are culled from all sources—chronicles, memoirs, letters, as well as State papers, thus giving the liveliest sense of reality to current events and personages. 12mo. Vol. I., 551 pages, 7s. Vol. II., 624 pages, 7s.

ANCIENT HISTORY. By P. V. N. MYERS. Devotes 151 pages to a study of the Eastern Nations from unknown antiquity to 527 B.C.; 200 pages to a full History of Greece, and 221 pages to a special History of Rome. 12mo, half-morocco, 617 pages. Illustrated. 7s. 6d.

MODERN SCHOOL BUILDINGS. ELEMENTARY AND SECONDARY.

A Treatise on the Planning, Arrangement, and Fitting of Day and Boarding Schools.

HAVING SPECIAL REGARD TO SCHOOL DISCIPLINE, ORGANISATION, AND EDUCATIONAL REQUIREMENTS.

By **FELIX CLAY, B.A., Architect.**

School.—"Felix Clay's masterly volume will prove indispensable to architects and to educational authorities, and we trust that it will be placed at the disposal of teachers. It is a remarkable contribution to architectural knowledge, and it takes high rank also as a contribution to the study of education."

School World.—"To the architect and the schoolmaster alike it will prove an invaluable work of reference. Every type of secondary and elementary school is fully illustrated and adequately described. . . . There is no detail pertinent to its wide range of subjects on which the reader may not gain prompt and trustworthy information."

Spectator.—"Mr. Clay's lucid and well illustrated volume will be indispensable to all who have to deal with the building of new schools, whilst we should gladly see its perusal made a necessary condition for holding the office of manager."

THE JOURNAL OF EDUCATION.

A MONTHLY RECORD AND REVIEW.

SCALE FOR ADVERTISEMENTS.

PUBLISHERS' ANNOUNCEMENTS—

Whole Page ...	£5 10 0	Half Page ...	£3 0 0
Quarter Page ...	1 15 0	One-Eighth Page ...	0 17 6
Per Inch in Column, 8/-.			

PREPAID RATES FOR SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—
6d. per line; minimum charge, 5s.

Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s. each
8 words after, 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—
"THE PUBLISHER, JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE BILL ONCE MORE.

AS we write the Education Bill is in the trough of the wave, and candid friends, like the *Times*, are advising the Government to abandon the old ship as water-logged, and make a fresh start with a new craft—how it is to be rigged they do not tell us. Mr. Chamberlain, bolder than the *Times*, has a scheme of his own—or, rather, two schemes—which he offers as alternatives. There is the secular scheme, which he himself prefers, but which he sees is not practical politics. Then there is the concurrent endowment scheme, by which the State will concern itself only with secular education, but grant facilities for religious teaching to all denominations alike. Such a proposal is to us, as teachers, even more objectionable than the purely secular scheme. Not only would it cut off the teachers from all religious instruction—otherwise there would be no valid abolition of tests, and to this point Mr. Chamberlain is committed—but also it gives the entry to a crowd of amateurs for whose teaching capacity there can be no guarantee. Nothing is easier than destructive criticism and nothing is harder than to construct.

Mr. Balfour was put forward as the chief speaker at the meeting of the Church Defence and Instruction Committee, and we may take him as a representative of moderate Churchmen. He still holds that Cowper-Temple religion is better than no religion at all, but at the same time he denounces the "gross unfairness" of the Bill which refuses equal rights and privileges to definite Church teaching. He agrees with the Romanists that "a child should be brought up from the very first with a consciousness of his membership of a definite communion," and he points out very truly how this denominational atmosphere may be, and is in Sunday schools, secured without any insistence on controversial points of dogma. But this denominational atmosphere depends entirely on the teachers, and, as Mr. Balfour insisted in introducing the 1902 Bill, it is therefore essential that the appointment of the teachers should be left with the managers.

The problem thus presented is insoluble. The first clause of the Bill, carried by an overwhelming majority which, there is no disputing, represents the voice of the nation, affirms the public control of public schools, and consequently of the teaching staff. Any concessions as to the appointment or employment

of teachers are obviously violations of this principle, and it is open at any point to opponents of the Bill to denounce their illogicality, and when an inch is given to demand an ell.

We have taken Mr. Balfour as representing the right-centre—the reasonable opponents of the Bill; and, could Mr. Balfour and Mr. Birrell be deputed by their respective parties to arrange their differences, with, let us say, Sir Edward Fry to arbitrate, we have no doubt that they would arrive at a working compromise. But when we read the speeches of extreme Anglicans on the one side, and of extreme Free Churchmen on the other, we confess we are driven to despair. Thus the Bishop of St. Asaph tells us in one breath that Churchmen are not opposed in principle to public control of schools and abolition of tests for teachers, and that “this Bill is worse than naked secularism.” In the other camp Mr. Hirst Hollowell denounces Clause 4, amended or not amended, in terms that would have approved themselves to the Rev. Gabriel Kettledrumlie.

With the several clauses of the Bill, as far as it has been debated, we have dealt in “Occasional Notes,” and all we here attempt is to reaffirm certain guiding principles which, in our judgment, have emerged more clearly from the discussion.

First and foremost, the whole discussion on dogmatic teaching has been proved a mere logomachy, a quarrel about the Emperor’s beard. A correspondent of the *Times*, who signed himself “Inquirer,” but did not attempt to conceal his identity, has told us his experience of secondary schools, both as a pupil and a governor. In these, whether they call themselves Church schools or are by statutes undenominational, there is virtually no dogmatic teaching. A Scripture lesson is given once or twice a week. Pupils never avail themselves of the conscience clause, and parents (the very parents who are loudest in their denunciation of this godless Bill) are perfectly content. Is not the sauce for the secondary goose good enough for the secondary gander?

Take, again, the teachers. It is argued that under the Bill either there will be no religious teachers at all or they will teach what they do not believe. Has that been the experience of the London School Board or its successor, the County Council? Any teacher in its employ can claim exemption from giving religious instruction; but so rarely has this privilege been exercised that the general public are unaware of its existence.

Thirdly, it is clear to us that religious instruction must be given in the prescribed school hours, or the “facilities,” however wide and liberal, will prove a farce. In this particular the Bill must be amended. At a famous public school a lecture was once announced, attendance at which was voluntary. The notice was conveyed to his house by one of the masters in this form: “There will be, to-night, a lecture in Big School, at which attendance is voluntary. Those who prefer not to go will attend in pupil-room, and I will read to them the Church of England Burial Service from 8 to 10 o’clock.” This is the right line to take with children.

Lastly, the debate has revealed the absurdity of denouncing the Bill *in toto*, as though it were a deliberate attempt to ignore the interests of religion, and, in particular, to rob and ruin the Established Church. They manage these things differently in France; and Mr. Birrell’s difficulties have arisen from his endeavours by all means in his power, consistent with the principle of public control, to conciliate the Church. He reminds us, indeed, of the middle-aged man of La Fontaine’s “Fables”; and between the grey-haired widow and the dark-haired spinster it will need all his wit to preserve his own iron-grey locks.

THE POLITICS OF GIRLS’ HIGH SCHOOLS.*

By F. GADESSEN.

WITH a definition of what is meant in educational politics by a “secondary school” we are for the moment, happily, not concerned, but there can be little doubt that all who are assembled here will agree that one, at any rate, of the finest and most valued characteristics of public secondary schools, as we have known them, is that freedom from unnecessary official control, from hampering and harassing con-

ditions in the conduct of our business, as educators, which gives free play to initiative and is the open gate to progress in its widest and best sense.

The year which is covered by the report which is in your hands has been full of interesting and important work and developments; and the agenda for the Conference bring before you for discussion and resolution some of the most important questions which have been under the consideration of the Executive Committee, and the solution of which will greatly influence our work in and for public secondary schools.

State Grants.

Behind them all, or nearly all, lies the new factor in educational politics, viz., the grants of public money for secondary education, with its just and necessary accompaniment of a measure of public control. To what extent the traditions which we so greatly value of variety in the type of schools, and of freedom and elasticity in their government and curriculum, will be influenced by this lies in the future.

A certain measure of unrest and anxiety is inevitable in all times of transition. But we can be grateful, at any rate, for the fact that secondary education is no longer the Cinderella of education, and that its importance to the individual and to the nation is recognized by statesmen and the man in the street, as well as by those who are immediately concerned with it. And we can be grateful, too, for the wide and liberal view of the obligations to the schools and to the teachers which is taken by so many of those who, in the new order of things, share the responsibility for them, and which has resulted in the recognition on a generous and more adequate scale than in the past of the value to the community of the teachers’ time and work. The improvement in the scale of salaries of assistant mistresses in the schools of the London County Council and some other Local Authorities is, I am sure, the cause of satisfaction to us all.

Inspection.

I have referred to the measure of public control which must follow the grant of public money. This public control is, of course, exercised partly in and through inspection; and, while we may agree that, quite apart from other considerations, inspection on the right lines is a help to efficiency, and is therefore to be welcomed, there is a danger which we cannot ignore in over-inspection, or inspection of a type which may be destructive to those forces of individuality and originality which it should be the purpose of the nation to foster and reward in every department of thought and action. The Board of Education desire, and we all desire, to raise the national education as a whole, and therefore I would point out that what the country needs is not so much that a comparatively few schools shall be highly efficient as that all schools shall be fairly so. But so long as any school which does not ask for grant can be as bad as it pleases the level cannot be raised and no real national efficiency can be reached.

Therefore let us have certain broad conditions to which all secondary schools must conform, and outside these conditions the most complete elasticity. I venture to think that the following provisions would secure all that is needed:—(1) No school of, say, more than five pupils to be carried on without a licence—this irrespective of grants. (2) This licence to be granted by the Board of Education on their Inspectors being satisfied on the following points: (a) That, as to sanitary conditions and buildings, class-rooms, play-grounds, &c., are adequate in size and satisfactory in equipment; (b) that at least two-thirds of the staff are on the Teachers’ Register—we will call it the Government Register for the moment; (c) that each member of the staff receives a salary of which the minimum should be fixed by the Board of Education. That is all.

All schools would thus reach a certain degree of efficiency. Anything beyond this would be the result of the individual capacity of the teachers. The stimulus to effort and initiative would remain, and the recognition of a school would not depend, as it may easily do under the present plan, on the idiosyncrasies of inspectors.

A licence given to a factory does not depend on the inspector’s estimate of the amount or quality of the work done there or on the methods by which it is attained. Neither should a licence for a school depend on the personal views of an inspector, on the arrangement of the time-table, or on the methods of teaching of English or mathematics or drawing.

The objections to such a simple scheme are obvious: it

* Presidential Address to the Association of Head Mistresses, June 8, 1906.

would severely limit the number of inspectors, and there would be no need for the spending of much public money by a Department. Protest also to it might rise up from those schools which, being wealthy from high fees or large endowments, would wish to remain a law unto themselves.

Compulsory Afternoon School.

The question whether we shall, in the interests of the pupils and of the teachers, preserve the freedom of the afternoon—at any rate, in neighbourhoods where it is desired and appreciated by all concerned, including the parents—is of first-rate importance. The ominous and rather misleading words in the preface to the Regulations for Secondary Schools—

The Board, however, desire to lay emphasis on a point which is sometimes lost sight of. The exigencies of a time-table in which practically the whole of the regular instruction is confined to the mornings may lead to over-pressure of a particularly dangerous kind, either by lengthening the morning meeting unduly or by trying to do too much in it. The intensive method of teaching, while it is a desirable change from the somewhat indolent methods of past times, may be carried too far; and the strain upon scholars kept at full tension for a whole morning (especially if the morning meeting exceeds three hours in length) is probably more severe than the strain of a longer school day taken at less pressure. It is very doubtful whether in any circumstances a school meeting lasting longer than three hours is desirable, or even ultimately economical; and this limit, in the Board's view, ought not in ordinary circumstances to be exceeded for any school meeting—

the fact also that some individual members of the Board of Education and some Inspectors are known to hold strong views—prejudiced views as some of us think—on the subject are warnings that we cannot neglect.

We who are living in the schools can, at any rate, speak from intimate and first-hand knowledge of what the schools require, and what will be to the greatest advantage of the pupils and the teachers. For myself, I say without any hesitation that the advantages of the free afternoon for work and subjects outside the ordinary school curriculum, for school games and home occupations and duties, far outweigh any possible over-fatigue from the morning's session of four hours, with its intervals between lessons for physical exercises and recreation and its proper arrangement of subjects; whereby the end of the morning is given to those which make the least demands upon the concentrated efforts of mind of the pupils. So far as my experience goes, the girl who will allow her mind to be kept at full tension for even one hour is rare, and the girl who will keep up so strenuous an attitude for four, or even three, is conspicuous by her absence from our schools.

The fact, also, that three hours and twenty minutes is the time given to actual teaching, and that this time includes such subjects as drawing, part-singing, and needlework, is too often forgotten or ignored.

The Register.

I do not wish to forestall the arguments which will be brought forward in the discussion which is to take place to-morrow morning, but it may not be thought out of place if I remind you that the idea of a Register to create an organized profession of teachers, and, *pari passu*, to improve secondary schools, was first brought before Parliament in 1869.

A Section of the Board of Education Act of 1899 provided that the Consultative Committee already appointed by an Order in Council should propose regulations for a Register of Teachers; but there was no clause of enforcement, and no suggestion of the means by which the keeping of the Register could be made obligatory on the Board of Education or any other body or Committee. The plan recommended by the Consultative Committee has been carried out by the Registration Council, and is that of the two Columns—A and B.

On Column A are supposed to be over eighty-five thousand teachers holding Government certificates. It is said that they are there automatically; but I believe the inclusion of a large number of them is legendary. Column A has not been kept by the Board of Education nor by the Registrar of the Registration Council.

On Column B there are about ten thousand teachers in secondary schools who have qualified for their inclusion by academic status, training, and service in a school of a particular type, and by the payment of a guinea. Of these ten thousand, as you will see in Mrs. Bryant's very interesting memorandum, 49·2 are men and 50·8 are women. The proportion between them is

scarcely worth considering. With the registration of teachers and the service clause there was necessarily combined the registration of schools.

Now, although we may criticize this plan of a double Register, with distinct qualifications, which took the place, we are told, of the Register, intended and expected by the clause in the Education Act of 1902, and there are many teachers in secondary schools who have cordially disliked it from the first; and, although the fact was continually borne in upon us that the dangerously low standard accepted for schools in some districts for admission to the Register of Schools tended to lower rather than raise the standard of efficiency and destroy the value of the hall-mark of registration, yet we were bound in fairness to remember that the conditions were of a temporary and tentative character, and that, when the years of probation should be at an end, there was good reason for expecting that they would become more stringent and uniform.

Intimately connected—at any rate, so far as women are concerned with the question of the registering—has gone that of training; and while we may, many of us, be quite convinced by temperament and experience that the right sort of training has yet to be found, we are, I think, as firmly convinced that the teacher requires to go through an apprenticeship and has to learn his trade quite as definitely and as thoroughly as the members of any other learned profession or occupation. Therefore we have used the advantage of a place on the Register as a means for urging those who left school or college to prepare for teaching by training. To many of these, and especially to University students, the summary destruction of the Register means serious injustice. It is not merely a question of the return of guineas paid to a State Department in all good faith, but of the time and expense at the end of a long, expensive University course with a view to complete the qualifications for a place on the roll-call of a profession instituted and kept by Government order.

Whatever its shortcomings, the Register has assuredly added largely to the number of trained teachers and has given an impetus to the professional feeling which we all here have tried to create and desire to encourage. The sudden announcement therefore that, while the Register was, so to speak, on its trial, it was to be abolished, and without any indication of anything to take its place, came like a bolt from the blue, and concern and astonishment have spread to all ranks of secondary teachers.

One more point with reference to the Register. The Board of Education desires to enforce training by and through its Regulations for 1906 and 1907, and it has been stated that in this way the influence of the Register will be replaced. The dangers which lie behind this are obvious. State Regulations cannot, even when accompanied by grants from State funds, have that living and stimulating influence on educational ideals which come from the realization and possession of a fine professional feeling. And the insistence that the State-aided schools must contain a certain proportion of trained teachers would surely result in a line being more and more clearly drawn between the schools which are subject to the State and those which are free: between the public school and the better type of private school and the profession, instead of uniting and consolidating, would split up into sections further and further apart. Of course, with universal compulsory inspection, this danger would be minimized or disappear.

Headship.

I will end, as I began, with a reference to the abiding importance of individual responsibility in school management. We may not wish to imitate the great Dr. Busby of Westminster School renown, who walked (so says the legend) when the King came to visit him in front of the King and with his hat on his head, lest any of his pupils should think there was a greater man on this earth or in his school than he; but all who value character and individuality and enterprise and who believe in the moving force of originality must stand for the independence and undivided responsibility of the head of the school as regards the business for which he is appointed, which is to organize and administer and educate.

It is satisfactory to know that this is the opinion of Mr. Birrell, and, with his most comforting words to all who may perhaps fear that in the multiplicity of authorities and regulations and inspections the shadow of the head of the school may

grow less or that the work which is essential to his calling may be overlooked, I will conclude :

Head masters [I am sure he includes head mistresses] must be allowed to be captains on their own quarter-decks. The success of a school depends on the character, energy, and skill of the head master, aided by his assistants. Local Authorities, once having chosen their head master, should stick to him, encourage him, support him, and let him have as much of his own way as possible. Let them not curtail his authority, nor restrict his influence, but support him generously.

MODERN LANGUAGE HOLIDAY COURSES, 1906.

*Compiled from information supplied by the Special Inquiries Office
of the Board of Education.*

The information is given in the following order :—Place, date, fees, and address of Secretary.

Germany and Austria.

GREIFSWALD.—July 9–28. 5–15 marks. For both sexes. Conversation Classes on modern methods. Prof. Dr. Bernheim, Ferienkurse, Greifswald.

JENA.—August 6–18. Entrance, 5 marks; 12 Lectures, 10 marks; 24 Conversation Classes, 30 marks. For both sexes. Renowned for its Course of Pedagogy. Frau Dr. Schnetger, Gartenstr. 2, Jena.

KÖNIGSBERG.—Date not yet fixed. 15 marks. Special Language Courses for Foreigners. Ferienkurse, Königsberg.

MARBURG.—First Course, July 9–28; Second Course, August 5–25. 40 marks for each Course, or for both 60 marks. Special German Courses (elementary and advanced): 3 weeks, 20 marks; 4 weeks, 30 marks. For both sexes. Conversation Classes; Preparatory Courses from Easter; Special German Courses. W. G. Lipscomb, Esq., Grammar School, Bolton, Lancs.

NEUWIED.—August 3–24. 42 marks. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.

SALZBURG.—September 1–15. Registration, 1 krone; membership, 5 kronen; entrance fee for a Course of 3–6 hours, 2 kronen, of 8–10 hours, 4 kronen. For University students and others. Lectures by University Professors. The Secretary, Local Committee for the University Vacation Courses, Salzburg.

Switzerland.

GENEVA.—July 16–August 28. 40 francs, and 6 francs for special Conversation Classes and correction of written work. Intended for advanced students of both sexes. M. Bernard Bouvier, Administrateur du Séminaire et des Cours de Vacances de Français Moderne à l'Université, Geneva.

LAUSANNE.—July 19–August 29. 40 francs. For both sexes. M. J. Bonnard, Avenue Davel 7, Lausanne.

NEUCHÂTEL.—First Course, July 16–August 11; Second Course, August 13–September 8. 30 francs for each Course, or for both 50 francs. For both sexes. Elementary and Advanced Courses. M. P. Dessoulavy, Académie de Neuchâtel.

BASLE.—No Course this year.

ZÜRICH.—Last fortnight in July. Particulars not yet to hand.

Spain.

SANTANDER.—August 4–25. £2. 2s. if name is entered before July 1; otherwise, £2. 5s. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.

France.

BESANÇON.—(a) Holiday Courses, July 10–November 15; (b) other Courses during the year, September 10 to the end of June. 30 francs, 1 month; 40 francs, 2 months. Lectures on Literary, Commercial, and Scientific Subjects. M. le Secrétaire de l'Université, 30 Rue Mégevand, Besançon.

DIJON.—(a) July 1–October 31 (Holiday Courses); (b) other Courses during the whole year. (a) 30 francs for first 6 weeks and 10 francs for each subsequent fortnight, or 60 francs for the 4 months. Examinations for University Certificates. M. Ch. Lambert, Professeur à l'Université, 10 Rue Berbisey, Dijon.

GRENOBLE.—Holiday Courses: July 1–October 31 (4–5 hours per day); other Courses during the whole year. 40 francs for the first 6 weeks and 10 for each subsequent fortnight, or 60 francs for the whole Course. Performance of Classical French Tragedy in the open air; Roman Theatre at Orange. M. Marcel Reymond, The University, Grenoble.

NANCY.—(a) During the academic year; (b) Holiday Courses, July 1–October 31. (a) 50 francs for the half year, 70 francs for the whole

year; (b) 40 francs for the first month, 10 francs for each following month—maximum, 60 francs. Preparation for Examinations of Alliance Française and University Certificates. M. Laurent, à l'Université, Nancy.

BOULOGNE-SUR-MER.—August 1–30. 40 francs for each Course. For both sexes. Classes: Elementary and Advanced. M. Borneque, Professeur à l'Université de Lille, 70 Rue de Turenne, Lille.

ST. SERVAN—ST. MALO.—August 2–29. £2 for the whole month; £1. 4s. for half the month. For both sexes. Examinations for Diplomas. M. Gohin, Professeur agrégé au Lycée de Rennes.

PARIS (1).—First Course, July 1–31; Second Course, August 1–31. 100 francs both Courses; 55 francs single Course. Elementary and Advanced Courses; Conversation Classes. M. le Secrétaire, l'Alliance Française, Boulevard St. Germain 186, Paris.

PARIS (2).—July 2–28, August 1–28, September 3–29. 75 francs for 1 month, 140 francs for 2 months, and 200 francs for 3 months. Use of Reading Room at International Guild for Students. The Secretary, Guilde Internationale, 6 Rue de la Sorbonne, Paris.

PARIS (3).—Christmas and Easter Holidays. Successive series of 8 Lessons: 12 francs each series. Preparatory to Summer Courses of the Alliance Française, &c. M. Louis Jadot, Université Hall, Boulevard St. Michel 95, Paris.

TOURS.—August 3–24. £2. 2s. if name is entered before July 1; otherwise, £2. 5s. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.

HONFLEUR.—August 3–30 (i.e., 20 days—5 days a week). £2. 2s. if name is entered before July 1; otherwise, £2. 5s. For both sexes. General Secretary, Teachers' Guild, 74 Gower Street, London, W.C.

BAYEUX AND GRANVILLE.—August 1–24. £2. 2s. Students allowed to go from Granville to Bayeux, and *vice versa*, without extra fee. For both sexes. Elementary and Advanced Classes. John A. Nichols, Esq., Stanley Mount, New Mills, Stockport.

CAEN.—Easter Holidays, July 2–31, August 1–30; other Courses during the whole year. £1 for 1 week; £1. 12s. 2; £2. 4s. 3; £3 for 1 month. Lectures by well known writers. Evening Courses and Conversation Circles. Walter Robins, Esq., St. Brelades, Preston Road, Leytonstone, N.E.

LISIEUX.—July 3–28, August 2–28; a Private Course during the whole year by M. Féquet. £1. 14s. Conversation Circles. J. Stott, Esq., Pulteney Grove, Bath.

VILLERVILLE-SUR-MER (near Trouville).—£2. 5s. For both sexes. Conversation Circles. M. L. Bascan, Professeur, Rue Caponière, Caen.

Programmes of most of these Courses may be seen at the Board of Education Library, St. Stephen's House, Cannon Row, Whitehall, London, S.W.

CORRESPONDENCE.

"ENGLISH."

To the Editor of The Journal of Education.

SIR,—As an old teacher who has in his time looked over thousands of English essays I should like to endorse and to supplement Mr. R. T. Bodey's admirable letter in your last number.

That the vast majority of the pupils who have been educated in our public schools are unable to write English is an acknowledged fact. Even the Head Masters' Conference do not dispute the concurrent testimony of examiners and tutors and the evidence of the public press. There can be no doubt that the average educated Frenchman or German can express himself in his own tongue far better than the average Englishman can in his. Nor can this defect be ascribed to any peculiarity in the English tongue or the national character; for the Americans are not thus to seek.

The fault lies wholly with the teaching, not necessarily with the teachers themselves, who have rarely had a free hand and have been hampered by a traditional and inelastic curriculum.

Let me take a concrete instance which is typical and not imaginary. It is a classical school: the average age for admission is thirteen. For entrance boys are tested in Latin and French accident and arithmetic. For the first three or four years three fourths of their time is given to classics and mathematics, and all the English they get is an hour of English literature a week. When they reach the sixth English essays are begun. An hour a week is allotted out of school for writing the essay, and a quarter of an hour in school for "giving it back." Further, the essay master is not the form master, but

a modern side master, who has nothing to do with the rest of their work.

How is it possible under such conditions to teach English composition? As well set a music master to teach counterpoint to pupils who had never learnt their notes. The reform must begin from the very bottom. A famous classical head master, so I read a month or two ago in your columns, was convinced one fine day by a pedagogic Socrates that English composition could be taught, and forthwith ordered that every form in the school should do an English essay once a week. He evidently believed, with Louis XIV., that "les grands rois font les grands artistes." Had he enacted that no boy should enter the school who was unable to reproduce a simple narrative in decent English, he would have laid the foundation stone of sound English teaching; and, had he further impressed on his staff the necessity of insisting in every lesson on clearly expressed, consecutive, logical answers, he would have built the first storey, and he might then have looked in his sixth form for essays worthy of the name. But our head masters, with worthy exceptions like Canon Bell, are still of Dogberry's opinion that to be a well favoured man (a classical scholar) is the gift of fortune, but to read and write (English) comes by nature.—Yours faithfully, EMERITUS.

"FRENCH BY THE DIRECT METHOD."

To the Editor of The Journal of Education.

DEAR SIR,—I greatly appreciate the kindly criticism of your reviewer, who has done full justice to my "French by the Direct Method" in all respects save one only. In dealing with Part III. (May number, page 341) he says: "The reduced copies of these pictures (The Four Seasons), promised in the introduction, do not, however, appear." This is a curious error on the part of your reviewer, as the pictures *do* appear on pages xviii, xx, xxi, and xxiii.

Then, again, the "curious error" with respect to the illustration of the Fox and the Crow is your reviewer's, for he will find La Fontaine's well known "Maitre Corbeau," to which the illustration on page 40 refers, on page 39, and he will see that the illustration could not have been placed otherwise than it is.

I merely wish to point out these errors on the part of your reviewer in order that none of your readers may think that there is anything slipshod about "French by the Direct Method," and I should like to end by thanking both your reviewer and your readers for the kindly interest they have shown in my translation and adaptation of Rossmann and Schmidt's notable French Course.—Yours faithfully,

THOS. CARTWRIGHT.

[I regret my error, but must plead that, even with the help of Mr. Cartwright's letter, it took me some time to find the pictures. They are not on the pages mentioned, but skilfully folded back against the cover of the book. Some indication of the position should certainly be given.—YOUR REVIEWER.]

UNIVERSITIES AND SCHOOLS.

ROYAL HOLLOWAY COLLEGE.

The Driver and Founder's Scholarships and Driver Prizes have been awarded as follows:—Classics: I. Compton Burnett, L. Bridges, and O. Clarke, Founder's Scholarships. Mathematics: W. Waddell, Driver's Scholarship, in addition to Founder's Scholarship already held; A. Trout, M. Holland, and M. Jackson, Founder's Scholarships. English: R. Williamson, Driver's Scholarship; C. Smith and P. Davison, Founder's Scholarships. French: E. Garrett, Driver's Scholarship; P. Webb, Founder's Scholarship. History: H. Cam, Driver's Scholarship; D. Harris, Founder's Scholarship. Physics: E. Ladler, Founder's Scholarship. Botany: H. Chambers, Driver's Scholarship; A. Williams, Founder's Scholarship. Prizes: Greek Prose: D. Charles; D. Seaton, highly commended. Latin Prose: D. Seaton; D. Charles, highly commended. Pure Mathematics: M. Pick; W. Waddell, commended. Applied Mathematics: W. Waddell; M. Pick, highly commended. History: divided between H. Cam and K. Bathurst. Botany: D. Dalston; H. Chambers, highly commended. Music: F. Leach. Savory Divinity: F. Gillett.

OXFORD.

The distractions of the Summer Term—the Eights week, the annual Honour Schools, the special lectures, the yearly increasing inrush of visitors, the garden parties, the *gaudes*, the excursions, the conferences, the special organized receptions (like the delightful invasion of the

representatives of French Universities which was arranged for this June)—all these, with the regular work in lecture-rooms and committee-rooms, which (for the seniors at least) show no diminution, make legislation of an important kind comparatively rare. This term only what may be called business statutes, involving minor changes of administrative detail, have been actually under discussion; and they are of no public interest. But there are many indications that the attempts to reform our preliminary and intermediate examinations are still active, though they have not reached (or successfully passed) the legislative stage.

The Greek question, after the decisive votes both at Oxford and Cambridge, is for a while at rest, though it is certainly a mistake to dismiss it as a *chose jugée*, the unfortunate phrase used by the *Oxford Magazine*. Nobody really supposes that when eleven out of thirteen British Universities make Greek optional for entry it can continue permanently to be a compulsory requirement in the other two, particularly when reform is advocated, as it was at Cambridge in the recent discussion, by such eminent Greek scholars as Prof. Butcher and Prof. Jackson.

At Oxford all is still in the preliminary stage of rumour and discussion: but some changes in the entrance examination are certainly being seriously considered afresh. In Responsions (which enjoys the reputation of being the least satisfactory entrance test now extant in any University of Great Britain, if not of Europe) it seems likely that two or three changes will soon be actually proposed: viz., to substitute unseen translations for the Latin and Greek books; to compress the arithmetic, geometry, and algebra into a single paper; and to add a compulsory science subject. The first two will be unqualified improvements. The unseen will be a real test, however humble in standard, that the candidates can read the language: the second will shorten without weakening the examination. The difficulty of the third is that science without *practical* work will be cram; and the time required to test two or three hundred candidates in any practical work it will be hardly possible to find. In Pass Moderations an attempt was made to reduce the books offered from three to two, and to improve the papers so as to lead to more intelligent methods of study. This was thrown out: but the Board have given notice that the papers in the books will be allowed longer time, and so the same end achieved in another (if less thorough) way.

In Honour Classical Moderations corresponding improvements are receiving serious attention. For example, in the Greek drama, instead of prescribing three plays to be thoroughly known, candidates will (if the present suggestion be adopted) read a larger number of plays, only a few of which will be subject to minute examination, and in the rest translation only will be required. The principle is the same substantially as the changes introduced into the "Poets and Orators" papers some twenty years ago, of which the result has unquestionably been to diminish the "cram" element, and materially to increase the literary study. It is much to be hoped that these schemes, which have been long maturing, will take definite shape early in the October Term.

The long discussions as to the improvement of the Summer Term have so far had no actual result in any solution commanding general assent. The objections to the present arrangements concern mainly two points. As all the Honour "schools" are held in the summer, and several pass "schools" also, the eight weeks' teaching is in many cases reduced to less than six, since the examinations have to begin in the sixth week; and, even so, owing to the length of time occupied by *viva voce*, all the lists are not complete till August. Nobody denies that the *viva voce* is extremely cumbrous, wastes the time and money, of the undergraduates, and, though every candidate has to appear once before the examiners (during six weeks of the long vacation, as well as three weeks of term), only a small percentage of the men are really affected, in regard to the class they obtain, by this laborious ploughing of the sand. Nevertheless, however unbusinesslike the arrangement seems, it must be assumed that at present it cannot be reformed. Quite recently a proposal, that the examiners should summon to *viva voce* only those whom they wished, was rejected. Another cure (for the interference of the "schools" with teaching) has been suggested, namely, to defer the examinations till the vacation; but, with the present system of *viva voce*, this would postpone yet further the final class lists. The deadlock will have to continue until the blind prejudice in favour of *viva voce* can be abated by time and reflection.

The other evil is the fact that there are two long established periods of festivity—the Eights week in mid-term and Commemoration at the end: visitors abound at both, and lunches, teas, dinners, balls, concerts, boating excursions, &c., are the order of every day and night. The only substantial proposal—to amalgamate the two saturnalia into one—has as yet found insufficient support; though it seems to offer the best chance of relief. At any rate, it is something gained that the mischief is acknowledged on all hands.

In the two Royal Commissions recently appointed to inquire into Trinity College, Dublin, and the Metropolitan Police, much satisfaction is here felt at the selection of three excellent members who were Oxford men. There seems good reason for

(Continued on page 474.)

Messrs. BELL'S NEW EDUCATIONAL WORKS.

Complete Educational Catalogue sent post free on application.

NOW READY. Small crown 8vo, 266 pages, price 1s. 6d.; or, with Answers, 2s.

A JUNIOR ARITHMETIC.

By **CHARLES PENDLEBURY, M.A.**, Senior Mathematical Master at St. Paul's School,
Assisted by **F. E. ROBINSON, M.A.**, Assistant Master at St. Paul's School.

This book is intended for the Middle and Lower Forms of Secondary Schools, and will be found adapted especially for the use of Candidates for the Oxford and Cambridge and Scotch Local Examinations, for County Council Scholarships, and for Examinations conducted by the College of Preceptors, the Board of Intermediate Education for Ireland, and other Examining Bodies.

Crown 8vo. With numerous Diagrams. 6s.

ALGEBRAIC GEOMETRY.

A NEW ELEMENTARY TREATISE ON ANALYTICAL CONIC SECTIONS.

By **W. M. BAKER, M.A.**

This book is written for beginners, and for the average boy. The straight line and the circle are very fully treated. The elementary ideas of the Calculus have been utilized, and full use made of one of the best reforms in the teaching of Mathematics, i.e. the abolition of the water-tight compartment between Geometry and Algebra.

Crown 8vo. With numerous Diagrams. 1s. 6d.

A FIRST YEAR'S COURSE IN PRACTICAL PHYSICS.

By **JAMES SINCLAIR, M.A. (Glas.), B.Sc. (Lond.)**, Head Science Master in Shawland's Academy, Glasgow.

This book is an attempt to provide for pupils in Day Schools, Evening Schools, and Pupil Teachers' Classes a course in Practical Physics which is not too difficult for young students, but which contains all that is really essential.

Examples in Arithmetic. With some Notes on Method. By **C. O. TUCKEY, M.A.**, Assistant Master at Charterhouse. Crown 8vo, with or without Answers, 3s.

"We believe that this book will hold its own, and more than hold its own, with any work written up to the present time on the lines that have been followed, and we can safely predict that it will be widely adopted."—*Guardian*.

A First Algebra. By **W. M. BAKER, M.A.**, and **A. A. BOURNE, M.A.** Small crown 8vo, 192 pages, 1s. 6d.; or with Answers, 2s.

This book, which takes the subject as far as Quadratic Equations, will be found specially suitable for the Local Examinations.

"The names of the joint authors of this compact little volume bid fair to become as classic in the mathematical world as that of Todhunter was in days of yore."—*Educational News*.

Elementary Dynamics. By **W. M. BAKER, M.A.**, Head Master of Military and Civil Department at Cheltenham College. New Edition, Revised and Enlarged, with Chapters on Graphical Methods. Crown 8vo, 4s. 6d.

Integral Calculus for Beginners. By **ALFRED LODGE, M.A.**, Mathematical Master at Charterhouse. Crown 8vo, 4s. 6d.

"An admirable little text-book. The general score of integration methods are lucidly explained, ... while the chapters dealing with the practical application of the calculus in determining centres of gravity, moments of inertia, volumes of solids, &c., are particularly good."—*Mechanical Engineer*.

Bell's First French Reader. By **R. P. ATHERTON, M.A.**, Assistant Master at Haileybury College, Author of "Bell's French Course," assisted by **F. GAL- LADEVÈZE**. With Illustrations by French Artists. Crown 8vo, 1s.

French Historical Reader. Being Short Passages giving Episodes from French History arranged as a First Reader. With Illustrations, brief Notes, and a Vocabulary. By **R. N. ADAIR, M.A. Oxon.**, Assistant Master at St. Paul's Preparatory School. Crown 8vo, 1s. 6d.

The Birds of Aristophanes. The Greek Text Revised, and a Metrical Translation on opposite pages, together with Introduction and Commentary. By **BENJAMIN BICKLEY ROGERS, M.A. Fcap.** 4to, 10s. 6d.

A Handbook to Shakespeare. By **MORTON LUCE**, Author of "A Handbook to Tennyson," &c. Fcap. 8vo, 6s.

This "Handbook to Shakespeare" offers in one volume the critical and explanatory helps that must otherwise be sought in many books.

"Mr. Luce is no blind worshipper, and his criticism is of excellent quality. He has laid students of Shakespeare under very considerable obligation."—*Spectator*.

London: **GEORGE BELL & SONS**, Portugal Street, Lincoln's Inn, W.C.

Messrs. BELL'S MATHEMATICAL BOOKS.

Written on Modern Lines to meet the Requirements of the various Examining Bodies.

NEW SCHOOL ARITHMETIC. By CHARLES PENDLEBURY, M.A.; assisted by F. E. ROBINSON, M.A. Second Edition. With or without Answers, 4s. 6d.; or in Two Parts, 2s. 5d. each.

Key to Part II. 8s. 6d. net.
In this book the *Metric System* is given a prominent position. *Graphical Illustrations* are used very freely, and the general use of *Graphs* is treated in a separate section. *Approximations and Decimalization of Money* are also treated fully. There are sections on *Elementary Mensuration* and on *Logarithms*.

"The new sections on graphs, mensuration, and logarithms add considerably to the value of the book, which in this form is unrivalled."—*Athenaeum*, June 3, 1905.

New School Examples in Arithmetic. Extracted from the above. With or without Answers, 3s.; or in Two Parts, without Answers, 1s. 6d. and 2s.

EXAMPLES IN ARITHMETIC. With some Notes on Method. By C. O. TUCKEY, M.A., Assistant Master at Charterhouse. Crown 8vo, with or without Answers, 3s.

"This book will hold its own, and more than hold its own, with any work written up to the present time on the lines that have been followed, and we can safely predict that it will be widely adopted."—*Guardian*.

ELEMENTARY ALGEBRA. By W. M. BAKER, M.A., and A. A. BOURNE, M.A., of Cheltenham College. Complete. Crown 8vo. Second Edition, with or without Answers, 4s. 6d.; or in Two Parts—Part I., 2s. 5d.; or, with Answers, 3s.; Part II., with or without Answers, 2s. 5d.

Complete Key, with numerous Graphical and other Figures, 10s. 6d. net; or in Two Parts, 5s. net.

"Messrs. Baker and Bourne's excellent Algebra must give satisfaction wherever used."—*Nature*.

Examples in Algebra. Extracted from the above. With or without Answers, 3s.; or in Two Parts—Part I., 1s. 6d.; or, with Answers, 2s.; Part II., with or without Answers, 2s.

EXAMPLES IN ALGEBRA. By C. O. TUCKEY, M.A., Assistant Master at Charterhouse. Fifth Edition. With or without Answers, 3s.

"The selection of examples and the order of the chapters undoubtedly place the book far in advance of any at present existing."—*Guardian*.

ELEMENTARY GEOMETRY. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. Complete. Fifth Edition, Revised, 4s. 6d. Also in Parts—Books I.-III., Seventh Edition, Revised, 2s. 6d.; Books I.-IV., Fourth Edition, 3s. Also published in the following forms:—

Book I., 1s. Books I. and II., 1s. 6d. Books II. and III., 1s. 6d. Books III. and IV., 1s. 6d. Books II.-IV., 2s. 6d. Book IV., 1s. Books IV. and V., 2s. Book V., 1s. 6d. Books VI.-VII., 2s. Books V.-VII., 2s. 6d.

Answers to Numerical and Mensuration Examples, 6d. net.

Complete Key, 6s. net.

Elementary Graphs. Reprinted from the above. New and Enlarged Edition. 6d. net.

NEW TRIGONOMETRY FOR SCHOOLS. By W. G. BORCHARDT, M.A., B.Sc., and the Rev. A. D. PERROTT, M.A. Crown 8vo, 4s. 6d.; or in Two Parts, 2s. 6d. each.

Complete Key, 10s. net; or, in Two Parts, 5s. net each.

This book is intended to supply the need felt for a Trigonometry based on *Four-figure Logarithm Tables*. The book lays stress on the more practical parts of the subject. *Squared paper* is freely made use of, and 600 miscellaneous Examples are provided. Tables of Four-figure Logarithms are given at the end of the book.

"The work is admirable for form use—it is, indeed, the best book on the subject at present in the market."—*Guardian*.

DIFFERENTIAL CALCULUS FOR BEGINNERS. By ALFRED LODGE, M.A., Mathematical Master at Charterhouse. With an Introduction by SIR OLIVER LODGE, D.Sc., F.R.S., LL.D., Principal of the University of Birmingham. Second Edition, revised. 4s. 6d.

PRACTICAL MATHEMATICS. By A. H. STERN, M.A., Principal of Cedar Court Army College, Roehampton; and W. H. TOPHAM, Science Instructor at Cedar Court Army College and at Harrow School. Crown 8vo, 4s. 6d. Also in Two Parts—Part I., 2s. 6d.; Part II., 3s. 6d.

SUITABLE FOR CAMBRIDGE LOCAL EXAMINATIONS,

JULY AND DECEMBER, 1907.

SHAKESPEARE'S AS YOU LIKE IT. With brief Introduction and Glossary, by JOHN DENNIS. 1s. net. (*Chiswick Edition*.)

SHAKESPEARE'S KING LEAR. With brief Introduction and Glossary, by JOHN DENNIS. 1s. net. (*Chiswick Edition*.)

NOTES ON SHAKESPEARE'S AS YOU LIKE IT. By T. DUFF BARNETT, B.A. 1s.

NOTES ON SHAKESPEARE'S KING LEAR. By T. DUFF BARNETT, B.A. 1s.

GOLDSMITH'S TRAVELLER AND DESERTED VILLAGES. Edited, with Introduction and Notes, by the Rev. A. E. WOODWARD, M.A., Assistant Master at Christ's Hospital. Cloth, 2s.; or, separately, sewed, 10d. each. (*Bell's English Classics*.)

GRAY'S POEMS. Edited, with Notes and a Memoir, by J. BRADSHAW, M.A. 2s. 6d. net.

CAESAR—DE BELLO GALlico. Book VII. Edited, with Notes, Exercises, and Tables of Idioms, by the Rev. W. COOKWORTHY COMPTON, M.A., Head Master of Dover College. 2s. 6d. net. (*Bell's Intermediate Illustrated Classics*.)

Translation. 1s. (*Bell's Classical Translations*.)

CICERO—DE SENECTUTE. Edited, with Introduction, Notes, Vocabulary, and Exercises, by A. S. WARMAN, B.A., Assistant Master at Manchester Grammar School. 1s. 6d. (*Bell's Illustrated Classics*.)

Translation. 1s. (*Bell's Classical Translations*.)

VERGIL—ÆNEID. Book IX. CONINGTON'S Edition. Abridged by the Rev. J. G. SHEPHERD, D.C.L. 1s. 6d.

Translation. 1s. (*Bell's Classical Translations*.)

A FIRST GREEK READER. In two Progressive Parts. With Hints and a Vocabulary. By E. C. MARCHANT, M.A., Fellow of Lincoln College, Oxford. With 30 Illustrations. 1s. 6d.

HAUFF'S SHEIK OF ALEXANDRIA AND THE CARAVAN. Translated by S. MENDEL. 1s.

SCHILLER'S WILHELM TELL. Translated by Sir THEODORE MARTIN, K.C.B.

SUITABLE FOR OXFORD LOCAL EXAMINATIONS, 1907.

SHAKESPEARE'S TWELFTH NIGHT. With brief Introduction and Glossary, by JOHN DENNIS. 1s. net. (*Chiswick Edition*.)

SHAKESPEARE'S CORIOLANUS. With brief Introduction and Glossary, by JOHN DENNIS. 1s. net. (*Chiswick Edition*.)

SHAKESPEARE'S AS YOU LIKE IT. With brief Introduction and Glossary, by JOHN DENNIS. 1s. net. (*Chiswick Edition*.)

NOTES ON SHAKESPEARE'S TWELFTH NIGHT; CORIOLANUS; and AS YOU LIKE IT. By T. DUFF BARNETT, B.A. (Lond.). 1s. each.

BYRON'S CHILDE HAROLD. Edited, with Introduction and Notes, by H. G. KEENE, M.A., C.I.E. 3s. 6d. Also Cantos 1 and 2, sewed, 1s. 9d.; Cantos 3 and 4, sewed, 1s. 9d. (*Bell's English Classics*.)

JOHNSON'S LIFE OF MILTON. Edited, with Introduction and Notes, by F. RYLAND, M.A. 2s. 6d. (*Bell's English Classics*.)

THE AGE OF POPE (1700-1744). By JOHN DENNIS. Fourth Edition. 3s. 6d. net. (*Handbooks of English Literature*.)

THE AGE OF JOHNSON (1744-1798). By THOMAS RSCOMBE. Second Edition. 3s. 6d. net. (*Handbooks of English Literature*.)

HORACE—ODES. Book IV. Edited, with Introduction, Notes, and Vocabulary, by H. LATTEY, M.A., Assistant Master at Cheltenham College. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics*.)

Translation. 1s. (*Bell's Classical Translations*.)

CAESAR—DE BELLO GALlico. Book IV. Edited, with Introduction, Notes, Vocabulary, and Exercises, by the Rev. A. W. UPCOTT, M.A., Head Master of Christ's Hospital. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics*.)

CAESAR—DE BELLO GALlico. Book V. Edited, with Introduction, Notes, Vocabulary, and Exercises, by A. REYNOLDS, M.A., Assistant Master at Merchant Taylors' School. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics*.)

CAESAR—DE BELLO GALlico. Book VI. Edited, with Introduction, Notes, Vocabulary, and Exercises, by J. T. PHILLIPSON, M.A., Head Master of Christ's College, Finchley. With numerous Illustrations. 1s. 6d. (*Bell's Illustrated Classics*.)

Translation of Caesar. Books I.-IV., 1s.; Books V.-VII., 1s. (*Bell's Classical Translations*.)

LIVY. Book V. PRENDEVILLE'S Edition. Revised by J. H. FREKE, M.A. 1s. 6d.

Translation. 1s. (*Bell's Classical Translations*.)

SOPHOCLES—ANTIGONE. Edited, with Introduction and Notes, by G. H. WELLS, M.A., Assistant Master at Merchant Taylors' School. With numerous Illustrations. 2s. 6d. net.

Translation. 1s. (*Bell's Intermediate Illustrated Classics*.)

EURIPIDES—MEDEA. Edited, with Introduction, Notes, and Vocabulary, by the Rev. T. NICKLIN, M.A., Assistant Master at Rossall School. With Illustrations. 2s. (*Bell's Illustrated Classics*.)

Translation. 1s. (*Bell's Classical Translations*.)

London: GEORGE BELL & SONS, Portugal Street, Lincoln's Inn, W.C.

thinking that in both cases a strong Commission of Inquiry will be of service. On the Dublin Commission Sir A. Rücker and Sir T. Raleigh have been chosen—both men of high distinction and administrative experience, whose names are well known elsewhere than in Oxford. Sir T. Raleigh, in particular, was for several years one of the ablest members of Council, and a very forcible speaker in University debates. Another Oxford man—Mr. C. A. Whitmore, who is appointed to serve on the Police Commission—will bring to his new duties a valuable experience gained by public work in London, especially on the London County Council.

Besides the highly distinguished list (given below) of those who received honorary degrees at the Commemoration, which has been recorded in all the papers, it is usual to award during this term, on other special occasions, similar degrees to notable persons who may be on a visit to England in the early summer. The following were thus awarded:—On May 17: D.C.L.—His Imperial Highness Duke Tsai Tseh. D.Litt.—His Excellency Shang Chi-heng and his Excellency Li Sheng-to. M.A.—The Hon. Tso Ping-Lung. The first three are High Commissioners appointed by the Emperor, and the last is the Secretary to the High Commission. The honorary D.Sc. was conferred on Mr. H. G. Lyons, F.R.S., of the Survey Department of Egypt; and last, and most notable of all, E. H. Grieg received the honorary degree of Doctor of Music.

The only deaths of Oxford men that have been recorded since my last letter was written are as follows:—Sir J. Vaughan, formerly Metropolitan Police Magistrate, aged ninety-two; R. F. Carline (Hertford), aged nineteen; J. Hatton Mills (Worcester), aged nineteen.

The proposed abolition of the Teachers' Register under a clause in the Education Bill aroused such serious anxiety in the secondary training colleges that early this term the Oxford Delegacy for Secondary Training summoned a conference in London. The conference passed a resolution pointing out the probable results to these training institutions arising from the withdrawal of the inducement to take a training course. This was sent to the Board of Education, who promised an early reply. The "encouragement" to training which Mr. Birrell promised in his first speech is here made explicit. It is a possible requirement by the Board that the staffs of the schools which are under the Board shall contain a certain percentage of trained persons among their new appointment. How far this will diminish the danger is not easy to forecast; but it is not likely to be at all as effective as the pressure in favour of training which arose directly out of the Register.

The following announcements have appeared:—

The Reports have been issued as usual of the Schools, Museum, Observatory, Taylor Institute, and the Sheldonian Theatre.

Mr. A. S. Hunt (the well known fellow-explorer of Mr. B. P. Grenfell, who together discovered not only the "Logia," but a long series of Oxyrhynchus papyri, the last discovery, yet unpublished, being awaited with exceptional interest) has been elected a Fellow of Queen's College.

The Vice-Chancellor, Prof. Goudy, and Prof. Thomson have been appointed to represent Oxford at the quatercentenary celebration of Aberdeen University.

Representatives on the governing bodies of schools, &c.: St. Paul's—C. Bailey (Balliol). University College, Nottingham—W. H. Stevenson (St. John's). Ipswich—J. C. Bailey (New College). Midhurst—F. W. Bourdillon (Worcester).

Honorary degrees at the Encaenia: D.C.L.—The Chinese Minister, His Excellency Wang Tah-sieh; Sir J. Madden, K.C.M.G., Chief Justice (Victoria), Chancellor of Melbourne University; Right Hon. the Earl of Aberdeen, G.C.M.G., Lord-Lieut. of Ireland; Right Hon. Alfred Viscount Milner, G.C.B., G.C.M.G.; Right Hon. R. B. Haldane, K.C., M.P., P.C., Secretary of State for War; Right Hon. Sir Horace C. Plunkett, F.R.S., K.C.V.O. D.Sc.—Prof. A. Graham Bell, LL.D., Ph.D., M.D.; J. Milne, F.R.S., F.G.S. D.Litt.—Monsieur L. Duchesne, Member of the Institute of France, Director of the Ecole Française de Rome; Prof. D. Comparetti, Senator of the Kingdom of Italy, Member of the Academy of the Lincei.

Special lectures: "Herbert Spencer" lecture, by Hon. Auberon Herbert; "Ford" lectures, by F. Haverfield (Christ Church), on "Roman Britain" (in 1907).

MANCHESTER.

Sir William Mather was the principal speaker at the speech day of the Broughton and Crumpsall High School for Girls on June 21. Referring to the academic successes gained during the year, he said he could not forget the larger view of education of which English people were just becoming aware. "I defy any one," he said, "to look at any weakness in man or woman, any imperfection in human society, without being able to apply to these great problems one panacea—viz., education, properly understood."

At the Manchester High School for Girls Miss Hilda Johnstone, M.A., has been appointed one of the history mistresses. Miss Mary

Lilley, B.A. (Fellow and Scholar of University College, London, and Scholar of Somerville College, Oxford), has been appointed on the classical staff. Girls at the school have won the Seaton Scholarship for Classics, the Jones Scholarship for History, and the Alice Fay Exhibition, all at the University of Manchester.

The appointment of Canon Welldon to the Deanery of Manchester places an ex-Head Master of Harrow on the governing body of the Manchester Grammar School. Dr. Welldon has already written to the

High Master of the Grammar School to say with what pleasure he anticipates once more coming into touch with the life of a great school. Among recent successes of Grammar School boys may be mentioned the winning of the Simpson Exhibition and the Theodores Exhibition at the Manchester University, both for modern languages, and of a major County Council Scholarship given by the West Riding. In Part I. of the Natural Science Tripos one Mancunian appears in the First and one in the Second Class, and the first of these has won an additional scholarship at Emmanuel as well as the Manley Prize for anatomy and physiology. In the second part of the Historical Tripos there is one name in the Second Class. The American Ambassador had accepted the invitation to distribute the school prizes at the annual speech day. As he finds he will not be able to be present, Lord Stanley of Alderley has kindly consented to do so.

At the annual founders' day service in the Cathedral, the Bishop of Carlisle, who was the preacher, and who is himself an Old Mancunian, gave some most interesting reminiscences of his schoolboy days. Speaking from the words: "The power of an endless life," he said that next to his home the most powerful influence in his life had been his old school.

At the University an influential Committee has been formed to raise a fund for the erection of adequate buildings for a Men's and Women's Union and a refectory. The cost of the refectory is to be £8,000, and of the

Women's Union £5,000, and both these sums are already provided. It is now proposed to raise £10,000 for the men's wing, and towards this sum the Executive Committee subscribed upwards of £1,000 among themselves. Arthur Jones, B.A., has been elected to the Jones History Fellowship, and Osborn Waterhouse, B.A., to the John Bright Fellowship.

The first business of the Education Committee at their last meeting was to elect a Vice-Chairman in place of the late Dean of Manchester. The vote was by ballot, and

Sir Thomas Shann, ex-Lord Mayor of Manchester, was chosen. The principal business under discussion was the question of a new municipal secondary school for girls. There was a proposal to place the new school on a central site, and the Board of Education have tried to dissuade the Committee from carrying out this plan. Sir James Hay explained that the Board had at first approved, and that in consequence matters were in a forward state. Eventually the proposal as submitted by the sub-committee was approved.

SCOTLAND.

Two Professors of Glasgow University have, after long service, resigned their Chairs. Prof. G. G. Ramsay, who

was the senior Professor in Scotland, having occupied the Chair of Humanity at Glasgow for forty-three years, has found it necessary to retire on account of ill health. He succeeded his uncle, Prof. William Ramsay, who was appointed in 1831, and uncle and nephew have thus taught Latin in the University for seventy-five consecutive years. Prof. Ramsay's resignation causes much regret to his old pupils and colleagues. He has been a successful teacher, and he has done admirable work in encouraging and developing secondary education in the West of Scotland. In all progressive educational movements he has taken a strong interest, and by writing, speech, and action he has done much to bring the Universities and the schools into close and harmonious relation. He was one of the founders of the Classical Association of Scotland, and since its foundation he has been its President. There is also much regret on account of the resignation by Prof. J. G. McKendrick of the Chair of Physiology, which he has held for thirty years. He has done excellent service to the University, both by his remarkable skill as a teacher and by his valuable research work, especially in connexion with the physiology of hearing and of sound-production. Under his direction the new physiology laboratories of the University are approaching completion, and he leaves to his successor the use of the extended opportunities they afford for teaching and research. The appointment to the Humanity Chair is made by the University Court, and the patronage of the Physiology Chair belongs to the Crown.

The Rev. Ernest F. Scott, B.A. Oxon., of the South U.F. Church, Prestwick, has been appointed to the Alexander Robertson Lecture-ship in Apologetics.

The University Court has raised the fees for each class in the Faculty of Arts from £3. 3s. to £4. 4s.

(Continued on page 476.)

J. M. DENT & CO.'S NEW EDUCATIONAL BOOKS.

DENT'S MODERN LANGUAGE SERIES.

Edited by Professor WALTER RIPPMMANN, M.A.

A Series based on the principles advocated by the pioneers of the "reform movement" in Germany (Viëtor, Franke, Walter, &c.), by the Association Phonétique Internationale, and by a large number of prominent teachers in France, Switzerland, Scandinavia, and America. Some of the latest additions are.

SHORT FRENCH READERS.

Well graduated and suitably edited, with Footnotes in French and Reform Exercises on the Text.

Per Vol., 4d. net, 48 pp. each.

Contes de Perrault I. L'Éléphant Blanc.
" " " II. Histoires Simples.

Per Vol., 6d. net, 60 pp. each.

Le XIX^{me} Siècle. La Révolution.

The *School World* says:—"Messrs. Dent have entered the field of the short French reader somewhat late in the day, but the result is very satisfactory. The notes are in excellent French."

SUPPLEMENTARY EXERCISES TO DENT'S FIRST FRENCH BOOK. By H. C. NORMAN, B.A. 6d. net.

The *Guardian* says:—"Teachers who have been using Messrs. Dent's excellent 'New First French Book' will welcome this little book, in which further prominence is given to various points which the writer's experience has shown him to need driving home."

FIRST EXERCISES IN FRENCH GRAMMAR.

By Miss F. M. S. BATCHELOR. 1s. net.

HINTS ON TEACHING GERMAN.

By W. RIPPMMANN, M.A. New and Revised Edition. 1s. 6d. net.

The *Athenæum* says:—"Particularly good and practical."

RIPPMMANN'S PICTURE VOCABULARY.

French or German. Per Vol., 1s. net.

The *School World* says:—"A splendid idea, well carried out. Prof. Rippmann has coupled the word with the picture."

FABLES DE LA FONTAINE. By T. KEEN. 1s. 6d. net.

FIRST SPANISH BOOK. By F. R. ROBERT. 2s. net.

THE SOUNDS OF SPOKEN ENGLISH.

By W. RIPPMMANN, M.A. 1s. 6d. net.

Contains a brief account of the organs of speech and of English speech sounds, and provides a simple course of ear training. Specially useful to the teacher of modern languages, as the power to impart a foreign pronunciation depends to some extent on the teacher's knowledge of the habits of speech acquired by the pupils through the use of their mother tongue.

The *School World* says:—"Prof. Rippmann is an acknowledged authority, and this book was badly wanted."

The *Guardian* says:—"The subject is treated in a pleasant and sympathetic manner, and quite without pedantry. . . . Mr. Rippmann is to be congratulated upon the production of a fresh and interesting little work."

The *Journal of Education* says:—"Supplies a real need. . . . We hope the book will be largely adopted in pupil-teacher centres and schools where provincial or vulgar pronunciation has to be corrected."

A New Series, edited by Prof. RIPPMMANN, on the lines of "Dent's Modern Language Series."

DENT'S FIRST LATIN BOOK.

By H. W. ATKINSON, M.A., and J. W. E. PEARCE. With 12 Coloured Illustrations. 2s. 6d. net.

The *Schoolmaster* says:—"A unique book . . . it represents a wonderful stride made in teaching Latin."

The *School World* says:—"A step in advance of the ordinary manuals."

Ready in a few days.

DENT'S LATIN PRIMER. By E. S. FOSTER, B.A.

For children who commence Latin early. Fully illustrated.

DENT'S NEW SERIES OF MATHEMATICAL AND SCIENTIFIC TEXT-BOOKS.

Edited by W. J. GREENSTREET, M.A., F.R.A.S., Head Master of Marling School, Stroud, Glos., Editor of the "Mathematical Gazette."

PRACTICAL NATURE STUDY FOR SCHOOLS.

By OSWALD H. LATTER, M.A., Senior Science Master at Charterhouse, formerly Tutor of Keble College, Oxford.

Part I. (Pupils' Book), 2s. 6d. net; Part II. (Teachers' Aid and Answers), 6s. net.

The *School Guardian* says:—"We heartily commend this book to all teachers who include Nature Study in their time-tables."

A FIRST BOOK OF GEOMETRY.

By W. H. YOUNG, Sc.D., and Mrs. YOUNG, Ph.D. 1s. 6d. net.

The *Schoolmaster* says:—"The arrangement and treatment are original. The authors never depart from the principle that the children must observe carefully and then formulate ideas."

PRACTICAL PHYSICS.

By F. J. TRISTRAM. 1s. 6d. net.

Education says:—"This admirable little book approaches very near to our ideal of an elementary text-book of Practical Physics. . . . Fortunate, indeed, is the student who has his powers of observation and manipulative skill trained on the lines indicated in this excellent little book."

Just ready.

LIGHT.

Glasgow University and the Technical College have suffered an additional loss in the death of Mr. James Blyth, LL.D., who was Professor of Natural Philosophy in the Technical College and Lecturer in the same subject at Queen Margaret College.

At Edinburgh University a Lectureship on General and Experimental Psychology has been established, mainly from funds provided by the trustees of Mr. George Combe, author of "The Constitution of Man," and well known many years ago as the leading advocate of phrenology in this country. Mr. Combe was himself a candidate for the Chair of Logic and Metaphysics at Edinburgh in 1836, when Sir William Hamilton was elected. Though his phrenology is now discredited, it was in some ways an anticipation of the more scientific work that has since been done in experimental psychology, and it is therefore fitting that the Combe trustees should aid the foundation of the new lectureship, which is the second of its kind in Scotland. In founding the lectureship, the University has kept specially in view its value in connexion with the training of teachers. The salary of the lecturer is £300 a year, and the University is providing suitable laboratory accommodation and equipment.

In connexion with the George Buchanan Quatercentenary, to be celebrated at St. Andrews on July 6, a prize of 100 guineas was offered last year by Dr. Steele, of Florence, for the best essay on "Sixteenth-Century Humanism as illustrated by the Life and Works of George Buchanan." The competition was open to all *alumni* of the Scottish Universities. The adjudicators, who were professors of the four Universities together with Dr. Steele, have unanimously awarded the prize to Mr. Thomas D. Robb, M.A., Paisley, a graduate of Glasgow University. Mr. Robb is a teacher.

The new Regulations for the Training of Teachers in Scotland have been submitted to Parliament. They are, in their main substance, unchanged from the draft form in which they were issued some months ago (*cf. The Journal of Education*, page 198). The principal modifications are the omission of the chapter regarding "candidates on probation" (*i.e.*, children selected and educated with a view to their becoming junior students in training) and the extending of the time of grace for the pupil-teacher system. But arrangements are made which will facilitate the obtaining of a sufficient number of junior students, and the pupil-teacher system has been granted merely a respite, and not a

reprieve. Effect has been given to many of the amendments in detail which were suggested by the Provincial Committees, and the regulations for the training of secondary teachers have been improved as regards such subjects as English and modern languages, while the important subjects of history and geography have been added to those for the teaching of which special training is to be given. One is glad to notice a very important addition to the article on the "further instruction of teachers in actual service." The Provincial Committees are now empowered to expend money not merely in providing classes for the further instruction of such teachers, but also "in assisting individual teachers to pursue their studies abroad." This wise provision will be of great value to teachers of modern languages. The new Regulations as a whole will have profound effects for good on Scottish education, and it is satisfactory that the Education Department has substantially maintained them against the pressure of politicians and ratepayers in search of a grievance.

IRELAND.

The announcement of the results of the examinations for Fellowship and Scholarships was made as usual on Trinity Monday. The new Fellow is Mr. R. M. Gwynn, son of Dr. Gwynn, of Trinity College, who last year also took first place, but unaccountably was not appointed Fellow by the Board. He has had thus to spend another year studying for Fellowship. His total (Classics, Mental Science, and Hebrew) was 963. The Madden Prizeman is Mr. G. R. Webb, whose total (Mathematics and Mental Science) was 805. The only other candidate was Mr. R. W. Tate, a First Class Classical Tripos Cambridge graduate, who competed this year for the first year, making the good total of 648, and winning a £60 prize. There were ten candidates for the five Mathematical Scholarships, fourteen for the eight Classical, and four for the one in experimental. The first Mathematical Scholar is Mr. S. G. Stewart, educated at Mountjoy School, Dublin, and the first Classical Mr. M. A. C. Wilkins, son of the Head Master of the High School, Dublin, who himself—one of three distinguished brothers—took Scholarship thirty years ago, and consequently dined on Trinity Monday with his son at the dinner given by the Fellows to the surviving Scholars of the years "six." The second Classical Scholarship was won by Miss Olive Purser, of Alexandra School and College, a young lady

Makers of the well-known PATENT SLIDING and

Folding Partitions for Schools, &c.

OVER 3,800 AT PRESENT IN USE.

Our Patent Sliding and Folding Partitions have been on the market for a number of years, and have so successfully stood the test of time that they have been adopted by more than—

600 School Boards, Education Committees, and County Councils.

250 have been supplied to the Glasgow School Board.

700 Architects have used and recommended them.

HIGHLY APPROVED BY THE BOARD OF EDUCATION, AND RECOMMENDED BY H.M. INSPECTORS OF SCHOOLS.

Illustrated Circular and Estimates Free on receipt of Particulars.

of nineteen, who is thus the first woman to hold a T.C.D. Scholarship. She belongs to a family distinguished in academic work, and her marks—175½—were considerably higher than those of the first scholar for the past four years. Mr. Wilkins's total—196½—was unusually high.

The terms of reference of the Commission are as wide as possible:

T.C.D. Royal Commission.

"To inquire into and report upon the present state of Trinity College, Dublin, and of the University of Dublin, including the revenues of the College and of any of its officers, and their application; the method of government of the University and of the College; the system of instruction in the College, and the teachers by whom it is conducted; the system of University examinations, and the provision made for post-graduate study and the encouragement of research; and also to inquire and report upon the place which Trinity College, Dublin, and the University of Dublin now hold as organs of the higher education in Ireland, and the steps proper to be taken to increase their usefulness to the country." It is added officially that the inquiry is to complete the work of the Royal Commission of 1901, and that the Commission will consider the evidence and report of that inquiry, and frame their own report as based on the whole investigation into Irish University education represented by the two Commissions. It is hoped that the report may be presented at no distant date. The chairman is Sir Edward Fry; the members, Chief Baron Palles, a Roman Catholic T.C.D. graduate, one of the Intermediate Board; Sir T. Raleigh, of Oxford; Sir A. W. Rücker, Principal of the University of London; Dr. Jackson, of Cambridge; Dr. Butler, late of Edinburgh (who acted on the Commission of 1901); Dr. Douglas Hyde, President of the Gaelic League; Dr. D. J. Coffey, of the Catholic University School of Medicine; and Mr. S. B. Kelleher, F.T.C.D. Exception has been taken by Conservatives to Dr. Hyde's appointment. Though a graduate of Trinity College, he has shown hostility to the College on account of its Anglicizing tendency and its neglect of Irish studies. Dr. Hyde is devoting his life to the Irish language revival, and his sole interest in the inquiry will be in endeavouring to get the Irish language, history, archaeology, and literature made a prominent feature in the curriculum of Trinity College. The T.C.D. Board were asked to elect a representative, and, to every one's surprise, by the casting vote of the Provost, appointed Mr. Kelleher, who only became Fellow in 1904, knows little about the finances, constitution, and administration of the College, and is a Roman Catholic.

The members of the Commission have already held a meeting in London, and have asked for documentary evidence to be handed in before the end of July. They will commence their sittings towards the end of the Long Vacation. Mr. J. D. Daly, who acted so efficiently in the three previous Commissions on Irish Education, is the secretary.

The extraordinary *impasse* produced by the Irish members and the action of Mr. Bryce in the House in reference to the Intermediate rules seems likely to have far-reaching consequences. It appears that it is a provision in the Act of 1878 that the rules and

programme shall lie on the table of the House for forty days, and cannot come into operation without being sanctioned by Parliament. This regulation has, it seems, not hitherto been carried out. Now that it has been discovered by the "Irish" party, they will probably use it as a valuable weapon. The prospect of having the secondary education of Ireland, and the details of the curriculum, management, and endowment of the school thus placed at the mercy of chance in such a tribunal, wholly inexpert in educational work, ignorant of the special conditions, and also, on the Irish side, warped by political factions and crazes, is, indeed, alarming, and such a monstrous state of affairs as would not be tolerated in any other civilized country. But anything, no matter how disastrous, is possible in Ireland! Mr. Bryce could have averted the present crisis by supporting the Board; then all the Government party would have voted with him, and defeated those desirous of changing the rules. This he did not do, and, consequently, in strict legality the Board must submit to the action of Parliament as laid down in the Act. The remedy is, of course, to alter the provision in the Act. Meantime, the Board met, and declined by a large majority to alter their rules. An unofficial account of this being published in the *Irish Times*, Mr. Bryce was violently attacked by the Irish party in the House. He stated, as the only information he was able to give, that the Board had represented that there would not be time to alter the rules and submit them for forty days to Parliament before the schools reopened in the latter half of August. They therefore proposed that the rules for 1906 should be allowed to hold good for 1907. This, however, the Irish party refuse. They demand that the changes in the new rules passed by Parliament shall be carried out; that the Board, if they refuse to do this, shall be called upon to resign, and a Provisional Committee be appointed to administer intermediate education until a popular Board "responsible to the Irish people" shall be formed to administer primary, technical, and secondary education. Mr. Bryce, by his unwary action, is thus likely

Just Published. Demy 4to, cloth, price 6s. net.

A GEOGRAPHY AND ATLAS COMBINED.

A Progressive Course OF Comparative Geography ON THE CONCENTRIC SYSTEM.

Illustrated by 177 Pictures and Diagrams in the text, and accompanied by 172 Maps and Diagrams in Colour, with Index, the whole forming a Geography and Atlas combined.

By P. H. L'ESTRANGE, B.A.,

Assistant Master at Malvern College; late Exhibitioner of Queen's College, Oxford.

SPECIAL FEATURES.

1. Provides automatically a *fixed Scheme for Schools* without restricting the freedom of the Teachers.

2. Contains a series of 172 Maps and Diagrams, printed in Colours on 69 Plates, with *Questions and Exercises* to accompany each. The Plates include *Physical, Climatic, and Commercial* Maps.

3. *Equal-area Projections*, with lines of Latitude as straight lines, are generally used. Mercator's Projection not used.

4. *The Regional Method* is applied. Areas with similar conditions treated side by side. All distances, heights, areas, &c., compared with a *known unit*.

5. *Facts not related, but inferred* by questions from the Maps.

6. *Cause and Effect* insisted upon throughout. All matter arranged on the *Concentric System*, i.e. A for Junior Course; A and B for Middle Course; A, B, and C for Senior Course. The names on the Maps are printed in different colours according to the same divisions, in brown for A, in blue for B, in red for C.

7. *177 Illustrations in the Text*, mostly from Actual Photographs, with Questions below them.

8. *Six Parts*, one for each term of a two-years' course.

9. *Over 1,300 Questions and Exercises* on Tracing Paper, Squared Paper, and by Protractor.

10. *Test Maps* for all Fact Maps, with symbols arranged in a rational order. The number of names is far less than in the ordinary Text-Book.

Detailed Prospectus, with specimen Coloured Map and specimen pages of Illustrations and Exercises, will be forwarded gratis on application.

All interested in the subject of Geography should send for Messrs. Philips' Descriptive Pamphlet, entitled "*Modern Methods of Teaching Geography*," which will be sent post free.

The Best Holiday Companion.

GOERZ TRIEDER BINOCULARS.

**High Power. Large Field.
Light and Compact.**

THE FINEST BINOCULAR FOR NATURE STUDY AND GENERAL PURPOSES.

"With my glasses—the GOERZ Trieder Binocular No. 30, 9x—I have been able to distinguish sea-birds on their nests two and a half miles away; at a distance of a quarter of a mile a bird the size of a sparrow can be recognized. No better aid for observing such far-away objects can be obtained or desired."—Mr. OLIVER G. PIKE, in *Woodland, Field, and Shore*.

"I was the happy possessor of a pair of GOERZ Trieder Binoculars. Every one praises his own glass, but of all those I have tried none has been so good as this glass for my purpose."—Mr. HARRY F. WITHERBY, F.Z.S., M.B.O.U., writing in *Knowledge* upon his Ornithological Tour through the Soudan.

"This is the second of your Trieder Binoculars I have had, and I am never tired of recommending them to my friends, as I consider them simply perfect. . . . for all purposes on land, sea, or the heavens, it is quite a delight to use it."—T. M. LONGBOTTOM.

"I have two Goerz Monoculars, which are *exquisite*. I have never seen anything to approach them in light, width of field, and definition."—A MEMBER OF THE B.A.A.

to have the whole Irish educational problem suddenly thrust on him for settlement. It may be added that no section would more disapprove of the formation of such a "popular" board than the Catholic Church, as it would remove education from their control. The comic element in the situation is that, in the rules for 1906 which the Irish members indignantly refuse, Irish is given the very prominence which they objected to see altered in the new rules.

During the Whitsuntide holidays Alexandra College celebrated the fortieth anniversary of its foundation. A public meeting was held on June 1 at which the Lord Lieutenant, the Chief Secretary, and Dr. Butler spoke. Hopes were expressed that in the coming Royal Commission, in connexion with the women students of Trinity College, some recognition might be given of the valuable work in higher education done by Alexandra College, either in giving it endowment or in bringing it into connexion with the University of Dublin. In the evening a dinner of over two hundred old students was held. The following day a meeting of the Alexandra College Guild occupied the morning. In the afternoon a garden party in honour of the College was given by the Countess of Aberdeen at the Viceregal Lodge, and in the evening a large *conversazione* took place at the College.

SCHOOLS.

BRADFELD COLLEGE.—The following have been elected to Foundation Scholarships, value 90 guineas per annum:—S. M. Bourne (Rev. R. J. Martin's, St. Leonard's School, Bexhill), A. Furze (Mr. A. M. Kilby's, Lindisfarne, Blackheath), G. A. C. Preston (Mr. E. W. M. Lloyd's, Hartford House, Winchfield). To a Warden's Exhibition, value 50 guineas per annum: L. B. Frere (Rev. R. J. Martin's, St. Leonard's School, Bexhill). To General Exhibitions, value 30 guineas per annum: D. R. McGregor (Mr. A. G. Paterson's, Cholmeley House, Eastbourne), C. Hupfeld (Mr. R. H. Wyatt's, Streatham School, Streatham Common, S.W.), W. R. Bartram (Mr. J. H. Daniel's, Southcliffe, Filey, Yorks), E. Bagot (Mr. M. Roderick's, Praetoria House, West Folkestone), H. C. Butler and C. B. Boughton (Rev. P. R. Cleave's, Cathedral School, Llandaff).

CAMBRIDGE, LEYS SCHOOL.—June 8 was speech day, and the prizes were distributed by Sir Frederick Treves, who congratulated the school on turning out not mere scholars and bookworms, but men of

science and of business. The new chapel was to have been opened, but the ceremony has been unavoidably postponed to October 27, when Dr. Barber, the Head Master, will preach.

GIGGLESWICK SCHOOL.—The following elections to scholarships have been made:—T. J. G. Brasnett, £60 a year (Dulwich College Preparatory School); F. G. Healey, £45 a year (Lickey Hills School, Barnet Green); T. M. Macleod, £45 a year (Beverley Grammar School); E. Porham, £30 a year (Clifton College, Harrogate); G. D. L. Hunter, £20 a year (Giggleswick School, formerly of Mostyn House School, Parkgate); A. C. Pearson, £20 a year (Giggleswick School); E. L. Platt, £20 a year (Wilmslow Grammar School).

PORTSMOUTH HIGH SCHOOL.—Miss E. Eldred, B.A., and Miss John, B.Sc., have left, and the English and Science work is being taken by Miss M. Auld, M.A., and Miss M. L. Gough, Girton College. A course of training in domestic economy will begin next term for girls over the age of seventeen who have taken the ordinary school course.

PURLEY, RUSSELL HILL SCHOOL.—Speech day was on Saturday, June 23, the Hon. Mrs. Herbert Cooke, the wife of the Chairman of the governing body, distributing the prizes. W. I. Warr gained the Debenham Scholarship, held in Switzerland: A. Eveson, the Taplin Exhibition for Writing; and J. J. Jones a similar exhibition for Arithmetic. The chief item of the speeches was a scene from "Henry V." Mr. Wm. E. Hunt, of Wakefield Grammar School, has been appointed art master. Our Head Master, Mr. Charles Gutteridge, has just gone to America on an educational tour to New York and other centres. The sports day was a great success, Cecil Williams becoming the holder for the year of the Old Russellian Challenge Shield. The floor of the "John Roberts" covered playground has been paved with wood blocks at a cost of over £200. The Wallington Fire Brigade came over and gave us a display to encourage our young firemen to further efforts.

RUGBY SCHOOL.—Entrance scholarships, 1906: H. D. Schloss (Tait Scholar; Mr. Christopherson's, Lockers Park, Hemel Hempstead); P. H. Greig (Derby Scholar; Mr. Middleton's, Ellerslie, Fremington); T. A. McKee (Benn Scholar; Mr. Pitman's, Clifton); T. C. Owtram (Benn Scholar; Mr. Dealtry's, The Leas, Hoylake); M. H. K. Kane (Mr. Thring's, The Wick, Brighton); H. Morris (Mr. Wise's, Oakfield, Rugby), J. W. Greany (Mr. Pearce's, Dunston House, Ealing), and A. E. Felkin (Mr. Meeres's, Harrow View,

AN ENGLISH RENDERING OF FROEBEL'S "MUTTER-UND KOSE-LIEDER."

By FRANCES and EMILY LORD.

[This Edition contains ALL the Pictures and Music.]

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

WORKS BY THE HON. LIONEL A. TOLLEMACHE,

Author of "Benjamin Jowett: a Personal Memoir." [Fifth Edition. Revised, with Portrait. 3s. 6d. Edward Arnold.]

"Talks with Mr. Gladstone." [Third Edition, Enlarged.]

"The Boswell of our age."—*The Journal of Education*.

"Even in the matter of talking, if Gladstone is to look for immortality, the *vates sacer* to whom we must go is far less Mr. Morley than Mr. LIONEL TOLLEMACHE, who cannot have spent as many minutes in his company as Mr. Morley spent hours. But in 'Talks with Mr. Gladstone' one sees and hears the talker; here in Mr. Morley's 'Life,' we read him, and it is quite another thing."—*The Guardian*.

NOW READY.

EIGHTH EDITION. Demy 8vo, pp. 460. With Photogravures of Hon. Lionel A. Tollemache and Hon. Mrs. L. A. Tollemache. Cloth elegant, gilt top, price 7s. 6d.

SAFE STUDIES.

Contents:—HISTORICAL PREDICTION. Sir G. C. LEWIS and LONGEVITY. LITERARY EGOTISM. CHARLES AUSTIN. RECOLLECTIONS of Mr. GROTE and Mr. BABBAGE. Mr. TENNYSON'S SOCIAL PHILOSOPHY. PHYSICAL and MORAL COURAGE. THE UPPER ENGADINE. NOTES and RECOLLECTIONS of Sir CHARLES WHEATSTONE, DEAN STANLEY, and CANON KINGSLEY. THE EPICURIST'S LAMENT. POEMS by B. L. T. (Hon. Mrs. L. A. TOLLEMACHE). INDEX to the CLASSICAL and other QUOTATIONS, with ENGLISH RENDERINGS.

FIFTH EDITION. Demy 8vo, pp. 262, cloth elegant, gilt top, price 3s. 6d.

STONES OF STUMBLING.

Contents:—THE CURE FOR INCURABLES. THE FEAR OF DEATH. FEARLESS DEATHS. DIVINE ECONOMY OF TRUTH.—Appendices:—RECOLLECTIONS OF MARK PATTISON. Mr. ROMANES'S CATECHISM. NEOCHRISTIANITY and NEOCATHOLICISM: a Sequel. INDEX to the CLASSICAL and other QUOTATIONS, with ENGLISH RENDERINGS.

These ESSAYS, RECOLLECTIONS, and CAUSERIES, by the HON. LIONEL TOLLEMACHE, were collected in their original form, which, of course, did not contain the Pattison Recollections, at the late Mark Pattison's request. The Books are issued at Cost Price.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

Ealing), equal; H. G. Strauss (Mr. H. Bull's, Pinewood, Farnborough); F. C. Bourne (Rugby School). Mr. A. K. Watson, who has just been appointed Head Master of Ipswich School, will leave at the end of this term. We wish him all success in his new duties and heartily congratulate Ipswich School on having secured his services. L. F. Nalder has won the Royal Asiatic Society's Public-school Medal for the best essay on "Hyder Ali." The following Old Rugbeians have got First Class Honours in recent examinations at Oxford and Cambridge:—Oxford: Classical Moderations—G. O'Hanlon (Corpus Christi), H. N. P. Sloman (Balliol), H. H. Symonds (Oriel). Cambridge: Mathematical Tripos, Sixteenth Wrangler—G. H. Millar (Pembroke). Classical Tripos, Second Division—G. H. Clayton (Pembroke). Historical Tripos—Part I., H. B. Spens (King's); Part II., I. H. Simpson (Pembroke). Mechanical Sciences Tripos—A. D. D. Butcher (Christ's). Old Rugbeians may be interested to know that the historical spot so long known as "Butler's Leap" is no longer recognizable. The demon of modern progress has swept away the old bridge, straightened the road, and built a new bridge almost covering the "Leap."

SHREWSBURY HIGH SCHOOL.—The school celebrated its twenty-first birthday on May 18 and 19. On Friday, 18, the Old Girls and mistresses, some friends who interested themselves in the foundation of the school, the present staff, and the Sixth Form dined together. Speeches followed the dinner, and happily Miss Cannings, the first Head Mistress, and Miss Gavin and Miss Wise, her successors, were present, and spoke. The rest of the evening was occupied with musical and dramatic entertainments furnished by the Old Girls. On Saturday afternoon the Head Mistress gave an "At home" to the parents of pupils now in the school. The pupils afforded much pleasure by their performances of scenes from "A Midsummer Night's Dream" and from "Struwwelpeter." In connexion with this celebration, old pupils and mistresses contributed money to found an annual prize to be awarded in the school.

ST. OLAVE'S SCHOOL.—A. Hughes and N. Green have gained entrance exhibitions at St. John's College, Cambridge, for Classics and Natural Science respectively. In the Cambridge Triposes, First Classes were gained by W. Burton (Third Division Classical Tripos) and H. G. Rice (Natural Science); Second Classes by F. B. Clogg (Classics), J. Griffin (Natural Science), A. E. Baker (Moral Science), N. G. Scorgie (Law), A. G. Dedman (History, Part II.); Third Classes by F. G. Forder (Natural Science) and C. H. Pitt (History,

Part II.). F. G. Forder has received an appointment on the staff of Charterhouse School. Arrangements have been made to establish a school camp on the South coast during the month of August.

WELLINGTON COLLEGE.—Waterloo Day was kept at Wellington College on June 18. The prizes were distributed by the Head Master, the Rev. B. Pollock, who congratulated General Miles as the first Wellingtonian who had attained that rank. F. E. Buller had the honour of receiving the Lord Roberts's prize from the hands of the donor. The King's Medal was won by Mr. H. C. Mansfield. After the distribution there was a garden party and an assault at arms in the gymnasium.

WINCHESTER COLLEGE.—The English verse prize on "Letizia the Mother of Napoléon" has been awarded to Hon. R. Palmer. The Sixteen Club has debated "The New World," introduced by F. P. Robinson. We are looking forward to an extra half-holiday for the unwonted success of a Senior Wrangler; we are also looking forward with mixed feelings to a new leaving certificate examination in July. Glee Club are practising Parry's "Pied Piper of Hamelin," and find it no easy matter.

WOOLWICH POLYTECHNIC SCHOOL.—Ethel Clothier has been awarded a West Scholarship in English and History at University College, London.

[Our Welsh letter was received too late for insertion.]

PRIZE COMPETITIONS.

The Translation Prize for June is awarded to "Emil."

The winner of the Translation Prize for May is H. M. Buller, Esq., 16 Mortimer Road, Clifton, Bristol.

The winner of the Prize for the Mathematical Problem is Ralph J. Beevor, Esq., The Limes, Weybridge, Surrey.

Dans les époques classiques, lorsque les écrivains s'efforcent de retrouver par l'étude les lignes simples et sévères des anciens poètes, ils retombent souvent dans un excès fâcheux, dans l'ennui, dans la

sécheresse. Une idée de fausse noblesse semble les poursuivre, le familier les effraye, ils écrivent dans un dialecte savant comme celui des brahmes de l'Inde. Le bon goût est une belle chose; cependant il n'en faudrait pas abuser: à force de bon goût, on arrive à se priver d'une multitude de sujets, de détails, d'images et d'expressions qui ont la saveur de la vie. La belle et riche langue du XVI^e siècle, blutée et vannée par des mains trop méticuleuses, pour quelques mauvaises herbes qu'on en a retirées, nous paraît avoir perdu beaucoup d'épis pleins de grains d'or. Nous sommes de ceux qui regrettent que Malherbe soit venu. Un grand et admirable poète, Mathurin Régnier, a exprimé la même idée en vers d'une énergie et d'une vigueur surprenantes. L'influence de Louis XIV n'a pas toujours été heureuse sur la littérature et les arts de son temps. La perruque du grand roi y domine trop. La majesté, l'étiquette, la convention, ont quelque peu chassé la nature. Les arbres du parc de Versailles portent des boucles et des frisées comme les courtisans; les poèmes sont tracés au cordeau comme les allées. Partout la régularité froide est substituée au charmant désordre de la vie; la volonté d'un seul homme remplace le caprice individuel; Louis XIV, qui se laissait bénévolement personifier sous la figure du soleil, avait plutôt l'amour du faste que celui de l'art. Il n'était pas doué de l'intelligence passionnée des Jules II, des Léon X. Il savait qu'il entre dans la composition de tout beau règne une certaine quantité de poètes, de prosateurs, d'architectes, de statuaires et de peintres, et il se procura les artistes dont il avait besoin pour sa gloire, car les grands rois font les grands artistes; ils n'ont qu'à vouloir: un regard d'attention, une bonne parole et une poignée d'or suffisent pour cela.

By "EMIL."

In classical epochs, when writers force themselves by study to recapture the simple and severe lines of the ancient poets, they often fall into an extreme much to be deplored, and become dry and tedious. A false idea of the sublime seems to pursue them: they shun the familiar and write in a learned dialect, like that of the Brahmins of India, comprehensible only to the initiated. Good taste is a beautiful thing, but it can be abused: in the name of good taste we may end by cutting ourselves off from a multitude of subjects, details, images, and modes of expression which exhale the very spirit of life. The rich and beautiful language of the sixteenth century, sifted and winnowed by a too nice fastidiousness, was purged indeed of some ill weeds, but seems to me to have lost at the same time many ears full of golden grain. I am one of those who regret the advent of Malherbe. A great and justly admired poet, Mathurin Régnier, has expressed the same idea in some singularly energetic and powerful lines. The influence of Louis XIV. on the literature and art of his time was not always beneficent. We never lose sight of the figure of the great King in his flowing perruque. The awe of majesty, etiquette, convention have, in a measure, banished Nature. The very trees in the park at Versailles are crimped and curled like the courtiers; and poems are constructed by line and rule as its walks are laid out. We look for the charming disorder of real life, and find everywhere cold regularity: the will of one single man usurps the place of the caprice of the individual. Louis XIV., who graciously deigned to allow himself to be set forth under the figure of the sun, loved pomp rather than art. He was not endowed with the impassioned intellect of a Julius II. or a Leo X. He knew that no reign which can be called great is without a certain number of poets, prose writers, architects, sculptors, and painters; and he set himself to furnish his throne with those artists necessary to his glory. For great kings make great artists: it needs only an exercise of the sovereign will. An approving glance, a gracious word, a handful of gold, and the thing is done.

We classify the 181 versions received as follows:—

First Class.—Ilex, E.M.M.C., Thistle, E.G.M., Gothicus, Sirach, Polygala (H), cos (A+B), Vesuvius, Eicarg, Menevia, H.J.K., Sorbonne, Rursus, Candida, Fortune le veut, E.H.O., Fortes et Fidelis, Chingleput, Plum Tree, M.E.L., Silverpen, Emil, Repente, Modreb, Beta.

Second Class.—Hilly, Worthing, Taugenichts, T.V.D., Lob, W.E.G., Machakos, Una, M. de C., White Heather, Quis, O.L., M.B., M.E.T., Sarum, Felicia, Lethe, Obba, Desper, J.E.C.M., Jane Lesah, D.K., Carky, J.Q., Guepe, Dilettante, Stedye, W.G.M., R.E.D.D., Riane, Cosy, La Straniera, Via Frattina, Dickie, Aiglon, Athos, Carl, Paquerette, Chestnut, Tête Blanche, J.H.J., Cyrano, Bia, Madeleine Bastille, O.P.M., Brynglas, Rose Julia, Prig, Organ, Roida, Ixe, Altnacaille, H.K., Alpha, Psyche, Odetta, Essay, Wharfedale, I.H.H., Arelata, Philosopher, Carol Ward, M.G., Wilts, R.J.P., Shakspeare.

Third Class.—V.G.S., Leander, Zilpah, Kisa, Nipul, Douteux, Ruby, K.M.L., Fjube, Trofrida, Emilia, Evadne, Rosa, Hilder, C.H.T., Bianca, Fleur-de-Lys, Stickler, Tircis, D.B., Bruno, K.A.B., Gretchen, N.B., Blank, Utilitas, Thérèse de Lisieux, C'est moi, Marguerite, Tim, Star Gazer, F.T., L'Epi, La Chercheuse, Saintes, J.K.M.B., D.A.J.K., A.M.C.D., Great Western, Earnest, Teutor, Chirrup, Sophonisba, Jack, Βατραχος, Narcissus, Mars, España,

Yaymaca, Hallé, Ecliptic, Squeeks, Abdul, Crocodile, Max, Enoch Arden, Hovis.

Fourth Class.—G.R.M.C., Françoise, Horatio, Senator, A. J. Richards, Pallas Athene, V.M.S., Vivian, Hab, M.E.P., B.W., St. Clair, E.M.B., Rustic, Pamela.

Fifth Class.—Gala, S.T., Uvula, Lassie, Tip, Balaam, P.M.E., Donny, Maude, Jasper, Théo, Tron, Fatima, Dulwich, Juvenis, Favor, Tis.

The extract from Gautier was easier than the average, as evidenced by the number of Second Classes attained. Most sentences went straight into English: the difficulty lay in finding the *juste mot* for each word and phrase. Thus, in the first sentence there is no need to change the French order. "In an age of classical revival" strikes the keynote. *S'efforcent*: not "force themselves," but "strive to recapture by dint of study." "They fall into a grievous excess, into tediousness and dryness," is very clumsy; better turn—"They run into extremes and become dry, wearisome, and distasteful." Many changed the tense, and several mistook lines (of statuary) for lines of poetry. *Une idée*: "They seem possessed by an ideal of false sublimity and in constant terror of the commonplace, and they employ a learned jargon like that of the Baboo." *A force de bon goût*: "by dint of good taste" is obviously inappropriate; "a too rigid adherence will lead us to abjure a number of topics, of incidents, of metaphors and phrases which are the very life-blood of literature." *La belle*, &c.: Gautier's metaphor does not go on all fours; language is first the grain that has been winnowed and then the cornfield that has been weeded. In translation we may gloss over the slight inconsistency by making two sentences of it: "has been too fastidiously sifted and winnowed; in ridding it of some ill weeds, we seem," &c. *Soit venu*: "the advent, or coming, of Malherbe," an allusion to a famous passage in Boileau:

"Enfin Malherbe vint, et le premier en France
Fit sentir dans les vers une juste cadence."

La perruque: numbers watered this down into "the influence," "the prejudice," &c. Of course, we must keep the full-bottomed wig of "le Grand Monarque." *La majesté*: "courtliness." *L'intelligence passionnée*: "keen intellectuality." *Ils n'ont qu'à vouloir*: "their word is law," or "they can create at will." Some dozen translated *boucles* "buckles," and three turned *Malherbe* into "wild carrots."

A Prize of Two Guineas is offered for the best translation of the following passage from Philippe Monnier's "Le Quattrocento":—

Une histoire ainsi conçue est extraordinairement intéressante. Elle est très édifiante aussi. On y voit l'impie déracinée et le christianisme victorieux. On y voit surtout des coups d'épée, des corps percés de part en part, des hommes fendus en deux d'une seule botte—crâne, ventre, cheval. On se crache au visage, on se tire la barbe, on a peur de rien; on en vient tout de suite aux invectives et aux mains; on se cogne, on se poche, on se bosse, on se coche, on s'écharpe, on s'enfoncé, on s'abime, on s'estourbit, on s'assomme; atouts et claques, calottes, tapes, gifles et mornilles, horions et nions, frottées, fessées, rincées, rossées, mêlées, raclées et giroflées; coups portés, coups parés, coups fourrés, coups secs, coups au morion; coups de revers, de travers, de pointe, d'estoc, de taille; coups sur coups, coups pour coups. Il y a des destriers qui franchissent les fleuves d'un seul élan, des monstres à gueule de lion et à corps de serpent tout en braise, des géants qui mangent de la chair humaine. Il y a des naufrages, des tempêtes, des palais enchantés, des armes ensorcelées, des musiques, des carrousels, des jeux d'échecs, des jardins de printemps, des grottes, des voleurs, des pavillons brodés et des blondes filles de roi. Tout ça est vrai, véritable, arrivé. Il n'y a pas moyen d'en douter. On vous produit les sources. On vous cite les témoignages. On vous donne les preuves. On vous indique les noms. On vous fournit les mesures. Et quand les auteurs sont en désaccord, on vous le dit. Il faudrait être fou à lier pour mettre en suspicion de pareilles choses si bien établies et reconnues, qui sont selon la vérité et selon la carte. Le peuple y croit. Il ne branle pas. Il ne bronche pas. Muet, sérieux et recueilli, les yeux agrandis, il écoute, et par sa bouche ouverte la salive coule.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

Those in the First Class are entitled on application to a copy of "Essays in Translation."

All competitions must reach the Office by July 16th, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

VISIT OF FRENCH PROFESSORS.

THE long expected visit of French professors and teachers in secondary schools occupied the whole of Whitsun week. Over two hundred, including ladies, were entertained by the University of London and the Modern Language Association. The origin of the visit was explained in our last number, and it is only necessary here to state that representatives of the University of Paris, of provincial Universities, and of the Collège de France were the guests of the University of London; while members of the Société des Professeurs de Langues Vivantes and of the Guilde Internationale were the guests of the Association. M. Liard and some of the most distinguished guests received and accepted a double invitation. The principal functions, such as the reception at the Foreign Office, were attended by both bodies, but the reception by the King at Windsor was confined to the University visitors. It is not possible for us to give more than a brief summary of the proceedings and of the most important speeches. Even the condensed report in the *Times* occupies many columns. Delightful as the visit was—at least to the entertainers, and, we hope, no less to the entertained—it was more of a ceremonial and social than educational character, and, charming as was the oratory to hear, yet the best after-dinner speeches will rarely stand the test of print.

The following is a list of the most distinguished visitors:—*Ministry of Public Instruction*: M. Bayet, Director of Superior Instruction; M. Rabier, Director of Secondary Instruction; M. Firmery, Inspector-General of Modern Language Teaching (German); M. Hémon, Inspector-General of Literature Teaching; M. Hovelague, Inspector-General of Modern Language Teaching (English). *University of Paris*: M. Liard, Vice-Rector; M. Appell, Dean of the Faculty of Science; M. Croiset, Dean of the Faculty of Letters; M. Lippmann, Professor of Physics; M. Lanson, Professor of French Literature. *Collège de France*: M. Léger, Professor of Slavonic Languages and Literature; M. Picavet, Secretary and Editor of *Revue Internationale de l'Enseignement*. *Société des Professeurs de Langues vivantes*: M. Morel, Professor of English at the Lycée Louis-le-Grand; M. Garnier, Secretary. *Guilde Internationale*: Miss E. Williams, Directress; M. Gautier, Professor at the Lycée Louis-le-Grand.

The main body of visitors arrived on Monday afternoon. They were met at the Victoria Station by the authorities of the University of London and officers of the Modern Language Association. Carriages were in waiting to convey them to the Royal Palace Hotel, Kensington, where rooms had been retained for all the University guests.

In the evening there was an informal dinner. The toast of "Our Guests" was proposed in French by Sir WALTER PALMER (Chairman of the Reception Committee), and was responded to by M. BAYET, M. LIPPMANN, M. MOREL, M. GAUTIER, and others. M. BAYET remarked that the phrase *entente cordiale*, which now seemed so natural, would have moved diplomatists of a century ago to laughter; and, if there was a domain in which the *entente cordiale* had its place, it was pre-eminently the domain of letters, science, and art. M. Lippmann spoke in excellent English, not only idiomatic, but witty, as when he remarked that the Sorbonne has grown out of knowledge, which was the only way for a University to grow.

On the same evening the guests of the Modern Language Association were received by Mr. STORR (Chairman of Committee) and Mrs. STORR in the Library of University College, Gower Street. There was an exhibition of rare books and music. Among the performers was Miss Manuela García, the daughter of the famous centenarian.

Reception at the Foreign Office.

At noon on Tuesday Lord FITZMAURICE, representing the Foreign Office, and Mr. LOUGH, representing the Board of Education, offered to our visitors on behalf of the Government an official welcome. The representatives of the Universities of France and of the Collège de France were introduced by Sir EDWARD BUSK. This visit, he said, for the first time brought together the most ancient University of Paris and the most modern of her offspring. While England had been founding new Universities, it had been the consistent and wise policy of France, as manifested by the compromise of 1875, and by the modifications introduced by the law of 1880, to revive the glories of her old provincial Universities, some of which, like Montpellier, almost rivalled Paris in antiquity, and to make each of them a centre of intellectual life.

Prof. SADLER, on behalf of the Modern Language Association, introduced the members of the Guilde Internationale, and of the Société des Professeurs de Langues vivantes. He referred to the success of the Guilde, which had won gold medals at the Paris Exhibition and at St. Louis, and to the useful work that it was performing in familiarizing English students not only with French language and literature, but with French life. The Société des Professeurs de Langues vivantes was

pursuing the same aim in France that the sister Association, which he represented, was pursuing in England—to assert for modern languages their proper place in the curriculum and to reform the methods and organization of teaching.

Lord FITZMAURICE, who spoke in excellent French, apologized for the absence of Sir E. Grey and of Mr. Birrell, the latter of whom had intended to be present, but was to his great regret, as they were aware, absorbed in another sphere of education. He welcomed M. Liard as the learned author of a work on the theory and organization of secondary education, one who had helped to remodel higher education in France, and who had associated with the Universities technical institutions to meet the needs of the day. University reform in France had to some extent taken the form of decentralization. In London, on the other hand, we had felt the need of centralization, and the London University Act of 1899 not only established a teaching University, but attempted to organize and unify the various institutions for higher teaching of the capital. The question of provincial Universities had, however, been dealt with similarly in both countries. In 1896 the fifteen groups of Faculties became the Universities of Paris, Bordeaux, Lille, &c. In England within the last half century the three Universities of Oxford, Cambridge, and Durham had grown to nine, besides those of Scotland and Ireland. The French were our masters in education, and we followed *longo intervallo*. Between the foundations of the University of Paris and that of London more than six centuries had elapsed. Yet we might console ourselves with the reflection that when the University of Paris was founded by Philippe Auguste, its statutes were drawn up by Robert de Courson, an Englishman.

Mr. LOUGH pointed out the contrast between French and English methods and ideals of education—in France the primary, higher primary, and normal schools wholly distinct from the *lycée* and the University; the teacher a State-paid Civil servant. Either system had its merits, and either nation could learn from the other. Thus France discovered how to convert beetroot into sugar, while England, thanks to her free trade, was able to consume three times the amount of sugar per head, and to buy it at half the rate at which it was sold in Paris. He referred to the good work that had been done by Miss Williams in promoting the interchange of teachers. The Board of Education, on its part, was doing all in its power to arrange for the employment of probationary French teachers in England.

M. RABIER, M. BAYET, and M. GAUTIER replied on behalf of the visitors.

The Luncheon.

Luncheon was served to some three hundred guests in the East Gallery of the University. The room itself is not imposing, but it was gay with flags and flowers, and the academic robes of the French Universities presented every colour of the rainbow. The VICE-CHANCELLOR, who presided, gave the toasts of "The King" and "The President of the French Republic." To the latter the FRENCH AMBASSADOR responded. The CHAIRMAN proposed "Our Guests," for whom M. CROISSET replied. Mr. EVAN SPICER (Chairman of the London County Council) gave the toast of "A Welcome to London," and urged the University authorities, as the most effective means of cementing the *rapprochement* between the two countries, to make colloquial French compulsory in their examinations.

M. HOVELAGUE, who knows English and English literature better than most Englishmen, quoted most appositely a sentence from "The Newcomes": "That kindly English landscape seemed to take him by the hand as he returned from Dover to London." That day they were all Colonel Newcomes.

The speech was followed by a *ban* for the University and the Vice-Chancellor, the French equivalent for our "Jolly good fellow."

The Addresses.

The company then adjourned to the Great Hall, likewise decorated with flags and bunting for the occasion. The first speaker was the VICE-CHANCELLOR, who regretted that time would not allow him to welcome individually all the famous men who had honoured them with their company. They had hoped to see there Dr. Pierre Curie, whose fatal accident had not only robbed the University of Paris of one of its most distinguished professors, but had left the world of science the poorer.

M. LIARD, who was received with prolonged cheers, delivered an address on higher education in France. They seemed to find in it something warmer than mere scientific confraternity. The invitation of the University had been welcome, and they had gladly accepted it. The *entente cordiale* between the two countries, proclaimed first by the heads of the States, then acclaimed by the peoples, quite recently consecrated by deeds, was not a mere word, such as sometimes flew through the atmosphere of nations to vanish on the morrow. It resulted, they hoped, from lasting feelings. The invitation and the visit were a new manifestation of these feelings—a special manifestation, since it was produced on a special soil, that of education and of science, where all the peoples could meet, with no other rivalry than that of serving best the permanent interests of humanity, in which the conquests realized by each of them immediately profited all the others. They had accepted that invitation for other reasons still. First, because it was an oppor-

tunity for them to pay, in the very heart of Great Britain, in one of its most shining scientific homes, a grateful homage to British science. What did they not owe to it, since the day when, beneath the breath of Bacon here, of Descartes in France, the idols of the Middle Ages had vanished from the human mind? Newton, Priestley, Cavendish, Davy, Hamilton, Darwin, Faraday, Maxwell, to name only the greatest among the dead, and how many others still could he name among the living, in that very assembly even, all classed among the initiators of modern thought, all geniuses of the first greatness, whose intuitions had cast light sometimes on the distances of the infinitely great, sometimes into the depths of the infinitely small. They had accepted the invitation, also, to salute in our midst our men of letters, our novelists, our historians, our philosophers, and, above all, our poets. For, if we were the positive and practical nation, we were also, *par excellence*, the poetical nation, and it was from our race that had bloomed the fairest flowers of poetry that humanity had breathed since the times of Greece; and he had said truly, he of France who had written of our Shakespeare: "le plus grand de tous les artistes qui avec des mots ont représenté des âmes." They had accepted, again, because they knew that here and from us they had much to learn. They knew that some of the superiorities of our race, made of the Norman graft on the wild Saxon stock; the virility of our education, the vigour of our muscles, and that of our characters, the solidity of our public spirit, its calm and reflecting way of proceeding by patient, unshakable, far-carrying resolve; our secular love of liberty, our fecundity in private initiative, being born, growing, and bearing fruit a little by chance, it seemed at first, like varied grains scattered on the soil without preconceived design, but ending always by meeting each other and co-ordinating themselves in the best interest of the public—such was the University of London, so young and already so powerful, which was first a body of examiners, and which had become a teaching body of so original a form, which united in the vast and supple network of its eight Faculties more than twenty different establishments, almost all born before her, and in which she had caused to circulate all the sap of modern science. Finally, they had accepted the invitation in the hope of making themselves better known among us. During the last forty years there had taken place in France a great effort for the progress and the diffusion of science, for a better management of national education. In what measure had they succeeded? It was not for them to say. Besides, they would be bad judges of it. But for some time past it seemed that, more than before, people came to them to see what they had done in those matters. Without presumption they could there recognize an indication that everything was not to be despised in what they had done. M. Liard proceeded to give a detailed account of higher education in France.

Sir A. RUCKER delivered an address on "English University Education." He pointed out the variety of organization, of administration, and even of educational ideals that underlay English Universities. Oxford and Cambridge were in their earlier stages ecclesiastical institutions, and it was not till 1871 that religious tests were abolished. The system of colleges he traced to the fact that both Universities were situate in comparatively small towns. Residence was an integral part of the system, and it was not till the nineteenth century that the theory was propounded that it mattered not when or how knowledge was got, so long as it was adequately tested by independent examiners. Whatever their distinguished guests might find either to applaud or to condemn in their present system, he would ask them to remember that they were visiting this country in the midst of a creative educational era. No fewer than six Universities had been founded or reorganized in the last six years. In London we were still engaged in what the future would regard as the work of preliminary organization. Amid all this change he had no fear that their guests would report that they had seen

"Custom starving Truth;
And blind Authority beating with his staff
The child that might have led him."

But he trusted that they would trace in the variety of our University systems and in the novelty of some of them, not the caprice of disorder, but an intelligent attempt to meet needs which were not exactly the same in town and country, in north and south, in the provinces and in London.

Prof. M. E. SADLER (Past President of the Modern Language Association) delivered an address on "French Influence on English Education." He said that it was one of the paradoxes of English life that we were at one and the same time so intensely national in spirit and so susceptible to foreign influences—susceptible, but not imitative, and he thought often most really impressed by the force of what was said abroad when we looked at first sight most obstinately insular and stubbornly unimpressed. We owed much in our intellectual and social life to the influences which had poured in upon us from Italy, from the Low Countries, from Germany, from Scotland and Ireland, from America; but from no country had the intellectual influence been so persistent, so penetrating, and so challenging to our many-mindedness as the influence from France. France gave us, at one of the most critical periods of our intellectual life, the form of our

University institutions. It opened the way to us to that great scholastic philosophy for which Paris was famous. No Universities in Christendom were so closely connected as Oxford and Paris. France gave us at the critical moment our mediæval University institutions and stimulated the most characteristic part of our mediæval philosophical thought. The next great wave of French influence touched the education of boys of the upper classes, and it culminated in the publication of Locke's "Thoughts on Education" a few years before the end of the seventeenth century. As we read Locke we felt ourselves in the presence of Montaigne, just as when we read Rousseau's "Emile" we found ourselves in the presence of Locke. That was the great chain of international influence. We saw in such an idea as Chesterfield's how potent was the influence of France in influencing the education of an English gentleman. He said: "The cultivated French gentleman is your ideal—a Frenchman who, with a fund of virtue, learning, and good sense, has the manners and good breeding of his country, is the perfection of human nature. This perfection you may, if you please—and I hope you will—arrive at." He would remind them of the persistent influence of Fénelon on the ideas of the education of girls in this country. At every great stage of English education it was French influence which had come in and touched us with its challenge.

A visit was afterwards paid to the new physical and chemical laboratories of the Royal College of Science, and in the evening receptions were held by Sir E. Busk, Sir W. Ramsay, Prof. Gardner, Dr. Waller, and others, at their private residences, which were attended respectively by the Professors of each Faculty.

Dinner at the Trocadéro.

In the evening the guests of the Modern Language Association dined at the Trocadéro Restaurant. Prof. SADLER, who presided, announced that he had received a message from the President of the Société pour la Propagation des Langues étrangères en France, sending his cordial felicitations and expressing the hope that that society might receive the Modern Language Association in Paris.

The toasts of "The King" and "The President," proposed by the CHAIRMAN, having been duly honoured,

Principal GREGORY FOSTER proposed in French the toast of "The Universities of France," coupled with the name of M. Liard. He praised the methods of the University of Paris in high terms, and said that the University of London would do well to profit by the example of her elder sister.

M. LIARD said he had been reminded only that morning of the close ties that existed between the two nations. On leaving the University a military gentleman had handed him his card and claimed relationship. "You, M. Liard," he said, "are Norman; and my ancestors came over with the Norman Conquest. There is but the difference of a vowel in our names." He had done little to deserve the encomiums he had received. He had, however, been exceptionally fortunate in having enjoyed the confidence of ten or twelve successive Ministries, and had therefore some experience of matters connected with Universities and with education. He was surprised that Principal Foster should have said that it was on the University of Paris that her younger sister, the University of London, desired to base her methods. The advice he would give was—don't. The University of Paris, it was true, dated from about the end of the eleventh century; but its ancient history might, after all, be forgotten. During the sixteenth, seventeenth, and eighteenth centuries it did not count for very much, and with the Revolution, as a matter of fact, the Universities of France disappeared, having fallen out of touch with modern thought, and become obsolete. It was Napoleon I. who made one immense University which extended to the confines of his empire; so that the French Universities, in reality, dated from modern times, and the new University of Paris had only enjoyed a few more years of existence than the University of London. Nothing had touched him more since he had visited England than to see upon the *menu* card of their dinner that evening the portrait of Corneille. He was in a position to enlarge upon that topic, as the other day he had attended the unveiling of a memorial to Corneille on the Place du Panthéon, and heard no less than sixteen speeches delivered in praise of that great man. But he would spare his audience. He drank to the health of the University of London, its progress and prosperity.

Lord FITZMAURICE, in proposing the toast of "Our French Visitors," said for the second time that day he must claim the indulgence of the French delegates while addressing them in their own language. We were all glad that our visitors had crossed the Channel. The most illustrious French poet of modern times, Victor Hugo, who lived for a number of years in Guernsey, had sung the praise of the Channel sea in delightful verse, but that rhythmic swell, that wild pulsation which had charmed the poet were the very things which he and they disliked. Mr. Spicer that afternoon had expressed the hope that the day was not far distant when our guests might reach our shores in the perfect calm and obscurity of a Channel tunnel. He had not the right to reveal the secret mind of the Government on that subject, even if he knew it, but there was one great obstacle in the way of the

realization of that project. Every nation had its phantom, and ours was a military one. Formerly it was feared that a French army might creep into England through the hole of a Channel tunnel; then it was a German army that was feared, then a Russian. But to-day it was the Chinese Army. We had been assured in the newspapers—and the newspapers never lied—that a Mongol army, after crossing Asia, burning St. Petersburg, destroying Berlin and the University of Paris, would occupy the pierhead at Calais, and, entering the tunnel, emerge at Dover. But those who had conjured up this dreadful picture forgot the French army, which in the vast plains between Tours and Poitiers would defeat this army and deliver us from a Tartar invasion.

M. RABIER responded to the toast. Mr. F. STORR proposed the toast of "The Schools," to which M. HOVELAQUE and Mr. A. T. POLLARD responded.

Mr. CLOUDESLEY BRERETON, in proposing the toast of "The Société des Professeurs de Langues vivantes and of the International Guild," said that as an old boy, in more senses than one, of a French *lycée* (he had entered a *lycée* when he was thirty), he was delighted to welcome the Professors. He bore testimony to the value of the Guild as a clearing-house of international friendship. To the classical masters in the two nations had been assigned the task of making the ancient world accessible. He looked on their guests as the honest brokers of modern civilization, nay more, as the *proxeni*, the unpaid consuls, who represented the foreign country in their own land. The professor of modern languages was an integral factor in the new diplomacy.

M. GARNIER and M. GAUTIER having replied, the company separated.

Visits to Schools.

Wednesday was occupied with visits to schools in and near London. In the morning the Modern Language Association guests were conducted in small groups to various schools and technical institutions, permission to visit which had been obtained through the good offices of the London County Council. The elementary school in Addison Gardens was greatly admired—the music and the lessons in French and natural history. In the afternoon Eton, Harrow, Mill Hill, and other schools in the neighbourhood of London were visited.

The University guests began with a visit to Spring Gardens, where they were received by the Chairman of the London County Council. They were then conducted over the Abbey by Canon Hensley Henson, and Westminster School by Dr. Gow. Thence they drove to Camberwell, where they visited the School of Arts and Crafts. Thence to Dulwich, where they were entertained at luncheon by Mr. Evan Spicer. The day was perfect, and our guests enjoyed to the full the gracious hospitality of an English country house. After lunch the College cricket field and the Dulwich Gallery were visited. For the evening a number of private dinners were arranged, and the day ended with a reception at the French Embassy, to which some two thousand guests were invited.

Visits to Windsor and to Holloway College.

Thursday morning was occupied with addresses delivered in the Great Hall by representatives of the different Faculties. The chief orators were Prof. E. A. Gardner, M. Croiset, Dr. Augustus Waller, M. Leger, M. Morel. A report of these addresses must be deferred to our next number.

In the afternoon the University guests travelled by special train to Windsor. They were conveyed in royal carriages to the Mausoleum at Frogmore, where a wreath was laid upon the tomb of Queen Victoria by M. Liard. They were then driven to the Castle and conducted through the State rooms by Lord Esher. Passing thence to the East Terrace they awaited their Majesties, who shortly appeared, accompanied by the young Princes and Princess Mary of Wales. Lord Rosebery, as Chancellor, presented to His Majesty Sir E. Busk, who in his turn presented the Senators of the University of London and the representatives of the French Universities, beginning in order with MM. Liard, Bayet, Rabier, Appell, Morel. After the presentation the King held a long conversation with M. Liard. The guests were then entertained at tea in the Orangery of the Castle.

The guests of the Modern Language Association were at the same time conveyed by special train to Egham to attend a garden party given in their honour by the Governors of Holloway College and the Principal, Miss Penrose. Some thousand guests were present, and refreshments were served on the Terrace. The Governing Body was represented by Lord Thring and Sir Charles Ryan. A letter was read from Prince Christian regretting his absence through indisposition.

Visits to Oxford and Cambridge.

Friday, the last day of the visit, was devoted to visits to Oxford and Cambridge. The Oxford visit was a long standing engagement, the invitation having been given by the President of Magdalen during his year of office as President of the Modern Language Association. The Cambridge visit was arranged by a University Committee, the chief promoters being the Masters of Peterhouse and of Caius College and Dr. Breul.

At Oxford, after a visit to the Bodleian, the party was conducted in groups to various colleges. All reassembled for luncheon at Magdalen

College, to which some hundred and fifty sat down. After the formal toasts, given by the President, the Vice-Chancellor proposed "The Guests," and recalled his visit to Montpellier as Public Orator and many other pleasant memories of French Universities. M. Liard proposed "The University," and was answered by Sir W. Anson. A garden party at Worcester College ended the entertainment.

At Cambridge visitors were met at the station by Mr. Roberts, representing the Vice-Chancellor, and driven to the Senate House, where they were welcomed by the Rev. E. S. Roberts, the Vice-Chancellor elect. They were entertained in groups at luncheon by the Vice-Chancellor, the Master of Trinity, and other heads of houses. After luncheon the Master of Peterhouse held a reception in Combination Room. They were afterwards driven in open carriages to the Pitt Club lawn at Ditton Corner, whence they witnessed the boat races.

ASSOCIATION OF HEAD MISTRESSES.

THE Annual Conference of the Incorporated Association of Head Mistresses was held on June 8 and 9 at the Clapham High School, by kind invitation of Mrs. Woodhouse, the Head Mistress. Miss F. GADESSEN, M.A. (Blackheath High School), the President of the Association, presided. After the delivery of the President's address and the transaction of formal business, the President moved the adoption of the annual report. Miss Gadesden referred to the two conferences which had been held, one at the Clothworkers' Hall last October, and the other in February at the Notting Hill High School. At both matters of wide educational interest had been discussed, and at both many and varied educational authorities had been brought together, thus affording a recognition of the aims and influence of the Head Mistresses' Association to take its place among the educational powers of the day. In the report would be found a memorandum on tenure drawn up and signed by representatives of the Head Mistresses' and the Assistant Mistresses' Associations, and she hoped the two associations would continue to work together in mutual good will and sympathy. Miss Gadesden read a letter from Prof. Sonnenschein, of the Classical Association, inviting all classical teachers in the United Kingdom to adopt a uniform method of pronunciation of Latin and Greek. This had already been done in many of the girls' schools. In conclusion, Miss Gadesden referred to the great pleasure she had experienced at receiving an invitation to the luncheon given by the Chairman of the London County Council at his house at Dulwich in honour of the French representatives from the Université de Paris and the Collège de France. She regarded the invitation as a distinct mark of honour to their Association, of whom she was the representative.

Miss CONNOLLY (Haberdashers' School, Hatcham) proposed:

"That, in view of the fact that women are directly interested and engaged in the work of education, which is now under the control of the State, it is of urgent importance that sex should no longer be regarded as a barrier to the exercise of the suffrage."

There was a danger that the great work of education, which was now controlled by the State, might be hampered and hindered because women have not political rights—women without votes were a negligible quantity. Women were on committees, but they were co-opted, not representative, members, and their words did not carry the weight they should. A woman might speak with knowledge and experience about health, sanitation, or the special needs of girls: what she asked might possibly entail outlay; she had been taxed for the money, but could not say a word as to its expenditure. All kinds of schools needed representative women with not only knowledge, but the power to carry what is right for girls. This would not be possible until women's political position was fully recognized. Women had with honour risen to the highest intellectual levels: they were now faced by a hindrance which impeded their progress and lessened their influence. Suffrage might be, as Shylock said, the "badge of his tribe," and of Mr. Birrell's minority; but it was not the badge of women, who had suffered unfairly in the past, and had now risen to do and to be according to their powers.

Miss DOVE, M.A. (Wycombe Abbey School), seconded the resolution, and said that the disabilities of women had become one of the crying evils of the present day. It was not always possible for women under present circumstances to live a decent life on account of the lowness of their salaries. This showed that we had not advanced beyond Euripides's idea that the life of one man was worth those of ten thousand women! Christianity taught that all souls were equal.

Miss BEALE, LL.D. (Cheltenham Ladies' College), said that in the resolution the suffrage was claimed on educational grounds. The underpayment of women went to the heart of all as a crying evil, and made every one earnest about the extension of the suffrage.

Miss L. SILCOX (Dulwich High School) said that all women engaged in public work had a grievance if they were excluded from all voice in State management.

Miss AINSLIE, B.A. (George Watson's Ladies' College, Edinburgh), suggested that the wording of the resolution might be with advantage

broadened. It implied that the necessity of the franchise had been borne in upon them for the first time by the present state of educational politics; that, however, was not the only ground on which the franchise should be demanded. She therefore proposed the insertion of the words "on educational grounds."

The discussion was continued by Miss BENTON, Mrs. BRYANT, Miss HADLAND, Miss DAY, Mrs. WOODHOUSE, and Miss OTTLEY; and eventually a resolution was adopted as follows:—

"That, in view of the fact that women are directly interested and engaged in the work of education, which is now under the control of the State, it is of ever-increasing importance on educational as well as other grounds that sex should no longer be regarded as a barrier to the exercise of the suffrage."

On a division, the resolution was carried by a large majority.

Discussion on Compulsory Afternoon School.

Miss BURSTALL, M.A. (Manchester High School), moved the following resolution:—

"That this Conference earnestly deprecates any attempt to force compulsory afternoon session on schools now working successfully under the system of a morning session, and unhesitatingly affirms its belief in the principle of freedom for the authorities of each school to arrange the hours of work in accordance with what they have found to be the physical, mental, and social needs of the pupils."

Miss Burstall said she had only to repeat the substance of the Association's memorandum presented to the Board of Education in 1902. She considered the head mistress on the spot was the best judge of the needs and dangers of the locality. The principles for the morning session were the claims of the home, the importance of girls returning home by daylight, their health during the period of growth, and time for organized games or for art study and music. The claims on a girl out of school hours were greater than those on boys, with a corresponding increase of pressure. An attack was being made on the long morning, but the head mistresses were the best judges of that. By a mixture of easier and harder subjects, and the system of the interval, the difficulties had been satisfactorily met. It was true there was a strain on the teacher, but that could be minimized by the variety of the work. The ideal of the high schools was freedom and responsibility—responsibility of the girl for her work, of the mistress for her teaching, of the head for the management. They had inherited this tradition—they must be true to the trust.

Miss COCKS (Redland High School) seconded the resolution. She thought there was a tendency to consider that one type of education was suited to all classes of girls, without regard to the different home environments. She regarded this as the clumsiest conception of education that could be possible. Its only recommendation was its beautiful simplicity. The application of the steam roller to level and press out all individuality and irregularity, reducing all types of schools to one level uniformity, was the danger which higher education had to face. The variety of the home must be taken into consideration; some children learn at home what others could only acquire from their teachers. People who paid high school fees of £16 to £17 a year were generally able to give their girls a home environment which was of inestimable value. To deprive such mothers of the companionship of their girls except for the sleeping and eating hours was to rob both girls and mothers of a large part of life's happiness, as well as of most valuable opportunities of mutual education. A mother of a girl attending a large middle-class school had said to her that her relation to her daughter was that of a hotel keeper! Time tables must give scope to home life. The lack of originality in the present day was the result of the over-teaching of boys and girls, and of too little being demanded of individual effort.

Miss BEALE stated that when she at first gave up afternoon school at Cheltenham there was a great outcry, and she returned to the old system only to find after a term's work that the parents preferred the morning session; and the morning session has been the custom ever since.

Miss FOXLEY (University of Manchester) was strongly in favour of the freedom of the afternoon. She had served in two schools: in the first there was compulsory afternoon attendance, and the girls' health was below the average. She was firmly converted to the view that girls ought to be free in the afternoon.

Miss OTTLEY (Worcester High School) and Miss KENNEDY (St. Elphin's, Darley Dale) both spoke strongly against compulsory afternoon school.

Miss WALKER (Roan School, Greenwich) was of opinion that it was a benefit to some parents to keep the children at school. She advocated freedom of choice in the matter, and thought that, if there were a double session, there should be a long interval between the two.

Miss MORISON (Truro High School) thought it was better to have the girls back to work under supervision if possible.

Miss GAVIN, M.A. (Notting Hill High School), emphasized the fact that "afternoon school" meant teaching—not merely games and preparation.

Miss BENTON (South Hampstead High School) thought that the

question of lunch should be very carefully considered. This could not be provided by the school for nothing, but it was a heavy charge on parents with, perhaps, three daughters at schools and with narrow means to pay 4s. per child per week. It was not desirable to encourage the bringing of lunch, as such meals were generally insufficient. The question of food was of paramount importance to growing girls.

Miss LEAHY, M.A. (Croydon High School), advocated freedom as long as there was efficiency. An efficient school had nothing to fear. The Board of Education did not bring up the question of efficiency, but that of health. But on the health side comparison need not be feared. Let the Board of Education come and see the girls and judge of their condition at the end of the morning. A girl who kept up her attention "strenuously" during a three to four hours' session was not often met with.

Miss FANNER, M.A. (Sale High School), drew attention to the fact that, if the Board of Education minimum was accepted, afternoon school was inevitable, unless some subject was omitted. That would mean leaving out some of the English work and Scripture—an alternative no one would welcome.

Miss HEWETT, B.Sc. (Walthamstow High School), was of opinion that the whole question depended on the class of girl. In some cases it was better to have the girls in the afternoon than to leave them to their own devices. In the urban districts of London especially the girls were often not well employed. The teaching in the afternoon could be in lighter subjects. She advocated compulsory afternoon work.

Miss CLAY (Queen's School, Chester) represented that compulsory afternoon school meant going home after dark, to which mothers objected, and this system would half empty the school.

Miss HOLME, M.A. (Carmarthen County Girls' School), doubted whether it was intended to compel the mistresses to teach in the afternoon; the Board of Education accepted preparation and organized games as attendance in school.

The PRESIDENT then put the resolution to the vote, and it was carried *nem. con.*

Miss BURSTALL proposed, and Mrs. WOODHOUSE seconded, the following rider to the resolution:—

"That this Conference instructs the Executive Committee to draw up a memorial on this matter to the Board of Education and to support it by statistics."

The statistics should state the school, and whether the head mistress was in favour of a free afternoon; if she had had experience as a girl of afternoon school, and what her opinion was.

This was carried.

On Saturday morning, Miss BEALE, LL.D., addressed the Conference. The address will be printed for private circulation.

Certificates of Religious Knowledge.

Miss OTTLEY (Worcester High School) asked that the resolution standing in her name on the agenda, viz.:

"That there is a demand for a certificate of religious knowledge for teachers in secondary schools, and that it be an instruction to the Executive Committee to appoint a sub-committee to consider the subject,"

might be taken in two parts, as she was not personally responsible for the second portion. Now that the old home Bible teaching was dying out, the high schools had a greater responsibility in the matter. The spirit wanted in Divinity teachers was not to be attained by any amount of study or any kind of examination; but ignorance of the fundamental facts of great religious truths was too prevalent. Freedom must be given with regard to the reading for the examination. Many would be satisfied with the Cambridge Higher Local Group; others wanted more. The beautiful Free Church Catechism and the Catechism of the Church of England were treasures for any child's possession; therefore she strongly advocated a broad selection of schemes of study and of books. The teacher must be enthusiastic. Therefore, she moved:

"That there is a demand for a certificate of religious knowledge for teachers in secondary schools."

Miss DOUGLAS (Godolphin School, Salisbury) seconded the resolution. She observed that it was easier to say that better religious training of teachers was desired than to say how this was to be ensured. She suggested that, when girls decided to adopt the teaching profession, they should be urged, if they wished to teach the Bible, to begin to prepare themselves at once for this supremely important duty. If religious education was neglected at home, every opportunity should be utilized to encourage girls to study their Bibles at school.

The first part of the resolution was carried, with three dissentients, as was the second part, with the addition of a rider, it finally reading as follows:—

"That it be an instruction to the Executive Committee to appoint a Sub-Committee to consider the subject, and that the Sub-Committee be instructed to confer with representatives of existing Committees which have arranged suitable courses of lectures, and to report on the various certificates which may seem suitable for teachers of religious knowledge in schools."

Report of Meeting of Members of Education Committees.

Miss BURSTALL (Manchester High School), Chairman of the meeting of members of Education Committees held on Friday morning, reported that the following resolution had been carried, on the proposal of Miss Heppel (Bromley Education Committee), seconded by Miss Heron (Leicestershire Education Committee):—"That the Conference be requested to send representatives to the meeting on Thursday, June 21, to support the Local Authorities (Qualifications of Women) Bill," the appointment of the representatives being left to the President. Miss Krabbé (Herefordshire Education Committee) had read a paper on the special difficulties in providing for secondary education in rural areas. Miss Ottley (Worcestershire Education Committee) had introduced the subject of municipal secondary schools, the discussion being taken up by several members. Miss Escott (Sheffield Education Committee) had introduced the subject of scholarships from public elementary schools, moving the following resolution, which had been seconded by Miss Blackmore (Cornwall Education Committee) and carried:—"That it is desirable that a better standard, both intellectual and physical, be required for scholars passing from elementary into secondary schools." The feeling of the meeting in regard to the physical standard had been so strong that, on the proposal of Miss F. E. Tooke (Gateshead Education Committee), seconded by Miss Rees (Willesden Education Committee), the following resolution was carried *nem. con.*:—"That the Board of Education be asked to urge the Local Authorities to have a medical inspection by their own officer of all successful candidates for scholarships before the scholarships be finally awarded." Some general discussion on the work to be done in elementary education by women members of Education Committees had concluded the meeting, which had been marked throughout by helpful statements of experiences and difficulties from members representing very varied districts, twenty-two being present out of a possible forty-five.

The report was adopted.

The Kinds of Training available for Women Secondary Teachers.

Miss GAVIN, M.A. (Notting Hill High School), introduced the subject of the kinds of training available for women secondary teachers, and proposed:

"That this Association accepts no system of training as satisfactory in which the theoretical work of the student is not supplementary to the practical work."

Miss Gavin said that much now passing current as training was not training, and brought discredit on the name. The Association ought to demand that after a year's training a student should be able to teach in some measure, and not merely take an intelligent interest in her profession. The apparent success of the training given in the training colleges for elementary teachers led to the adoption of a somewhat similar form when the question of training secondary teachers arose thirty years ago. The problems, however, were far from similar. The elementary teacher of thirty years ago began his career as a pupil-teacher; in his college course he had to study what to teach, as well as how to teach it, and his instruction in method and theory came after he had acquired a practical knowledge of the "difficult and perplexing art" of teaching. When the young graduate of to-day finished her University course she knew nothing less than she knew children. What she required was an opportunity of becoming familiar with children. The training college failed to provide this opportunity, even whilst it afforded a practising school, a demonstration and practising school, or an opportunity of practising in ordinary schools, elementary and secondary. An experiment in training in which the speaker was personally interested, because it seemed to her the best yet evolved, had been initiated three years ago by certain schools fortunately situated with regard to a local University, the schools undertaking, in co-operation with the University, the practical training of a strictly limited number of students. She had found the greatest difficulty in the way of this scheme to be the inordinate demands of the examination syllabuses, which had been drawn up to suit the courses given in the training colleges.

Miss HASTINGS (Wimbledon High School), in seconding the resolution, referred to a scheme in which eight of the schools of the Girls' Public Day School Trust are associated with the University of London in giving practical and theoretical training to graduates or women of equivalent educational standing.

Miss REES (Brondesbury and Kilburn High School) described the work of the Maria Grey Training College; Miss FRODSHAM, B.A. (St. Saviour's and St. Olave's Grammar School for Girls), described training in a residential training college; Mrs. WOODHOUSE (Clapham High School) described training in a training department attached to a school; Miss LATHAM (St. Mary's College, Paddington) spoke of the work done in what she suggested should be called a "training centre" rather than a training college. Miss BURSTALL gave an account of an experiment in the University of Manchester, in which theory and practice were associated; and Miss HAIG BROWN, M.A. (Oxford High School), advocated training in a secondary school, in co-operation with the training department of a University.

After some discussion, the resolution was carried.

Consideration of State Action with regard to Education.

Mrs. BRYANT, D.Sc., Litt.D. (North London Collegiate School for Girls), opened a discussion on the crisis in the history of educational development and the proposal to abolish the Register of Teachers. Having reviewed some of the difficulties which had confronted the Consultative Committee and the Teachers' Registration Council, she said that the practical policy of the moment was to try to save the principle of the present Register, which provided for some definition of qualifications in the higher branch of the teaching profession not provided for otherwise. Registration was most required for teachers with higher qualifications—with a University degree or its equivalent. The condition of service in a particular kind of school was the only genuine grievance against Column B. The abolition of that condition of service gave a sufficiently simple form of Register which would yet be open to every one with the two kinds of qualifications, and some service in a training college. In this practical country practice would always be valued at its true worth. She therefore proposed the following resolutions:—

"I. That this Conference deeply regrets the Government proposal to abolish the Teachers' Register, believing that the confusion of ideals as to qualifications, and the depreciation of the teacher's status consequent on its abolition, would cause much injury to the secondary education of the country.

"That the Conference therefore desires to see Clause 36 of the Education Bill amended by the addition of words the effect of which would be the formation of a Register containing in alphabetical order the names of all teachers of approved training, with qualifications as to learning not less than those required for a University degree.

"That the duty of forming and maintaining such a Register should be referred to a Representative Professional Council with powers of co-optation.

"That all persons whose names are on Column B of the existing Register should be admitted without question or further fee to this reformed Register; and that the monies already paid for registration by such persons shall be paid over to the Council upon trust, (a) to place upon the new Register the names of those who desire to be so registered; and (b) to return the fees paid for registration in Column B to those who do not desire to be so registered.

"II. That, in the event of the enactment of Clause 36 without such amendment, action should at once be taken for the establishment on a voluntary basis of a Teachers' Register on the lines described in Resolution I.; and that this Conference desires to co-operate with other educational associations and with the Universities in steps to that end.

"That in the constitution of a Registration Council, apart from the State, the sanction, as well as the assistance, to be derived from a representation of the Universities is, in the opinion of this Conference, of fundamental importance.

"That in the formation of the Register three characteristic conditions should be observed:—(a) The standard of learning required should be that of a University degree or its equivalent; (b) the purpose for which the teachers are accredited should be that of fitness to instruct children and young people of school age; (c) service in any particular type or class of school should not be required.

"To the fulfilment of each of these conditions this Conference attaches importance, and, in view of the facts, desires to emphasize specially (c)."

Mrs. WOODHOUSE, in seconding these resolutions, said that the Register had had three results: improved efficiency of all schools; higher appreciation of the value of professional training; and a higher standard of academic attainment on the part of the teachers. Nine hundred teachers had raised their qualifications in one and a half years, and there was a clearer understanding of the means for organizing national education. It was not a question affecting a certain type of school, but a national question. There was no longer the great cleavage that once existed between elementary and secondary schools.

The resolutions, on being put to the vote, were carried unanimously.

Some Recent Experiments in Education.

Miss COULTER (James Allen's School, Dulwich) read a paper on "Gardening and Garden Laboratory." This was followed by a paper by Miss MCCROBEN, M.A. (Wakefield High School), on "Geography Teaching and Apparatus." Miss GRAY (St. Paul's Girls' School) and Miss LEAHY, M.A. (Croydon High School), spoke on "Domestic Economy Classes in connexion with School Work"; and Miss ESCOTT (Sheffield High School) read a paper on "Class Teaching as applied to Beginners in Music."

On the proposal of Miss JONES (late of the Notting Hill High School), seconded by Miss DAY (Grey Coat Hospital, Westminster), the following vote of thanks was carried:—

"That the cordial thanks of the Conference of the Association of Head Mistresses be given to Mrs. Woodhouse for inviting the Conference to Clapham High School, and that Mrs. Woodhouse be specially thanked for her hospitality and for the admirable arrange-

ments made by her and her staff for the convenience and comfort of the members of the Conference."

After a vote of thanks to the President for presiding, the proceedings terminated.

Mrs. Woodhouse and the Council of the Girls' Public Day School Trust held a reception in the garden of the High School during the afternoon, which was largely attended.

INCORPORATED ASSOCIATION OF ASSISTANT MISTRESSES IN PUBLIC SECONDARY SCHOOLS.

AN Extraordinary General Meeting of the Association was held on Saturday, May 26, at King Edward's High School for Girls, New Street, Birmingham. The chair was taken by Miss LAURIE (Ladies' College, Cheltenham), in the absence of the President, Miss Skeat (Chester).

Miss STONEMAN (Notting Hill High School), Secretary of the Information Sub-Committee, reported that this Sub-Committee had been formed to collect and tabulate information as to the action of Local Authorities with regard to secondary schools for girls. The Branches had been asked to appoint local committees to collect such information in their own districts: nearly all had already done so, and most had begun their work, from which valuable results were anticipated.

Miss HODGE (Notting Hill High School) reported the formation of the Federal Council of Secondary School Associations, under a constitution which the representatives of the A.A.M. regarded as wholly satisfactory. A resolution was passed expressing the deep gratitude of the Association to Miss K. T. Wallas for her long and most valuable services as their representative on the Federation Committee, and their regret at losing her.

Teachers' Register.

The HON. SECRETARY then read the following memorial on the Abolition of the Teachers' Register, which had been drawn up by the Committee to be sent, if the meeting adopted it, to the President of the Board of Education:—

"The A.A.M. has noted with deep regret the proposal contained in the Education Bill now before Parliament to abandon the Teachers' Register. The Association considers that such action would be a serious blow to the progress of education.

"In the short time that the Register has been in existence it has already proved of service to the whole body of secondary teachers, having beneficially affected all types of secondary schools, in spite of the fact that teachers in private schools are less open to influence than teachers in public secondary schools.

"Among the benefits which have already resulted from the Register are the following:—

"1. It has had a stimulating effect on individuals, causing them to seek a higher standard of academic attainment than heretofore.

"2. It has been the means of inducing many women graduates to supplement their academic acquirements by a course of specialized training for their profession.

"3. It has promoted, if not called into existence, additional means of training.

"Thus it has undoubtedly tended to raise the dignity and efficiency of the profession. At the present moment, when the education of the country is largely undergoing reorganization, it would seem especially desirable to secure a high standard among teachers, while, as a guide to their selection, the existence of a list of those who are adequately qualified has proved of value to those who are responsible for the staffing of schools.

"The Association therefore earnestly desires that the possibilities of usefulness inherent in the registration movement should receive due recognition, and that, in lieu of the retrograde step of abandoning the Teachers' Register, means should be taken to reconstruct its provisions and to promote its development on lines acceptable to the profession as a whole, and consistent with permanent efficiency."

The memorial was proposed as a resolution by Miss VERNON HARCOURT, seconded by Miss W. SLATER, and carried unanimously.

Women's Suffrage.

Miss BANCROFT (Redland Court High School, Bristol) reported that the A.A.M. had been invited by the National Union of Women Suffrage Societies to appoint a representative to attend the deputation in favour of women's suffrage which the Prime Minister had consented to receive on May 19. The Committee had not thought themselves entitled to commit the Association to any definite line of action without consulting the General Meeting, since the question might be considered outside the province of an educational association. They asked for directions from the meeting in case they should receive any similar invitation at some future time.

Miss BANCROFT proposed:

"That, the State having assumed the control and direction of primary, secondary, and technical education, it becomes of vital importance that the sex barrier to enfranchisement be removed, in order that the views of women shall be represented in our national system of education."

She said that, in the present relation of the State to education, the question of women's suffrage concerned members of the A.A.M. not only as women, but as educationalists. Women, lacking the force of the vote, were not adequately represented on the bodies which framed their conditions of work. Only the minimum number of women was usually co-opted on Education Committees, and these were not always experts in education. The evil effects of such a system had already shown themselves in girls' schools under public control.

Miss M. THOMSON (King Edward's Girls' Grammar School, Camp Hill, Birmingham), seconded the resolution.

Miss OAKESHOTT (Leeds High School) said that the question was outside the scope of the A.A.M. as an educational association, that many of its members disapproved of granting the suffrage to women, and that those who desired it could find ample opportunities of expressing their views through other associations. She moved the following amendment:—"That, the whole question being so wide and important, it is not advisable to pass any resolution upon it until it has been discussed by the Branches." Miss M. JULIAN seconded the amendment, which was put and lost.

More discussion followed. It was clear that the meeting, while in general sympathy with the cause of women's suffrage, strongly disapproved of some of the methods by which it has recently been supported, and would not sanction any action to be taken conjointly with bodies which had used them. The Hon. Secretary assured the meeting that, if Miss Bancroft's motion were carried, the Committee would not desire or consent to associate the A.A.M. with any but orderly and constitutional methods. Miss Bancroft's motion was then put and carried by 49 votes to 10.

Miss LAURIE then read a paper on "The Importance of Plant Geography in the Teaching of Botany."

Votes of thanks were proposed and carried by acclamation to Miss Laurie for her very interesting paper and for kindly acting as Chairwoman, and to Miss Creak and the staff of King Edward's High School.

At the afternoon meeting, held at Edgbaston Church of England College, Miss VERNON HARCOURT read an interesting paper on "A Visit to some Schools in Germany and France."

Votes of thanks were proposed and carried by acclamation to Miss Vernon Harcourt for her paper; to Miss Thomas for her kind hospitality, and to the Midland Branch for their admirable arrangements and hospitality.

COLONIAL AND FOREIGN NOTES.

FRANCE.

France, like some other countries, is awakening to the fact that the future of a race depends no less on the education of its women than on that of its men. Of course, against higher education for the former the usual trite arguments are advanced: that it unfits them for maternity and domestic life, and so forth. Yet not a few Frenchmen understand that it is but the continuation of that salutary discipline of body and mind which the school begins, and that a woman is as capable of being educated as a man—to the same extent and with no more harm to her physical efficiency. Some French professors would organize a special higher education for her. The Société d'Enseignement supérieur, on the other hand, has passed the following resolution:—"For higher education properly so called young women, like young men, should follow the ordinary courses and lectures of the University. It is not expedient to create Universities for women." If women desire to study, they have, it seems, only to apply to the Universities and enrol themselves for the courses that suit their wants. Thus at Caen there are at present thirty-five French or foreign women students entered on the books of the Faculty of Letters. At Caen, too, by way of protest against the law that excludes women from representation on the University Councils, Mlle. Decroix, of the *lycée de jeunes filles*, has been put forward as a candidate for a vacant seat in the Conseil académique. She has, moreover, gained a majority of votes, men being her nominators and supporters; from which it would appear that the law will have to be altered.

The *inspecteur d'académie* of Morbihan has addressed to those concerned a circular in which he lays down that the conferences between head masters and assistant masters usual in some schools are to become general and obligatory. They are to take place every quarter in the last week of March, June, September, and December. The head master will preside by right. He will ask the opinion of masters and mistresses upon matters of discipline and study. All are to express

Masters' Meetings.

their views freely and simply, without any thought but of mutual help. The schools in question are French primary schools; but we trust that these meetings for the frank interchange of thought are now held everywhere. When the head is in sympathetic communication with his assistants, and they with one another, more than half the difficulties of a school are wont to disappear.

GERMANY.

We confess that on the subject of titles we do not see quite eye to eye with our German kinsfolk; nevertheless, we record the various "movements" with regard to them for the benefit of curious readers. It is the ladies that

Mrs.
or Miss?

now are coming to their titular due. Some time ago the school authorities of Vienna resolved to bestow even on unmarried women teachers the title of "Frau." The Prussian Kultusminister has lately been moved by a similar spirit. He has conferred on Fräulein Wentscher, Head Mistress of the Königin Luise-Stiftung at Berlin, the official title of "Frau Direktorin." No one will grudge such distinctions to those who care for them; they may even serve to emphasize the fact that a woman can merit social honour when single no less than when married. But, as we have said, we set not such store as the Germans by titles of any kind.

Their habit of mind in another respect seems to us more admirable.

Polytechnics
once more.

They are the most scientific of nations. They will make you a science of anything. If touching any matter there is an accumulation of experience that can be ordered with an instructive result, then, they hold, there is a science of that matter. And the matter viewed as a field of activity to which a man may legitimately devote himself is called a *Fach*. In England we hear doubts expressed as to the existence of a science of pedagogy. At Giessen or Königsberg the sceptics would be ranked with peasants who did not believe in a science of chemistry. There is a science of boy-training, just as certainly as boy-training is a *Fach*. But your German knows dozens of others. For example, he is busying himself greatly just at present with the Science of Railways, which embraces such subjects as geology in relation to railway-cutting, the management of railways, and railway law. If we wanted *Eisenbahnfachwissen-schaftliche Vorlesungen* (lectures on the Science of Railways) in England, we should hardly know where to seek them; they are being given this summer at Berlin, Breslau, Frankfurt a.M., and Köln. To deal with these practical sciences is the function of the great technological institutions of Germany. We hear some one objecting that they are best learned by actual practice, that the Science of Railways, e.g., is most profitably studied in a railway workshop. Now the answer is that other civilized nations do not think so. There is such a flocking of foreign students to the German polytechnics that a new ministerial decree imposes a tax upon them, and in future every non-German student of a technical *Hochschule* must pay £2. 10s. a half-year for the privilege of attendance—a clear proof, is it not? that polytechnics are useless.

A suggestion having been made that Prussia should, like Austria, fix an age limit, which reached, a professor should be compulsorily retired with a pension, the Kultus-ministerium took the opinion of various University

No Age Limit
for Professors.

senates upon the subject. The idea was received with so general a disfavour that it has been decided to abandon it. And, indeed, elderly men differing much in the measure of physical and intellectual vigour that they retain, a hard and fast line might seem to run counter to the logic of facts. On the other hand, it would be difficult to prove that a loss of efficiency brings with it a desire or willingness to abdicate. Nor do we feel sure that the Ministry consulted the right people. If we wished to ascertain whether bishops ever became too old for their work, we should hardly ask for the judgment of the episcopal bench.

It was in a country school, the teacher of which notoriously had little of knowledge and no zest in imparting it. The inspector, by way of beginning the examination, gave out the hymn: "Unser Wissen und Verstand ist mit Finsternis umhüllt" ("Our knowledge and understanding is shrouded with darkness"). The schoolmaster, not without reason, suspected an allusion to the state of learning in his domain. When the inspection had somehow or other been got through it was his turn to prescribe the vocal exercise. He bade the children sing from a well-known hymn the stanza beginning "Ihr Hölle-Geister packet euch, ihr habt hier nichts zu schaffen" ("Away, infernal spirits! ye have nought to do here"). "Did you mark how they caught my point?" said the inspector to his companion, as he retired with a self-satisfied smile.

AUSTRIA.

Austria has for some time acknowledged in principle the right of women to follow higher studies at a University or polytechnic, and not a few women have used the right. But there has been a lack of schools for preparing them, and little employment open at the end of their studies.

Women
Students.

A recent decree does nothing to rid them of these grievances; but it collects and harmonizes a number of precedent regulations and makes the situation clear. Women, it says, are admitted as regular hearers (*ordentliche Hörerinnen*) in the philosophic faculties on exactly the same terms as men—they must have the leaving certificate of a *Gymnasium*. They may become non-regular hearers (*ausserordentliche Hörerinnen*) if they have been through a training college for women or one of the town or private *Mädchenlyzeen*. Without either of these qualifications they may take special lectures or courses of lectures as occasional students or guests (*Hospitantinnen*); but they gain no rights by doing so. It appears that financial reasons delay the projected establishment of *Gymnasien* for girls, which alone will give them equal opportunities with boys.

In spite of the difficulties to be overcome, women are inscribed on the rolls of all the eight Austrian Universities. Of those Universities the greatest by far is that of Vienna, where more than a third of the students in the country are gathered. In the winter Semester 1905-6 the number of them was 7,937, of whom 231 belonged to the Faculty of Theology, 3,425 to that of Law and Political Economy, 1,519 to that of Medicine, and 2,762 to that of Philosophy. The small following that Theology attracts is somewhat remarkable, although from parts of Germany, too, come complaints of a lack of theological students. Whether to draw them or to deter them from coming to Vienna the Professor of Homiletics there has introduced a startling innovation into his *Seminar*. A phonograph is employed to take down and reproduce the practice sermons of candidates for holy orders, so that their attention may be drawn to constantly recurring faults and they may be assisted to cure them. The notion we hold to be a good one, provided that due care is taken to destroy the records as soon as their task is done. It is said that the phonograph has also been found serviceable at Vienna in the study of comparative philology. The instrument seems "to have a future"; but we have not yet heard of any English teacher bold enough to let its irritating mimicry of human utterance resound in his class-room.

UNITED STATES.

There has lately been celebrated the twenty-fifth anniversary of the founding of Tuskegee, the famous institution for negro students over which Booker T. Washington presides. It was formally opened on July 4, 1881, when its one teacher and thirty students met in a half-ruined hut. Soon afterwards an abandoned plantation was bought for the school, which grew steadily under its active young Principal. Now it owns a great farm of 2,500 acres, with 400 head of milch and working cattle, 200 horses, well-stocked poultry yards, an immense apiary, and thousands of orchard trees, the farm producing all the food needed for the 1,500 students and 150 teachers that the school of to-day comprises. Among its eighty-three buildings are wagon shops, a sawmill, a harness shop, a tailor's shop, a printing office, a model laundry, and a tinning establishment, all designed by a negro architect and built by negro student labour; for the education that is found most suitable for the coloured race is education through work to work. President Booker Washington has toiled a quarter of a century in providing it, without overcoming the prejudice against his skin. He rides in the Jim Crow cars, and sometimes finds the use of a hall refused to him for his meetings. Yet, patient and uncomplaining, he continues his task. The silver jubilee of Tuskegee may serve as an occasion for sending him a word of greeting from England, with congratulations on the past and hopes for the future.

Whatever brings life into school studies has an interest for those who love the young. The commonest objection to the teaching of Latin is that the Romans, their language, and their institutions are dead. At the East High School of Rochester, New York, a method of quickening the lifeless forms has been successfully pursued during the last three years. We give, from the *School Review*, a few particulars of the process employed. Since every American child has a sort of instinctive taste for politics and elections, the eight hundred and fifty boys and girls that take Latin are organized into a mimic Roman State, and reproduce the features of a political campaign and election at Rome. Every Latin pupil is a member of the State. As a first step in the organization of it, each of the twenty-nine sections, or forms, represents one of the trade guilds (*collegia opificum*), such as the *aurifices*, the *fullones*, or the *tonsores*. Each guild chooses from among its members a *princeps*, or president, who in his turn appoints four *magistri*, or master workmen, the rest of those in the form being apprentices. The class-room becomes for the guild its *curia*, or local place of assembly, where rules of membership are drawn up and choice made of a guardian deity and of a *patronus*. Although the ancient guilds were not political, they serve as useful instruments in forming the State—a business undertaken by the *princeps*, with the aid of the *magistri*. It is the *princeps* that assigns to every member of his guild a Roman name, with its three parts. Each pupil keeps his name for a year, and

A Roman State.

is expected to investigate the life of the man whose name he or she bears. Having received their names, the young Romans are classified as citizens by birth, citizens by naturalization, or citizens by manumission, the largest number being in the first class. They are then enrolled successively in the four great political units of *curia*, *tribus*, *classis*, and *centuria*, on the basis respectively of birth, geography, wealth, and age; only, with a somewhat daring innovation, birth is estimated by scholarship, which determines whether a pupil shall be ranked as patrician or plebeian. Of the eight hundred and fifty citizens ninety are patricians—a number chosen to secure a multiple of three (the number of patrician tribes), and of thirty (the number of *curiae* in these tribes). Each *curia* elects its *curio*, and the thirty *curiones* a *curio maximus*. The *curiae* meet as *comitia curiata*, and after the election confer the *imperium* by a formal act upon the officials designated by the popular assemblies; it is the earlier form of the *comitia curiata*, composed solely of patricians, and wielding a really effective power of ratification, that has been adopted.

The division into five *classes* on the basis of wealth is represented by grouping the pupils according to their "years," the "Virgil classes" forming the *prima classis*, the "Cicero classes" the *secunda classis*, and so on. But fictitious property to the legally required amount is allotted to each citizen. The resolution of Roman citizens into *centuriae* of *juniores* and *seniores* is expressed by forming the girls into *centuriae* of *juniores* (seventeen to forty-five years of age) and the boys into *centuriae* of *seniores* (forty-five to sixty). For the fourth division into thirty-five tribes, on a basis more or less geographical, there could be no natural representation; for each tribe must contain both *juniores* and *seniores* from all five classes. To obtain this result, and at the same time to equalize the numbers in the tribes, the several *principes* were instructed to begin at different points in the alphabetical lists of tribes, and assign one boy and one girl to each tribe in order, until the *collegium* was exhausted. This process insured the formation of thirty-five tribes each composed of from twenty to thirty members, comprising representatives from each of the five classes, and equally divided between *juniores* and *seniores*. As soon as a pupil had been assigned to a tribe he incorporated in his name the abbreviated name of his tribe. Moreover, he received some fixed town of residence. Now the various divisions are complete. *Comitia centuriata* are organized on the reformed tribal basis; *comitia tributa* are constituted, as also is a *concilium plebis tributum*, made up solely of plebeians. Canvassing may begin and elections be held.

That this vivifying of instruction in Latin has real pedagogic value we for our part are quite convinced. And a proof of its value is seen in the effect on the youthful Romans. M. Terentius Varro writes a Latin biography of himself in which, while preserving the main features of the life history of his namesake, he also gives to fancy its free play, and indulges in sarcastic reflections on his contemporaries. Or M. Tullius Cicero inveighs in Latin against the turpitude of his political opponents. Mass meetings are held in support of rival candidates. Blackboard space is in demand for Latin inscriptions of a partisan character. In short, the enthusiasm of youth is awakened no less keenly by an imaginary than by a real contest. The use of imagination in the school-room is too often underrated. But the teacher (who seems in this case to be Mr. Mason D. Gray) that can stir it to such vividness must be of unusual gifts. And methods as methods are for normal men. Yet those who love classical studies may endeavour, each according to his powers, to give to them the meaning and vitality that are needed to maintain them in honour. The death that threatens them is from dead teachers.

As we reported, the annual meeting of the National Educational Association was to be held this year at San Francisco. It has been decided to abandon the gathering by way of expressing sympathy with the afflicted city. We confess that we do not quite follow the reasoning. If these assemblies are not held for the good of education, they are sheer futilities that might properly be abandoned for ever; if they are, why should the earthquake be allowed to damage an interest more precious than any buildings, or even than many lives? Perhaps the difficulty of arranging a meeting elsewhere has weighed with the Executive Committee no less than the sentimental consideration. Yet surely that was not insuperable to American energy.

Slowly education is coming to its rights. By a recent vote of the Faculty of Arts and Sciences, says the *Educational Review*, the instructors in education at Harvard University were constituted a "Division of Education" of co-ordinate rank with other divisions of the Faculty. Heretofore the instructors in education have been affiliated with the Division of Philosophy. Besides assigning to education its appropriate place among other University studies, this vote evidently indicates that Harvard University intends to develop the study of education and the training of college-bred teachers as rapidly and as comprehensively as its resources permit.

NEW ZEALAND.

We had been reading how at Dunedin the New Zealand Premier spoke about the present system of paying teachers in proportion to the attendance at their schools. What he said was:—"The Government policy includes provision for an increase in teachers' salaries on a fixed basis. The present system is rotten. They are paid on the average attendance, and, if there is an epidemic, or if a settler changes his location, the teacher has to suffer a reduction of salary. There should be a fixity of salary all round." Then came the news of Mr. Seddon's tragically sudden end. We may perhaps be allowed in this column to pay one humble word of tribute to the dead statesman. Owning but a small debt of gratitude to the school, he was nevertheless always a friend of education. His memory will be cherished by all who have realized the imperial mission of the British race to diffuse knowledge, freedom, and a love of justice.

CAPE COLONY.

The official *Gazette* reports the death of Mother Cecile, of Grahamstown, a woman who was the most notable worker for education that the Colony has known. Annie Cecile was the youngest child and only daughter of Captain Isherwood, upon whose death when she was sixteen years of age she went to live with his old friend Sir James Brown, then Governor of the Military Academy at Woolwich. Resolving young to labour for the good of others, she withdrew from the allurements of social life, and attached herself for two years' training to the London Deaconesses, doing parish work under their guidance. Presently she began to hope for service in some foreign field. Thus when Bishop Webb came to England looking for helpers she gladly offered herself to him. His diocese was Grahamstown, whither she now proceeded, landing in Cape Colony in 1883, when she had just completed her twenty-first year.

Then began a career of extraordinary activity. At Eden Grove, or St. Peter's Home, as it was renamed, the English lady gathered round her a zealous band of women workers. At first her task was what is called district work. Soon it appeared that the establishment of a school for the education of the poor would be an efficient means of benefiting them. Mother Cecile set herself to establish one. She began with one little girl as a pupil and herself as sole teacher. But the school grew and prospered, until it was merged in the Good Shepherd Mission School. Simultaneously with it there arose a Children's Orphanage, and a school for children of a higher social class, the latter named St. Peter's School. More and more closely did she now apply herself to the problems of education in the Colony. In 1894 the training of pupil-teachers was taken up on a regular system, practice in class-teaching being given at St. Peter's School and at the Good Shepherd Mission School. In the same year a day school for girls was opened in King William's Town; it was conducted with success until it was handed over in a flourishing condition to the Public School Committee of the town. Native education next engaged Mother Cecile's attention. She founded a Training School for teachers of natives at St. Matthew's, Keiskama Hoek, providing suitable class-rooms, as well as a large boarding-house for girl pupils, and conducting a practising school. Like the other institutions due to her initiative or personal toil, the Training School thrived, inasmuch that the accommodation became insufficient for the number of students. Visiting Europe, Mother Cecile collected the necessary funds for an enlargement, and her Training School, now become the Training College, received new class rooms. With her buildings and the property transferred to her for the purpose of endowment it seemed as if the whole quarter of Grahamstown about St. Peter's would pass into her hands.

Memorable and of far-reaching utility, this work of hers for Cape Colony had been done in twenty-two years. She died when only forty-three. Naturally strong, she came nevertheless to suffer from an internal ailment, and succumbed to it in England after an operation. Those who knew her in life praise her mastery of general principles, her power of inspiring others, and her quick sympathy with their difficulties. Her readiness to do the thing that lay before her needing to be done will be apparent to all who read even this scant chronicle of her achievement. She must have possessed in a rare measure the skill to organize and to govern. But this attracts us most to her: seeing the true mission of her country as a bearer of the torch of civilization, she took education to be the field of her labour. In a remote land, away from the cherished scenes of her youth, she taught and trained others to teach. Hers is a career entitled to some record in a journal of education; hers is a memory that should prove a continual inspiration to those who come after her. This was a woman worthy of her Imperial citizenship.

CHINA.

We talk so much of the future of Japan that we are liable to forget that China has also a future—a future in which English and Japanese influences will further the cause of progress. Hitherto, in the matter of education (the field of activity with which we are concerned) China has been dominated by the Competitive Examination, those who desire to serve the State subjecting themselves to periodic tests wherein with essays and poems they show their knowledge of the early Chinese sages and their skill in imitating the style of these masters. It is true that life itself is a competitive examination; but then it does not turn upon Confucius. This important limitation of a general truth has at last been brought home to the Chinese mind. In accordance with two recent Imperial decrees, the State literary examinations are to be dropped from 1906 onward; those who are ambitious of office must henceforth prepare themselves for it by attending some educational establishment of a modern cast. England has sometimes been reproached with having a touch of China in her methods. Those who think the charge just will rejoice in the possibility that Chinese developments may now react upon us.

TEACHERS' GUILD NOTES.

[By a resolution of the Council, of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but "The Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

THE associations of secondary-school teachers in England are all up in arms against the proposed abolition of the Teachers' Register. Their protests, which have been forthcoming "thick as autumnal leaves . . . in Vallombrosa" during the last six or seven weeks, would, if collated, form an unanswerable objection to Clause 36 of the Education Bill. Starting from more or less different points of view, they all converge on one main point—that the abandonment of the Register will be a disastrous setback to the movement in the direction of the formation of a profession of teachers. We, of the Guild, have examined the conclusions of the Memorandum of the Board of Education, rather than the arguments on which they are based, because we think that, by traversing one by one those of them which we cannot accept, we are more likely to secure attention to our representations than if we put forward a more general objection to the contents of the Memorandum. Our answer to the Memorandum is published in the *Teachers' Guild Quarterly* for June.

Of course, we go over much of the same ground as is covered by the other associations, but, inasmuch as we are not a secondary-school association, but a body of teachers in all grades of schools, our aim is not quite the same as that of most. We also are eager for the preservation of Column B of the Register, but not as a register of secondary-school teachers, rather as the nucleus of a new comprehensive, single-column, alphabetical Register which shall grow gradually by the addition of properly qualified teachers from schools of any grade, all admissible under the same conditions of minimum qualifications and payment.

To make such a Register possible, under existing conditions, it is necessary to lay chief stress on strictly professional qualifications, while recognizing the desirability of some academic credentials, though of a lower standard than the University degree or its equivalent. To require this latter qualification at the present time is to ignore the fact that a Register of professionally qualified graduates will, for a long while to come, exclude not only the great mass of Government certificated teachers, but also almost all kindergarten teachers and teachers of lower forms in many secondary schools. Were registration made compulsory, it would be obvious that the graduate qualification could not stand as an essential feature. The fact that it is voluntary ought not to alter the whole basis of registration. The minimum academic qualification required by our Council is the Government Certificate, the Intermediate Arts Examination of London University, or their equivalents. The professional qualification which we support is that laid down in the permanent conditions for admission to the present Register.

THOUGH we believe that the establishment of the two columns in the present Register, and the consequent hostility of primary-

school teachers to it have led to its present parlous position, we do not anticipate any serious opposition on their part to a comprehensive scheme which shall yet maintain such an academic standard as we propose. They may not actively press for it: it will surprise us if they oppose it. Though they are, from some points of view, quasi-civil servants, that is no reason why they should be indifferent to becoming members of a learned profession as well. We have reason to believe that we understand their attitude better than do many associations which are less in touch with them than ourselves.

THE proposals of the Guild have one other differentiating feature which distinguishes them from those of the other associations. They are constructive. We urge the establishment of a statutory Educational Council on the lines laid down by the Bryce Commission, and the representation of teachers on such a Council by election by the members of the Register. There are other cogent reasons why such a Council should be set up. The Consultative Committee has no life apart from the will of the Board, unless it may be called life to protest against its master's action. A profession needs more independence in its mouthpiece than that. The satisfactory solution of the tenure difficulty, with right of appeal by head and assistant, requires a professional appeal court, and the Bryce Commission saw this when it proposed such a Council. We earnestly hope that those who do not look at the registration question eye to eye with us will yet see how desirable it is, on all grounds, that this valuable recommendation of the Secondary Education Commission should no longer be ignored by the legislature.

BOOKS OF THE MONTH.

Architecture.

Class Illustrations for the Study of Architectural History. Comprising the complete Series of 300 Plates as appearing in the Fifth and enlarged Edition of "A History of Architecture on the Comparative Method." By Prof. Banister Fletcher, F.R.I.B.A., and Banister F. Fletcher, F.R.I.B.A. B. T. Batsford, 13s. 6d. net.

Great Buildings and how to enjoy them: Gothic Architecture. By Edith A. Browne. Containing 48 full-page Illustrations reproduced from Photographs. A. & C. Black, 3s. 6d. net.

Astronomy.

A Compendium of Spherical Astronomy, with its Application to the Determination and Reduction of Positions of the Fixed Stars. By Simon Newcomb. Macmillan & Co., 12s. 6d. net.

Biography.

The Story of Sir Walter Raleigh. By Margaret Duncan Kelly. With Pictures by T. H. Robinson. T. C. & E. C. Jack, 1s. 6d. net.

The Story of David Livingstone. By Vautier Golding. T. C. & E. C. Jack, 1s. 6d. net.

JOTTINGS.

F. S. writes: "I was visiting an L.C.C. elementary school in the West End, and, remarking how well the boys and girls were dressed, I asked the head master whether some of his pupils did not come from the class of small shopkeepers. To my surprise and delight he answered: 'Many do, but the parents of many are better off than myself.' This is proof that Prof. Sadler's aspiration is in course of fulfilment: 'The old idea that the public elementary school is for the poor alone has lost much of its power. The quickest way to eradicate it is to make the public elementary schools so good that parents who have their children's welfare at heart will want to send them there.'"

TEACHERS who wish to take advantage of the Mosely visits of inquiry to the United States and Canada—the plan of which is given in another column—should apply to Mr. Alfred Mosely, C.M.G., Union Bank Buildings, Ely Place, London, E.C. As the number is limited to five hundred, an early application is advisable.

MATEO MORAL, the perpetrator of the bomb outrage at Madrid, was a professor at the Modern School of Barcelona, and we read that the

French Plays for Children.

Dans le Royaume des Fées.

By VIOLET M. PARTINGTON. In stout paper cover. Just published, 9d.

Les deux Fées. And other Plays.

By the same Author. In stout paper cover. Second Edition now ready. 9d.

Literature of the Elizabethan Period.

A First Book in English Literature.

By C. LINKLATER THOMSON. Part III. (From Lyndsay to Bacon.) Ready immediately. Cloth, fully Illustrated. 2s. 6d.

This work combines a simple history of English Literature with typical passages from that literature, long enough to be of independent interest, and chosen chiefly for their intrinsic beauty. Much attention has been paid to the pictures, which are in many cases copies of drawings in contemporary MSS.

A New Arithmetic.

A Heuristic Arithmetic.

By CLIFFORD GRANVILLE, B.A., and C. E. RICE, M.A., of West Heath School, Hampstead. Part I. Ready immediately.

This Arithmetic is on very original lines, and aims at the rational development of the pupils' mathematical power from the earliest stages. Part I. is adapted for children from six to ten years of age.

Complete Prospectus, with Specimen Pages, post free on application.

A New Carmelite Classic.

Chaucer's Nun's Priest's Tale.

Edited by C. T. ONIONS, M.A. Decorated paper cover. Price 3d.

Other recent volumes in this series of dainty booklets are :

Marlowe's Dr. Faustus. Cloth, 8d.

Spenser's Faerie Queene. Book I. Cloth, 1s. 4d.

Macaulay's Life of Goldsmith. Paper, 3d.

Complete List post free.

Summer Nature Study.

Botany Rambles—Summer.

By ELLA THOMSON. Limp cloth, many Illustrations. Price 1s.

Readers for Little Children.

Director and several of the other professors have been arrested in consequence of the pernicious literature discovered on the premises. We fully expect to see these facts quoted by some head master as a sign of the corrupting influence of modern languages and an argument in favour of pure classical learning.

"We may forgo the right to train up broods of controversialists on this side or on that, but we can only abnegate at our peril the duty of teaching every child in our schools that there is a Kingdom of Heaven, on accepting which depends its true prosperity and peace."—Canon AINGER.

MR. H. LEE-WARNER finds in the Cambridge Junior Local Examination for 1904 a good illustration of the attitude of middle-class parents towards dogmatic Church teaching. The alternatives set were the First Book of Kings, part of the Acts of the Apostles, the Church Catechism, and Morning and Evening Prayer in the Book of Common Prayer; and the respective numbers of candidates were 4,550, 2,749, 535, and 187, exactly ten Bible students for each dogmatist.

CANON BEECHING, presiding at the Abbey on June 17, combated the theory that the State is a secular institution, and has therefore no business to meddle with religious education. It was easy to show that, as far as the English constitution is concerned, theory and practice are both against the argument. The House of Commons has a Chaplain, and forbids Sunday trading. He went on to argue that, as the great majority of Englishmen are Christians, and are agreed on the essentials of Christianity, as, for instance, they are set forth in the Free Churches Catechism, the State is not only at liberty, but in duty bound, to prescribe the teaching of this common form of Christianity in its national schools, subject, of course, to a conscience clause in favour of a dissentient minority.

It would be interesting to have a list of public schools arranged according to the number of Registered teachers on their respective staffs. We can give the first ten: Stonyhurst, 50; Bedford, 40; Rugby, 36; Christ's Hospital, 33; Marlborough, 32; Cheltenham, 30; Dulwich, 29; Clifton, 26; Haileybury, 25; Harrow, 24. It will be noted that Eton, Winchester, Charterhouse, and St. Paul's are not in the first class.

THE Head Mastership of William Jones's Grammar School, Monmouth, is vacant. The post is worth, at present, about £500 a year and a house rent free, capable of holding forty boarders. July 7 is the latest day for receiving applications.

PROF. GEORGE RAMSAY has resigned the Chair of Humanity in the University of Glasgow, which he has held for forty-three years.

WE hope next month to give some account of the Ambleside Conference, which assembled, on the invitation of Miss Charlotte Mason, from June 8 to 12. Between thirty and forty distinguished teachers met, and the discussions were animated. The subject was a liberal and progressive curriculum for children between the ages of six and fourteen, and a final resolution was passed recommending the promulgation of the Parents' Union curriculum. The operative resolution, however, was proposed by Mr. Lowrie, of Sedburgh: "That not more than two and a half hours in the first, to go to ten hours a week in the fourth, year be devoted to classics." On this resolution we shall have something to say.

A MEMORANDUM on the proposed abolition of the Teachers' Register by Mrs. Bryant, already printed for private circulation, will shortly be published in the *Head Masters' Journal*.

MISS F. M. BUTLIN, Old Headington, Oxford, has arranged a fifth visit to Denmark, to last from August 6 to 18. A full course of lectures will be given at Copenhagen by Danish professors. It is reckoned that £10 will cover the total cost. The same lady has also organized a visit to Sweden from August 27 to September 8. Full particulars may be had on application.

MESSRS. WHITTAKER & Co. will issue in August the "Second French Book," based upon the direct method. The "First French Book" has had a great sale both here and in the colonies. The same publishers announce a thoroughly revised and rewritten edition of Miss Harcourt's "German for Beginners." Miss Harcourt is the head of a high school for girls at Wiesbaden, and was a pioneer of the direct method. The "First German Book" will be published in July, and the "Second Book" soon afterwards.

OCCASIONAL NOTES.

THE Education Bill has now assumed its final form as far as the Lower House is concerned, and will pass this week to the House of Lords, where it will be in the charge of Lord Crewe. In the Committee stage there were many peripeties and unexpected developments, not easy for an outsider to follow; but, in spite of considerable concessions to the dissenting minority, the leading principle of the Bill—public control of publicly supported schools—has been preserved intact; and Mr. Balfour himself, while denouncing the conclusions reached and the way in which they had been reached, acknowledged the ability, amenity, and tact with which the debate had been conducted by Mr. Birrell. Though it ill becomes a Gracchus to complain of the closure, yet it is a most regrettable incident of party legislation that all the last clauses of the Bill, and, in particular, Clause 36, abolishing the Teachers' Register, should not have been debated. We have, however, little doubt that on this and other moot points there will be an opportunity for full discussion in the Autumn Session when the Bill comes back amended by the House of Lords.

ON Clause 6, which places religious teaching outside school hours, the Cabinet itself, as the voting showed, was divided, and there is little doubt that an amendment in another place reversing the decision of the Commons would be accepted. On Clause 4 an appeal to the Board of Education is granted to school owners against an unreasonable Local Authority, enabling the Board to make an order under which extended facilities would be one condition of the transfer. But the alternative is allowed of making such a school a State-aided school, *i.e.*, putting it in the same position as before the Act of 1902. This is to create a new type, or rather to revive an extinct type, of school.

We can only hope that the event will justify Mr. Birrell's prognostic and that the contingency will rarely arise. Of far more importance is the concession under Clause 4 admitting teachers who are properly qualified to undertake denominational teaching. We cannot believe that this clause has received its final shape. Clause 25 has undergone as many changes as the proverbial Irishman's gun; but as it emerges it gives to Wales the same free hand in primary that it now enjoys in secondary education, and at the same time protects minorities and retains for Parliament the power of the purse.

ON July 26 the Archbishop of Canterbury delivered in the House of Lords what may be termed a speech on the First Reading of the Bill. His main point, which he drove home with much ability, was that syllabuses were no guide to the actual teaching given in schools, and that in two-thirds of the provided schools of the country there is no security for effective religious teaching of any kind. It is a bold premiss to assume that without inspection there can be no security, and, judged by this test, all our secondary schools would be classed as irreligious. But the real answer to the Archbishop is, it seems to us, that under the Bill the schools will be such as the nation choose to make them. If the nation is godless, the schools will be godless, and there is no help for it. If, as we are convinced is the case, the bulk of the nation is sincerely religious, it will see that its schools are religious, and will not be imposed upon by syllabuses which are a dead letter.

CLAUSE 23 of the Education Bill does much to recognize that book-learning or intellectual training forms a part only of the environment needed by young children. Under this clause the Local Recreation. Authority has power to provide for the recreation of the children not only during term time, but also in the holidays. Thus is Mrs. Humphry Ward justified of her settlement children. Vacation schools may be provided, play centres may be established, and, further, the health and physical condition of the children may become a proper subject of concern for the Authority. How far these provisions are acted upon will depend on the willingness of each locality to undertake additional expense. For it is obvious that playgrounds in large towns cannot be acquired cheaply. Physical examination, if it is thoroughly and scientifically performed, will add largely to the rates, though there could be no better investment. These improvements can only come gradually; for the present we are content to see recognized the principle that education has a wide connotation, and includes all the influences that surround children. In large towns, especially in the less favoured quarters, children get neither fresh air nor suitable play unless the Authorities see to it.

THE recently issued Code has several novelties. Vaccination is no longer insisted upon in cases where the teacher has conscientious objections. But the Board will not recognize any unvaccinated teacher unless the Local Authority has given its approval. So on the latter body is thrown the onus of deciding whether the risk of infection shall be allowed. It is provided that suitable organized games, such as cricket, football, hockey, and rounders for boys, and similar appropriate games for girls, may be played in afternoon school hours and count towards attendance. The preface speaks very prettily, in if somewhat stilted language, of the value of games in developing character. With regard

to moral instruction, two methods are given as alternatives—the incidental and the direct. The Local Authority, having regard to the teachers in any particular school, may decide which method is to be employed. But “the good moral training which a school should give cannot be left to chance.” The teacher must have a clear scheme which must be systematically carried out. It is also pointed out that “the scope of such lessons should be carefully defined in order to guard against doing or expressing anything in the least subversive of the authority of religion.”

WHEN Mr. Wesley Dennis was asked by the National Society to open a discussion on “The Future of Training Colleges” his first impulse, so he told his audience, was to refuse in Disraeli’s words: “Never prophesy before you know”; but he relented and in his address came to the conclusion that the future of denominational colleges was entirely in the hands of the denominations. It is clear that Local Authorities are inclined to start training colleges, or in some cases have already done so; but this tendency is being checked by a natural dislike to increase the rates if use can be made of existing institutions. The Local Authorities also see the disadvantages on educational grounds of establishing colleges for limited areas. For example, it is an obvious drawback that an intending teacher should attend an elementary school, a secondary school, and a training college all within the boundaries of the same borough. Still in cases where the Authorities establish or subsidize training colleges pressure will inevitably be put on students to go to these. The remedy is, if the Church of England, or any other religious body, desires to keep a hold on the training of teachers, to open hostels in connexion with the day training centres at which only members of the denomination should be received, and in which care should be taken to teach the students the special doctrines of that body. The Government grant would cover the cost of maintenance, or nearly so: all that is needed is for the Church to find the funds for a building and for the stipend of a chaplain. We wonder that Mr. Dennis’s proposal has not already been more widely acted upon.

THE *Daily News* has a grievance in a paper in geography set at the recent Certificate examination of the College of Preceptors. Examination papers are often criticized, and it is well that such should be the case. Sometimes they may be badly or carelessly set. Sometimes—many of our readers will say Amen to this—they appear to be set by men who gave up teaching twenty years ago, and who have no knowledge of the changes that have since taken place in the treatment of the subject. Such errors do not, however, take place in the case of examinations by the public bodies, such as the College of Preceptors, where the papers are subjected to revision by a body of moderators. We refer to the matter here because it illustrates a difficulty just the opposite of that we have spoken of above. There are schools which seem impervious to changes that have taken place. When the examiner endeavours to set his paper on modern lines in accordance with the teaching given in the most advanced schools, there is always some complaint from old-fashioned schools that the paper is unfair and outside the scope of the usual teaching of the subject. Examiners are often unjustly blamed for adhering too closely to tradition. The fact is, they are controlled by the schools. The teaching of geography has been entirely revolutionized in the last few years. We hope it has become a more real and stimulating subject. But the teachers who cling to text-

books are not unnaturally puzzled at the new type of question: hence the trouble.

THE agitation against the alleged inability of the London County Council to perform the functions of an Education Authority continues, and, indeed, grows more threatening. The voice of Dr. Macnamara is never silent for long on this subject, and we have a manifesto issued by a body with the title “The London Education Election Committee,” urging that at the forthcoming election in March, 1907, no candidate should be adopted unless he undertakes to support by vote and by petition to Parliament the re-creation of a separate Education Authority for London, directly elected for this purpose, without disqualification of candidates on the ground of sex, residence, or rate-paying. It is true, no doubt, that the present Council is unable to cope with all the necessary details, and work gets into arrear or has to be done by the officials. But we hope that some solution can be arrived at other than the one demanded in this manifesto. As Mr. Sydney Webb rightly says, it is contrary to all traditions of Liberalism to divide the work of local government among separate Authorities. An area of local government is an entity that should appoint its representatives to deal with all matters that are the function of that Authority. We have always opposed “*ad hoc*” Authorities, and we sincerely hope that some way may be found out of the existing difficulty other than by the election of a special Education Authority for London. Perhaps, when the Council and its officers are more accustomed to the work, it may be found that things will go more smoothly. The only pressing reform, in our opinion, is one which will admit women to be members of the Education Committee, just as they were members of the late School Board.

GREAT pressure will be brought to bear to induce the Lords to cut out Clause 24 (as at present it is numbered), which abolishes the Teachers’ Register. Equally strong pressure will be brought by the N.U.T. in an opposite direction. There is much to be said on both sides. We have never been satisfied with the double-column Register. Gladly shall we see it transformed into a Register with a single column. On the whole, we incline to the cutting out of the clause that abolishes the Register, and for this reason. It is grossly unfair to those who have registered in full confidence in the permanence of the regulations that their action should be entirely annulled. We want a new Register; but those teachers in secondary schools who are on the existing Register should be transferred automatically to this new Register. This can be effected if the offending clause is struck out. We can only hope that the National Union of Teachers will be merciful, and will withdraw its opposition, on the distinct understanding that the Register shall be entirely remodelled and all social distinctions removed. Whatever may be the fate of this clause, it is quite clear that we shall have a Register some day. The wide-spread agitation aroused by its threatened abolition has at last influenced the Board, and we have Mr. Birrell’s statement that he is ready to produce a Register so soon as teachers are agreed as to what they want. This is a weak position for a Minister to assume, but it is an honest confession that the difficulties are great. The real difficulty is to agree upon a minimum qualification. We can only say that it must be low at first, but must be gradually raised to at least a University degree and a diploma of training.

MR. SADLER makes an earnest and eloquent plea for the continuance of elementary schools of a type which is the outcome of deep religious conviction. He

Contracting out. suggests that such schools, if they wish to cut themselves off from rate-aid, should be allowed to do so, but should be eligible for the Exchequer grant, in every case where there is a Local Authority school within reasonable distance. If this privilege were allowed, the Local Authority would be able to build new schools at central points for groups of villages without feeling that they were thereby destroying a village school that had gained the affection of the villagers. To a very large extent we agree with Dr. Macnamara in his denunciation of the "contracting out" facilities. We feel that, if many denominational schools were to stand outside the national system, there would be a danger lest the cry of "intolerable strain" should again be raised; that the denomination would find a difficulty in raising the considerable sum needed to supplement the Government grant, and that the school would become inefficient and the teachers suffer in pocket. On the other hand, the Board has ample power to see that this does not happen. The school would be under inspection, and, if it were unable to retain its efficiency, it would be warned and finally handed over to the Local Authority. And we do feel strongly, whatever our religious views may be and whatever our opinion of the education that is called religious in the public elementary schools, that, if any group of persons are prepared, on the ground of "genuine religious conviction," substantially to support a school of a certain definite type, they should be allowed to do so, provided that accommodation is found for children who prefer the national system and that the efficiency of the special school is maintained.

Teachers as Civil Servants. ACCORDING to the *Morning Post*, the new Regulations for Pupil-Teachers contain an adumbration of a mighty change. It is decided that in future the Board of Education will pay to County Councils a grant in aid of the travelling and other expenses of pupil-teachers. This means that for the first time the Board will make a direct payment for an individual which to some extent takes the form of salary. This may pave the way to the payment of all salaries directly from headquarters. Mr. Sadler, in a letter to the *Morning Post*, would seem partially to endorse this view. He says: "It would be well if in future the salaries of all teachers were paid from the Parliamentary grant, and if the Code were to require that at least a minimum scale of salaries should be paid to all teachers in all schools which received subsidy from the State." There are reasons why many people would dislike to see teachers recognized as a definite branch of the Civil Service. They fear the rigidity of a large organization. Teachers should be free and independent to some extent. We quite agree in theory; but in practice we may find that the objections are mainly sentimental. It seems clear that we are rapidly approaching to a time when all teachers in public elementary schools will be paid directly by the State. Pupil-teachers are under the care of the Government, teachers in training colleges are equally so: the State guarantees a pension. After all, an Inspector is a civil servant, and we expect him to retain some amount of independence.

L.C.C. Salary Scale. THE London Education Committee has now presented to the County Council a scale of salaries for teachers in secondary schools. The matter has been referred to the Finance Committee for consideration, and, therefore, it is possible that some alterations may be introduced. But our readers will be glad to know the outlines of the scale. Head masters receive, as a minimum, £400, rising by annual payments of £20 to £500, £600, or £800, according to the size of the

school. Head mistresses will receive from £300 to £600, rising by £15 a year. In the smaller schools the maximum is to be £400. Assistant masters are to begin at £150 and rise by £10 a year to £300, or to £350 in posts of special responsibility. Assistant mistresses are to be appointed at £120, rising by £10 a year to £220 or in special cases to £250. In all cases the increment is subject to a satisfactory report. The suggested scale is to be applied to new appointments. The report of the Committee states that salaries are very low in London schools. The average received by 405 assistant masters is said to be £153 and by 240 assistant mistresses £108. In order to gain admission to the scale, it is suggested that teachers should hold certain qualifications. Provision is also made for service in other than Council schools to count in fixing the initial salary. The issue of this scale is good news; for many Authorities have been waiting for a lead from London.

A Satisfactory Document. IF the proposed scale of salaries for teachers in the secondary schools of London should be finally passed by the County Council, we are inclined to think that head masters will welcome the change that will be introduced. At any rate, if the existing head masters, or some of them, who have grown up under the old system of payment by capita-tion fee, prefer that things should remain unaltered, the newer race will certainly accept with alacrity the opportunity of a fixed salary. The prevailing system of payment of head masters attempts to make them managers of a business concern, whose salary depends upon success. This success may be the result of circumstances quite apart from the personal efficiency of the head master. In the London schools there will be no empty places. So long as a man does his duty he deserves to know that his salary will come regularly. The scale for assistant masters is quite the best that could be expected at present. It is the scale that has been urged by the Association of Assistant Masters and endorsed by Mr. Sadler. An income of £300, under the conditions of modern town life, does not mean luxury to a man with a family, but it is possible to live on it with care and economy. More important still, it is a certainty so long as the work is efficiently performed. With regard to mistresses, their position is equally good on a slightly lower scale. We may look forward in the future to the same scale for men and women; but, as things are, the proposals of the Education Committee are quite reasonable.

Religious Teaching in Public Schools. IN the *National Review* Mr. A. C. Benson writes temperately, and from an orthodox standpoint, on "Religious Education in Public Schools." He confines his remarks to Eton, and, except for the peculiar institution of Sunday questions, Eton may be taken as a typical public school. A Bible lesson on Sunday and one at first school on Monday is the almost universal rule. The lessons are undogmatic, and the object is "to make boys good Christians rather than good Anglicans." "Christian truth is approached on its moral and emotional side rather than on its metaphysical and ecclesiastical side." What makes the atmosphere of the school is partly the chapel services, but far more the preparation for confirmation, generally undertaken by the house master, though it may be delegated to the Chaplain. Under this system, according to Mr. Benson, the tone of Eton is far more religious than it was fifty years ago. And parents are perfectly content. Even High Anglicans acknowledge the impossibility of adapting the general instruction to suit their views. Mr. Benson points no moral, and we will follow his good example.

LINCOLN GRAMMAR SCHOOL, 1090-1906.

IT has been shown in these columns from the records of Westminster Abbey and Durham "Abbey" how entirely unhistorical is the often-talked-of but never existent "monastic school," in the sense of a public school which the monks either maintained and taught. It is now to be shown how entirely different was the connexion with education of the secular clergy from that of the monks. Our first and most salient proof of this comes from the great Midland diocese of Lincoln.

Lincoln became the ecclesiastical capital of the Midland counties on the removal of the episcopal see from the Oxfordshire Dorchester, then shrunken to a village, by William Rufus, completing the work of William the Conqueror. The school was, as usual, an integral part of the foundation of the cathedral church in 1090. This we know from the register of Moray, otherwise Elgin, Cathedral, the Chapter of which by their foundation in 1214 were to have all the privileges and be subject to the customs of "the great church" of Lincoln, and therefore sent to Lincoln to ascertain what these customs were, and wrote them down. This shows that the four Principal Persons of Lincoln Cathedral were the Dean, Precentor, Chancellor, and Treasurer. Of these, while the Precentor was to rule the choir and look after the singing, the Chancellor's duty was to rule or teach the school ("regere scolam") and correct the books. As "archiscola" he "ought to hear and determine lectures, and keep the seal of the church, prepare letters and deeds and enter the readers on the table of the day, and in like manner the Precentor the singers." In 1236 the Dean and Chapter sent a written and longer statement of their customs to Elgin, and this statement was copied in a Lincoln book. In this we find the Chancellor and the "archiscola," or Schoolmaster, separated into two different persons. "The office of the Chancellor is to teach the theology school, to preach, . . . to correct the lesson-books, . . . to hear the readers and determine the lessons," to keep the seal and prepare deeds and read whatever has to be read in Chapter, and to keep the library; in fact, he was the legal and literary (law and literature were then closely allied) officer of the Chapter; "to his dignity it belongs that no one is able to teach [*legere*, to lecture] in the city of Lincoln, except by his licence, and that he appoints to all the schools in Lincolnshire at pleasure, except to those in prebends"—prebends being places forming part of the endowment and under the jurisdiction of his brother canons.

The Chancellor, who originally taught the Grammar School of Lincoln himself, now taught only theology, but was also the Diocesan Inspector and Board of Education for the county, superintending Lincoln and the other grammar schools. Some of these schools are named about a century later, in 1329, when, the Chancellorship being vacant, the Chapter appointed masters to the Grammar Schools of Partney, Grimsby, Horncastle, Boston, and Grantham, and next year to Stamford also, while during a similar vacancy in 1354 they appointed to Bourne Grammar School on the presentation of the Abbot of Bourne. Meanwhile, in 1264, the Schoolmaster of Louth, which was one of the prebends, and therefore exempt from the jurisdiction of the Chancellor, occurs as being asked by the Bishop to induct a new vicar of Louth; in 1309 another grammar school in a prebend—that of Strubby—is several times mentioned.

The earliest document outside the Cathedral Statutes which show us what sort of status the Grammar School Master at Lincoln itself held is dated November 3, 1246, and shows him in a rather august position, acting with the Chancellor, whose "Vice" he was, as a Papal delegate to try a case in which Whitby Abbey was interested. In 1300 the Schoolmaster (*magister scholarum*) is mentioned as one of the officers of the Cathedral to whom, as to each canon, a new canon was on his admission bound to present 6d. for wine. In 1311 we find Bishop Dalderby directing the Chancellor to exercise his prerogative to uphold the monopoly of the authorized Grammar School, and excommunicate any one setting up a rival and unlicensed grammar school. Waste of educational resources by overlapping and underselling in the same area was not allowed in those benighted times.

The first Lincoln Master whose name is recorded was an author of some distinction—William of Wheatley, a place in Lincolnshire, which he Latinized for a *nom-de-plume* as "de Frumentis lege." He was Master of Stamford School in 1309, and of Lincoln in 1316. While at Stamford he published a

commentary on the pseudo-Boethius treatise "On School Teaching" ("De disciplina scholarum"), which is preserved at Exeter College. At Lincoln he wrote a commentary on the real Boethius' "Consolation of Philosophy." This is preserved at New College, Oxford, together with other lucubrations by him, including two hymns in honour of St. Hugh, the Bishop of Lincoln, which he wrote in riming Latin verses of the most elaborate Asclepiads, for a play to be performed at Christmas, no doubt, by his boys. He was probably still Master in 1321, when the Grammar School is clearly distinguished as a separate institution from the Song or Choristers' School, with which it is customary for most writers on education to suppose it was identical, with the utterly erroneous implication or assertion that it was merely a place where a few choristers learnt to sing or to stumble through a Latin psalm. By an order made for the division of the plunder derived from the offerings of the faithful at the shrines of St. Hugh and St. Robert Grosseteste (the bishop whom the Chapter refused to allow to visit them while alive and converted into a saint when he was dead), each canon was to take 6s. 8d., the Grammar School Master ("magister scholarum grammatice") 5s., and the Song School Master ("magister scholarum cantus") only 1s. There is other evidence of the distinction. While the Grammar School was the child of the Chancellor, the Song School was under the tutelage of the Precentor. Thus in 1305 all the parish clerks of the parish churches in the city were summoned by the Precentor and charged with keeping adulterine (*i.e.*, unlicensed) schools in song or music in their churches, and, on their admission of the offence, were made to swear on the Gospels not to do it again without the licence of the Song School Master.

The choristers did, no doubt, also attend the Grammar School, but they were so far from being the sole or even the principal or primary part of the attendants at it that we find the Chapter harassed by the difficulties of combining proper attendance at the school with proper attendance at the services. So in 1307 they gave them a separate tutor, and a century later set up a separate and to some extent a rival grammar school for their exclusive benefit. The choristers, after all, were only twelve in number, and would not form a real school. Before 1264 they were lodged about as charity boys in the houses of the canons or other officers of the church. From 1264 they were all boarded together in what is now the organist's house. On an appointment of their keeper or warden ("*custos*") on January 25, 1308, he was sworn to teach ("*informare*") them as well as look after them. On October 2, 1389, the Precentor presented a pedagogue ("*petagogus*," it is spelt) to teach the choristers grammar as well as song, and look after them. A "pedagogue" properly means, as all classical scholars know, not the person who taught the boys in school, but the private tutor (commonly a slave) who took them to school. But on September 23, 1390, the Usher or Under Master of the High School of Lincoln was appointed master of the choristers to teach them grammar, Mr. Robert Bramley being then Master of the High School, or "Grammar School of the City of Lincoln," as it was also called.

On December 23, 1406, Mr. John Bracebridge, who since 1390 had been Master of Boston Grammar School, was appointed by the Chancellor Master of the High School ("*scolas grammatice generales civitatis Lincoln*"), while Thomas Prestcot, priest, was appointed by the Precentor master of the choristers ("*scolas grammatice collegii choristarum*"). Further, on June 15, 1407, the Chapter allowed the choristers' master to admit commoners with the choristers, and to teach relations of the canons in the school of the college gratis (*libere*); but boys from outside leaving the "General Grammar School," whether from the city or the country outside, he was not to take. This limited admission of outsiders was, however, resented by the city and the Chancellor as an attack on the privileges of the ancient Grammar School. A Chapter "Act" of February 12, 1407, records that after a treaty between the Chancellor and the Mayor and citizens on one side, and the Precentor and Chapter on the other, on the admission of outside scholars and of commoners with the choristers, in derogation of the rights and regimen of the General Grammar School, on the complaint of Mr. John Bracebridge, its Master, a compromise was effected—a compromise in which, as usual, the practical victory remained with the clerical party.

The nominal superiority and legal monopoly of the ancient

Grammar School was preserved. The boys in what is now called "the Grammar School in the close," i.e. the choristers, commoners boarding with them, and the relations of the canons or vicars choral of the Cathedral or those living with them, were allowed to be taught in the separate school now established, without payment of "collections" or salary to the general or public schoolmaster, or being under his control. But this was on condition that, for one day in each of the three school terms Michaelmas, Christmas, and Easter, they went down to the General School of the Church of Lincoln, and sat under the teaching and chastisement of its Master "unless of his own free will some other arrangement was made." No one else, "whether living in chantries or inside or outside the Close," was to be allowed to attend the new Choristers' School. The boys living in chantries included a rather curious little establishment of six boarding scholars attending the Grammar School, boys from seven to fifteen years, founded as part of a chantry of five priests to pray for his soul by Bishop Burwash or Burghershe in 1345; to whom two more were added by Bishop Buckingham in 1388.

The terms used in these documents show how entirely the ancient Grammar School, called indifferently the "high school of the city," and the "general school of the church," occupied precisely the same position as the present Grammar School, connected alike with the Cathedral and the city, as the Public School of Lincoln, sharply distinguished from the new, close, and semi-private school of the choristers. The interest taken in it by the civic authorities is sufficient evidence that it was no school for choristers only, or for clerics only, but for the laity and the general public as well. It is the circumstance of the school being down in the town and not up on the hill in the Close, which suggests that the school was really older than the Cathedral, and existed from early English days when the town grew up as a seaport on the plain by the Witham before the Normans dominated it with their garrison in the new castle and new church on the hill. From a subsequent document of 1511 we learn exactly where this old school was—next to St. Rumbold's Church (now disappeared) at the corner of Glasketgate, not two hundred yards from the Grey Friars, which the school has recently left for an ampler ether and a more spacious site on the hill.

From 1407 to 1567 the two Grammar Schools went on; the Choristers' School under the tutelage of the chapter, the High School under the tutelage of the Corporation, but with the Masters appointed by the Chancellor of the Cathedral. In the Chapter books we see the Chapter trying to dragoon—for the most part ineffectually—their vicars choral and their "poor cleriks"—young men of eighteen to twenty-four tending the altars of the church while training for Orders—to attend the lower Grammar School. In later years the choristers were so hard to teach that the Chapter set up a special song schoolmaster for the choristers, occupying the same position as regards the ancient and "general" song school as the grammar master did to the ancient Grammar School. The ancient Grammar School rarely appears in the Chapter books; but when the city minute books begin in the reign of Henry VIII. the Corporation is found fostering the school, buying a new dwelling house for the Master, and imposing a special voluntary rate—afterwards made compulsory—for its support. After the Reformation, the Chapter, with curtailed income, found the separate choristers' school too heavy a burden for them, and from 1560 onwards various arrangements were attempted or made between the authorities of the Cathedral and the city for the division of the burden of the school between them.

At length, when the city had acquired from their Recorder, Sir Robert Monson, the house of the dissolved Grey Friars, by an agreement of January 18, 1584, the two schools were reunited. Henceforth there was in the Grey Friars one Grammar School under two shepherds—the Head Master, appointed by the Chapter and paid £26. 13s. 4d. a year (of which they contributed £20); and an Usher, appointed and paid £13. 6s. 8d. a year by the city. This union lasted till 1871, when the school was divided into Upper and Lower Schools—but still both in the Grey Friars. In 1883 the Grammar School was removed to new, but very cramped, premises uphill, under the government of the Chapter; the Middle School, as it was now called, remaining in the Grey Friars, under the government of the city. This separation proved signally unsuccessful; so, by a

scheme of January 11, 1900, the two schools again became one, under a governing body mainly civic, but with representatives of the Dean and Chapter. With a splendid new site on the Lindum Road, and fine buildings in course of erection, the school may at its opening celebrate at least its eight-hundred-and-seventh, and probably its thousandth, anniversary, without being afraid of overstating its claim to continuous life.

ADDRESS OF M. APPELL*

(Dean of the Faculty of Sciences in the University of Paris).

WE consider that Faculties of Science have a double mission. They have first to give a general scientific course of instruction with a view to high mental culture and to preparation for certain careers, such as those of medicine, engineering, and teaching, in which advanced scientific knowledge is indispensable. Secondly—and this is the noblest part of their task—they must advance science itself by the work of their masters of every rank and initiate the *élite* of students in methods of invention and discovery. We consider this the vital function of superior instruction. A scientific institution whose professors devoted themselves solely to the exposition of scientific results that others have attained would be destined to rapid dotage. It is only masters who have made, and are making, original researches themselves who can know and really comprehend the proper methods of each science: they alone can give life to teaching, even of an elementary kind, and communicate to their pupils that spirit of scientific curiosity, that passionate search for truth, apart from all practical applications and material profit, which constitute the genuine man of science.

To fulfil this double task we have established two kinds of courses and laboratories. In the first, devoted to general instruction, the same fundamental questions are treated year by year. It is evident, in fact, that for the teacher of the calculus, of general chemistry, geology, &c., there are a certain number of fundamental ideas which must be carefully developed, a certain number of observations, experiments, and calculations which students must perform and thoroughly understand. Accordingly, for these courses there is more or less a fixed programme.

On the other hand, in the courses planned for scientific research the most complete liberty reigns: there are no programmes or defined methods of instruction. The professor has a free choice of subjects, and he brings his subject up to the point at which the most recent researches have left it; he points out what facts are certain and what are doubtful, and in what direction, in his judgment, future researches may be conducted with the best hope of success.

It is clear that this dichotomy of courses and laboratories, according as they are destined for general instruction or for research, cannot be rigorously determined except in the case of mathematics. In experimental sciences, where questions apparently "classical" may lead to discoveries of the first order, there can be no hard-and-fast line. I may instance the great discovery on the composition of air by Sir W. Ramsay, whose presence we welcome to-day. Therefore we insist that general instruction, even the most elementary, should be given by real masters of science, who alone can speak with authority, suppress useless details, and present the elements to their pupils in such a way as to prepare them for future research.

For a long time—especially before the creation of the Universities—the teaching of the Faculties of Science was too theoretical, too verbal; it consisted too much of *ex cathedra* courses, religiously taken down and mandated by the students for examination purposes. We have been, and are still, engaged in making it more real, reducing oral instruction to the necessary minimum, and developing, on the other hand, the life of the laboratory—direct contact with the actual world of things in all its reality and complexity. In this respect the ideal at which we are aiming is to have teaching laboratories large enough to enable all students to work in them at any hour.

The Dean proceeded to give some details as to the preparation of University students. In mathematics they were generally

* Delivered at the University of London, June 7.

well grounded. Those who came from the Ecole Polytechnique, the Ecole Centrale des Arts et Manufacture, and the Ecole Normale Supérieure were picked pupils. For five hundred places there were last year two thousand candidates.

On the other hand, science students came from the *lycées* very insufficiently prepared, and it could not be otherwise unless they added to the already overloaded programme for the *baccalauréat*. For these there had been instituted a preparatory year of science, which was obligatory on medical students and had last year been attended by five hundred.

"But," the Dean ended, "I have fallen into the error which I denounced at the beginning of my address and given you a verbal description *in abstracto*. I can only repair my fault by inviting you to come and see for yourselves what our Faculty at Paris is doing."

THE IMPORTANCE OF PLANT GEOGRAPHY IN THE TEACHING OF BOTANY.*

By CHARLOTTE L. LAURIE.

DURING the last ten years a great deal has been done in America and on the Continent in the study of plant geography. One of the first workers in Britain was the late Robert Smith, who published the first maps of the Scottish Botanical Survey (Edinburgh, North Perthshire) in 1900. In 1903 a map of the vegetation of the South-Western district of the West Riding, by Dr. William G. Smith and Mr. C. E. Moss, was issued; one or two others have followed. It seemed to me that members of this Association would be interested in hearing what is being done in this direction at the present time. The introduction of plant geography is in some sense a new departure in the teaching of botany, and one that seems likely to be much developed in the near future; for it is finding its way into the syllabuses of University examinations.

The great interest of the subject lies in this: the central idea of botany teaching on these lines is the habitat of the plant—the term "habitat" including all the surroundings of the plant; viz., the soil in which it grows, the intensity of the light that falls on it, the rainfall, the amount of moisture in the soil, &c. The structure of the plant is taught in connexion with, and is seen to be affected by, its habitat. For instance, any one who is observing the distribution of plants soon notices that plants growing in dry situations are, as a rule, much more hairy than those growing in wet places, or that they have a tendency to roll in their leaves, or that the leaves are very succulent, &c. It is by some adaptation of this kind that the plant growing in a dry situation where the supply of water is irregular protects itself from loss of water; and these modifications of the leaf are not, as a rule, found in those plants which have a regular supply of water. The study of the structure and physiology of a plant should, it seems to me, be accompanied by observations on habitat. Laboratory work needs to be supplemented by out-of-door observation, which should precede the experimental work in the class-room. Suppose, for instance, the nature of soil is being studied. A quarry or a gravel-pit can be visited; the humus (or soil proper), the subsoil, and the hard underlying rock can be observed; also the extent to which the roots penetrate, following the course of the water, which is indicated by the dark lines in the rock; the disintegration of the hard rock into the looser rock of the subsoil, and ultimately into the top layers—all this can be seen only out of doors. It is true that the degree of porosity of different soils may be tested experimentally in the laboratory, but the effect of this on the nature of the vegetation can be observed only by visiting different areas. Or let us take the intensity of light. It is well known that certain plants require more shade than others, and that light affects growth in length. In the laboratory it is possible to grow some seeds in the light, others in the dark; but these laboratory conditions are, at best, unnatural. If, however, plants are observed in their natural habitat, it will be possible to note a difference in the vegetation of two hedgerows on the opposite sides of a lane,

and the difference in the intensity of light can be measured then and there by means of a photometer. The effect of light on growth in length can be estimated by comparing two specimens of the same plant—one growing in the shade of a hedge, the other in the open. These are just a few examples of what can be done during expeditions.

The most interesting part of plant geography consists in finding out what plants grow together in plant associations. It is found that certain plants belong to certain situations: one set of plants is characteristic of a heather moor, another of a salt marsh; others, again, are found only in woods. In the study of plant associations the usual method at present is this: (a) The dominant species of the wood, moor, &c., is noted. In a beech wood it would be the beech; on a heather moor, heather; and so on. Sometimes there is no one dominant species. A wood may consist of deciduous trees, no one species being predominant: it would then be described as "mixed deciduous." (b) Having noted the dominant species, the subdominant are next examined. These usually form the shrubby undergrowth of a wood—for instance, hawthorn, blackberry, guelder rose, &c. (c) Lastly, the herbaceous undergrowth is noted. This varies considerably and depends on the dominant species. It is far greater in an oak than in a beech wood, in a beech wood than in a larch plantation. It depends on how closely the trees are planted; for that affects the intensity of light. It depends, too, on the season of the year and whether the leaves of the trees are out or not. Thus, in the spring there is a great deal of undergrowth in a beech wood before the leaves of the trees are out; in the summer only plants that can do without much light are to be found. This question of plant associations is being worked out, and very little generalization is as yet possible. The moors of the West Riding have been thoroughly mapped; the bilberry and crowberry are found associated with the cotton-grass, and the heather moor usually has more plants associated with it than the cotton-grass moor.

It is found practicable for girls learning botany to study the vegetation of any natural area, such as a pasture, a hedge, a hill, a wood, in the way described. Observations should be registered on the spot; then, after several observations, the teacher might set an essay, in which some attempt should be made to draw general conclusions. For instance, if observations have been made on several hedges, an essay on "Hedgerow Vegetation" would embody the following generalizations:—(1) That climbing plants are characteristic of hedges; (2) that the herbaceous undergrowth of the hedge depends on (a) the amount of light, (b) the amount of moisture, (c) the side of the hedge examined. It is important to observe several hedges, not only those by the sides of woods, but also those between a pasture and a road; for the vegetation of the side of a hedge next a cornfield, for instance, will consist of weeds of cultivation not found in a hedge between a wood and a lane.

The vegetation of a district may be mapped. The most useful map is the Ordnance Survey map, the 6-inch-to-the-mile scale. This has the woods, pastures, &c., marked. To do this the map must be taken to the spot that is going to be observed, each wood, pasture, &c., is numbered, and a corresponding number inserted in the note-book with the description thus:—(1) oak wood; (2) pasture, ridge, and furrow; (3) daffodil pasture; (4) meadow for mowing; (5) cultivated, wheat, &c. Then when the map has been filled in with index figures the pastures, woods, &c., are coloured in different colours according to the type of vegetation. A scheme of colouring is being suggested, I understand, by the Ecological Committee, of which Dr. Smith, of the Yorkshire College, Leeds, is secretary.

In conclusion, it may be helpful to give books on this subject: (1) "Okologische Pflanzengeographie." Warming. (2) Clement's "Research Methods in Ecology," published by the University Publishing Co., Lincoln, Nebraska. (3) Schimper's "Plant Geography" has been translated into English, and is to be had from the Clarendon Press. These three books are expensive.

The *New Phytologist* (University College, London) is bringing out papers on survey work in vegetation. The first pamphlet can be obtained for 3d. There is a very helpful article on "The Flora of the Cambridge District in the Natural History of Cambridgeshire issued to members of the British Association in 1904." There is also a valuable introduction to the map of the Leeds and Halifax district, published by Bartholomew.

* A paper read at the meeting of the Association of Assistant Mistresses on May 26, at Birmingham.

BLACK'S EDUCATIONAL SERIES.

Small Crown 8vo. Large Type. Strongly Bound.

ALGEBRA.

By Prof. G. CHRYSAL, M.A., LL.D.
Introduction to Algebra. For the use of Secondary Schools and Technical Colleges. Third Edition. Price 5s. Or in two separate parts. Part I., price 2s. Part II., price 4s.

By M. S. DAVID, B.A.
Beginner's Algebra. With Illustrations. Second Edition. (With or without Answers.) Price 2s. 6d. Answers separate, price 6d.

ARITHMETIC.

By T. B. ELLERY, F.R.G.S.
The Council Arithmetic. Illustrated. *Scheme B.*—Complete in One Volume, with or without Answers, price 2s. 6d. In Two Volumes, with or without Answers, price 1s. 6d. each. Answers separate, complete, price 1s. 6d.
Separate Parts. Paper covers, 2d.—4d.; limp cloth, 3d.—6d. Answers to Parts, cloth, price 4d. each.

By A. SONNENSCHNEIN and H. A. NESBITT, M.A., Univ. Coll., London.

The New Science and Art of Arithmetic. In Three Parts, price 2s. each. Part I., Integral; Parts II. and III., Fractional and Approximate; or complete in One Volume, with or without Answers, price 4s. 6d. Answers to Complete Book in separate Volume, price 1s. 6d.

A B C of Arithmetic. Teacher's Book. Parts I. and II., price 1s. each. Exercise Book. Parts I. and II., price 4d. each.

BIBLICAL.

Old Testament History. For Sixth Form Boys. By Rev. T. NICKLIN, M.A. Part I. From the call of Abraham to the death of Joshua. Part III. From the Death of Jehoshaphat. With Illustrations and Maps, price 3s.

CHEMISTRY.

By TELFORD VARLEY, M.A., B.Sc.
Progressive Course of Chemistry. For Junior Classes. With 166 Illustrations. Second Edition, price 2s. 6d.

By A. SCOTT, D.Sc.
An Introduction to Chemical Theory. Crown 8vo. Illustrated, price 5s.

 Posts Wanted or Vacant.—30 words for 2s.; each 10 words after, 6d.
 Lectures, Classes, Non-Resident Posts, &c.—48 words for 3s. each
 8 words after, 6d.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

Date of publication of next issue will be found at top left-hand corner of front page. [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—
 "THE PUBLISHER, JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C. Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

OVER-PRESSURE.

By GERALDINE HODGSON.

ONE of the most urgent, and at the same time contentious, of educational problems is over-pressure. Its importance is immediate, because, if it exists, it is doing vital harm now; if it does not, the bogey of it should be slain and removed—since the age of bogies is past, they are no longer considered salutary.

The human body, so say the physiologists, generates a certain amount of force in a given time, on given resources. It also, on the same authority, asks for seasons of repair.

Now over-pressure must mean one of two things: either a greater amount of force is demanded of the body than is justified by the time allowed and the nutriment given; or sufficient rest is denied—rest being time to be expended on nothing but what should be the silent unconscious processes of restitution. This is worthy of note because recreation and rest are often treated now as if they were synonyms. No one will deny that in the "big world" over-pressure exists. Preachers, teachers, philosophers, all alike bewail the feverish restlessness of modern life; its bustle, its noise, its hurry, its superficial success built on rocking foundations; its pretence which has taken the place of strength; its jerkiness of effort which has supplanted resolute strenuousness. Medical men not only can, but do, testify to the present frequency of "nervous breakdown." This is a disease estimated variously. Those few and happy people who can still say they do "not know what nerves are" treat it with contempt. The mass, who have not suffered it yet, but feel that they may, look at it rather as a jibbing horse eyes a piece of unexpected white paper on his path. Those who have suffered it either accord it the over-mastering victory it has gained, or, if of stronger fibre or happier destiny, hold it as one of mankind's worst foes, to be fought against by every weapon of reason and morality, to be driven back inch by inch relentlessly, till it is beaten out of the field. But, however it is viewed, it is sheer waste to the individual and the nation. On the hypothesis of contempt, a man or a woman may be a "poor thing"; but it does nobody any good for a poor thing to become a perfectly useless one. If he cannot be improved, yet, if any effort or wisdom can keep him on the level and off the down grade, why,

common sense says : exert the effort, use the wisdom. Qualifications of a statement are subject to two inherent defects. Put in, they are tedious ; left out, their omission damages the position.

Two must suffice here. First, let it be said that the statement that over-pressure exists is not identical with the statement that we are all over-pressed. In this place all that is meant is that it exists sufficiently to be a grave danger, and that experience seems to suggest that it is also a growing danger. The second is the obvious one that an amount of activity which overdoes one person may be a "nice day's work" for another. Over-pressure begins when—to use the expressive word employed lately in certain mills—the worker is "driven," whether by an employer, by opinion public or private, or by a distorted sense of duty. To stop hyper-activity of human life by any legislative means is of course impossible, for the present ; some commercial men will ruin themselves in the effort to outstrip rivals ; some athletes will sacrifice their future capacity to break a record ; and noisy advertisement will open up ever fresh markets for worthless goods. But there is a more effective weapon at hand than force, physical or legislative : there is the silent potent strength of habit. If we really want strong, capable, strenuous, healthy men and women instead of nervous breakdowns and an entry into asylums ever increasing in greater proportion than the growth of population, it is a pity to make over-pressure an educational system. And that may happen, if it has not done so already. Tendencies of opinion and habits are formed in youth—that is at once a platitude of education and a law of the human animal. Locke's *tabula rasa* is discredited now : the infant mind, if it must be pictured, is rather a palimpsest than a white sheet. What will happen, say a century hence, to a child if he comes into the world with tendencies to over-haste inherited from bustling forbears, only to find a system of education which hurries and drives him more ? The wisdom of waiting, the patience essential to slow construction, the calm for reflection, these are among the qualities for which over-pressure has no room and sees no use.

In education, over-pressure may be physical—the kind of system which approves too long hours, which crowds too many subjects at once into sated minds, which requires violent physical exercise from a child already weary with intellectual effort. (In this last case the argument of "change of occupation" will be cited. But, if the force generated be exhausted on one occupation, rest—not "recreation"—is the suitable change.)

But a worse species of over-pressure is that which is intellectual rather than physical, which will sacrifice mental training to immediate material ends. It is natural enough, if deplorable, that men and women engaged in the actual business of life should sometimes, when necessity presses hard, seize on the nearest means and lose sight of the end. But what is more or less unavoidable in their case is not pardonable in those who undertake the training of children ; who, so it must be supposed, have thought the thing over. Theory must be pure if practice is to be even moderately filtered from evil matter.

"L'art de passion," said Amiel in his plea for mental serenity, "est sûr de plaire, mais ce n'est pas l'art souverain." We do not, however, expect to find it "pleasing" to educationalists. Should not the end of their efforts be the "sovereign art" ? To control the passions (all of them, not only those which corrupt the body, but those, like hurry, superficiality, restlessness, over-leaping ambition, noisiness, which war against the soul) is the art of education.

To confound feverish effort with strenuousness is becoming apparently a very common mistake. To over-work without recking the consequences (and that not in a sudden emergency, but as a continuous practice so long as strength endures) seems in some quarters to be deemed the last new virtue. And yet all the enduring achievements of the past, the literatures of the world, its governments, its laws, its buildings, its great men even, in some measure, have been the work of men who could allow themselves time to think, quiet for contemplation, and occasional periods of repose. Of many of us to-day how true are Amiel's words—"il leur faut toujours des effets, des actes, du bruit, de l'effort" !

Struggle and noise in the world outside, if it must be, we will suffer. But in the schoolroom why not keep still the "seed growing secretly" ? If it be inevitable, as it probably is, that the onward movement of invention and the accompanying growth of population make the slower methods of our fathers impossible, such a condition will be hastened incalculably and

injuriously if children are taught all through their most receptive years that these things are not only inevitable, but admirable. The taste for short cuts everywhere must end in dislike for, and distrust of, all those parts of human life and thought to which there are none. We may see this already in the crusade against the classic languages. The opponents of these are not content with arguing that, as at present taught, they do not bring good results, but rather they consider them intrinsically useless. The patience, the continued effort, the perpetual bracing of the mind to get at the kernel of the matter, these are to be sacrificed to the more easily acquired languages which give commercial advantages. No one wishes to belittle the charm of modern tongues ; as Mr. Morley said once : "No one who reads French need ever spend a dull hour."

But the contention is not that modern languages are better training, but that they are more *useful*. When the word "useful" is employed thus, its meaning may always be translated in terms of pounds, shillings, and pence. But the matter does not end so easily. "Useful" knowledge is not the one and only sort worth acquiring even for pecuniary ends. It may be quite true that, if two boys of average intellect were trained, one on the old classical lines, and the other on the newest method of cram and competitive examinations, stress being laid on modern languages (it may be noted parenthetically that a firm of publishers are bringing out a series of *commercial* language text-books), and then were put into a house of business, the latter would succeed most palpably at once. But would he, when unforeseen difficulty arose, be as well able to cope with it, this person of selected text-books and special systems, as the one who had learned by slow and steady degrees to pluck the heart out of a few subjects, even if he did not grapple with so many at once ? If it should turn out to be unfortunately true that, to maintain our commercial supremacy, we must sacrifice some of our population in this way, yet we need not call the process an educational system. Habits of thoroughness cannot be instilled into children whose school life is a continual rush ; nor can they learn them from a perpetual stream of facts poured into them by teachers or manuals ; nor can they learn them if their so-called leisure is filled with games which are less recreation than a fresh attack of fever, a little different in kind.

But over-pressure, in education at any rate, is scarcely deliberate and planned yet ; it is more or less the result of three causes. The first is the badness or insufficiency or unsuitableness of much early education. There are people who fancy, or who act as if they fancy, that a child can be neglected till fourteen or so, and then that everything can be put straight in a couple of years at school. Then, again, early education is often insufficient, that is, parents do not begin early enough to realize the value inherent in twelve months ; they think there is "plenty of time," whereas average children want all the time that nature has given them. If something solid be acquired slowly and steadily every year with plan and foresight, there need not be over-pressure to secure results something more than mediocre.

Perhaps more early education is rather unsuitable than really bad. It is true that many children show no marked proclivities, at any rate, until they are grown up. But too often those who do are thwarted or neglected. It may be a consequence of the general hurry of life that scant attention seems to be paid to natural bent ; almost any circumstance being allowed to weigh more in the choice of his future occupation than a child's own capacities and tastes. It is true that some children never have a bent ; but attention given to the matter is rewarded occasionally by the appearance of very definite tastes, which might have remained dormant till too late had not some elder person, wiser by experience than the child could be, pointed out to him the signal importance of spending the major portion of his life in a suitable and congenial occupation. The duty of "doing the thing that's nearest" has, for some unaccountable reason, overshadowed the duty of "doing the thing that's fittest." It is odd that a nation which has accepted the most convincing argument in favour of free trade—viz., that under it the *natural* gifts and capacities of nations are utilized to the utmost—should have missed the application of a similar truth to individuals. Is it extravagant to say that, as a nation, we do not take half enough trouble to develop children's latent tastes, and find then the occupations for which those tastes fit them ? Even "over-pressure" might gain by a change here, since we can all work longer and harder at a congenial than at a distasteful occupation.

A second cause of over-pressure is the cheapness of education. To teach difficult subjects to a great number of children at once, in several different stages of receptiveness, and that in a given time, would tax Socrates himself severely. To excessive numbers is added the exaggeration of the competitive examination system which obtains among us. It has been raised gradually into the position of the one all-sufficing test, though every one who knows anything about it knows that it tests some people wrongly, and some not at all. There must be examinations. But need there be so many, especially for growing children, and need they be quite what they are? For example, is it worth while so to over-work school-children for preliminary examinations—as is done in some schools—that when they arrive at their degree examinations they are too weary to do anything approaching to their best? Again, though to get a First Class in a degree examination is worth an effort—worth a great and sustained effort, since it is a satisfaction at the moment, and, moreover, should failures come thickly in after-years, it is pleasant to remember that one succeeded once at least—yet is it worth while to sacrifice the future to the preparation for it? It is an old gibe, not perhaps without some shred of foundation, that Senior Wranglers are not always heard of again.

The whole educational problem has grown quickly in the last fifty years. Now that irrefutable proof is forthcoming that certain feats deemed impossible aforesaid are not so in reality, has not the time come to review the whole question as a national one? If the review should be made, why not face the problem of over-pressure?

No one who really wishes to learn nowadays need complain of lack of opportunity; the vaunted ladder is complete to its last rung. Is it equally true that the education offered is as perfect as it could be made? Are children and young people taught, not here and there, but in the majority of schools, that steadiness, not restlessness; persistence, not jerkiness; endurance, not a sudden start forward; indefatigable courage, not spasmodic effort, are the best methods of gaining knowledge, the surest avenues to secure serene, successful life?

CORRESPONDENCE.

THE FOUNDATIONS OF MR. BIRRELL'S BILL.

To the Editor of The Journal of Education.

SIR,—In the recent discussion of the merits of undenominational teaching and of the logical possibility of a common undenominational religious system there is one point which will perhaps bear being brought out more fully and re-emphasized from time to time. It is one connected with the basis in thought of the system encouraged by the Education Bill at present before us. It has its theoretical side and its practical issue.

First, as to the theoretical side. Let us grant that intellectual comprehension and sympathy, play of mind in instruction and learning, in even companionship and debate, depends on each person's power of imaginative realization of the attitude of others, and of the relation of that attitude to his own point of view. It follows, then, that the possession of a root of conviction, intellectually justified, joined to a power of recognizing and allowing for this conviction in others, is the best guarantee of a true effort to attain the unity which goes deeper than a superficial uniformity. And the more complete and deeper is such a common understanding the more numerous will be the points both of contact and difference which each party will be able to see and appreciate. The common understanding is not restricted to the common agreement. It is, moreover, built up from the independent thought of the individual, and thus no external and artificial standard of agreement can be applied to what is a matter of common development.

Let us apply this theory to the practice of teaching, taking as an example the subject of history. History taught from the point of view of the development of nations fosters a sense of international progress and intercourse. But history taught from the point of view of a vague cosmopolitanism would bring

about a carelessness of issues and an ignorance of the real force which binds a nation together and finds its expression in patriotic acts. What is true in this sense of historical is also true of religious teaching.

Again, we have been told that the method of all teaching is dogmatic: the real ground for this assertion is that all teaching is in its nature ethical. The ethics may be true or false, but the intention is there, and this aim causes a certain standard to be marked out for the teacher and exacted from him, and by its appeal to received canons incidentally justifies his use in teaching of the dogmatic method. Thus no teaching is acceptable which does not imply a conviction of the truth of its basis, a conviction which is justified by the intellect, has its issues in conduct, and controls the methods of education. Let us try to mentally estimate the difference between the work of a teacher whose own religious conviction is strong enough, to influence his life, who neither reduces nor abolishes the large and living elements in his own belief, but, having his mind set in the direction of unity, emphasizes harmony rather than divergence, and that of a teacher who, unconvinced himself of the necessity of expression of doctrine (and therefore also incomplete in his ethical theory), starts from the idea of the "common measure" in beliefs. The "common measure" is apt to become greatly attenuated; the principle of its being is to decline in proportion as it is generally applied. We want a principle that grows in strength with its general application.

Again, it is important, we are told by those who are most anxious to smooth out doctrinal characteristics from the teaching of religion, that the teacher should be able to avoid debatable ground. We are also told—and this is not merely a different, but in some cases an opposed, theory—that he must be able to leave out the comparatively unessential elements in doctrine. It is not necessary here to enlarge upon the difficulty of deciding as to what is relatively unessential in dogma, nor on the danger lest, in the attempt to withdraw from the pressing claims of conflicting ideas, the mind should be driven into the "inner darkness, the still wilderness where no differences are visible, where there is neither Father, Son, nor Holy Ghost." It is only a practised thinker and instructed teacher who can realize the proportional value of dogma, and only the convinced believer who can really respect the convictions of others and treat them with more than tolerance—with Christian charity. The agnostic habit of mind at its best exhibits but a cold tolerance: it opens its gates indiscriminately to all and welcomes none; and in reality this is a mind opposed to the warmth of charity, which sees the spiritual possibilities of even the undeveloped and degraded, and welcomes in all the best, and therefore the most true and characteristic, element. We should aim at a charity which sees deeply into the possibilities of human nature rather than at a tolerance which accepts it in its present aspect.

It is easy to foresee objections to what has been here said. We are, of course, exposed to the old reproach that the intellectually convinced do not, as a matter of fact, always appear to be the most charitable. But there is no fact of which it is more difficult to judge fairly. Issues which seem to others unimportant may to them be fraught with tremendous consequences; those who are surprised at the amount of strong feeling called out by the religious question in the present Education Bill should be the last to accuse others of want of charity, but should realize that sternness of attitude may be due to a truer sense of proportion. The indifferent cannot be impartial.

What is the conclusion? Surely this: that, so far as the present Bill limits or abolishes the opportunities for denominational religious instruction, it incidentally destroys a valuable educational test. It may certainly be argued that spiritual fitness is not examinable and cannot be tested, but this is not urged. What we should like to establish is that adhesion to a definite body of Christian principles is a safeguard to educational methods in the teaching of religion and to the possibility of true breadth of thought. It is true that there is a saving fact in that there may be little change in the *personnel* of the schools if the Bill becomes law. It is, however, the theoretical basis of the Bill which I have ventured to examine, and in the end this theory cannot be without its influence on practice. There is, too, a special danger connected with the type of legislation which we have been considering. It would be most unfortunate for the life of the country (but it would be simply the con-

sequence of the fact that law helps to mould public opinion) if the effort to be broad-minded led the next generation of teachers to avoid the subject of religious thought and to minimize their share in it. But this is always a danger where private convictions are unnaturally dissociated from public service. It has come about in France and in Australia as a result of the creation of secular conditions there, and, in a less marked degree, may be the case in England in proportion as the right to give definite religious teaching is withdrawn from the schools and the teachers and dissociated from their usual school programme.

It is in the interests of the alliance between educational theory and practice that I have ventured to deal—though briefly and insufficiently—with one aspect of the Education Bill.—I am, Sir, &c.,
E. F. J.

Paris, July 12, 1906.

COMPULSORY REGISTRATION OF SECONDARY SCHOOLS.

To the Editor of The Journal of Education.

SIR,—The Board of Education has now been in existence for some years, and, as its regulations are supposed to be fairly permanent, it is interesting to inquire how far it has carried out the purposes for which it was formed and to what extent its work is of real value to the cause of education, and so to the community at large.

The Board was created to improve secondary education, acknowledged to be in a state of chaos, throughout the country. It proposes to do this by a promise of a capitation grant to all schools not run for private profit which satisfy its Inspectors that they are efficient. This is good news for those schools—perhaps some dozens in the whole of England—which have, by great and voluntary efforts, already made themselves efficient. Amongst these are some of the public schools for boys and most of the great high schools for girls.

But the Board's proposal does not affect secondary education as a whole: it simply makes what is good or fairly good a little better. There still flourish the school which charges £200 to £300 a year and gives no education worth the name in return and the school which charges, perhaps, £1 the quarter and does the same. The one school does not want the grant; the other knows it could never earn it. And they, with the thousands of schools of intermediate grades, have on their rolls a large proportion of the youth of England. It is this fact that has aroused an increasing feeling of dissatisfaction in the minds of those who care for the whole education of the country. They are glad to find certain schools appreciated, and glad that the system of grants may make their future financially safe; but they see no prospect of the policy of the Board resulting in a general raising of the standard of education.

It is true the Board expects that many fresh schools will make themselves efficient in order to earn grants, and undoubtedly this will be the case. Yet their number will be comparatively small; and, given the well known and peculiar indifference of the majority of English parents to education, it seems certain that for many generations to come they will mainly continue to send their children to schools offering the attraction of fashion or the attraction of cheapness.

Surely the first object of the State when interfering with education, and indeed the only excuse for such interference, should be to make it impossible that the future of any child should be so sacrificed. I suggest, therefore, that what the country needs is not that a comparatively few schools shall be highly efficient, but that every school shall be fairly so, and to ensure this no complicated machinery is necessary. There is no need for an elaborately organized Board with a regiment of Inspectors spread over the country at great cost. The whole difficulty could be settled by a brief decree of Parliament that no secondary school may exist without a licence.

And the clauses of such licence should be wide and simple. It would be sufficient to declare that every school must satisfy the Board through its Inspectors: (1) as to the sanitary conditions; (2) that the buildings and playground are satisfactory in accommodation and equipment; (3) that two-thirds of the staff are on the Register of Teachers; (4) that the salaries given are according to a scale settled by the Board.

Thus the surroundings of the child would be healthy, its

teachers would have the necessary knowledge (and anything further is a matter of individuality and cannot be inspected), and the teaching profession would become more, and not less, worth the attention of the ablest men and women. All beyond this should be left to the school itself, and we should thus keep the independence, the elasticity, and the initiative which are the redeeming features of our present chaotic system, and which will assuredly be lost if a licence or even recognition has to depend on close inspection and, as a natural corollary, on the idiosyncrasies of Inspectors.

It has been said by a great French traveller that he knew of no spot on the face of the earth which, having been once under British rule, would not be the worse if that rule were withdrawn. This is high praise, and, if it is true, we must acknowledge that, while the interference of the State in secondary education is necessary, it should be of the slightest kind compatible with efficiency, and as little destructive as possible of that peculiar character which has made our Empire builders in the past, and which, we hope, will make them in the future.

I am afraid that this scheme will meet with little favour. It is too simple, and would necessitate a moderate expenditure of public money. But I venture to think that it would result in an immediate improvement in secondary education all over the country—an improvement which would seem to be impossible under the present regulations.—I am, Sir, yours faithfully,
FLORENCE GADESSEN.

Blackheath, July 23, 1906.

THE HOUSE OF EDUCATION.

To the Editor of The Journal of Education.

DEAR SIR,—We ask you to allow us to draw attention through your columns to a valuable educational experiment which has been going on long enough now to establish a definite result, and which we venture to think is deserving of attention from all those who are interested in the advance of education in this country.

About fifteen years ago Miss Mason, of the House of Education, Ambleside, began to organize the teaching given in private schoolrooms with a view to raising the standard of the work done to that accomplished in the best schools. The machinery by which she has achieved her purpose has been very simple. She has trained a certain number of governesses at Ambleside on her own lines, but she has not confined her work to their schoolrooms. A suitable time-table and scheme of work in four grades may be had by any member of the Parents' National Educational Union under certain conditions; and the five hundred schoolrooms odd that have adopted her scheme form what is known as the Parents' Union School. The experiment to which we allude has been carried out in this "school" for fifteen years, and its success has led Miss Mason to submit her results to the profession with a view to their wider adoption. We are among those whom she was good enough to invite to a conference held at the House of Education at Whitsuntide, and we desire to record our sense of the value of her experiment as regards the literary side of a child's education.

The curriculum of the Parents' Union School is very wide, and includes all the subjects ordinarily taught in schools besides hand-work, physical exercises, &c. The originality lies in the methods of work prescribed by Miss Mason with regard to "English subjects." Miss Mason bases all humanistic work on a study of history, and from the earliest age devotes much time to it, demanding from the first independent study on the part of the child. The books he is to use are selected with the greatest care: mere text-books and readers are discarded and those of living interest chosen. Miss Mason allots a certain portion for the study of each class each term: the child reads part of this daily in lesson hours; and the teacher's function is confined to directing the work, inspiring interest and setting some test that demands reflection—e.g., calling on the child from time to time to narrate something of what he has read. During the term a great deal of ground is covered, and towards the end a few test questions sent by Miss Mason are answered, children who are too young to write dictating their answers to others. Some hundreds of these answers were submitted to us for inspection, and we are of opinion that they bear out Miss Mason's belief that her system has succeeded—(1) in forming habits of concentration and of independent study at an early age; (2) in overcoming to a large extent the difficulties of English composition and spelling; (3) in imparting a considerable amount of knowledge of various kinds.

We watched a small school at work on Miss Mason's system, and discussed freely with her various questions that were raised. Her testimony was supported by those present who as parents or teachers had personal knowledge of the work, and in particular by the head

FRENCH MISTRESSES FOR FRENCH.

To the Editor of The Journal of Education.

DEAR SIR,—Will you grant me a little space in your valuable paper about a grievance from which my sisters and myself have suffered?

I have noticed lately the tendency there was of head mistresses and principals of schools to discredit partly the teaching of the French language in schools by capable French ladies: the reason chiefly given was, or is credited to be, that they cannot maintain discipline, and also the difficulty of obtaining the right sort of French teachers; and this deficiency is filled by engaging English ladies who, as a rule, cannot speak the language at all, or, if they do, it is very inefficiently; and unfortunately some of them spoil the accent of their pupils for ever. My sisters and myself can vouch for that, having had, all of us, pupils thus taught, and having filled posts vacated by such. However good the accent of an English lady is, it cannot possibly be that of a born and well-educated Frenchwoman, and, though, in spite of the *entente cordiale*, the battle-cry of "England to the English" be raised, and which needs no comment, here, in this case, you cannot prevent a child thus taught to get a bad accent even by Act of Parliament. As for maintaining discipline, I think you will find that a true Frenchwoman, worthy of the name, having received a good education in France, in a good school, is quite capable of keeping good order as well as her English sisters. If principals and head mistresses would take the trouble to find the right sort of French teachers, pay them well, and, when they have got them, they themselves and their staff would treat them with more charity and hospitality and uphold their authority with their pupils, it might be that the average specimen of French ladies in England would improve, as well as the accent of their pupils. Given a fair chance to any really well educated French woman, and she will and can hold her own with anybody.

Such has been in most instances my own experience and that of my sisters, but the beginning in any school, chiefly about discipline, was at first a fight and a struggle, pupils taking a little time to realize with whom they had to deal, though it was only a Frenchwoman in earnest.—Yours truly,

July 21, 1906.

A PARISIENNE.

MIXED PUPIL-TEACHER CLASSES.

To the Editor of The Journal of Education.

SIR,—In a criticism of a book called "Boy and Girl," on page 450 of your journal, I am told that the following statement is made:—"It is notorious that the mixed classes for pupil-teachers in London and other great cities have led to grave moral evils."

For the last fifteen years I have known the London pupil-teacher centres intimately; for some years every complaint passed through my hands; and I am yet wholly at a loss to know what your reviewer refers to. The statement is a "plain superficial statement." But I can scarcely imagine that any one writing responsibly in your columns would make such a statement without some fragment of truth to support it. Yet in its plain meaning it is, so far as I know, entirely untrue.

The matter is of extreme importance, and I venture to ask that your reviewer should substantiate his statement. I should prefer that he should do so quite openly, so that his allegations may be exposed equally publicly and no suspicion left. But, if he prefers to make them through the editor, then, Sir, I will undertake to prove them baseless or to recant openly.—Yours faithfully,

Woodberry Knoll, Loughton.

July 23, 1906.

[We are glad to publish a contradiction on such excellent authority. Our reviewer, for reasons that appear to us adequate, declines to go into the witness box.—ED.]

To the Editor of The Journal of Education.

DEAR SIR,—In the criticism on the book entitled "Boy and Girl," published in the July issue, occurs the statement: "It is notorious that the mixed classes for pupil-teachers in London and other great cities have led to grave moral evils." Now, whatever may be the reviewer's fancies and prejudices on the subject of the co-education of the sexes, he certainly has no right to make such a charge as the above. As one who has been engaged for over twenty-five years in teaching these mixed classes, and as a member of the Departmental Committee which inquired most carefully into this question, I must protest against such reckless statements, which are a gross libel on the teachers of such classes, and on the thousands of young people who have passed through them.—I am, Sir, yours faithfully,

GEORGE COLLAR.

DOGMA IN SECONDARY SCHOOLS.

To the Editor of The Journal of Education.

SIR,—In your article upon the religious difficulty in education you refer to "Inquirer's" letter to the *Times*. It will doubtless interest you to know that a letter disclosing fundamental inaccuracies in his statement was sent to the *Times* from the school whose arrangements he described—and that the *Times* would not publish the letter.—Yours faithfully,

July 9, 1906.

ROBERT F. CHOLMELEY.

[Naturally. "Inquirer's" letter referred to three schools, but none was named.—ED.]

COLONIAL AND FOREIGN NOTES.

FRANCE.

Whilst instruction is one of the agencies that education uses, it has also separate fields for itself, in which the end pursued is not education, but the practice of some mechanic or other art. An increasing demand for technical instruction is among the characteristics of our day, and the desire for it is rather to be approved than condemned, provided that it be, as it were, grafted on to education, not substituted for it. France has been studying American institutions, and has come, as a result, to the conclusion that a knowledge of agriculture should be more widely diffused. Not only must provision be made, as in our English agricultural colleges, for the training of those who are to cultivate the land on a large scale, but those also must be instructed who are destined to act as their subordinates or to till their own small plots. For the former a four years' course is necessary: the latter must generally be content with what can be taught to them in a winter or two. For these humbler students the Collège d'Enseignement Secondaire of Langres (Haute-Marne) has organized a scheme of instruction during the winter months. The pupils are from thirteen to eighteen years of age, chiefly the sons of small farmers who cannot afford to keep them at school during the fine season. Instruction is spread over four months (November 1 to March 1) of two consecutive years, with the following allotment of time:—

	FIRST YEAR.		SECOND YEAR.	
	Lessons.	Exercises.	Lessons.	Exercises.
Agriculture	32	8	48	8
Horticulture	16	8	32	8
Breeding of Animals	16	8	16	8
Forestry	8	4	8	4
Physical and Natural Sciences	64	16	64	16
Primary Instruction	64	8	48	8
Drawing	—	16	—	16
	200	68	216	68

The exercises consist in illustrations of the way in which the sciences are applied practically to agriculture. That the scheme, which has been worked for three or four years, is found useful appears from the fact that the number of students attracted grows with a steady growth.

Makers of the well-known PATENT SLIDING and

Folding Partitions for Schools, &c.

OVER 3,800 AT PRESENT IN USE.

Our Patent Sliding and Folding Partitions have been on the market for a number of years, and have so successfully stood the test of time that they have been adopted by more than—

600 School Boards, Education Committees, and County Councils.

250 have been supplied to the Glasgow School Board.

700 Architects have used and recommended them.

HIGHLY APPROVED BY THE BOARD OF EDUCATION, AND RECOMMENDED BY H.M. INSPECTORS OF SCHOOLS.

Illustrated Circular and Estimates Free on receipt of Particulars.

GERMANY.

We wrote in a recent number of that new pedagogy which would determine its procedure by assuming as its end the individuality of the pupil. There is another pedagogy in the field, called *Volkstumspädagogik*, *Volkstum* being a word invented, if we mistake not, by Jahn to express what we know as nationality. Philosophic systems, it is said, come and go; whereas the national sentiment remains as an abiding possession of the race. To maintain it in undiminished vitality is a proper object for pedagogy. The German pedagogue, then, should seek to develop a German who would fulfil the demands of modern ethics without surrendering his nationality, or looking for cosmopolitan ideals of virtue. And simultaneously he should strive by educational means to remedy the faults and weaknesses of the German character. Guided by these principles, he will use no method of education or instruction that might run counter to the national feeling of his pupil; and he will employ all the good qualities that the pupil's nationality brings with it in assisting him to reach his high ethical goal. Instruction will dwell long on Germany and the Germans, so as to bring home to the learner his natural dependence on the soil and the closeness of his attachment to the people. There will be more German and less Greek and Roman history read. Less will be said of the features of Asia and Australia: more about those of Germany.

This view of the functions of pedagogy interests us not a little. For it now appears that we English have been practising *Volkstumspädagogik* many a long year, albeit unconsciously and without a name for the process.

Do we not abhor tale-bearing, for example, as a thing "counter to the national feeling" of our pupils? Is not "un-English" a strong term of condemnation for unworthy acts? Bidding our boys be "good Englishmen," do we not set before them the ethical goal in the language that they are most likely to understand? Have we ever neglected to expatiate on the beauties of our island, or on the merits of its strong-limbed sons, the conquerors or colonizers of remote lands? It appears that the insularity of the tone prevalent in our large schools has been, after all, only true *Volkstumspädagogik*, and that we hit by chance long ago on what is at last discovered to be the ideal form of pedagogy.

Yet, for our part, we are not minded to congratulate ourselves on our haphazard success. The truth would seem to be that there has been far too much *Volkstumspädagogik* in the schools of every nation. It is natural that a people should cherish and endeavour to transmit the qualities of which it deems itself peculiarly entitled to be proud. But the teacher who should stop to consider how far the several qualities were the exclusive possession of any one folk might haply find himself dealing a sore blow to *Volkstumspädagogik*. Nor have we ever convinced ourselves that nationality is a finally closed circle, incapable of expansion by the absorption of foreign elements. Perhaps on the whole it would be wise for us, still pursuing, if you will, our *Volkstumspädagogik*, to keep open avenues for good influences from without, and to cultivate a sense of our neighbours' virtues as well as a consciousness of our own.

We are always reluctant to say much in the way of comparing English schools with German. There is less reticence in Germany: in fact, *Volkstumspädagogik* demands something of the kind if the comparison be favourable to the national institutions. A book much used in German schools asserts that the chief defect of ours is the incompetence of the teachers. What means the writer has of knowing this he does not say; we, at least, have no scales in which to weigh the German schoolmaster against the English; nor, had we the scales, should we set them in action. But of one weakness in German education we may speak without discourtesy and with evidence at our command. Addressing the meeting of higher teachers at Eisenach a few months ago, Dr. Hartmann, of Leipzig, revealed the startling fact that of those who might claim to serve in the army for only one year—they having passed the prescribed examination—from 60 to 70 per cent. are pronounced unfit owing to affections of the nervous system or the heart, the number having increased two- or three-fold in the last two decades of years. He urged that regular medical officers should be attached to the higher schools, that parents should be taught the laws of hygiene and should be brought into co-operation with the teacher, that the time spent in school should be shortened, and that buildings should be constructed on sounder principles of sanitation. With the cures for the evil we need not concern ourselves; the existence of so much physical incapacity is a legitimate matter for comment. Modesty shall not prevent us from saying that in the education of the body our schools are unrivalled, and that Germany might profit by studying the system that they employ.

Some have ascribed the breakdown of so many German boys in the higher schools to the pressure caused by the *Abiturienten-Examen* (Leaving Examination). *Die Neuesten Nachrichten*, of Berlin, adopting a favourite method of modern journalism, sent round

a form of inquiry to various quarters, asking whether the examination should properly be continued or abandoned. Of the answers received, eighteen were for continuing it, one for a reform of the examination, and five for its abolition. It does not, however, appear that those consulted were of great weight in the pedagogic world. It is a circumstance to which we assign more importance than perhaps the editor of the newspaper did; indeed, nothing in modern life is quite so amusing as the degree in which all men are strategists when war rages and authorities on education in time of peace.

UNITED STATES.

There seems to be an ever increasing recognition in the United States of the value of school gardens. During the three years just past a garden of three acres, resolved into two hundred and fifty plots, has been cultivated by the boys of Yonkers. Hartford in the last two seasons has opened several gardens for public-school children. To Boston belongs the honour of having established the first school garden in America. That was in 1890. Since then such progress has been made that now there are at least a dozen gardens in the city, each connected with some public school. The expense of maintaining them is borne by a group of citizens interested in the movement; but the schools control their several domains. The Boston Normal School gives a course in school gardening, so that at least the younger teachers are qualified to undertake the work of supervision. At New York the garden in De Witt Clinton Park has completed its fourth successful season. As the garden is public property, and lies near one of the most congested districts, an effort has been made to employ in it as many children as possible. It covers about three-quarters of an acre. Four hundred and fifty-eight children had plots assigned to them from May until August; when these had carried off their crop, four hundred and fifty new cultivators succeeded them. In some parts of the country a strip of the paving has been removed from the school-yard in order to gain space for a garden. What is done in America could be done in English towns. Only let it be always remembered that the object of the school garden is education, not vegetables.

The American Peace Society some twelve months ago appointed a committee to report on the instruction in history given by the public schools of the United States, with special reference to war, battle, and militarism. The Report of the Committee, based on laborious inquiry, has just appeared. It establishes the fact that the treatment of war occupies much less space in school-books than it did half a century ago, and that the subject of national quarrels—the Revolt of the American Colonies, for example—is now handled in a more calm and philosophic spirit. In all discussions of wars it seems to the Committee better that causes and results should be emphasized, and that battles should not be described so fully as hitherto. We quote the opinion expressed as to what should take the place, in American histories, of the military details omitted. "Our country has had a rapid growth, and our advancement has been unprecedented in respect of invention, in all the industries, in education, literature, the useful arts, the fine arts, benevolent institutions, the rights of women and children, law, government, and morals. The reports of our Patent Office show our progress in inventions. Sixty years ago this office issued from four to six hundred patents annually. In one year, now, it has issued more than twenty-five thousand. In 1840 its receipts were 38,000 dollars; its annual income now is 1,325,000 dollars. Attention might well be called to the development of our agricultural machinery; to the improved steam-plough and machines for planting, hay-making, and harvesting. Seventy-five years ago it required three hours' labour of the farmer to raise one bushel of wheat; now it needs only ten minutes. In market gardening, in the shoe industry, in the products from india-rubber, in the application of steam power and of electric power, such advance has been made as to astonish the world. All these will require more and more space in the books every year. So in other directions. In all text-books on the history of our country, space should be found to tell of the growth of our system of public schools, of the rapid advancement and liberal endowment of our colleges, of the uplifting of the people through the many charitable and philanthropic movements, the advances in law, morals, and the rights of man, and, in general, of the intellectual and moral improvement of society at large."

The object that the Peace Society has at heart, which is the cultivating of a disposition to settle international difficulties not by force and violence, but by the method of arbitration, is one to be regarded with sympathy and all respect. Yet, so old is the custom of expatiating to the young on the martial achievements of their forefathers that it would seem to be rooted in necessity. We fear that a people with no heroes of war would presently cease to have heroes of peace. What the school can do is to train its pupils to clearness of thought, and to promote the formation of sound moral judgments in the sphere of domestic, as well as of foreign, affairs. Doing this, it may contribute not a little to the peaceful and orderly development of the nation, and make quarrels rare, if still possible.

TELEGRAMS: "LATTISTEP, GLOUCESTER."

Mr. Carnegie has given his name and more substantial stimulus to a Committee which is now, at last, to reform the spelling of the English-speaking world—or, at any rate, of the American part of it. Many good pedagogues favour a change; we doubt the capacity of millionaires to bring it about. Some of them might apply their minds at present to effecting a revolution in connexion with (as Lord Beaconsfield would have put it): "what you call 'canning' and we call 'tinning.'" As to imminent alterations in the domain of spelling, there is no reason for great alarm. Of those prescribed by the Committee we notice only two or three. "When a word can be spelled with *-ence* or *-ense*, chose *-ense*. Example: *defense*." We have not the moral courage to comply. "Spelled with *-ite* or *-it*, omit *e*. Example: *deposit*." We have always striven to obey the rule. Indeed, no one but a millionaire could afford to write "deposite"!

CANADA.

That munificent benefactor of education in Canada, Sir William Macdonald, has handed over to McGill University the Agricultural College founded by him on the outskirts of the city of Montreal, together with an endowment of £400,000 for its maintenance. The

new arrangement should promote the efficiency of the College; but we always see with regret the intrusion of practical sciences into the domain of liberal studies. Not from disparagement of the former, but because the latter must nowadays be jealously guarded, we deprecate the introduction into Universities of subjects alien to the atmosphere of them and more profitably pursued in a separate institution. Agriculture should be taught, but it should be taught in some sort of technical *Hochschule*. It would grieve us did Oxford add Brewing to its curriculum, or if Cambridge established a School of Dyeing.

CAPE COLONY.

The Act for the creation of School Boards, details of which were reported in this column, is being steadily put in force. According to the official *Gazette* the state of affairs on April 21 was as follows:—One hundred and one school districts had been proclaimed, there being two fiscal divisions not yet dealt with; and of the 101 corresponding School Boards 92 had held their first meeting, and thus become fully

constituted, the remaining 9 being at various earlier stages of the process of formation.

The cadet corps movement continues to make progress. The present strength of the united corps is 4,617, an increase for the year of 1,140. Since it has always been recognized in South Africa that the obligation of military service in time of need rests on every citizen, the work of the schools in giving the rudiments of military training is of much importance. The largest corps is that of East London, with a strength of 277. The officers have formed an association with the object of advancing the interests of the movement and of promoting the efficiency of the cadet officer.

INDIA.

The year 1906 will be memorable in the history of the Madras University. At its Convocation two Hindu ladies received a degree, they being the first women to attain the distinction in the University. "No wonder," says the *Educational Review*, "that for several days the young ladies were fêted by the leading representatives of the Hindu community in Madras. More than once the young ladies spoke at these gatherings, and spoke with dignity and composure. Their success was not a mere question of brains, for Indian women have always been distinguished for intelligence, but was due to steady persistence in the face of serious obstacles. It is not easy to estimate the force of character required to enter on a course of study, when a household has to be managed and when there are children to be brought up." We are not encouraged to hope that these lady graduates will have many followers in the immediate future. Yet in Mysore large scholarships have been founded with the object of inducing Hindu gentlemen to let their wives study after marriage.

The Report on Education in Bombay for 1904-5 shows that of boys 28 per cent. of those who should attend school are enrolled as scholars; of girls, only 5.37 per cent. Our readers will be aware that, small as the latter figure seems, it is large in comparison with that for some parts of India. With regard to girls' schools, the Report says: "This year, for the first time, the Department has had the benefit of the advice and criticism of a skilled inspectress on a large number of the European

IMPORTANT NOTICE. No Agents employed and no Commission paid for introduction of business, whereby about £10,000 a year is saved to the Members.

Assurances can be readily effected by direct communication with the Office,
2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

girls' schools. Miss Ashworth's remarks are too long for reproduction, but they deal with the necessity for more attention to physical exercises and games, for the improvement of the teaching powers of the lower assistants, for greater freedom and intelligence in teaching methods, especially in history and geography, and for the diffusion of a knowledge of simple elementary science and domestic economy. Miss Ashworth rightly notes the excessive importance attached to the Bombay Matriculation Examination, and would encourage schools to look rather to the Cambridge Local Examinations; while she gives very valuable advice as to the necessity for practical needlework as opposed to fine sewing and elaborate embroidery."

In England, too, teachers will be wise to weigh carefully the merits of the Oxford and Cambridge examinations against those in which success depends on the use of the right cram-book. But we return to Bombay. There has been distinct progress in secondary Anglo-vernacular schools, and an attendance largely increased at the end of the year. With respect to primary education, all the Divisional Inspectors speak of improvement in the methods of instruction and in the equipment of the schools. But of 16,702 men teachers in primary schools only 5,620 are trained. Indicative of the difficulties to be overcome in giving India education is the fact that two hundred and sixty-eight teachers died of plague during the year in question.

HERE is a bold shot at a French unseen, Florian's fable beginning:

"Au bord d'un fleuve un paysan

Assis sur une large pierre

Regardait l'eau couler d'un air impatient."

—"At the bottom of a river a working man stood on a big pear and seemed not to like the colour of the water."

In a recent Certificate paper one of the questions set for "free composition" was "Pourquoi aimez-vous l'école?" One young lady had the courage of her opinion, and answered: "Je ne puis répondre à cette question parce-que je hais l'école." Another naively answered: "J'aime l'école parce-que si je n'étais à l'école je resterais chez moi et j'aurais à travailler." A third wrote: "Mon école est distant deux kilogrammes de chez moi, et c'est une jolie promenade à bicyclette en allant et retournant."

Exam. Book-keeping, &c.

Sarll's Text-Book Sales nearly 250,000 copies.

PRIZE COMPETITIONS.

The winner of the Translation Prize for June is Miss Marion Little, St. Winifred's, Eastbourne.

We regret that, in consequence of the indisposition of our Prize Editor, the award of the July Translation Prize is deferred to next month.

HOLIDAY PRIZE COMPETITIONS.

TEN GUINEAS.

Prizes to the above amount are offered for the following subjects. The full award will not be made unless, in the opinion of independent judges, there are candidates of sufficient merit, but a minimum of Five Guineas is guaranteed.

DRAWING.

1. A water-colour landscape.
2. A black and white sketch adapted for *Punch*.

PHOTOGRAPHS.

1. A family group.
2. A study to illustrate any order of architecture.
3. A Nature study to serve as an illustration for a lesson.

LITERARY.

1. A translation of an English lyric, not more 24 lines, into any foreign language.
2. An incident of school life—not more than 500 words.

No entries will be received after September 15. Photographs (except those of prize-winners) and drawings will be returned if accompanied by a stamped and addressed wrapper.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by September 15th, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Now ready.

Demy 8vo, cloth, 756 pp., price 2s. 6d., free by post.

REVIEWS AND MINOR NOTICES.

Historical Greek Coins. By G. F. HILL. With Plates.
(10s. 6d. net. Constable.)

Mr. G. F. Hill is already known to students of ancient numismatics as the author of a useful "Handbook of Greek and Roman Coins." In the present work he does not attempt to cover the whole field of inquiry, but offers a study of some special coins which link themselves, as evidence or illustration, to the facts of Greek history. The book is an attempt to do for coins what was effected for inscriptions by Canon Hicks's "Manual of Greek Historical Inscriptions." In the wider aspects of history the study of a nation's currency forms a part of a chapter upon economics and finance, subjects which loom larger in the political history of modern States than they usually do in ancient politics. Greek coins are likewise, from the variety and originality of their types and the excellence of their technique, indispensable adjuncts to the history of Greek social life, religion, and art. Thus, all coins are, in a sense, historical documents. But history, as commonly written, concerns itself with military, political, and dynastic facts, with the lives and actions of individual men. The connexion of coins with such facts is occasional and accidental. Some peculiarity in the coin type, some fact respecting the provenance or date of issue of a coin, may be called in to illustrate, perhaps to support, perhaps to controvert, some statement in literary record. Where literary record is deficient the coin may supply evidence of facts not otherwise known. Where literary history is abundant and trustworthy the evidence of coins is usually of not much independent value. It is interesting archaeologically, but not indispensable. It is as literary record fails that the evidence of coins increases in importance. Coins are the side tracks or occasional sign-posts of written history; they become the main guiding lines of inquiry when history is unwritten or compiled by late writers careless of contemporary evidence. Their value varies inversely as the amount and excellence of first-hand information. This principle will be found established in the book before us. The additional facts added by a study of coins to our knowledge of Greek history will seem small—to some, perhaps, disappointingly small. Their evidence sometimes fails provokingly where it might be expected to be of service. Thus, Mr. Hill shows that Aristotle's account of Solon's reform of the Athenian coinage ("Ath. Pol." chapter x.) is hard to square with the extant early Attic coins. One might have expected to find illustration in coins of the exploits of Philomelus and Onymarchus, considering the amount of treasure they melted down and presumably minted; but no gold coin is extant, and only a few silver and bronze coins remain.

On the other hand, coins sometimes supply evidence in an unexpected way. Thus, the series of coins (page 62) issued by various Ionian cities bearing a similar type on their obverse, and stamped in some cases with the letters ΣΥΝ (*συνμαχία*), clearly establishes the fact, unrecorded otherwise, of an anti-Spartan league formed after the battle of Cnidus (B.C. 394–389). A somewhat similar case is the league between Athens and Crete in B.C. 200 (page 134). But these positive additions to history are rare. Yet, if coins do not add to history, they illuminate it. He must be an unimaginative reader who is not touched with emotion as he learns from this book (page 54) to connect in thought the most pathetic story ever told by any historian, the Athenian disaster in Sicily, with that splendid series of Syracusan coin designs which bear the names of Cimon and Euaenetus. Scarcely less eloquent in the directness of its appeal is that coin (page 76) which remains a silent witness of that one reassertion by the Pisatans of their right to preside at the Olympic Games. If "all history, rightly understood, is a part of biography," it surely is something to come, through coins, directly, as it were, into touch with great personalities like Themistocles (page 45), Epaminondas (page 69), Philip (page 80), Dion (page 84), and Flaminius (page 136). We may thank Mr. Hill for putting before the student of Greek history these illuminating coin histories. He has set them forth in sober, but clear, style, and we trust that the success of his book will be such as to secure the fulfilment of his promise of a companion volume on Roman coins.

The illustrations which accompany the text are excellent: though the reader's attention is not drawn to the artistic beauty

of many of the coin types here displayed, he cannot but be conscious of it.

We have noted a few misprints or omissions: page 24, line 22, ἀγαθόν for ἀγαθόν; page 36, note 4, ὅς ὁν for ὁ τὸν; page 72, line 15, the illustration shows OAYM, not OAY; page 127, line 11, after "in exergue" add the letter A; page 55, line 25, should it not be *west* side?

National Education and National Life. By J. E. G. DE MONTMORENCY. (3s. Sonnenschein.)

Mr. de Montmorency has already made his reputation by two learned and scholarly works on what we may term the constitutional history of education. In the present volume of essays he descends from the "serene temples" of the publicist into the arena of current politics, and, though he still preserves the unbiassed attitude of an arbiter, we cannot always accept his ruling or even his reading of past legislation. The bias with which he confesses that he starts in favour of the co-ordination of secular and religious education, the protest against a State-improved curriculum from which the elements of Christianity are excluded we share with him, but we differ in our interpretation of "the elements," and in our opinion the prescriptive rights that are claimed for the Established Church on the score of past services cannot be maintained. Much water has passed under Westminster Bridge since the book was written, and it would serve no good purpose to criticize the author's criticisms of the several clauses of the Bill which have already been greatly modified, and have not yet attained their final form.

The author's general position is that the Church of England had for generations borne "the cold and misery of the educational night," and that in accepting the Bill of 1902 they had made the maximum of sacrifice. The problem of the present Government was to fulfil Liberal pledges, and at the same time to satisfy the unconquerable determination of the Church of England and the Roman Catholics to maintain denominational teaching in their schools. According to Mr. de Montmorency the problem was easily soluble. "Most draftsmen in Lincoln's Inn could devise a scheme that would give full public control and abolish tests, and yet preserve intact the denominational characteristics of the voluntary schools." For our part we hold that the problem is insoluble, and we should like to see the draft Bill produced by the combined wisdom of the five Inns of Court. We would undertake to tear it to tatters, as Mr. de Montmorency has torn and rent Mr. Birrell's Bill, showing that, instead of unification, the result will be twelve different types of schools. For the reasons given we must decline to discuss the central position and content ourselves with glancing at a few of the many incidental questions that it raises.

With the pupil-teacher system Mr. de Montmorency has no sympathy, and, if funds permitted, he would like to see it swept away to-morrow. Higher-grade schools he looks on as an encrescence, and regards Mr. Cockerton as a public benefactor. We welcome with him the education of primary teachers in secondary schools, but at the same time we hold that provision should be made for the more frugal of the working classes who desire that their children should continue their education beyond the age of fourteen, and yet have no ambition that they should become teachers or clerks or even skilled mechanics. This class is not suited by the grammar school.

On the question of free meals Mr. de Montmorency is socialistically inclined, and he would extend his charity to the provision of free clothing to the destitute. We cannot share his sympathy for barefooted children. It may be that naked feet are not suited for city dirt, but we remember being told by a Senior Wrangler that he could recognize every boy and girl in his native village by the look of the bare soles, and he certainly was no *Œdipus*.

The plea for the retention of Euclid seems to us singularly feeble, and the rejection of all fiction from public libraries a little puritanical.

There are slips in English which show that the book has been hurried through the press. "Educationalist" is a monstrous word; *morale* is neither English nor French; "forebade" is a printer's error; "neither are needed" and "the school pence was scraped" are doubtful constructions; "this solution of the religious question is only offered" cannot mean, as is intended, "this is the sole solution."

An Introduction to Logic. By H. W. B. JOSEPH, Fellow and Tutor of New College. (Clarendon Press.)

The title "Introduction" is ambiguous and frequently misleading. Instead of representing a smoothing of the path to beginners, it is more often given to a learned and philosophical commentary on the problems of the subject it deals with, which can only be appreciated by tolerably advanced students. Of this sort is Mr. Joseph's suggestive and valuable book; although he not only frequently asserts that it is an elementary work, but also gives in detail nearly all that is to be learnt from any text-book for beginners. The chief fault of the book is that it is too voluminous. Those who read it for what is important in it—the discussion of the more metaphysical problems of logic—have to wade through pages of elementary information. It would be an improvement if all this were omitted and the book adapted entirely for students who are familiar with the science; for to such students, and to them only, will the author's study of Aristotle's writings and his criticism of modern views be of service.

Mr. Joseph belongs to the school of thinkers such as Bradley, Bosanquet, and Welton, who have done much to redeem logical study from the confusion and pursuit of false tracks that Mill introduced by his empirical method of making logic deal with external things, such as conjunctions and sequences, and the counting up of particular instances, antecedents, and the members of a class, rather than with the deepest processes of thought and the psychological nature of what we call proof. We may note his analysis of judgment (very like Mr. Bradley's), his interpretation of the "Dictum de omni et nullo," and his study of the Inductive Methods, as illustrations of the great advance made in logical thought in this country in recent years.

The treatment of the Figures and of Reduction seems to us excellent. With the view that the Hypothetical and Disjunctive syllogisms are not syllogistic reasoning we cannot agree. A deeper analysis shows that, notwithstanding superficial differences, the end to be attained is the same as in the Categorical—a synthesis between subject and attribute, and the means used also the same—a previous *double* synthesis which necessitates the concluding judgment. The presence or absence of a middle term (on which Kant dwelt) is not the point. It is upon the previous *judgments* we in all the three forms rely.

Mr. Joseph's aim throughout is to reach what is the real process of thought involved in any form of reasoning, and what it is the mind demands before it will give an assured assent to any conclusion. He thus rightly reduces the four Inductive Methods to one—the elimination of all that can be removed without removing the phenomenon under investigation (substantially Bacon's method). He might, however, have emphasized that when all this is done the mind does not accept the remaining conditions as the proved cause. It is only when the intuitive reason has obtained some view of what Locke calls "the immutability of the same relations between the same immutable things" that we are satisfied.

The chief defect in Mr. Joseph's valuable chapters on Induction is that he does not seem to recognize the large part that hypothesis plays, and, in the formation of hypothesis, analogy. Let him observe the natural movement of his own mind the moment he begins to try to explain a set of facts concerning which he is curious. At once, with the first observation of the facts, some "guess" as to their cause arises. Such a guess he will find is valuable in proportion to the fullness of his knowledge concerning this case and other cases analogous to it. The moment a plausible hypothesis is thus formed, instinctively deductive reasoning begins as to what must logically follow if it be correct, and upon that fresh observation and experiment to attain proof. Mr. Joseph's treatment hardly makes this process clear, or develops all that its several stages may involve. His book is exceedingly suggestive and valuable. It would be much more readable and attractive were he to cut out the elementary information and study greater condensation and conciseness of style.

An Elementary Logic. By J. E. RUSSELL, M.A., Mark Hopkins Professor of Intellectual and Moral Science in Williams College. (3s. net. Macmillan.)

A small volume of two hundred and fifty pages of wide type, intended for students beginning the study of logic. It gives only the essential rules for the various forms of reasoning, and the more important principles of valid thought; much of the

matter to be found in the ordinary text-books is omitted. Thus nothing is said of Reduction or—a more serious absence—of the canons on which the syllogism rests. Though thus very elementary, it is exceedingly well done, with insight into logical thought, and simple, brief, and interesting exposition. Rightly, much larger space is given to inductive logic than is usual in an elementary text-book, and the account of its principles and the mental processes it involves is satisfactory. On one point we cannot agree with Prof. Russell—in classing the Methods of Induction as processes of observation and experiment forming a stage preceding the use of hypothesis. This is not the natural order of thought either in science or in ordinary life. Hypothesis, crude or valuable, is inevitably used from the first step of inquiry; and, indeed, without some such guiding idea, observation and experiment would be of little value, while the Inductive Methods can only be used at a late stage when most of the difficult work is accomplished, often merely affording the additional test of the invariable absence or presence of the cause (already ascertained) when the effect itself is absent or present. On the whole, the book is clear, well arranged, and well written, and may be strongly recommended. There are copious examples, but no index—a defect in such a book.

Water Babies. By CHARLES KINGSLEY. An edition for Schools, abridged and annotated by JANET HORACE-SMITH and MARION L. MILFORD. With Illustrations by JANET ROBERTSON. (2s. 6d. Clarendon Press.)

Certain *prima facie* objections to this undertaking inevitably arise in the mind of the impartial reviewer. But, as these are frankly anticipated by the authors in the first two pages of their preface, a consideration of them at the outset may not be taken as implying any want of appreciation of the way in which the work is performed. "Our first object," the editors tell us, "was to meet the requirements of schools." That the schools should include in their "requirements" a book of exactly this quality and calibre is a point at which we find ourselves tempted to cavil. Is not, we would question, the chief value of "Water Babies" its fusion of science with poetry—its stimulus to imagination grounded (as all true imagination must be), in fact, but aspiring thence to wonders that eye hath not seen nor ear heard? Do we not, some of us, look back to it as a portal through which we passed out from the enchanted courtyard of childhood to the broad uplands of fair romance? And should we have been helped on this journey by notes such as the following?—"In saying that things should happen at the coming of the Cocqigrues Kingsley meant that they would never happen at all, as there are no such monsters," and "'grinning like a Cheshire cat' is an expression of uncertain origin. It is said that Cheshire cheeses used to be moulded in the form of a grinning cat, and the saying may have come from these." If a work of this kind be set as a text-book, there is probably no system for its annotators to pursue except the one of explaining every term that is difficult or mysterious. At any rate, a very delicate discrimination would be required in deciding just which of the allusions are meant to be merely suggestive and which are to be analyzed. Not the least of the achievements of the work that is before us is the proof its compilers have given of the number of references contained in "Water Babies" which are unmistakably of the latter class. Some fifty-four pages of small print are here filled with notes, to very few of which exception can be taken. A few of them, the editors, in their conscientiousness, have perhaps carried a trifle too far, and it is news to us that Quakers at any time had a testimony against the use of the terms "father" and "mother." But in the main they are excellent, and they are further elucidated by minute and careful drawings which do much to enhance their explanatory value. The best and most useful section is that which preponderates largely and is concerned with definite points of natural history, descriptions of birds, beasts, and flowers. There are two reasons for this: first, that these explanations do not trench on the delicate border-land suggested above that lies between fact and phantasy; second, that the book was primarily intended for Kingsley's own children, who were, of course, singularly well versed in the story-book of Nature. In short, the general verdict in regard to the notes must be that, granting the book had to be annotated, it hardly could have been done better. The loss, therefore, would be the greater if work of this quality should not ultimately tell in the right direction. And this end can only be secured by the full recognition on the part of the teacher that it is the province of the notes to deal only with the foundation on which the story is built, and that where, as in the instances of the Cocqigrues and the Cheshire Cat, they pass out of their own department they become worse than useless. Spite of his most praiseworthy efforts, it may prove impossible to set some of his pupils across the threshold of this treasure-house of fancy and imagination, but at least he will uphold the fact of its existence by regarding it as something living and organic not to be taken to pieces and rebuilt brick by brick, in the way of houses that are not heavenly, but are made

with hands. Miss Robertson's illustrations are excellent—notably the one of Tom making his way to the cabinet of Mrs. Bedonebyasyoudid. The atmosphere of this and most of the other drawings is—as it should be—that of a credible, tangible fairyland. Fault-finding, where so much is beautiful, would be a thankless and ill-judged task, and we would not wish to comment on a failure which is inevitable in the attempt to portray Mother Cary's face, were it not so complete a proof of our argument that the most artistic portions of the book are in themselves complete and incapable of translation.

Birdland Pictures. Twenty-four Illustrations from Photographs direct from Nature. By OLIVER G. PIKE. (3s. 6d. net. Crofton Publishing Co.)

Mr. Pike has given us a pleasant mixture of the familiar and the rare in birdland: the lark and blackbird and the ruddy sheldrake and great crested grebe. In most of the pictures the birds are nesting, and to find your bird and snapshot it must have been a work of infinite patience. The photographs are not so artistic as some of the Brothers Kearton, and the backgrounds are sometimes unsatisfactory, but the birds themselves are admirable. Mr. Pike has used the Goerz lens, "undoubtedly the finest in the world for natural history photography"; and also, we will warrant, the Goerz binoculars, whose merits for distant observation we have ourselves tested. In the letterpress he chats pleasantly of his adventures.

The Children's Heroes: The Story of Nelson and The Story of General Gordon. Edited by JOHN LANG. (T. C. & E. C. Jack.)

These books, in the main, are simply and vividly written, and therefore likely well to serve the purpose for which they are intended. Though the quality is unlikely to be inimical to their popularity with a juvenile public, we cannot but regret the ultra-sensational, even blood-thirsty, nature of many of the highly coloured illustrations.

Experimental Electro-Chemistry. By N. MONROE HOPKINS. (12s. net. Constable.)

This rather large book is of an elementary type, and is suited to the wants of students whose knowledge of chemistry and physics is rather limited. The first third of the book is really an elementary exposition of the theory of electrolytic dissociation, Faraday's laws, and energy relations, all written in a very clear and simple manner. Then follow directions for performing a few simple electrolytic preparations of important substances such as caustic soda, white lead, and vermilion. The production and use of ozone on a large scale, the preparation of nitric acid from the air, and the isolation of a few important metals then receive notice. But little space is devoted to organic preparations, because the chemistry involved is likely to be too complicated for many of those for whom the book is intended. The concluding chapters give some account of the theory of primary and secondary cells and of the attempts which have been made to obtain electrical energy directly from carbon. A useful bibliography of electro-metallurgy and electro-chemistry, arranged chronologically from 1791 to 1905, constitutes the final chapter. Here and there one notices expressions which are curiously crude in form and, at times, inaccurate. Thus, on page 55, "the electricity from an electrical machine is almost all potential difference"; and, on page 57, "we can think of the free ions being migrated by ordinary magnetic induction so common to all students of physics and electrical engineering." A beginner is not likely to realize the meaning of "hysteresis" from the statement, on page 63, that "the heating of iron by an alternating current under such circumstances is called hysteresis." The diagrams are throughout clear, and the book can be recommended to elementary students of the subject.

Exercises in Quantitative Chemistry. By H. N. MORSE. (8s. 6d. Ginn & Co.)

The author does not claim that this is a complete manual, but puts it forward as a selection of exercises chosen with the view of familiarizing students with a considerable variety of quantitative methods and operations. Given a thorough training in manipulation and method, a student will have no difficulty in carrying out an unfamiliar analysis when he has access to books of reference; and such a training will certainly be obtained if he works conscientiously through the course laid down in this book. Matters of fundamental importance in work claiming to be accurate—such as best methods of weighing, comparison of sets of weights, calibration of eudiometers, flasks, and pipettes—are dealt with fully. In addition to the usual gravimetric and volumetric estimations described in books of this kind, there are useful chapters on the determination of molecular weights and the purification of substances. Examples of the processes involved in the analysis of water, of organic substances, of iron and steel, and of gases also find a place. The course is a valuable one for students who intend to make quantitative analysis a strong point in their chemical education.

A Grammar of the German Language. By G. H. CLARKE and C. J. MURRAY. (6s. Cambridge University Press.)

The first point we look to in a new grammar is the print. The type leaves nothing to be desired, and the leaded German type catches the eye most effectively. It would have been better if lists of words, as in the genders, had been given in columns and a distinction made between the rarer and the more common. The authors do not state for

whom the grammar is specially designed; but, whether so intended or not, it will undoubtedly be used in schools as a book of reference, and a very complete index fits it for this purpose. Great pains have been taken to bring it up to date. Language grows and grammar lingers: the school grammars of to-day reflect the literary German of a century ago. Accidence and syntax are combined. This may be more logical, but we are not convinced of its advantages in practice. For one thing, it necessitates a good deal of repetition or cross references. Thus, to answer an elementary question—how is time, past, present, and future, expressed in German?—we must refer to nouns, numerals, English prepositions, &c.; and there is danger that the pupil will render "I lived for four years in London," "Ich wohnte auf vier Jahre in London" (page 340). We add a few comments that have occurred to us in the perusal. Page 29: "*verblieben*, completion of action." Surely this is strained—*ver* = "away." Page 82: "Physical strength, power, violence, or the like are qualities essentially masculine." We think of the German equivalents, *Kraft*, *Macht*, *Gewalt*. Page 195: "Objective verbs are such as denote an action extended by the subject to some other person or thing called the object." The term seems to us no improvement on the old "transitive," and it does not cover the verb when used in the infinitive. Page 252: *frohlocken* and *liebhaben* have both forms of the past participle. Page 275: "A past participle has an active meaning if derived from an intransitive verb, *die angekommenen Freunde*." The authors have been misled by the English idiom. Page 368: concessive clauses cannot be said "to give a result." Page 385: for "indirect question" read "direct."

"The Carmelite Classics."—(1) *Shelley, Adonais*; (2) *Macaulay, Life of Goldsmith*. Edited by N. L. FRAZER. (3d. each. H. Marshall.)

These booklets commend themselves by their external appearance, and we approve the plan of editing—notes reduced to a minimum, giving only what pupils cannot be expected to find out for themselves, and at the end some suggestive questions. But we cannot approve the execution of the first volume. Can a schoolboy be expected to make out the meaning of lines which Prof. Hales cannot, or could not, understand; or will he discover by the light of nature who is the Pilgrim of Eternity? Does it pass the wit of a schoolboy to discover for himself that "ruth" means "pity" and "sere" means "faded"? Such notes, too, as "Urania is the name by which Venus is known in heaven"; "the Pyramid or monument of Cestus [*sic*] marks the burial-place of both Keats and Shelley at Rome," are not illuminative.

Great Buildings, and how to enjoy them: Gothic Architecture. By EDITH A. BROWNE. (3s. 6d. net. A. & C. Black.)

The book consists of some fifty illustrations of famous Gothic cathedrals and churches, with letterpress to face them, giving a brief account of date of buildings and leading features. A brief introduction deals with the genesis, development, and significance of Gothic architecture. The writing is non-professional and unassuming, and the volume is well adapted for a school prize.

Stanford's Octavo Atlas of Modern Geography. Third Edition. (25s.)

We were well acquainted with this fine library atlas in the quarto size, but we believe that it is now produced for the first time in the more convenient octavo. It is both pleasant to the eye and good for food. The *Handy Atlas* (price 10s. 6d.) is a selection of thirty from the fifty maps of the larger work.

"Junior School Books."—*The Gospel according to St. Matthew*. With Introduction and Notes by E. WILTON SOUTH, M.A. (1s. 6d. Methuen.)

The notes are up to the average standard of such books. There is a short introduction dealing with the teaching of the Gospel, the growth of written records, the four Gospels, the Synoptic Gospels, the Gospel of St. Matthew, the Jewish hope of a Messiah, Palestine, religious state of the Jewish nation. Some useful appendices and maps complete the volume.

St. John: the Revised Version. Edited, with Introduction and Notes for the use of Schools, by ARTHUR CARR, M.A. (Cambridge University Press.)

This little commentary is decidedly above the average. The introduction and notes are lucid and concisely arranged. Account is taken of recent critical work on the Gospel and cognate themes. An excellent feature is the running analysis that accompanies the text. The book ought to be found most useful for class-work, and we cordially commend it. There are two good maps. Type, paper, and binding are excellent.

Elementary Electrical Engineering. By J. H. ALEXANDER. (3s. 6d. net. Crosby Lockwood.)

The author states that this book represents an amplification of lectures in electrical engineering given to young artisan members of an evening class. It is far from easy to devise a satisfactory course of instruction in this subject without introducing mechanical ideas and mathematics, which, unfortunately, many evening students do not count as part of their equipment. One feels therefore that the author handicaps himself seriously when he says that "he has omitted all complicated mathematical formulae." Making all due allowance for the

superficial treatment of much of the subject which necessarily follows, it seems that a fairly good book has suffered considerably by much looseness of expression and occasional inaccuracy of statement. On the first page we are told that electricity is a form of energy. Both on pages 3 and 115 the author seems to reverse the usual signs of the poles in a voltaic cell, and the use of acid in a bichromate cell is not mentioned. At page 10 Coulomb's law of action between *poles* is wrongly given as the law of action between *magnets*. On page 23 it is implied that silver cyanide solution is acid. The descriptions of galvanometers on pages 46 and 47 need most drastic revision—at present they are useless—and on page 59 an attempt to explain Wheatstone's Bridge by a mechanical analogy is marred by a misstatement respecting the ratio of the balance arms. Further, we find such statements as these:—"A positively charged sphere possesses magnetic lines of force" (page 26); "a microm [sic] = 100000 ohm"; "the Nernst filament consists of a highly *refractive* oxide"; and so on. With careful revision the book might become really useful to the class of student for whom it is intended.

Electromagnetic Theory of Light. Part I. By C. E. CURRY.
(12s. net. Macmillan.)

Starting with Maxwell's equations for electromagnetic disturbances in the ether, Dr. Curry develops in this volume the fundamental laws of optics. No experiments bearing on the matters discussed are described, as the work is confessedly entirely mathematical. It is, therefore, obvious that only those students whose mathematical training has been very thorough can make use of the book. Part II., which has yet to appear, will deal with those phenomena for which Maxwell's theory cannot satisfactorily account.

Messrs. Collingridge send us a set of *Fruit-Culture Charts* drawn up by Miss L. F. BANYARD. The operations of Planting, Cutting and Layering, Pruning, Budding, and Grafting are clearly shown, and the letterpress is brief and pointed. They are published for the Fruit-ers' Company—price, for single chart, 2s. 6d. net; for set of five, 5s. net. They are admirably adapted for the higher classes of country schools.

THE BLAKE EXHIBITION.

Thank heaven! I never was sent to school
To be flogg'd into following the style of a fool!

A SAD change has come over the face of education since Blake penned these comfortable lines. A hundred years ago the delicacy, the complexity of the human branch of nursery gardening were appreciated so little, the hand of the cultivator was so rude, that his would-be ministrations offered themselves for types of frost and blight.

O father and mother, if buds are nipp'd
And blossoms blown away,
And if the tender plants are stripp'd
Of their joy in the springing day
By sorrow and care's dismay,
How shall the summer arise in joy
Or the summer fruits appear?
Or how shall we gather what griefs destroy
Or bless the mellowing year
When the blasts of winter appear?

We must suppose that the contemporary theory of education—if education already suffered from a theory at that early date—laid emphasis on the need for hardening and anticipatory acclimatization. And, to be sure, it is a need not wholly negligible and certainly not emphasized unduly now. Blake's epigram has lost its sting, and even when he framed it its poison was not for others only, but turned in part against himself. From the beginning to the end he was a self-educated, that is a half-educated, man. To the end he was afraid of education, and to be afraid of education is to be afraid of culture.

I must create a System or be enslav'd by another man's;
I will not Reason and Compare: my business is to Create.

Here, in close union, at first sight hardly distinguishable, lie the sources of his weakness and his strength, the truth and error of his way. For analysis is, indeed, the enemy of action and of all constructive work, a murderous process culminating in death. But in the intellectual, as in the physical, world there is a constant give and take, and death is never the final word. The life and luxuriance of the present draws from the ashes of the past. Perfect creation can only be founded upon discriminating appreciation of past achievement and past failure. The only certain road to such appreciation is by a

criticism which involves analysis, and part at least of the function of education is to train the faculty, still more to maintain the standard by which failure and achievement may be judged. The uneducated man, being a stranger to the accepted currency of excellence and merit, has nothing for it but to mint a fantastic coinage of his own. This is what Blake felt himself forced to do, and his weakness was that he made a virtue of the necessity. There was no alternative in his eyes but to impose or be imposed upon, and he was so un-Socratic as to choose the active rather than the passive of injustice, preferring, in this particular, to be not sinned against, but sinning.

I must create a System, or be enslav'd by another man's.

—Creation was, indeed, his task; systematization was his snare. He fell a victim to that very Devil whom else it might have been his proudest boast to have exorcised. "Beware the back-blows of Sathanas." Rather than seem the one slave among the many, Blake was content to impose a new slavery—upon himself, if not upon his kind. It is a strange irony, indeed, to see this strenuous apostle of spiritual and intellectual freedom labouring to construct a fresh universe by system and by symbol, and deceiving himself with the belief that because new created his system will be no system, that its fetters will be the less binding because he has forged them with his own hand. Blake, in so far as he arrived at creating a new mythology, was false to himself—false, that is, to the artistic principles which he was most concerned to uphold.

Every great mythology lives for the most part in human memory through the achievement of the artists who made it the foundation of their work; and it is sometimes on that account supposed that to mythologize—to body forth certain symbolic characters and to define their meaning and associations—is itself an artistic procedure. The reverse is the truth. A made mythology offers, indeed, grand material for the artist's imagination, but its value is precisely that it comes ready to his hand, that it is common property, not made by him, but existent already as a network of associations in the minds of his fellow men; and just in so far as his work is poetic in the most exalted sense, seeing beyond the type to the thing typified, it will destroy the rigidity of these associations, will fuse, transform, and pass beyond them. And it is the grand merit of Blake's art that this vitalizing power is present in it so perpetually. Even his mythologies may be forgiven him, because half his time he deals with them like a true artist and destroys them as soon as they are made. In the work of earlier poet-mystics he aims for the most part at the higher—the poetic—sense. The wonder of that crystalline water-colour "The River of Life" is wholly separable from its acceptance of the symbolism of the Apocalypse. We may mark, if we please, the various heavenly trees that fringe the stream, and count the number of their fruits; but to do this is not to see the picture. To see the picture, we must feel the swift flow of radiant water that sweeps without hindrance away to the sunset and the Western world—while the soul sails with it, sharing the triumphant buoyancy of its course, or stoops, in an ecstasy of exhilaration, to draw from it that draught which tasting it shall never thirst again. Here is a treatment the very virtue of which is in emancipation of the mind from any rigid acceptance of its chosen imagery as a final embodiment of truth.

The same may be said of the far less powerful, but hardly less lovely, drawing entitled "Jacob's Ladder." Blake himself, in one of his autobiographical poems, gives us a cue to the interpretation of this. For him there is constant ministration, as by angels, between Earth and Heaven, recognized, if you will, in dream, but only so, because the waking eye is preoccupied with lesser things—

The eye of Man, a little narrow orb, clos'd up and dark,
Scarcely beholding the great light, conversing with the ground.
But in Felpham, his own village, he sees it and calls his friend
to share the joy—

Away to sweet Felpham, for Heaven is there—
The Ladder of Angels descends thro' the air.
The bread of sweet thought and the wine of delight
Feed the village of Felpham by day and by night.

Jacob's vision becomes thus for Blake the symbol of an unchanging reality: it is a vision which he shares; but here, again, he does not lose the reality in the symbol. This spiral, these slender figures passing to and fro, are a revelation of

something greater, deeper, more intimate than themselves. Neither Blake, we understand, nor Jacob saw their like. It was no unique manifestation granted either at Bethel long ago or at our own Felpham in these latter days. They saw, and thus expressed, what is always and everywhere discernible to the discerning eye. That Blake was at times no artist, that he set himself to systematize his visions, to give a rigid anatomy to those airy children of the mind whose flexibility was their life, resulted, we believe, from a misconception on his part that came of defective culture. It would not become us to say that education in his time was all that it ought to have been. But wherever men lay their heads together certain errors are avoidable. And who scorns common knowledge is sure somewhere to pay forfeit in more than common confusion.

OBITUARY.

MARY ELIZABETH CHRISTIE.

IT is with deep regret that we record this month the loss of one of our oldest and most constant contributors, Mary Elizabeth Christie, who has been connected with this journal for five-and-twenty years. She was the second daughter of Mr. W. D. Christie, sometime member of Parliament, editor of the *Globe* Edition of Dryden, and author of a *Life of the first Lord Shaftesbury*. He was a friend of Thomas Carlyle, and was, with him, mainly instrumental in founding the London Library. He had other famous literary friends, and Miss Christie may be said to have grown up in a literary atmosphere. She was born in London in 1847, and lived there till her father's death, when the family removed to Kew.

Her chief literary work was reviewing. She also wrote many articles on various topics, and a number of stories, most of which appeared in this journal—"Mr. Chichester's Conscience," "A Sub-editor's Story," "Red Lilies," &c. At the time her connexion with this paper began she also wrote for the *Pull Mall Gazette* and for the *Fortnightly Review*. Later, she became one of the staff of the *Spectator*, and there was a warm friendship between her and Mr. Hutton, the former editor. She also wrote for the *Churchwoman*, the *Pilot*, and the *Guardian*: her chief contribution to the last named paper was a series of articles on various authors—Thackeray, George Eliot, Mrs. Oliphant, &c.

A few years ago she joined the Christian Social Union, and to further the aims of that society she delivered early last year a series of lectures, called "Ideals of Life," on such subjects as "Home," "Society," "Fashion," "Work," &c. She took a warm and practical interest in work among the poor, especially in schemes for helping them in a human and individual rather than a mechanical and collective way. But the cause with which her name will always be associated was the founding of the Art for Schools Association, the objects and work of which are familiar to all readers of this journal. Of this association she was for many years the life and soul, throwing herself into every detail with characteristic energy and thoroughness.

It would be impossible to give an adequate idea of her personality to any one who did not know her. A friend told her once that she was the most serious minded and the most light minded person he knew. With a *fond* of gravity she combined a sunny temperament that "could not help enjoying everything," a keen sense of humour, and a flow of delightful nonsense. An original thinker, always living in the world of thought and idea, with a fine taste in poetry, art, and literature, she was yet intensely interested in the practical details of everyday life, and loved to administer them. There was a certain severity about her, and she had a way of hitting straight from the shoulder in personal criticism or rebuke; but her warm heart was seized with remorse if ever she found that she had given real pain to any one. She was an indefatigable and insatiable correspondent, and delighted in letters, which she called a "subtle effluence." Perhaps her chief characteristic was a sort of white heat of enthusiasm with which she irradiated every subject that interested her.

In her younger days she was for some time a member of the Positivist body, but in 1884 she returned with renewed conviction to the Church in which she had been brought up. Physically

strong and vigorous, she overtaxed her powers. Last autumn she was continually ailing, and her health quite broke down at the end of the year. It was thought that she was only overdone with her various activities, and that complete rest and change would restore her to health. She went to Eastbourne in March, but while there it was discovered that her illness was much more serious than had been supposed, and she returned to spend her last days among her kinsfolk and friends. It was on May 15 that she travelled home. The weather was exquisite, and, though weak and suffering, she was able to enjoy the tender green of the trees, the bluebells in the copses, the primroses on the banks. She said to the friend who was with her: "You will think of me in many ways, I know; think of me as one who loved the beauty of the world to the end." Afterwards she said that she could not have enjoyed the journey more if she had been in full health and strength.

The news of her fatal illness brought her a flood of letters conveying the deep sympathy and sorrow and affection of her friends. She was quite overwhelmed; for she had no conception how much she was loved and valued; and she said that, though she suffered, she was abundantly satisfied and happy. She came to the conclusion, she said, that one's friends see one as one desires to be, not as one really is; "and, she added, 'I believe that God Himself sees us as we desire to be, and helps us to become more like it.'"

She grew rapidly worse after her return home, and passed into the unseen world on July 6, full of faith and hope and peace—an irreparable loss to those who had the privilege of her friendship.

JOTTINGS.

"THE Federal Council of Teachers in Secondary Schools" has come to the birth and consists at present of the following associations:—Head Masters', Head Mistresses', Assistant Masters', Assistant Mistresses'. A Chairman, Treasurer, and Secretary for the year ending April 30, 1907, have been appointed, and a constitution has been adopted. It will be observed that of the eight constituent bodies, according to the first intention, three—the College of Preceptors, the Head Masters' Conference, and the Private Schools—are not included, and the adhesion of the Head Masters' Association is conditional on the approval of the general meeting in January, 1907. At the half-yearly general meeting of the College of Preceptors on July 21 a motion was passed authorizing the Council to join the Federation. Each of the associations that has joined is asked to contribute £10 towards the expenses of the year.

HOLIDAY IN SWITZERLAND.—Miss Walter is arranging to take a party to Switzerland on August 7. The tour will be organized for a fortnight, and the time will be spent at Grindelwald and Adelboden—both places about 4,000 feet high and in the centre of beautiful Alpine scenery. Second-class carriages will be reserved from London: the route out is *via* Dover, Calais, Bâle, and Berne, the return route being *via* the Brünig Pass, Lucerne, and Paris. The cost of the holiday will be ten guineas. The tickets are available for twenty-five days. Further information will be supplied by Miss Walter, 38 Woodberry Grove, Finsbury Park, N., to whom immediate application should be made.

GEOLOGY as a school subject was illustrated by the exhibits from the Paddington and Maida Vale High School (Girls' Public Day School Trust). It is a matter for regret that this subject does not often find a place in the curriculum, particularly at the present time, when efforts are being made to rationalize the teaching of geography. Moreover, some knowledge of geology is a fitting introduction to the study of botany and zoology, since the biological features of a district are necessarily connected with the nature of its soils, drainage, and general physical configuration. Apparently the subject may form a holiday interest, since the exhibit shown included specimens from the collections made by the pupils themselves in their holidays during the last two years, and included minerals, rocks, and fossils, &c., from such different localities as North Wales, Sussex, Devonshire, and Cumberland. School expeditions had also resulted in varied specimens. A series from the school collection illustrated the different methods of fossilization, and there were plasticine models of overlap, unconformity, faults, and the formation of an escarpment.

It is pleasant to note another small scholarship scheme connected with the Cambridge Summer Meeting is about to take effect. At the annual meeting of the Local Centres Union for the Extension of

University Teaching held in Oxford last August, a resolution that the Union should, as a body, found a fund to provide such scholarships for the Summer Meeting was unanimously adopted. The conditions being submitted to, and approved by, the Syndicate, a body of students who had passed a Cambridge University Extension examination between September, 1904, and May, 1906, or had written papers regularly in connexion with the Cambridge Six-Lecture Course during the time, were admitted from the co-operating centres to an examination in June, and the successful candidates are now about to enjoy the benefits of this fund. They will receive money grants, the minimum being £2 and the maximum £6, from the Union; and from the Syndicate a free ticket for the whole Meeting or for one part. The awards were made by the Syndicate, and it was a condition that scholarships should be held only by those who could not attend the Meeting without such aid, and have not obtained a scholarship from any other source.

THE Local Lecture Summer Meeting of the University of Cambridge will be held from August 2 to August 28. It is divided into two parts of a fortnight each, either of which can be taken. The principal subject will be "The Eighteenth Century," and the inaugural lecture on "The Rise and Development of the United States" will be given by the American Ambassador. Among the lecturers in the Education Section are Prof. Sadler, Mr. Oscar Browning, and Dr. Breul. France is strongly represented by Profs. Gabriel Monod, A. Beljame, and H. Lemonnier.

WE understand that there has been this year a considerable falling off in the number of candidates entering for the examination of the Cambridge Teachers' Training Syndicate. In the last four years their numbers have nearly doubled (262 in 1906 against 145 in 1902). This falling off may be taken as a direct consequence of the impending abolition of the Register.

THE TRAINING OF TEACHERS IN OXFORD.—Generous gifts have recently been received to enable the educational facilities of Cherwell Hall to be considerably extended. The foundation stones were laid on July 11 of a new wing of Cherwell Hall for 30 women students and of a new modern secondary school at Milham Ford for 225 girls. Cherwell Hall is unique as a training college in that it trains various types of women teachers, and has under the control of the same Council a modern secondary school containing day girls, boarders, and pupil-teachers. The following types of students are received at Cherwell Hall:—(1) Graduate students preparing for the Oxford, the London, and the Cambridge Teachers' Diploma. (2) Selected trained teachers already employed in elementary schools as teachers are received for a one year's course, to study special subjects closely related to their work. For example, Nature study and school gardening, geography and methods of teaching it, handicrafts and brushwork, special studies of Froebel and Herbart. These students are taken for one year at the low fee of £10 a term, which includes tuition, board, and residence. The Board of Education contributes a grant towards these students. (3) Students who have passed the Higher Local and Senior Oxford examinations may also be received for one year on the same terms to work for the Government Teachers' Certificate. (4) There is also a Kindergarten Training Department; students are prepared for the Higher Froebel Certificate. (5) Foreign, American, and colonial teachers are allowed to attend special classes to study methods of teaching special subjects. Milham Ford School, which is being rebuilt and reorganized by Miss Catherine I. Dodd, M.A., affords excellent opportunities for exemplifying the theories of education laid down in the lecture hall.

TEACHERS' GUILD NOTES.

[By a resolution of the Council, of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but "The Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

THE guillotine has fallen, and Clause 36 of the Education Bill has been passed in the Commons. Much will be the lamentation which will follow this drastic performance. We should hear a great deal about it from the teachers' associations were it not that their members are all too busy or too tired at the end of the school year to meet and record their views. Moreover they have expressed themselves clearly on the clause before it was reached in the House of Commons. That there has been absolutely no discussion on it in Parliament is a grave misfortune; but our regret is tempered by such letters as that of Mr. S. H. Butcher in the *Times* the other

day, which stands out, perhaps, more prominently than if it had been a speech on the clause, and that of Mr. Birrell to Mr. T. B. Napier, in which he refers to Mr. Butcher's letter. After all, what are we going to lose if Clause 36 becomes law? Do we want the Board of Education to keep a Register of Teachers? Yes, if there be no better alternative; no, if the consequence of the removal of the obligation is to be the establishment of a statutory Educational Council, charged, among other duties, with the keeping of a Register. Mr. Birrell's letter does not shut the door against this alternative. The writer is open-minded and sweetly reasonable. He asks for nothing more than a scheme "which would be beneficial and practicable and satisfactory to the teaching profession as a whole." Our own scheme, which is before Mr. Birrell, meets, we believe, the first two of his requirements. It would satisfy, we have reason to think, our own members and the teachers in primary schools and the teachers of elementary subjects in secondary schools. There is also a mass of evidence accumulating to show that it is becoming palatable even to many teachers who have hitherto stood firm for a Register in two sections, and for the University degree as the minimum qualification on the academic side for registration. Any one who has read the *Educational Times* lately can find there how much opinion has veered round towards the quarter of a comprehensive Register among the teachers represented by the College of Preceptors, to name one body only.

THE last line of defence of the champions of the existing Register is the University degree. Mr. Butcher puts it forward as the ideal to be aimed at, but we are glad to see that he does not rule out a lower academic qualification at the start. The fact is that to demand the degree *now* is to seek the establishment of a limited class Register, and to court fresh shipwreck. The included in such a Register would be but a fraction of the whole profession, and the excluded would be almost all the teachers professionally qualified by training. Of course, it would be in many ways excellent if all teachers were graduates; though we believe that in some spheres of teaching work bookish qualifications, such as a degree obtained by private study would supply, would be a positive drawback, as being destructive of freshness. For instance, would a kindergarten teacher gain in hold over the attention and interest of children of the age of five or six years by a graduate course? Would Nature study be altogether helped by such a course? Some of the advocates for the degree would put kindergarten teachers on a Supplementary Register. Such people cannot fully realize that the kindergarten is the foundation of the main building in education. Supplementary Registers are for the teachers of so-called "extras," and for them only.

WE feel certain that the policy of the profession now is to work for the establishment of an Educational Council. Such a Council would have a great initial advantage in not being a State Department, and would grow to be the mouthpiece of the teaching expert in a manner which would be impossible for any Board of Education. It would give dignity to the profession. It should be largely composed of members elected by the profession through its Register or roll. It would be able to act judiciously in dealing with the difficult questions of tenure between heads of schools and governing bodies and between assistants and heads, and, with the growth of public confidence, would gradually gain power to regulate and co-ordinate the external examinations of schools, and even to modify the curriculum in different classes of schools in accordance with the best educational opinion of the day. Above all, we believe that it would be the mainstay of the high-class private or independent schools, which are threatened with extinction by inimical forces which, meaning them no ill, yet in all their operations so act as to render their existence more and more precarious.

THE Office of the Guild will not be closed during any part of the summer holidays, but the usual shortening of Office hours will begin on Monday, August 13, and will last for three weeks. During that period the Office will be open from 11.30 a.m. till 4.30 p.m. (Saturdays till 1.30 p.m.). The Library will not be available for members for six days from the 30th of August, during the annual cleaning.

UNIVERSITIES AND SCHOOLS.

BEDFORD COLLEGE FOR WOMEN.

The Council have made the following appointments:—Mr. P. G. Thomas, M.A. Cantab. and Liv., as Lecturer in English Language and Literature; Miss F. C. Johnson, M.A. Lond., as Assistant Lecturer in French; Mr. J. F. Spencer, M.Sc. Liv., Ph.D. Breslau, as Demonstrator in Chemistry; Miss E. Hanhart, M.A. (Mathematical Tripos, Cantab.), as assistant in the Department of Mathematics; Miss G. W. Martyn, B.Sc. Lond., as Physical Instructor.

A Research Scholarship in Zoology has been awarded to Miss Lilian Ash, National Science Tripos, Cantab. Entrance scholarships have been awarded as follows:—Clift-Courtauld in Arts (£31. 10s. for first year, £28. 7s. for second and third years) to G. F. Bennett, of Tremarth School, Hampstead; Deccan in Arts (£40 for three years) to G. Inkster, of Clapham High School; Pfeiffer in Science (£48 for three years) to M. Brownsmith, of Bournemouth High School; Deccan in Science (£60 for three years) to A. F. Bate, of Croydon High School. Scholarships for the Secondary Training Course beginning in October have been awarded to D. M. Charles (Somerville and Royal Holloway Colleges) and to E. K. Mullins (Newnham College). Grants in aid have also been awarded to B. M. Munro (Newnham College) and to N. R. Manson (Newnham College).

Mrs. John Ellis and the Principal of Bedford College were at home on Tuesday, July 17, at 40 Pont Street, S.W., 5 p.m., to meet Miss Marie Shedlock (on her return from the United States), who will speak on the "Educational Value of Fairy Tales as an Introduction to the Study of Literature, and as a means of awakening the Imagination of the Child." Miss Shedlock's work in America has been carried out in connexion with the children's rooms of the public libraries and the training schools for elementary teachers, and has aroused great interest throughout the United States.

ROYAL HOLLOWAY COLLEGE.

The following awards have been made by the Governors of the College on the recommendation of the examiners:—Scholarships of £60 for three years to Miss M. Y. B. E. de Ternant, French and German, with credit for Pure Mathematics (Church Company High School, Streatham); Miss L. K. Ellis, German and French (University College, Bristol); Miss W. M. Seville, Mathematics and Chemistry (Notting Hill High School); Miss M. E. White, Mathematics (South Hampstead High School). Scholarships of £50 for three years to Miss O. C. Beach, Classics, with credit for Pure Mathematics (Mary Datchelor School); Miss M. M. Green, History and English, with credit for French (St. Winifred's, Eastbourne); Miss O. F. Martin, Mathematics, with credit for Physics (City of London School); Miss D. Menzies, Chemistry and Botany, with credit for Pure Mathematics (North London Collegiate School); Miss E. P. Padfield, Botany and Chemistry (Mary Datchelor School); Miss M. E. Walker, Classics (City of London School). Scholarship of £40 for three years to Miss W. Wright, Mathematics (Durham High School).

OXFORD.

The University has, of course, been in vacation during the whole of July and the last fortnight of June, and in ordinary circumstances I should not trouble you with correspondence; but by inadvertence I omitted in my June letter to add the notices (printed below) from two of the women's colleges. This omission I hope you will permit me (with apologies) to repair; and I take the opportunity to prefix a few University items which have appeared since in the rare vacation *Gazettes*.

Another important change has been introduced into the curriculum for Honour Moderations in Classics by the Board of Faculty of Arts, in regard to the Greek plays offered by the candidates. In the older system, which lasted till the early eighties, the drama was one option among many; latterly, since the change, the Greek tragedians were made a special group (one among four), and were practically taken by everybody. The amount required was three plays, and latterly the plays offered had to be either *Æschylus' "Trilogy"* or one play of each of the three dramatic poets. In recent years, owing chiefly to the publication of certain exhaustive commentaries—of which Jebb's "*Sophocles*" is the most distinguished example—the industrious and ambitious student (whose interests deserve every consideration) found the task increasingly laborious. The object of the recent reform was at once to lighten this excessive labour and to encourage a study at once less onerous, more profitable, and wider.

The new system is to begin two years hence, so as to save all vested interests. One play of each poet is to be "specially prepared," and each candidate must offer four other plays (including one from each of the three dramatists) for less special study. The idea clearly is that he will read five plays, and know all about one, instead of trying to know all about *three*, with very imperfect success. There is little doubt that the change is educationally an improvement.

The annual report has been issued of the Delegacy for Training of Secondary Teachers. The numbers on the whole have remained very steady for the last few years; for 1905 they are 54 men and 51 women. Whether the numbers will continue to keep up, now that the Register is abolished, we cannot be sure. It probably depends on the nature and amount of "encouragement" promised by Mr. Birrell.

The following University notices have appeared:—

Squire Scholarships: S. M. Morgan (Exhibitioner-elect of Keble), P. T. B. Clayton (Scholar of Exeter). Rolleston Prize: G. W. Smith, B.A. (New Coll.). Leather-Sellers' Exhibition: A. W. G. Edwards (St. John's).

The death is announced of the Ven. Archdeacon Brooke, of Halifax, formerly of University College.

The funeral of the late Mr. Beit (as a benefactor to the University) was attended by the Vice-Chancellor and Proctors, the Beit Professor (Mr. Egerton), and the Secretary to the University Chest.

SOMERVILLE COLLEGE.—The Council of Somerville College has awarded a Fellowship to Miss Florence Isaac (Girton College, Cambridge, and Society of Home Students, Oxford), who has undertaken an investigation of the refractive indices and other properties of crystallizing solutions, and a study of the early stages of crystallization.

ST. HILDA'S HALL.—Scholarships of £35 each have been awarded to Miss Ella O. Bell, Notting Hill High School (in Classics), and Miss Gertrude E. Easton, Maria Grey Training College (in History).

MANCHESTER.

Just as, a few years ago, the annual speech day of the Manchester

High School for Girls was the occasion of the first public appearance of Prof. Sadler in Manchester, so this year the new Dean (Bishop Welldon) was the principal speaker at that ceremony, which was also interesting, as Prof. Tout made his first appearance as the newly elected Chairman of the Governors. The speech day of the High School followed closely upon another important and highly successful function—the Horticultural Show, which was the means this year of raising £50 towards the fund for providing the school with an electric light installation. Regret is felt at the loss of Miss Shannon, B.A., who is retiring from teaching. The mistresses newly appointed are Miss Burns, B.A., of the Royal Holloway College, and (in the Junior School) Miss Haskyns, of the Training Department for Secondary Teachers, Bedford College, London. Leaving exhibitions have been awarded to the total value of £240.

The Lord Mayor of Manchester presided at the annual speech day of the Walley Range High School for Girls on July 25th in the Hulme Town Hall.

As already announced, Lord Stanley of Alderley kindly consented to distribute the prizes at the annual gathering of the Manchester Grammar School in the Free Trade Hall on August 1. Rowing has so far advanced at the school that for the first time a four entered for the Eaton Plate at the Chester Regatta. The Grammar School will feel deeply the loss of Mr. H. L. Earl, M.A., who, after twenty-five years on the staff, is retiring from teaching.

Very satisfactory reports were presented at the prize days of the Salford Technical School and the Salford Secondary School for Girls. The Salford Education Committee have appointed a committee to consider the practicability of giving systematic instruction in "morals, temperance, thrift, elementary economics, citizenship, hygiene, and domestic economy" in the elementary and secondary schools. They are also memorializing the Tramways Committee on the question of the issue of tickets bearing advertisements of the character of lottery tickets. *A propos* of this action of the Salford Committee, we may refer to words spoken in Manchester recently by Sir William Mather, who said he "would rather see the children of our working classes acquiring perseverance, a moral conscience, good manners, clean habits, clean minds, manual training, the habit of thinking, an elementary knowledge of the simple laws of health and Nature, and physical strength than the whole curriculum of the best elementary school we have."

Among a number of honorary degrees to be conferred by the University may be mentioned the conferring of a degree upon Mrs. Sarah Fielding, who endowed the Chair of Education. On the occasion of the visit of the Classical Association to Manchester in the autumn honorary degrees are to be conferred upon Lord Curzon, the President, and upon Mr. Haldane. In making his annual statement, the Vice-Chancellor referred to the increase in the number of students, to the new Faculty of Technology, to the institution of a Special Certificate in Biblical Knowledge, and to the foundation of additional Lectureships in Law owing to an increased grant from the Manchester Law Society. At the Degree Day, a few days later, the Vice-Chancellor spoke of the fact that, for the first time, graduates were admitted in the two new Faculties of Theology and Technology, and also to the conferring of degrees for the first time (under new statutes) upon those who had con-

ducted research in the University. A special appeal has been made for funds for the proposed new Union buildings.

Mr. A. C. B. Brown, B.A., Oxford, has been appointed assistant Lecturer in Classics; Mr. G. H. A. Hickling, B.Sc., has been appointed Assistant Lecturer in Geology. Other appointments include those of Mr. F. J. Tanqueray, B.Sc., L. ès L., as Assistant Lecturer in French, and of Miss Grace Owen, B.Sc. (Columbia), and Mrs. Pete Sandiford, B.Sc., as Assistant in Education. A committee of ladies has been formed, with Miss Oakeley as secretary, to deal with the question of the provision of suitable lodgings for women students.

At a meeting of the Lancashire Education Committee on July 16 Sir Henry Hibbert referred to the need for undenominational training colleges in the county. The Manchester Education Committee propose to make a grant of £400 towards the expense of

increasing the accommodation at the County School in Cheshire. A special scheme has been drawn up by the Manchester Committee with the object of improving the reading in the public elementary schools of the city. The aim is further to lead children to the appreciation of the best English literature. The Sub-Committee on Playing Fields have presented their report, in which they recommend that the Committee provide fields away from the schools and also wait upon the Parks Committee to ask for special facilities for games. An interesting report was also presented on the classes for stammering children.

Under the Presidency of Mr. Paton, a meeting of educationists was held at the Grammar School on July 4 to discuss the question of co-education. A committee was appointed to arrange for a public meeting in Manchester in the autumn to further the scheme for the foundation of a school at Harpenden. The Rev. Cecil Grant, the prospective Head Master, was among the speakers.

WALES.

So many modifications have already been introduced into Part IV. of the Education Bill that it is somewhat difficult to grasp the present position of the Welsh National Council. It is, however, perfectly clear that the Council to which the House of Commons will give its final sanction will be a vastly different body from that which was foreshadowed in the first draft. The powers which were originally conferred upon it were so extensive that many who believed in the soundness of the principle that Wales should be given a certain amount of autonomy in educational matters were inclined to withhold their support to the Government's proposals. They have been subjected to such fierce criticism in Wales that Mr. Lloyd-George seems to have realized long ago that it was quite futile to expect anything like a consensus of opinion in their favour. This is the only way in which it is possible to explain the extremely conciliatory tone which he adopted during the debate in Committee. He showed that he is prepared to go to almost any lengths in the form of concession to the "minority," provided only that he can secure a fairly united opinion on his side. The one object is to mould this section of the Bill into such a shape that the Lords will have no reasonable excuse for rejecting it *in toto*. In his opinion it is far better to get an inferior machine with limited powers which the majority of the Welsh people could accept without suspicion than a more perfect machine which half the population would regard with mistrust.

The Government's first attempt to meet the demand for more effective parliamentary control over the doings of the Council was not remarkable for its success or foresight. As the Bill left the Committee, it provided for a member of Parliament, "whether a member holding office or not," to be responsible to Parliament for all the acts and finances of the new Council. In effect, a Welsh Minister of Education was to be created. But, probably under the fire of criticism from the Opposition, this proposal was no sooner made than it was abandoned. According to the latest amendments, the control of Welsh education of all grades will be transferred to the Treasury, and, instead of a special Welsh Minister, some official in the House, who is connected with the Treasury, will be answerable to Parliament for the National Council. The Government has also acceded to other demands of the Opposition; for it is prepared to grant to the minorities on the constituent Councils representatives in the proportion of one in three on the central body, and to assign to the Board of Education the sole power of determining whether a transferred voluntary school shall be discontinued or not. The Treasury, and not the Council, will draft the estimates and submit them to Parliament, though the actual administration of the money will be vested in the Council. The accounts will be subject to public audit and examination. The new Council is, therefore, but a mere skeleton of its former self, and it is small wonder that Mr. Birrell described it as a "modified, minimized, and reduced" form.

One does not clearly understand Mr. Lloyd-George's statement that the Treasury already controlled secondary and higher education in Wales. As regards the Central Welsh Board, the points of contact between it and the Treasury are extremely few; nor, as far as one is

aware, has the Treasury ever attempted to interfere with any of the decisions of the Board. It is true that it submits a financial statement to the Treasury; but this can hardly be described as "exercising control" in the sense in which Mr. Lloyd-George used the term. The Treasury does not appear to possess the requisite machinery for the purpose of dealing with educational problems; so that in practice this form of control will very probably prove to be nothing less than a farce. Why the Board of Education is not allowed to become the controlling power is by no means clear.

Mr. J. H. Davies, the new Registrar, has done excellent service to intending students of the college by publishing in a convenient form a small pamphlet advising them as to the most suitable courses to adopt according to the profession they propose to follow. Useful hints as to the preliminary steps are also given.

The papers which were set this year were, on the whole, thoroughly satisfactory. As an examining body, the Central Welsh Board has undoubtedly improved very greatly, and therefore it is difficult to understand why it is proposed that it should be promptly disestablished.

Mr. W. J. Gruffydd, B.A., assistant master at Beaumaris School, has been appointed Assistant Lecturer in Celtic at the University College, Cardiff. Mr. H. Stanley Jevons was also appointed Lecturer in Political and Commercial Science, and Dr. Mitchell Stevens Lecturer in Pharmacology at the same College. Mr. A. G. Legard, M.A., Chief Inspector of Welsh Primary Schools, who attains the age limit at the end of the present year, has been granted an extension of his tenure of the position. Mr. Legard was appointed Chief Inspector in 1897.

The Glamorgan Education Committee have established holiday courses at Barry in Nature study, woodwork, drawing, &c. First-rate teachers have been secured, and so it is expected that many teachers of these subjects will avail themselves of this excellent opportunity of perfecting their knowledge. At Rhyl a summer school in Welsh will be held, and already a large number of assistant masters and others have signified their intention of attending it. The Denbighshire Education Committee have shown their sympathy with the movement in favour of Welsh teaching by allowing a grant of £2 to all teachers who applied for it to enable them to attend the courses at Rhyl.

SCOTLAND.

The quatercentenary of George Buchanan was admirably commemorated at St. Andrews on July 6 and 7. Among the visitors were representatives of most of the Universities of Great Britain and Ireland, and of the University of Paris. On the morning of the 6th a simple and impressive service was conducted in the University Chapel by Principal Stewart and the Professors of Divinity. In the afternoon Lord Reay delivered an able and learned address on Buchanan in the hall of the United College. Mr. Andrew Carnegie, Rector of the University, presided and made an introductory speech, in which he dwelt on Buchanan's vindication of the principles of liberty and constitutional government. Principal Donaldson read the following epigram which he had received from Prof. Bucheler, of Bonn, who was unable to be present:—

"Tela quatit fera barbaries: tu Scotia, scuto
Mundum atque humanas protege munditias."

The sentiment is better than the prosody.

A graduation ceremony followed, at which the Vice-Chancellor, Principal Donaldson, conferred the degree of LL.D. on Prof. Bonet Maury (Paris), Prof. Hume Brown, Mr. S. H. Butcher, Prof. S. Dill, Prof. Robinson Ellis (*in absentia*), Prof. Percy Gardner, M. Gennadius, Miss E. S. Haldane, Countess Lovatelli (*in absentia*), Prof. Mahaffy, Prof. J. E. B. Mayor, Prof. J. S. Reid, Prof. Rhys Roberts, and Prof. Tyrrell. The degree of D.D. was conferred on the Rev. A. Gordon Mitchell, Minister of Killearn (Buchanan's birthplace), who has made admirable translations of Buchanan's poems into English verse. In the evening a dinner was given in the Students' Union. On the morning of the 7th the delegates visited an interesting exhibition of books and portraits of Buchanan, arranged by the University Librarian, Mr. J. Maitland Anderson, and in the afternoon there was a garden party in the grounds of the United College. A further commemoration of Buchanan is to take place at Glasgow in autumn, and it is likely that a volume of essays will be published.

Elaborate preparations are being made for the celebration of the quatercentenary of Aberdeen University on September 25 and the following days. The new buildings at Marischal College are to be opened by the King on the 27th, and the Franco-Scottish Society is to hold its meetings in Aberdeen about the same time. A special building is being erected for a banquet, at which 3,000 guests are expected to be present.

At Glasgow University, Mr. J. S. Phillimore, Professor of Greek,

has been appointed by the University Court to be Professor of Humanity, in succession to Mr. G. G. Ramsay, who resigned in June. At Edinburgh University, Dr. W. G. Smith, of the University of Liverpool, has been appointed to the Combe Lectureship in Psychology. The appointment is for five years from October 1.

An action was recently raised in the Court of Session by several women graduates of St. Andrews and Edinburgh Universities to have it declared that women graduates are entitled to vote in the election of a member of Parliament to represent the Universities. An interesting and ingenious argument was made on their behalf, but Lord Salvesen has decided that they are not entitled to vote.

Mr. Maurice Paterson, LL.D., Rector of the United Free Church Training College, Edinburgh, has resigned his appointment. He has been Rector of the College for over forty years, and his old pupils in all parts of the country will hear of his resignation with much regret.

IRELAND.

Dublin University Degrees. At the Conferring of Degrees held in Trinity College, July 3, honorary degrees were conferred on Sir Albert Hine, the eminent engineer; Sir W. R. Gower, the specialist in nervous diseases; Prof. Wright, the philologist, of Oxford; Colonel David Bruce and Sir Almoth G. Wright, both distinguished in medical science; and the new Astronomer Royal of Ireland, Prof. E. T. Whittaker. At the same time seventy-three women students of Cambridge and Oxford received *ad eundem* degrees. In the Pass Degree list of Dublin University the first of the respondents is Miss D. K. Cox, who won this position with a very high percentage of marks.

The Intermediate Board and the House of Commons. After undergoing much heckling from Irish M.P.'s and Irish newspapers, the Chief Secretary has been obliged to undo his own act in the House of Commons, and ask the supporters of the Government to reject the resolution of the House to upset the rules of the Intermediate Examination for 1907. On July 3 Mr. T. O'Donnell moved: "That a humble address be presented to His Majesty praying that the rules for the Intermediate Board for 1907, sealed the 19th day of June, be disapproved in view of the refusal of the Board to act on a resolution of the House of Commons in regard to the teaching of the Irish language." In the debate that ensued Mr. Bryce did not deny that the Board, by a large majority, had declined to submit to the resolution of the House—a resolution, it will be remembered, carried by a House quite ignorant of the matter, solely in obedience to the recommendations of the Chief Secretary himself. He now withdrew from that position, on the grounds that it was impossible to issue new rules in time for the opening of Irish schools, and that thus to pass Mr. O'Donnell's motion would entail the suspension of the Examinations in 1907, and of the Intermediate endowment of secondary schools, a state of things too serious to face. There certainly would have been time had the Board at once made the alterations demanded by the Irish members, but to do this would have been to admit the principle that the House of Commons is in future to interfere in the details of the rules, and to upset on any caprice, political or otherwise, the work for which the Board is responsible. Moreover, one of those alterations, making Domestic Science an obligatory subject on all girls entering for Senior Grade Exhibitions, would entail great difficulties and disadvantages on both pupils and schools. The Board offered the alternative of allowing the rules for 1906 to continue next year. This course Mr. Bryce was obliged, on July 3, to ask the House to approve, and it did so by a majority of 46.

Mr. Bryce plainly did not realize the difficult position he was creating by his first action, and that position still remains. No Board could be got to carry on the work of directing intermediate education under the circumstances that the letter of the Act of 1878 permits the Irish members to create. It is certain that in the near future legislation must be introduced to make a practicable situation, and this may open up the whole question of the reform of the Intermediate system. Seeing that the Government continue to refuse to allow the Board to carry out their scheme of inspection and thus keep Irish education on the old evil lines of payment on the results of examinations, anything that would compel reforms might be a benefit; but that would depend on the direction reform takes. Mr. Bryce intimated that the present decision is only a temporary solution, and that the whole question must be settled later on. He also promised to publish the correspondence between himself and the Board. Since the debate a letter from Archbishop Walsh, one of the members of the Board, has appeared, in which he complains of the disadvantages of maintaining the rule that the proceedings of the Board shall be confidential, and asks, if it be not necessitated by the Act, that it shall cease.

It may be remarked that the practice of carrying on all their proceedings in profound secrecy is also maintained by the National Board, which administers far larger funds and controls the education of much larger numbers. There seems to be no reason why the public should be kept profoundly ignorant of the administration of education, and consequently remain quite uninterested in it and powerless to assist it.

The Secretary of the Commission, Mr. J. D. Daly, has issued invitations to various bodies, institutions, and individuals to send to him, to 4 Upper Merrion Street, Dublin, statements in writing of their views on the present state of Trinity College, and the changes they would recommend in order to make it more useful to education in Ireland. The Commission will commence its regular sittings in September. The time is somewhat unfortunate, as Vacation commenced at the end of June, and the Fellows and officials of Trinity College, as well as most other educationists interested, are dispersed for the holidays, and scarcely in a position to collect required information.

SCHOOLS.

BATH COLLEGE.—The following scholarships have been awarded:—Entrance: L. B. Frere, £90 (Mr. Martin's, Bexhill); E. W. Hickie, £60 (Mr. Meakin's, Southbourne); G. Robinson, House Exhibition, £25 (Mr. Gregory's, Weston-super-Mare); D. S. Hewett, House Exhibition, £20 (private tuition). School: R. G. B. Perkins, £40; E. S. White, £30; C. G. Martin, £10.

BUSHEY, ST. MARGARET'S.—Prize Day at St. Margaret's, Bushey, took place on Friday, June 22, the prizes being distributed by the Right Hon. J. G. Talbot, M.P. The Treasurer of the Corporation, Prebendary Baker, presided. St. Margaret's was removed from St. John's Wood some nine years ago, and its dignified buildings are situate amid beautiful scenery in an extensive garden, now glorious with July roses. Miss Baylee, in her report, referred to the successes of past and present pupils, three of whom have lately taken their London degree, one has secured a bursary for chemistry at the Royal Holloway College, one is leaving to read in the Honour School of Natural Science at Oxford, and one has been engaged to play at the Queen's Hall Promenade Concerts in the autumn. Music is evidently one of the specialities of the school, if it is allowable to judge from the all too short musical programme which was admirably performed by the pupils. Miss Phillips, a former pupil, gave a dignified rendering of Bach's "Concerto in D minor," the more satisfying for the very beautiful accompaniment by Mlle. Colmache. Prebendary Baker's witty speech—like the musical programme, all too short—was conspicuous for one practical business statement, that a generous legacy has been received, earmarked for the higher education of girls from St. Margaret's School, such legacy forming a fund which will provide each year for one girl, or for two girls in every three years, a scholarship for three or four years, at one of the Universities. The legacy is, in fact, of so generous a nature that one's thoughts reverted to the private endowments of higher education so fashionable among our American cousins. A sale of work realized a substantial sum towards the Baylee Scholarship in process of formation. The school chapel is highly decorated both with frescoes and coloured glass windows, and here Evensong was held, an appropriate close of a happy and enjoyable day.

CAMBERWELL, MARY DATCHELOR GIRLS' SCHOOL.—Ethel Padfield and Olle Beach have won open entrance scholarships at the Royal Holloway College of the value of £50 for three years; the former for science (botany and chemistry), the latter for classics, with credit for pure mathematics. Ethel Padfield, who entered the school four years ago with an Intermediate Scholarship from the London County Council, has also received from the Council a Senior Scholarship of the value of £80 a year for three years.

CANTERBURY, KING'S SCHOOL.—The following elections have been made:—Junior Foundation King's Scholarships: P. H. Nixon, D. J. N. Lee, D. H. Cowie (for Mathematics), B. H. Matheson, H. Parsons, all of King's School. Probationer Foundation King's Scholarships: G. H. Claypole (King's School), H. Spence, R. C. Crowley (Junior King's School), F. L. Sidebotham (Mrs. Scott Malden, Brighton), C. K. Mowll (King's School), A. W. Raymond (Mr. Simpson, South Norwood Hill), H. S. Wachter (Junior King's School). Entrance Scholarships: G. H. Claypole (Mr. Brandram, Southbourne, and King's School); K. E. L. Beardsworth (Mr. Beaven, Leamington), for Mathematics; E. F. Housden (Mr. Mallam, Sydenham), for Mathematics; C. T. Marshall (The Abbey School, Beckenham); F. L. Sidebotham (Mrs. Scott Malden, Brighton); A. Lush (Mr. Douglas, Malvern Link); J. S. Hannah (Mr. Yule, Bedford). House Scholarship, A. W. Raymond (Mr. Simpson, South Norwood Hill).

CHELTEENHAM, DEAN CLOSE SCHOOL.—Speech day this year was memorable by the presentation of a service of plate to Dr. and Mrs. Flecker as a recognition of their twenty years of service in the school. Dr. Flecker recalled the beginning of the school with a little band of twelve scholars, mostly his personal friends. Since then 1,200 boys had passed through the school and had scored 925 successes in public examinations.

CLAPHAM HIGH SCHOOL.—Entrance scholarships: Somerville College, Oxford, Clothworkers' Scholarship for History, W. Meikle; Westfield College, exhibition for English, G. Inkster; Girton College, exhibition for science, G. Mowll; Bedford College, Deccan Arts Scholarship, G. Inkster; Royal Holloway College, bursary for science, B. Smith; Haberdashers' Company Scholarship, C. Irons.

HAMMERSMITH, ST. PAUL'S GIRLS' SCHOOL.—At the recent examin-

ation for foundation scholarships the following were successful:—Seniors: Valérie English, Norah Hamill, Helen Harting, Mabel Hewkley, Mildred Hooke, Ailsa Yoxall (St. Paul's Girls' School). Juniors: Helen Buckhurst (Richmond High School), Elaine Fuller (St. Paul's Girls' School), Yvonne Pewny (Bedford Park and Chiswick High School).

HARROW SCHOOL.—The principal prize-winner on Speech Day was J. R. M. Butler, who carried off no less than eight prizes. Roxburgh won the Peel Medal for Latin essay, Owen the Shakespeare Medal, Howson the prize for English verse, and Somervell that for English essay. Fisher, sen., gained the Neeld Medal for mathematics, Somervell and Pallis the Science prizes, and Brandt the prize—not often awarded—"ob studia uno tenore feliciter peracta." Since July, 1905, D. L. Murray, E. S. H. Corbett, and H. R. Lynch Blossie have won scholarships at Oxford, and J. R. M. Butler (Major Scholarship at Trinity), A. Pallis, and E. G. de L. Hopcraft at Cambridge. Eleven boys have passed into Sandhurst, and one into Woolwich, direct from the school, and three Old Harrovians have passed into the Indian Civil Service. At the end of this term Harrow loses the valued and valuable services of Mr. G. H. Hallam, who retires after thirty-six years of loyal and strenuous work. In September the staff will be joined by Mr. C. H. Eyre, of Pembroke College, Cambridge, Captain of the Cambridge Eleven, who will doubtless do much for the athletic as well as for the intellectual of Harrow. "Lord's" and Bisley are the chief events of the Summer Term—apart from the world of books. The fight against Eton was exciting, as it turned out, and fairly close, but there was some disappointment on the Hill, as those who had watched the eleven closely were not without hopes of victory. We did well at Bisley. A shot on the wrong target made victory impossible, but we were a good third, and S. B. Martin made the highest score—66—of any competitor for the Ashburton Shield.

NORTH LONDON COLLEGIATE SCHOOL FOR GIRLS.—The annual distribution of prizes took place on the afternoon of July 3 in the Clothworkers' Hall of the school. Owing to pressure of Parliamentary duties, Mr. Thomas Lough, M.P., Parliamentary Secretary to the Board of Education, who had kindly consented to take the chair, was unable to be present. His place was taken by the Lord Advocate, Mr. Thomas Shaw, K.C., M.P., who was supported by Mr. Latham, K.C. (Chairman of the Governors), the Rev. and Mrs. Septimus Buss, the Rev. Alfred J. Buss (Clerk to the Governors), Mr. and Mrs. Lulham Pound, the Rev. B. Saunders Lloyd, Miss Clapham, M.B., Miss Mary H. Wood, M.A., Mrs. Miall-Smith, Mrs. W. K. Hill (one of the Governors of the school), Miss Aitken (Head Mistress of the Girls' High School, Pretoria), Mrs. Heberden, and others. The Head Mistress read her report, which included a long list of successes won by old pupils. After the distribution of prizes by Mrs. Lough, the Chairman spoke. He began by tendering the apologies of his friend Mr. Lough for his unavoidable absence. He drew attention to the fact that this type of girls' school was plentiful in Scotland, but remarked that in Scotland all Universities were open to women. He looked forward to the day when English Universities would follow their example. Mr. Latham, K.C., proposed a vote of thanks to Mrs. Lough and the Lord Advocate, which was seconded by the Rev. B. Saunders Lloyd. Mrs. Lough herself replied to the vote of thanks in a charming speech. The following is an abstract of the Head Mistress's Report:—The number of pupils in school is 438. Of the 43 senior pupils who left during the year, 33 were matriculated students of the University of London, 13 being entitled to the School Leaving Certificate, of whom 7 took papers at the Higher Standard. Sixteen of these senior pupils have proceeded to the Universities. Seven of these won open scholarships: Marjorie Long a Girton entrance scholarship of £50 a year for three years, and Margaret Tonkin a Girton entrance scholarship of £30 a year for three years, with second and third places on the list; Myra Dobson a scholarship at St. Hilda's Hall, Oxford; Katherine Curtis a Reid Scholarship at Bedford College; Lillian Gillman and Grace Moscrop, bursaries at the Royal Holloway College, and the former gained also a L.C.C. Scholarship of £50 a year for three years; Edith Brown a Senior County Exhibition. The school scholarships have been awarded as follows:—The Clothworkers' Leaving Scholarship to Margaret Tonkin; Platt Endowment Scholarships of £20 each to Edith Brown (for classics), to Violet Cooper (for science), to Grace Moscrop (for English), also to Winifred Friend, Dorothy Menzies, Catherine Muirhead, and Gertrude Tonkin. The highest honour this year falls to Violet Cooper, who has gained a Girton entrance scholarship of £50 a year for three years, being second on the list. Academic successes among former pupils are as follows:—Eight have graduated in Arts (four with Honours), four in Science, and five have taken the Teachers' Diploma. Two appear in the Tripos lists of the University of Cambridge—Miss Emily Hambloch in Mathematics, Miss Helena Quirk in Natural Science.

STREATHAM HIGH SCHOOL.—A scholarship of £60 for three years has been awarded by the governors of the Royal Holloway College to Yolande de Ternant, who gained the first place on the list for French and German, with credit for pure mathematics. She will also hold a scholarship for £50 for three years from the Streatham High School for the annual exhibition of the Royal Drawing Society the

school was awarded the Bronze Medal of the Society of Arts for Botanical Diagrams, and the Bronze Star of the Royal Drawing Society for Design in Black and White. Four girls were commended in the First Class and two in the Second Class. In the bi-monthly examinations of the Société Française for the year 1906 Yolande de Ternant has obtained the First Prize in the "Degré Supérieur" and First Prize for "Narration"; Jean Brewster, the First Prize in the "Degré Intermédiaire"; and two other girls gained mentions.

TONBRIDGE SCHOOL.—The entrance scholarships have been awarded as follows:—F. H. Knott and A. Dibdin (Tonbridge School); H. N. H. Cobbold (Mr. C. F. Sylvester, Godalming), W. R. Young (Brighton College), H. A. Sylvester (Tonbridge School), E. C. Wood (Mr. E. W. M. Meeres, Ealing), P. L. Bathurst (Mr. C. Mallam, Sydenham), D. Pilditch, S. E. Johnson, and C. T. Beckett (Tonbridge School). In addition to the various University and other honours recently published, the following distinctions have been gained:—M. B. Fisher, British Institute Art Scholarship; Capt. F. P. Dunlop (Worcester Regiment, United Service Association), First Essay Prize; and Sir Ralph Nevill, K.C., has been made one of His Majesty's judges.

UPPINGHAM SCHOOL.—The chief distinctions gained lately have been: E. F. Monk (Lincoln College, Oxford), Class I., Classical Moderations; H. G. A. Baker (Magdalen College, Oxford), Class II., Lit. Hum.; A. D. B. Wautan (Clare College, Cambridge), Class II., Classical Tripos; A. S. Kane (King's College, Cambridge), Class II., Natural Science Tripos; L. J. Wills (King's College, Cambridge), Class I., Natural Science Tripos; A. S. Kay (Wadham) and M. Powell (Magdalen College), Class II., Classical Moderations; H. F. P. Hearson, Exhibition (£60) for Classics, King's College, Cambridge; G. J. Wilkenson (Caius College, Cambridge), Stewart of Rannoch Scholarship for Music; and H. G. Ley, Exhibition Royal College of Music and Organ Scholarship (£100), Keble College, Oxford. After thirty-seven years of loyal and devoted service, the Rev. George Christian is leaving us at the end of this term, having accepted the living of Billesdon. Mr. Christian will be missed by the town no less than by the school. The Spencer Cup was won by Sergt. Featherstone after having to shoot off a number of ties probably unprecedented in the history of the competition. Speech Day was July 10. Perhaps the chief feature of the day was an address to the school by Lieut.-Gen. Sir Charles Burnett, K.C.B., who spoke strongly and eloquently on the old text of "Si vis pacem, para bellum." He also gave an interesting account of his experiences in Japan, "where patriotism is a religion, and where every man, woman, and child put first their duty to their country, irrespective of everything else, even of their lives." The chief feature of the speeches was the "Brutus" of W. Johnstone-Douglas, who showed elocutionary powers above the ordinary. Probably the number of parents and other visitors was larger than on any similar occasion.

WINCHESTER, THE COLLEGE.—The roll for entrance scholarships is as follows:—J. G. Tayler, E. B. Reynolds, G. M. Sproat, R. T. A. Hay, A. K. Fraser, W. D. Croft, A. D. Finney, J. W. Russell, R. G. Johnston, J. E. Stephenson, A. E. Overton and F. G. Drew (exhibitioners), W. Fagan, B. C. Studd, B. H. Sumner, O. K. K. Carré, J. C. E. Inchbald, E. O. Coote. There are ten vacancies in College. The Latin Speech has been awarded to H. T. Wade-Gery; the English Speech to D. Davies.

BOOKS OF THE MONTH.

Biography.

The Story of General Gordon. By Jeanie Lang. T. C. & E. C. Jack, 1s. 6d. net.

The Story of Nelson. By E. F. Sellar. With Pictures by Monro S. Orr. T. C. & E. C. Jack, 1s. 6d.

MEETING OF BRITISH ASSOCIATION AT YORK	635

OCCASIONAL NOTES.

WE have devoted a large, and what to many of our readers will seem a disproportionate, space to reporting the proceedings of the Educational Science Section of the British Association at York.

Section L
of the British
Association.

Our object has been twofold. Every branch of teaching, from the kindergarten to the University, was touched upon, and we flatter ourselves that every teacher and educationist will find something to instruct and also to entertain him that he could not glean even from the full and quasi-official report of the *Times*. At the same time, we desire to arouse wider interest and enlist the sympathy of the profession as a whole with the work of Section L. Prof. Armstrong, who is no respecter of persons, chose out the Head Master of Eton as his whipping-boy; but Mr. Lyttelton, who sent a written excuse, is not so culpable as other distinguished head masters who were seen at York, but not in Section L, or the professor who, in lieu of a paper, sent a telegram: "Absent through serious indisposition and other causes." When Prof. Armstrong tells us that we do not take our profession seriously we can but kiss the rod and promise to behave better in the future.

THANKS in no small measure to the tact and judgment of the chairman and to the example that Prof. Sadler himself set, the discussions were stimulating and closely to the point, and the platitudinarian bore who haunts such meetings was conspicuously absent. Yet, as one speaker remarked, there was too much sermonizing and too little science. The section is still in its infancy, and has yet to organize itself. The programme was far too ambitious. Nature study, curricula, training of teachers, modern language teaching—any one of these subjects would have afforded ample material for a whole session. Further, for a fruitful discussion it is essential that the reports of com-

mittees should be in the hands of members before the meeting, as forming a common basis of argument, and we hope that Mr. E. Gray's reiterated complaint on this head will be heeded by the executive. We, too, may complain of the niggardly supply of *précis* of contributed papers. It was only the favoured few who could obtain a copy. The difference of cost in printing fifty or five hundred is infinitesimal.

HAVING had our grumble, let us gladly acknowledge with Prof. Sadler the advance which this meeting shows in the growing spirit of research, the common desire for educational union, and the humility which an increase of knowledge brings to teachers. Researchers such as Prof. Sadler, Mr. Heller, Prof. Findlay, and Mr. Rowntree contributed the results of their investigations and experiments; but we still lack directed and co-ordinated research, and for this we must look to the Association. The bulk of the audience were secondary teachers, but the needs of primary schools received full consideration, and the absence of public-school exclusiveness and caste prejudice was a marked feature. Even Mr. Page, who ran a tilt against scientific utilitarianism, desired pure science and pure literature for all. There was a general agreement that we must appeal more to the imagination of children; that we must examine them less and trust more to inspection, which in its turn must be more advisory and less inquisitorial. Psychology is the Cinderella of the sciences, and it was so treated by the titular professors; but Miss Sturge, with feminine instinct, "*rem acu tetigit*" when she pleaded for its retention in the training college curriculum as inducing "a new attitude of mind." That phrase best sums up our impression of the York meeting as a whole. It would be hard to tabulate any positive conclusion; but one who attended it went away a gladder and a wiser man.

THE Principal of the Cambridge University Day Training College has published the lecture delivered by him at the Cambridge Summer Meeting on "The Importance of the Training of Teachers." What ever Mr. Oscar Browning writes is sure to be genial and lively, and his reminiscences of Eton under Keate's reign are excellent reading. But the sting of the lecture is in its tail. "The Board of Education is opposed to elementary teachers taking University degrees." "A grandmotherly Department insists upon the inquiry, first, as to whether the prospective student has the mental capacity to take a degree; and, secondly, whether he can bear the physical strain." As our readers are aware, the more graduates, both men and women, who are found teaching in our primary schools the better we shall be pleased; but surely Mr. Birrell is bound to test the sound mind in a sound body before he tenders the King's shilling, and exceptional strength of mind and body is needed to stand the double strain. We should be very sorry to see undergraduate training accepted as the norm. On one other point we find ourselves differing from Mr. Browning. "The chief object of the training of a teacher is to secure discipline," and discipline, he tells us, is the necessary condition precedent of stimulus or the exciting of interest. Surely this is putting the cart before the horse. An interested class is a disciplined class, and a teacher who has learnt the art of interesting will need no disciplinary art. We doubt, moreover, whether this power can, as Mr. Browning thinks, be adequately tested by the examiner for Certificates, though we would not go so far as Mr. Heller at York in pronouncing the set lesson given by candidates a hollow farce.

AS we hear "Simple Bible Teaching" alternately exalted and decried, we cannot but recall the mediæval epigram (is its author known?):

**Simple
Bible Teaching.**

Hic liber est in quo quaerit sua dogmata quisque,
Invenit et pariter dogmata quisque sua.

The opponents have no difficulty in showing that, interpreted in its strictly literal sense, it is an absurdity. As the Bishop of Birmingham put it, it would mean beginning with the first chapter of Genesis, teaching the child that the world was made in six days and "all manner of things in the Old Testament which were directly contrary to his fundamental moral sense." Lord Halifax went further: "He emphatically considered that simple Bible teaching had nothing distinctly Christian about it"—a statement that Lord Halifax would find it hard to reconcile with the Sixth Article. But, if once we acknowledge that the Bible is not a dogmatic system nor an ethical code, but a literature, a collection of the greatest religious books that the world has produced, most of these difficulties disappear. We all would retain Shakespeare in our schools; yet Shakespeare lends itself to the creed of the Romanist, the Protestant, and the Agnostic, and there are in Shakespeare all manner of things that are contrary to the child's fundamental moral sense. To assert with Dr. Gore that Bible teaching apart from dogma—i.e., the dogma that distinguishes Christian sects—must be weak and washy seems to us not only untrue, but profane. Are the story of Joseph and his brethren, the Sermon on the Mount, the parable of the Prodigal Son "weak and washy"?

NO one blessed with a sense of humour can have failed to laugh or smile, according to his temperament, on first reading the decision of the Court of Appeal in the action of the Crown against the West Riding County Council. That a Unionist Government should have unwittingly granted the greater part of what a Liberal Government is now contending for, that for four years Tory and Radical, Churchman and Dissenter should have engaged in a sham fight, and that it should have been left to a few canny Yorkshiremen to discover the true interpretation of a statute which had baffled the legal officers of the Crown and the Judges of an inferior Court—here indeed are all the elements of Meredithian comedy. Yet, though none of us foresaw this particular development, the *nexus* of the play lay in the original conception of the 1902 Bill. It was an attempt to run with the hare and hunt with the hounds, to put all schools under popular control and at the same time to preserve the distinctive teaching of the voluntary schools. The judgment is undoubtedly a strong card in the hands of the Government. Whether there will be an appeal to the House of Lords does not seem to us greatly to matter. The fate of the Bill will have been settled before the supreme decision can be given. It is ridiculous to suppose that the Government will listen to its candid advisers in the Unionist press, drop the Bill, and accept the Act of 1902, as now judicially interpreted, as a fair compromise. For one thing, that Act provides no guarantee for the religious liberty of the teacher.

WHAT form the amendments in the House of Lords will take we can gather pretty clearly from the debate on the second reading, and there is also little difficulty in determining which will be accepted by the Government as a reasonable compromise and which will be rejected as "wrecking." Clause 4 ("extended facilities") was left an open question, and the amendment which would have nullified it was defeated only by 16 votes. It follows

**Amendments
in the Lords.**

that the Lords will be free to reject it. An amendment to read "must" for "may" is more doubtful policy, and we do not think it likely that such amendment will be pressed; for it would carry with it the omission of Clause 5 and the alternative therein offered of State-aided non-provided schools. "Four-fifths" and "five thousand" are not sacred numbers, and here and on the arrangements for a ballot of parents there is room for compromise. Under Clause 8 (1) an exception may be allowed in the case of existing teachers. When these can be dismissed only by the Local Authority there will not be much risk of their being coerced into giving religious instruction. This we take to be the extreme limit of admissible concessions, and many of our Liberal readers will hold that we have been too generous. Clause 7, which confines compulsory attendance to the secular hours, must—we say it with regret—be maintained. The conscience clause, as has been abundantly proved, is no adequate safeguard; and the Opposition, who have put in the forefront of the battle the natural right of parents to decide what religion their children shall be taught, cannot logically insist on prosecuting the total abstainers. Nor can those who raised the cry of confiscation now insist that all their schools shall be confiscated. There remains to consider Clause 13, perhaps the most operative of all in deciding the fate of the Bill. Lord Hugh Cecil has already (August 14) run up the black flag of passive resistance, but sober Churchmen will think twice before flinging away a million a year.

THE Annual Report of the Day Schools Sub-Committee of the London County Council Education Committee, which has just been issued, may be taken as providing indirect evidence of the need for establishing an Education Authority for London other than a Committee of the County Council. The work is enormous.

The annual expenditure amounts to £5,000,000, about £2,000,000 of which is received from the Board of Education. The average roll of the public elementary schools is 750,000. The school accommodation is, of course, in excess of this. In provided schools there are 588,703 places, and in non-provided schools 209,208 places; in addition there are 3,904 other efficient places, making a total of 801,815. Nearly 20,000 teachers are in the service of the Council, and there is an annual demand for about 1,500. The administrative staff numbers 500, with some 400 attendance officers in addition. There are 600 bodies of managers. These few figures taken from the report give an idea of the immensity of the work. It would seem that London, on the analogy of the Board of Education, might well have its Minister of Education acting as chairman of an elected advisory body, the members of which should be chosen for their knowledge of, and interest in, education, and who should be willing to devote their public energies exclusively to this great work.

A "BOARD SCHOOL TEACHER" contributes to the *Monthly Review* a graphic article giving his personal experiences, which began in 1894, only twelve years ago.

Reading his account of the discipline in a Board school in the North of England, one might imagine one was reading a piece of history from the dark ages. Yet the writing bears the impress of simple and uncoloured truth. "Any teacher who thinks he can teach without a cane is a fool; but any teacher who lets a visitor see a cane is a bigger fool": this was the dictum of one of our writer's head masters. When a visitor came (and the school was singled out for visits of admiration) the word was passed round and canes were pu

Discipline.

away. "All done by love" was the comment of one lady visitor on her departure; after which the Head Master went round the school to cane those boys who had not behaved absolutely according to orders during the visit. In this school the physical position of every child had been planned and reduced to rule for every moment of the school day. If by chance any sign of slackness appeared, work was stopped and exercises in sitting still were substituted. After ten or fifteen minutes of these "the rest of the lesson proceeded as merrily as a funeral bell." We read again "the work was shocking." Yet, with all his experience, the writer of the article maintains that, with regard to corporal punishment, "knowing all I know, I would have it abolished entirely."

LOCAL AUTHORITIES.

THE County Borough of Bootle has issued a scheme for the co-ordination of all forms of education in the Borough. This scheme has been approved by the Board of Education. The idea is, presumably, to group into a convenient diagram all the educational effort that is going on in the town so that parents or others who are interested may see at a glance what opportunities are open. On the one side of the diagram we have the eleven public elementary schools leading up to three evening continuation schools with a general course for the first year, and for the second year specialized courses, either domestic, commercial, or industrial. Parallel to these is a pre-apprentice day school (not yet opened) which is to give a two years' course of an industrial character. All of these lead to the Technical School, with its five departments—domestic, commercial, engineering, building, academic or pure science. From the Technical School students may go on to the University of Liverpool, to which the Borough makes a grant. On the other side of the diagram we have the private preparatory schools, leading to the Intermediate Day School for Boys, to which is attached a pupil-teacher centre, or to the Secondary Municipal School for Girls (not yet opened), and to a recognized private school and to preparatory classes for pupil-teachers. There is a pupil-teachers' centre for girls also. From these two blocks the scheme implies that pupils will go on either to the Technical School, the School of Art, or the Teachers' Certificate course (not yet opened). The day or residential training college is the final stage. University Extension lectures stand in a block to themselves. The diagram does not appear to contemplate any passage from the public elementary schools to the Intermediate School or the new school for girls; and there appears to be no higher secondary school leading directly to a University course in Arts or Science. Otherwise the scheme will be complete.

THE governors of Chigwell Grammar School have asked the Essex Education Committee for a sum of £2,500. With regard to two items of £100 each, the Committee decided not to make any recommendation. With regard to the rest, they decided to recommend a grant of £400 and a loan of £1,900 on the following conditions:—"That the property of the school now held in trust by the Charity Commissioners do vest in the County Council; that the repayment of loans be made to the County Council at the times and according to the amounts that the Council shall be under obligation to pay; that the new class-room in the Preparatory School be for at least twenty boys; that during the continuance in office of the present Head Master the governors shall make the school increasingly available for pupils from the locality; that prior to the appointment of the next Head Master the governors shall confer and arrange with the County Education Authority the future character of the school and the conditions of its working." Two important matters stand out from these proposals. In the first place, there is a question whether it will be held lawful for the Board of Education to entrust an educational endowment to a Local Education Authority. The case will need to be tested. There are many schools that find it impossible to maintain themselves according to the increasingly high standard of secondary education. They appeal to the County or Borough Authority for help, and the answer is likely to be a request for full control. The other important matter is the threatened conversion of a non-local into a local school. Essex might well have one non-local secondary school of the highest grade generously helped from public funds. Perhaps this honour is to be reserved for Felsted. We should like to know what Prof. Sadler's report has to say on this matter. Evidently it is before the Essex Education Committee, though, as far as we know, it has not yet been distributed to the public.

Two important test cases as to attendance have been raised by the Staffordshire Education Committee. In the first case the magistrates held that, as the boy had reached the age of thirteen years, and had made 350 attendances in each of five years since he was five years old, he was entitled to leave school and to be employed full time in a factory under Section 71 (1) of the Factory and Workshop Act, 1901, although the school attendance by-laws of the Staffordshire Education Committee make no provision for exemption on an attendance qualification. On appeal, the Lord Chief Justice and Mr. Justice Darling reversed this decision. While the matter was pending some 150 children had been removed from school; but steps have now been taken (successful except in five cases) to secure the return of these children. The other case referred to a girl who had reached the age of twelve and was employed half-time in a factory. The magistrates held that, although the by-laws of the Staffordshire Education Committee make no provision for the partial exemption of children from school, the child was legally attending school half-time in accordance with the Factory and Workshop Act, 1901. This decision was upheld by the same Court which reversed the former decision. We have also received the "Directory for Higher Education" issued by the Staffordshire Education Committee.

IN 1903 there were 74 Council schools in Gloucestershire and 323 voluntary schools. In April of this year there were 86 Council and 303 voluntary schools. Since that date 10 other Council schools have been opened or are in process of erection, and 3 voluntary schools will shortly be transferred to the Council. In addition there are 4 certified efficient schools which are not maintained by the Council. The latest figures for average attendance are 15,173 in Council schools and 29,995 in voluntary schools. The religious instruction in the Council schools has been examined "by numerous gentlemen, chiefly clergy and Nonconformist ministers," and, with one or two exceptions, has been declared to be thoroughly efficient. The supplementary courses for girls in elementary schools, to which we have referred before in these columns, have now been arranged, and three special teachers have been appointed for the purpose. A special supplementary course for boys has been arranged at a school in the neighbourhood of Stroud, whereby twelve boys attend at the Brimscombe Polytechnic to be trained as designers and workers for the umbrella-handle and wood-carving industries. A medical examination of the children in the Stroud district, which proceeded satisfactorily for some time, has been abandoned owing to difficulties that arose. It is possible that the work may be continued by the district nurses, with a view of checking the spread of infectious diseases. Twenty schools have been affiliated with the National Home-Reading Union. The percentage of average attendance has improved; but the number of children on the registers has decreased from 53,588 in 1904 to 50,301 in 1906.

THE steadily growing cost of elementary education, coupled with the large number of new schools that are needed, accounts perhaps for the attitude of the Gloucestershire County Council on the subject of a rate for higher education. A report had been prepared showing what annual provision would be necessary to ensure a satisfactory system of secondary education throughout the county. The estimate given was for the sum of £3,000, equal to rather more than a halfpenny rate. The Council thereupon resolved "that the report be referred back to the Education Committee, with an intimation that the Council reaffirms its decision that, whilst ready to give facilities for those districts that express their willingness to be rated for the purpose of higher education, it cannot consent to an increased general county rate for that purpose." One result of this hint to the Education Committee to exercise greater economy has been that no junior county scholarships are offered for competition this year. The Committee states that it has no funds for the purpose, but suggests to the Local Committees that they should, out of moneys provided by the Education Committee, provide scholarships for children within their areas. The estimated income for the coming year is about £16,000. Half of this is paid direct to centres. The Agricultural, Domestic Economy, and Mining Sub-Committees receive £3,000; pupil-teachers account for £2,000; scholarships require over £2,000; and £500 calculated for administration nearly completes the total. The income of £16,000 includes about £1,400 raised by rates in localities.

THE offer of the Duke of Sutherland to give Trentham to the county to be used for educational purposes is an exceedingly generous one; at the same time public bodies are obliged to look a gift horse in the mouth. It is not always that a nobleman's mansion can be adapted for educational purposes without a large expenditure, nor is it always accessible. The offer was made in December last, and was referred to the Education Committee. That Committee had long ago discussed

the possibility of founding an institution for higher education that might some day grow into a University college. Already a site had been provided by private munificence. This site is near Stoke Station. After very careful investigation and discussion carried out by minor Committees, the Education Committee decided that Trentham might be accepted and made without undue expense, either as regards initial fittings or annual maintenance, into a residential training college for women teachers. For such a college there is an undoubted want in Staffordshire. Without the munificent help of the Duke and Duchess of Sutherland, it would be impossible to have so fine a building situated in such picturesque grounds. When this proposal was brought before the Duke he wrote: "On the whole, I would rather keep Trentham as an art museum than have it made into an institution for women teachers; but, if at any time in the future the County Council should see their way to take it over for the purpose for which it was offered in the first instance—i.e., as an institution for technical and higher education—the building should be at their disposal." Accordingly, the Education Committee recommend that the Duke's offer be not accepted.

THE London County Council has become convinced that it is necessary to supplement the old system of apprenticeship by some system of trade schools if London is to supply a due proportion of recruits for

skilled trades. At Easter of this year a number of such schools for girls were opened and scholarships were awarded to enable the children of poor parents to take advantage of the opportunity. The experiment is considered to be so successful that it has now been decided to extend similar benefits to boys. It is therefore intended to open this month a School of Engineering in Poplar and in Paddington and a School of Silversmithing in Regent Street. A number of scholarships will be offered for competition immediately after the close of the summer holidays. These scholarships are open to boys between the ages of fourteen to sixteen whose parents' incomes do not exceed £160 a year. They are tenable for two years and, in addition to education in general subjects and in the trade chosen, carry a maintenance grant of £10 for the first year and £15 for the second year. The examination will be in arithmetic, English subjects, and drawing.

RAPPORT DE "L'ASSISTANT ANGLAIS" POUR L'ANNÉE SCOLAIRE 1905-6.*

MONSIEUR LE PROVISEUR,—J'ai l'honneur de vous présenter mon rapport pour l'année scolaire 1905-6. Pendant ce temps j'ai parlé avec des élèves choisis dans presque toutes les classes; j'ai l'intention de vous expliquer mes méthodes et de vous rendre compte des résultats que, me semble-t-il, j'ai obtenus.

Je dois, tout d'abord, signaler la vivacité et l'intelligence de mes élèves de toute classe et de tout âge: j'ai été surpris par la précision et par l'étendue de leurs connaissances. Mais même avec de tels élèves, je suis convaincu que la conversation doit être considérée comme une méthode d'enseignement, et qu'il faut chercher soigneusement comment on peut l'harmoniser le mieux avec les études proprement dites.

En examinant les divisions naturelles de l'enseignement d'une langue vivante, j'ai compris tout de suite que le rôle que je m'étais tracé d'avance était superflu. Les professeurs parlent anglais avec une telle exactitude et avec une telle pureté d'accent qu'il n'est pas vraiment utile aux élèves d'entendre seulement parler l'assistant. La grammaire, si l'on admet qu'elle doit être enseignée, appartient à la classe; le vocabulaire ne s'augmente pas beaucoup par la conversation. La mémoire visuelle est plus répandue que la mémoire auditive chez les jeunes gens. Les mots—et, par conséquent, plus encore les phrases—qu'ils entendent seulement ne se fixent pas très bien dans leur esprit; les fautes mêmes ne sont pas facilement corrigées par la conversation. Par exemple, un élève dit: "The *time* will be beautiful"; et, malgré les corrections orales répétées, la faute ne peut pas être corrigée, ou, du moins, ne peut l'être que par une répétition qui risque de faire perdre trop de temps.

Il reste la mémoire organique, les reflexes des oreilles et des

organes vocaux, le fondement de la conversation proprement dite. Pour encourager ces reflexes, il faut formuler des méthodes définitives, n'avoir qu'un seul but: forcer l'élève à causer sans s'en apercevoir, c'est-à-dire, aplanir les difficultés et encourager ou créer le désir de parler.

D'abord—et cela est chose un peu difficile—il faut que l'assistant parle lentement, plus lentement que le professeur, mais sans perdre pour cela le rythme de sa langue; car l'élève ne profite pas d'une conversation où les mots arrivent à ses oreilles séparément, à des intervalles égaux comme les coups de canon d'un salut. On peut toujours accélérer la vitesse de la parole après deux ou trois leçons sans que l'élève le remarque. Qu'il imagine toujours qu'il prend part à une conversation ordinaire.

On doit aussi comprendre tout et ne pas corriger trop. Par exemple, un élève me dit: "One will *tire* the *los* soon of the lottery." Je répondrai: "Oh, they will draw the lots, will they? When will they draw the lots?" Il donnera alors une réponse correcte; sinon, mais alors seulement, il faudra le corriger, et il ne sera pas découragé par la timidité, qui est le plus grand obstacle dans la conversation. C'est cette timidité qui se présente à chaque instant; il faut la combattre par tous les moyens possibles. L'élève doit choisir les sujets lui-même: on connaîtra très vite les goûts individuels; mais il faut toujours se rappeler qu'un garçon ne parlera jamais devant ses camarades des choses qui l'intéressent profondément. Par exemple, j'ai un élève qui ne demande pas mieux que de me parler d'une société religieuse dont il est membre; mais avec ses camarades il devient muet. Parmi environ quarante élèves, j'en ai trouvé deux qui voulaient parler de la musique, un de la religion, un de la peinture, trois de la littérature française; du sport ou de la vie anglaise très peu, de la politique sérieuse ou internationale très peu, des beautés de la nature ou de la littérature anglaise presque aucun.

Un élève parle volontiers s'il se sent dans une position de supériorité, s'il s'imagine qu'il a des renseignements intéressants à fournir qu'il ne peut donner qu'en anglais. Pour cette raison, j'étaie toujours une ignorance complète des mœurs françaises et de la langue aussi. Ce sont les détails les plus minimes qui amènent le succès.

Il faut savoir goûter les petites plaisanteries ou en avoir l'air; avant qu'on puisse demander à un élève de dire un conte de fées, il faut lui persuader qu'on est particulièrement curieux de ces fables. Tous s'intéressent sur-le-champ et prennent un souci véritable qu'aucun détail ne manque. Alors la conversation marche; autrement la demi-heure est presque gâtée; les élèves s'intéressent plus alors à ce qui les environne, et qui n'est pas anglais, qu'à la conversation.

Les fautes sont beaucoup moins graves et moins nombreuses que je l'aurais cru d'avance. Par exemple, l'ordre des mots est très correct; les adjectifs précèdent leurs substantifs et les pronoms compléments suivent leurs verbes; les pluriels irréguliers ne semblent présenter aucune difficulté, ni, vraiment, les verbes irréguliers. Ce sont les petits mots—les prépositions, les ad-verbess et les verbes auxiliaires—qui se mêlent souvent: *in, at, to* semblent parfois être mal distingués; *not even, not any* remplacent "never," "none"; les temps semblent présenter des difficultés, particulièrement le passé défini—"Were you going to the theatre in Rouen?" "Do you go last night?"—sont les fautes communes. "Have you ever been..." est une phrase presque inconnue.

La prononciation me semble extrêmement correcte—en particulier, le *a*, le *th* et le *h*; seuls le *a* comme dans "water" et le *s* comme dans "sing" ne sont pas nets; la dernière syllabe est souvent avalée, et, dans les longues phrases, le rythme français reparait presque toujours.

Ce sont de petites fautes; le grand fait est que les élèves parlent couramment; souvent ils ne traduisent pas. Quand la conversation devient un peu vive et que mes réponses sont assez courtes, ils ne pensent point en français: les mots semblent arriver automatiquement. On doit, du reste, être toujours prêt à remplir les lacunes quand ils commencent à hésiter.

J'ai obtenu les meilleurs résultats avec les élèves de seconde et de troisième: les quatrièmes sont admirables, mais ils sont d'un âge où ils ne peuvent guère profiter beaucoup de la conversation. La construction de leurs phrases reste naturellement très simple; les phrases sont toujours coordonnées; ils parlent l'anglais comme ils parlent le français; ils ne peuvent guère faire de progrès maintenant qu'au point de vue du vocabulaire

* Mr. Hankin has been good enough to send us an advance copy of his report, which will be issued by the Board of Education as a direction to higher Assistants.

que, je l'ai déjà dit, on ne peut enrichir par la conversation. Pour cette raison, il me semble que je suis plus utile avec les plus grands. On voit chez eux des progrès vraiment extraordinaires : ceux qui, au commencement de l'année, ne pouvaient rien me dire couramment, bavardent maintenant avec un plaisir et avec une facilité évidents. Toute leur connaissance semble être assouplie et contrôlée.

Les élèves de seconde qui ont l'allemand pour première langue m'ont plu surtout : après deux ou trois heures, le pouvoir d'expression arrivait chez eux d'une façon frappante. Chez les élèves de première je ne vois pas un progrès semblable ; mais il y en a parmi eux qui, après avoir étudié l'anglais par la méthode ancienne, ont abandonné cette étude pendant trois ans et la reprennent maintenant depuis une année. Ils sont si excellents qu'on est tenté d'en tirer une conclusion, peut-être aventurée, au sujet des effets subconscients de la grammaire apprise il y a quatre ans. Au contraire, les élèves qui ont été en Angleterre ne semblent pas profiter de la conversation : ils restent toujours incorrects et retardent leurs camarades par leur désir de parler sans cesse.

S'il m'est permis de vous indiquer mes idées, je puis dire que les élèves de troisième et de seconde tirent infiniment plus de profit que les autres de la conversation ; qu'il ne faut pas avoir plus de trois élèves à la fois ; qu'ils doivent être amis, s'il est possible, et qu'il faut considérer quelle espèce de mémoire chacun d'eux possède. En ce cas, chez les élèves dont la mémoire auditive aura été reconnue insuffisante, on pourra essayer de la développer.

Je parais avoir laissé de côté les autres devoirs d'un assistant anglais. Mais si l'on essaye toujours de persuader aux élèves de causer, on ne peut pas leur donner beaucoup de renseignements sur la vie anglaise. Il n'y a pas beaucoup à le regretter. Les professeurs le font beaucoup mieux ; ils peuvent mieux qu'un Anglais expliquer le génie des Anglais, leur vie et leurs habitudes, parce qu'ils ont été frappés autrefois par leurs caractères distinctifs. Pour comprendre sa patrie on doit étudier les critiques étrangères.

Mais la tâche de l'assistant anglais ne se borne pas pour cela à enseigner aux élèves à "demander une côtelette à l'étranger." Il est un échantillon, un exemple concret de ses compatriotes, — costume, mœurs, façon de voir, etc. Il voit toujours les préjugés diminuer des deux côtés ; il y a un enfant qui sait aujourd'hui qu'il y a des vaches en Angleterre ; les plus grands comprennent peut-être que l'insularité anglaise n'est que de la réserve, pas de l'hostilité ; que la liberté peut exister dans un pays encore peu démocratique. Personnellement, je n'oublierai jamais l'amabilité et la politesse des amis que j'ai faits parmi les élèves du lycée Corneille, auxquels je ferai mes adieux avec un regret sincère.

Veuillez agréer, Monsieur le Proviseur, l'assurance de mes sentiments les plus respectueux.

GERALD T. HANKIN.

Lycée Corneille, Rouen, July 1, 1906.

ON LETTING ALONE.

WE have all heard of the boy who thought that "getting out" was unquestionably the pleasantest episode in scholastic routine : some of us may have agreed with him ; a few of us may possibly have gone so far as to speculate upon the foundations of his judgment. Whether our speculations may be profitable is another matter : at least they have led to the consideration of a particular point in scholastic practice which might fitly receive more recognition than it does.

He would be a bold man who denied the importance of initiative, or of suggestion, or of thoughtfully directed guidance in education ; he is possibly somewhat rash who ventures to assert the equally great importance of a more delicate and difficult art, to wit, the art of "letting go." Yet the teacher who has clearly traced the real boundaries of his province and duly observed the limits of his paedieutic efficiency must have been brought up, time and again, before a rather startling "Thus far and no farther !"

There is unquestionably in most educational processes a

definite point, varying with the individual child, but nevertheless clearly to be marked by the shrewd educator, beyond which the teacher is not merely unnecessary, but positively harmful. However sad the reflection, it is probably only too true that every teacher does unwittingly, yet none the less effectively, retard in some measure the progress and development of the intellects committed to his charge.

To a certain extent this is inevitable. So long as children are taught in classes there must be periods of stagnation or retardation for individuals. The smaller the class, the less will be the aggregate of wasted minutes. But it should not be beyond the power of educational endeavour to minimize the evil ; when ideal methods of instruction prevail its magnitude will be mightily diminished.

How, then, do teachers retard growth ? Juvenal spoke only a half-truth when he said :

Occidit miseros crambe repetita magistros.

He might well have added "*occidit pueros.*" True, repetition and reiteration have their function, but who can define the function of the "vain repetitions" to be so often heard in infant classes ? A class of tiny mortals gaze on a picture of a slumbering Persian, and say, again and yet again, till the monotonous cadence falls for the tenth or twentieth time on the wearied ear : "The cat is on the mat."

Possibly inhibition is strong in infancy. Let us at least hope so. Were it otherwise, it were hard to explain how so many children survive the ordeal with a modicum of brain. Doubtless a stray child in the class has been for a time or two interested in the wondrous connexion between thing, symbol, and sound ; but during most of the time action has been automatic, and thought has been "switched off." In other words, time which might have been filled with work is filled with noise enough to induce in course of time inhibition, and in the fullness of time atrophy. Fortunately, atrophy rarely supervenes.

Now there is not an atom of doubt that the normal little child is simply full of the desire to know and to work. With advancing years the desire frequently fades so far as school is concerned. This should not be so, and when schools are perfect it will be far otherwise. But in a perfect school the gabble of many will neither pass muster for the learning of many, nor will it prevent the working of a few.

Doubtless there is something pleasant to a child in a "sing-song" simultaneously performed. Most vices have their charm, and a "sing-song" is at least a soporific. The worst of it is that under soporifics one neither does much nor desires to do much. Let the teacher who trusts at all in "simultaneous" work ponder the matter awhile.

Nor is it in the infant school alone that the teacher may thus retard the accomplishment of his own ends. There is a type of teacher whose dearest tenet is that children are brought into the world in order to be taught. Such a teacher can never pursue the wise policy of *laissez faire*. To let a child alone to follow his particular line of interest were to be guilty of sheer laziness. No child in that class can hope to be left alone for even a little with a book, to discover how books can speak to him, nor with a flower, to become curious as to the "why" and "wherefore" of its lovely form, and to ask questions thereanent. All must ever be busy at some definite task, or following the work of a particular individual.

Unquestionably the examination fetish has much evil to answer for. For too long it was regarded as essential that in a given class each child should at a fixed time have reached a definite level of attainment in particular branches of study. To secure this the teacher had to think mainly of the weak, and thus the strong were forced to "mark time" during part of the session. To suggest that they might at reading lesson have been turned loose to browse as they pleased in the school library would have been rank heresy ten years ago ; to too many it would yet appear a dangerous experiment ; yet it would at least secure that the children were doing something *con amore*. Plasticity and obedience have their disadvantages ; a child will with great good will do perfectly uninteresting and useless work simply because the teacher's *fat* has gone forth.

One of the best features in the higher education of to-day is the improvement in general educational perspective. We no longer aim at producing a boy who knows a certain amount ; we rather strive to mould a child into a particular type of all-round, generally satisfactory youth, not over-clever, perhaps, but level-headed and full of interest in life. His school-days are less

"cloistered" than of yore. Even in school he has learned the value of intellectual self-reliance. He has, to some extent at least, been let alone.

To the average teacher few things are more difficult than to acquire the art of letting alone. Let every one who can read Long's charming "School of the Woods," if he would see perfection in the training of the young. The eaglets blunder into flying, the young fish-hawks go hungry while they learn to seize their food; the parent bird guides and watches, but knows how to leave the nestling to its own slender wits.

There is, alas! too little blundering in our school; too many artificial aids are at hand. What wonder, then, if our young ones enter the world's larger school lacking in the *savoir faire* which is the salt of life!

W. R.

OBITUARY.

MISS A. C. MAITLAND.

THE death of Miss Agnes Maitland, which occurred on August 19 at Oxford, has not only deprived Somerville College of its Principal, but removed one of the leaders in the advancement of women's education.

The facts of her life may be briefly stated. Born in London in 1849 of Scotch parentage, she spent her early years first in Scotland and then in Liverpool, where her father was settled in business. Her first educational work was as an examiner and inspector in the Schools of Domestic Economy established in Liverpool at the instigation of Miss Fanny Calder; and as a writer and lecturer on this subject she soon made her mark as a recognized authority. In 1889 she was invited by the Council to succeed Miss Shaw-Lefevre on her retirement as Principal of Somerville Hall. In the seventeen years during which she held the post the Hall (incorporated as a College in 1894) has increased in numbers from 35 to 83, and the structure has grown in proportion to the numbers. The library, opened in 1904 by Mr. John Morley, united the two wings, and was an outward sign of the completion of Miss Maitland's work. But her activities were not confined to Oxford. She served on the Committees of the University Association of Women Teachers and of the National Union of Women Workers. For the last year of her life she suffered from a grave malady. She fought bravely and rallied for a time, and continued almost to the end to take part in the government of the College. Though she took no active part in politics, she was a staunch Liberal, with the courage of her opinions and a reason to give for her faith. In her Kirkcudbrightshire home at Chipperkyle she delighted to play the gracious hostess, and entertain her Oxford students—some who are now mourning their best and wisest friend.

An "Old Somervillian" writes to us:—"What most impressed some at least of us students was the human way in which Miss Maitland regarded us. To her we were not merely students, members of a community who had to obey its laws: we were individuals in whose home interests, hopes, and troubles she could and did sympathize, as some of us have good reason to remember. We had each of us individual pasts and futures of which she cared to hear, and advice of very real value was never failing. It was, of course, impossible for all students to come into these close relations with her, but I can confidently affirm that none who sought her help found her lacking. She seemed to us to have a keen discrimination as to character and our fitness for responsibility. She knew how much liberty could be wisely granted to each student; when to tighten, and when relax, the reins of discipline, enforcing or ignoring at her discretion the unwritten law of the College. She loved her work, and it prospered in her hands; and perhaps few can judge how far-reaching was her influence, or how many will mourn her loss."

TRAINING OF MUSIC TEACHERS.—The thirty-first annual course for teachers has been held in London by the Tonic Sol-fa College. The work is mainly pedagogic. Students face an orchestra, a choir, and a class of children, and conduct and give lessons under the supervision of a professor, listening also to the attempts of fellow-students and to the model lessons. For their own improvement students have daily voice practice, and the physiology of the voice is explained. They also learn to write down harmonies by ear, to sing at sight from staff and sol-fa, and to compose music. Students attended from many distant places. The professors were Messrs. McNaught, Venables, Oakley, Rook, Bonner, and Harrison, and Mr. Curwen had the general oversight.

COLONIAL AND FOREIGN NOTES.

FRANCE.

Ought head masters to pay visits of inquiry to the class-rooms of their schools? It is a question that French school-masters have lately been considering. In some *lycées* the *proviseur* never comes near the forms; in others his appearances are frequent. When he visits, his impressions are wont to be communicated and to affect the judgments of *inspecteurs d'académie*, of *recteurs*, and even of *inspecteurs généraux*. Yet how can he judge of teaching except in his own subject? Is a classical scholar competent to weigh the merits of science teaching, or a mathematician a fit critic of instruction in modern languages? On the other hand, is not the head of an institution entitled to know what is being done in the school for the conduct of which he is responsible? The French schoolmasters found, as we think, a right settlement of these questions when they agreed that the head master should be free to be present at lessons, but that independent and regular inspection should prevent his opinion from being of final and decisive authority. Looking at the matter from an English point of view, we would gladly see some such system prevail, so that an assistant master, asked for his record, could produce, not the customary tributes of grudging or unduly lavished praise, but a simple statement of what forms he had taught, in what schools, and with what appreciation from qualified inspectors.

A recent number of the *Revue Pédagogique* contains an awakening article on "Difficulties in the way of Co-operation between the School and the Family." The writer, M. Crouzet, of Toulouse, finds that more progress has been made towards an understanding between the two authorities in the case of primary than of secondary schools. The primary teacher is urgently counselled at the training college, and by his superiors, to cultivate good relations with the parents of his pupils. And the working man stands nearer to the *instituteur* than does the middle-class father to the *professeur*. Yet the peasant is more expert in the breeding of cattle than in the breeding of boys, and free education leads him to depreciate the school from a belief that price and value are equivalent terms. Under these circumstances the physical, the intellectual, and the moral education of a child are beset with difficulty.

With regard to physical education, in the eighteenth century it was Jean-Jacques Rousseau that pleaded for the bringing up of children in accordance with Nature: now it is the doctors, the hygienists, and the pedagogues. Yet in respect to all the requirements of infancy—air, activity, fit nourishment, and cleanliness—there is generally some family practice dangerous to the child, who is either confined indoors, kept still, stuffed with improper food, or brought up amid filth. And, if in some matters, such as the crusade against alcohol, it is the family that puts obstacles in the way of good physical education, the school is not seldom an accomplice. Parents and teachers sharing the desire to keep the little one quiet, written exercises serve the purpose of both and are prescribed in undue measure. As to intellectual education, it might seem to be the exclusive sphere of the teacher. But the family could do much in co-operating with him. In point of fact, parents take no interest in their children's tasks, are unable to supervise them, or, with an excess of zeal, do the work themselves and conspire to deceive the teacher. Yet, for all their negligence and folly, they are greedy of scholastic distinctions for their offspring and look to the school to supply plenty of work. Not only for children six years old, but also for scholars of from seven to thirteen, the abuse of written homework is a complaisance to parents who confound education with cramming and like to see plenty of writing done—not merely because it ensures their tranquillity, but as a visible proof that labour is being exacted from their young.

But it is in the department of moral education that the home shows the greatest imperfections. A father may delegate to the teacher the office of an instructor; he cannot renounce all share in the moral formation of his child. But often the influence of the home, far from being wholesome, is morally injurious. The family may undo in the evening the work of the school in the day. On an average a child passes three hours at home for every one at school; the family then must be the controlling force in his moral education. In the worst homes there is actually a struggle to wrest from the school recruits for the army of crime. In the less bad there is hostility to its moral teaching and to its discipline. Some parents receive with open arms a boy that has been punished: "Pauvre chéri! il t'a puni, le maître? Eh bien! moi je vais l'arranger." Others welcome complaints against the teacher, or encourage their children in an attitude of formal or open resistance to him. But these indiscretions are of small moment in comparison with other misdoing. Moral education is, above all, the education of example. How is it given to a child who knows Saturday as "the day when you fuddle yourself," or to one who beats his mother "to do like daddy"?

The Family and Moral Education.

It is clear that the French father is as far from perfection as the British. The latter has, moreover, a special characteristic. Whilst he resents the discipline of the school, his own educating is done mostly by violence.

The British Parent.

Readers who walk abroad in large towns must often be saddened by the pedagogy of the streets. The father takes off his belt to chastise a laggard son. Inspired by his example the mother cuffs her girls, the child nurse shakes the baby nursing. Pain may be a legitimate disciplinary agency; few will recommend it as a first remedy, and fewer extol it as an universal specific. The parents hitherto considered are those of the lower class. The British parent of a higher grade has different, but no less conspicuous, weaknesses. A father insists that his numb-witted son, as a gentleman, shall learn Latin and Greek, when the dullard would be better employed with an educative dung-fork; nor is he capable of knowing that mental disciplines should be chosen with reference not to social pretensions, but to the capacity of the child. A mother is generally concrete indiscretion. In both father and mother the predominant defects are fatuous inconsistency and a baffling, maddening infirmity of purpose. Yet in some measure the school is to blame; for it grew its own rods. It can never cast off all responsibility for the sins of the age; indeed, its most solemn obligation arises from the fact that the half-taught parent avenges on his offspring the neglect of his teacher. If this be understood, we may hope for better things. We, for our part, believe not only in the education of the individual, but also in the progressive education of the race. Perhaps when Thring flogged boys for returning late after the holidays he was consciously flogging not so much actual schoolboys as potential fathers. Improved education will surely improve parents. Let us be of good cheer, and, above all, let us not blame heaven for our own failures.

GERMANY.

Bad Salzbrunn is a watering-place in Silesia. Its springs attract patients of the kind described by milliners and guide-books as "fashionable." It has, moreover, the credit of being the author of a *bahnbrechend* innovation. It has engaged this year for the holiday

A New Occupation for Teachers.

days a teacher expert in the games of the young, whose business it will be to organize sports for the children and to take them for walks in the neighbouring mountains and woods. In this way parents will be relieved of the charge of their offspring and will be able to devote themselves exclusively to their "complaints." There are cases of illness in which such relief is imperative. But, in general, the mother who desires to be freed from the society of her children is *μήτηρ ἀμύτωρ*. As for the teacher, he must be regarded as a pioneer leading us on to a new, and, we hope, profitable, industry. In England too there are watering-places, and there are teachers with more strength of limb than sense of dignity.

It is a subject of constant lament that the boys in the higher schools are overburdened with work. Yielding to newspaper agitation, the Württemberg Ministry made inquiry into the number of hours spent in school

Overtaxing the Boy.

and the amount of study at home exacted. The result has been some mitigation of the boys' lot. In *Gymnasien* the Latin hours are reduced from 81 to 74 a week. Readers who have used the tables that we have published will understand that the figures are got by adding together the hours a week given to Latin by each form through which a boy would pass in the full nine years' course. Greek goes down from 40 to 38 for a six years' course. The total number of hours a week in school for all subjects of the nine years' course falls from 266½ to 258; that of hours of preparation out of school, from 107½ to 89. To make the matter as plain as possible, we may say that 3½ per cent. has been taken off the work in class, and 17 per cent. off the preparation. Similar alleviations are granted to the pupils of the *Realgymnasien* and the *Oberrealschulen*; in both of which, as we observe with some surprise, the time assigned to geometry has been cut down. We have heard so often that the German boy is overburdened that we have grown to believe it. With regard to the English boy "overwork" generally proves, on investigation, to be work under unhealthy conditions. We are not disposed to recommend any lightening of his burden.

UNITED STATES.

That San Francisco is to rise again from its ruins we need hardly say. One part of the work of restoration will be

San Francisco.

done, as it is hoped, by novel means. Teachers and children throughout the United States have received an appeal urging them to supply the San Francisco School Department with money for the rebuilding of the thirty-three school-houses destroyed by fire in the recent calamity. Collecting has already begun in several quarters. The pupils in the tent schools are busy making sketches in coloured chalk of their temporary quarters, and these are being sent to the East in large quantities. The commence-

ment exercises, on June 2, were held at Golden Gate Park with the sky for a roof and the trees for walls. We are not surprised to learn that discipline is more easily kept in the open air than in ill-ventilated class-rooms.

The "Carnegie Foundation" is the name, not of the new machine which is to reform our spelling (that is the "Simplified Spelling Board"), but of the incorporated trustees of the fund for providing higher teachers in

The Carnegie Foundation.

the United States, Canada, and Newfoundland with retiring pensions. The full title of the Board, which consists of twenty-two presidents of colleges or Universities and three commercial men, is the "Carnegie Foundation for the Advancement of Teaching." The income at its disposal is 500,000 dollars a year. The first service that it could render to education must have been obvious to our readers, who will have divined that the offer of pensions would bring to light the number of institutions from which claimants might come. The fund is not available for schoolmasters, but is intended for the benefit of teachers in colleges or Universities. It now appears that in the English-speaking part of North America there are more than seven hundred institutions calling themselves colleges or Universities! Instead of being impressed by the amount of learning thus represented, the trustees regard it sceptically; nay, they assert that the honourable titles have been adopted by ambitious institutions in much the same way as the aspiring citizen of the United States makes himself a colonel. Hence they have been obliged to look for a definition of a college, and have accepted that now in use under the revised statutes of the State of New York. "An institution to be ranked as a college must have at least six professors giving their entire time to college and University work, a course of four full years in liberal arts and sciences, and should require for admission not less than the usual four years of academic or high-school preparation, or its equivalent, in addition to the pre-academic or grammar-school studies."

A professor in such an institution may be pensioned on the ground either of age or of long service. He is qualified to benefit if he is sixty-five years of age and has served for not less than fifteen years, or if he simply can prove a service of twenty-five years. Under the

Whom it will benefit, and to what extent.

scale fixed by the trustees, those who have been receiving small pay obtain as pension a much larger proportion of their active pay than those who have been in rich offices. Thus a professor who has had 1,200 dollars a year will get a retiring allowance of 1,000 dollars, while one who has had 5,000 dollars will receive 2,700 dollars. The widow of a professor may draw during her widowhood a pension of one-half that to which her husband was entitled. In no case is the retiring allowance of a professor to exceed 3,000 dollars.

Mr. Carnegie's latest bantling, the "Simplified Spelling Board" mentioned above, is showing itself vastly energetic.

Spelling.

It has a central office in New York and a—doubtless able—secretary, and will conduct an active campaign with pamphlets and addresses. "It hopes," says Prof. Brander Matthews, "to win over the support of organizations in sympathy with progress, of teachers and of advertisers, of publishers and of printers, of men of science and of men of affairs, of all who are awake to the immense waste of time and of effort due to our present spelling, and who can see how much of a hindrance this is to the speedier adoption of English as a world language." There is certainly much to be said from the pedagogic point of view in favour of reformed spelling. We fear, however, that it has already been said, and said in vain. Some will still hold, with Renan, that a word is like a living thing that has grown to form and beauty, and so is not lightly to be reshaped. All will be conscious of the practical difficulties in the way of effecting a change; for neither American nor English schools are State-controlled in the sense that German are. And there is a little detail to which we would call attention as delicately as possible. Although the Board has Mr. S. L. Clemens (Mark Twain) among its members, it shows a slight lack of humour. We doubt not that the rich Carthaginians spelled as they chose and haply formed a Trust to regulate the mode in which words were written. They will hardly have claimed more than a local influence or appointed a committee to reform the spelling of Tyre.

Yet, after all, it is, now as hitherto, the practical difficulty of bringing a new orthography into vogue that must be most seriously considered. The beginning would have to be made in the instruction of the young. Middle-aged men seldom alter their spelling, unless it be with the help of a dictionary and to make it less (not more) phonetic. A journal must spell in the main as its readers wish it to spell. But we leave the topic for another. The *School Review* opens its columns to a

The Classical Humanities and Medicine.

"Symposium on the value of Humanistic, particularly Classical, Studies as a Preparation for the Study of Medicine and of Engineering." In Germany the struggle now is chiefly to free medicine for boys from the non-classical schools. It is then strange to see that Dr. Vaughan, Dean of the Department of Medicine and Surgery in the University of Michigan, argues in favour of classical studies. We need not repeat what he says of the value of Latin and Greek as aids to the exact understanding of medical terms. What

follows will astonish our readers: "There has nowhere been found a better training for the thinking apparatus of the young than the study of Latin and Greek. The great number and variety in the inflexions of noun and verb render close attention an absolute necessity, and this, in and of itself, is of the greatest value in an educational way. Carelessness and superficiality are incompatible with any thorough study of Greek and Latin. Besides, with the close attention that the student must give to the variations in the structure of words, he soon begins to perceive that these indicate variations in the shade of meaning, and then the joy of study takes possession of the student. His observation is sharpened, his perception becomes more delicate, and he finds increased pleasure in the intensity with which he seeks fully and correctly to interpret the author's meaning. And this habit of close observation, of attention to detail, of looking for fine distinctions and shades of difference, and the alertness of mind possessed by an individual of this habit, will be of inestimable service to him should he choose medicine for his profession, both in his experimental work in the laboratory and at the bedside of his patient. This point in favour of the study of Greek and Latin, it seems to me, is not easily over-estimated. Indeed, the progress of medicine is determined largely by the accuracy and precision with which observations are made. The careless or the superficial man is not suited either to the practice of medicine or to the conduct of experiments for the elucidation of medical problems. It is the painter who brings out detail, and not the impressionist, who is needed in scientific medicine."

Is it not remarkable that a medical man should champion the cultivation of the powers of observation by means of verbal phenomena? It is the object of the modern science movement to vindicate the function

for the phenomena of Nature. But this is not the place to discuss the question. We end this note by reporting the resignation of Dr. William T. Harris, the United States Commissioner of Education. His contributions to the settlement of educational problems will be known to many of our readers. The United States will miss his wide grasp of mind and philosophic spirit, his powers of organization and indefatigable strenuousness exercised in the public service for half a century.

CAPE COLONY.

The Report of the Superintendent-General of Education will be read on the whole with pleasure. Dr. Muir's difficulty has always been to get a supply of competent teachers. We reproduce what he says on the subject with reference to the year in question. More satisfactory progress can be recorded this year than was possible in 1904. In the twelve months under review the qualifications of 5,511 teachers were reported on, as against 4,954 in 1904. An examination shows that, of the additional 557 teachers, 355, or 63.7 per cent., hold professional qualifications. This is satisfactory, as it shows that a larger proportion of the teachers entering the service are qualified than of those already on the departmental list. Accordingly, the percentage of certificated teachers has risen to 51.41, an improvement of 1.39 on the percentage of 1904. But there is undoubtedly a great leakage from the teaching profession. This is evident from the fact that, while there is an increase of only 310 in the number of teachers holding the Third Class Certificate, no fewer than 537 teachers obtained this certificate. There is, therefore, for the year a loss of 227 certificated teachers to be accounted for. A large number have married, and a large number, especially of the newly certificated, have entered the service of the new colonies. It may be observed that for many years Cape Colony, as the oldest and longest settled of the South African States, has been in the habit of furnishing the majority of the South African trained teachers for the States north of the Orange River.

The year was one of great activity in the founding of schools. The net gain in new schools is 297. In the previous twelve months the increase was 182, and it will therefore be seen that development has been proceeding at an accelerated rate. We observe, moreover, with satisfaction that there has been an increase of fifty in the number of libraries attached to schools. On one small point we may touch critically without giving offence. Miss Eaton's report on the teaching of needlework has the statement that the alternative of machine work to take the place of handwork and tacking in Standards VI. and VII. will cause increased expenditure. The sewing machine is an instrument of education that we have always viewed with suspicion and dislike. If we were passive resisters, we would let our goods be sold rather than allow the rates to be spent in providing sewing machines for schools.

JAMAICA.

The experiment which is being tried at the Shortwood Training College, Jamaica, deserves the attention of those who think that the education and social elevation of our coloured fellow-citizens are our highest real interest in colonies such as the West Indies. Miss Marvin, the Principal of Shortwood, visited three years ago Mr. Booker Washington's institution at Taskagee and other kindred establishments

in the Southern States, and has since then been endeavouring within her much narrower resources to introduce something of the same spirit into the training of the women teachers in Jamaica. Cows are being kept for the college use, and selected students in the preliminary year are taught to milk them. Cotton is being grown in the college grounds, and basket-making and similar industrial occupations have been introduced into the practising school. But the innovation which has aroused most discussion among the teachers of Jamaica is the new regulation by which any student in the preliminary year may redeem her entrance fee by domestic work in the college. Practically all the new students have accepted the offer, and enjoy the work, but some of the older teachers in the island look askance.

The directors have strongly supported Miss Marvin, and we agree with them when we read in their last report that "domestic work should be considered an essential part of the education of the average Jamaican girl,"—and others—"It benefits her not only physically and morally, but intellectually."

We only wish the colonial authorities, here and in Jamaica, could realize the supreme importance of our educational work there, and release more than the beggarly £60,000 a year to which the whole education budget for a population of 700,000 has for some years been confined.

JOTTINGS.

"UN livre pour veiller et un fauteuil pour dormir."—"Some money for my old age and a feather bed to sleep on." "Numero Deus impare gaudet."—"Two would like to be an odd number."

FROM the Board of Education's Annual Report on Welsh Intermediate Schools we learn that the total number of pupils has increased in the year from 9,284 to 10,413. The proportion of teachers to pupils is nearly 1 to 18. The average salary of a head master is £327, of a head mistress £278, of an assistant master £133, and of an assistant mistress £110. Five head masters and one head mistress receive over £500 a year, but only one assistant rises above £250. The sum spent on scholarships and bursaries in the year was £20,700.

"S. L." writes to us: "The Archbishop has been giving us signal instances of the munificence of Churchmen in founding Church schools and of their self-denying zeal in maintaining them. It is well to be reminded that there is another side to the picture revealed in the following report on the Mosley Schools, which I copy from 'The Life of Sir Joshua Fitch':—'I had remarked last year on the absence of subscriptions or of any evidence of local interest; and this year I found under the head 'Voluntary Subscriptions' the sum of £34. 4s., balanced, however, by a new item on the other side, in which the rent of the room was also set down as £34. 4s. It was explained to me that the managers had thought it better to credit themselves with contributions to the schools, although the transaction was wholly imaginary, no money having been given or received.'"

We have received from the St. George's Press "A London Boy's Saturday. By T. E. Harvey, Deputy Warden of Toynbee Hall." It gives the results of an investigation undertaken by the Enquirers' Club which meets at Toynbee Hall. The results may be summarized thus: Girls spend most of the day in domestic work and boys in wage-earning occupations, of which the chief is selling newspapers. The games are street games, such as tip-cat, and the relaxation is the penny gaff as the reward for the day's toil. This grim picture is relieved by many gleams of light. Children in three schools were set as an essay, "How I spent my last Saturday." One girl, a budding Dorothy Wordsworth, writes: "There were a lot of hyacinths growing and the air about a yard from the garden looked quite blue." A boy instructs his mother how to play at "knocking up catches": "She did 'nt know how to play, I showed her how and then she had a longer inrains than I did." That seven essays out of eleven should begin "I arose," or "I arose from bed," is a reflection on the teachers; that dressing should invariably precede washing shows that hygiene is not taught, or, at any rate, taught effectively.

FRENCH teaching in our public schools still leaves something to be desired. In a recent examination the question was asked, to be answered in French: "Depuis quand apprenez-vous le français?" and one answer ran: "J'ai appris le français depuis j'est venu à l'école. Je apprenne le français huit ans."

AN examiner sends us a palmary instance of the muddled or addled brain produced by learning three or four languages simultaneously. "We should only eat when we are hungry" was translated by one pupil into French (?): "Nous edirions nur."

THE University of London has published (3d., post free) a most useful pamphlet entitled "General Information for Internal Students." The student can see at a glance the various schools of the University, find what each professes to teach, and the cost of tuition and examination fees.

THE late Head Master of Eton has been discoursing on public schools. Dr. Warre tells us that the great public schools will in future be judged "not so much upon intellectual as upon moral grounds." This reminds us of the Oxford undergraduate who, after he had been hopelessly ploughed on every subject in Collections, excused himself to his tutor on the ground that he had hardly missed a college chapel.

A NEW two-year Course of Physical Training for Ladies will begin at the St. Bride Physical Training College, Bride Lane, E.C., on September 17.

"THE Bill is, under another name, an organized attack on the Constitution in Church and State, and as such should be first hung up to public obloquy and afterwards, if necessary, taken down and re-constructed. But this is a secondary consideration."—*Blackwood's Magazine*, August. We should like to learn from "Maga" what is the primary consideration.

THE opening of the University of London Library by the Chancellor is fixed for October 26. It consists of the Grote Library, bequeathed by the historian; the De Morgan Library, presented by Lord Overstone; and the Foxwell Library of economic literature, purchased for £10,000 and presented by the Goldsmiths' Company. According to the *Tribune* it was the section representing the old non-teaching University who opposed the formation of a proper library and neglected the books they possessed. On the removal from Burlington Gardens they were conveyed by workmen in trolleys, and dumped down anywhere. "Rare editions were found later on at the bottom of the lift, in a pool of water. A porter was librarian, and the lift boy sub-librarian."

THE International Congress for Works of Popular Education, organized by the Società Umanitaria, will be held at Milan on September 15 to 17 inclusive. It sits in three sections, and the respective "themes" are (1) "Auxiliary and Integrative Institutions for Primary Schools," (2) "Professional Teaching for Male and Female Working People," (3) "Popular General Culture for Adults."

IN its provisions for the training of teachers the Scotch Department, not for the first time, has given a lead which the Board of Education will do well to follow. No school can be recognized as a centre for the training of junior students unless it has a separate master of method or one of the existing staff set apart for the special duty of supervising the practical training. What our English head masters and some of our head mistresses desire is a roving commission to take apprentices and train them at their pleasure.

ANOTHER circular of the Scotch Department is *optimi exempli*. It proposes to alter the date of examinations for Leaving Certificates from June to before Easter; but, before coming to a final decision, it invites teachers to communicate their views and set before them arguments for and against the change.

ON the retirement of Mr. Boyd, H.M. Chief Inspector for Scotland, Dr. Dunn has been nominated to the post of Chief Inspector for the Northern Division.

THE Historical Association has advanced so far as to adopt a constitution and by-laws and elect its officers. The first President is Prof. Firth. The subscription is fixed at 5s. The first general meeting of the Association will be held early in January, 1907.

MR. JOHN COBB, B.A. Lond., Modern Language Master at Russell Hill School, Purley, Surrey, has been appointed Head Master of the Archbishop College at Halifax, Nova Scotia.

MR. H. H. ROBERTS, B.Sc., Director of Modern Instruction at the Cheltenham Grammar School, has been appointed additional assistant in the Higher Education Department of the Kent Education Office.

MISS ETHEL HURLBATT, M.A., Principal of Bedford College for Women (University of London), has been offered and has accepted an appointment as Warden of the Royal Victoria College, McGill University, Montreal, and will leave England at the end of the year. The Council of Bedford College will shortly appoint her successor, who, it is hoped, will come into residence at the beginning of the Lent term.

MR. G. E. S. COXHEAD, senior English master of the Liverpool Institute High School, has been appointed Head Master of the Hinckley Grammar School.

MR. CECIL H. S. WILSON, second master of Cirencester Grammar School, has been appointed Head Master of Lymm Grammar School.

IN recognition of Mrs. Humphry Ward's work in connexion with vacation schools, it has been suggested that the clause in the Education Bill which deals with this subject should be known as the "Mary Ward clause." Perhaps a still better suggestion would be that the schools, when established, should be known as the "Mary Ward Schools."

IN the annual report of the Higher Education Committee of Bootle it is noted that Miss Armstrong's private school for girls, which had been previously recognized as efficient by the Education Committee after a detailed inspection by the Board of Education, has been assisted by the provision of a teacher at the expense of the Local Authority in accordance with regulations applicable to all private secondary schools in the borough.

THE pupil-teachers attending a secondary school appear to have made a protest to the Local Education Committee against the quality of the education given them, which, it is urged, does not enable them to pass their examinations. They seem to be especially wounded at being asked, in a school General Knowledge paper, to give the name of the winner of the Derby. They ask if a serious-minded pupil-teacher should be asked to burden his memory with such facts. They also object to being asked: "What article in common use is associated with the phrase 'Won't wash clothes'?"

A USE appears to have been found at last for the L.C.C. steamboats. Recently a party of boys from a Council school were taken by boat from Lambeth to Greenwich with the object of giving them a practical lesson on the Thames and its uses. Such an adjunct to the geography lessons should prove useful and stimulating.

THE Cambridge "Locals" will be held in July of next year as well as in December.

THE following remarkable statement found in an examination paper shows how prone boys are to write what they do not understand:—"The sun never shines on the Equator, the Mediterranean being in the Equator does not have tides." Another boy, in answer to a question about coral islands, wrote:—"A group of islands made up of coral would look fine of course, we have never heard of such things." The same boy, asked about a ship canal crossing an isthmus, wrote: "An isthmus as we all know is a narrow neck of land. To make a canal would not do I don't think and especially for ships to go up and down it would not do."

"WHEN the Shipman and his fellows sailed up the Gironde, we cannot doubt that they saw many young washerwomen diligently washing clothes by the river side with the aid of a batlet, which was called at that time a *batedor* in Provençal, and simply means a 'beater.' They promptly learnt the word, but turned it into 'battledoor' by association with *battle*, which in provincial English still means a 'mallet.' *Batedor* is formed like *troubadour*, which is well known to be Provençal."—From an article by Prof. Skeat on "Provençal Words in English," in the current number of the *Modern Language Review*.

THE Essex Education Committee have issued a memorandum "On the Teaching Profession" for the information of parents. Under the heading "Prospects of the Teaching Profession," we find that: "The teaching profession must always be held in honour, since the character of the nation largely depends on the religious, moral, and intellectual training of the schools." The latter part of this statement is profoundly true; as to the first part, it is to be noticed that the writer does not say that the teaching profession *is* held in honour, but that it *must* be so held. The fact is, the teacher appears to the man in the street to be a poor sort of creature who stands apart from his fellows and maintains his dignity by distance.

THE foundation stone of the new buildings at Frognal, Hampstead, for University College School has been laid. The whole estimated cost is £110,000, of which about £70,000 has been already raised.

THE Essex Education Committee have made a grant to Mr. Vincent, proprietor of the boys' school at Loughton, of the sum of £50 towards the salary of a science master in consideration of such teacher also undertaking the teaching of the girls in the secondary school. The payment is to include rent for the use of the laboratory on Saturdays.

MR. J. VAVASSEUR, of Thetford, Norfolk, has offered £1,000 towards the new secondary school, to be expended in any way the Local Education Committee shall decide.

THE Education Committee of Staffordshire have approved a temperance Reader, which will be supplied to local managers when requisitioned.

THE Society of Arts has recently issued the results of the Intermediate Examination. There were 9,572 candidates, who worked altogether 10,734 papers; so that most took one subject only. Certificates were given on 7,382 papers—a fairly high percentage of passes. Shorthand, Book-keeping, and French are the popular subjects.

THE *Schoolmaster* in its leader of August 18 predicts a stormy Autumn Session. The House of Lords will probably refuse to go on with the Committee stage of the Bill till the West Riding case has been determined by the highest legal court, and a situation will arise "sufficiently interesting for the most jaded palate." But teachers—or, rather, members of the N.U.T.—may rest in quiet and confidence. "Fortunately there is always the N.U.T." Moral: Why does not "every teacher in the land, woman as well as man," join the N.U.T.? Only Horace could do justice to such sentiments.

The just and constant N.U.T.
 Contemns C.-B. and A. J. B.;
 The State may crash above his head,
 But Mac—a feels no dread.

THERE really seems to be no general demand for a holiday course in Spain. This year the Staffordshire Education Committee, which has for long supported courses for the study of Spanish, reports that no grant has been made because no suitable candidate presented himself who was willing to carry out the conditions laid down by the Committee.

CORRESPONDENCE.

THE LONDON COUNTY COUNCIL AND ELEMENTARY TEACHERS.

To the Editor of The Journal of Education.

SIR,—Elementary "education" is all to the fore at present, or, rather, controversy concerning the unessential matters connected with our primary teaching; in the endless disputes over curricula, inspection, religious teaching (or the contrary), and a hundred other such things, it would seem as if the two most important factors in the whole run the risk of being ignored—that is to say, the child and the teacher. Of these two, perhaps the latter is the vital one; for the influence of the teacher is often the only influence of any worthy and positive sort that the elementary scholar feels, and what the teacher is the pupil will very largely approximate to. Therefore it is all the more deplorable that to-day everything in elementary education is tending towards the deterioration of the teacher.

Many people found the old School Board system far from satisfactory, and rejoiced when the London County Council took over all the primary schools in London. It was felt that now, indeed, was the good time coming. London's education would have a chance of becoming something worthy of London. Efficiency, originality, and enthusiasm (we believed) would characterize the Council's plans; teachers and taught would be inspired to better things. Thus the anticipation: does the reality justify these hopes?

London Office: Aldine Chambers, Paternoster Row, E.C.

To judge an educational system is a large and difficult matter; but one thing is indisputable in this connexion: the first, perhaps the most convincing, proofs of progress in education are (1) the high type of the teaching body, (2) the high status of the teaching body, and (3) the material prosperity of the teacher. If these things do not exist, then the "education" will be worthless. So long as our elementary teachers are not the best type of men and women to be found within the State, are not regarded with real respect by the nation, and are not paid a respectable living wage, there can be no worthy teaching body, and no valuable teaching. Let us, then, briefly consider whether the London County Council has succeeded in producing

... has attempted to produce) a fit body of teachers in London; if not, the constant talk about educational ideals, higher standards, finer methods, &c., is so much empty vapouring, and even savours of cant. It is hardly necessary, I imagine, to point out that the elementary teachers all too frequently fall far below the best types of manhood and womanhood which the age produces; that these same teachers are regarded with indifference or contempt by the community as a whole (the remark, "He couldn't do much at things; he's rather a feeble sort, so he went in for teaching," can still be heard constantly); that they are quite inadequately paid, and that for the average teacher there are no "prospects" whatever. These are all well known facts, and lamentable facts. What has the London County Council to say concerning its own part in the business? The Council would probably say that such a state of affairs is not of its creation: matters existed so before the Council had any share in educational affairs. This is true; but be it always remembered that the Council deliberately took upon itself the management of London's education with a view to its betterment (especially the primary education), and the step can only be justified by improved results. What, then, has the Council done to obtain improvements, especially the most necessary reform of all—the creation of a fine body of men and women to carry out the work in the elementary schools? The answer is: "Nothing"; and, if the teaching body is, on the whole, worthy, competent, and self-sacrificing, this is in spite of the Council.

It is, I think, easy to prove this statement by reference to a few matters only. Take first the question of salaries. The pay of the teacher has always been absurdly inadequate when we consider what highly skilled, what responsible and arduous, work is his. Surely, if the London County Council had any genuine desire to elevate its teachers and the standards of teaching, the first thing it would have done was to improve the salaries. Can it be expected that the clever, ambitious, original young man or woman (the very people we want in the educational world) shall deliberately take up work surrounded by hardships and drawbacks which brings in about £90 to £150 (the latter sum only for the most fortunate), and opens up no possible prospects? The best people will be for ever kept out of a profession which cannot offer a fair living wage—and very rightly; for the good labourer is decidedly "worthy of his hire, and, if he expects a pittance, it may be taken for granted that his claims are but small. We can understand, then, why it is that the profession becomes more and more recruited from the ranks of the mediocrities—especially is this so in the case of men—and that the man or woman who aims at anything a little above the ordinary scoffs at the idea of going in for the ill-paid drudgery of elementary teaching.

This leads me to the consideration of another question: a certain amount of drudgery—a fairly large amount, I fear—is inevitable in this work. The pupils are usually poor, often unclean, of a low type, lacking in morals and manners, and much of the teacher's work is pure missionary work—a work of civilizing and reclaiming. Granted this must be, yet the Council has not sought to make even possible reforms. It continues to pack scholars into each school till more are admitted than can be possibly handled, and the teacher is daily more overworked. The large classes remain undivided, the hours of work remain unshortened, and, worse still, extra duties (such as superintending the feeding of underfed scholars) are thrust upon the already over-burdened teacher.

We see, then, that the best type of teacher is not tempted into the elementary schools under existing conditions, and that

(Continued on page 596.)

RELFE BROTHERS' BOOKS FOR OXFORD LOCAL EXAMINATION, 1907.

Twelfth Night.

Plain Clear Type, Interleaved with Writing-Paper for Pupils' own Notes.
Crown 8vo, cloth, 8d.

Samuel I. St. Matthew.

Acts of the Apostles.

Full Notes on both Versions
by G. CARTER, M.A.
Maps, Historical Tables, &c.
Crown 8vo, cloth, 1s. 6d. each.

These books are all done on the same admirable plan, and are in use in nearly all Schools that prepare for Examinations.

Scott's Talisman.

With Notes and Introduction by W. MELVEN, M.A., Frontispiece, &c.
Crown 8vo, cloth, 2s.

On the same lines as their edition of "Ivanhoe," which was so favourably received last year.

Outlines of English Literature.

By H. E. EVANS, B.A., L.C.P.
With Biographical Sketches, Chronological Tables, Index, and full Historical Appendix. Cloth, 1s. 6d.

Perrault's Contes des Fées.

Crown 8vo, cloth, 1s.

This Edition is distinguished by the very clear type and concise Notes. There is a separate Vocabulary to each Tale.

The Local Examination Physiography.

By W. J. PERRY, M.A., LL.D.

A Special Edition to meet every point in the new Syllabus except Political. With Illustrations, Diagrams, and Maps. Cloth gilt, 2s. 6d.

Oxford Local Drawing Copies.

The Actual Copies set for Preliminary for the last ten years. Per set, 1s.
Junior and Senior Copies from the Cast. Per set, 1s.

The Local Examination Geography of the World.

By A. G. HAYNES, B.A. Edited by G. CARTER, M.A. Compiled from the latest and most reliable statistics. Thoroughly up-to-date, special attention being paid to *Commercial Geography*. Fully Illustrated with Maps and Diagrams. Cloth, 1s.

A New Geography of Great Britain and Ireland.

By A. G. HAYNES, B.A. Special for Preliminary. Arranged as suggested in the Syllabus. With 6 excellent Maps (3 Commercial). Crown 8vo, cloth, 8d.

A School Geography and Atlas.

By G. CARTER, M.A. Ninth Edition, entirely reset and brought up to date, with new coloured Maps. The best Geography for all Pass and Competitive Examinations. Crown 4to, cloth, 2s. 6d.

Notes on Church Catechism.

By J. WORSFOLD. With Selection of recent Questions. 8d.

Local Examination English History.

By T. J. WALKER, M.A. Edited by G. CARTER, M.A. An unbiased reading History, specially written for the Junior Locals. 1s. 6d.

A Junior Form Algebra.

By R. B. MORGAN, Author of "Graphs" and "Exercises in Geometry." On up-to-date lines. With 14 Diagrams. Fully sufficient for the Junior Locals. 1s. 6d. ANSWERS, 6d. net.

Outlines of English History.

B.C. 55–A.D. 1901. By G. CARTER, M.A. Unrivalled as a Manual for Candidates who wish to obtain high marks in this important subject. The Biographical Sketches are especially valuable, and full Genealogical Tables are appended. Eighty-third Thousand. Cloth, 1s. 6d.

History of England.

By G. CARTER, M.A. In Three Parts. Crown 8vo. Part I. (to A.D. 1485). Part II. (1485–1689). Part III. (1689–1897). The reigns have been divided into sections, and the well written Biographies will be of the greatest use to the student. Each Part, 2s.

The Charterhouse English Grammar.

By Rev. A. MACRAE, B.A. (Emanuel School, Wansworth Common). 168 pp. Crown 8vo, full cloth, 1s. 4d.

Specially written for the Locals.

Hints on Essay-Writing for Schools.

By C. H. HODGSON, M.A. Contains—"General Hints," "Common Faults," and "Skeleton Outlines" on varied subjects, besides several Model Essays. Second Edition. 50 pp., cloth, 8d.

Relfe Brothers' New Aldersgate Atlas.

With 136 Maps and Diagrams—Astronomical, Physical, and Political—arranged on the Comparative Method, with Introduction and Full Index. Particularly suitable to the requirements of the Syllabus. Imperial 4to, 2s. 6d.

TWO REMARKABLE BOOKS

For Nature Study Teachers.

PLANT LIFE: Studies in Garden and School. By HORACE F. JONES, late Instructor to the Wiltshire County Council. With 30 Diagrams. Crown 8vo. 3s. 6d.

In this book the plant is studied from the beginning on systematic lines in a series of carefully chosen observations and experiments.

The aim of the work is to keep before the pupil the use and object of every organ, and the knowledge acquired in working through the course will be found to be vivid and real, while the method by which the knowledge is acquired is the most natural, and therefore the most scientific and educational. The course will be found to make an excellent foundation for the subsequent study of any branch of natural science.

Please write for a Prospectus.

A New Geographical Reader.

THE DOMINION OF MAN. By E. PROTHEROE. With 32 full-page Illustrations. Crown 8vo, 2s.

This book is an introduction to the study of Geography in its human aspect, designed to show what man, especially the Briton, is by his labour doing in his world heritage.

Man's necessities, ever increasing with the degree of civilization he attains, give rise to enormous industries and a vast commerce entailed in the distribution of raw and manufactured products. A consideration of transport by land and sea, and the race for markets, afford special opportunity for gauging the encroachment of the foreigner upon the commercial supremacy of Britain.

From first to last the work is calculated to encourage the student diligently to inquire into the vital problems that increasingly confront the great nations of the earth.

METHUEN & CO., 36 ESSEX STREET, LONDON, W.C.

the material situation of the teacher is most unsatisfactory: these two things, as has already been said, mark deterioration of the profession. Lastly, we have to consider the status of the teacher, and here the existing state of affairs is deplorable.

It has already been pointed out (and probably none will be willing to dispute the fact) that the teacher is a more or less despised unit in the community—the English nation has little respect for education and less for educators. But it is the duty of the great body which controls our education to alter matters, to instil some respect into the nation for those who do the second greatest work (or such it *should* be) after the parents for society. It would be easy for the Council to set an example by honouring the teacher with the respect which is his due. Let the Council give its teachers every possible privilege, let it consult them whenever possible in matters educational, let it show genuine appreciation of the good work of the teachers. Does the Council even aim at such a course? Needless indeed to put the question! The voice of the teacher is unheard; no one knows him or his sphere of work; his knowledge and experience are never appealed to, his judgment never acted upon. Does the Council grant any special benefits or privileges to its teachers? By no means, and, what is more, too frequently courtesy is denied. It is hardly likely that the status of the teacher will rise when he is classed in official promulgations with the Council's scavengers (as occurred recently), or bullied by porters and pert lads acting as "clerks" when he comes to transact business with the officials who exist merely to serve the teachers.

Finally, I come to the worst feature of all in the Council's present policy—the system of producing fresh teachers to fill its schools. The dearth of teachers grows greater and greater—naturally enough, considering what has been already pointed out in this letter—and the Council, unable to recognize that its own hand is partly a cause of this "dearth," makes desperate efforts to find a remedy. Scholarships are scattered wildly and unthinkingly; any material is hailed in to provide pupil-teachers; no one is allowed to fall out, however unfit. Hence our present pass. We have a policy which successfully drives out all the best spirits from the service, which procures mediocrities, and then bewails its handiwork. Elementary education had its defects in the past, but the Council's present methods will not remedy them.—Yours, &c., L. B.

"COLLOQUIAL LATIN."

To the Editor of *The Journal of Education*.

DEAR SIR,—“An Assistant Mistress's” letter in your April issue mentions a correspondence in the *Morning Post* re colloquial Latin and asks for a good text-book. As out here one does not get the *Morning Post*, it is quite possible that Mathurin Cordier's book may have been alluded to. On the other hand, it may not; so I give the title of the one I have for her information.—Faithfully yours,

MARLBURIAN OF '54.

Hobart, Tasmania, June 18, 1906.

[“Mathurini Corderii Colloquia Selecta; or, Select Colloquies of Mathurin Cordier.” Parts I., II., and III. Edited by Samuel Loggan, A.M. 22nd Edition. Longmans, 1839.]

“THE INTERLINEAR BIBLE.”—The Cambridge University Press have ready and will issue next month a Bible so printed that both the Authorised and Revised Versions may be read from the same text, without difficulty and without need of reference from text to margin or from one text to a second. The method adopted is to print in large type such words as are common to both Versions. When there is a difference between the Versions, however minute, the one line of large type divides into two parallel lines of smaller type, of which the upper gives the separate reading of the Revised and the lower that of the Authorised Version. Where the words again become common to both Versions the two parallel lines disappear and the one line of large type resumes. Thus, by reading along the large type and following, where it ceases, the upper of the two small lines, the Revised Version may be read; while the large type, in conjunction with the lower of the small lines, gives the continuous text of the Authorised Version. Many methods have been tried to facilitate comparisons between the two texts, but it is claimed that no method other than that now adopted has given a comparative view of the two Versions, showing at a glance the position, extent, and exact nature of every difference between them. On account of the way in which the type is set, the Bible is to be known as “The Interlinear Bible.”

CASSELL & CO.'S LIST.

CASSELL'S NEW FRENCH DICTIONARY.

FRENCH-ENGLISH—ENGLISH-FRENCH. 746th Thousand. Edited by JAMES BOIRELLE, B.A. Newly Revised by DR V. PAVEN-PAYNE, Assistant Examiner in French in the University of London. 1,230 pages, extra crown 8vo, strongly bound in cloth, 3s. 6d.; or in half leather, 5s.

CASSELL'S GERMAN DICTIONARY.

GERMAN-ENGLISH—ENGLISH-GERMAN. 327th Thousand. By ELIZABETH WEIR. 1,128 pages, demy 8vo. Cheap Edition, cloth, 3s. 6d.; half morocco, 5s.

CASSELL'S LATIN DICTIONARY.

LATIN-ENGLISH—ENGLISH-LATIN. 152nd Thousand. Thoroughly Revised and Corrected. Cheap Edition, 3s. 6d.; half morocco, 5s.

A HISTORY OF ENGLAND.

By the Right Hon. H. O. ARNOLD-FORSTER, M.A., M.P. Revised. Fully Illustrated. Extra crown 8vo, 816 pages, bound in cloth, price, 5s.; or handsomely bound, cloth gilt, 6s. 6d.

THE CITIZEN READER.

By the Right Hon. H. O. ARNOLD-FORSTER, M.A., M.P. This new Edition has been reset in a new, clear type, and contains an entirely new series of Illustrations. It has been revised wherever necessary, in parts re-written, and has been brought entirely up-to-date.

* * A Scottish Edition of THE CITIZEN READER has been prepared for use in Scottish Schools. price 1s. 6d.

ROUND THE EMPIRE.

By DR. G. R. PARKIN, C.M.G., LL.D. With a Preface by the Right Hon. the Earl of ROSEBURY, K.G. Fully Illustrated. Strongly bound in cloth. 143rd Thousand. Price 1s. 6d.

THE HEALTH READER.

By W. HOSKYNs-ABRAHAM. With an Introduction by Sir VICTOR HORSLEY, M.D., F.R.S., F.R.C.S. Fully Illustrated and containing 4 Coloured Plates. Crown 8vo, cloth, 1s. 9d.

Cassell's Educational Catalogue will be sent post free on application.

CASSELL & COMPANY, Ltd., La Belle Sauvage, London, E.C.

BUXTON PHYSICAL TRAINING COLLEGE

(Non-residential).

Principals—MRS. BELL and MISS RALPH HALL.

Assisted by MISS HEIKEL,

Gymnastic Director from Arvedson's Institute, Stockholm.

THE aim of the College is to train educated women as Teachers of Gymnastics (Ling Swedish System), Dancing, Swimming, and Games, and to enable them to take cases for Massage and Medical Movements. Also to train Teachers as Health Mistresses and Lecturers of Hygiene. The College Course lasts two years, and includes Educational and Medical Gymnastics, Theory and Practice, Massage, Anatomy, Pathology, Physiology, Hygiene, Dancing, Swimming, Games, and Elocution. The Staff consists of Trained Certificated Teachers, and each subject is taught by an experienced Teacher who has made a speciality of the subject. At the end of the Course the Students have to pass examinations in both Theoretical and Practical Knowledge, also Advanced Physiology and Hygiene (Board of Education). In all cases the Students have been most successful in obtaining work and in each instance before leaving the College. For further information apply—

The SECRETARY,

Swedish Gymnasium, Buxton.

Miss MARGARET CARTER,

L.R.A.M., A.R.O.M.

(late Head of Music Department, Skinners' Company's School, for fifteen years)

Directress of Music and Lecturer on Voice Production at the Goldsmiths' Training College for Teachers, New Cross, under the University of London,

announces that she receives Pupils for Pianoforte, Solo Singing, and Voice Production at her Studios at

BECHSTEIN HALL, 88 Wigmore Street, W.; Stamford Hill; and Blackheath.

The Voice Production Course includes—Careful Physical Training in Breathing; the Cure of Accental Faults; Clear Articulation: Reading Aloud.

Special Classes for Teachers.

For Practical Training in the Delivery of Lessons and Lectures, the Cure of Physical and Accental Defects, and the Relief of Voice Fatigue and Weakness. Speech Defects Cured.

Vacancies for Students wishing to be trained as Teachers of Voice Production. Letters should be addressed as above, or to 7 OSBORNE HOUSE, ST. MARY'S TERRACE, W.

The Associated Board holds Examinations throughout the United Kingdom, and in the Colonies, in both Theoretical and Practical Music.

The Examinations are as follows:—

- (1) **Local Centre Examinations**, including Intermediate and Advanced Grades, conducted by two Examiners. Theory Examinations, are held in March and November at all Centres in Great Britain and Ireland. In Practical Subjects they are held in March-April at all Centres, and in London and district in November-December, as well as in March-April. Entries for the November-December Examinations close October 10th, 1906. Full particulars will be found in Syllabus A, which will be sent on application to the Secretary.

- (2) **School Examinations**, including Higher, Lower, Elementary, and Primary Divisions. Candidates for these Examinations may be entered either by Heads of Schools or by individual Teachers. In the latter case, neither the Teacher nor the Candidate need necessarily be connected with a School.

The School Examinations are held at three periods, viz., October-November, March-April, and June-July. They are conducted by one Examiner.

Entries for the October-November Examinations close October 10th, 1906.

Full particulars of the School Examinations, including the **General School Examination** and the **Class-Singing Examination**, will be found in Syllabus B, which will be sent on application to the Secretary.

Syllabuses A and B for 1907 are now ready, and can be obtained on application to the Central Office.

These Examinations are of graduated difficulty, so as to provide a complete series of tests from the Primary Division School to the Advanced Grade Local Centre Examination, suited to Candidates of all degrees of proficiency. The subjects for Examination are as follows:—

PRIMARY THEORY.
RUDIMENTS OF MUSIC.
HARMONY AND GRAMMAR
OF MUSIC.
COUNTERPOINT.
PIANOFORTE.
ORGAN.

VIOLIN.
VIOLA.
VIOLONCELLO.
DOUBLE BASS.
HARP.
WIND INSTRUMENTS.
SINGING.

The Board offers annually Six Exhibitions, tenable for two or three years at the R.A.M. or R.C.M. These Exhibitions are limited to Candidates in the Local Centre Examinations who are under twenty years of age, and who fulfil certain conditions set forth in each Syllabus.

Syllabuses, Forms of Entry, Theory Papers set in previous years, and all information can be obtained from the Central Office, 14 Hanover Square, London, W.

THE Complete Works of William Shakespeare

Ready in October, 1906.

REPRINTED FROM

THE FIRST FOLIO.

Edited, with an Introduction to each Play, Complete Glossaries, and Variant Readings, by CHARLOTTE PORTER and H. A. CLARKE. With General Introduction by JOHN CHURTON COLLINS, M.A., D.Litt. In Thirteen Volumes printed on antique paper, deckle edges, each with Frontispiece and Title-page in Two Colours. Sold only in sets. Price **£2. 2s.** net each set. [Also an Edition on pure rag paper, limited to 75 sets. Price **£4. 4s.** net each set.]

THIS EDITION furnishes the reader with the text of the Plays nearest to Shakespeare's stage, to his ownership, and to his authority, and provides in clear and terse form an exposition of its relation to the modern text.

Shakespeare's texts have been modernised to suit each succeeding epoch, and yet *there is practically nothing in the form of the Folio which should cause the present-day reader any difficulty in reading it.*

A Complete PROSPECTUS, with Sample Pages, &c., will be sent, post free, to any address.

Lessons in the Use of English.

By MARY F. HYDE.

SECTION I. **First Three Years' Work.** In 3 Parts, 9d. each; or, Complete, 2s.

SECTION II. **Practical English Grammar, with Exercises in Composition.** In 2 Parts, 1s. 6d. each; or, Complete, 2s. 6d.

NEW SUPPLEMENTARY READERS

To meet the Requirements of the Board of Education.

Large crown 8vo, 1s. 6d. each.

A NEW SERIES of books of entrancing interest for young readers. Designed to include those epics and stories of the past which have survived the chances of time, reflecting, as they do, the genius of the nations which gave them birth.

EACH VOLUME contains 256 Pages of Letterpress and at least 16 Full-page Illustrations, including reproductions from the best works of Lord Leighton, Sir E. Burne-Jones, G. F. Watts, D. G. Rossetti, and other famous English and Continental Artists.

Legends of Greece and Rome.

Stories of Long Ago. By GRACE H. KUPFER, M.A. Revised and Enlarged Edition. With 20 Full-page Illustrations. Large crown 8vo, 1s. 6d.

Favourite Greek Myths.

By LILIAN STOUGHTON HYDE.

Stories of Robin Hood

And His Merry Outlaws. Retold from the Old Ballads by J. WALKER MCSPADDEN.

"This book ought to be widely used. Junior and middle forms will revel in it." —*School World.*

Stories of King Arthur

And His Knights. Retold from Malory's "Morte Darthur." By U. W. CUTLER.

"It is wonderfully cheap at the price, and should find a wide circulation as a reading book in preparatory schools and the higher standards of elementary schools." —*The Journal of Education.*

Stories from Greek History.

Retold from Herodotus by H. L. HAVELL, B.A., formerly Scholar of University College, Oxford.

"More girls, as well as boys, will in the future know the fine stories of Greece if Mr. Havell's book gets its due." —*Bookman.*

Stories from Wagner.

Retold by J. WALKER MCSPADDEN, Author of "Stories from Robin Hood," &c.

"An admirable and very welcome addition to the literature of the schoolroom." —*Spectator.*

Stories from Scottish History.

Selected from Scott's "Tales of a Grandfather," by MADALEN EDGAR, M.A.

Britain Long Ago.

Stories from Old English and Celtic Sources. Retold by E. M. WILMOT-BUXTON, Author of "The Makers of Europe," "The Ancient World," &c.

Stories from Greek Tragedy.

Retold by H. L. HAVELL, B.A.

Further volumes in active preparation.

HEATH'S MODERN LANGUAGE SERIES.

Heath's Practical French Grammar.

By W. H. FRASER, B.A., AND J. SQUAIR, B.A.,

Professors of the Romance Department, Toronto University.

Crown 8vo. Section I., 2s.; Section II., 2s. 6d.; Complete, 3s. 6d.

Adopted by the following Schools:—**Christ's Hospital; Strand School, King's College; Glasgow Academy; Royal High School, Edinburgh; George Watson's College, Edinburgh; Oundle School; Bradford; Wolverhampton; Wellingborough; Aberdeen; Swansea Grammar Schools; Yorkshire College (Leeds), &c., &c.**

Extracts for Composition in French.

For Middle and Senior Classes. Compiled and Edited by J. E. MANSION, B. ès L., Royal Academical Institution, Belfast. Crown 8vo, 1s. 6d.

The References are to "Heath's Practical French Grammar."

A First Year of French.

By J. E. MANSION, B. ès L., Royal Academical Institution, Belfast. Small crown 8vo, 1s.

Grammaire Française.

A l'usage des Elèves de l'Enseignement Secondaire. By MARY STONE BRUCE. Crown 8vo, 3s.

Oontes et Légendes. Parts I. and II.

By H. A. GUERBER. With Vocabulary. Small crown 8vo. Two Parts, 1s. 6d. each. "Materials" on Book I., 6d.

60 vols. *French Classics and Modern Authors.*

Lehrbuch der Deutschen Sprache.

A Practical Course in German for Beginners. By ARNOLD WERNER-SPANHOFF. Crown 8vo, 2s. 6d.

Recent introductions include:—**The City of London School for Girls; Bedford High School; Bradford Grammar School; Haberdashers' Girls' School, West Acton; Cheltenham College; The Charterhouse; Royal High School, Edinburgh; Glasgow High School; Oundle School; Municipal Technical Institute, Birmingham; George Watson's College, Edinburgh; Rossall School, Fleetwood; Heriot-Watt College, Edinburgh, &c., &c.**

A German Drill Book.

Containing material essential to beginners in the study of German. By FRANCIS K. BALL, Ph.D. Crown 8vo, 2s.

Märchen und Erzählungen für Anfänger.

Two Volumes. Edited by H. A. GUERBER. Vol. I., with Vocabulary and Questions in German on the Text; Vol. II., with Vocabulary. Crown 8vo, 2s. each.

80 vols. *German Classics and Modern Authors.*

Complete CLASSIFIED CATALOGUE now ready.

Date of publication of next issue will be found at top left-hand corner of front page [Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—"THE PUBLISHER, JOURNAL OF EDUCATION Office, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

THE REPORT OF THE CONSULTATIVE COMMITTEE ON HIGHER ELEMENTARY SCHOOLS.

THIS is an important document, and will receive more attention when the somewhat superficial controversies as to control and religious education which now fill the air have been appeased. The Committee were asked by the Board of Education to advise them as to the "principles which seemed most important in determining the curriculum in various types of higher elementary school," and, in particular, "the part which instruction in technical subjects should play—whether, for example, the curricula of such a school in Coventry should include actual instruction in bicycle-making and only in the principles of mechanics." The terms of reference also allude to the type of teacher desirable and some consideration of rural conditions. On all these points the Committee have something interesting to say, but they decided—wisely, we think—to devote the main part of their time and space to a discussion of what a higher elementary school should be, and how it is to be distinguished from other types, and especially from a secondary school. It is here, of course, that the keenest interest centres, and for their remarks on this question of classification the Committee may expect the sharpest criticism. Some criticism—a far-reaching kind—we think the Report deserves, and we will allude to this later, but we should deprecate any wholesale condemnation, in view of the difficulty of the problem and the many sensible suggestions which the Committee make on practical points.

A summary of their conclusions best indicates the trend of the discussion. They consider that in villages and small towns of less than 20,000 inhabitants separate higher elementary schools are not desirable. They recommend that in such cases the need for "higher primary instruction" should be met, as in Scotland, by supplementary courses in elementary schools, and "intermediate or secondary instruction" must be provided in

one higher school, "for which the regulations should be different from those affecting a secondary school in a large town."

They think that it is the large towns of more than 50,000 inhabitants which really need the higher elementary schools, and that in the intermediate towns of from 20,000 to 50,000 inhabitants it "will lie with the Board of Education and the Local Education Authority to deal carefully with each case," and that "supplementary courses in elementary schools may, in some cases, be found desirable in towns of this character."

Now, apart from obvious criticisms, we must recognize in this a scheme in advance of any official regulations—an attempt to allow for growth and variety of development impossible under one uniform system. We welcome especially the application of the Scotch precedent in allowing supplementary courses, or "higher tops" to the ordinary elementary schools in country districts. It was, we believe, Mr. C. C. Hodgson, of the Cumberland County Council, who first formulated this suggestion, which arose spontaneously from the farmers in the Northern counties. They complain that in many cases the old free grammar schools of their districts, supported by endowments, have been degraded to ordinary elementary schools, and that, if they need anything better, they have to send their children away from home at much greater expense—often an expense quite beyond their means.

The suggestion is that in suitable places the Board should allow scholars to remain beyond the elementary age—up to fifteen or even sixteen—and pay a higher grant on those doing advanced work. And the Committee tell us that "the Board are prepared to sanction the use of endowments for this purpose without danger of appropriation under Section 13(1) of the Act of 1902." This is good news, and we should hold that the labours of the Committee had been well spent if they only succeeded in getting this one simple reform accomplished.

But it must be noted—and here we come to our few words of criticism on the theoretical side of the Report—that when we admit these "higher tops" as a general thing in country districts and in towns under 20,000, and as a possible thing in all towns under 5,000, we have made such a breach in our symmetrical water-tight organization of national education as no educational organizer will ever after be able to mend. Personally, we see no reason why he should try. We read the Committee's Report to find those fundamental, irrefragable reasons which compel us in the ideal educational community—the town over 50,000—sharply to distinguish between the higher elementary and the secondary schools, and we must confess that they appear to us very far from solid.

We are told that the primary function of the higher elementary school is to instil good discipline, the power of self-help, and pride in good work; that these good qualities are to be cultivated by a training more practical than heretofore and by "appropriate illustration" from the industrial and social surroundings of the children. Who would not say "Amen" to such a prayer, and who will say that such a training should be the characteristic of one class of schools rather than another? Is, then, your test to be of age—that in a higher elementary school the scholar has a three years' course and leaves at fifteen, but in a secondary school he is to stay till sixteen? This is the present rule; but every one knows how little real difference it implies in fact, and it is obviously the flimsiest of barriers by which to defend a class distinction between schools. That the class distinction is the most substantial difference the Committee do not attempt to disguise. The higher elementary school is to be "end on" with the elementary; the secondary is not, because it caters for those living in a more liberal atmosphere and with wider prospects, and it must avoid the damaging features of the ordinary elementary school. We only now point out the problem, and urge its great importance. How can such an organization hope to live in an age of growing socialism and democracy, when the Labour Party are beginning to insist that the supreme educational question is that the "schools of the people" should be made as good as possible and that every child shall have the best opportunity of developing his powers? Shall we not be driven to accept a looser and more liberal organization, frankly abandoning the legal distinction between elementary and secondary, and, while endeavouring to our utmost to maintain the standard of all really good work, treating the school supply of every place according to its own needs and merits, as the Committee would allow to every place with a population less than 50,000?

REVIEWS AND MINOR NOTICES.

The Metaphysics of Nature. By CARVETH READ, M.A., Professor of Philosophy of Mind and Logic in University College, London. (A. & C. Black.)

This treatise is, in its author's own words, "a discussion of our ultimate beliefs and forms of judgment, so far as they can be treated upon speculative grounds, and, as far as possible, apart from considerations of moral philosophy and religion." After an introductory discussion of the connotation of the terms "belief," "knowledge," "reality," and "truth," Prof. Read gets to his work proper, and carries on a long-sustained argument in four books under the heads of "Canonic," "Cosmology," "Psychology" and "The Categories." The treatment is highly interesting and illuminative, and the central position of the work is buttressed by support after support with fine cumulative effect. It is impossible here to convey anything but a rough idea of the argument, and we must content ourselves with indicating what seem to us the main contentions.

First: Since reality, according to the writer's own definition, is that of which truth is a more or less adequate representation, it is necessary to have a criterion by which we shall know truth so as to know reality. The result that emerges from a long historical and analytic discussion of criteria is that the only criterion of truth is to be found in developing the system of Positive philosophy in which from the facts of experience we develop concepts, generalizations, and laws, and then return to facts for verification of these concepts. To the sceptic objection that this gives us only relative knowledge, Prof. Read replies that outside of our knowledge there is nothing by which the sceptic can disparage it, and that the certainty of knowledge must lie within that knowledge. Such a criterion, however, does not seem to be essentially different from the pragmatist criterion which adjudges truth by successful action rather than by *a priori* categories, and which Prof. Read rejects. The development of Prof. Read's ever extending conceptual system in which he finds his criterion is effected only through the storm and stress of human activities. And when thereby any fresh addition is made to our cognitive system and we accept it as valid, may it not be said that activity in working out to a concept accepted by men has been successful, and that the successful action in being successful has lived itself as it were into, and thereby made or discovered, truth? And Prof. Read's criterion seems to us to have greater chance of development along the lines suggested by a philosophy that links up thought and action more closely by regarding successful action (in the wide pragmatist sense) as the end of a thought process inseparable from the process, and therefore as the real determinant of truth.

Second: That this criterion of truth enables us at the same time to know reality is based on the assumption that the reality known must have some ground of resemblance to the cognition of it. Knower and known are relative terms, and possess meaning only as related—that is, as having some ground of resemblance to one another. The ground of resemblance is consciousness. What we call inorganic Nature or the world is conscious, and the equivalent of what we perceive, and far more, exists in the world's consciousness. The relation between the individual and this world consciousness is described by Prof. Read as follows:—

Knowledge is consciousness. Now the growth of such representation in life and mind I take to be a function of the evolution of Nature; and it is a true knowledge of Nature, because it is her self-knowledge. The universal consciousness grows into such knowledge.

Hence the farther we can extend the conceptual system of Positive philosophy the more we know of the world reality. In this way Prof. Read substitutes for the old transcendent substance a world consciousness which, to the extent that we do not know it, is transcendent—a transcendent reality. We get to know this reality through phenomena; for "the true correlation of conscious processes is not with the organism as phenomena, but with the transcendent reality whose phenomenon it is." To this transcendent reality, or world consciousness, Prof. Read would give some body, or at least a skeleton, by transferring thither something from its correlative individual consciousness, viz., time, change, coexistence, order or uniformity of change.

Third: The relation in which the world consciousness stands

to the individual subject is treated of in the "Psychology." After an examination of the possible predicates—substance, phenomenon, &c.—applicable to the individual subject, Prof. Read concludes that it may be least misleading to call the individual consciousness "an activity of this transcendental being." He is rightly afraid of the term "soul," with its latent rhetoric of technical terms.

In support of the hypothesis of a world consciousness he calls to his aid Kant's notion of transcendental apperception. He thinks he gives to this notion the only sensible meaning it can have of the common consciousness of Nature; and this because the notion that transcendental apperception can be a function of the individual is so intolerably foolish that any other is comparatively sane. This "sensible meaning" of the Kantian expression is in accord with the late Prof. Adamson's interpretation of Kant's "pure Ego,"* and seems to us to help considerably in doing justice to the Kantian philosophy. In further support of his theory of a world and an individual consciousness working in concert Prof. Read claims that no other hypothesis can give an adequate explanation of individual perception and volition. The "story," as Prof. Read calls it, "contains so many queer phrases that it asks some courage to write." The interested reader will find it on pages 240, 241, and in chapter xii. This chapter is an interesting and suggestive one to the educator. Prof. Read has a tilt at the elaborate accounts in works on psychology of how we learn to perceive and to will, and expresses the conviction that organic development, which is a growth of the body as a sign of the soul, is of far more consequence than learning to perceive and to will. Again: "But to maturity and even to the close of life (as we see in the oncoming of insanity) it seems that the general type of intellect and character, as distinguished from the details of knowledge, accomplishment, and behaviour, is a realization of hereditary conditions."

Fourth: Whilst the individual consciousness is an activity of transcendental being, the latter is not prior in time to the former. "Reality is essentially a process in time as witnessed by the nature of consciousness." Thus is individual freedom secured. Prof. Read expresses the notion of freedom in various ways. For example, the individual consciousness is said to witness the world process or system, to construct the phenomena, and to be one of the agents that determine the course of the world. So long as the world is looked upon as a process independent of the individual, the individual cannot regard himself as a free agent. But, as one of the agents co-operating in the world process, he is undetermined by any final, foreordained end. This freedom from being compelled to make—for a predetermined end is all the personal freedom that the individual can conceive of, and all, in fact, that he needs. Thus, by making the individual consciousness constitutive of the course of the world, Prof. Read would overcome the antagonism between the notions of a providentially predetermined world and personal freedom. The doctrine of design, therefore, goes by the board. Final ends are not so much ends as guides and transition points in an infinite process which, *ipso facto*, is inconsistent with the notion of final end. Physical and final causation are, therefore, as Kant suggested, to be regarded as one and the same principle operative in a world process of which individuals are determinants.

True to his purpose, Prof. Read does not deal, except very indirectly, with religious conceptions, nor with the question as to how these are affected by such a metaphysic as he unfolds. Our own opinion is that the work will rank high among the labours of those thinkers who are striving to reach more definite, more intelligible, and at the same time more sublime conceptions of God and religion. Prof. Read is to be congratulated on his "conciliatory and constructive" effort.

Minor Poets of the Caroline Period. Vol. I. Edited by GEORGE SAINTSBURY, M.A. (10s. 6d. net. Clarendon Press.)

Setting aside the collector's interest in adding yet another relic to his museum of antiquities, we may say that two kinds of interest attend the rescue of forgotten literary undertakings from the dust-heap of oblivion: one is the response of the human spirit to any true and master touch on the mysterious chords of artistic experience—this is an absolute and universal

interest; the other is that of the literary student, who in enriching his store of human documents is filling in the background of his picture of the past, from which, to the unlettered, the dominating figures of the master poets stand out in a prominence unhistoric while unrelieved. These figures of the background were living figures in their day: to their contemporaries they loomed more significant—perhaps because more partial in their appeal—than the great masters. As Prof. Saintsbury says in the volume before us: "From the confinement of the attention to a few examples, however brilliant and famous, come hasty generalizations, insufficient exposition, not seldom downright error." This is true, and, we may add that the garments which the great poet adopts and discards in his progress through contemporary influence and fashion to his abiding place of power come down to us well worn and individualized in the pages of one and another minor poet. Moreover, in an age of satire, whose individual idiosyncrasies do not die a natural death, we must know the original, as Prof. Saintsbury points out, if we would "apportion the office of the true critic and that of the mere satirist." And, on the other hand, the gibbeting of a religious, social, or literary opponent was balanced by the princely hyperbole accorded to a literary friend, especially if of the softer sex. Who does not want to make acquaintance with the "matchless Orinda," who equalled Sappho in verse and surpassed her in virtue; whose poems, to quote a commendatory epistle prefixed to her works in the present volume, "would be no disgrace to the name of any man that amongst us is most esteemed for his excellency in this kind, and there are none that may not pass with favour when it is remembered that they fell hastily from the pen but of a woman"? Orinda—more prosaically Mrs. Katharine Philips—if not matchless, was an interesting character: she had a distinct and invigorating personality, though it is sometimes obscured in her verse, and in her small way she was a worthy scholar of Donne's metaphysics of friendship: at her best she was no mere copyist; she had an active and discriminating mind, and the treasure she amassed from Donne, her master, was not merely displayed as a curious ware among other foreign merchandise.

In Orinda, alone of the poets in this volume, we hear that clear, inevitable lyric ring of which Suckling was so great a master—perfect in its way, if its way was a humbler one than the subtle and varied cadence of the great Elizabethans. Perhaps the strangest and most original figure represented in this collection is that of Edward Benlowes—ridiculed by Butler in the "Character of a Small Poet." His mysterious poem, "Theophila," interspersed with outbursts of Latin where his paroxysms of sensuous religious ecstasy can find no vent in his native tongue, will provide edification of various kinds, though hardly of the sort anticipated by the author. He certainly did not fail from timidity of aim or narrowness of intention. After reviewing the wretched state, "beyond all synonyms of misery," of the worldly-minded "in their drink humorous, their humours quarrellous, their duels damnable," he continues: "to divert thee, therefore, from such shelves of indiscreet vice, and to direct thee to the safe and noble channel of virtue, and to know the end which distinguisheth thee from a beast, and to choose the good end which differenceth thee from an evil man, be so much thine own friend as to peruse seriously the spiritual poem, which treateth of Subcælestials, Cælestials, and Supercælestials, whereby a delightful curiousness may steal thee into the pleasure of Goodness." The author proceeds to assign to each of these principles its place in the universe, computing with startling arithmetical detail the distance between their domains. But Benlowes, in happier vein, recognized that

The opal-coloured dawns raise fancy high;
Hymns ravish those who pulpits fly;
Convert dull lead to active gold by love-chemistry.

And his praise of poetry has an exaltation of tone not unworthy of Nash or Sidney. Benlowes, though always an "original," was representative of his age. Milton's early poems have left their stamp on his verse in scattered phrases, and there are many traces of Herbert's quaintly daring identification of the homely and sublime, as in his description of Adam's first dwelling—Eden: "Clouds washed, winds swept his floor." It is possible to instance in Benlowes all the vices, and not a few of the virtues, of the "metaphysical" school in recklessly close juxtaposition; for poetry and bathos were co-inmates of his mind.

* "The Development of Modern Philosophy," Vol. II., pages 56, 57.

Chamberlayne's vast heroic "Pharonnida" may be safely commended to those who have a taste for a true Arcadian periphrasis of imagery, enwrapping the commonest relations of emotional and physical experience, and who are content to pant through the breathless unrest of its bastard couplets in the hope—sometimes rewarded—of resting places of clear refreshing melody and often of images of sustained and impressive beauty.

Perhaps the most suggestive part of Prof. Saintsbury's editorial work is to be found in his consideration of this poem in its influence on the poets of the early nineteenth century, and in his treatment of the questions raised by its metre and diction. Indeed, those who are content to base their appreciation on the scholastic-historic estimate—the term is the editor's—will find ready justification for this volume. But Prof. Saintsbury appeals to a higher court. He finds charm in "almost every page of Chamberlayne, and more frequently elsewhere," and would account for it by "the constant presence of the worship of Imagination and of the reward which Imagination bestows on even her most mistaken worshippers."

Letters from Samoa (1891-1895) by Mrs. M. I. Stevenson.
Edited and arranged by MARIE CLOTHILDE BALFOUR.
Illustrated. (Methuen.)

Even to the most ardent of Stevenson lovers it must bring a sense of relief to read in the preface to this volume the following words:—"It may be frankly confessed that these letters are published far less with a desire to furnish a few more details of a life about which so much has already been written than to preserve some memorial of one as well beloved if less widely known."

And, indeed, the letters have a very personal and individual charm, and by no means depend for their central interest on any fresh details about R. L. S. Mrs. Stevenson was a keen observer and had the power of reproducing scenes and their settings in a vivid and picturesque way. Her delightful sense of humour makes many an adventure entertaining and blunts the edge of many a mishap. She had the spirit and power of enjoyment of the born traveller, and we cannot fail to share her amusement and enjoyment whether we walk in the park at Sydney with her and listen to all the preachings going on there, "nicely varied to suit all tastes," or sit on the floor feasting with the royal Malietoa and hear her being complimented by him on looking "very strong" to be the mother of "such an old son"! She goes on: "Indeed, he went the length of saying I looked the younger of the two, which Lou was half-inclined to resent till I suggested that it was 'considering my age,' which took the sting out of it."

The letters give a wonderful insight into Samoan native life, with its curious customs and ceremonies, and this, combined with a strong feeling for natural scenery, gives us a very vivid picture of the home at Vailima and its inmates. Incidentally, also, we get many a charming picture of the beloved Tusitala, as: "When the work was over Louis sat down to rest and sighed for a cigarette, without feeling sufficiently energetic either to go or send for tobacco. At that very moment Sosimo appeared with all that Louis had just been longing for. 'Quel è le potu!' said Lou, gratefully—'How great is the wisdom!' And he was deeply touched with the quick reply: 'How great is the love!'"

The book deserves many readers, and these, in closing the volume, will surely agree that, "without injustice to her brilliant son," Mrs. Stevenson can have "held no secondary place" among "those who knew and loved them both."

"English Men of Letters." *Walter Pater.* By A. C. BENSON.
(Macmillan.)

Even if Mr. A. C. Benson had not taken us into his confidence, in "The Upton Letters," as to the amazing speed and extent of his literary output, we should by now have been tempted to wish that he did not exercise his gifts with quite such facility. The reality of those gifts it is idle to deny; yet the effect of their present use on the impartial observer is irritating. Without doubt the most obvious truths are the ones that require the most frequent repetition; yet surely the familiarity of an idea necessitates a certain delicacy and lightness of touch in its exposition? And in portions of "The

Upton Letters" themselves, and more notably in the recent series of essays "From a College Window," Mr. Benson has carried to excess his ideal of balance and lucidity of expression. There are points in the essays where even the reader's consciousness that a statement is true is apt to be obscured by the fact that the writer presents it with a weight and exhaustiveness of style that seem also to suggest that it is new.

In his study of Pater Mr. Benson's knowledge, his impartiality and general rightness are most fully apparent: he shows no tendency to leap over points or to avoid analysis of complexity. If to some of us it may seem that the scenes and characters he is presenting demand for their portrayal a certain broadness, even vagueness, of outline, we must be disappointed; for Mr. Benson's method includes no "lights left out." But, if, on the other hand, we are in search not so much of a whole as a detailed, deliberate exposition of the parts of which the whole is composed, if we go further, we shall certainly fare very much worse. The faults alluded to make themselves chiefly felt in regard to matters of personality and character—as, for instance, the lengthy analysis on page 3 of distinctions between cheerful and meditative boys; in criticism of Pater's writings they are much less apparent. All that is said on the subject of "Marius" is true, and most of it excellent.

Maîtres et Parents. Etude et Enquête sur la co-opération de l'Ecole et du Lycée avec la Famille. Par PAUL CROUZET, Professeur au Lycée de Toulouse. (3 frs. 50. Paris: Librairie Armand Colin.)

"This book," says the author in his introduction, "is addressed to both masters and parents, to both primary and secondary school teachers, and to families in all classes of society." In concluding, he says: "This long essay will have attained its end if it has only succeeded in arousing some sympathetic interest in the subject." This, in the profession, we think it will do. Teachers will recognize the enthusiasm and good sense of the writer, and will be interested in the numerous quotations from the reports of all kinds of educational conferences so freely given. English readers may be interested to see how the same circumstances which militate here at home against the frank and hearty co-operation of parents and teachers for the good of the taught are felt, perhaps in even a greater degree, in France, and may learn something from the various plans and methods suggested for combating these difficulties. In so far, however, as the book makes an appeal to parents of children in the primary schools, we fear that it is not likely to be very successful even in France. The matter is put in far too dry and technical a form, the language is not sufficiently simple and direct. Indeed, for all readers, the style is too much that of a Blue Book or Government report, and, could it be lightened by an occasional flash of humour, would have been more attractive. There is a hint of pathos in the little "carnet de correspondance" which passed between a poor Breton peasant woman and the teacher of her boy; and we were moved to smile at the mention of the lady who made a practice of calling on the wife of her son's teacher while the boy was in his form, but whose visits always abruptly ceased when the pupil got his remove, and were presumably transferred to the wife of the next *professeur*, and so on, all the way up the school. But such all too human touches are all too rare! As in England, so in France, a variety of causes combine to make the desired co-operation difficult. Apathy born of ignorance and poverty on the part of the parents, the pride and indifference of the fashionable, evil home influences of every kind, the utilitarian spirit of the age, the low salary and uncertain social position of the teachers, the immense size of the classes—all these antagonistic forces must be attacked in many different ways, and we are rejoiced to find at the end of this long discussion that M. Crouzet concludes as follows:—"Il ne s'agissait pas en effet de trouver le meilleur procédé possible de co-opération entre l'école ou le lycée d'une part, la famille ouvrière ou bourgeoise d'autre part. Le meilleur procédé est celui qui convient le mieux à chaque milieu, à chaque établissement, à chaque maître, à chaque parent. . . . La co-opération des maîtres et des parents est chose trop délicate pour n'être pas absolument libre. . . . Il s'agit moins d'un règlement à rédiger que de mœurs à refaire." This, at any rate, is good and wholesome doctrine.

A French Historical Reader. By H. N. ADAIR, M.A.
With Illustrations. (G. Bell & Sons.)

Teachers who rely on teaching French to young children mostly on the reading method—a most excellent one, be it said—should be pleased with Mr. Adair's "French Historical Reader." The pieces are interesting and of about the right length for a lesson, and sufficiently complete in themselves to tell their story. The type is good, and the French, though simple, is idiomatic and varied. There are a vocabulary and a sufficiency of notes, but no dates are given. We look on the omission of dates as a defect, though the author says, in his preface: "I have avoided quoting dates, even in the notes, thinking that

the approximate period of each event would be sufficiently indicated by the illustrations." We should not ourselves rely with such confidence on the young readers' knowledge of the history of their own country, and we gather that they are not supposed to have any previous knowledge of French history at all. The approximate date must be arrived at by some one before, or in the course of, the lesson; why, then, not quote them, "even in the notes"? The illustrations are apparently French, and quite good and lively.

Stories from Greek Tragedy. Retold by H. L. HAVELL, B.A. (1s. 6d. Harrap & Co.)

"In this book," says the author, "I have tried to present, in the form of prose narrative, the leading incidents of ten Greek plays." Boys and girls who are learning Greek, and even older people who have no knowledge of the language but are desirous of reading good translations of the plays, might find these sketches of the plots helpful to them. If, on reading more than one or two of them at a sitting, the use of the present tense throughout is apt to become a little wearisome, still it is difficult to see how the action could be so well described otherwise. Apart from this the stories are told in a picturesque and interesting manner. There are sixteen illustrations from pictures by such well known artists as Sir W. B. Richmond, Lord Leighton, the Hon. J. Collier, and others; the "Clytemnestra," by Collier, is perhaps one of the most impressive. At the very small cost of 1s. 6d. any school library might be enriched by a present of this little volume. Teachers would find it useful to read aloud to their forms, or it might perhaps be set as an "extra" with advantage.

Britain Long Ago. Stories from Old English and Celtic Sources retold by E. M. WILMOT-BUXTON. (1s. 6d. Harrap & Co.)

Children will enjoy these stories, and some interest in English literature should be awakened by them. The old English poems, translated by the Rev. Stopford A. Brooke, strike us as too difficult for quite young readers. There are numerous illustrations and a pronouncing index. The preface is good; but we doubt if the author is wise in beginning: "It is a well known fact that the only use of a preface, or 'foreword,' as our ancestors would have called it, is to be skipped." He is more than likely to be taken at his word.

Old Maids' Children. By EDITH ESCOMBE. (3s. 6d. Swan Sonnenschein.)

This is a pretty little book, bound in pink linen, which might make an acceptable present to any young mother of the class which can afford "spacious nurseries" and a large garden with "shrubberies and well shaven lawns." It is written by a true lover of children, and the advice given in it is pleasant and sensible. The title is taken from the last chapter, which is headed by a quotation from Charles Lamb's "Dream Children." It is a delight to be reminded in any way of that inimitable prose-poem, where one is tempted to think the first and last word on the subject has been said. Such topics as "Religion," "Dead Children," "Natural Children," "Grown-up Children" are fearlessly, but reverently, touched upon; and, perhaps, this little book may be welcomed where a longer and deeper educational treatise would be shunned.

Scenes from the Great Novelists. Adapted and arranged for Amateur Performance by ELSIE FOGERTY. (6d. Swan Sonnenschein.)

This selection of four scenes from "The Abbot," "The Mill on the Floss," "Adam Bede," and Dickens's "Christmas Carol" is a good sixpennyworth and should be welcome to girls'-school teachers who are seeking to get up some little entertainment. They might be used also for home acting. The scenes are well chosen and the stage directions full and clear. There is a costume edition, with numerous plates, at 2s. 6d.; but the sixpenny edition can be used without it, as the costumes are quite well described in it. The type is large and good; but there are a few misprints. A pretty little girl should be an attractive little figure as Mary Queen of Scots. "Mrs. Pullet's New Bonnet," should be very funny if well managed; but the young actress who plays Mrs. Poyser in the scene from "Adam Bede" will have to be almost uncannily clever to make a real success of such a one-part piece, and such a part!

Geometrical Conics. By F. S. MACAULAY, M.A., D.Sc. Second Edition. (Cambridge University Press.)

The changes in this edition are chiefly relative to a fuller treatment on the lines of modern pure geometry, and the book should now form a satisfactory introduction to the fuller study of that subject so ably treated by Mr. J. W. Russell in his "Elementary Treatise on Pure Geometry" (Clarendon Press), a new and revised edition of which was recently published.

A School Geometry. Parts I. and II. With an Introductory Course of Experimental and Practical Work. By HALL and STEVENS. (2s. 6d. Macmillan.)

Most teachers now prefer to give a preliminary course in experimental and practical work before the definite geometrical course. Many, however, find it difficult to plan out such a course satisfactorily, and will therefore welcome this addition to the "School Geometry" of Messrs. Hall and Stevens. It seems to us a thoroughly satisfactory and well arranged course, and of suitable length.

Algebraic Geometry: a new Treatise on Analytical Conic Sections. By W. M. BAKER, M.A. (6s. Bell & Sons.)

This is an elementary course in analytical conics, the straight line and circle being treated specially at length. Use has been made of elementary ideas of the calculus—with distinct advantage, we think. Attention is given to the use of squared paper and elementary curve tracing. The expositions are clear, and the book is well arranged. The revision papers are helpful, and the book should prove a satisfactory up-to-date treatise for school use.

Citizenship and the Schools. By JEREMIAH W. JENKS. (6s. net. H. Holt & Co.)

This is a volume of collected addresses, essays, and articles by the Professor of Political Economy and Politics in Cornell University. The first paper, on "Training for Citizenship," strikes the keynote, and a quotation will indicate its scope: "Needed reform will always come in time. But much suffering, much time can be saved by an understanding of the needed changes obtained through a careful study of social institutions. For this special knowledge we must rely largely on our educational institutions. But, besides and above these special bits of political and social knowledge, there needs to be an ideal of the value and purpose of the State. That should be taught specifically to all our voters, in all our schools, . . . and the subjects should be taught as living realities, not as dead forms." Such doctrine is even more needed in England than in the States, and, though we are not interested in some topics here treated—such as School-Book Legislation—yet three-fourths of the volume has for us a direct application.

School Organization. By S. E. BRAY. (2s. W. B. Clive.)

The title does not indicate the restricted aim of the author. Mr. Bray is an Inspector of Schools under the London County Council, and, though much of his work is of wider application, yet he writes throughout from the point of view of the provided school. With this caution we can heartily recommend the treatise. Facts are clearly stated, and the advice given to the young teacher is sound and sensible. On the question of co-education Mr. Bray, after balancing the *pros* and *cons*, gives as his own opinion that, "consistent with Nature's methods, as it seems to be, it is bound sooner or later to take up a strong position and assert its dignity and influence everywhere."

Subject Classification. By JAMES DUFF BROWN. (15s. net. Library Supply Co.)

This work appeals to a limited class of readers, but for the public librarian it is indispensable; and any school with a library worthy the name would do well to procure or, at least, to consult it. Even in our modest task of putting "Books Received" each month under their proper heading we are often perplexed for want of an authoritative guide and have taken shelter in that refuge for ignorance or laziness, "Miscellaneous."

"Brown's School Series."—*Elementary French Accidence.* With Exercises. By G. H. CLARKE and W. G. GRIFFITH. (1s. 3d. net. A. Brown.)

This may be described as a grammar drill book. Three hundred short sentences to seventy-eight pages of grammar seems to us rather a meagre allowance; and the verbs, which take the lion's share of the grammar, are not printed in a form to catch the eye. Otherwise we can commend the work as simple and not too infantine. "Il est médecin" and "C'est un médecin" (page 78) cannot be used indifferently; and the meanings of *penser à* and *penser de* should be distinguished.

A First Book of French Oral Teaching. By C. V. CALVERT and W. G. HARTOG. The First Sixty Lessons phonetically transcribed by D. L. SAVORY. (1s. Rivingtons.)

Nothing need be said of this book but that the orthodox transliteration of the Association Phonétique Internationale has been adopted throughout, and that great pains have been taken to secure absolute correctness. Mr. Savory, who has had large experience, assures us that to begin with phonetic script is no hindrance to the subsequent acquisition of the conventional spelling.

"Blackie's Little French Classics."—*Bouilly's L'Abbé de l'Épée.* Edited by W. G. HARTOG. (8d.)

This pretty little play *pour les jeunes filles* makes a good Reader. The notes are simply construed, or, to do them justice, good renderings, of hard words and phrases. It is news to us that *Abbé* is a courtesy title of *all* Roman Catholic clergymen. "*Personne*" is always feminine" is dangerous doctrine. *Sensible*, on page 14, has its ordinary meaning. "*Comme qui dirait*" is surely still heard in polite society.

Combined German Reader, Writer, and Grammar. By H. G. SPEARING. (3s. Clarendon Press.)

The author craves indulgence in striking out a new line; but there is nothing new under the sun, and this primer is an adaptation of the Prendergast method. About a thousand common words have been selected, and the passages for translation have been arranged so as to contain none but these words and to repeat them again and again. The drawback to this method is that it is hard not to bore the pupil; but, given the conditions, the author has made the Reader fairly interesting. Grammar rules and forms follow as required. The print is

bold and clear, but we should have preferred more than one page in roman type. An excellent plan adopted in Mullins and Storr's "Hauff Stories" is to give in an index all the words used in the text, with a reference to the page where they first occur, so that the pupil who forgets is forced to revive his first impression.

Class-work in French Composition. By ERNEST WEEKLEY.
(2s. W. B. Clive.)

A century of English passages of about the same length and difficulty as those set for Joint Board Certificates. At the end are vocabularies giving the harder words. We should have preferred some hints as to the turning of sentences. The pieces are well chosen.

Ma première Visite à Paris. An Illustrated French Reading Book for Beginners. By A. E. C. (1s. 6d. Clarendon Press.)

The narrative is put into the mouth of a boy of eleven, and the main sights of Paris are well and simply described. The start is not very happy—the difference between a turbine and an ordinary steamer—and the dramatic element is weak throughout. The illustrations are poor. But the Reader is on the right lines, and a select vocabulary at the end gives all the words and phrases needed.

The Físcole Club Papers, being Lessons in Sketching for home-learners. By W. G. COLLINGWOOD. (3s. 6d. net. Ulverstone: W. Holmes.)

These papers, by the well known biographer of Ruskin, appeared in the *Parents' Review*, and many will be glad to have them in a separate form. Like his master, Mr. Collingwood gives first principles and insists that there is no royal road to drawing; that the eye must be trained to see no less than the hand to execute. A book of this sort without illustrations is not likely to be popular, but it is well worth the study of the young artist.

Tales from the Talmud. By E. R. MONTAGUE. (1s. 6d. Blackwood.)

Most of us have gained what slight knowledge of the "Talmud" we possess from the brilliant article by Dr. Deutsch in the *Quarterly Review* of the sixties. The present modest little volume brings us nearer to the fountain head, as it gives, though apparently at second hand, a vast number of legends, tales, and saws—some quaint and fantastic, but nearly all instinct with morality and some of high imaginative beauty. If only for the sidelights that it throws on the Old Testament, the book is a valuable aid to Scripture lessons. It would be the better for an index.

Paton's List of Schools and Tutors. Ninth Annual Edition. 1906-7.
(1s. 6d.)

This useful publication, too well known to need description, grows in bulk and now exceeds 1,100 pages. A map at the beginning shows what schools are available for each locality; and the photographs, which cannot lie like prospectuses, are well reproduced.

A Complete Pronouncing Gazetteer or Geographical Dictionary of the World. Edited by ANGELO HEILPRIN and LOUIS HEILPRIN.
(£2. 2s. net. Lippincott.)

The present publication is a new work framed on the "Gazetteer" with the same title which appeared in 1855, but virtually rewritten and brought up to date (1905). It includes the most recent explorations—for instance, that of the British expedition to Thibet—and mountain ascents such as those of the Workmans in the Himalayas. Of course, it is mainly designed for American readers. There are no less than thirty-five Mount Pleasants, not one of which we could have located, and innumerable post villages with less than a hundred inhabitants. English villages well known as health resorts or for historical reasons—Holne, Eversley, Goathlands, &c.—are not included. In spite of this partial treatment, it is a book for the English library, especially the school library.

How to become a Qualified Accountant. By R. A. WITTY.
(2s. net. Sir I. Pitman.)

The book gives plain directions as to the steps necessary for entering the profession and some sound hints as to the general qualifications that are likely to lead to success. There is an appendix of specimen examination papers.

The Girls' School Yearbook: Public Schools. (2s. 6d. net. Swan Sonnenschein.)

It is high time the *Public Schools Yearbook* (for boys), now in its eighteenth year of publication, should be followed by a companion volume, and the present issue promises likewise to become a perennial. The editors have, perhaps wisely, refrained from giving any definition of a public school—difficult in the case of boys, and almost impossible in the case of girls. The 119 schools here admitted are "schools for girls qualified to enter the Association of Head Mistresses," but what that qualification is should be definitely stated. The second part of the book gives information as to colleges for women and careers open to women. There is also an alphabetical list of all teachers mentioned under schools. We miss some schools which may well claim to be public, such as The Mount School, York, and we think the editors might well stretch a point and include some private schools, like Roedean, which are better known to the public than many old foundations. As is natural in a first edition, there are some irregularities in

the printing: the list of schools is begun on page xxxi and continued on page xxi. We fail, too, to discover what qualifies a school to be photographed.

Greek History for Young Readers. By ALICE ZIMMERN.
(2s. 6d. Longmans.)

We welcome this cheap reissue; the book was originally published at 4s. 6d. The maps and illustrations are all retained. Miss Zimmern has compressed the story of a thousand years into less than four hundred pages; but in her hands it is still a story, not a bare epitome.

(1) "New Era Geography Readers."—*Our Imperial Heritage.* Illustrated. (1s. 8d. Sir I. Pitman & Son.) (2) "Twentieth Century Geography Readers."—Book II.: *Life in our own and other Lands.* With Coloured Illustrations. (1s. W. & R. Chambers.)

(1) Well supplied with pictures, some of them coloured, and with maps, this volume forms an interesting account of the history, geography, productions, and commerce of British lands beyond the sea. It is well written and touches, in passing, on the recent royal tour in India.

(2) Fred pays a visit to his friends, Tom and Lucy, and their father, Captain Bell, and their talks form the substance of the book. It is written in a lively manner, and well illustrated. It is intended for much younger children, and tells its story much more simply.

A Junior Arithmetic. By CHARLES PENDLEBURY, M.A., assisted by F. E. ROBINSON, M.A. (1s. 6d. Bell & Sons.)

This is a simple and well arranged book, intended for the middle and lower forms of secondary schools. It differs from an earlier book of Mr. Pendlebury's in including the recommendations of the Committee of the Mathematical Association. It is furnished with a few pages of tables at the beginning and with miscellaneous problems at the end.

"The Children's Heroes."—No. 2: *The Story of Livingstone.* By VAUTIER GOLDING, with Coloured Pictures by L. D. LUARD. No. 6: *Sir Walter Raleigh.* By M. D. KELLY, B.A., with Coloured Pictures by T. H. ROBINSON. (1s. 6d. net each. T. C. & E. C. Jack.)

• These are well printed and tastefully got-up little books, containing the first 118 pages, and the second 120 pages, of a convenient size for the pocket. They tell their stories very simply and plainly, but are not by any means devoid of interest—especially Miss Kelly's volume about Sir Walter Raleigh—while their essentially heroic themes are exactly suited to the little ones. The illustrations are generally good and suitable. We wish the edition every success.

A CORRECTION.—Dr. R. J. Lloyd writes: "The statement made in your August number, at the foot of page 551, that the word 'morale' is neither English nor French, is entirely erroneous. Consult Littré, and you will see that he gives nearly the same amount of space to *morale*, fem. sub., as to *moral*, adjective."—As the context shows, we meant *morale* as applied to the temper of an army, school, &c.

SCHOOL HYGIENE IN SWITZERLAND.

AT the seventh annual meeting of the Swiss Society for the Study of School Hygiene, held lately in Neuchâtel, the principal subject of debate was overwork in schools. On this two discussions took place. One dealt with the question of overwork in primary schools; the other with the conditions in secondary schools. The first discussion was opened by Dr. Perrochet, who discussed the subject from the doctor's point of view, and Prof. Hillebrand, who spoke as a teacher. Each came to the conclusion that, if a child were overworked in the primary classes, the home conditions were to blame. The school authorities may be expected to notice signs of bad management at home, and should report anything serious to the proper quarter. But it is not often possible to interfere when a child is burdened with a moderate amount of housework.

Dr. Perrochet wished to see the harder mental work confined to the mornings, and the afternoons reserved for manual training or occupations. He advocated a break of fifteen minutes between lessons, two half-holidays per week for pupils and teachers alike, the abolition of homework, and the encouragement of physical training.

Prof. Hillebrand, following several French authorities, advocated the institution of a pupil's health card. He opposed the inclusion of reading and writing in the work of the first year, and wished to see the syllabus of work in succeeding years altered so that personal activity was encouraged, and receptivity received less reward.

From the ensuing discussion it appears that many parents give instruction to their children before they join the primary school. This instruction consists of elementary arithmetic, hymns, and poems.

These parents, the makers of infant prodigies, are not sufficiently discouraged by school authorities.

Inspector Labour demanded that thirty minutes daily should be given to physical training in the primary school; and Dr. Schmid, of the Federal Board of Health, proposed that seven should be the age of admission to the primary school. Dr. Schmid opposed the free afternoon for young children—a plan introduced in some German towns—on the ground that it would lead to moral neglect and add to the causes which produce the hooligan.

The discussion on overwork in secondary schools was opened by Dr. Bourguin, of La Chaux de Fonds, who demonstrated that pupils in these schools, whether *Gymnasien* or *Realschulen*, were decidedly overworked. The nearer the pupil approached to the leaving examination of his school the greater was the evil. As a remedy the speaker demanded more uniformity in the curricula of secondary schools, and especially in the *Gymnasien*. He proposed to give pupils under fourteen years of age 28 hours per week, to those between fourteen and sixteen 28 to 30 hours, with a maximum of 33 hours for any pupil at a secondary school.

The succeeding speakers agreed unanimously with Dr. Bourguin that the work of the secondary school was becoming too encyclopædic. A number referred approvingly to the action of the school authorities of Winterthur, where the lesson period now lasts only forty minutes. The change to this length was made as the result of experiments extending over two years. No decrease of attention or receptivity was found to follow the introduction of a shorter period, but there was found a distinct increase in the percentage of efficient work. The shorter lesson, however, demanded stricter punctuality and methodical concentration on the part of the master. If the teacher can attain these ends, the pupil can be relieved so as to get more time for his hobbies, his exercise, and the development of his personal aptitudes. Towards these objects the schools of Winterthur have been steadily progressing. Much of the subject matter has lately been overhauled, so that mere memorizing has been reduced and more appeal made to processes of reasoning.

The Congress decided to produce two reports next year, and appointed Committees to draw them up. One refers to the number of hours per week of instruction in all kinds of secondary schools. This will be presented by the Standing Committee. The other report will be on school hygiene as it affects the teacher. It will discuss the terms of appointment, the amount of work demanded, the state of health, the causes of death, the provision made for old age, illness, and widows for every Canton of the Federation. This report, to be presented at St. Gall in May, 1907, will be drawn up by a strong Committee of five, on which Dr. Huber, editor of the *Swiss Educational Year Book*, and Dr. Zollinger, Secretary to the Zurich Board of Education, have consented to serve.

BOOKS OF THE MONTH.

UNIVERSITIES AND SCHOOLS.

LONDON.

All things come to those who wait, and would-be readers will rejoice to learn that our University Library *in esse* is to be no longer a hope deferred; for it is to be formally opened by the Chancellor on October 26. Those who are interested in the *entente* will be able to procure a memorial volume giving full particulars of the hospitality extended by our University at Whitsuntide to the representatives of French Universities.

A *propos* of another *entente*, an interesting series of lectures on Japanese Education, by Baron Kikuchi, is announced for the Lent and Summer terms of 1907. The Baron is a Cambridge graduate in Honours, and a very distinguished statesman at home.

Convocation, through its Standing Committee, has, for the past few years, given a good deal of attention to the question of academic costume: it has recently recommended the appointment of official robe-makers to the University, thus ensuring, to a large extent, that unauthorized persons will be unable to procure the gowns and hoods of our University. Convocation recommended the appointment of the two firms who have for so long enjoyed the countenance of the Senate: Messrs. Ede, of Chancery Lane, and Mr. Northam, of Henrietta Street, Strand, and the Senate has formally ratified this choice. Convocation has also given considerable attention to the proposed statutes and regulations for the management of University College, now a part of the University.

After September Dr. Payne will no longer be a member of the Senate, having resigned. Dr. Benson has been appointed Vice-Chairman of the External Council for 1906-7, and Dr. Mears of the Finance and General Purposes Committee.

A B.A. Honours degree in Architecture has been instituted for internal students, and regulations for the modified Arts degree for internal students can now be had.

The severity of our Matriculation Examination can be measured by the fact that about 40 per cent. only of candidates passed at the June examination, and about 14 per cent. only of the successful ones were placed in the First Division. Looking at the subjects proposed for essays, and the width and depth of reading required in the historical notes demanded, it seems a wonder, taking into account the standard of the rest of the paper, that any one passes in English. It seems impossible to prepare for the geographical essays, so capricious has been the choice of subjects of late. Examinees at the September Matriculation will be confronted by some new examiners, so that sound, fresh matter may be expected in the papers. Mr. Lys in Latin, Mr. J.

Oliphant in English, and Mr. Dale in Mathematics are among the newcomers. Among Arts degree examiners Prof. Gollancz replaces Dr. Lawrence in English, and that veteran London examiner, Dr. J. S. Reid, replaces Dr. Shuckburgh in Latin.

A most interesting and important announcement, specially interesting in the light of a recent resolution in Convocation advocating such a course, has been made to the effect that a special sum of £600 will be devoted during the session of 1906-7 to the provision of courses of advanced or special lectures in Classics, History, Physiology, Botany, Zoology, and Meteorology. Arts graduates will be glad to note that one-half of this sum is to be devoted to classics and history.

Scholarships have been awarded on the results of the Scholarships Examination held at the University in July to students who have passed an Intermediate Examination as follows:—University Scholarships of £50 a year, tenable for one year: J. G. Simpson, King's College (Granville Scholarship), for Classics; G. W. S. Friedrichsen, University College, Nottingham, and Miss E. C. Grimwade, Royal Holloway College, for German; F. O. Mann, University College, and Miss D. L. Owen, Royal Holloway College, for English; A. J. Clark, University College (Derby Scholarship), for History; G. H. Langley, University College, Reading, for Elementary Psychology and Logic; A. G. Warren, East London College (Sherbrooke Scholarship), and Miss M. Pick, Royal Holloway College, for Mathematics; B. M. Neville, private study (Neil Arnott Scholarship), for Physics; H. E. Watson, University College (Neil Arnott Scholarship), for Chemistry; Miss E. M. E. Parsons, University College, for Botany; H. Tinker, South-Western Polytechnic, for Geology; H. C. R. Darling, University College, for Physiology; J. J. Cater, London School of Economics (Gerstenberg Scholarship), and Miss F. I. Taylor, London School of Economics, for Economics and Political Science. Gilchrist Scholarships of £40 a year tenable for two years, open to women only: Miss E. M. Stuart, North London Collegiate School for Girls, for Classics (qualified also for a University Scholarship in Classics); Miss G. M. Broughton, University College, for Elementary Psychology and Logic (qualified also for a University Scholarship in this subject).

University Entrance Exhibitions of £40 a year, tenable for two years, have been awarded on the results of the Exhibitions Examination held at the University in June to Mr. T. J. Cash, St. Ignatius College, Stamford Hill, N.; Mr. F. W. Sparge, William Ellis School, Gospel Oak, N.W.; Mr. H. C. H. Barton, Technical Schools, Southend; and an additional exhibition to Mr. A. D. Mitchell, East London College. St. Dunstan's Exhibitions of £50 a year, tenable for three years, have been awarded by the St. Dunstan's Educational Foundation on the results of the Exhibitions Examination to Miss G. M. Inkster, Clapham High School (for Arts subjects), and to Miss W. I. C. Friend, North London Collegiate School for Girls (for Science subjects). A Mitchell Scholarship of £25 a year, tenable in the first instance, for one year, has been awarded to Mr. R. E. Oldfield, City of London College.

NEWNHAM COLLEGE, CAMBRIDGE.

Scholarships on the results of the Cambridge Higher Local Examination have been awarded as follows:—The Clothworkers' Scholarship of £50 a year for three years, to Miss O. M. Ingle (Perse Girls' School, Cambridge), for mathematics; the Goldsmiths' Scholarship of £50 a year for three years, to Miss G. Mowll (Clapham High School), for natural science; the Winkworth Scholarship of £50 a year for three years, to Miss D. Braginton (Bromley High School), for mathematics; a college scholarship of £50 a year for three years, to Miss M. E. Walker (City of London School for Girls); scholarships of £35 a year for three years, to Miss O. F. Martin (City of London School for Girls), Miss D. B. Murray (Bedford High School), and Miss C. M. Ryley. The Gilchrist Scholarship of £50 a year for three years, tenable at either Girton or Newnham College, was awarded to Miss E. M. Brown (City of London School for Girls), for natural science. Miss Brown has elected to hold it at Newnham College.

MANCHESTER.

In the absence of Lord Stanley of Alderley, who was prevented by his Parliamentary duties from attending the speech day ceremony of the Manchester Grammar School, the prizes were distributed by the Rev. Canon Kelly, himself an old boy of the school. In his report the High Master (Mr. Paton) referred to the fact that, including the two Preparatory Schools, the number of boys had now reached 1,057.

The new Preparatory School in North Manchester had had a most successful year, under Mr. A. W. Dennis, M.A., the Head Master. The steady rise in numbers was specially gratifying, as, considering the increased facilities for secondary education provided recently in both Manchester and Salford, it showed the existence of a growing and widespread demand for secondary education in Lancashire. Reference was made to the loss sustained by the resignation of Mr. H. S. Roby, late Chairman of the Governors, and by the death of the late Dean

(Continued on page 608.)

OXFORD UNIVERSITY PRESS.

BOOKS SUITABLE FOR THE CAMBRIDGE LOCAL EXAMS., 1907 (Preliminary, Junior, and Senior).

Oxford Bible for Teachers. Containing the Texts of the Old and New Testaments, with or without Marginal References, and in either the Authorized or Revised Versions, together with the "Oxford Helps to the Bible," and 124 full-page Plates. In many styles and bindings. From 3s.

Dr. STOKOE'S MANUALS. Crown 8vo.

Old Testament History for Schools.

Part I. (Third Edition.) From the Creation to the Settlement in Palestine. Part II. From the Settlement to the Disruption. Part III. From the Disruption to the Return from Captivity. Extra fcap. 8vo, 2s. 6d. each, with Maps.

Manual of the Four Gospels. With Maps. 3s. 6d.; or, separately, Part I, The Gospel Narrative, 2s. Part II, The Gospel Teaching, 2s.

Manual of the Acts. 3s.

The Life and Letters of St. Paul. 3s. 6d. or, separately, Part I, The Life of St. Paul, 2s. Part II, The Letters of St. Paul, 2s.

First Days and Early Letters of the Church. 3s.; or, Part I, First Days of the Church, 1s. 6d. Part II, Early Letters of the Church, 2s.

New English Grammar: Logical and Historical. By Dr. H. SWEET. Part I, Introduction, Phonology, and Accidence. Crown 8vo, 10s. 6d. Part II, Syntax. Crown 8vo, 3s. 6d.

Select Plays of Shakespeare. In extra fcap. 8vo, stiff covers. Edited by W. ALDIS WRIGHT. **AS YOU LIKE IT.** 1s. 6d. **KING LEAR.** 1s. 6d.

Milton's Paradise Lost. Extra fcap. 8vo, Book I. Edited by H. C. BEECHING. Stiff covers, 1s. 6d.

Goldsmith's Traveller. Edited by G. BIRKBECK HILL. Stiff covers, 1s.

The Deserted Village. Paper covers, 2d.

Scott's Talsman. Edited by H. B. GEORGE. Crown 8vo, stiff covers, 2s.

Concise French Grammar. Including Phonology, Accidence, and Syntax, for use in Upper and Middle Forms. By A. H. WALL. Crown 8vo, 4s. 6d.

French Primer. For use in Middle and Lower Forms. By the same. Extra fcap. 8vo, 2s.

Selections from Don Quixote. The Adventure of the Wooden Horse and Sancho Panza's Governorship. By CLOVIS BEVENOT. 2s. 6d.

Schiller's Wilhelm Tell. Edited by the late C. A. BUCHHEIM. With a Map. Seventh Edition. 3s. 6d.

Passages for Unprepared Translation. Selected by EDUARD EHREKE. Stiff covers, 3s.

Greek Reader. Vol. I. Selected and adapted, with English Notes, from Professor Von Wilamowitz-Moellendorf's "Griechisches Lesebuch," by E. C. MARCHANT. Crown 8vo, 2s.

Caesar.—The Civil War. Edited by ST. GEORGE STOCK. New Edition. 3s. 6d.

LONDON: HENRY FROWDE, OXFORD UNIVERSITY PRESS WAREHOUSE, AMEN CORNER, E.C.

Maclure, who had succeeded him in that position. In welcoming the new Chairman (Mr. E. J. Broadfield), Mr. Paton said that it was no exaggeration to say that Mr. Broadfield had given his whole life to education. Incidentally, reference was made to the memorials shortly to be erected in the school both to Dean Maclure and to Mr. George Broadfield, whose services to the school musical societies for so many years have already been referred to here. The Honours list was exceptionally gratifying. There were no less than three First Classes in Classical Greats—a record which no other public school could show. Since Midsummer, 1905, the school had won fourteen open scholarships and exhibitions at Oxford and Cambridge, besides a number of distinctions at Manchester University. There were also at Cambridge one Fellowship and the Chancellor's Medal for English Verse. In the Joint Board Examination the school came next only to Eton and Rugby. Sixty-eight boys had passed the Matriculation examination at the Universities of London and Victoria, and there were a great many successes in connexion with County Council scholarships and Education Committee bursaries and exhibitions.

One of the most interesting announcements Mr. Paton had to make was that an employment bureau had been opened at the school, and that he was in a position to say that parents who allowed their boys to remain at the school a sufficient length of time might rely upon a position being found for them on leaving. In bidding farewell to Dr. Neuendorff, of Berlin, who has held a temporary appointment on the staff, Mr. Paton referred to the way in which this interchange of teachers between English and German schools was conducive to the strengthening of the *entente cordiale* between the two nations.

At the prize distribution at the Hulme Grammar School, which took place on the following day, the Head Master (Dr. Joseph Hall) announced that, beginning with next term, no boy would in future be admitted to the school unless he were prepared to devote some time to the playing fields. The announcement has led to a lengthy correspondence in the public press, and in a leading article the *Manchester Guardian* points out the distinction between boarding and day schools in this matter. The examination successes at the Hulme Grammar School have equalled the achievements of any former year.

There was a large gathering at the annual speech day of St. Bede's College. Sir William Stephens, ex-Mayor of Salford, was present, and the prizes were distributed by the Bishop of Salford, Dr. Casartelli, formerly Principal of the College. The Bishop referred to the contemplated enlargement of the building by the addition of a north wing.

Special interest was felt in the prize day of the Manchester High School for Girls, as the newly elected Dean of Manchester (Bishop Welldon) was to make his first public appearance. It was interesting to watch how keenly the Dean enjoyed the singing by the girls of a favourite Harrow song, Mr. E. E. Bowen's "Songs." In the course of his address, which was followed with close attention by the large audience that filled the Free Trade Hall, Dean Welldon said: "There lies before the womanhood of the future an opportunity all the more precious and all the more beautiful if the girls of to-day will realize and remember that they will achieve the highest success, not in trying to be like men, but in trying to be what is far better, namely, good women. When I see women of to-day smoking, or parading the streets in knickerbockers, or coming into church without hats or bonnets, I don't so much feel that these things are wrong as I feel they show an extraordinary poverty of mind. Women are not meant to be like men; they are meant to be better than men; and, believe me, they will win the respect and the honour which are justly theirs if they pursue their own independent lines rather than if they follow the lines already marked out for the other sex." The report of the Manchester High School, read by the Head Mistress, Miss Burstall, M.A., showed that the school had now grown to the number of 480. The record of successes in open scholarships was this year unusually large. They included the Mary Conybeare for Classics at Somerville College, three open scholarships at the University of Manchester, a number of exhibitions, and three senior secondary-school scholarships offered by the Manchester Education Committee. Of the old girls, the names of three appeared in the Final Schools at Oxford and Cambridge, while nine had taken degrees at Manchester University, where also they had won one research fellowship, one travelling fellowship, and the Walters Scholarship for Modern Languages. The Jones Scholarship for History had been won for the eighth time during the last nine years. The report of Miss Tollemache on the gymnastics of the school stated that the work of the girls "would compare favourably with metropolitan schools." In a competition with the girls of the Liverpool Gymnasium, the Manchester High School led in all events except jumping. The result was described by Miss Tollemache, who was one of the judges, as "really splendid."

In the course of his introductory remarks, the Chairman, Prof. Tout, referred to the fact that the foundation had been cut down from three schools to two, and said that "these two schools were as flourishing in

numbers, tone, and reputation as they had been at any period." The Pendleton School had increased by leaps and bounds, and the Governors had decided to hand over the management of the school to the Pendleton Committee, the chairmanship of which had been taken by Sir William Stephens. The report of this school, read by the Head Mistress, Miss Rosa Patterson, M.A., showed that the year had been one of rapid growth and development.

At the Manchester University Mr. A. C. B. Brown, B.A. of New College, Oxford (late student at the British School at Athens), has been appointed Assistant Lecturer in Classics. Much regret is felt at the loss of Mr. W. B. Ramsden, B.Sc., Lecturer in Sanitary Chemistry, who died suddenly just as he was about to lecture to one of his classes. At the degree ceremony the honorary degree of D.Sc. was conferred on Dr. Emil Fischer, Professor of Chemistry in the University of Berlin. The annual statement of the Vice-Chancellor shows that—exclusive of about 300 attending evening classes and about 450 attending courses in Law, Economics, and Railway Economics—the total number of students in the various Faculties was 1,371. A new Chair had been instituted in the subject of Metallurgy, and Dr. H. C. H. Carpenter had been appointed to the Professorship. Courses had also been definitely arranged for a degree and certificate in Mining. Owners of collieries and mines had assisted by subscription and by affording facilities for practical work, and the Faculty had been recognized by the Home Office. Eight students had already graduated in the new Faculty of Technology. Important changes had been introduced in the curriculum for degrees in Medicine. The result would be that more time might be devoted to Medicine, Surgery, and Midwifery. A valuable catalogue of the specimens in the Pathological Museum had been compiled by Prof. Lorrain Smith. Owing to the generosity of the family of the late Mr. Edward Behrens, who had contributed £5,000, the Oaks estate (formerly his residence) had been purchased by the University. During the past year over five thousand volumes have been added to the library, which now contains about a hundred thousand books, exclusive of ten thousand duplicates. The number of students now in residence at the various halls is 113. The accommodation at the Women's Hall (Ashburne House) has had to be increased. The erection of the new Hulme Hall, to which Sir William Houldsworth had subscribed so generously, is proceeding rapidly. The number of entries this summer for the July examination for Matriculation was over 1,300, as against 856 last year. The University of Sheffield is now represented on the Joint Matriculation Board, and the Universities, as well as the Education Committees of Lancashire, Cheshire, Manchester, Liverpool, and the West Riding of Yorkshire, have decided to award their scholarships on the results of the Matriculation Examination, which now includes advanced papers in all important subjects. Reciprocal arrangements with regard to this examination have also been made with the Universities of Oxford and Cambridge.

The general balance sheet of the University, published in August, 1906, shows that, including the John Owens Trust Fund of about £90,000, the assets of the University were a little over £1,075,000. Against this is set a total of a little over £400,000 for college buildings, equipment, and property. The special funds received since July, 1905, to be held in trust for professorships, &c., include £7,150 given by Mrs. Sarah Fielden for the Department of Education.

A report, signed by the Lord Mayor of Manchester and by the Chairman and Vice-Chairman of the Manchester Education Committee, with reference to the proposed reduction in the numbers of that Committee, has been presented to the City Council. The report states that, considering all the circumstances, it is deemed desirable that the Education Committee should be reduced from its present number of fifty-one to fifty-three, of whom twelve are to be appointed by the Council from outside, and to be persons of experience in the management or administration of elementary education, of technical and commercial education, and of University education. Two members at least are to be women. The precedent of Leeds was cited, where the Committee was reduced from thirty-six to twenty-four.

Owing to the announcement (in February) that the Education Committee of the Stretford Urban District Council proposed to provide a new school for a thousand children at a cost of about £20,000, a formal appeal, signed by nearly five hundred ratepayers, was forwarded to the Board of Education. The result of an inquiry is that the Board has ruled that only an infants' school may be erected, with accommodation not to exceed three hundred and fifty. Irrespective of this proposed school, the Stretford Council are already engaged in building a school to accommodate eight hundred children at a cost of over £17,000.

The county Coroner having spoken strongly on the need for instruction in the matter of care of children, attention has been publicly called to the fact that provision is already made by the Manchester Education Committee for instruction on the feeding and tending of infants and young children.

The Bury Town Council, after a long discussion, have confirmed the

J. M. DENT & CO.'S NEW EDUCATIONAL BOOKS.

DENT'S MODERN LANGUAGE SERIES.

Edited by Prof. W. RIPPMAUN, M.A.

A Series based on the principles advocated by the pioneers of the "Reform movement" in Germany, by the Association Phonétique Internationale, and by a large number of prominent Teachers in France, Switzerland, Scandinavia, and America.

LATEST ADDITIONS.

SHORT FRENCH READERS.

Well graduated and suitably edited, with Footnotes in French and Reform Exercises on the Text.

Contes de Perrault. Part I.
" " " **Part II.** } Each 48 pp., 4d. net.

L'Éléphant Blanc.

Le XIX^{me} Siècle and La Révolution Française.
Each 64 pp., 6d. net.

The *School World* says:—"Messrs. Dent have entered the field of the short French reader somewhat late in the day, but the result is very satisfactory."

ADVANCED FRENCH READERS.

Cloth, 1s. 6d. net each.

Fables de La Fontaine.

With Notes and Exercises by THOMAS KEEN (The High School, Glasgow).

Les Pèlerins de la Tamise.

With Notes and Exercises by Mrs. BOVD. [Just ready.]

SUPPLEMENTARY EXERCISES TO DENT'S FIRST FRENCH BOOK.

By H. C. NORMAN, B.A., Liverpool Institute (High School). 6d. net.

The *Guardian* says:—"Teachers who have been using Messrs. Dent's excellent 'New First French Book' will welcome this little book, in which further prominence is given to various points which the writer's experience has shown him to need driving home."

FIRST EXERCISES IN FRENCH GRAMMAR.

By Miss F. M. S. BATCHELOR. 1s. net. [Just ready.]

These Exercises are intended to accompany the *Première Grammaire Française*.

HINTS ON TEACHING GERMAN.

(NEW AND REVISED EDITION.)

By W. RIPPMAUN, M.A. 1s. 6d. net.

The *Athenaeum* says:—"Particularly good and practical."

RIPPMAUN'S PICTURE VOCABULARY.

French or German. Per Vol., 1s. net.

The *School World* says:—"A splendid idea, well carried out."

FIRST SPANISH BOOK.

By F. R. ROBERT. Extra fcap. 8vo, 2s. net. Illustrated by J. A. SYMINGTON.

Exceptionally well written. Forms a most interesting introduction to the study of Spanish. [Just ready.]

THE SOUNDS OF SPOKEN ENGLISH.

By W. RIPPMAUN, M.A. 1s. 6d. net.

Specially useful to the teacher of modern languages.

The *Guardian* says:—"The subject is treated in a pleasant and sympathetic manner . . . a fresh and interesting little work."

A NEW SERIES,

Edited by Prof. RIPPMAUN,

on the lines of DENT'S MODERN LANGUAGE SERIES.

DENT'S LATIN PRIMER.

By E. S. FOSTER, B.A. Fully illustrated. 1s. net.

For children who commence Latin early. [Just ready.]

DENT'S FIRST LATIN BOOK.

By H. W. ATKINSON, M.A., and J. W. E. PEARCE.

With 12 Coloured Illustrations. By M. E. DURHAM. 2s. 6d. net.

The *Schoolmaster* says:—"A unique book . . . it represents a wonderful stride made in teaching Latin."

For further particulars regarding the above and other books see Dent's Modern Language Catalogue, post free.

DENT'S NEW SERIES OF MATHEMATICAL & SCIENTIFIC TEXT-BOOKS.

Edited by W. J. GREENSTREET, M.A., F.R.A.S.,
Head Master of Marling School, Stroud, and Editor of the "Mathematical Gazette."

A FIRST STATICS.

By C. S. JACKSON, M.A., and R. M. MILNE, M.A.

With upwards of 200 Diagrams and numerous Examples. Crown 8vo, 4s. net. [Just ready.]

Please write for Prospectus of this book.

LIGHT.

By F. E. REES, M.A., late Demonstrator of Physics, Bangor.

Price 1s. 6d. net. [Just ready.]

PRACTICAL NATURE STUDY FOR SCHOOLS.

By OSWALD H. LATTER, M.A., Senior Science Master at Charterhouse, formerly Tutor of Keble College, Oxford.

Part I. (Pupils' Book), 2s. 6d. net; Part II. (Teacher's Aid and Answers), 6s. net.

The *School World* says:—"It is impossible to speak too highly of the skill with which the questions have been framed."

A FIRST BOOK OF GEOMETRY.

By W. H. YOUNG, Sc.D., and Mrs. YOUNG, Ph.D. 1s. 6d. net.

The *Schoolmaster* says:—"The arrangement and treatment are original. The authors never depart from the principle that the children must observe carefully and then formulate ideas."

PRACTICAL PHYSICS.

By F. J. TRISTRAM, M.A. 1s. 6d.

Education says:—"This admirable little book approaches very near to our ideal of an elementary text-book of Practical Physics."

Many other volumes in preparation.

DENT'S TEMPLE ENGLISH LITERATURE FOR SCHOOLS.

The *School Government Chronicle* says:—"A series of very pretty little volumes. The subjects are well chosen for their purpose, and the treatment is very suitable. A sufficiency of notes is provided, and there is a serviceable introduction, biographical of the author, explanatory of the period and circumstances of the work. The little volumes may well be regarded also in the light of gift or library books. They are light and compact, not too large even for the pocket, clearly printed, and furnished each with its portrait-frontispiece."

JUST READY.

LONGFELLOW'S SHORTER POEMS.

With Introduction and Notes by G. C. DENT. Limp cloth, 3d. net.

SIR ROGER DE COVERLY.

A Selection from the *Spectator*. Edited by R. G. WATKIN, M.A. Cloth boards, 1s. net.

PRESCOTT'S CONQUEST OF MEXICO AND PERU.

Selections put into a continuous narrative, and edited by OLIPHANT SMEATON, M.A. 1s. net.

PREVIOUS VOLUMES.

J. M. DENT & CO., 1 Aldine House, Bedford Street, London, W.C.

recommendation of the Education Committee that a municipal secondary school should be provided for Bury to accommodate boys and girls, with pupil-teachers' centre attached. An alternative proposal was for a secondary school, with pupil-teachers' centre attached, for girls, and a middle-class school, with scholarships at Bury Grammar School, for boys. This scheme was negated by only two votes.

The Lancashire County Higher Education Committee have issued circulars to Education Committees of non-county boroughs and urban districts, requesting them to report as to the probability of employers being willing to give special facilities to employees under sixteen years of age to attend evening classes. It is suggested that the younger employees might be exempted from attendance at work, without loss of wages, up to eight or nine o'clock of the morning following their attendance at evening classes. The proposal has been commended in the public press, where attention has been called to the fact that for some time now in Manchester (as reported in this column) the apprentices at engineering firms have been allowed to devote one day a week entirely to work at the Municipal School of Technology.

UNIVERSITY COLLEGE, READING.

The following elections to scholarships are announced:—To Major Open Scholarships: Dorothy H. Carr (Arts), Norman M. Comber (Science). To Minor Open Scholarships: Helen R. Parson (Arts), Frederick Wootton (Science). To a Major Berkshire Scholarship: Arthur R. Thomas (Science).

WALES.

The three Welsh colleges have recently been subjected to some rather outspoken and virulent criticism both in the press and on the platform. They are charged with fostering an anti-national feeling, and with endeavouring to stifle the growth of national ideals and aspirations. Somehow or other they have failed, it is said, to catch that very elusive thing, the national spirit. When, however, we come to analyze the utterances of the critics, we fail to find in them any facts which in any degree tend to substantiate such very serious statements; on the contrary, in most of them we have nothing but vague generalities and variations on the old theme of "Wales for the Welsh." The reply to these attacks, which was sent to Principal Reichel by old students of the Bangor College, should do much towards restoring that public confidence in the colleges and in the University which the ill-informed and unrestrained criticism tends to destroy. It is couched in very moderate terms, and is therefore effective and convincing. The signatories—who all hold responsible positions in Welsh educational circles—emphasize the value of the work done, and of the influence exerted by the colleges. They point out that they have been the making, morally and professionally, of very many men and women in Wales—men and women who are destined to become leaders in the various spheres of our public life. The professors are vigorously defended against the charge of anti-nationalism, while the policy of out-and-out protection in appointments is deplored.

It is difficult to imagine what is the ultimate object of these repeated and often unjustifiable attacks on our public institutions. Whether it is desired to destroy or reform them is not really always evident. This much, however, is perfectly clear. There is a real danger lest the public, forgetting for the moment the lack of special knowledge, qualifications of most of these critics, should come to believe that our University, our colleges, the Central Board, &c., are really in need of urgent reform. At present one can confidently state that the very great majority of the nation believes firmly in the efficiency of its educational machinery, and that its faith in it is not shaken.

At the Cymmrodorion meeting held at Carnarvon during the National Eisteddfod the relationship between the University and the Eisteddfod was under discussion. The claims of the latter were upheld in a well written and vigorous paper by Mr. Llewelyn

The University and the Eisteddfod.

Williams, M.P. The Eisteddfod, he said, was a purely spontaneous native growth which in pre-University days gave their chance to many Welshmen, like Principal Rhys, &c. The University, on the contrary, failed to develop the special characteristics of the Welsh people, as it was constructed on English, and not Welsh, lines. Unfortunately, his paper betrayed some ignorance of the working of the University. For instance, in describing its attitude towards theology he declared that the Court had made a determined attempt to exclude it from its curriculum. Principal Reichel, later on, had no difficulty in disproving this. Prof. Lloyd, of Bangor, who took up the cudgels on behalf of the University, was probably correct when he accounted for the existence of a certain type of Welsh critic. The Welshman, he said, is an idealist, who is never satisfied with human organizations—he never does full justice to his national institutions. No sooner is his dream translated into actual fact than he becomes dissatisfied and critical; and so our most cherished institutions begin to degenerate as soon as

(Continued on page 612.)

BOOKS SENT ON APPROVAL TO TEACHERS.

GINN & COMPANY, ST. MARTIN'S STREET, LONDON, W.C.

they begin to be. And most Welshmen will be disposed to agree with this utterance of the Professor. The paper, as a whole, was a lucid and temperate account of the aims and achievements of the University, which is well worth careful study.

In the Presidential addresses at the Eisteddfod references to our educational system are rare. There was one, however, which deserves notice from its very comprehensive character. Mr. O. M. Edwards, the distinguished Welsh historian, and one of the Presidents, in his speech, describes our primary schools, our secondary schools, and our colleges as "these dry bones" of our national life. Prodigious!

Under the Welsh Act there is no school for girls available for the inhabitants of the Ruabon district. There is, therefore, now an agitation to convert the Ruabon County School into a dual school. The parents have promised to avail themselves of the opportunity which a dual school would afford.

Ruabon County School.
Mr. T. R. Dawes, M.A., Head Master of Pembroke Dock County School, has been appointed Head Master of the new secondary school at Castleford, near Leeds. Mr. Dawes was the first Head Master of the Pembroke Dock school; he was also the Hon. Treasurer of the Welsh County Schools' Association—a post which he filled to the entire satisfaction of the members. Mr. R. L. Archer, M.A. of Wadham College, Oxford, has been appointed as Professor of Education at Bangor, in succession to Prof. Green.

Appointment.
Mr. D. Davies, M.P., has offered to defray the expenses of four intermediate and six elementary teachers to America to study American methods. This offer is conditional on the Montgomeryshire County Council paying the salaries of teachers while away and supplying substitutes.

SCOTLAND.

Dr. Diarmid Noel Paton, superintendent of the laboratory of the Royal College of Physicians, Edinburgh, has been appointed by the Crown to the Chair of Physiology in the University of Glasgow, in room of Prof. J. G. McKendrick, who resigned last June. Prof. Paton

is the eldest son of the late Sir Noel Paton, R.S.A. He received his medical education at Edinburgh, Vienna, and Paris, and he was for some years Lecturer in Physiology at the School of Medicine of the Royal Colleges, Edinburgh.

At the summer graduation of Edinburgh University the degree of LL.D. was conferred on Sir Donald Currie, Emeritus Professor Sir A. R. Simpson, and on two international jurists, Senhor Antonio da Veiga Beirao and Baron Descamps. At a luncheon given to the honorary graduates by the University Union, Sir William Turner announced that of the £18,000 still required for the extension of the Union Sir Donald Currie and Mr. Andrew Carnegie had each promised to give £6,000, provided that £6,000 were raised locally, in addition to the £7,000 already subscribed. Of the total amount £4,000 are to be spent on books for the library. The reconstructed and extended building is to be opened on October 19, when Mr. A. J. Balfour, Chancellor of the University, and Mr. R. B. Haldane, the Lord Rector, are expected to be present.

Appointments.
Mr. Norman Smith, M.A., D.Phil., Assistant to the Professor of Logic in Glasgow University and Lecturer in Logic at Queen Margaret College, has been appointed Professor of Psychology in the University of Princeton, New Jersey, U.S.A. Prof. Smith is the author of an able book on Cartesianism, and he has done excellent work as a teacher of philosophy at Glasgow. Mr. James Muir, M.A., D.Sc., Assistant to the Professor of Natural Philosophy in Glasgow University, has been appointed Professor of Natural Philosophy in the Glasgow and West of Scotland Technical College, in succession to the late Mr. James Blyth.

Leaving Certificates.
A circular has been issued by the Scotch Education Department, in which it is announced that, unless there is strong objection, the Department intends to alter the date of the written examination for the Leaving Certificate from Midsummer to Easter. This change will obviate the disturbance of the Summer term, which is inevitable with the present arrangement, and it will have the additional advantage of enabling the Inspectors to see the written papers before visiting the schools.

Religious Instruction in the Training Colleges.
The question of the provision of religious instruction in the training colleges, when they are taken over by the new Provincial Committees for the training of teachers, has been under discussion, and the Edinburgh, Glasgow, and Aberdeen Committees have resolved that the religious instruction shall be given by the Churches whose training colleges are transferred. The Churches are to pay the cost of the instruction, draw up the syllabus, supervise and

Chambers's Books for Secondary Schools.

Chambers's "Thorough" Arithmetics. By W. WOODBURN.

- The Special Features of this Entirely New Series of Arithmetics are:—
- (1) The unusually large number of exercises in concrete form, thus training the pupil to apply the principles learnt to the problems of everyday life.
 - (2) The abundant provision made for the continuous revision of previous rules.
 - (3) The complete and systematic carrying out in Books VI. and VII. of the suggestion made in Art. 2 (3) of the Code of 1905—"Mensuration should be taught to older boys, and the use of literal symbols in working simple problems may with advantage be taught in the higher classes."
 - (4) The inclusion in the Teacher's Book VII. of a chapter on "Approximate Methods in Decimals."

Books I., II., and III., 2d. each. Books IV. and V., 3d. each. Books VI. and VII., 4d. each

Teacher's Books. To accompany the above, including Answers, Notes, and Mental Exercises.
Nos. I., II., and III., each 9d. net. Nos. IV. and V., each 10d. net. Nos. VI. and VII., each 1s. net.

Elementary Pure Geometry. With Mensuration.

By E. BUDDEN, M.A. Oxon., B.Sc. Lond., Macclesfield Grammar School; formerly Scholar of Winchester College and of New College, Oxford.
PART I., with or without Answers, 10d. PARTS I., II., and III. (forming the Complete Book), 292 pages, 3s.

How to Keep Well.

A HEALTH READER FOR THE USE OF SCHOOLS. 1s.
By Dr. ANDREW WILSON, F.R.S.E.

A simply written Reading-Book, dealing in a popular manner with those fundamental laws of health and temperance which should be known by every scholar before he leaves school.

Chambers's Poetic Gems.

A SELECTION OF GOOD POETRY FOR YOUNG READERS. 1s.

The Academy Shakespeare.

W. & R. CHAMBERS, LTD., 47 PATERNOSTER ROW, LONDON, E.C.1; AND EDINBURGH.

examine, as at present; but the instruction, subject to a conscience clause, is to be included in the ordinary time-table, and given in college hours, and the Churches are to be at liberty to employ members of the college staff as instructors. An alternative proposal was that the Churches should defray the cost of the instruction, but that the Committees should be responsible for it, and should appoint the teachers. This alternative received comparatively little support, as it was felt that the appointment of the instructors by the Committees might lead practically to the imposing of a religious test on candidates for positions on the staff of the colleges.

IRELAND.

Some remarkable developments have taken place during the last month in regard to Trinity College and Irish Roman Catholics. On July 30 a statement drawn up by the Association of Irish Catholic Laymen, to be laid before the Royal Commission on Trinity College, was published in the papers. This statement, signed by a large number of the Catholic laity, has been since sent in to the Royal Commission. It demands as a satisfactory mode of constituting Trinity College as the sole college of a National University (a) substantial representation of Catholics on the governing body, which should grow with the increase in numbers of the Catholic students; (b) dual Professorships in Mental and Moral Science and in History; (c) religious instruction of the Roman Catholic students by Roman Catholic clergymen; (d) establishment of a Faculty of Catholic Theology; (e) a chapel for Roman Catholic students; (f) formation of a Council to supervise the safeguards for such students.

This statement was based on another statement sent in to the Royal Commission by a considerable number of the Fellows and Professors of Trinity College, and representing the provisions they recommend to modify the constitution of Trinity College so that it may become a national University. All the requirements of the statement of the Catholic laymen given above are laid down as necessary, and, in addition, details are suggested for the practical carrying out of these provisions. An Advisory Committee shall be formed of six persons (four of whom shall be laymen), having certain defined duties in safeguarding the faith and morals of Roman Catholic students. To give Catholics substantial representation on the governing body from the first, that body shall be reconstituted and consist mainly of elected members. Among the electorate shall be for the first twenty-five years a special Roman Catholic electoral body of fifty members (forty laymen), which shall have the right to elect 25 per cent. of the governing body. At the end of twenty-five years this electoral body would disappear. The permanent electorate would consist of (a) Fellows and Professors of longer standing, (b) the remaining Fellows and Professors, (c) Senior Moderators in and after 1912. Elaborate methods of allotting votes among these bodies are tentatively suggested, and the whole scheme seems ingeniously devised to give fair and proportionate representation to Catholics, while permanently making the power in election and government rest on an academic basis independent of creed. These proposals—the most revolutionary and remarkable that have ever emanated from Trinity College—are signed by twelve Fellows, one ex-Fellow, and seven Professors. They have been drawn up in vacation, when most of the Fellows and Professors are away; otherwise there would undoubtedly be many more signatures. None of the Board have signed, but their doing so, at least at this stage, would scarcely be in order. Dr. Barlow, the last survivor of the old Conservative Board that ten years ago formed a solid barrier against change in Trinity College, has since published a disclaimer against the statement being taken as representative of Trinity College opinion, but he has been answered by an able letter from Mr. Edward Gwynn, F.T.C.D., which gives a remarkable expression of the new rational and generous spirit growing rapidly in Trinity College. While there is no doubt that the proposed revolution will meet with some opposition among Protestants, it may be predicted that the changes (or some modification of them) would be agreed to by an overwhelming majority within the walls—judging by the offers already made by even the Board of T.C.D. itself.

It is far otherwise on the Catholic side. Archbishop Walsh at once, both in an interview and by public letters, denounced the proposals of the Catholic laymen's statement (much the same as the T.C.D. proposals) as utterly unworkable, unsatisfactory, and mischievous; announced that they would be rejected by all the bishops and by the vast majority of the laity, and that, were the bishops even willing to accept them, an injunction would be laid upon them by the Holy See to oppose them. The bishops then published the statement they themselves had laid before the Royal Commission, in which they say they will accept (a) a fully endowed separate Catholic University; (b) a separate college with equipment under Dublin University; (c) a separate well equipped college under the Royal University; but that on no terms and in no form will they tolerate mixed education.

(Continued on page 616.)

W. HEFFER & SONS' Publications.

LINDSEY HISTORICAL SERIES.—Recent Additions.

PROBLEMS AND EXERCISES IN BRITISH HISTORY. Part V., 1509-1603. Crown 4to, 60 pp., 2s.

* This part is uniform with Parts I.-IV., and contains 10 new pages (including a Scheme of Study), not contained in either of the previous books in the Series dealing with the Tudor Period, which are out of print and definitely superseded by the new part. **Book J, 1688-1832.** Crown 4to, boards, 194 pp., 3s. 6d. net.

* This book consists of the sheets of the two overlapping books (Book G, 1688-1832; Book D, 1715-1820) bound together in as nearly as possible chronological order.

BIBLICAL HISTORY OF THE HEBREWS. By Canon FOAKES-JACKSON, D.D., Fellow and Dean of Jesus College, Cambridge. Crown 8vo, 6s. Second Edition, with an Appendix giving Translations and Inscriptions bearing on the History of the Hebrews.

Warmly received by both Scholars and Teachers as a noteworthy addition to Old Testament History Literature. Written in a bright and lucid manner, the book is admirably suited for the use of the Higher Forms in Schools.

HELPS BY THE WAY SERIES. Written by S. STEWART STITT, M.A. Cambridge. Crown 8vo.

1. **The Old Testament History Analysed.** Revised Edition, 2s. net.

2. **English Church History Analysed.** 1s. 6d. net.

3. **Early Church History Analysed.** 2s. net.

This Series is designed for the use of Students and Classes preparing for Examinations. The Questions are exhaustive and the Answers arranged in the briefest form possible. Helpful Charts and Summaries are provided and typical Examination Papers given.

Both the Student and Teacher will find these books of great service; they are the work of a practical coach and capable scholar, difficulties are met and answered, and, though concise, they are eminently thorough.

Press Notice of No. 1, the last published of the Series:—

School.—"As a summary it is admirably done, being clear, systematic, and concise. If a student really mastered it, while carefully reading the Bible itself, he would be distinctly advanced in a competent knowledge of Hebrew history."

PRACTICAL PHYSICS FOR SCHOOLS. By C. J. L.

WAGSTAFF, M.A., Science Master at Oundle School, and G. C.

PARALLEL GRAMMAR SERIES,

Edited by Professor E. A. SONNENSCHN, D.Litt. Oxon.,

Now includes **Grammars of English, French, German, Welsh, Latin, and Greek**, each consisting of Two Parts—I. *Accidence*, II. *Syntax*—varying in price from 1s. to 2s. 6d. each part.

The Series also includes **Readers and Writers for French, German, Latin, and Greek**, together with **Exercises in English**, at from 1s. to 1s. 6d. each.

Single Copies of any volume will be sent post free to any Teacher on receipt of half its published price. Keys to the Latin and German Readers and Writers may be had by Teachers direct from the Publishers.

ORA MARITIMA SERIES.

Edited by Professor E. A. SONNENSCHN, D.Litt.

NEW VOLUME NOW READY.

THE GREEK WAR OF INDEPENDENCE.

A Greek Text for beginners, with Notes, Exercises, Vocabularies, and Maps. By CHARLES D. CHAMBERS, M.A.

Crown 8vo, cloth, 3s.

This book applies to Greek the methods which Professor Sonnenschein has expounded in his *Ora Maritima* and *Pro Patria*. It is assumed that pupils beginning Greek will have been learning Latin for at least two years. The story of the Greek War of Independence (1821-1827) is told with the use of only about 1,250 words, nearly all of which occur in Thucydides.

ORA MARITIMA.

A Latin Story for Beginners, with Grammar and Exercises. By Professor E. A. SONNENSCHN, D.Litt.

Crown 8vo, cloth, 2s.

PRO PATRIA.

A Latin Story, being a sequel to *Ora Maritima*, with Grammar and Exercises to the end of the regular *Accidence*. By Professor E. A. SONNENSCHN, D.Litt.

Crown 8vo, cloth, 2s. 6d.

"Professor Sonnenschein's books do not gild the pill. They merely make the pill a healthy one."—*Week's Survey*.

IMPORTANT NEW BOOK ON EDUCATION.

NATIONAL EDUCATION AND NATIONAL LIFE.

With a Chapter on "The Evolution of the Religious Question." By J. E. G. DE MONTMORENCY.

Crown 8vo, cloth, 3s.

"A work which should be studied at the present juncture by all interested in the educational controversy. Mr. de Montmorency is an experienced and impartial authority on the subject which he treats."—*Daily Mail*.

"Well informed, thoughtful, and temperately reasoned."—*Scotsman*.
"Mr. de Montmorency has studied and written much to good purpose on the history of education in England, and is himself connected with educational administration. It is to managers of elementary schools and governors of endowed secondary schools he addresses these essays."—*Times*.

NEW VOLUME OF THE "SPECIAL CAMPAIGN" SERIES.

THE FREDERICKSBURGH CAMPAIGN,

1862. By Major G. W. REDWAY. With Maps and Plans. Crown 8vo, 5s. net.

A NEW VOLUME OF "STANDARD PLAYS FOR AMATEUR PERFORMANCES IN GIRLS' SCHOOLS."

SCENES FROM THE GREAT NOVELISTS.

By ELSIE FOGERTY. Imperial 16mo, with Costume Illustrations, 2s. 6d. Paper Edition, without plate, 6d.

INSECT PESTS.

By F. MARTIN-DUNCAN. Illustrated with Original Drawings and Photographs. Crown 8vo, 2s. 6d. net.

SCHOOL GARDENING.

By LUCY LATTER. Crown 8vo, illustrated, 2s. 6d.

"A series of detailed hints for teachers at kindergartens or children's schools—with list of books, tabular schemes, &c., showing how to carry out Nature teaching in the school garden, and interest the children not only in plants, but in the weather, the butterflies, the worms, and all the natural life of the garden. It is by an experienced teacher, and has an introduction by Professor Patrick Geddes."—*Times*.

OLD MAIDS' CHILDREN.

By EDITH ESCOMBE. Crown 8vo, cloth, 3s. 6d.

In the controversy that has continued since the Catholic laymen have steadily held their ground and met the arguments of Dr. Walsh and Dr. Delany with logic. It is hard to answer why should the Pope and the German bishops sanction the very similar provisions in Bonn and other Rhineland Universities, and not those proposed in Dublin. Why should English Catholics be permitted to attend Oxford University without any special safeguards at all? The real answer to these questions the bishops do not wish to give—that the Church demands what it has any possibility of getting, and that it still believes it has sufficient power in Ireland to prevent the laity accepting any kind of mixed education. It is not only teaching by men of various creeds (for such men teach in the Catholic University College, Dublin), or even the exclusion of the bishops from direct control, that they oppose, but also the intercourse between Protestant and Catholic students. Yet such intercourse and mutual understanding among the youth of all creeds and parties is the one thing needful to-day in Ireland. As long as the people form "two camps," demanding from the Government a contrary policy, with even the best intentions, all Governmental reform must be either paralyzed or reduced to injurious compromises. It is to be hoped the Catholic laymen will steadily persist in their position. It is not too much to say that the solution of the educational problem, with its far-reaching consequences, depends chiefly on them.

Dr. Gwynn has resigned the Regius Professorship of Divinity in Trinity College. Dr. Windle, President of Queen's College, Cork, has been appointed Commissioner of Intermediate Education in the room of the late O'Connor Don. Lord Castletown, of Upper Ossory, has been appointed Chancellor of the Royal University.

At a meeting of the Senate of R.U.I. on July 27 a "statute dealing with academic disorder" was enacted. Its provisions have not been made public.

At the end of July a Visitation of the Royal University was held by Sir Andrew Parker and Sir William Anson to decide the long-standing contention concerning the clause in the Act excluding the "holder" of prizes from other public colleges from receiving prizes in the Royal University. The difficulty lies in the interpretation of the word "holding" in cases where the prize from another college was paid either before or after the date of the winning of the prize in R.U.I., and chiefly affects the holders of scholarships in the Queen's Colleges. The Visitors decided that no student should be debarred from receiving any prize in R.U.I. unless at that moment he was holding some emolument from another college.

SCHOOLS.

CHELTEMHAM LADIES' COLLEGE.—London University Intermediate Arts Examination: Pass—Frances M. Archibald, Freda Baron, Agnes I. Browning, Editha K. Derrick, Gladys D. Hill, Dorothy H. Jackson, Dorothea J. Tugwell, Fanny L. Turnbull, Dorothea V. Wallace, Ella Gilbert (in Logic only). Intermediate Science: Pass—Ella Holme, Elizabeth D. Pocock, Mabel M. Barker (in Geology only). Matriculation Examination: Division I.—Frances C. Anderson, Mary McLean, Elizabeth Saunders, Mary Addams Williams. Division II.—Alice D. Bates, Christine D. Butler, Gladys Daubeny, Adèle M. de Putron, Christine G. Downie, Mary I. Henningway, Dorothy Leech, Amy C. G. Uloth, Lucy Wills, Margaret I. W. Witton, Mary Désirée Waller. WILLIAMS & NORGATE'S
LIST OF SCHOOL BOOKS.

"Books to be strongly recommended."—*Educational Times*.

EUGENE'S GRAMMAR, EXERCISES, AND METHOD.

The Student's Comparative Grammar of the French Language. With an Historical Sketch of the Formation of French. For the use of Public Schools. With Exercises. By G. EUGENE FASNACHT, late French Master, Westminster School. 21st Edition, thoroughly revised. Square crown 8vo, cloth, 5s. Or separately, Grammar, 3s.; Exercises, 2s. 6d.

"The appearance of a grammar like this is in itself a sign that great advance is being made in the teaching of modern as well as of ancient languages. . . . The rules and observations are all scientifically classified and explained. Mr Eugene's book is one that we can strongly recommend for use in the higher forms of large schools."—*Educational Times*.

French Method. Elementary French Lessons. Easy Rules and Exercises preparatory to "The Student's Comparative French Grammar." By the same Author. 17th Edition. Crown 8vo, cloth, 1s. 6d.

"Certainly deserves to rank among the best of our elementary French exercise books."—*Educational Times*.

"Extremely well done."—*Educational Times*.

HUGO'S LES MISÉRABLES.

Les Misérables. Les Principaux Episodes. Edited, with Life and Notes, by J. BOIELLE, B.A., late Senior French Master, Dulwich College. Two Vols. Crown 8vo, cloth, each 3s. 6d.

"A worthy addition to our stock of French reading books, which will be welcomed by numerous masters. M. Boielle's notes are full and to the point, his philology is sound, and his translations idiomatic."—*The Journal of Education*.

"Has done extremely well in putting forth his selection of the most striking episodes of Victor Hugo's masterpiece, and has done it well."—*Educational Times*.

"Makes an admirable school-book."—*Scotsman*.

HUGO'S NOTRE DAME.

Victor Hugo.—Notre Dame de Paris. Adapted for the use of Schools and Colleges, by J. BOIELLE, B.A., late Senior French Master, Dulwich College. Two Vols. Crown 8vo, cloth, each 3s.

"His notes abound in good renderings of sentences and phrases, opportune remarks on the proper meanings of words, and historical information necessary to elucidate the text."—*Athenum*.

"His famous work, adapted with commendable taste and judgment, . . . presents every factor which could be put together to make a perfect school book."—*Spectator*.

"Equipped in the same excellent manner as the same author's 'Misérables.' . . . Makes an admirable school book."—*Scotsman*.

FRENCH CLASSICS FOR ENGLISH STUDENTS.

Edited, with Introduction and Notes, by LEON DELBOS, M.A., late of King's College. Price per Volume, paper boards, 9d.; cloth, 1s.

1. **Racine.—Les Plaideurs.**
2. **Cornéille.—Horace.**
3. **Cornéille.—Cinna.**
4. **Molière.—Le Bourgeois Gentilhomme.**
5. **Cornéille.—Le Cid.**
6. **Molière.—Les Précieuses Ridicules.**
7. **Chateaubriand.—Voyages en Amérique.**
8. **Xav. de Maistre.—Prisonniers du Caucase et Le Lépreux d'Aoste.**
10. **Molière.—Misanthrope.** By G. H. CLARKE. 1s.
11. **Chanson de Roland.** Historical, Critical, and Grammatical Introduction. Three Passages, with Explanatory Notes and an English Translation. By CLAUDE F. CONDELL. Sewed, 9d.

"Compared with other books having the same aim, these books deserve very favourable mention. For the notes are well selected; they never commit the capital fault of trespassing on the province of the grammar or the dictionary, and so pandering to the pupil's laziness; and they are, moreover, generally well expressed and to the point."—*Saturday Review*.

READY. Crown 8vo, cloth, 3s.

SCHOOL TEACHING AND SCHOOL REFORM.

By Sir OLIVER LODGE, Principal of the University of Birmingham.

"We heartily commend Sir Oliver Lodge's book to the teaching profession as a valuable, thoughtful, and inspiring contribution to the recent discussions on education."—*School*.

JUST READY. Crown 8vo, cloth, 2s. 6d. net.

REFORM IN PRIMARY EDUCATION.

By J. G. HAGMANN, Ph.D. Translated from the Second German Edition by R. H. HOAR, Ph.D., and RICHMOND BARKER, M.A. With a Preface by LEON DELBOS, M.A.

WEISSE'S SHORT GUIDE TO GERMAN IDIOMS.

Being a Collection of the Idioms most in use. With Examination Papers. 8vo, cloth, 2s.

This book of German Idioms will be found to be a fairly complete collection of such phrases as come under this designation, being commonly used both by good writers and in ordinary conversation; while the arrangement in alphabetical order of the characteristic or cue words will make it easy for the student to refer to any particular expression.

Grimm's Märchen. By W. J. HICKIE.

Andersen's Bilderbuch ohne Bilder. By ALPHONS BECK.

"A marvel of cheapness."—*The Journal of Education*.

giving took place in the School Hall on Friday, July 27. The chair was taken by the Rev. Canon Carver, D.D., Chairman of the Governors. The prizes were distributed by the Venerable the Archdeacon of Kingston-upon-Thames, formerly a Governor of the school. In December, 1905, 75 girls were presented for the Cambridge Local Examinations, of whom 74 passed, 29 in Honours, with 34 Distinctions. Six of the Senior candidates were exempted from the London Matriculation, and 11 from the whole or part of the Cambridge University Previous Examination. In the examination of the London Institute for the Advancement of Plain Needlework 63 certificates were obtained in various grades. In July, 1905, London County Council Intermediate Scholarships were awarded to K. Angell and M. Rackham, and a Kent County Council Senior Scholarship to H. Baker. On the results of the summer examination by the University of London exhibitions of £45 a year for three years were awarded to H. Richardson, H. Beagley, and R. Angell, the Governors generously granting a third exhibition, as the second and third candidates were practically of equal merit. The following successes have been won by former pupils of the school during the past year:—L. Delf obtained First Class Honours in the Natural Sciences Tripos, Part II. (awarded the Thérèse Montefiore Prize of £32), M. Gardner, Second Class Natural Sciences Tripos, Part I. (awarded Fourth Year Scholarship of £21), L. Marsh, Second Class Classical Tripos, and S. Stebbing, Second Class History Tripos. W. Branchley, B.Sc. Lond., obtained a Gilchrist Studentship of £100 for one year for research work in botany. E. Beagley was first among all candidates in the Civil Service Examination for Women Clerkships. E. Leech obtained a First Class Diploma for Needlework and Laundry Work at the Battersea Polytechnic Training School for Domestic Economy. M. Bryant passed the London Intermediate B.Sc., taking the third place in Botany. At the conclusion of the proceedings a vote of thanks was accorded to the chairman for his late generosity to the school in endowing two prizes for modern languages to be given annually on the result of the summer examinations. The winners for this year were M. Buser in the sixth and M. Japps in the fifth form.

EAST LONDON COLLEGE.—Drapers' Company's Entrance Scholarships of £40 per annum, tenable for three years, have been awarded as follows:—P. P. Selver (City of London School), C. H. Hampstead (Enfield Grammar School), R. A. M. Kearney (Wandsworth Grammar School), F. B. T. Thole (Owen's School, Islington), J. E. Brinsley (Kirkdale Grammar School), A. F. Salmon (Banbury Municipal School), G. G. Lamb (Watford Grammar School), H. G. Howson (Owen's School, Islington), A. E. Willman (Watford Grammar

School), F. S. Long (Parmiter's School), G. E. R. Wendt (Coopers' Company's School), M. Howgego (Coborn Girls' School). Alec D. Mitchell has gained a London University Entrance Exhibition; Arthur G. Warren, a London University Sherbrooke Mathematical Scholarship; L. Wilson, a London County Council Senior Exhibition of £25 a year for two years; and Arthur P. Thurston, First Class Honours at the B.Sc. (Engineering) Examination of London University. At the London University General Intermediate B.A., B.Sc., and B.Sc. (Engineering) Examinations for Internal Students, 9 passed in Arts, 23 in Science, and 7 in Engineering. Additional Lecturer in Mathematics, Mr. G. A. S. Le Beau, B.A. (Oxford Junior and Senior Mathematical Scholar); Professor of Physics, Dr. C. H. Lees, F.R.S.; Lecturer in French, Miss Mina Paquier; additional Lecturer in English, Miss Alice H. Davies (First Class Honours at Oxford in English). The engineering workshops and laboratories have been extended by means of a further grant of £5,000 from the Drapers' Company. The Arts course for the London B.A. degree, which was started in September, 1905, has been much extended; and very full courses in the day and evening under recognized teachers are arranged for the B.A., B.Sc., and B.Sc. (Engineering) degrees of London University, both Pass and Honours.

EDINBURGH, ST. GEORGE'S TRAINING COLLEGE.—At the recent examinations of the Cambridge Teachers' Training Syndicate the following students obtained Certificates for Theoretical Knowledge of Educational Principles and Practical Efficiency as Teachers in Secondary Schools:—Class II.: Mary S. Anderson, M.A., Mary Black, M.A. (Honours), Netta T. Gordon, M.A. (Honours), Janet J. Kerr, M.A., Jane B. T. Macdonald, M.A. (Honours), Mary McMichael, M.A., Dorothy K. Pearsall (Somerville College, Oxford), Elsie Richards, B.Sc., Mary Wedderspoon, M.A. Misses Anderson, Gordon, Kerr, and Richards were awarded Distinction for class teaching. Class III.: Mary Gilmour, M.A., Lillie E. Hudson, B.A., Ada S. Mackay, M.A. (Honours), Janetta M. Murdoch. The following appointments were made at the conclusion of the course of training:—Miss Anderson, assistant mistress, the Wallasey High School, Liscard; Miss Barty, science mistress, St. Margaret's School, Polmont; Miss M. Black, assistant English mistress, Lycée de Jeunes Filles, Grenoble; Miss Gordon, classical mistress, St. Columba's School, Kilmalcolm; Miss Richards, science mistress, Girls' Grammar School, Ashby-de-la-Zouch. Several other students of the Training College have accepted appointments in private schools. On the recommendation of the

250 have been supplied to the Glasgow School Board.

700 Architects have used and recommended them.

HIGHLY APPROVED BY THE BOARD OF EDUCATION, AND RECOMMENDED BY H.M. INSPECTORS OF SCHOOLS.

Illustrated Circular and Estimates Free on receipt of Particulars.

Edinburgh Provincial Committee for the Training of Teachers, the course of professional training at St. George's Training College has been recognized for session 1906-7 by the Scottish Education Department in the case of graduates preparing to teach in schools giving mainly a primary education. Graduates with Honours desirous of securing the special qualification to teach some higher subject in an intermediate or secondary school may also qualify during session 1906-7 by attendance at St. George's Training College, provided they have fulfilled the other conditions laid down by the Department.

EXETER HIGH SCHOOL.—Miss W. A. Todhunter, B.A. London, Oxford and London Training Diplomas, will take charge of the training department in September. As Gilchrist Travelling Scholar Miss Todhunter has been investigating the conditions of school life in Norway, and she previously spent a year in girls' lycées in France. The training department makes its chief aim the training of modern language specialists on new method lines. Miss Haslam (Classical Tripos, Girtton) joins the staff as classical mistress, and Miss Bambridge (Natural Science Tripos, Newnham) as science mistress.

HARROW, LOWER SCHOOL OF JOHN LYON.—Five boys have gained First Class, and 15 boys Second Class, in the Junior School Examination of London University. Mr. Carl Sandberg, M.A. Oxon., Scholar of Hertford College, has been appointed Modern Language master. Speech day was July 29. The prizes were distributed by Mr. W. Chawner, M.A., Master of Emmanuel College. He was supported by Mr. W. Leaf, Litt.D.; Mr. T. F. Blackwell, J.P. D.L., President of the London Chamber of Commerce; and Mr. A. K. Carlyon, J.P., High Sheriff of Middlesex.

KIDDERMINSTER, WOLVERLEY SCHOOL.—Scholarships have been awarded to I. A. J. Duff (Mr. Lewis Faraker, Holm House, Lowestoft), H. T. M. Roberts (Wolverley School), F. C. Sale (Miss Ryder, Wistaria House School, Shipston-on-Stour), W. H. Wills (Wolverley School), A. Devis (Chaloner's School, Braunton, N. Devon).

MARY DATCHELOR GIRLS' SCHOOL AND TRAINING COLLEGE.—The year which closed on July 24 with the distribution of prizes by Mrs. T. Stanhope Kelley, wife of the Master of the Clothworkers' Company, who are the governors of the school, has been a very successful one. The school has been larger than at any previous period of its history, and has, indeed, been quite full all through the year. The reports of the London University and of the Board of Education as to the work, discipline, and general efficiency of the school have been most satisfactory. The results of outside examinations have also borne witness

to the thoroughness of the teaching. Two girls took the Final B.A. of London University last autumn. This summer three have passed the Intermediate B.A. and three the Intermediate B.Sc.; seven have matriculated, fifty-three have passed the Junior School Examination of the University, thirty-eight gaining First Classes, and there was no failure at all in this examination. Two open entrance scholarships have been won at the Royal Holloway College, one for Classics, the other for Science. Each is worth £50 a year for three years. The winner of the Science Scholarship has also been awarded one of the Senior Scholarships of the London County Council of the value of £80 a year for three years. Another of the Datchelor girls has been given a free place at University College for three years—that she may read for an Honours degree in Science. Two others are now proceeding to Girtton, one to read for Classics, the other for Modern Languages; the latter has been awarded the Clothworkers' Exhibition of £50 a year for three years. In the Cambridge Higher Local Examinations held last June seventeen Honours were won (with four Distinctions), nine being in History, four in English, three in Languages, one in Logic and Psychology. There were also nine passes, five of which were in Mathematics. Sixteen girls in all entered for various groups in this examination, and only three failed in any group. In the Art Examinations of the Board of Education forty-four certificates have been won, sixteen of them being First Classes. The musical department of the school has also had a very good year. Thirty-eight certificates have been won for Pianoforte, two for Violin, five for Solo Singing, thirty-three for Sight Singing and Theory of Music. Out of eighty-five who entered for these various examinations seventy-eight were successful and twenty-five took Honours. The examinations for which pupils were entered included those of Trinity College, the Associated Board of the Royal Academy and Royal College of Music, the Incorporated Society of Musicians, and the Incorporated Staff Sight Singing College. During the year nine students—all, of course, graduates—have gained the Teaching Diploma of the London University. Five others have taken the Cambridge Teaching Certificate. All the students have obtained satisfactory posts in schools.

PARKSTONE (DORSET), SANDECOTES SCHOOL.—On July 30 the annual prize-giving was held in the school hall. The Hon. Mrs. Charles Eliot distributed the prizes and spoke to the girls. The chair was taken by Mr. W. Joynson Hicks, and the report of the year's work was given by the Head Mistress, Miss Grainger Gray. The

Three chapters have been added describing in brief compass the chief events in the history of France, Germany, and Russia in the last two decades of the century.

494 pages, crown 8vo, cloth, price 6s.

Detailed Prospectus gratis on application.

STANFORD'S NEW OROGRAPHICAL MAPS.

Compiled under the direction of H. J. MACKINDER, M.A., Director of the School of Economics and Political Science in the University of London, and lately Reader in Geography in the University of Oxford.

These Maps have been compiled with care from original materials, chiefly Government Surveys. They are primarily intended to depict the Physical Features of the Continent, but, by the employment of the device of grey, almost transparent, lettering, many names have been inserted without spoiling the graphic effect of the colouring. The contour lines have been drawn at the same intervals above and below the sea level.

WRITE FOR CATALOGUE.

NOTE NEW ADDRESS:—

6 BOUVERIE STREET, FLEET STREET, LONDON, E.C.

successes in the past year included four full Higher Certificates and two Letters and passes in the London Matriculation and Cambridge Previous Examinations. In Music two pupils—E. Grose Hodge and I. Morley—passed the Advanced Grade, and two pupils—M. McCall and M. Marston—passed the Intermediate Grade of the Local Centre Examinations; and ten passed the various divisions of the Local School Examinations of the Associated Board of R.A.M. and R.C.M. One pupil—B. Orange-Bromehead—passed Grade II. ('cello) of the examinations of the I.S.M. Two pupils—I. May and Elsa van Goethem—gained Full Honours Certificates from the Royal Drawing Society, and thirty-one gained Honours in one or more divisions. At the exhibition of the R.D.S. one sheet of drawings was highly commended; three sheets were commended Second Class; and two sheets were commended Third Class. A programme of music and elocution was given by the girls, a large number of parents and friends being present.

PURLEY (SURREY), RUSSELL HILL SCHOOLS.—Debenham Scholarship to Switzerland for Modern Languages, William I. B. Ware. Boys.—Tapping Exhibitions (English silver watches and balance of Exhibition Fund), Arthur Eteson and John Jones; Mr. Hope Morley's Prize for Business Routine, A. Eteson; Walsford Greatorex Prize (best University Local candidate), John Jones; Dr. Walter Leaf, L.C.C., Prize for Good Conduct, H. J. Kidson; John Bentley Prize for Gymnastics, Sidney Wilde. Girls.—Mr. Hope Morley's Prize for General Attainments, Gladys S. Rush; the Hon. Mrs. Herbert Cook's Prize for best Senior Local candidate, Gladys S. Rush; Lady Faudel-Phillips's Knitting Prize (senior and junior girls), Violet Brown and Florence Packington. Mr. John Cobb, B.A. London, the modern language master, has left to take up the headship of an important school in Canada. Mr. W. E. Hunt, of Wakefield Grammar School, has been appointed drawing master. On prize day a scene from Shakespeare's "Henry V." (Act iv., Scene iv.) was well rendered by Williams, Godfrey, and Collins. Swimming races are to be organized for Old Russellian Day on Saturday, September 18. Miniature rifle shooting is to be taken up again with renewed vigour. The floor of the John Roberts covered playground has just been renewed with maple blocks at a cost of over £200.

RHYL, ELWY HALL.—A scholarship of £50 a year has been awarded by the Governors of the Royal Holloway College to Miss Margaret Noel Roberts, a pupil of this school. Miss Roberts, who is seventeen years of age, was granted a bursary of £30 a year on the strength of her being first of the four candidates who *proxime accesserunt* at the recent Entrance Scholarship Examination, in which she was second in French among the candidates.

ST. LEONARDS-ON-SEA, UPLANDS SCHOOL.—On prize day the Countess of Ancaster distributed the prizes. Sir W. Mackworth Young, K.C.S.I., who presided, said that during the past year the school had made gratifying progress in every respect. In January the premises were enlarged so as to accommodate thirteen additional boarders. All these places had now been filled, raising the total number of pupils to a hundred. The Head Mistress, Miss H. Walsh, in her report, stated that many successes had been won in examinations. In the Cambridge Junior Local Examination for History the third place was obtained out of 7,900 competitors. As the first and second places were won by boys, the pupil from Uplands was placed first of all girl candidates in England taking History. Honours with distinctions were secured in the Senior and Junior Divisions by other pupils in English, French, and Religious Knowledge. One pupil won a scholarship for violin playing at Trinity College of Music; and eleven others passed successfully the examinations of the Associated Board of the Royal Academy of Music and the Royal College of Music. A Bronze Star was among the many successes obtained from the Royal Drawing Society. At the conclusion of the proceedings a most effective demonstration of Swedish drill was given in the school gymnasium.

WINCHESTER COLLEGE.—The Duncan Prize for Reading has been awarded to H. T. Wade-Gery; the Moore Stevens Divinity Prize to G. D. Roehling; the Holgate Divinity Prizes to R. M. Wright, J. S. Wilson, and S. S. G. Crese. A. J. Toynbee won the Goddard Scholarship. The summer concert took place on July 30; the chief feature in the programme was Parry's "Pied Piper of Hamelin." The Sub-Warden (Mr. J. Parker Smith, P.C.) presided at Medal Speaking and Domum Dinner. A shadow has been thrown over the term by the deaths within short intervals of Dr. R. Margerisen, Mr. K. J. Freeman (one of the younger masters, a brilliant Cambridge scholar), and Mr. J. A. T. Bramston, a well known figure in the younger Wykehamical world as his father's son and a great golfer and racquet player.

WYCOMBE ABBEY SCHOOL.—Speech day was held on June 28. Amongst the Honours gained since last speech day the most outstanding were two Firsts in the Final Honours School of Modern History at Oxford. Dr. Burge, President of the School Council and Head Master of Winchester, presided over the speeches in the afternoon; and Canon J. O. Johnston, Principal of Cuddesdon College, preached at the special service held in the Parish Church at 11 a.m.

Manufacturers, Importers, and Dealers in
CHEMICAL & PHYSICAL APPARATUS

Rostron's Patent **OPTICAL LAMP** for Students.

ADVANTAGES.

- 1—It brings to a white surface on the bench a line of light which may be considered the path of a ray of light.
- 2—The Laws of Reflection and Refraction are obvious from the visible paths of light. No imagination is required as in "Pin" experiments.
- 3—It gives a source of light of desired shape, and screens it efficiently.
- 4—It is convenient in size and adjustments, no focussing is required, and it is coupled in place of the Bunsen Burner.
- 5—It serves instead of all Screens (except for image), their Stands, Pin-hole Camera, and Lamp and Scale for Mirror Galvanometer.

Price 15s. 6d.

One of H.M. Inspectors of Secondary Schools says of it:—"The Lamp is an excellent means of directly illustrating the principal Laws of Light, and it would prove very useful to all students of this subject."

MICROSCOPES and ACCESSORIES

by all the Leading Makers, (including Beck, Leitz, Reichart, Zeiss, and also Messrs. Watson & Sons, of whose Instruments we hold a Large and Varied Stock.

BIOLOGICAL & DISSECTION INSTRUMENTS.

The "VICTORIA" Biological Case—Solid Walnut Wood Case, containing Three Scalpels, Three Forceps, Three Pairs Scissors, Three Dissecting Needles, Seeker, Section Lifter, Metal Blowpipe, Razor, Strop, and Triplet Lens.

Price £1 1s. 0d.

GOERZ TRIEDER BINOCULARS.

**High Power. Large Field.
Light and Compact.**

THE FINEST BINOCULAR FOR NATURE STUDY AND GENERAL PURPOSES.

"With my glasses—the GOERZ Trieder Binocular No. 30, 9x—I have been able to distinguish sea-birds on their nests two and a half miles away; at a distance of a quarter of a mile a bird the size of a sparrow can be recognized. No better aid for observing such far-away objects can be obtained or desired."—Mr. OLIVER G. PIKE, in *Woodland, Field, and Shore*.

"I was the happy possessor of a pair of GOERZ Trieder Binoculars. Every one praises his own glass, but of all those I have tried *none has been so good as this glass for my purpose*."—Mr. HARRY F. WITHERBY, F.Z.S., M.B.O.U., writing in *Knowledge* upon his Ornithological Tour through the Soudan.

"This is the second of your Trieder Binoculars I have had, and I am never tired of recommending them to my friends, as I consider them simply perfect. . . . for all purposes on land, sea, or the heavens, it is quite a delight to use it."—T. M. LONGBOTTOM.

"I have two Goerz Monoculars, which are *exquisite*. I have never seen anything to approach them in light, width of field, and definition."—A MEMBER OF THE B.A.A.

J. POOLE & CO.,

(ESTABLISHED 1854)

104 CHARING CROSS ROAD, LONDON, W.C.

After speeches the Head Mistress held a garden party, and visitors remained until 7 p.m., when the majority were conveyed in a special train to London.

CORRECTION.—In our Oxford letter of last month the winner of the Stanhope Prize was incorrectly designated. Read: "R. V. Holt, Lincoln College." The winner further points out to us that the prize essay on "Viscount Castlereagh" was read at Encaenia.

PRIZE COMPETITIONS.

The Translation Prize for July is awarded to "Gempy."

Une histoire ainsi conçue est extraordinairement intéressante. Elle est très édifiante aussi. On y voit l'impiété raclée et le christianisme victorieux. On y voit surtout des coups d'épée, des corps percés de part en part, des hommes fendus en deux d'une seule botte—crâne, ventre, cheval. On se crache au visage, on se tire la barbe, on n'a peur de rien; on en vient tout de suite aux invectives et aux mains; on se cogne, on se poche, on se bosse, on se coche, on s'écharpe, on s'enfonce, on s'abîme, on s'estourbit, on s'assomme; atouts et claques, calottes, tapes, gifles et morniffes, horions et nions, frottées, fessées, rincées, rossées, mêlées, raclées et giroflées; coups portés, coups parés, coups fourrés, coups secs, coups au morion; coups de revers, de travers, de pointe, d'estoc, de taille; coups sur coups, coups pour coups. Il y a des destriers qui franchissent les fleuves d'un seul élan, des monstres à gueule de lion et à corps de serpent tout en braise, des géants qui mangent de la chair humaine. Il y a des naufrages, des tempêtes, des palais enchantés, des armes ensorcelées, des musiques, des carrousels, des jeux d'échecs, des jardins de printemps, des grottes, des voleurs, des pavillons brodés et des blondes filles de roi. Tout ça est vrai, véritable, arrivé. Il n'y a pas moyen d'en douter. On vous produit les sources. On vous cite les témoignages. On vous donne les preuves. On vous indique les noms. On vous fournit les mesures. Et quand les auteurs sont en désaccord, on vous le dit. Il faudrait être fou à lier pour mettre en suspicion de pareilles choses si bien établies et reconnues, qui sont selon la vérité et selon la carte. Le peuple y croit. Il ne branle pas. Il ne bronche pas. Muet, sérieux et recueilli, les yeux agrandis, il écoute, et par sa bouche ouverte la salive coule.

By "GEMPY."

A history conceived on these lines is of extraordinary interest, and highly edifying at the same time. It shows us impiety well pummelled and Christianity triumphant. We see above all sword-cuts, bodies run through and through, men cleft in twain at a single blow—skull, belly, and horse. Men spit in each other's faces, pull beards, and fear nothing; they fall at once to gibes and to fisticuffs; they bang, punch, bruise, batter, and slash each other, plunge into battle, annihilate, assassinate, and exterminate each other. We have slaps, raps, taps, smacks, whacks, cracks, bangs, buffets, bumps, and bruises; clubbings, drubbings, hurlyburlys, pummellings, and punchings; blows laid on and parried, underhand blows, dry thumps, blows on the scone, back strokes, cross blows, point, edge, cut, and thrust; blows on blows, blows for blows. There are chargers which clear you rivers at a single bound, monsters with lions' jaws and fiery dragons' bodies, giants who feed on human flesh. There are shipwrecks, hurricanes, enchanted palaces, magic weapons, music, tournaments, games of chess, gardens of spring flowers, caves, robbers, embroidered banners, and fair-haired princesses. All is true, genuine, matter-of-fact. There is no room for doubt. Authorities are quoted. Evidence is forthcoming. The proofs are at hand. Names are published. Measurements are furnished. And when the authorities disagree you are told of it. No one but a candidate for a strait waistcoat would cast suspicion on matters so well established and vouched for, so manifestly true and according to Cocker. The public believe it all, without so much as a wink or a blink. Dumb, grave, and collected, they listen with staring eyes, while the saliva dribbles from their open mouths.

We classify the 101 versions received as follows:—

First Class.—Mow, Vire, M. de C., Givry, W.G.M., Megan, Gempy, Menevia, Chemineau, Philosophe, Wharfedale, T.V.D., Fifiue, Bia, W.M.H., Wyvenhoe.

Second Class.—Baloo, Cinnamon, C.H.T., Cécile, C.V.B., M.J.B., Tête Blanche, Pearl, Rest, Cosy, Leander, Broom-stick, B.O.B., Abdul, Chingleput, Banshee, Altnacaille, Una, Bladud, E.A.K.M., Monk, Proba, Carl, Elizabethan, M.C., Gargoyle, G.A.S., Clev, Hilly, Amadan.

Third Class.—J.H.H., Rosamund, Thel, H.D.S., Eclipse, Marguerite J., M.E.F., Broionie, Frig, K.M.L., E.C.N., Gem, Aiglon, E.M.B., Sitaput, Paillet, L.L.C., F.T., Novice, Incognito, Lob, M.D.

School and Teachers' Advertisements are continued on pages 627, 628, 629, 630, and 631.

Fourth Class.—Rustic, Emilia, F.J.W., D.B., 11769, G.R.M.C., Black Panther, V.S., A. Eustache, Fas, Pervenche.

Fifth Class.—Astrachan, Vosges, Undine, Salve, Scylla, T.B., N.A.T., Paris, Lobelia, F.R., Consuelo, Non, Viola, Percy, Uva, Cynic, Delorme, Aster, Mott, U.T., O.N.A., Lob.

Monnier's description of the mediæval romance of Italy was one of the hardest bits set for a long time, and some of the words are not to be found in Becherel, Littré, Thomas, or any ordinary dictionary. *Nions* I have myself been unable to discover (it is not a misprint). I shall not attempt to give a definition of the various terms of assault and battery. In translation it is more important to preserve the jingles and alliterations than to give exact equivalents. Burton's "Anatomy," Urquhart's "Rabelais," "Tristram Shandy" might serve as models. "Gempy" has in this succeeded the best, but he might have been closer. Thus, *on se cogne*, &c.: "facers, black eyes, slashes, gashes, hacking, hewing, battering, shattering, and felling." To point out a few of the commonest mistakes, *ainsi conçue* is not "thus conceived," but "composed on these lines," like the Latin *conceptus*. *Impitté* is not "sin," but "infidelity." *Des corps*: not "corpses," but "bodies spitted like fowls." *Tout de suite* is not "directly afterwards," but "in an instant." *S'abîme* has nothing to do with "drowning," nor *carrousel* with "carousals." *Les sources* is "the original authorities." *Selon la carte* is "as it stands in the programme"; our "by the card" exactly serves. "Slavers with open mouth" will avoid an ugly word, as above "head, trunk, and horse." "According to Cocker" is an ill-fitting modernism, as is "band" for "music." *Pavillons* may mean "banners," but more probably "tents."

HOLIDAY PRIZE COMPETITIONS.

TEN GUINEAS.

Prizes to the above amount are offered for the following subjects. The full award will not be made unless, in the opinion of independent judges, there are candidates of sufficient merit, but a minimum of Five Guineas is guaranteed.

DRAWING.

1. A water-colour landscape.
2. A black and white sketch adapted for *Punch*.

PHOTOGRAPHS.

1. A family group.
2. A study to illustrate any order of architecture.
3. A Nature study to serve as an illustration for a lesson.

LITERARY.

1. A translation of an English lyric, not more 24 lines, into any foreign language.
2. An incident of school life—not more than 500 words.

No entries will be received after September 15. Photographs (except those of prize-winners) and drawings will be returned if accompanied by a stamped and addressed wrapper.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by September 15th, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

VACATION TERM FOR BIBLICAL STUDY.—The work of imparting religious teaching is so largely undertaken by women or falls to their share in the ordinary duties of life that it is important that their Biblical knowledge should be not only sound, but up to date as regards the results of modern research. In order to meet this need, which is being increasingly felt amongst educated women, of systematic instruction in theology of an equally high standard to that obtainable in other subjects, it was arranged three years ago to hold short terms during the summer vacation alternately at Oxford and Cambridge. This year the Committee resolved upon a new departure, and Durham was chosen as the place of meeting. Amongst the lecturers were some of the foremost Biblical scholars of the day, including Dr. Burney (Oxford), Canon Foakes-Jackson and Rev. C. W. Johns (Cambridge), Dr. Jevons and Canon Knowling (Durham), Dr. Moulton (Manchester), Rev. C. Anderson-Scott (London), Dr. Hodgkin, and Dr. Flinders Petrie. The kind welcome and hospitality of all those connected with the cathedral and University of Durham, and the beauty and historical interest of the surroundings, contributed largely to the enjoyment of the term. As suggestions for next year's vacation term are already under discussion, those who are interested are invited to write for further information to the Secretary, Miss Creighton, Hampton Court Palace.

MEETING OF BRITISH ASSOCIATION AT YORK.

THE Section of Educational Science was opened on Tuesday, August 2, by the Presidential Address of Prof. SADLER, who said :

The Committee of this Section, feeling that in England we are at the opening of a new chapter in our educational history, have endeavoured to arrange a programme which, so far as the limits of time allow, will enable members to discuss the chief and most pressing problems of school reform. Some sides of this question, political and ecclesiastical rather than educational in character, are by the rules of the Association rightly excluded from debate; but plenty has been said about these topics elsewhere, and there remains for us a series of questions not less pertinent to the main issue and scientific in their range without being politically controversial. With your leave, therefore, but with a strong sense of the difficulty of the task and of the greater fitness of several other members happily present among us to undertake it, I will attempt to say something by way of general introduction to the debates which lie before us during the next few days.

During the last ten years more thought and labour has been given to educational questions in England than at any earlier period in our history. If we compare the present state of things with that of a decade ago, we have good reason for encouragement and hope. Great additions have been made to the number of our schools and Universities; within the last six years six Universities in England have been either reconstituted or actually refounded, two in Yorkshire itself; great changes have been made in the machinery of educational administration, and an even greater change has come over the attitude of mind with which thinking people approach the question of what our schools should teach, how they should teach it, and what should be the social purpose underlying and inspiring their work. We have moved, often unconsciously, from our old moorings. A strong current which we could not resist has shifted us from where we lay, more or less comfortably. And we have had to move in a fog—a puzzling and dangerous fog—now impenetrably thick and now lifting enough to show that we are moving in strange waters. First on one side and then on another we have heard angry cries at impending collision; but the current carries us on amid conflicting advice as to the handling of the ship, and much discord of opinion as to whether we are really going.

If, however, we review the general course of events in English education during the last few years, certain changes stand out conspicuously and call for notice. There has been a great growth in public control over educational work. The chief tendency of recent legislation has been to strengthen the powers of the Board of Education on the one hand, and of the Local Authorities on the other. It is true that many of these powers have not yet been fully exercised, but they have been granted, often without serious challenge, and they lie in reserve. Whether in course of time the enforcement of these powers will come chiefly through the Central Authority or through the Local Authorities is still uncertain. The cantonal principle and the national principle are struggling for the mastery. Probably neither of them will completely prevail. But considerations of finance, the growing need for increased contributions from the Treasury in relief of local rates, and the accumulation of experience in the very large and widely distributed staff of the Authority point towards a steady increase in the power of the Board of Education to press for change, partly through the direct exercise of the power of the purse, partly through the action of Local Authorities taken in response to its own steadily urged requirements. We have realized more fully than heretofore the need for greater unity of purpose in the different grades of education, and the dependence of what is attempted at one stage upon what has been accomplished in another. For example, we have recognized the fact that technical instruction cannot be built up as a detached system by itself. In its higher forms it has to rest upon a long and carefully organized course of secondary education; in its more elementary grades upon a sound basis laid in the primary and higher elementary schools. There are a number of frontier questions. The need of adjustment between the methods of teaching in the infant school and those employed in the junior classes of the senior school, the waste of effort caused by a sharp break of gauge at the junction between the public elementary and the older type of secondary school, the impossibility of making an effective reform in the curriculum of preparatory schools without a modification of the requirements of the entrance and scholarship examinations at the public schools, are all frontier questions, the consideration of which has forced upon us the need for greater unity of plan in our educational system.

A wholly new stress has been laid upon the physical side of education. The reports of the Scottish Royal Commission on Physical Training, 1903, and of the Inter-Departmental Committee on Physical Deterioration, 1904, have helped us to see the whole question of school work in a new perspective. A systematic physical training must be regarded as the essential part of the daily work of every school, and will be found as beneficial to the intellectual and moral development of the scholars as to their bodily condition. For guidance in the

educational treatment of every child according to its physical need; for the detection of defects in eyesight, in hearing, and in teeth; for marking the symptoms of organic disease, we require systematic medical inspection of all school-children at periodical intervals, especially in schools in poorer districts. The attention of great numbers of teachers is already directed to these matters, and with a fuller training in hygiene they would be able to make a considerable number of the necessary observations for the use of the medical inspectors who would visit the schools at such intervals as the special circumstances required. The *crux* of the difficulty lies in getting the parent to act upon the medical inspector's report. But the majority of parents, especially when interest in the matter was shown by a personal visit to the home, would take the necessary steps to secure the medical treatment required. Where help was necessary, it would not be difficult, through the co-operation of charitable agencies, to secure it. And in cases of obstinate neglect the law should severely remind the parent of his responsibility. But to improve the schools and the physical care of the school-children is not sufficient without reforming the state of many of their homes also, and without a great change in some of the conditions of industrial employment. Where the insufficient feeding or the wrong feeding of some of the children is found to defeat the work of the school the real cure of the mischief lies in dealing with the parents, with their economic weakness or ignorance or wastefulness or insensibility, as the case may be. Where the children come to school exhausted by the strain of long and late employment out of school hours the remedy has to be found in stringent regulation of the use of juvenile labour, and, so far as may be, in the prohibition of those forms of premature wage-earning which are fatal to the gaining of industrial efficiency in later years. Thus at point after point purely educational questions are implicated with economic and social problems, and we are forced to the conclusion that educational reform, in any true sense of the word, involves the intrepid handling of evils which lie outside the class-room, and affect the home life and economic welfare of parents and children alike.

Great changes are coming, and coming in the right way, by the response of individual effort to a new sense of national need, as well as by a gradual reform from within of many old institutions which have struck their roots deep into the national life. And towards this new sense of responsibility on the part of schools and colleges which represent the older tradition in English education very much was done by that eminent scholar and eloquent thinker and writer Sir Richard Jebb. And, if we extend our view to what is going forward in Scotland, Wales, and Ireland, the same impression is confirmed. It has been and is the good fortune of England to receive educational stimulus of different kinds from each of the other parts of the United Kingdom. Scotland, above all, has during the past century and a half taught us many lessons. And we have only ourselves to blame that we have not learnt from her many more. One of her lessons, that the higher educational opportunities should be brought within the reach of every lad of promise, we have at last taken to heart seriously, with already fruitful results. Nor ought it to be forgotten how much stimulus and quickening of purpose we have derived from the zeal and courage of America; from the diligent pains, the thrift, but never parsimonious, management, and skillfully directed efforts of German education; from the very practical patriotism of Denmark; and from the brilliant renaissance in France. In education one nation is foolish to attempt a slavish copy of another, but still more foolish to refuse to learn from it. And the result of all these divers influences on English education is that much more that is hopeful for the future is quietly taking place in English education than any one observer can realize.

It is indeed high time for a great change; for I suppose no one who endeavours to look on English education with a candid eye can but admit that in no other civilized country have so many otherwise intelligent people been habitually indifferent to education, or unaware of what it may be made to do. In spite of the issue in the form of a Blue Book of "Suggestions to Teachers in Elementary Schools," I am afraid that great tracts of our habitual indifference still remain undisturbed. It must be admitted that in England, as compared with the best of Scotland and Germany, the home does little to co-operate with the intellectual work of the school; that manifold class separations have prevented the growth of unity in our school system; that we have been more wasteful of the more ordinary kinds of intellectual material; that we have done pitifully little to teach the mother tongue; that there has been far too little in our school lessons to kindle an imagination which, on social, on political, on economic grounds, we urgently need; and that by our worship of examinations we have too often encouraged on the part both of teachers and of learners the wrong attitude of mind. But, looking at the matter as a whole, we have good reason to feel that during the last ten years the mind of the nation towards educational matters has significantly changed. If the truth be told, we are worried and puzzled at the questions involved. But we are perfectly right to feel puzzled and worried. The central difficulties in the whole matter are the outcome of a profound change in our mental outlook due to scientific investigation and to an upthrust of new social forces and ideals which is due in great measure to the same cause. Our best chance of gradually finding the

right solution for our difficulties lies in discarding the idea that somewhere in the world there is a magic formula in education which can charm our troubles, and in recognizing the need for patient and systematic experiment in new educational methods and forms of training.

I am profoundly impressed by the local differences in economic need and in psychological outlook upon educational matters. If there is one country in the world where a cut and dried State system is quite inappropriate, it is this country. Consequently I feel that we cannot be too grateful for the number of men and women all over the country—teachers, administrators, and social workers—who are devoting to the common weal an amount of thought and time and money which I think is not surpassed in any other land. And we may be thankful for the fairness of mind and temperateness of judgment which mark their outlook on educational affairs. I am also deeply impressed by the inevitable expense; impressed by the necessity for doing much more than we have yet done, and yet conscious of the grim figure of the ratepayer. We may well be content to watch for the slow outcome of much that has been done. I feel that we know very little about what is going on in England itself. Is it not much to be desired that we should have publicly on record a real description of what is doing in English education of all grades at the present time? This is a suitable occasion to plead for a systematic, periodic series of physical measurements of children in all schools, and we need something like an inventory of educational effort, intelligently written, and its bearing shown upon the economic and social needs of the nation. We may welcome new duties to be placed on His Majesty's Inspectors of taking these wider surveys of educational work and considering the relation of what is done in schools to the need of the community in which the school is situated. Is it too much to hope that at some time the Central Authority will publish these current notes, so that every teacher should be able to receive regularly and without trouble the new number of the series from headquarters? We need much more cross-fertilization of ideas through the regular publication of results. We have much to learn from the freedom with which the great American Central Bureau issues its publications without charge to all who ask for them. The great point is that we should not have things forced upon us by the Central Authority, but do them willingly and gladly. In what remains to be done will it not be wise to look at the growing points and encourage those points, instead of wasting time on what may be regarded almost as dead tissue? The following seem to be the real growing points in English education at present: first, a new keenness on the part of many intelligent workmen to make the elementary schools better, to have more individual teaching in them, fuller staffing in the higher standards, so that there is less marking time in the last years of the course, and then to have connected with the elementary schools and in sympathy with them a new type of school which provides a higher education to about fifteen years of age, and then a carrying forward from that of technical and physical education in evening classes well graded throughout the district. And for adult workers a further education which is not merely bread-winning and technical, excellent as that is, but which has about it a touch of imagination and humanity and civic idealism. We may rejoice also at the new and kindling interest in the greater development of our practical studies. It is striking how many employers of labour have shown new and welcome interest in the problem of encouraging education amongst their workmen and apprentices: it is most striking in the railway companies and great engineering firms. There is great keenness for better physical training, which should not end with the elementary schools, but be carried on through adolescence, and, I venture to think, be part of the obligation of each individual of the community.

But, if we are to help forward this educational movement, do we not need much more carefully planned and systematically watched educational experiments? There should be better classification of children in public elementary schools with regard to their different rates of mental growth and different intellectual aptitudes. Do we not teach quite different types of children too much alike? The sifting out of defective children is a beginning of the process. It means smaller classes, and smaller classes must be very expensive—so expensive that I think we ought to try by experiment to see what we can do effectively to individualize the children by dividing classes for different parts of the work, by encouraging private study on the part of some of the children, and by massing groups of children more together for certain subjects. It would be an excellent thing if each great Local Authority would have two or three of its elementary schools set apart to work out the educational and financial problem really involved in giving to every child in the school an individual and suitable training. It is desirable that we should have in some of our districts a new type of elementary school tried with far more manual work in the curriculum, with a great deal of physical training, and much simpler literary and arithmetic training. We have a lesson to learn from the industrial schools, and I cannot help feeling that, with all the good intentions in the world, the present curriculum of the elementary school is too ambitious and too varied. Then we need a very careful working out of the course of study and of corporal training in higher elementary schools between the ages of twelve and fifteen; careful experiment as to how to adjust the studies to the different kinds of practical life, and,

at the same time, how to keep strong and fresh a literary interest and a feeling of civic duty. We need, again, carefully watched experiments as to the actual results of postponing the beginning of Latin as a regular school subject until twelve years of age, because, if it is possible to defer Latin, many difficulties as to the breaking of gauge between primary and secondary education will be happily modified.

There is an urgent and extremely difficult problem in our English education—the waste of intellectual power and the waste of moral discipline which arise through children leaving the elementary school at thirteen or fourteen and passing out altogether from the discipline of educational care. The problem of the right education of boys and girls during adolescence is only just beginning to receive the attention it deserves. Can we live in our great cities without having an uneasy feeling that modern conditions of city life and of city employment are really imperilling the stamina of many of the boys to whom we ought to look to become the recruits of our skilled industries, and of many of the girls to whom we look to be mothers of good and healthy homes in the future? It is much to be feared that certain phases of modern industry which depend on practically unskilled employment of boys and girls as they are turned out from the elementary schools are in part parasitic in character, and may be really getting much more than their promoters realize of the moral force and physical strength of the nation. Thirty per cent. only of the young people know educational care during the critical years between fourteen and twenty years of age. In 1904, in Manchester, at least fourteen thousand children between fourteen and sixteen were not in evening or day schools. The conclusion which is being forced upon a majority of observers is that we cannot afford to allow this leakage to go on. We are in the position of people who have laid down a costly water supply and then left a hole in the pipe just behind the tap. Out of seventy-six teachers and experienced administrators whom it was my duty to consult, no less than fifty-two were in favour of some form of obligatory attendance. During the last two years there has been a great improvement in the organization of evening schools in many industrial towns. Wise and liberal action has been taken at Messrs. Rowntree's works in this city, and all girls under seventeen years of age are required to attend a school of domestic economy, cookery, and so forth two hours a week during working hours in an excellently built and taught school maintained by the firm at their own expense in the works. The school is under the supervision of the Board of Education, and 520 girls are in attendance; and I believe the results are most encouraging to those who have tried this valuable and epoch-making experiment.

All this voluntary work is valuable, but it does not touch the mass—that huge residuum which we feel is drifting into physical and intellectual disorder, losing the habit of work and discipline, becoming casual, losing the powers of mind and body which they need if they get the opportunity to begin a skilled trade. But shall we not conclude that it is no good to make attendance compulsory unless we touch as part of the problem the question of the hours of the late work of juvenile workers, throwing upon employers the duty of facilitating the attendance of young people up to seventeen years of age without over strain? I should like to see a beginning made by the Local Authority with compulsory attendance at a course of physical training for all boys and girls up to seventeen years of age, encouraging the districts adopting compulsion by a double grant. Have not those three great Yorkshire leaders, Alcuin, Roger Ascham, and Joseph Priestley, their message for us to-day—Alcuin to remind us that, whatever else is done, a nation must educate its leaders; Ascham to remind us that, in order to individualize our scholars, we must distinguish between their aptitudes and natural rates of intellectual growth; Priestley to remind us that the key of the whole situation lies in greater keenness among the secondary schools, and that we should do nothing to hamper individual initiative and private experiment by taking tempting short cuts to excessive State control?

Sir PHILIP MAGNUS, the Chairman of the Committee appointed (Southport, 1903) to report upon the courses of experimental, observational, and practical studies most suitable for elementary schools, presented the report. Separate subjects, he said, had already been ably dealt with by representatives of the Sub-Committee, and he would confine himself mainly to the salient features of the general report. In the teaching of arithmetic valuable work had been done of late years by the Board of Education, and the memoranda they had issued contained many sound, practical suggestions to teachers. But the memoranda did not go far enough: they were confined to details and did not pretend to give that co-ordination which was essential to unity of studies. Moreover, they were so far only a counsel of perfection: they were not carried out in elementary schools. For practical studies to flourish there must be an entire rearrangement of the time-table. It was clear that the intellectual and moral, and, to some extent, the physical, training also of boys and girls between the ages of seven and fourteen would be vastly improved if active and constructive work on the part of the school-children were largely substituted for ordinary class teaching, and if much of the present formal instruction were given as it arose incidentally out of such practical work. He had worked out the idea fully in his valedictory address to

the Association of Manual Teachers—an address that had been translated into German and in Germany had borne good fruit. If practical studies, whether experimental or observational or both, were to dominate the teaching, a fundamental alteration in the methods of instruction must be made and certain informational studies that we now pursued by means of reading and lecturing, with very little permanent effect on the children, must go by the board. There could be no doubt that, owing largely to the requirements of the Code and to the effect which the receding shadow of payment by results had cast upon our schools, a system of academic and mechanical teaching had become stereotyped. It was only by attention to practical work, to the encouragement of "learning by doing," that we could hope to lift the teaching out of the grooves into which it had fallen. Children from the earliest age should be taught to think. No one who had watched a child at play could have failed to observe how it spontaneously exercised its reasoning faculties. But in the scheme of the Board of Education manual study was still an extra. There was no compulsion to provide any practical teaching. Ordinary subjects, such as arithmetic and the group known as English subjects, should be taught incidentally and in close connexion with practical work. To the objection that under such a system there could be no uniformity he answered that uniformity was a false ideal to aim at. The principles underlying the teaching must be the same; but in their application there should be the largest variety of method. There was ground for apprehension that the organization of secondary teaching under State control might tend to produce uniformity and cramp the initiative of the teacher, as it had in the case of primary education. He should like to see under every Local Authority at least one school organized on the principle he was commending—the association of muscular work with brain work. For instance, by the present Code drawing was associated with manual work, but not, as it should be, with reading and arithmetic. To carry out such a scheme we must have a different training for teachers. Classes must be much smaller and the teacher must put himself *en rapport* with each individual pupil. This involved large expense; but there would be some countervailing economy. Under the present system there was far too much teaching in our elementary schools. Children should be left much more to themselves. There must likewise be sympathetic inspectors—not young men taken straight from the Universities, but the pick of elementary head teachers. He hoped they would have a full discussion of the revolutionary programme he had been bold enough to propound.

Prof. SADLER then called on Mr. CYRIL JACKSON, sometime Director of Education in West Australia and Senior Chief Inspector of the Board of Education, to open the discussion. Mr. JACKSON said the practical question was how to get over the difficulty of the present large classes; for we could not hope for some time to come materially to reduce the numbers. Our aim must be to impart in the elementary school not a modicum of learning, but capacity to learn. Let every side of the child's nature be developed on the same individual lines. What could be more absurd than to teach a class of sixty children to read from a Reader? In Scotch schools children were taught to read for themselves both in school and at home. They were given books ranging from the story of Cinderella to "Westward Ho!" and were tested by simple composition. He could not support Sir Philip Magnus's proposal to cut out reading as a distinct subject. In the evening classes with which he had been connected he found that no books were read, and at best nothing but the newspaper. Composition, too, till two years ago, had been nothing but the purest memory exercise. Again, big classes should not be taught as wholes. There should, at starting, be a bifurcation into the forward and backward for clever and stupid pupils. The work should be schemed for a term, not a year; and promotion should take place terminally. Lastly, children should be made to read what was interesting to them, and be interested in what they read. The great army of unemployed consisted mainly of those who had no interest in life.

Mr. A. BURRELL, Principal of the Borough Road Training College, Isleworth, dealt, under six heads, with what he termed "mass work," leaving aside the question of correlation. Under the first head of "Physical Work" he said that at present it was generally represented by steaming children in thick clothing performing exercises on an asphalted playground watered once a week by the caretaker. They were now allowed by the Code swimming and games, but there was as yet no mention of boxing or fives or athletics. They should not be satisfied till every Local Authority was compelled to provide for every primary school a local grass field where cricket and football could be played. The primary schools had yet to find their Almond of Loretto. (2) To teach the use of tools was far more important than most of the forms of manual work now in vogue. (3) The geography mass involved the application of a good deal of bookwork, and to it were appended history, biography, and the daily newspaper. As B. H. George had said: "History is geography." (4) In English work the problem of the school library had not yet been faced. (5) In mathematics book work should be greatly reduced and mental work increased. (6) The sixth mass—singing, speaking, &c.—was equally defective. Turning to training colleges, he said that in spite of all

improvements they had not yet hit on the proper method for excluding the unfit. The student, though he had passed many examinations and came to them with the Board of Education's *imprimatur*, was often a person wholly unfit, and one who would always be unfit—physically, intellectually, and temperamentally—to stand before any class or to instruct or train any child. A school was not made by its buildings or laboratories, but by its teachers. Teaching demanded physical qualities, but with intending teachers practical hygiene was neglected. We needed a medico-ethical training. The Board of Education preferred the calculus or Greek to a knowledge of drawing and the blackboard. An old pupil, now working in the Colonies, had written to him: "I never knew what it was to teach under satisfactory conditions till I left England."

Prof. J. A. GREEN (University of Sheffield) said that teachers had not yet risen to the opportunities of new conditions; they still moved in fetters, though the fetters had been removed. The standard of entry to training colleges had been brought down, but the period of training had not been increased. The seeming tendency was to produce a dead level of mediocrity. He advocated the selection of head teachers not by seniority, but from men who had undergone a prolonged training and really studied pedagogics.

Mr. T. G. DYMANS urged the importance of Nature study in country schools: in town it was an extra; in the country it was the daily bread. It should be of immediate practical utility. Thus, they should take not simply wild plants, but the weeds of fields, allotments, gardens, and show how they can be eradicated. Children should be taught to distinguish useful and injurious grasses. Insect life should be studied in bees and bee-keeping. The ostrich was a favourite object lesson: why not choose rather the domestic fowl?

Mr. ERNEST GRAY thanked Mr. Burrell for his brilliant paper as far as he could understand it, but he confessed that to him it was a *feu d'artifice* which dazzled and blinded him. He entered a protest against the tardiness of the Executive in publishing the Committee's Report. The Committee had sat for three years, and yet few of the audience had had an opportunity of even seeing, and yet fewer of perusing, their Report. He referred to a Report of the Consultative Committee on a cognate subject published that week. In it the higher elementary school of to-day was condemned, but in its place the creation of special schools for children between the ages of twelve and fifteen was recommended. The proposed curriculum was not ambitious. It was confined to three subjects, but these were comprehensive ones: literature, science (including mathematics), and physical training (including manual instruction). To the last subject a third of the working hours was assigned. Specialization, in the sense of preparation for a particular trade or industry, was discouraged, but not in the sense of giving a general trend in the direction of manual labour. The very name of this type of school was changed, and they would be known as day continuation schools. They would be distinguished from secondary schools not by the curriculum, but by the age of pupils, strictly confined to those between twelve and fifteen.

Prof. ARMSTRONG thought it lucky that there was no telephonic communication with the Board of Education; else they would certainly have been treated as the Duma, and dissolved as a dangerous set of revolutionaries. They were attempting the radical reform of making practical studies the kernel of school work. He desired a large diminution of mathematics, which was useless unless made a part of the practical work, and so brought home to the learners. He had lately asked a class of children who were working compound fractions to measure the desk before them. The teacher interposed and said they had not learnt that. Much, however, could be done without any change in the curriculum. Children could be made to speak up. In another class which he had inspected the teacher mumbled out instruction and the children mumbled out answers. The teacher, when taken to task, told him that the Inspector liked the children to talk softly! Another thing they could do was to kick that nonsensical psychology from the training colleges. As to the scheme of the Consultative Committee he was not very sanguine. When he was a member of that body he had helped to draw up a scheme of leaving certificates, but the Board had not had the courage to act on it, and it was so much waste paper.

Mr. SYKES (Bradford) wished that the room were full of elementary teachers to show their approval of Mr. Burrell's paper. Their prayer was for freedom to experiment. The Board of Education did not recognize the individual child: it recognized only averages. The report stated truly that "teaching of the kind here indicated can be given only by well trained teachers"; but he was disappointed with what followed. Something more was needed than the reform of training colleges. Less than 50 per cent. of the present staff satisfied the bare minimum of attainment connoted by the training college. "Supplementary teachers" was the euphemism adopted by the Board for the old incompetents known as "Article 68." As to the simplification of the curriculum caution was needed. He had heard the other day a county-borough councillor urging the dropping of manual instruction, and the argument he had used was: "If you cut off these fancy subjects, you can have larger classes, and taught by pupil-teachers."

Miss FOXLEY (University of Manchester) urged that "real" sub-

jects meant not merely what a child can touch and handle, but all that came within a child's experience. The person played as large—nay, a larger—part than the theory—the person as a member of the family and of the community. She pleaded for the teaching of the humanities on the same lines as the new method of science study.

The PROVOST of TRINITY COLLEGE, DUBLIN, brought to the discussion his experience as a Commissioner of National Education in Ireland. Let them not repeat a fundamental mistake that had been made in Ireland. In 1890 a new system of manual training was introduced, and it was sought to carry it out with the existing body of teachers. It had failed, as he predicted, because the teachers were, most of them, too old to learn themselves. Any new reform must begin in the training colleges.

After some remarks by Mr. J. H. LEONARD, Mr. HELLER, and Miss COOPER, the CHAIRMAN summed up. Prof. Sadler said he had rarely heard a more interesting discussion. It had touched on fundamentals; for primary education was the basis on which all education was built, and the remarks had been far-reaching and practical. They had really been discussing the social aims of education. At the outset the aim of the elementary school was to keep poor people in their proper place. The new studies were put into the curriculum with a view of enabling pupils to change their place and rise to a higher social level. Again our view had changed, and we were aiming at a scheme of primary education that would satisfy the whole nation. If attempted on a large scale, he feared that this revolution was doomed to failure. It should be begun on a small scale and experimentally. We must start with small schools, with small classes, and a sympathetic staff. The new learning looked well on paper; but it had not yet been worked out. One side of education, he thought, had by some speakers been overlooked. That which makes a child love a great hero, that which makes him proud to be born in a country and nation for which he would count it his privilege to die—where does this come into carpentry? We wanted to train the constructive imagination through thought—to train a child in thinking ahead of what would follow from certain courses. And we want this done for the children of the poor under practical conditions and without that self-advertisement which too often characterizes private schemes when promoters naturally set forth all the merits and omit all the drawbacks. The model or experimental school must be protected against the interference of ignorant people; yet it cannot be under public authority, for it must teach social reforms—teach children, for instance, that they must not engage themselves as fur pickers in a hair-filled atmosphere. One more caution. Let it not go forth to the world that we think all that is going on in schools is bad because we point to something better. And let us not insist over much that teaching depends on the teacher, not on the buildings. We want both good teachers and good buildings. Though he must rank himself as a member of the left centre, yet he was most heartily in favour of this reform movement.

Domestic Work.

Mr. J. FLETCHER, the Secretary of the Sub-Committee, presented the report. Systematic training should not begin before the age of twelve. The defect of such teaching hitherto had been a too rigid division of the subject into cookery, laundry-work, and needlework. The teaching had, in consequence, been too far removed from the needs and home conditions of those receiving it. The accommodation required for efficient teaching might be provided without much difficulty in large girls' schools, but in small rural schools centres of domestic teaching were recommended. Thrift should be inculcated incidentally.

Prof. SMITHELLS, University of Leeds, delivered an address on "School Training for the Home Duties of Women." He should not be content till he saw the management of the home and the nurture of children assigned as important a place in our educational system as the training of doctors or of engineers. The branch of the subject to which he had paid special attention was the teaching to girls and women of something in the nature of science which should be of real value in relation to the affairs of the household. His object was not simply utilitarian. It was his firm conviction that no man's, and no woman's, work was what it should be unless it engaged and exercised his or her powers of understanding, when it acquired an intellectual interest and gave that pleasure which is only possible to one who is working in the light of knowledge. Yet the household had been hitherto a realm of applied science which our educational system had allowed to remain a realm of rule-of-thumb and of drudgery. Girls were now taught science, and in many schools taught it well, but they had still to learn to apply it. No sphere in human activity more abundantly illustrated the unscientific attitude of mind than the household. Let them recall the common phrases: "The chimney will smoke, the oven won't heat, the jelly won't set, the meat won't keep, the fire won't draw." This was the language of superstition. A demon of adversity is implied behind it all. In how many houses might you not see a poker laid across the fire bars to make the fire draw! This was simply a survival of the belief in the efficacy of the sign of the Cross. Formal science by itself would not do. Those who have taken the highest honours will stand paralyzed

before a smoky chimney. Still less will the other extreme—the lessons in so-called domestic economy, hygiene, &c., tags of knowledge with no scientific basis, a farrago of learned words producing nothing but nausea in the pupil's mind. What was needed, and what he had attempted, was to let a little scientific light into the domestic laboratory. The best syllabus of work that he knew was that prepared by Mr. Heller. Domestic arts should follow domestic science. There was a vast undeveloped intellectual region in connexion with the domestic work of women. It was impossible to exaggerate the evils that accrued from mismanaged homes, and he had lived long enough to know how greatly efficiency in all practical arts might be furthered by well directed intelligence.

Miss E. MARSDEN insisted on the need of a good general education for the intending teacher of domestic economy; some test such as the London Matriculation or the Senior Locals should be required. To secure competent teachers salaries must be raised. The London University and the Goldsmiths' Institute were the only public bodies within her knowledge who paid their teachers in this subject a fair wage. In American training colleges they had too much of pure science, but in England too little. The student should have practice both in primary and secondary schools; but the Board of Education foolishly laid down that the eighty lessons required must all be given in one class of school. And the student must actually give the lessons herself. As it was, she generally taught from ten to twenty times, and heard other teachers from sixty to seventy times. She should not be always supervised, but left to tackle a class by herself.

Prof. ARMSTRONG, in some desultory criticisms ranging over the whole debate, commended Sir Philip Magnus, Mr. Burrell, and Prof. Smithells for the three philosophic contributions made to the discussion. Miss Marsden had aimed too high; they must attend more to the rank and file of pupils and of teachers. Was it wise to talk about domestic science? Would it not be better to leave household affairs to those who really understood them, and teach the sciences independently? What we wanted to implant in those who would have the care of the home was a sense of earnestness, economy, and interest in their work. What we wanted in science teaching was to teach pupils the meaning of an experiment; not the high-falutin' science of school manuals. The psychology of a training college was an imposture. We knew nothing of the laws of mental development; the only thing we knew was that children grew worse as they grew older.

Miss MAUD TAYLOR complained that domestic science was hardly yet taken seriously. The teachers were expected to make a good housewife in forty hours. Children lost at school the natural instinct which led them to make mud pies and dress their dolls, and got nothing in its stead. The science master was no good to the domestic teacher; he never thought of connecting his test tubes with her saucepans. Domestic teachers themselves failed to connect their lessons with the children's homes, of which they knew nothing. Visiting teachers were at a great disadvantage, and each school ought to have a domestic teacher on its staff. She might be employed on other work, such as arithmetic.

Mrs. MARGARET PILLOW gave statistics of decreasing population, which she traced to the growing distaste among girls for home life, in consequence of the many new careers open to them, and to infant mortality due to ignorance.

Mrs. MARVIN, speaking as an ex-Inspector of Schools, complained that the teachers were tested only in technical skill, and that domestic economy was taught only in a fragmentary way. Needlework and so-called domestic economy were taught by the staff; cookery, laundry work, and housewifery were taught outside school by those who knew nothing of what went on in school. Cookery was the most popular subject, and the teaching of cookery had improved. But there was no opportunity of carrying on these subjects after school age—fourteen at the outside—and no permanent impression was made. A radical change was needed to treat the subject as one—a vast realm with many ramifications. Hygiene was hardly touched at present, and in the last year of school life she would introduce the elements of physiology and sociology. At present housecraft was not stimulating, because it was not linked on to other intellectual work. Clever girls hated it. A scheme similar to that which she had adumbrated had been tried for the last two years in Glamorganshire with every promise of success, but it had not yet been sanctioned by the Board of Education. The two points she would insist on were the present want of unity in the subject and the want of unification with other subjects.

Mrs. Prof. MACKENZIE (Cardiff) agreed with the last speaker that there was too great a gulf between the elementary school and home life. From the point of view of training future mothers, the elementary school was a failure. The ideal school of the future for girls would be planned in three stages or departments: (1) Four to eight, a nursery with a motherly woman at the head and plenty of girl nurses; no books or benches, but dolls and toys. (2) Eleven to fourteen, definite instruction in home life, one meal a day to be cooked at an open fire and eaten by girls themselves, as in a cottage; for needlework, dusters to hem and their own clothes to mend; for laundry-work, to do some of their own washing. Time did not allow her to treat the intermediate stage.

Curriculum of the Secondary School.

Monday morning was occupied with curriculum of, and training for teachers in, secondary schools.

The session was opened with a brilliant oration by Mr. T. E. PAGE, to which no *précis* could do justice. We can only attempt to give some of the salient points. The theory that the public schools were above discussion, though held by the whole of the Head Masters' Conference, could not be sustained; the very name contradicted it. Head masters held that the form of education was the best in which they could say, "I am the school; the governing body is so called because it does not govern. Let us stick to our watchwords of Freedom, Variety, Elasticity." There were various motives for this conservative attitude, but, when analyzed, four out of five would be found to be financial. Fifty years ago there was no question of "balance of subjects" because there were no conflicting subjects to balance; there was no confusion because there was nothing to confound. When he was at Shrewsbury, the school of Darwin, there was no science, and mathematics was relegated to the seventh day, on which the precept of the Hebrew legislator was strictly observed—"Thou shalt do no manner of work." Yet the system had its merits. The food of its kind was good and well served, far more wholesome and digestible than the modern menu of the 3s. 6d. ordinary. We must adapt our new methods to new needs—adapt, but not abolish. With all the strides of modern science our sons were not trained to do more noble deeds or think more noble thoughts than Plato in his gardens of the Academe or Diogenes in his tub. What had the public schools done? They had either abandoned classical study, as on modern sides, or retained classics in their entirety and tacked on, in an unscientific and unintelligent way, a little French, a little English, a little natural science, and so forth. The ordinary British schoolboy was absolutely lost and confused. His mental digestion was in inverse ratio to his physical, and the result was nausea. Army classes were vitiated by the fact that they had to prepare boys for an external examination. A body that had hopelessly failed to reform itself set about the task of reforming public-school education. He himself, after having taught for thirty-three years, had been inspected for twenty minutes by a delegate of the War Office. Of modern sides he could not say much. They had diminished the number of human ills by two—Latin and Greek. But they were governed by purely commercial aims and filled by sons of parents who would confine education to what would pay. What was the condition of classics? They were being absolutely ousted from our public schools. No classical knowledge had any financial value whatsoever. But let not scientists exult too rashly in their triumph. He commended to their attention the classical fable of "The Horse and its Rider." The object of education was to teach how to earn a living and to teach how to live. Its two tables of commandments were summed up in the texts: "In the sweat of thy brow shalt thou eat bread" and "Man shall not live by bread alone." At present all was chaos, and the task set before the British Association was to produce order. In an eloquent peroration Milton, Shelley, and Isaac Todhunter were quoted as witnesses to the supreme value of Greek literature.

A paper contributed by Mr. LYTTLETON was read by Mr. EGGER, who premised that he must not be taken as agreeing with the sentiments. The curriculum must be based on the laws of mental growth. There were certain faculties concerned with the acquiring of facts and other faculties concerned with thinking or reasoning. The transition between these two stages occurred somewhere between the ages of fourteen and sixteen. The fault of teachers was to force prematurely the reasoning faculties, and the result of the forcing was evidenced by schoolboy "howlers." There must be a harmonic development of faculties. Physical training was too much neglected. Many brains were incapable of development unless hand and eye were trained together. To arouse the desire to learn was more important than to equip with a conventional minimum of unnecessary knowledge. Language might be taught so as to exercise the memory, or the vocal organs, or literary taste. The dispute of French or Latin was singularly barren. If taught in similar fashion, either language will train the same faculties—memory, reasoning, comparison. If Latin is kept as a mental gymnastic, French will be useful to train the ear and to preserve English vowel sounds from degradation. Later on the pupil will read in Greek at least the "Odyssey" and Herodotus, and, perhaps, some Plato. The respective provinces of the three languages were: Latin for writing, Greek for reading, and French for ear-training. The teaching of Latin and Greek in the same way was a monumental fact in the history of human stupidity. We should either discard one of the two languages or revolutionize our way of teaching it. The attempt to give boys what would be professionally useful to them was futile. Science must form part of the curriculum, but it trained the mind in a different way from language training. Laboratories were useless for boys under sixteen. In the lower school there should be science lectures to large classes—not to give science teaching, but to stimulate to future endeavour. Facts should be given without any learned "jaw." Before sixteen literature should be tempered with science, and after sixteen one should be the principal subject, but neither subject should be wholly excluded. Sixteen was the age at which options should be admitted. Many subjects, such as music,

English composition, history, and geography, might be relegated to out of school work. After all, the question of curricula was of secondary importance. Any subject taught by the right man in the right way might be made educative, only let us banish utilitarian considerations. There was a great deal of clap-trap in this cry for lightening the curriculum. No teacher was ready to abandon his own subject.

Preparatory Schools.

Mr. GIDLEY ROBINSON discussed the curriculum of the preparatory school. The position was much the same as it was six years ago, when Vol. VI. of "Special Reports" appeared. Since then the common entrance examination agreed upon by a Conference of the Head Masters' Association and the Association of Preparatory Masters had come into existence, and this year it had been taken by thirty-seven public schools. It was a great convenience, but it had done little to improve the curriculum. There was a wide option of subjects, and the Head Masters refused to make any subject compulsory. Greek was alternative with German, and science with Latin verse. The main object of the Head Masters was to secure the study of Latin and Greek. He would refer Mr. Lyttelton to the Blue Book as evidence of the disastrous results. It was there stated that "the teaching of the preparatory school is vitiated by the aim imposed on it from above." For eleven years preparatory masters had protested, and protested in vain, against this enforced specialization as bad for the clever and the stupid alike. Head masters still refused to accept the aphorism of the American Committee of Ten: "What is intrinsically the best for any stage of development is also the best for that which comes after it." In the curriculum of a preparatory school English must come first. That English can be taught through Latin translation was an exploded superstition. French must be the first foreign language; it was the best introduction to Latin. The intensive method was essential. Ten hours a week might be given to it. He believed in Latin as a gymnastic, and, if French were thus taught, Latin need not be postponed till twelve, as in the Frankfurter *Lehrplan*. The syllabus of the Nature Study Association, published in 1904, had been of great use as laying down the proper lines for that subject. Similar direction for history teaching was greatly needed.

Mr. O. H. LATTER (Charterhouse) stated that thirty out of the thirty-seven schools above referred to made Nature study optional, and that 30 per cent. of the schools took Latin verse.

Prof. ARMSTRONG said what we needed was a social change. Mothers who sent their boys to Charterhouse did not think what they would be taught, but how well they would be cared for and what a charming host they would find in Mr. Page. It was not as a successful teacher, but as a successful hotel-keeper, that they valued him. Mr. Lyttelton held that the reasoning faculty was not developed till after the sixteenth year. Ladies knew better; they could tell him that it comes into existence about the sixteenth hour. And it grew steadily till children went to school; then it ceased very rapidly to develop. The students who came to him from public schools had two radical defects—they could not speak up and they did not know how to read. He would furnish in every school a big room with a soft carpet for pupils to lie on on their stomachs and lots of books. If that were done, it would not matter much whether teachers taught or not.

Mr. LEONARD drew attention to the lack of proportion in the curricula of most secondary schools and to the overlapping of different subjects. Thus, an elementary form in science had to be taught decimals before they could understand the marks on a ruler, and were afterwards taught it all again in the arithmetic class. So with history and geography, with English grammar and composition. Examinations at the end of term were beloved of every head master as a slack time. A few oral questions would serve the purpose quite as well and save a week or a fortnight in each term.

Mr. A. C. BENSON's paper on "The Secondary School Curriculum" was read by Mr. HUGH RICHARDSON. For the large majority of average boys the classical system, however conscientiously administered, was, under present conditions, a deliberate disregarding of most of the methods by which intellectual influences might be brought to bear on the young. The minute, detached, philological way of teaching Latin and Greek appealed only to the few. The many did not emerge, but scrambled out on the hither side, and remained materialists for life. The principal defects of public-school education at the present day were its diffuseness, its lack of concentration, its vagueness, its desultoriness. The crying need was simplification. By taking out of the ordinary educational scheme, one by one, all the component parts which were not absolutely essential, and by keeping the balance of subjects carefully in view, it would be possible to arrive at a simple core of education which should be available for all boys, while a little should be added at one point or another, with careful reference to the tastes and abilities of individual boys, by which the emphasis might be laid on one group of subjects rather than on another. The scheme was not in the least unpractical, because, though individual characteristics were strongly marked in boys, yet it was very easy to group them on certain fairly broad lines, and, if the experiment were tried on a large scale, the numbers would probably not be found to vary seriously. French, arithmetic, modern history, English and

European, with geography, elementary science, taught by popular lectures with demonstrations, Bible-teaching, and English, should form the central core of education. This would be ample for the majority of average boys. The French should be taught most thoroughly, so that a boy would be able to read it with absolute ease and write it flexibly and accurately; and the same should apply to the boy's writing of English. The modern history of England and Europe would give the boys an inkling of the development of modern political questions, whereas the custom of doing isolated periods produced nothing but mental confusion. According as it was discerned what the boy's special idiosyncrasies were, so should those abilities be catered for. A boy with literary and linguistic tastes might do Latin, Greek, and possibly German; a boy who was linguistic and not literary could do German and be spared Greek. Of course, mistakes would sometimes be made, but they were made on a far more colossal scale now. He deprecated the outcry against utilitarianism. A study was none the worse because it had a practical use hereafter. One of the defects of classics was the absence of any marked aim or object that could be realized by the average boy.

Leisure Hours.

Mr. ARTHUR ROWNTREE said that the following was a fair allotment of the hours of a week (reckoning Sunday as a *dies non*):—Class-work and preparation, 40; sleep, 54; meals, 12; games, &c., 18. There still remained 20 hours for leisure pursuits. To fill these well was half the battle of school life and discipline. Individual tastes must be encouraged, and thorns and briars obstruct the path of the loafer. He gave instances of the various pursuits of the Natural History Club at Bootham School, which varied from land shells to archiepiscopal vestments. It helped to solve the problem of the "duffer." One boy who had for years wasted his substance in riotous line-writing had thereby been turned into a model pupil. Guidance in the selection of hobbies was necessary. A boy who had been urged to make a collection of some sort had set about collecting the labels of beer bottles. He invited an inspection of their Natural History Club work at the school.

Mr. FLETCHER (Irish Board of Agriculture) repudiated the epithet "sordid" applied by Mr. Page to bread-winning studies. Which was more sordid—for a man to earn his own bread in the sweat of his face or to eat the bread of another? Mr. Page seemed to think that no culture of any kind could come from the study of science. He repudiated also Mr. Lyttelton's dogma on the late growth of the reasoning powers as a wicked aspersion on childhood. Laboratories, forsooth, were to be reserved for specialists over sixteen, and all below that age were to be pap-fed on lectures. All teachers who really cared for science had been endeavouring for the last ten years to get boys away from crowded lecture-rooms, where they learnt nothing, and put them in the workshop.

The CHAIRMAN, summing up the discussion, remarked that, by tacit consent, the secondary education of girls had been omitted—a large subject that called for separate consideration. The discussion justly reflected the prevailing discontent with the results of public-school education; but as to the remedies there was the widest diversity of opinion. They had made the irritating discovery that no particular person, not even the most abused head master, was to blame. In the last resort it was the parents who were at fault: it was they who must insist on reform. What was taking place was a change in our point of view. Let us not in criticizing forget our gratitude for what the public schools had done and were still doing. With all their faults there were no schools in the world to which their pupils were more attached, none in which the self-devotion and pastoral care of masters were greater. What was needed was to relax the too-tight bar which restricted the passage from the preparatory to the secondary school. The test examination to which boys were subjected on entrance was far too narrow. We needed to curb the inordinate desire of parents that their sons should win scholarships. It seemed to him a case of conscience whether many parents were justified in taking these scholarships, which were intended by their founders for the needy. The whole system needed overhauling. We had begun at last to legislate for the average boy, and there was some danger that with the swing of the pendulum we might, as in Germany, sacrifice the clever to the average. Mr. Rowntree had shown them the danger of considering the intellectual side of school life confined to school hours. There was a third danger—that of over-teaching boys, as well as girls, during the period of adolescence. He regarded with some apprehension the scheme for setting up a State examination at sixteen or seventeen which was to serve as an entrance to all the professions. Anything that tended to make a boy think that a leaving certificate was the end-all and be-all of learning was to be deprecated. It was not an old civilization that was fading from the view. They had left the old behind, and the new was hardly yet in sight. The new order, if he might venture to prophesy, would come through a sense of responsibility in the upper classes for the common weal. Social service would be its symbol. The humanities would still remain the dominant factor in education; but there would be far more of constructive work.

Training of Teachers.

Prof. J. J. FINDLAY read a paper on "Scientific Method and the Study of School Teaching," of which we give the summary.

I. Progress in the study of education has been hindered:—(1) By the error made by the earlier advocates of training in treating the study of education as a kind of applied philosophy.—The work of eminent psychologists, such as Profs. James Ward, James, and Dewey in America, has, however, served to clear this issue. It is now recognized that the chief service to be rendered from that quarter is in utilizing the results of experimental psychology, and especially of genetic psychology. The latter, in its more popular form of child study, is already producing definite results in school practice. (2) By the popular interest in education and in schools.—Everybody has a direct interest both in the political and personal aspects of the subject, and readily adopts an opinion on many topics embraced under the term. Hence the necessity for such prolonged investigation as is demanded by other branches of science has been commonly denied—no less by men of letters and science than by the general public. (3) By the extensive range of studies included under "education."—Thus the only topics so far handled in a scientific method by this Section are those concerned with the public administration and organization of education. In these fields the method is similar to that pursued in economics or politics. But in school teaching the method must be different. Results can only be secured from the observation of children while actually acquiring school experience. (4) By the peculiar difficulties to which such prolonged investigation of children is subject (difficulties which in part account for the reluctance with which both teachers and public authorities welcome any "reform" in school procedure).—The achievement of any new "result" in school teaching requires the co-operation of several teachers with children placed in their hands for several years, the whole process being conducted with persistence and continuity.

II. Hence some of the important reforms introduced into English schools (e.g., in manual training, modern language teaching, practical mathematics) have been due, not to investigations conducted within the schools on a scientific method, but to movements outside the schools, which have first of all gained the public ear, and have then been adopted without an adequate inquiry into children's nature or needs. Thus these reforms have largely gone to waste.

III. Other reforms, however, have been produced with a greater approach to scientific method—i.e., they have been prefaced with a definite theory as regards both the ideal to be achieved and the nature of the scholar who is to undergo the experience—followed by a definite experiment in applying theory to practice over an extended period. In England the work of Arnold of Rugby approached this character, and also that of William Ellis in the Birkbeck Schools. In Germany the work of Herbart and his followers has been associated (not without great opposition) with the Universities, and has created a definite group of teachers professing adherence to "Wissenschaftliche Pädagogik." In America there are many examples: the influence of Prof. Dewey, in his Experimental School (University of Chicago), is perhaps the most conspicuous.

IV. Conditions under which such prolonged experiment can be conducted with prospect of success.—(a) There must be assumed a fairly comprehensive theory, both of the ideal to be achieved and the processes by which the scholar's experience should develop during the years of school. (b) A staff of teachers in sympathy with this theory and prepared to co-operate in executing the plan over a period of years. (c) A sufficient number of scholars in small classes who may be expected to remain under observation and teaching during one well defined period of school life. (There is usually no difficulty found in securing all the scholars that are needed.) (d) Time available for keeping records of the processes adopted (syllabuses, notes of lessons, &c.), and records, also, of the mental and physical progress of each scholar.

V. Effect produced upon teachers and students of education who work in such a "laboratory."—The habit of treating problems of teaching in a scientific spirit, instead of relegating such problems to the region of prejudice and tradition is in itself a most important effect. Such a habit is not easily acquired. It by no means follows that men who are scientifically trained in one branch of science would transfer the habit to their treatment of educational science.

VI. Effect upon the theoretical exposition of education by professors and lecturers when their work is associated with a school which they direct.—Speculations as to cause and effect are thus limited by educational results.

VII. The plan proposed in the Demonstration Schools at Manchester to investigate school teaching on such lines.—The following topics have so far received special attention:—Elementary teaching of modern languages, of practical mathematics, and of literature; association of parents with school life; experiment with a school "camp" (transferring town scholars with their teachers for teaching and training during a short period to the country).

VIII. Recognition and support of such "laboratory" work by Universities and by public authorities are urgently demanded.

Miss E. CONSTANCE JONES urged that lecturers in training colleges, both primary and secondary, should have undergone a thorough course

of psychology and moral science at the University and also had practical experience of teaching. There was a tendency to underrate the value of psychology; yet all the reforms advocated by Prof. Armstrong, Mr. Heller, and other speakers were based on psychological considerations. Psychology stood in the same relation to education that physiology did to medicine. Education was the only profession in which untrained skill was preferred.

Prof. GREGORY agreed with the plain man denounced by Miss Jones who thought that psychology was in the air, that the good teacher had learnt more of the mind of the child than any professor. The psychologist was in the position to-day of the schoolman in the days of Galileo: he expressed what every one knew in words that no one understood.

Miss STURGE (Mount School, York) said that head mistresses were now agreed that some training was necessary, but as to the kind of training they desired they were still at sixes and sevens. It seemed to her that they expected of training more than it could possibly give. There was no royal road to teaching, any more than to learning, and a year's training would never turn out an experienced teacher. What she hoped to find in the trained teacher was a certain attitude of mind, more humble, less rigid, more enterprising. That attitude was produced by the theoretical rather than the practical side of the work, and she should be very sorry to see this diminished. Yet at the Hull Conference of Head Mistresses a resolution had been passed that theory should be kept within due bounds, and at the last conference of the Assistant Mistresses it had actually been proposed that the theory of education should be omitted from the training college syllabus and taken as an Honours course at some later stage. Even as it was, the text-books in use at training colleges contained a modicum of watered-down applied psychology and a flood of weak moralizing and platitudes. True, psychology would not help the teacher in his everyday work, but it would give him an attitude of mind, a background, a basis.

Mr. OWEN (St. Peter's School, York) agreed with Miss Sturge as to the proper place of psychology, but held that the personality of the teacher was the all-important factor. There was in England no career for the teacher *qua* teacher, and there was a danger that the increased expense of preparation would act as a deterrent and still further limit the supply. He suggested some possible remedies. (1) Candidates for any administrative post, such as Secretary for Education to a County Council, should be required to have had experience of teaching in a secondary school. (2) All educational institutions should be exempted from rates and taxes. (3) We were living on the munificence of the Middle Ages. We must appeal to the rich for new endowments, not earmarked for building. (4) Fees must be increased. Parents had been pauperized and expect to get for £10 or £15 what cost, even with the present low rate of salaries, £20 or £25. (5) State grants must be increased, and these must not be absorbed by huge offices and an army of clerks.

Mr. F. E. POLLARD (Bootham School) advocated training by practice under supervision in some large efficient school, rather than by giving isolated lessons in classes with which the candidates had had nothing to do before and would have nothing to do afterwards.

Miss HORSEDALE (University of Manchester) urged that the training student should be led to frame a psychology for himself from the facts that he observed in the practising school.

The second portion of Mr. A. C. BENSON's paper was then read. Mr. Benson hoped to see the day when a training department would be the normal adjunct of every great public school. Such practical training should then be followed by a six months' course of theory. The training should not be too protracted nor too scientific. He dreaded to see the art of teaching being too much systematized. Teachers should be encouraged to make their own methods. He had a horror of any man's adopting any system in its entirety. A teacher should never regard a pupil as typical.

Prof. FINDLAY then replied. The attitude of Prof. Gregory and other speakers towards psychology was that of the farmer to the science of agriculture. Speaking from his own experience, he could honestly say that every act that he had performed as a practical teacher he could refer to a psychological principle. The common knowledge of which Prof. Gregory spoke—what every one was supposed to know about mind—was just one of those popular errors that most hindered the progress of educational reform. As rebutting the charge that psychology was in the air and had reached no conclusions, he recommended a study of Prof. Dewey's "The Child and the Curriculum," which was based directly on observations of child activity in the school.

The CHAIRMAN desired, in particular, to thank the ladies who had contributed to the discussion. It was the women teachers of England who had led the way in the scientific and philosophical treatment of education. Mr. Owen had expressed the general apprehension that there would not be enough good teachers to go round. For a future supply we must look mainly to the growing sense of social duty and mutual help to turn men's thoughts towards the teaching profession. In the last resort it was not money, but a sense of duty, that would fill the gap. We could never hope to compete with the brilliant prizes that commerce and administration offered to the successful. It was this sense of public duty that had created the Danish high schools and the German secondary schools. University training and apprentice-

ship in the school were not mutually exclusive, but complementary. He hoped to see the system introduced of allowing a term off for scientific study. At the end of five years a master should be granted one off-term, at the end of ten years two, and after fifteen years' service a whole year. The thanks of the profession were due to Mr. Mosely for showing how this off-term could be utilized. Returning to the question of the supply of teachers, Prof. Sadler said that in his inquiries he had found the lack most apparent in day secondary schools, and this was accounted for by the miserably low salaries. The average salary of an assistant master was as follows in the counties he had inspected:—Essex £140, Derby £126, Hampshire £160, Lancashire £150. He had advocated a scale which he hoped would be adopted by all Local Authorities—initial salary for assistants £150, rising by annual increments to £300 or £350, with a retiring pension at the age of fifty five and some allowance for widow and children in the case of premature death. It might further become necessary for the State to offer, say, thirty places a year for young men who would undertake to prepare themselves for the work of secondary teaching and give proof of their competence. Such State-paid masters might be attached to schools as part of the Government grant. There must be further State aid for the establishment of training departments.

Inspection and Examination.

Thursday's session was opened by an address by Prof. ARMSTRONG on "The Juggernaut of Examinations." He began with a note of warning to secondary teachers. Let them beware of putting themselves under the yoke which primary teachers had hardly yet shaken off. With the spread of liberal ideas they were threatened with the loss of individual freedom and universal State control against which Herbert Spencer had warned them. It rested with the schools to maintain their independence, but there was little evidence that the teaching profession was alive to its danger and its duty. The leaders did not make use of the opportunities offered them by these meetings. The defection of Canon Lyttelton was significant; he was typical of those who did not take these matters seriously to heart. The ideal system would be for the schools to examine themselves, with the aid occasionally of competent assessors, as in Germany. Knowledge in the future would not be undervalued—it would be demanded more and more; but discipline and character would be demanded still more. By character he did not mean what the present public-school system was said to produce, which too often eventuated in little more than turned-up trousers as a social badge. Unfortunately, the teaching profession was not yet a self-respecting profession in this country, in the sense that it did not claim recognition as the most important of all the services. If education made the man, no class of men could be of more importance to us than the teachers; that they should be the worst paid and least considered class of public servants was nothing short of proof that we had as yet no clear conception of their function. About three years ago the Consultative Committee of the Board of Education produced a scheme for a school-leaving examination, involving the participation of the teachers; but the teachers cried out: "For heaven's sake do not let us have any part in it!" and the Universities threw cold water on it. One University frankly stated to the Committee the reason—they would lose their fees. Those who declined responsibility and behaved as slaves could not expect to be treated as patriots, and, if the Board of Education received such scant encouragement, it was natural that it had remained spineless to this day. The public loved examinations. Our examinations, however, did little more than grade candidates in rough order of merit with reference to the particular test applied, but gave little or no proof of merit. The present system encouraged dishonesty at every turn; an examination was a game between rivals—not a test of true education. If examinations were honestly conducted, and papers strictly marked according to merit, the results would be terrible. There should be no examination except in conjunction with the school staff.

Mr. W. MAYHOWE HELLER said his work as an Inspector had been mainly concerned with primary schools, and he would confine his remarks to them. There was no doubt that the transition from the system of payment by results to that of payment by inspection had been accompanied by a falling off in the main grant-earning subjects; but it would be an educational calamity to revert to the Chinese slavery of the *ancien régime*, and the only question before them was how to make inspection effective. The function of the Inspector was to see that public money was well spent and that the teaching was effective. The Inspector was a servant of the State or of the Local Authority, and his instructions must be definite. Formerly he was expected to be an examining machine: now he was more concerned with the work of the teacher than of the pupil. Is the school well organized? Is the time-table well balanced? Are lessons adequately prepared by the teachers? Are the pupils interested in their work?—such were the questions that the Inspector was bound to answer, and for these duties and responsibilities Inspectors, as a rule, were not prepared. In Ireland they had, till quite recently, been appointed by competition, as for the Indian Civil Service. There was no guarantee that they had had any teaching experience; still less that they had had experience of the kind of schools they would have to inspect. In one Irish school he had

heard an excellent science lesson given by a teacher; but on investigation had discovered that this was the only science lesson given in the year, that it had done duty at three previous inspections, and that the school, on the strength of it, had obtained a report of "excellent" in science. An Inspector was bound to be familiar at least with the aims and methods of all branches of knowledge taught in the school, and for the secondary school there must needs be two classes of Inspectors—the literary and the scientific. Teachers needed not so much criticism and censure as suggestion, help, and encouragement; and it might be well to substitute "Adviser" for the more formidable title of Inspector. To pass to details, he thought there was little profit in Inspectors hearing lessons given: neither the teacher nor the pupils were under natural conditions. The Inspector could gain a far truer impression by giving a lesson, or part of a lesson, himself. If he adopted a cheerful bedside manner, he could soon put the class at their ease. The publication of reports was not desirable: they should be confidential documents. The want of uniformity in the standards of Inspectors was a grave evil to be met partly by visits to other districts, but chiefly by frequent conferences of Inspectors.

Sir HENRY CRAIK said that in listening to the discussion he had been delighted to find that the reforms advocated were for the most part already carried out in Scotland. There inspection was not regarded as something outside of the real work of education, but as an integral part of it. He did not see how they could dispense with some form of inspection, or, as he should prefer to call it, visitation, of schools. There were two alternatives. The locality might be allowed to fix its own standard without any central control—a system which had obvious advantages, but would never work over England as a whole. Or, as in France, the State might assume a part in the management of schools—a system opposed to our traditions and national genius. The *via media* was to try and make our inspection as little irksome, as little dictatorial, as possible. The trend of the Scotch Department was to make inspection more advisory and less dictatorial. Their Inspectors were instructed to record the aims and methods of the teachers, to lay more stress on colloquies with teachers and managers than on written reports. More and more was left to the masters themselves. Thus their leaving certificates were awarded mainly on the verdict of the teachers. For inspection of secondary schools they had a few permanent officials, but went mainly into the open market. In fact, they had a large floating staff. In this way they were able to secure the services of eminent men and also to bring the Universities through their professors into touch with the schools.

The CHAIRMAN summed up the debate. In primary education there was going forward a great change in our ideals. It involved one radical reform—smaller classes. It would take some time for Inspectors to alter, so to speak, their focus to suit the new prospect. In secondary education inspection was in the exploring stage, trying to understand the conflict that was going on. The multiplication of forms to be filled in was a heavy tax on teachers, and he suggested that a single form, to be filled in once a year, might be drafted which would give all needful information. The Inspectorate should be closely in touch with the administrative side of the Central Office, and it would be an excellent thing if there was an interchange of work between the Inspectors and the staff at Whitehall. The knowledge gained by Inspectors should be made available in some published form for the general public. More should be done to get Inspectors in different grades to work together, and there should be fixed conferences of teachers to compare notes as to methods and organization of work. The number and variety of schools in England constituted a special difficulty; yet any organization would be dearly purchased that crushed or thwarted private enterprise. Inspectors should not be overdriven in their work; they must have leisure to see other districts and foreign systems, in order to produce the cross-fertilization of which he had spoken in his address. Examinations must continue in some form or other, if only as a means of selecting the fittest. What we needed, especially in secondary education, was to cut out the non-essentials in teaching and the "marginal inutilities" in which examiners were tempted to revel. He would suggest three pressing reforms in school examinations:—(1) They should be reduced in length and in the value attached to them, and the term's work should count more. (2) An oral test should form part of every examination. (3) Original work should be encouraged. A good test of ability would be to set a thesis and see what a pupil provided with ample books of reference could make of it in three hours. In England we rightly valued pluck and grip, but we underestimated thought-compelling originality.

Modern Languages.

In the last session, on Tuesday afternoon, Prof. FINDLAY led off with a paper on "Processes involved in the Acquisition of a Foreign Language." He summed up the results of experiences partly personal and partly of investigations in classes taught or directed by himself since 1891:—

- I. (1) The process is fundamentally one of acquiring habits of automatic reaction in the association of foreign symbols with ideas.
- (2) Distinctions between reading and hearing, speaking and writing are of minor importance.
- (3) The employment of language (native or

(Continued on page 644.)

Davis & Moughton's List.

The "Guide" Rural Calendar. New and much Enlarged Edition. By A. J. EWART, D.Sc. Cloth, 1s. net.

It shows for each month of the year particulars of Wild Flowers, Trees, Shrubs, Birds, Gardening and Farming Operations, &c., &c.

The Flowers for each month are arranged according to colour, &c., &c., so as to make recognition easy, and there is also included in the book a complete Key to the recognition of the Common Wild Flowers of this country, with Index, 128 pp.

An English History Note Book. Second and Revised Edition. By M. A. ROLLESTON, First Class Historical Tripos, 1886. With Introduction by Rev. T. W. SHARPE, C.B., Principal of Queen's College, London, late H.M. Senior Chief Inspector of Schools. 3s.

"A *multum in parvo*, at once a chronology and a pocket dictionary of English history, with notes for essays interspersed."—*The Journal of Education*.
"An excellent summary of English history, from the earliest times to this year, with several appendices."—*School World*.

"The book is well arranged, and calculated to be very serviceable to an industrious student."—*Educational Times*.

"We do not know that we could recommend any work more cordially than we can this note-book of Miss Rolleston's."—*Secondary Education*.

Algebraical Factors. By H. R. BIRCH. Contains (a) Rules for resolution of Algebraical Expressions into Factors, (b) the application of the Rules to Algebra, Arithmetic, Geometry, and Mensuration. Over 200 carefully selected illustrative Examples *fully worked out*. The Exercises are numerous and well graduated. Miscellaneous Exercises comprising questions set at various Examinations are also included. 2s. 6d.

The Teaching of Design. An Aid to Teachers in introducing the Elements of Design into the Drawing Lesson. A thorough explanation of the leading principles on the subject is given, with special Teaching Notes and Hints on Colouring. Numerous Illustrations. 2s.

The "Design" Freehand Drawing Copies. In Sheets, Cards, and Books.

Sheets, Cards, and Books correspond with one another, and are all beautifully coloured. Specimens and particulars on application.

The "Guide" Series Brushwork Drawing. in Book form for Teachers, containing 48 beautifully coloured Plates, together with minute Directions to the Teacher on the method of working, the construction of the designs, and the colouring. 6s.

The "Guide" Series Brushwork Drawing Cards, for Pupils' use, containing the above-mentioned 48 Plates, carefully graded. Size, 9 inches by 7 inches. Published in 4 Sets or Packets, I. to IV. Per packet, 2s.

First Lessons in English Grammar and Analysis. Eighth and Enlarged Edition. Limp cloth, 128 pages, 9d.

A special feature consists in the definitions being all in simple language. The explanations precede and lead up to the various definitions, which are printed in dark type. The Exercises are numerous and well graduated. The book has met with considerable success as a first book in this subject for the lower forms.

Catalogue of other Publications, Specimen Pages, Cards, or Books will be sent post free to Principals of Schools on application.

TRIGONOMETRY.

By M. S. DAVID.
Beginner's Trigonometry. With 56 Diagrams, price 2s.

A. & C. BLACK, SOHO SQUARE, LONDON, W.

foreign) is a synthetic, not an analytic, process; the recognition of the single symbol is merely a step (and often an unnecessary step) towards the immediate recognition of the general sense of a passage. But an equivalent in the vernacular may often be suggested for a moment and then encouraged to sink below the threshold of consciousness. (4) In contrast to other arts (compare, e.g., golf) the special hindrance encountered in acquiring a second language is due to the extraordinary resistance of the native speech "centre." (5) Hence to the beginner the path of least discomfort is to interpret the foreign symbol through the native symbol, and thus to set up a translation habit which is really a bar to progress, since objects of thought can only be symbolized with effect when the objective, the thought, is directly expressed by the symbol appropriate to it. (6) When once the establishment, mental and physical, of a new speech centre is begun, with its accompanying set of experiences, the force of resistance rapidly diminishes. (7) The rate of progress depends (a) upon the intensity of the learner's absorption in the new art during the early stage; (b) upon suitable environment, with appropriate objects of thought. (8) When the new habit is established in only a small degree traces abide for a great length of time, and can be easily recovered. (9) A month's residence among foreign people, or a year's course of school instruction, suffices to overcome the resistance in its earliest and strongest stage. (10) The use of a special phonetic script is of doubtful value to learners, except to adults who have received a philological training. (11) The study of changes in nervous function accompanying the mental process are not at present adequate to confirm these conclusions, but inquiry into cases of aphasia among bilingual people may be expected to throw some light upon the nature of brain centres for foreign speech. (12) The attempt to "establish" two foreign languages at the same time should not be made: each tends to inhibit the other. French, e.g., should hold the field for three years at least before German or Spanish is introduced. Latin, however, taken on a translation method, does not appreciably interfere.

II. New factors presented when classes of twenty-five to thirty-five are taught together:—(1) A body of teachers are needed who can be relied upon to carry through the experiment over several years. (2) The general efficiency of the school life and teaching in other departments affects vitally the issue in success or failure. (3) Detailed preparation for each portion of the work by the teacher is essential; teachers can seldom find time for such preparation when in full practice. (4) Progress is hindered by the incapacity of some scholars to apprehend new sounds; on the other hand, the stimulus of numbers (here, as in all branches of teaching) aids progress.

III. In order to carry through an extended piece of work of this kind, the teachers concerned need to come to some agreement as to the working of cause and effect in mental development; so long as "direct" methods of teaching are regarded as leading to enfeeblement of mind, it is unlikely that analytic methods will be discarded. This applies still more to the methods adopted by examiners and inspectors. It is obvious that no finality in quantitative results can be recorded such as are forthcoming in more familiar fields of scientific investigation. But it would be feasible, by adequate inquiry (with a check upon varying data and conditions), to secure records vouched for by competent authorities which would help to solve some controversies. But such investigations must extend over a period of years, and the "results" must be sought in the positive attainments of the scholars at the close of the period.

The CHAIRMAN suggested that each paper should be debated separately. To start the discussion he remarked that it seemed as if the learner of a foreign language had for the time to assume a different personality. A friend of his had told him that, after a prolonged visit to Germany, it took him a fortnight to recover his English personality. If this was so, the dramatic element should be made use of in modern language teaching, *non obstante* Plato. It was a question whether the New Method should not be extended to Latin teaching.

Mr. TREER (Denmark) took exception to (2) and (10) of Prof. Findlay's theses. In Denmark the use of script for beginners was universal, and precedence was given to the spoken over the written language.

Prof. FINDLAY thought that the Danish experiment of script was not conclusive. Pronunciation was learnt not by reading, but by imitation. (2) was intended simply to anticipate any discussion of the respective merits of learning by reading and writing as distinguished from speaking.

Miss HARRISON (Mount School, York) read a charming paper on "The Cultivation of Literary Taste." It was a plea for *Lehrfreiheit* and *Lernfreiheit* for the free play of natural influences, as in the childhood of Scott and Wordsworth, and for instilling a love of books, especially of poetry, as the chief aim of the teacher.

Miss THEODORA CLARK described the system of private reading followed in her school. A book for private study was prescribed each term and also as a holiday task, and a stiff examination paper was set in it. This excited a lively interest among the girls, and for their holidays they had asked that a novel might not be set: "You can't find so many things to get hold of in a novel."

Prof. ROBERTSON (University of London) read a paper on "The Position of German in the Educational Curriculum." In the last

Everychild: A Book of Verses for Children.

Compiled by HOLBROOK JACKSON. Cloth, stiff cover, 9d.; paper cover, 6d.

Selections from Rudyard Kipling, W. B. Yeats, R. L. Stevenson, William Morris, Eugene Field, Edward Lear, and others. This Anthology has been designed with the idea of appealing to the imaginative faculty and arousing an interest in Nature.

"The volume should be welcomed both in the school and the home, and wherever the direction of the growing minds of children is considered. It should make a convenient handbook for teachers, as well as an excellent class-book, particularly for secondary schools."—*Yorkshire Weekly Post*.

NEW FRENCH BOOK.

Méthode Intuitive pour apprendre le Français.

Leçons de Choses, Conversations, Compositions et Grammaire. Par A. HAMPTON, L.L.A. 120 pages, crown 8vo, cloth, 1s. 6d.

The main object of this book is the acquisition of French through the medium of French by means of a careful arrangement of Object Lesson and Dialogues.

Preliminary Greek.

By R. ROBINSON, M.A., Sixth Form Master, Ampleforth College. 158 pages, 2s. 6d. net.

Suitable for Students preparing for Junior Examinations.

A New First Year French.

By GEO. F. ARMITAGE, M.A. On a new and improved plan. Drill and Viva Voce Exercises; Vocabulary. Limp cloth, boards, 9d.

Samples and Specimens of all goods on application.

J. W. BEAN & SON, 17 Boar Lane, LEEDS;
SIMPKIN, MARSHALL, & CO., LONDON.

W. & A. K. JOHNSTON, LTD.

NEW MAPS.

"Imperial" BRITISH ISLES.

This new Map is uniform in size and style with the other Maps in this popular series of School Maps.

FEATURES.—Bold lettering and distinct county colourings
Population of towns indicated by symbols.
Battlefields
Physical features clearly indicated, and
Heights of mountains given in feet.

Size 72" x 63", mounted on cloth and rollers and varnished.

Price 21/-.

In same Series:—Africa, America, North America, South America, Asia, England, Europe, Ireland, Scotland, United States, World in Hemispheres, World (Mercator).

Each Map is accompanied by a Handbook.

EMPIRE OF GREATER BRITAIN.

Constructed by Captain MACAULAY.

This Map has been constructed on entirely new lines to meet the demand for a Map of the Empire giving information in a manner easily understood by pupils.

FEATURES.—Status of each part of the Empire indicated by colour.
Native and white populations given approximately.
Only the more important routes are given; these show how the Empire is linked together.
Tables of distances (grouped) are given on Map.

Size of Map, mounted on cloth and rollers and varnished, is 42" x 66".

Price 15/-.

fifteen years there had been a steady decrease in the study of German. In schools where there had been large classes it was now hard to get a German class together. At the last Intermediate Examination of the University of London the proportion of candidates taking German was to those who took French as 1 to 40. For the Matriculation Examination he had not statistics. Various explanations of this atrophy were offered, none of them adequate. The commercial rivalry of Germany had made German unpopular with the middle classes. Germans learn English, and, therefore, there is no need for English to learn German. We tend more and more to specialize. Once it was French and German; now it is French or German, and French is preferred as the easier language. These might be *verae causae*; but they failed to explain why in Canada and the United States German held the first place among modern languages. In America a knowledge of German was considered an essential part in the education of cultured citizens. Americans were more alive than Englishmen to the needs of a scientific training. But the question must be raised to a higher plane than utilitarianism. In the first half of the nineteenth century, from Carlyle to M. Arnold, the best minds in England were in close touch with German thought and poetry. Now German literature was of no account in England—witness the place assigned to it in the "World Library." For this the teachers of German were greatly to blame. They had rarely themselves the knowledge and sympathy essential in order to interest their pupils. French was generally their *Hauptfach* and German a *Nebenfach*. It would be a great step forward if the combination of French and German could be replaced by masters who took French and English or German and English. The true way to the study of German (or of French) was through the mother tongue, and in the same way for the study of a foreign literature the best method was the comparative. The importance of German depended, as American educational leaders had recognized, not merely on the utility of the language as a tool for the student of science or philosophy, but as a means for bringing us into touch with a literature invaluable for the development of the Anglo-Saxon mind: it introduced us to a criticism of life and an attitude towards art and literature which were of supreme value as correctives to the more sternly practical ideals of the English and American peoples. The teachers of English in Germany had succeeded in making Shakespeare a national poet, read and appreciated by all. The same could not be said of Goethe and Schiller in England.

Mr. STORR, as an Examiner, was able to supply the missing statistics for the London Matriculation. The proportion of German

to French was almost exactly 1 to 10. In the Scotch Leaving Certificate Examinations it was nearly 1 to 5. He attributed the decline in German to the present tendency to lighten the curriculum, and, so far, he could not regret it. He would sooner see no German in schools than have three foreign languages imposed on the average pupil. The remedy lay in the abolition not only of compulsory Greek, but of compulsory Latin. For the modern sides he held that the two compulsory languages should be French and German. German in its earlier stages was as hard as Greek, and, for the modern-sider, more educative, since it offered him a vista: if he was worth his salt, he would carry on the study; whereas, Greek would in ninety-nine cases out of a hundred stop with the Little-go.

Prof. SADLER could not admit that the influence of German thought in England was on the decline. To say nothing of the ascendancy of German music, for a solution of the questions that most concerned us—the relations of capital to industry, the claims of the State, and the duty of the individual as regards the State—we looked for light and guidance to Germany.

The New Method.

A paper on "The Results of the New Method of Modern Language Teaching," by Mr. F. B. KIRKMAN, was read by Mr. STORR.

Mr. KIRKMAN said that the New (or reformed) Method was a broad banner with many devices, and under it were enrolled many teachers who had failed to grasp the very first principle. This was to establish a direct connexion in the pupil's mind between the object of thought and the expression of thought. It was not, as many supposed, opposed to reading, and its aim was not to impart the power of talking fluently, but to make the pupil understand and appreciate the genius of another nation. A secondary aim was to produce international good feeling; and something, though not very much, might be effected in this direction by the choice of suitable Readers. The use of script was still an open question and one that we could hardly hope to solve by experiment. Good results had been obtained by both methods. The books set in Oxford and Cambridge examinations had in the past been most unsuitable, but now a choice was offered between set books and unseens. Many teachers, either from habit or because they did not read the directions, continued to hug their chains. Teaching by the New Method was most exhausting work, and English teachers should rebel against the long hours, from twenty to thirty a week, whereas the maximum for a teacher in France was eighteen.

A vote of thanks to the Chairman concluded the proceedings.

C. A. JONES' "CAJAC" Extension Ladders.

(Patent applied for.)

Registered Trade Mark "CAJAC."
Made in TWO SECTIONS only.

HARDWOOD TREADS.

Stocked in Eight Sizes
up to 30 feet (extended height).

Possess the following advantages
over all others:—

1. Greater constructional rigidity.
2. No iron clutches.
3. No possibility of catch getting out of order.
4. Catch bound always to take the tread on its underside, along its entire length, thus preventing wearing of treads.

Write for List, including our Celebrated

OCCASIONAL NOTES.

THE endless difficulties and complications of the Education Bill perplex and worry simple folk, and there is a growing tendency to ask: Why could we not let well alone; why not go back to the *status quo ante 1902*, the happy concordat of 1870? We need a sharp reminder that this golden age is a past that never was present, and such a reminder is furnished by the recent proceedings of the London County Council. It will be remembered that as far back as May, 1905, the Council condemned 108 non-provided schools as structurally unsuitable and required the managers of 351 others to carry out the alterations required to make their schools safe and sanitary. Various times were allowed for effecting these changes, and, as the latest date fixed approaches, the Council have determined to take action. The latest report states that in 30 cases the requirements have been carried out fully, and partially in the case of 100, while 50 schools have been, or shortly will be, closed. There remain 279 schools, in which, as far as the Committee can ascertain, nothing has been done. These schools are classified in the report according to degrees of insanitariness; but, for our present point it is enough to note that the first class consists of 98 schools where the sanitary arrangements are pronounced dangerous and the third class of 19 schools which refused to permit sanitary inspection. The Council have wisely decided to extend the time of grace, choosing, as the lesser of two evils, to run some risk to health rather than turn some 40,000 children into the streets to starve intellectually and morally. But what shall we say of the Church managers? That their poverty, and not their will, consents. That is their best and only plea, but it gives their case away and allows the absolute necessity for public support and consequently of public control. "Cleanliness is next to godliness" is the text (not, as vulgarly supposed, in the Bible) on which the

non-provided schools have set up their rest; but they have been careful to lay the stress on "next."

FOR cool impertinence the Bishop of Manchester's letter in the *Times*, August 29, will be hard to beat. "It [the West Riding judgment] is a serious matter for the teachers in denominational schools"—but this is a trifle. Where there is no contract between managers and teachers the managers will simply hand over the reduced sum that they receive from the Local Authority; and where there is a contract they will give notice to the teachers so as to readjust the salary, and, if the Local Authority refuses to confirm this readjustment, they will close the schools. "Some small amount we might be compelled to pay for heating and lighting during religious instruction, but the sum would not be serious." The Bishop reminds us of the Irish absentee landlord who when informed by his agent that he had been fired at by moonlighters replied: "You may let them know that they may shoot any number of agents, but they will not intimidate me." The executive of the N.U.T. have given undue importance to the letter by passing on it a formal vote of censure.

THE resolutions passed by the Association of Teachers in Technical Institutes respecting the proposed High School of Technology at South Kensington, popularly known as the London Charlottenburg, are drastic; they demand, in fact, that it should be the centre of federation embracing the whole kingdom, and not simply a technical institute for London. Like the postscript of a lady's letter, the weightiest resolution comes last: "The institution should be permanently independent of University control." The best authorities in Germany, as we have pointed out in previous articles, are opposed to this divorce between applied science and the Universities. For the rest, the demands seem to us reasonable—that nineteen be the minimum age for entrance, and that an adequate test of previous training be imposed; that the work of existing technical institutions be co-ordinated, and that these institutions should be represented upon the governing body.

THE Chairman of the Association of Assistant Masters, Mr. C. H. Greene, of Berkhamsted, delivered a powerful speech at the Mercers' School urging the need for improvement in the position of assistant masters. He is quite right in saying that while the country, as represented by the Board of Education, and the rate-payers, as represented by the Local Authorities, are pouring out money on inspectors, buildings, and administrative control, the assistant master remains where he was. Yet on him depends very largely whether the money spent by the Authorities shall bear fruit or not. The average salary throughout the country probably remains at about £120. Under modern conditions of life no one can bring up and educate a family according to middle-class ideas of comfort and culture on such a pittance. Yet, as Mr. Greene points out, the one serious effort that has been made to improve the status of the teachers in secondary schools is about to be abolished by the present Government. Mr. Greene had also something to say about the position of the head master. "He is more the slave of popular and ignorant opinion than the assistant master. He must purvey an education according to popular fancy or lose his scholars, his capitation fees, and his reputation." The meeting carried resolutions in favour

of the establishment of a Register of Secondary Teachers under a representative professional council ; and expressing the opinion that Inspectors' reports should be issued in two parts, one dealing with the school generally and to be published, the other containing detailed criticism for the eyes of the staff only.

TO Lord Londonderry the West Riding judgment has come as a complete surprise. He is no doubt perfectly sincere in saying that the Government in 1902 "fully believed that the Education Authorities were not only empowered, but were forced, by the Act to pay for denominational teaching." He believed that Mr. Birrell's surprise was equal to his own, and he called upon the present Minister of Education to state at the earliest possible moment whether he and his colleagues meant to appeal against the decision or to accept matters as they now stand. With regard to the Bill that is before the country his lordship had no hesitation in saying that it was "absolutely unjust" and that he was sure that the majority of the people desired to maintain denominational education. Here we join issue with Lord Londonderry. We do maintain that the majority of the nation desires, and will insist upon, religious education ; but we do not believe that the majority, or indeed any considerable number, of laymen desire to admit or support the claims of the Church of England to control that education on the lines laid down by the loudest speakers in the Church party. The real difficulty lies in deciding what religious education shall be taken to mean. We believe that the nation as a whole deems conduct more important than doctrinal belief. Judging from the utterances of the leaders and supporters of denominational education, one might suppose that exactly the reverse is true.

THE series of articles on educational subjects which the *Times* is publishing—with, a view, apparently, to the formation of public opinion on the matter of curriculum—may be taken as an indication that the upper classes are beginning to care about such matters and are interested in the problem. But, however good each contribution may be in itself, the whole is not sufficiently informed with one mind to have the force of a body of authoritative suggestions. It would seem that we have talked in the air for long enough. It is not altogether true that the schoolmaster is in the hands of the parent or that he has to provide the education demanded by the public. The lay mind will always listen to the expert when the expert produces a well considered scheme with definite aims. We suffer at present from a multitude of advisers at war with one another and not quite fully convinced of the value of their own advice. We do not over-estimate the importance of the expert or official opinion. Schoolmasters must take a broad view and get help from other sciences and professions ; but, after all, it is for schoolmasters, taking the term in its widest sense, to produce the curriculum for the various grades of schools, with their various ends and aims. Until the teaching profession is more fully organized we cannot hope to have any general expression of opinion that will carry undoubted weight. In the meantime desultory talk can, at any rate, do no harm.

A LETTER written by "A Tramp" has appeared in the *Westminster Gazette*, calling attention to the ignorance shown by the labouring classes of their own locality. It is an ignorance that we all must have encountered and deplored. One reason for it is left for "A Tramp"

Will Mr. Birrell speak ?

Wanted a Curriculum.

"Thinking Locally."

to suggest. He points out that the Inspectors are not likely to be familiar with the districts in which they are inspecting, seeing how large an area they cover and how frequently they are changed. What the Inspector does not ask questions about the teacher does not teach : so argues the writer of the letter. Now this is not altogether true : teachers are not all jackals, and wise Inspectors, like the fool in the proverb, will ask more questions than he can himself answer. Yet there is good sense in the suggestion of the letter that children before they can think imperially should be taught to think locally. We had thought that in these days of scientific teaching in geography children did receive some instruction in their locality ; but, how little this is can be gauged by any wayfarer who inquires the short cuts in the neighbourhood or the names of the hills and woods in the district. Maps can now be purchased cheaply, and it would certainly be a good plan that a large-scale map of the district should be hung in every school (in many, no doubt, it is already in evidence), and that such map should be made the subject of instruction.

PROF. LAURIE makes out a strong case for fresh legislation in reference to the Scotch Universities. As a result of the findings of the Commission of 1889, which findings have the force of an Act of Parliament, no Scotch University can make a change in its curriculum without the consent of the other three Universities. It is possible that a laudable desire to prevent competition actuated the Commissioners ; but every year, with the advancing strides that the acquisition of knowledge is making, renders such a state of affairs less tolerable. It would be inconceivable that Oxford should have to seek the approval of the sister Universities to any proposed changes before they could be carried out. The case of the Victoria University was something similar to the conditions in Scotland, but it has become necessary for the towns that originally composed this University to separate in order to allow scope for individual development. So it must be in Scotland. No one University can hope to be equally good in all departments of knowledge. There must be differentiation ; each must be allowed to develop its own genius. No doubt the Government will find time for a short Act giving to the Universities of Scotland their own freedom.

A LOCAL paper has just published a leading article which appeared in its own columns fifty years back. From it we gather that in 1856 the public mind was exercised on the subject of education much as it is to-day. We have the complaint that nothing is done for the middle classes, "who are precluded from making use of the National school because by so doing they would risk the loss of caste." It is amusing also to note "that our Senators are, Session after Session, introducing fresh educational schemes which are invariably defeated, one plan being introduced by the High Church party, a second by the Low Church, and a third by no church at all." The article further states "our conviction that the qualifications for National schoolmasters and schoolmistresses are carried to an absurd length." Are first class certificates wanted, and is it desirable that teachers should receive a college education ? asks the writer. "Are Greek, Latin, French, mathematics, drawing from models, prose and poetic compositions wanted in cow-keepers and scullery maids ?" The writer then grows facetious and tells us that these ladies have already a natural facility for drawing—beer. But the most interesting part of the article is the information that, owing to the spread of education

Is there no New Thing ?

amongst the working classes, the domestic servant problem had become acute fifty years ago.

WHETHER the gloomy prognostications that Sir James Crichton Browne addressed to the Association of Sanitary Inspectors are well based, or whether the falling birth rate is merely a result of the "Dr. Blackpool." general law that the higher the organism the lower the relative rate of fertility, we leave it to scientists and statisticians to decide. At present there is no agreement as to the significance of the figures. But as to the gospel of recreation that he preached we have a word to say. "In these days," he said, "we have all become valetudinarians, and it has become the duty of every doctor to preach from time to time the gospel of recreation." Purposely giving a local colouring to his speech, Sir James suggested that every one would be better for a nip, or even a good long draught, of Blackpool. Now surely in these days there is plenty of recreation both at school and in later life. It is quite another question whether that recreation is of such a kind as to afford rest to tired brains or nerves. In many cases it is the monotony of modern work that causes the need for recreation, and the worker gets it. If it be true that we are all valetudinarians, and we freely admit that real health is uncommon among us at the present time, then it behoves doctors to advise us to the best of their powers how to improve our health. Boredom at the seaside is not necessarily healthful, and that is what many a worker's holidays amount to.

BISHOP WELLDON has published in the *Nineteenth Century* the address on "English Public Schools" that he delivered to a Japanese audience at Tokio. We mean no disrespect to the Bishop when we say that it is consciously or unconsciously modelled on the great speech of Protagoras in the dialogue which bears that sophist's name. It may have been well to set before Japanese students the ideal of an English gentleman, and to show them how close is the connexion in the past between that ideal and the public schools. But we are inclined to doubt whether it is well advised to repeat such a sermon to an English public. The virtues of monitors and flogging, of cricket and football, and of swishing have been sufficiently trumpeted, and "Kappa," little as we agree with him, seems to us a better preacher than Bishop Welldon. Thus, when he tells us that "practically the whole governing class of Englishmen is educated in the public schools," the present Cabinet sufficiently disproves the statement, and to form a true estimate of public-school education we must further qualify the statement by the fact that hardly any of the leaders in thought and science, either abstract or applied, have come from the public schools, or, if by accident they have, owe as little to them as Darwin did to Shrewsbury.

LOCAL AUTHORITIES.

PROF. SADLER'S Report on the County of Essex, the outcome of an inquiry made in the summer and autumn of 1905, is crammed with detail, and shows a most minute acquaintance with the educational problems of the district. At the same time it affords a general criticism on educational tendencies and a body of doctrine as to the paths to be followed in the future. The conditions in Essex are so varied that the county may almost be said to form an epitome of the whole country. "It has been necessary," says Prof. Sadler, "to consider the very different needs and difficulties of populous urban areas like East Ham and Walthamstow; of residential suburbs like Woodford and Loughton; of wide agricultural districts, some, like the Rodings or Finchingsfields,

remote from railways; of the busy industrial region along the Thames; of ancient market towns like Saffron Walden; of large and growing centres of population like Chelmsford and Colchester, with varied industries and wide market connexions, and of much social and commercial importance; of small but vigorous manufacturing centres like Halstead and Braintree, surrounded by agricultural neighbourhoods; of residential seaside resorts like Southend-on-Sea, Walton-on-the-Naze, and Clacton; of the Port of Harwich; and of the sea-faring and fishing population along the estuaries of the Blackwater and the Colne." The needs of each of these districts are treated in detail. But, before considering the proposals made, we will deal with the figures showing what is the present condition of the county as regards educational facilities.

THE population of the administrative County of Essex is more than 900,000. For educational purposes it is divided into eighteen districts. The produce of a rate of 1d. in the £ for purposes of higher education is £18,055. In the spring term of 1905 there were 9,692 children being educated in the secondary schools, public and private, of the county. This number works out at 11·87 per 1,000 of population (the Report has an obvious misprint here), and is slightly in excess of the similar figures for Hampshire, and more than double the figures for Derbyshire. The boys were only slightly in excess of the girls. Of the 4,490 boys, 2,461 were in public or semi-public schools, and 2,529 in private schools. The girls in public or semi-public schools were only 1,375, while in private schools they numbered 3,327. At the time of the inquiry there were 14 public schools, one of which was dual—these contained 1,487 boys and 79 girls; 6 co-education or dual schools, containing 861 boys and 659 girls; 2 girls' schools, containing 292 pupils, 23 of whom were little boys; 6 semi-public schools under corporate control, with 90 boys and 368 girls; 149 private secondary schools, with 1,529 boys and 3,327 girls. As regards the salaries of the assistant staff, we find that, excluding Felsted and Chigwell (where boarding fees are added to some of the salaries), and excluding East Ham (whose day-school salaries include payment for evening work), the average of 95 assistant masters was £141. 1s. 3d. a year. No one of these received as much as £260 a year. For women the average works out at £98. 5s. 3d. Even at Felsted and Chigwell most of the salaries are under £200 a year.

It is impossible within our limits even to indicate the reforms that are desiderated. The volume will prove a reliable book of reference for many years in county education offices. We can only hint at one or two of the main subjects that are treated. On the question of salaries, condemnation of the existing state of affairs is given with a free hand. The Report proposes that for men graduates, professionally trained, the scale should be £150, rising by £10 a year to £300; for women, with degree or equivalent and training, £110, rising by £7. 10s. a year up to £200. The annual cost of maintaining schools is stated to be as follows:—A school of the type called in the Report "higher elementary," from £8 to £9 per head for any number of pupils over a hundred. A middle secondary school will cost for boys £15, and for girls £13. In each case a hundred to a hundred and fifty pupils are supposed. For higher secondary schools the cost will be from £23 to £25 in the case of boys, and from £18 to £20 in the case of girls. A careful scheme of scholarships, carrying pupils from one stage to another, is implied. As regards co-education, Prof. Sadler states that one result of his inquiry in Essex is to make him more conscious of the benefits and practical advantages of this system than he had been before. At the same time he sees much to admire in schools for girls that he does not find in co-education schools. With regard to private schools, it is insisted that these play a useful part and are likely to enjoy the support of parents for a long period, in spite of the increase in number of public schools. The nation cannot afford to be indifferent to the education that the rising generation is to have; therefore these schools must be efficient and should be inspected at the cost of the Education Authority.

THE Report of the Surrey Education Committee includes a circular letter which has been sent to the governing bodies of secondary schools for boys in the county, calling attention to the regulations of the Board of Education in reference to physical exercises. The letter asks for full details as to what is done, in order that the Committee may organize a scheme likely to be acceptable. The letter states, further, that physical exercises should be taken to include something more than mere military drill or marching—indeed, that anything approaching to a military nature should be abolished. In its stead should be substituted "a course which, while physically developing the scholar, shall give some instruction in the scientific principles underlying such course, and their application to and beneficial results upon various parts of the human anatomy." The Physical Training Sub-Committee reports with approval the results of Major Norman's classes: 475 teachers have

passed through a complete course of instruction, and there are more than 600 now undergoing instruction. The same Sub-Committee has been making inquiries through its officers into the health of the scholars in the elementary schools, especially with regard to the spread of preventable diseases. The Report shows that much more care is required, and a much larger staff of medical officers; but, in view of the costliness of such a complete scheme, it cannot be carried out in its entirety. The examination of mentally defective children continues. In the schools whose examination is included in the Report before us, 41 children were found to be mentally defective, giving a percentage of 0.49. Other children to the number of 127 were examined: 32 were declared to be dull and backward and 20 had "arrested development of one or more faculties."

FROM "The Proceedings of a Conference of Delegates from School Committees in the Orange River Colony" we learn that there are twenty-six educational districts, each with extensive powers of administration. The school system makes provision for the establishment in every important town of a free school with departments forming a co-ordinated whole from kindergarten to matriculation. In the rural parts of each district endeavours are made to provide schools within reach of every farmhouse. At present the number of such schools is totally inadequate, and the Conference had to consider how to meet the deficiency. Pupils from the rural schools, after completing their elementary education, are expected to go to a town school, where they will receive free preparation for the University Course at Grey College. Mr. Gunn, Director of Education, calculates that there should be at least 34,000 children in the Colony of school age—just double the number in attendance at present. He speaks of farmers, with tears in their eyes, imploring the Department to provide more schools, and of pathetic letters "clamouring for new schools with a pertinacity that might be objectionable if it were not so absolutely justified." The whole question, adds Mr. Gunn, resolves itself into a matter of money. It is the shortage of money that accounts not only for the want of school buildings, but also for the dearth of teachers. "If we are to get our teachers in South Africa at the present day, we must pay higher salaries than any of the other colonies. As a matter of fact our salaries are considerably lower." But, on the whole, the report is reassuring, denoting a population keenly alive to the benefits of education, a Government anxious to use all possible resources for the purpose, and officials able and willing to co-operate with the people.

WE have received from the Education Committee of the West Riding of Yorkshire a number of handbooks dealing with the numerous facilities offered to teachers and other students in a large variety of subjects.

From the information at our disposal we are inclined to think that no area provides more opportunities for the intellectual and manual improvement of its people, or takes more trouble to see that information as to these opportunities is circulated in a clear and handy form.

THE SPELLING UKASE.

WE are grateful to President Roosevelt for bringing the question of spelling reform to the fore, though we can as little approve his circular as the bomb discharged against M. Stolypin. His list of three hundred simplified spellings, though framed by a learned Committee with Prof. Brander Matthews as Chairman, appears to us extraordinarily crude and illogical. By the enunciation of two or three simple rules or principles it might have been reduced to half its length. Seventy of the three hundred words are preterites or past participles of verbs, as "accurst" for "accursed." Why have a larger number of similar verbs been omitted from the list? The *Times*, in a leader on the subject, asks whether we are in future to write "kilt" for "killed." The question is absurd. "Killed" can never rime with "spilt," but we should welcome the simple rule which was not only preached, but practised, by the Brothers Hare and Dr. Whewell, that wherever the participial ending is pronounced *t* it shall be so written. A second rule, which would reduce the list by more than thirty, is that the final *-our* of substantives shall be written *-or*. To stop the mouths of critics who are sure to ask how we propose to write "hour," it would be necessary to add: "of substantives derived from the French *-our* or the Latin *-or*." A similar rule, substituting *-er* for *-re* in words like "metre," would further reduce the list by some twenty words; and, if we add: "*e* for *æ* or *a* in classical derivatives such as 'mediaeval,' and *-ize* for *-ise* in

verbs," Mr. Roosevelt's three hundred will prove no more formidable than Falstaff's men in buckram.

We would not be understood to endorse all the rules that we have formulated. As a matter of choice, we prefer "criticise" to "criticize"; and, though "honor" does not scandalise (or scandalize) us, we see no great advantage in adopting the American spelling. What, as teachers, does concern us, and what, from this point of view, we can heartily support, is the plea for simplification, the removal, in however a small degree, of the stumbling-block which stands in the way of every English child and makes the first steps of learning far more difficult to him than they are to the German or the Italian.

None but the elementary teacher can appreciate to the full the grievousness of this burden, and it is passing strange how little interest he has shown in the attempts made to lighten the yoke. Thus, in the latest book on pedagogics (why is this word not in the list?) Prof. Welton assumes as axiomatic that "spelling is nothing more than memory drawing of the pictures of words," that it is not directly learnt through rules at all, and that the way to acquire the art is to make the child for the first two years of his school life learn to spell one new word a day. This amounts to a confession that the English child is in no better case than "the grey barbarian," the Chinaman or the Japanese, with his twenty thousand ideographs; and yet Prof. Welton is apparently content and would relegate all phonetics to a later stage.

So far our criticism has been mainly negative, and we may be fairly asked what reforms we should ourselves propose. Let us dismiss at starting phonetic spelling as outside the range of practical politics, though the arguments in its favour seem to us irrefutable and the objections urged against it transitory and comparatively unimportant. The insurmountable objection is one that is rarely acknowledged: those who have with pain and labour acquired an accomplishment, however worthless, will not forgo the fictitious superiority and become again as little children. As well expect the Chinese mandarin to pare his nails or the Chinese lady to wear Western boots! But, though we cannot hope to go the whole way, there are not a few remediable abuses in spelling that can plead neither reason nor antiquity for their retention. Some of them are to be found in the American list, and the most pedantic of purists cannot quarrel with the spelling of "bun," "cyclopedias," "era," "gipsy," "lacrimal," "pigmy," "plow," "skilful," "wagon," "whisky"—and we may add two words so spelt in *The Journal*—"program" and "rime." But we would go a step further and ask what imaginable argument can be adduced for retaining anomalies such as "proceed" and "precede," "grottoes" and "quartos," and the numerous words which, as Prof. Skeat has often pointed out, only perpetuate the blunders of ignorant grammarians—"could," "sovereign," "sylvan," "scythe," "sulphur." It is a remarkable fact that the philologists, the professional conservators of traditional uses, are almost to a man ardent spelling reformers. Archbishop Trench was a singular exception, and some may remember how, in that early controversy with his learned brethren, he fell into the pit that he had digged for himself, maintaining that, if the French *poëts* lost its *d*, the connexion with the Latin *pondus* would be forgotten. We are reminded of a more recent anecdote, for which we can vouch. A venerable master at one of our great public schools, in entering the papers that he borrowed from Common Room, used to write "*Graphhic*" till a younger colleague ventured one day to question the spelling. "Very stupid of me," was the apology; "but the Greek runs in one's head and confuses one."

The mild reforms in spelling that we have suggested would, we own, be but a slight alleviation and may seem hardly worth making; but, if a beginning were made, if it were once acknowledged that neither Johnson nor Webster nor even Murray is stereotyped, they might be indefinitely extended.

Meanwhile, we would enter an earnest plea for toleration, especially in the case of young pupils. The importance attached by inspectors and examiners, and consequently by schoolmasters, to correct spelling seems to us wholly disproportionate, and the time wasted in spelling drill, especially in elementary schools, is lamentable. Misspelling is taken as a sure mark of illiteracy, and, of course, it is true that most educated men and women, by long practice, come to spell correctly; yet most of us could name among our acquaintances at least one distinguished scholar whose letters would have plucked him for the Civil Service.

Keate, as the story goes, in one of his tantrums, called an Eton boy a fool and a liar. The boy wrote demanding an apology and was promptly expelled. His parents reasoned with him on his foolishness and asked whether he was not sorry. "No," the boy doggedly replied; "I'd do it again. If he were a gentleman, he'd have given me satisfaction. But [reflecting] I am sorry for one thing." "What's that?"—"I spelt 'apology' with two p's."

CORRESPONDENCE.

DOGMA OR ATMOSPHERE?

To the Editor of The Journal of Education.

SIR,—Will you allow space for a brief criticism of "E. F. J.'s" letter on Mr. Birrell's Bill in your August issue? One may assume general assent to his theory that conviction, imagination, and charity are the fundamental qualities which go to make a teacher—conviction, that he may be steadfast; imagination, that he may be able to put himself in another's place, and also to see that other not only as he is, but, more, as he may become; charity, that he may respect the conviction of another, even when it clashes with his own.

On the practical side, however, does not "E. F. J.'s" position entail an acknowledgment of formal authority in religion? Is all conviction to be laid down by the "practised thinker and instructed teacher," and simply accepted by the pupil; and, if so, will this teacher—to whose care, presumably, all religious instruction is to be entrusted—inoculate his pupils with a "conviction" of the right of private judgment? Whilst—or, perhaps, because—admitting the difficulty of estimating rightly the proportional value of dogma, one may believe, with Mr. A. C. Benson (*vide The Journal of Education* for August) that Christian truth may well be "approached on its moral and emotional side rather than on its metaphysical and ecclesiastical side," and extend one's belief from Eton to the elementary school.

One hears constantly, from men and women alike, that amongst the most helpful recollections of their school life are those of morning prayer, a Bible reading (without comment), a hymn, a collect, the Lord's Prayer. It is not the dogma, implicit or explicit, in any of these that appeals to the child mind, but rather the atmosphere created by the recognition of higher things—the taking for granted of the religious attitude of the school.—I am, Sir, yours, &c.,

Edinburgh, August 17.

L. P.

INTEREST AND DISCIPLINE.

To the Editor of The Journal of Education.

DEAR SIR,—Allow me to call attention to a statement in the "Occasional Notes" of your *Journal* for September, which, although true, is apt to be misconstrued. In reference to Mr. Browning's lecture on "The Training of Teachers," it is there said that "an interested class is a disciplined class." It is true that even the weakest of disciplinarians can secure listeners for a good tale; but it is equally true that in most of the subjects of a school curriculum not even the most interesting teacher can hold the attention of a class without the power of discipline. Directly the story is over and the class is set to write out what they have heard, then the disorder is likely to begin. And it is doubtful whether the average boy can, from day to day and from month to month, be so interested in such subjects as grammar and the like that he will voluntarily choose to give his attention without the pressure of compulsion. Very few boys would come to school unless they were sent.

We must always remember the relativity of interest. Many people do not find an inherent interest in their daily duties, but they are obliged to perform them, and thus an interest is acquired even in otherwise irksome work. And yet when the hours of duty are over they gladly throw aside their tasks for more congenial pursuits. And a boy's world is very different from ours. A show lesson may be given, and may appear to us to be interesting; but the ordinary work can hardly be made always so inherently pleasurable to boys that they will all, with one consent, vote cricket dull and football slow. And one or two mischief makers are sufficient to upset the discipline of a class.

But, if a boy feels that he must attend or he will get into trouble, that he cannot go to sleep or he will have bad dreams, then he will be stimulated to exertion; and this activity will give rise to interest, and his work will even become a source of pleasure. Many a one has found that subjects which were originally undertaken only under compulsion have gradually become, largely from the pleasure of successful striving, the favourite pursuits of life. And it is a truism that boys themselves like such pressure. They feel that they ought to work in school, but, unless temptations to idleness are obviated, they seem to find themselves powerless to resist extraneous influences.

Thus it would appear that, in ordinary circumstances, discipline is the necessary condition precedent of stimulus or the exciting of interest. At the same time I do not know that I should have said that discipline is the chief object of training. There are many things for a teacher to learn besides keeping order. And I am inclined to think that in the matter of discipline each beginner must work out his own method, as an actual master, in an actual school, with a real head master and real pupils. However, training and guidance may be helpful even in this.—Yours, &c.

THOMAS W. H. HUNT, B.A.

The Retreat, Swaffham.

September 29, 1906.

[To discuss the question here raised would need an article. We may hint at what our answer would be by quoting Mr. Arnold's lines:

Yet tasks in hours of insight willed
May be through hours of gloom fulfilled.

—ED.]

CHIGWELL SCHOOL, ESSEX.

To the Editor of The Journal of Education.

DEAR SIR,—The attention of myself and of several of my governors has been drawn to a report in your September number, as to certain negotiations which have been carried on between the Governing Body of this School and the Essex Education Committee. I am asked to state that your correspondent's report of the conditions attending a grant which we are receiving from the county and a loan which we are negotiating with the Committee is not quite accurate; and that the conclusions which he draws from the arrangement are also not justified by the circumstances of the case. We are advised by the Board of Education that the transference of our trust property from the Board to the county is merely formal and cannot in any way affect the administration of the School, particularly as all the conditions quoted are controlled by one, which is not noticed, to the effect that in case of any difference of opinion between the Essex Education Committee and the Governors of the School the judgment of the Board of Education shall be supreme. There will not be any change whatever made in the character of the School. It has always been a local school; although the non-local element in connexion with our boarding houses has affected this considerably; and it is evidently not known to your correspondent that always more than 50 per cent. of the boarders have been Essex boys, most of them resident within half-a-dozen miles of the School. The growth of the population in the immediate neighbourhood will, of course, before many years have passed make greater local claims upon the School than before.—I am, dear Sir, yours faithfully,

September 18, 1906.

R. D. SWALLOW, *Head Master*.

THE VALUE OF QUESTIONS IN FRENCH EXAMINATIONS.

To the Editor of The Journal of Education.

DEAR SIR,—The following question was set in a late examination by one of the foremost examination authorities in the country:—"Give the masculine plural of the compound adjectives *aigredoux*, *deminort*, *puiné*; and the feminine plural of *fraiscuilli*, *clairsemé*, *courtéçu*."—I should be glad to learn the opinion of others whether this has any educational value or is merely a cram question, and whether young people, seeing the multiplicity of subjects of study, can be expected to answer it. For, surely, the three words *deminort*, *clairsemé*, *courtéçu* constitute an onerous repetition, as they illustrate an identical principle; *puiné* is practically not a compound adjective, while *fraiscuilli* is a "catch" of the good old-fashioned crusted sort. Are we going back to the gender of *gens* and the agreement of *tout*?

A further cause of bewilderment to the teacher is the want of proper gradation among the various examinations. For last year's Pupil-Teachers' a poem was set containing some extremely involved phraseology, and the most unusual form *boaux*—which Littré does not give. For the London Intermediate the French paper was so easy that it would have done quite well for Matriculation.—Yours truly,

Cecil A. Gould.

BRITISH ASSOCIATION.

To the Editor of The Journal of Education.

DEAR SIR,—In the report in this month's *Journal of Education* of my paper in the Education Section of the British Association at York I am said to have "urged that lecturers in training colleges, both primary and secondary, should have undergone a thorough course of psychology, &c." May I point out that what I pleaded for was that training college lecturers *on theory of education* (whether primary or secondary) should have gone through the preparation described?—I am, yours truly,
 Girton College, Cambridge, E. E. C. JONES.
 September, 1906.

To the Editor of The Journal of Education.

SIR,—In your report of the British Association meeting (Section L) you quote me as saying that end-of-term examinations "were beloved of every head master as a slack time." Will you allow me to point out that I did not say or imply this—knowing as I do that it is not the case? My remarks in this connexion were solely directed to the fact that the too rigid adherence to the usual routine of such examinations involves waste of school time. The subsequent sentence in your report then follows naturally. Thanking you for inserting this correction,—I am, Sir, your obedient servant,
 J. H. LEONARD.
 Kensington, September 7.

THE MARIA GREY TRAINING COLLEGE.

To the Editor of the Journal of Education.

DEAR SIR,—A rumour has got abroad that the Maria Grey Training College is training teachers for elementary schools. Will you kindly allow me to explain that this is not the case? The Middlesex County Council has given an annual grant to the College on the condition that ten free places shall be reserved for students residing in the Administrative County of Middlesex who wish to be trained as teachers in *secondary* schools. The Middlesex students are trained to teach in high schools, private schools, or kindergartens just as the other students are trained.—Yours truly,
 ALICE WOODS.

[We are compelled to hold over a long letter from "School Manager" in reply to B. L.'s arraignment of the London County Council.]

IN MEMORIAM MRS. WILLIAM GREY.

THE death of Mrs. William Grey at the great age of ninety reminds many of us of the great pioneer movement for the higher education of women and girls which she in part originated and pre-eminently led in the seventies. The history of social improvements moves so rapidly that, as one generation passes, its successor forgets or ignores the self-denying and strenuous efforts of individuals to win for the juniors those chances and privileges which later on seem a natural birthright. It is therefore salutary and even stimulating, as workers for the common weal pass into silence, to try and estimate not only what they did, but (often far harder) how they did it.

Mrs. William Grey was born in 1816, and with her gifted sister, Miss Emily Shirreff (d. 1897), led a full and varied life as a girl. Their father's profession (that of a naval officer) took them constantly abroad, and at various foreign stations no less than in England the sisters saw and mixed with society where intellectual culture was by no means neglected. They both became accomplished linguists, and maintained their interest and proficiency in French, German, and Italian to the last. One or two books by the sisters appeared about fifty years ago marked by that acute and varied observation of men and manners which was the outward expression of a sound, liberal, and continuous self culture and discipline; for such writing as is to be found in Miss Shirreff's "Intellectual Education" (now out of print) shows no mere fitful cleverness, but a philosophic bent matured by steady and hard reading. Mrs. Grey, after a brief married life (her husband was a son of Earl Grey, and by profession a wine merchant), was left a widow, and turned naturally to the task of awakening and directing interest in the condition of women's education. Friends and sympathizers quickly joined her. Among these may be named the late Lady Stanley of Alderley, the Rev. T. W. Sharpe, C.B., Miss Mary Gurney, Sir James Kay-Shuttleworth, Miss Buss.

HORACE MARSHALL & SON'S

SCHOOL BOOKS.

A HEURISTIC ARITHMETIC.

By CLIFFORD GRANVILLE, B.A., and C. E. RICE, M.A., of West Heath School, Hampstead. Part I. METHOD BOOK, 2s. 6d.; Examples, 1s.

This Arithmetic is on very original lines, and aims at the rational development of the pupil's mathematical power from the earliest stages. Part I. is adapted for children from six to ten years of age.

Complete Prospectus, with Specimen Pages, post free on application.

A FIRST BOOK IN ENGLISH LITERATURE.

By C. LINKLATER THOMSON. Part III. (From Lyndsay to Bacon.) Cloth, fully illustrated, 2s. 6d.

This work combines a simple History of English Literature with typical passages long enough to be of independent interest. The pictures are in many cases copies of drawings in contemporary MSS.

ILLUSTRATIONS OF ENGLISH LITERATURE.

From Defoe to Burns. Edited by C. L. THOMSON. (In the Carmelite Classics, Large Size.) Cloth, 1s. 4d.

ILLUSTRATIVE HISTORY —**MEDIAEVAL PERIOD (1066-1487).**

Edited by A. KIMPTER, Mistress of Method at the University College of Wales, Aberystwyth, and G. HOME, M.A., late of Newnham College. Cloth, fully illustrated, 2s. 6d.

These books, of which this volume is the latest published, consist of striking passages from original sources and standard historians, and are intended to be used in illustration of whatever English History text-book may be adopted.

INDEXING AND PRÉCIS WRITING.

By R. V. N. HOPKINS, B.A., late Scholar of Trinity College, Cambridge. Cloth, 2s.

This book consists of carefully graduated exercises in Indexing and Précis Writing, and is suitable for use in connexion with the various Civil Service Examinations.

DANS LE ROYAUME DES FÉES.

French Plays for Little Children. By VIOLET PARTINGTON. Decorated paper cover, 9d.

READINGS IN WORLD LITERATURE.

Being a sequel to the *Temple Reader*, and formerly known as the *New Temple Reader*. Intended for use in Literature and Composition Lessons in the Higher Classes of Schools. Edited by E. E. SPEIGHT, B.A. Cloth, 1s. 6d. net.

CHAUCER'S NUN'S PRIEST'S TALE.

Edited by C. T. UNIONS, M.A. Decorated paper cover. Price 3d. (In the Carmelite Classics. Full List post free.)

BOTANY RAMBLES — Autumn.

By ELLA THOMSON. Limp cloth, fully illustrated. 1s.

THE LIFE OF THE STATE.

By GERALDINE HODGSON, Mistress of Method at University College, Bristol; sometime Golden Scholar of Newnham College. Cloth, 240 pages, 2s. 6d.

The SPECTATOR says of *The Life of the State*:—"The well-informed reader soon finds that Miss Hodgson knows what she is writing about; that her study of the subject has begun at the beginning, and is thorough. Her remarks on the British Constitution in its present development are clear and instructive."

TEACHERS should write for Horace Marshall & Son's NEW ILLUSTRATED CATALOGUE OF SCHOOL BOOKS, with particulars of A FIRST HISTORY OF ENGLAND by C. L. THOMSON, THE ROMANCE READERS, THE CARMELITE CLASSICS, POETRY BOOKS, MODERN LANGUAGE BOOKS, &c., &c.

The Women's Education Union was an early outcome of their efforts, and from that sprang the Girls' Public Day School Company. Mrs. Grey was an able and incisive public speaker, and did much to form public opinion as to the crying need for better and sounder education for middle-class girls. Unwilling to waste one or two generations in waiting for pious founders or Government sympathy, Mrs. Grey and her friends boldly supported the idea of education on a commercial basis, and wherever a locality could produce shareholders to guarantee about £1,000 a high school was opened by the company. Some, such as the Notting Hill High School, speedily justified the plan, and, though no doubt the hypercritical could and did inveigh against education as a financial enterprise, Mrs. Grey and her friends could point with growing pride and confidence to the schools themselves, and to the splendid opening they offered to girls and women of ability and serious purpose. But the very success of the schools showed other and deeper needs, and none more clearly than that which Mrs. Grey and others next tried to meet by the establishment of the Teachers' Training and Registration Society. A College for Women Teachers for Secondary Schools was opened by this society (of which Mrs. Grey was the hon. organizing secretary) in 1878 in premises kindly lent for the purpose by the late Rev. Wm. Rogers, Rector of Bishopsgate. Here the work was carried on till 1885, and many and curious are the stories which might be told of the fortunes of the college, which later removed to Fitzroy Street, and later (in 1892) to Brondesbury, where for years past it has borne the honoured name of her who was in effect its foundress. Much might be added of Mrs. Grey's boundless hopes and projects for the progress of her sex, but the dominant trait in her character was the deep appreciation of what was practicable and of the necessity for taking what could be got instead of wailing for the ideal best. Whoever had the privilege of knowing Mrs. Grey personally knew and felt this—felt it not in any sense as a cheapening of ideals, but rather as an impelling influence to prove capacity for higher opportunities by that "faithfulness in small things" which the eye of the Master can discern and appreciate. Here, and in all modesty, let it be added that Mrs. Grey felt and expressed the deepest conviction as to giving a foundation, clear, firm, broad, and unsectarian, of religion to all education. To awaken a sense of the greatness and importance of everyday life and its opportunities, to make intellectual life keen, lofty, broad, because thus, and thus alone, could effectual service be rendered to others, was her lifelong aim. Through years of weakened health and restricted opportunity she kept alive her faith—no low motive, no cynical expression of disbelief but had her instant reproof—a reproof driven home by her lifelong efforts on a higher plane.

As she grew older her features took on an indescribable beauty; the weak body but threw into a serener light that animating spark of spiritual life which illumined for fifteen years or more the quiet chamber in which she lay confined. Friends passed—her dear sister Miss Emily Shirreff died, to her inconsolable regret, in 1897—and still the call came not. What matter? She could still from time to time see a friend, utter her words of hope, of sympathy, of encouragement; those brief interviews are among the most treasured memories of her friends and followers. "They also serve who only stand and wait."

As the solemn service was read in the peaceful church on September 22 it seemed as though her thrilling decisive tones were yet audible in the Psalmist's prayer that we might so number our days as to apply our hearts unto wisdom.

THE REV. A. E. CRAWLEY, late scholar of Emmanuel College, Cambridge, has been appointed Head Master of Derby School, out of seventy-four candidates.

HOXTON MISSION KINDERGARTEN.—A memorial fund is being raised in memory of the work of Miss Adelaide Wragge, late President of the Blackheath Kindergarten Students' Guild. The sum of £400 is required to build and furnish a room in connexion with the new buildings of the Christian Social Union. Many Froebelian will be glad to support this effort to continue and extend the educational experiment which Miss Wragge so successfully started. Donations may be sent to the Treasurer, Miss E. L. Cuming, 26 Gleneagle Road, Streatham, S.W.

TELEGRAMS: "LATTISTEP, GLOUCESTER."

**IS YOUR PENCIL A
KOH-I-NOOR
OR ONLY AN IMITATION?**

DRAWING
Teachers should see their pupils use
L. & C. Hardtmuth's KOH-I-NOOR.
No other pencil gives such good
results or lasts so long as the KOH-
I-NOOR. It has an inimitable touch
smooth as velvet, yet firm—just the
right pencil for Artists.

MADE IN SEVENTEEN DEGREES.
KOH-I-NOOR PENCILS are one price everywhere
— 4d. each, or 3s. 6d. for one dozen. Of
Stationers, Photographic Dealers, and Artists'
Colourmen. Dainty Booklet on Pencils post free
from L. & C. HARDTMUTH, 12 Golden Lane,
London, E.C.

ARITHMETIC.
**ARITHMETICAL EXERCISES
for JUNIOR FORMS. Book I.**

By R. B. MORGAN, B.Litt.

Crown 8vo, limp cloth. With or without Answers. Price 1s.

This work will be completed in three parts, and will be found to include
all that is necessary for the various Local and similar Examinations.

ALGEBRA.
BEGINNERS' ALGEBRA.

By M. S. DAVID, B.A.

Second Edition, with 17 Illustrations and an Additional Chapter. Small
crown 8vo, strongly bound in cloth, price 2s. 6d.

The ANSWERS are published separately, price 6d.

TRIGONOMETRY.
BEGINNERS' TRIGONOMETRY.

By M. S. DAVID, B.A.

With 60 Illustrations and some pages at end of book ruled in millimetre
squares. Small crown 8vo, strongly bound in cloth, price 2s.

Complete Catalogues on application to the Publishers—

J. POOLE & CO.,

(ESTABLISHED 1854)

104 CHARING CROSS ROAD, LONDON, W.C.

ÆNEID II. 1-56.

THE court was hushed and hung upon his lips.
From his high throne Æneas then began :
"What memories of woe too deep for words
Thou wak'st, my Queen, commanding me to tell
How Troy was sacked and her imperial pride
Crushed by the Danaan victor ; piteous scenes
Wherein I shared and suffered not the least.
Who among Dolopes or Myrmidons,
Or e'en of grim Ulysses' men-at-arms,
Could tell the tale dry-eyed ? Already night
Drops from the zenith with her dewy wings,
And sinking stars invite us to repose ;
Yet, if thy heart be set to hear our tale,
The sum in brief of Troy's last agony,
Though at the recollection I recoil
And shrink in anguish, I will make essay.

"Baffled by fate, forspent by years of war
That dragged their weary length, the Danaan chiefs
Upbuild a horse by Pallas' art divine,
Huge as a mountain, ribbed with planks of pine—
A votive offering for their safe return,
So ran the rumour by the builders spread.
Then in the hollow flanks they stow by night
A chosen band, and all the cavernous womb
Teems with its load of armed warriors.

"Hard by the coast lies Tenedos, an isle
World-famed, and rich while Priam's empire stood,
Now but a makeshift anchorage for barks.
Thither they sailed, and on the desert shore
Lay hid ; but we believed them gone for aye,
Bound for Mycenæ with a favouring breeze.
Rid of her long oppression, Troy was glad.
Through the wide open gates a merry crowd
Streams forth to view the Doric camp, the trenches
Now tenantless, and shores without a keel.
Here were the quarters of the Dolopes,
Here grim Achilles pitched, here lay the fleet,
Here in the mellay many a time we fought.
Some scan the weird gift to the Virgin Queen,
Mazed at its hugeness, and Thymetes first
Cries : ' Let us hale it straight within the walls
And set it on the height, '—foul traitor he,
Or but a witless link in Troy's downfall.
But Capys and the more discreet advised
To whelm in ocean this insidious gift
Of Greece, or burn it where it stood, or else
To pierce and probe the monster's murky womb.
Rent in two factions shout the thoughtless mob.

"Lo ! from the high fort, of a crowd the first,
Rushes precipitate Laocoon.
'What, are ye mad, sirs ?' yet afar he shouts ;
'Think ye our foes have gone, that Grecian gifts
Are guileless ? Was Ulysses without guile ?
Nay, in this wooden frame Achæans lurk,
Or 'tis an engine planned to raze our walls,
O'er top our homes and whelm us from above.
Some trick, be sure, is here ; mistrust the horse.
I fear the Greeks e'en when they proffer gifts.'

"He spake, and, gathering all his might, he hurled
Against the monster's flanks and bellying ribs
His spear : it stuck and quivered ; at the stroke
The vaults reverberate sent a hollow groan ;
And, but for froward hearts and froward Fate,
We at his hest had spoiled the Argive lair,
And Troy and Priam's towers were standing still."

MR. ALGERNON R. PRESTWICH, sometime Scholar of Selwyn College, Cambridge, and senior mathematical master in King's College School, Wimbledon, has been appointed Head Master of Richmond School, Yorkshire.

SCIENCE AND ART EXAMINATIONS Of the Board of Education.

Books for the First Stage.

- I.—*Practical Plane and Solid Geometry, First Stage.* By G. F. BURN. Second Edition, Revised. 2s.
- III.—*Building Construction, First Stage.* By BRYSSON CUNNINGHAM, B.E., Assoc. M. Inst. C.E. Second Edition, Revised. 2s. 6d.
- V.—*Mathematics, First Stage.* Containing all the Algebra and Euclid required. Edited by WM. BRIGGS, LL.D., M.A., B.Sc. 2s.
- VI. A.—*Mechanics (Solids), First Stage.* By F. ROSENBERG, M.A., B.Sc. Fifth Edition. 2s.
- VI. B.—*Mechanics of Fluids, First Stage.* By G. H. BRYAN, Sc.D., F.R.S., and F. ROSENBERG, M.A., B.Sc. Second Edition. 2s.
- VIII.—*Sound, Light, and Heat, First Stage.* By JOHN DOW, M.A., B.Sc. 2s.
- IX.—*Magnetism and Electricity, First Stage.* By R. H. JUDE, M.A., D.Sc. New Edition, Revised. 2s.
- X.—*Inorganic Chemistry (Theoretical), First Stage.* By G. H. BAILEY, D.Sc., Ph.D. Heidelberg. Edited by Dr. WM. BRIGGS, M.A., B.Sc., F.C.S. Third Edition. 2s.
- X. P.—*Inorganic Chemistry (Practical), First Stage.* By F. BEDDOW, Ph.D., D.Sc. Second Edition. 1s.
- XI. P.—*Organic Chemistry (Practical), First Stage.* By GEORGE GEORGE, F.C.S. 1s. 6d.
- XIV.—*Human Physiology, First Stage.* By G. N. MEACHES, M.D., B.S. Lond. 2s.
- XV.—*Biology (Section One), First Stage.* By W. S. FURNEAUX. 2s.

IMPORTANT NEW WORK.

Ready Shortly.

**CASSELL'S
NEW GERMAN DICTIONARY.**

By **KARL BREUL**, M.A., Litt.D. (Cambridge), Ph.D. (Berlin),
Cambridge University Reader in Germanic. Upwards of
1,300 pages. Cloth, 7s. 6d. net; half leather, 10s. 6d. net.

MANY thousands of new words and phrases have been added, and a large number of the old renderings have been corrected and rearranged. Words etymologically connected have, as a rule, been grouped under the same heading; but in many cases homonyms of different origin, which had been confused in the former edition, have now for the first time been separated. The forms of all the strong and irregular verbs have been entered in their alphabetical place in the main part of the Dictionary.

In the German-English part the German accentuation has been indicated: in the English-German part, and in the lists of the German strong and irregular verbs, the latest official spelling of 1903 (as adopted by Germany, Austria, and Switzerland), is given. This spelling, which will probably be generally adopted in the future (*Efeu, Tür, gibt, imstande sein*), has hitherto not been given by any other English-German dictionary.

Among the new words and phrases admitted, will be found many thousands of idiomatic phrases, well known proverbs, and familiar quotations; many ordinary colloquial expressions and a number of German slang terms in common use that often prove puzzling to English students; also some very important dialect terms in both languages. Moreover, the new cycling terms, ordinary postal, military, tennis, historical, geographical, phonetic and linguistic expressions, newspaper terms and advertisements, the chief technical terms of commerce, education, literature, and poetry.

Full particulars and List of CASSELL'S UNRIVALLED
DICTIONARIES will be sent on application.

Messrs. BELL'S NEW EDUCATIONAL WORKS.

Messrs. Bell's Complete Educational Catalogues, or Prospectuses of any of the Books mentioned below, sent to any address on application.

JUNIOR PRACTICAL MATHEMATICS.

By **W. J. STAINER, B.A. (Lond.)**, Head Master of the Municipal Secondary School, Brighton.

Crown 8vo, complete, **3s.**, or with Answers, **3s. 6d.**; or, in Two Parts: Part I. (consisting chiefly of ARITHMETIC and ALGEBRA), **2s.**, or with Answers, **2s. 6d.**; Part II. (GEOMETRY and MENSURATION), **1s. 6d.**

This book has been designed to meet the needs of Preparatory Schools, Public Elementary and Higher Elementary Schools, and the Lower Forms of Secondary Schools. It represents an attempt to correlate the studies of the pupils in the various branches of elementary Mathematics with any work in practical weighing and measuring which they may be afforded an opportunity of doing, and with the constructional exercises generally known as Hand and Eye Training.

The book is generally in accord with the "Suggestions for the Consideration of Teachers, &c.," recently issued by the Board of Education.

Small crown 8vo, 266 pages, price **1s. 6d.**; or, with Answers, **2s.**

A JUNIOR ARITHMETIC.

By **CHARLES PENDLEBURY, M.A.**, Senior Mathematical Master at St. Paul's School,

Assisted by **F. E. ROBINSON, M.A.**, Assistant Master at St. Paul's School.

This book is intended for the Middle and Lower Forms of Secondary Schools, and will be found adapted especially for the use of Candidates for the Oxford and Cambridge and Scotch Local Examinations, for County Council Scholarships, and for Examinations conducted by the College of Preceptors, the Board of Intermediate Education for Ireland, and other Examining Bodies.

Crown 8vo, 6s. Or Part I. (THE STRAIGHT LINE AND CIRCLE), **2s. 6d.** KEY in preparation.

ALGEBRAIC GEOMETRY.

A NEW ELEMENTARY TREATISE ON ANALYTICAL CONIC SECTIONS.

By **W. M. BAKER, M.A.**

This book is written for beginners and for the average boy. The straight line and the circle are very fully treated. The elementary ideas of the Calculus have been utilized, and full use made of one of the best reforms in the teaching of Mathematics, *i.e.* the abolition of the water-tight compartment between Geometry and Algebra.

The examples are numerous and varied, and a number of new types introduced, such as those that have been set in recent Examinations. Revision questions, which may be taken orally, and Revision papers are given at various stages. The use of squared paper is encouraged.

All the most important properties of the Conic Sections are proved, either by Algebra or by Geometry.

A special feature of this work in comparison with other volumes on Conics is the very free use of diagrams.

Crown 8vo, with numerous Diagrams. **1s. 6d.**

A FIRST YEAR'S COURSE IN PRACTICAL PHYSICS.

By **JAMES SINCLAIR, M.A. (Glas.), B.Sc. (Lond.)**, Head Science Master in Shawlands Academy, Glasgow.

This book is an attempt to provide for pupils in Day Schools, Evening Schools, and Pupil-Teachers' Classes a course in Practical Physics which is not too difficult for young students, but which contains all that is really essential.

Crown 8vo, **1s.**

LATIN UNSEENS.

Selected and arranged by **E. C. MARCHANT, M.A.**, Fellow of Lincoln College, Oxford;
late Classical Master of St. Paul's School.

Crown 8vo, **1s. 6d.**

A FRENCH HISTORICAL READER.

Being Short Passages giving Episodes from French History, arranged as a First Reader. With Illustrations, brief Notes, and a Vocabulary.

By **R. N. ADAIR, M.A. (Oxon.)**, Assistant Master at St. Paul's Preparatory School.

LONDON: GEORGE BELL & SONS, York House, Portugal Street, W.C.

Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

EDUCATIONAL SCIENCE AT YORK.

THE youngest Section of the British Association again held its own amongst its elder brethren both as regards the interest of the papers and discussions, and also in point of the numbers attending its sessions. It is, however, still somewhat in the making; so that the nature of the subjects under consideration is apt to vary from year to year. In view of the chaotic condition of education generally in this country, it may be expected that points widely apart will present themselves as requiring immediate settlement. At York subjects of a practical, rather than a scholastic, aspect held a prominent place: thus the necessity for definite physical education, for the teaching of domestic science, for training for home life loomed large. Yet the program included also discussions upon the teaching of mechanics and of modern languages; the training of teachers; the inspection and examination of schools; the balance of subjects in the curricula of both elementary and secondary schools—all this crowded into the space of four days of about five hours each.

Again, in respect of its members, Section L is hardly, take it all in all, as homogeneous as other Sections. Education is a popular subject just now, and hence any discussion of any of its problems necessarily attracts a popular audience; there was, however, somewhat a dearth of educationists pure and simple. There was, as usual, a nucleus of experts, the officers of the Section and a band of faithful adherents, who were to be found always in their seats, whose allegiance is undivided; but, as was animadverted upon by one prominent member, teachers from the rank and file of the schools, whether men or women, were rather conspicuous by their absence. This member expressed the opinion that, if chemists, botanists, and the like could give up a week of their holiday for the advancement of their subject, teachers might surely do as much. There is this to be said, however, that many teachers *do* give up the week (hard though it be when it comes at the end of a hot and tiring term), but they are chiefly science teachers, who take the opportunity for the inspiration of getting once more into the swing of their special subject, and are therefore more frequently

to be found swelling the ranks of the chemists and botanists than consorting with their strictly professional *confrères*; added to which the heterogeneity of the program renders it inevitable that specialists will be sporadic in their attendance.

The great disadvantage under which the York meeting laboured was the poor representation of the arts side of education. The British Association exists for the advancement of science, and doubtless arts teachers consider that they gain more from the Classical or the Modern Language Association. For whatever reason, the general absence of classical teachers, especially from York (as compared with some earlier meetings), was marked, and in spite, or perhaps because, of the present canvass of the classics, it were a pity if they should lose representation in an assembly which hopes to deal with the science of education as a whole, and equally a pity should the Section shrink into concerning itself only with technical affairs. Nowhere were the humanists more missed than at the discussion on the curriculum of secondary schools.

It is sufficiently obvious that in a liberal education, such as is hoped for as the outcome of the present educational distress, science and the humanities must each have due place. This can only be compassed by a full consideration of their rival—or rather their complementary—claims, by teachers from both sides: and perhaps the presence of the humanist, who is centuries behind the age in his ideas of the relative values of lecture-room and laboratory in science teaching, is as necessary for his own sake as to counterbalance that scientific colleague who has boasted his utter ignorance of all classical learning. In any case, neither destructive criticisms nor well rounded periods nor one-sided arguments conduce to the settlement of any question whatsoever, not even to the adjustment of the balance of subjects in a school curriculum—in fact, the York meeting left this problem much where it found it; and yet, had the literary side been adequately represented, this is just one of the subjects which could nowhere have been better threshed out than in Section L.

In reviewing the work of this year one's thoughts turn instinctively to the future of the Section. That it may have a great future is evident even from its brief past, from the conditions under which it meets; for, with the whole organization of the British Association behind it, it has unique facilities for the investigation of all sorts of educational problems. This vastness of field alone, however, is a little overwhelming, and it is possible that the best interests of education will be served by some sort of selection of subjects from year to year out of the long list of questions crying for settlement, such as are most urgent or most appropriate to the place of meeting might be put upon the program, the others waiting their turn—or a more convenient season. Again, the difficulties arising from the absence of *data* based on scientifically conducted experiment might be met by the formation of special committees to organize or encourage such experiment and to collect such *data*. Sub-committees for this kind of work do exist: but their numbers might be well increased, and their scope greatly enlarged.

Another point: the reports of the committees might be printed and circulated amongst members of the Section some time before they are read and discussed. Yet again, the Section might well prepare for debating subjects of wide application by breaking up into sub-sections. This was done once at York: it might be done systematically. With regard to the inspection and examination of schools, for instance, the classical specialist is not necessarily excited about the inspection of cookery classes; but he has views as to the examination of his own subject, and the great point both for him and the examiner is that they may meet and learn each other's aims and ideals at first hand. The Section might, therefore, break up into Arts, Science, and Technical divisions to discuss details of work, the whole body receiving later the results of their deliberations and considering the broader issues. Or, again, teachers in primary and secondary schools are not vitally interested each in the work of the other: questions relating to each class of school might, therefore, be discussed in sub-sections, the results being submitted to the Section as a whole.

Finally, a greater liberality in respect of printed matter is essential: at present the abstracts of papers are most meagre, the number of copies is at a minimum. It would be an immense gain to have the reports of special Committees, and the drafts of the more important papers freely circulated, and

before the time of reading, so as to give members time to formulate their ideas before plunging into the whirlpool of debate.

To carry out such suggestions need not mean an increased tax upon the time and energy of the already devoted sectional officers, for a larger Committee with every facility for lightening its labours by division, or by adding to its numbers, would meet the case fully: that all the help required will be forthcoming admits of no doubt; for, because of its hopeful initiation and its unparalleled opportunities, the newest and most criticized of all the British Association Sections claims the support of educationists of all classes.

THE READING OF THE YOUNGER GENERATION.

DO the younger generation read more trash and fewer good books than their fathers and mothers did? Miss Low, in an interesting paper in the February number of the *Nineteenth Century*, maintains that they do. She bases her argument chiefly upon the answers given by high-school girls to a paper of questions about their favourite authors, the magazines they read, &c. If these answers represent the whole truth and nothing but the truth, the state of culture of an average high-school girl of fifteen or sixteen is not a high one. But before deciding that they are such utter barbarians as they appear I should like to know how far these school-girls' answers represent the real facts. Some of them should, I think, be received with much caution. A girl, *e.g.*, is asked what magazines she reads. With the natural impulse of this much-examined generation she immediately writes down the names of all she knows. Miss Low concludes, I think too abruptly, that the unhappy child reads every one of these magazines every month!

Again, when the complaint is that they do not read Scott or Dickens, I should like first to be sure that they knew who was the author of "Ivanhoe" or of "Oliver Twist." It sounds absurd to suggest that they may have read these without knowing or remembering the names of their authors; but it is really possible. I have seen a little boy reading "Ivanhoe" with joy in a sixpenny edition which he had bought for himself, who had never disturbed the rows of Scott's novels in nice bindings which I have placed in the shelves in the hope of attracting him and his fellows. Scott does not appeal to all tastes at all ages, nor does Dickens. I remember at the age of thirteen thinking "Waverley" dull, and being horribly tired of "Little Dorrit," both of which I heard read aloud by a good reader whom I loved, and therefore heard in the most favourable circumstances, but before my mind was ready for them. Indeed it is not yet ready for "Little Dorrit," though I often wonder how I could ever have thought "Waverley" dull. At that same age I loved Scott's poetry, and I find that young people still love it, and that here and there a quite young boy will devour the "Waverley" novels. I do not know a boy who does not like "Marmion" or "The Lady of the Lake," but, as most of them have read one or other in school, perhaps Miss Low would not count this, even though they will read it at home when it is not set. When they are older they may learn to like Scott's novels; if not, they must be content with their Stevenson, who has some of the qualities which endeared Scott to us. Stevenson himself, in one of his essays, tells how he "discovered" his Scott, by coming upon the character of Andrew Fairservice. Scott, in his own generation, was beloved by the young, and thought that his books would most naturally please "young people of bold and frank disposition." Perhaps in those days the wise-a-ces shook their heads when they found young people absorbed in them. I can remember hearing the same things said when I was young. Miss Mulock's stories, which Miss Low places among the classics—"John Halifax" and others—came out in the magazines, and I was reproved for wasting time in reading them, and told to get "something sensible to read, instead of filling my head with that trash." "That trash" on the particular occasion included "Pride and Prejudice" in a yellow-backed cover.

To return to our young people: I draw my own conclusions chiefly from a smaller area; but because it is small I know it, and I have no reasons for believing it to be exceptionally good.

For the last twenty years or so I have had some part of the care of a few boys of varying ages attending a day school. They are welcome to our books at any time and they have access to a small school library. They always, however, bring with them a few books of their own for reading at spare moments, and these must to a certain extent show their tastes. One boy used to bring chiefly historical books of all kinds—I remember Creighton's "Queen Elizabeth" and Froude's "Elizabethan Seamen." This term the elder boys' books are not very remarkable—they have three by Rider Haggard, four by Max Pemberton, one by Conan Doyle, one by A. J. Church, one by Stevenson, Tennyson's poems, "The Romance of Modern Electricity," Whetham's "Recent Developments of Physical Science," Proctors "Leisure Readings," and a Shakespeare borrowed, "Nature" borrowed, "Tale of Two Cities" borrowed, besides books which will be used in school, and books which have been placed in their study for their use. I have known these boys to buy for themselves, and have seen them reading at tea-time, such books as More's "Utopia," and copies of Cassell's six-penny editions of plays of Shakespeare (without notes, I think, and certainly not for examination or for school work). "A whole term" spent in school over one play of Shakespeare (after all, probably only 24 lessons) has not in their case produced the result which Miss Low deprecates, of "boredom verging on dislike."

The juniors have brought in their play-boxes numbers of natural history books—two of them have Wood's large book, books about moths and butterflies, plants, British birds, &c. Some of these have been bought by the saving of treasured pence, or with money sent to buy a birthday present. Books about animals are perhaps the most universally popular at this age (from eight to fourteen). Seton Thompson's books they are very fond of and Kipling's "Jungle Books." I have known a boy of ten, when it came to his turn in a game we were playing to tell a story, stand up and repeat a tale from the "Jungle Book" almost word for word. This book was his own private property, and he never seemed to tire of reading it.

Besides animal stories and books of natural history, the juniors' own books include "Gulliver's Travels," "Robinson Crusoe," "Swiss Family Robinson," "Grimms' Fairy Tales," "Tom Brown's Schooldays," Lang's "True Story-book" (a great favourite), Newbolt's "Tales from Froissart," "Ivanhoe," Stevenson's "Black Arrow," a whole set of "Books for the Bairns," one each of Jules Verne, Fenimore Cooper, Ballantyne, and Henty.

It seems to me that the children of this generation have an immense advantage over us in the cheap reprints of the best books, which are as common as "trash," and which I believe they generally prefer. I have known two brothers—ages eight and ten—spend part of their weekly pence in taking in the series of "Penny Poets" as they came out, and I once overheard to my great amusement a lively argument between the younger of these brothers and another boy of nine on the merits of "Paradise Lost," which was the latest number, and which the youngest of eight complained that he "could not understand." "What can't you understand?" asked the nine-year-old; "just tell me what it is you can't understand in it, and I'll explain it to you!"

On Sunday evenings I generally read to them for half an hour, and the one book which has never failed to please is "Pilgrim's Progress." I once heard one young person describe it as "a jolly decent book!"

Children's history books now are as interesting as any other story books, and books which they read in school are attractive enough to be borrowed by boys in other forms than those in which they are read. In this way at present come in "Hereward the Wake," "Children of the New Forest," "Ivanhoe," "The Story of Odysseus," and the "Temple Readers," which are often borrowed from each other and read "for pleasure." I should not think it more necessary to recommend such books than to recommend jam tarts, which, if well made, supplied at the right time and not too frequently, are sufficiently attractive in themselves.

None of these boys—with perhaps one or two exceptions—has been a specially clever boy or has belonged to a specially literary family. No doubt they could be made to like trash if it were provided and put in their way, or if they saw us always reading it ourselves; but then such a course on our part would reflect rather upon our generation than on theirs. μ.

REVIEWS AND MINOR NOTICES.

A History of the English Church from the Accession of George I. to the end of the Eighteenth Century (1714-1800).

By the late Rev. Canon JOHN H. OVERTON, D.D., and the Rev. FREDERIC RELTON, A.K.C. (Macmillan.)

This book is the seventh of eight volumes of a complete "History of the English Church," originally planned by the late Very Rev. W. R. W. Stephens, Dean of Winchester; its six predecessors have already been noticed by us. On Canon Overton's death his work for this volume was left incomplete and in a rough state, and it has been arranged, revised, and completed by the Rev. F. Relton. As in Canon Overton's published works on the Church history of the eighteenth century, the matter prepared for this book was chiefly in the form of a series of biographies. This was not in accordance with the plan of the work as a whole, and would probably have been altered to some extent by the author had he been spared to finish the book. After his death it would have been impossible to alter it completely without destroying virtually all that he had written, and Mr. Relton has contrived to combine chronological with biographical treatment by dividing the work into four periods, and by adding much new matter. The arrangement as it stands is excellent and specially suitable to the subject; for, while the history of the Church falls into fairly marked divisions, the forces which affected it are so complex that it could scarcely be represented apart from the public lives of a large number of prominent persons who contributed to its development, and illustrate its character at various times. The book is written in a forcible and animated style. The first five chapters, which cover from 1714 to 1738, deal mainly with the defence of Christianity against the attacks of Arians and Deists, and set forth the contributions to it during those years of Waterland, Sherlock, Butler, Berkeley, Law, and Warburton. It was a time of religious controversy, and the English Church, rich in men of intellect and learning, routed the assailants of the Catholic faith. Meanwhile, it was spiritually poor; its practical energies seemed paralyzed, and its clergy were generally lazy and careless, and were despised and ridiculed. Among the causes of its lethargy special stress is laid on the dynastic controversy which cut off the dignified ecclesiastics, supporters of the Hanoverian succession, from sympathy with the inferior clergy, who were largely Tories, and on the silencing of Convocation, which prevented an effectual means of reform.

The year 1738 is taken as a turning-point in the life of the Church because it was the date at which John Wesley began his work as an Evangelist in England. While Wesley's character and labours receive sympathetic treatment, it is maintained with much force that he could not have accepted organized support from the Church, even had it been offered to him, that his methods were alien to its spirit, and that Methodism as an organization inevitably ended in severance. The differences between Methodism and Evangelicalism are clearly brought out, and the source of both movements alike is traced to William Law, though he did not himself fully sympathize with either. On the Church the first effect of Wesley's work was an increase of deadness arising from opposition to its special characteristics. Enthusiasm in religion was strongly condemned, and was regarded with such a morbid dread that Hurd, afterwards Bishop of Worcester, when preaching an assize sermon, chose that singularly inappropriate occasion to descant on the "exhorbitance [*sic*] of ungoverned piety." If the chapters dealing principally with the lives of bishops are less interesting than other parts of the narrative, the defect lies in their subject rather than in the treatment of it. No lack of interest will be experienced in reading the chapter devoted to Bishop Wilson, on whose work Mr. Relton has already written.

A third division of the history begins with 1760, not so marked a dividing point in the ecclesiastical as in the political history of England, for the first ten years of the reign of George III. saw but slight signs of improvement in the state of the Church. Yet the Evangelical movement made progress and before long became powerful for good. Among much else that is deserving of notice, the common belief that Newton was a man of imperious and gloomy temper, and exercised an unfortunate influence on Cowper's mental condition is ably, though perhaps not altogether successfully, combated. Full justice is done to the leaders of the Evangelical movement,

and its strong and weak sides alike are brought out with much care. The effect of the French Revolution on the position of the English Church was so marked that 1789 is a fair starting-point for the fourth period of its history during the eighteenth century. Church feeling was strongly stimulated by the fear and indignation with which men regarded the dissemination of revolutionary and infidel pamphlets among the masses. The belief that the constitution and the safety of society were endangered by the revolutionary propaganda rallied thousands who were previously indifferent on such matters to the support of the National Church, and identified the interests of "the altar and the throne." Yet this change was not, as we are reminded here, without some ill consequences, for it widened the breach between the Church and the Dissenters, and arrested the progress of toleration. The volume ends with four chapters on general Church life, the Sunday-school movement, colonial and missionary work, which is treated at considerable length, and includes an account of Berkeley's attempt to found a college in the Bermudas and the relations of the English Church with the sister Churches in Scotland and America and with the Moravian Church—the last a matter of special interest at present, for the "Moravian problem" is, we are told, to be discussed at the next Lambeth Conference.

Henry VIII. and the English Monasteries. By Abbot GASQUET, D.D., G.S.B. New edition, one vol. (G. Bell.)

Yet another edition of this frequently republished work bears witness alike to its well deserved popularity and to the desire of the public for sound information on matters connected with the religious changes accomplished in England in the sixteenth century. Abbot Gasquet's history of the suppression of the monasteries is surely by this time too well known to need further words of commendation. The present edition is a reprint of the edition of 1899, and that contained no important variations from the first edition in two volumes of 1888-9, save in the references to documents which had not been calendared when the book was written, and were therefore, when it first appeared, given in a less convenient manner. To this edition, however, we have a special preface explaining the author's views as regards the moral state of the religious houses at the time of their dissolution. The argument that earlier visitatorial records to some extent support the *comperita* of the King's visitors is met by some weighty remarks, among which we find that, though men and women "did not leave their faults and failings behind them when they entered the cloister," these records prove that the Church took means to detect sin, and punished it with severe censure. While it is true that human nature remains the same whether under cowl or helmet, it may be observed that those who entered religion undertook to live what was held to be a life of special holiness, and reaped the benefit of endowments founded for such as were faithful to their profession. They are therefore to be judged by a more exalted standard than others. Were the lives of the monks, nuns, and friars of the early years of the sixteenth century purer and better than those of their contemporaries who remained in the world? We do not say that they were not; but, if they were not, it was well that their societies should be broken up; for in that case they were cumberers of the land. That is the test by which English monasticism at the time of the suppression must be judged, and no vague phrases such as that discipline was "not all that could be desired" must turn us from that question. Again, we must not accept the assertion that the Church sternly repressed monastic immorality as true without many exceptions. It had been so in earlier days; but no one acquainted with English monastic history will, we think, deny that throughout the fifteenth century discipline was often relaxed and punishments were by no means adequate to offences. It was, speaking generally, a time of decay, and, though the monastic life when thoroughly carried out shielded its votaries from many temptations, it was when discipline was slack full of special temptations against which life in the world afforded safeguards. "Corruptio optimi pessima."

These considerations, however, only touch one side of the main subject of this preface, which is the credibility of the reports of the royal visitors. Abbot Gasquet points out that the object of the visitation begun in 1535 was to find evidence against the monasteries; that it was conducted by unscrupulous instruments and in an unfair and grievous manner; that the

charges which the visitors brought against the monks were utterly unsupported by outside evidence; that the alleged confessions rest only on the assertion of these visitors, whose characters do not entitle them to credit, and that their reports, horrible as many of the charges are, do not prove a state of wholesale corruption. His contention as to each of these points appears to us to be just. No one capable of judging evidence and unblinded by prejudice can read the reports of the visitors without the gravest suspicion. He next exhibits the misrepresentations commonly accepted as to the proceedings in the Parliament of 1536, and takes as an example a short sentence in Green's "History" which contains "some assertions that are absolutely false, some incapable of proof and unlikely, some distinctly misleading." That any document such as the famous "Black Book" is said to have been ever presented to Parliament, or, indeed, ever existed at all, is, as he shows us here, extremely doubtful. On this subject and on the whole character and course of the suppression a seeker after truth cannot do better than read Abbot Gasquet's well considered and interesting book.

A Grammar of Classical Latin for use in Schools and Colleges. By ARTHUR SLOMAN. (6s. Cambridge University Press.)

The scope of this Grammar is partly indicated by the title. "Classical Latin" is taken in its most restricted sense—that artificial literary dialect of which Cicero and Caesar are the recognized exponents in prose, Vergil, Ovid, and Horace in poetry. "Schools and Colleges" is defined as "throughout all forms of a classical school"; and we may say provisionally that Mr. Sloman stands half way between Kennedy and Roby. We may question at starting whether the game was worth the candle, whether the Grammar is not a survival, or rather a revival, of the Classical Renaissance, an attempt to prepare English youth for writing Latin prose like Cicero and Latin elegiacs like Ovid. What should we think of a grammar of classical English for foreigners which admitted no form or construction not to be found in Addison, Johnson, Goldsmith, and Pope, rejecting Shakespeare as archaic and Tennyson as silver English? The parallel seems to us neither far-fetched nor unfair. For what other reason should Terence be excluded at one end and Pliny the Younger at the other? The line of Terence

Amantium irae amoris integratio 'st

is chosen by the author as a type of the blundering examples of the old Latin grammars. Why it should be excluded, if Vergil's "Sensit delapsus in hostes" is admitted, we cannot for the life of us see.

Waiving this radical objection, we gladly admit that within the limits set the work has been well executed. The print is clear, and terminations are indicated by spaced type. Rules are concisely given and logically expressed. Examples are carefully chosen and well translated.

This general approval needs some qualification. The *Memoria Technica* Rules for Gender seems to us no improvement on the old "Propria quae maribus," except that there is not so much of it. Does a boy really need a *memoria technica* to teach him that *vir* is masculine and *mulier, mater, soror* are feminine? "The rhyme is bad"—we have the author's word for it—and the rhythm is worse:

Neuter reckon all in -en,
Except five which denote men;
Fiamen, cornicen, tibicen,
Fidicen, and tubicen
With ladies' pecten.

The prosody errs both by excess and defect. It is needlessly technical. Thus: "The Greater Alcaic is a Logaedic Pentapody Catalectic with Anacrusis"; and it does not give sufficient rules to guide a boy in writing Latin verse. Some of the rules we fail to understand. Thus, for the pentameter: "Avoid having a whole couplet in one sentence"; and to give a list of adjectives which occur as the final word is absurd: any adjective, if emphatic or used predicatively, may end the line.

We doubt whether in a school grammar it is wise in our present state of knowledge to indicate hidden quantities; and, though the author professes to do so, by giving Quicherat as his standard authority on quantity he shows that he has not seriously faced the problem.

To note one or two minor points, we cannot agree that

Cicero marks the transition state of the use of *cum* temporal with indicative or subjunctive. In the sentence quoted (page 363) "*cum* in concilium ventum" is indefinite time, "when the case was pending"; and "*cum* in consilium mittebant" "the moment when witnesses were being produced." Mr. Sloman justly takes credit for expelling the false ablative *feroce*, but he perpetuates the old misrendering of *ferox* as "fierce."

The Grammar will be of great service to a sixth-form boy, but we cannot think it adapted for use throughout a school.

From St. Francis to Dante. A Translation of all that is of primary interest in the Chronicle of the Franciscan Salimbene. By R. R. COULTON. (10s. 6d. net. David Nutt.)

As to the value of the record which Mr. Coulton is the first to present to English readers in anything like its entirety there can be no conflicting opinions. Brother Salimbene's chronicle is a kaleidoscope of the thirteenth century. The patterns shift continually, displaying at one moment the dismemberment of Italy by Emperor and Pope, at another the smallest detail of conventual miracle and gossip, the behaviour of the crops, or the state of the heavens. But behind the patterns, colouring and encompassing them all, is the atmosphere of the most heroic century that Europe has seen. Violent, incoherent, credulous, it is full of radiance and of life. The times, like the diarist, are indiscriminating: large and small, good and evil, are strangely confused, but the scale of everything is great. Devils and saints are realities; the horrors of earth closely impinge on the glories of heaven, but the glories are unmistakably present. Betwixt earth and heaven is

Passage wide—

Wider by far than that of after times.

As to the accompaniments with which the record is presented, judgment is more difficult to pronounce. Mr. Coulton is a controversialist, and the brief he holds is for the twentieth century. His aim is comparison, and he forces his question as to the value of mediæval ideals and practice in relation to our own. Salimbene's chronicle, to his mind, does much in providing the answer, and to him that answer appears overwhelmingly in favour of modern developments. "There never," he says, "was an age in which theory was more hopelessly divorced from practice than in the thirteenth century, or in which men owed more of their greatness to a passionate and life-long protest against the sordid realities of life around them." It does not seem to have struck him that the divergence he deplores, the contrast he perceives, in part at least, might arise as well from the exaltation of ideas as from the abasement of conduct. Our agreement with Mr. Coulton in his dislike of the pseudo-Franciscan cult is lively in the extreme. No thirteenth-century prescription swallowed neat can combat the disease of our day. The heart of the malady may indeed be the same, but its expressions are manifold and divergent; and, in regard to St. Francis himself, it is difficult to imagine anything more irreverent of his whole attitude and purpose than any tendency towards stereotyping the virtues he adored, in idealization of his personality.

But, though Mr. Coulton has every right to object to enthusiasm founded on cheap and unintelligent comparison, in attempting to expose the foolishness of nineteenth-century Franciscanism he surely falls into its error of comparing the incomparable. A weighing of the twentieth century with the thirteenth would demand a more inclusive vision of our own day, and a larger knowledge of the past, than it is possible to possess; but still more it would require an agreement as to spiritual values which it is impracticable to obtain. That impossibility is, in fact, the ground of the controversy now existing between Mr. Coulton and his opponents. The question is not as to the desirability of the coming of the Kingdom of God upon earth: it is as to the nature of that kingdom, and, consequently, the means by which it may be obtained. Europe is of age; and that the general level of conduct and existence has been raised since the days of her childhood no one will dispute. Many childish violences and crimes her adult life, of course, had put away. The question is whether, with a different aspect, because with a more orderly and rationalized mind, she pursues goodness and beauty with the ardour of her earlier days, or whether she is losing sight of ideals in conditions, and becoming blinded and slothful. It is not intelligently conceivable that the injunction "except ye become as little children" idealizes

the whole condition and sets it, faults and limitations included, as a model for adults. None the less the statement represents, and is accepted as representing, a vital and permanent truth.

Plato as an Introduction to Modern Criticism of Life.

By EMIL REICH. (10s. 6d. net. Chapman & Hall.)

This is an extraordinary book. It is an exposition of Dr. Reich's views on such topics as Love, Imperialism, Education, and Life in what he calls "the monde," introduced by references to the writings of Plato, often inaccurate and usually ungrammatical. Viewed as such, it is not without interest: as a book on Plato, it is worse than useless; and yet Dr. Reich claims for himself a place among the first interpreters of Plato. "In the fifteenth century the ladies of Florence sat and listened to Marsilius Ficinus, and to-day we are listening once more to the self-same topic." The same happy parallel is drawn in another lecture in somewhat different terms. "An audience similar to this sat before Lorenzo the Magnificent in Florence four hundred and thirty years ago, and heard him talk of Plato; and it will happen again two thousand years from now." "With Plato," says our modern Marsilio Ficino, "is needed a very fine interpreter, as in music and the drama." The recipe for becoming such is given on page 2. "For instance, if one has lived in America for some time, and studied anything of life, one begins to understand the whole 'Symposium' of Plato, any type of man and woman." It might also be as well perhaps to read what Plato says. That Dr. Reich, in spite of his references to "the pagination of Stephanus," does not seem to have done. "Beautiful things," says Plato, "are hard." Dr. Reich considers that Plato is easy. He talks a great deal about the "Symposium," and yet actually thinks that Plato says that love was always between similars. He thinks that Plato believed that, "wherever we find man and woman brought up on the same lines, there we will always find something wrong." He says that Plato never mentions love of country. He thinks that Imperialism is a Platonic idea. He imagines that Xenophon was Plato's pupil, that the Greeks never dreamt (Has he ever read the "Republic"?), and that pessimism was unknown in Greece! Dr. Reich talks of Nietzsche: let him read "The Birth of Tragedy." We will conclude by giving two typical quotations from this wonderful work, which will show how deeply Dr. Reich is imbued with the Platonic spirit. "And so too, Beethoven, who was in a great 'swear' when he heard Handel." "So, too, in Greenland, where the climate is awful, and the people live mostly underground, in dark caverns, a more cheerful people than the Greenlanders cannot be imagined." So, too, we may say, at Claridge's, where the champagne lunches are excellent, and the audience the leaders of society, a worse interpreter of Plato than Dr. Reich could hardly be found.

The Interlinear Bible. The Authorised Version and the Revised Version, together with the Marginal Notes of both Versions and Central References. (12s. 6d. net. Cambridge University Press.)

A specimen will indicate at a glance the method adopted for comparing the two texts.

If I speak with the tongues of men and of
angels, ^{but} have not ^{love,} I am become ^{and} as sounding ^{charity,}
brass, or a ^{clanging} cymbal. ^{tinkling}

Read along the upper line we have the Revised Version, and read along the lower line we have the Authorised Version. The minutest variations, even of punctuation, are faithfully recorded. Type, paper, and binding leave nothing to be desired, and, though it would need some practice to read from it fluently, yet for the use of the student no better method could be found.

The book speaks for itself and needs no further notice; but the occasion tempts us to make one general reflection on a version which has now been more than twenty years before the public. There can be no disputing that it has wholly failed to supersede the Authorised Version. It is the exception even for the clergy to use it in reading the lessons. It was not, of course, to be expected that in so short a space of time we should change the words of the Lord's Prayer or omit the final clause; but it is surprising that it should not have found its way into schools as the "textus receptus" and that a quotation

from it should strike our ear as strange. Doubtless the comparative failure to win acceptance is mainly due to our inborn conservatism; but, in our judgment, this is only a partial explanation. There is the further fact, which will now hardly be disputed, that the Revision Company were too much slaves to the letter, and, while careful to avoid innovations which would have raised dogmatic controversies (as in the two records of the Creation), they had no scruples in sacrificing to verbal accuracy rhythm, harmony, and modulation. The very verse that we have quoted at random will serve as an instance. "Love" is, undoubtedly, a better modern rendering of *ἀγάπη* than "charity," and "clanging" is an improvement on "tinkling"; but the cacophony of "become sounding" should have given the Revisers pause. And when we read in the same chapter: "Whether there be prophecies, they shall be done away: whether there be tongues, they shall cease: whether there be knowledge, it shall be done away," no sense of accurate scholarship can reconcile us to the loss of the old, familiar rhythm. "Thy will be done, as in heaven, so on earth" appears to us a wanton change, and the alteration of "the uttermost farthing" and "a quickening spirit" to "the last farthing" and "a life-giving spirit" we resent as a slur on our common intelligence.

Principles and Methods of Teaching. By JAMES WELTON.
(5s. W. B. Clive.)

Prof. Welton is known to most students of pedagogics as the author of "The Logical Bases of Education," the clearest exposition of the theory of education that can be found in any English text-book. The present volume is a sequel—an attempt to apply the theory to the actual work of the school. It is meant to be practical, to guide the teacher in his daily task; but it is none the less theoretical, in so far as each plan of study, each scheme of lessons, is directly based upon or referred to first principles. Thus, though the chapters on "Music," "Geography," "Mathematics," "Natural History," and "Needlework"—nearly half the book—are contributed by various writers, Prof. Welton is fully entitled to set his sole name on the title-page: he is the architect, and his collaborators the masons who have carried out his plan. One name, however, deserves particular mention. Mr. Welton's chapter on "Mathematics" (for his "Geography" we do not so greatly care) is an original and independent piece of work.

It will already be apparent that the book is a new departure: that it differs in conception from its predecessors, with which we should naturally compare it, such as Barnett's "Teaching and Organization" or Collar and Crook's "School Management," as constituting an organic whole—a complete *ratio studiorum*. The teacher who is on the look-out for tips, wrinkles, the newest lights on his subject, will be sent empty away. As the author epigrammatically puts it, the model for a work on teaching should not be a book on cookery, with recipes for every dish. There is a further limitation which should, we think, have been mentioned—if not on the title-page, at least in the preface. The work is confined to subjects taught in the elementary school, and among these physical training is not included. Of foreign languages, ancient or modern, there is not a word.

The book falls into two distinct parts—pure theory, which occupies the first hundred pages, and applied theory, to which the remaining four hundred and fifty pages are devoted. The first part is largely critical, and the trenchant analysis of Herbert Spencer's theory of "values," of Herbartian "concentration," and formal steps of method, and of the hackneyed maxims such as "proceed from the known to the unknown" is admirable.

There is one easily remediable defect which seems to us to depreciate the value of all the succeeding chapters—the element of time is omitted. Thus, the advice given as to the study of a play of Shakespeare that it should be read consecutively four times, each time with a different intention, is sound doctrine; but a teacher in this wicked world will ask himself how many years a play will last with the ordinary allowance of time. He will also ask whether children of thirteen are competent to comprehend the essays of Bacon and of Stevenson and to appreciate the differences of style. We hope that in a second edition, which is certain to be called for before long, the author will make good this defect and also supply an ideal time-table, showing the distribution of hours between the five broad groups

or nine subjects which must be regarded as essential constituents of any worthy curriculum.

Selections from Latin Authors. By A. F. WATT and B. J. HAYES.
(2s. 6d. Clive.)

This book has been prepared for the use of candidates for matriculation at London University, the extracts being intended not only to interest the reader, but also to give him some idea of the classical authors from whose works they are taken. To assist the student in answering elementary questions on literature, each author is introduced by a brief sketch of his life and writings. Short, but sufficient, notes and a vocabulary are furnished. Even a captious critic, taking into account the modest aim of the editors, could find little fault with their work. Perhaps the statement that "the cycle of poems which he [Tibullus] apparently wrote in conjunction with Messalla's niece, Sulpicia, would suffice to place him in the first rank of elegiac poets" will convey but small instruction to the young. We do not know that Tibullus wrote any poems whatever in conjunction with Messalla's niece, Sulpicia, and, as President Roosevelt would say, "that's all there is about it." And is it not over-bold to give

"Sulpicia est tibi culta tuis, Mars magne, Kalendis"

(IV. 2) as a specimen of Tibullus? On page 271 the quantity of the *i* in "Tyrhidae" might have been marked; it is a case in which boys and girls are wont to go astray. Neither note nor vocabulary gives "sun" as a meaning of *sidus*; and yet that is the sense of the word in Tibullus II. 147, a passage used in the text. We observe, moreover, that candidates for matriculation are taught to write "Vergil"; we remark in simple and colloquial language that "Virgil" is good enough for us. But these things are mere trifles. The work is done with far more care than is usually bestowed on books of the same class. Those who have pupils reading for the London Matriculation, or for similar examinations, will do well to avail themselves of this excellent collection of pieces, now in a third impression of the second edition. And to the private student it should prove of the utmost value, affording him in isolation the guidance of capable men.

Greek Reader. Vol. II. By E. C. MARCHANT. (2s. Clarendon Press.)

The first volume of Mr. Marchant's "Greek Reader" is now followed by a second, the text being again selected from Prof. von Wilamowitz-Moellendorf's "Griechisches Lesebuch." The pieces are taken from the "Life of Aesop," Plutarch, Arrian, Polybius, Posidonius (in such form as he can be recovered), Theophrastus, Aeschylus, and Hero of Alexandria. Most of what we said in reference to the first volume applies to the second, which, however, offers more difficult matter and is suitable for a fifth or lower sixth form. Occasionally, as before, Mr. Marchant's German is at fault. "Das Thatsächliche, auf das es uns ankommt," means "the element of fact, which is that to which we attach importance," not, as he says, "the element of fact, on which it is dependent." But we are aware that he was not bound to fidelity of translation. Nor does he merely render the original; he prunes excrescences from it or grafts on to it matter of his own. His work is done with sufficient care, and the book may safely be used by those whom the range of the extracts does not alarm. Tacitus for Sallust in line 20 of page 36 is a slip that mars the sense. The error should be corrected in a second edition.

"French Lessons in French" Series.—(1) *Vocabulaires et Descriptions*. (1s.) (2) *Conversation in Class*. (6d.) (3) *La Visite Importune*. (2d.) (Cassell.)

(1) There is nothing distinctive or original in this series. The vocabularies are in good bold type, but the topics seem chosen somewhat at random. Thus we miss "The Classroom," though three chapters are assigned to "Pencil-box," "Penholder," and "Penknife." A "dab" and "lemon sole," "prawns" and "shrimps" are not synonymous, and we do not see the advantage of phrases such as "You break your arm," "You are bandy-legged." (2) We may give as a specimen the last conversation: "Qu'est-ce que cela fait?—Cela ne fait rien du tout." We do not see the use of repeating the question in the *Questionnaire* at the end of the lessons. (3) is "a monologue for recitation in schools and polytechnics," and is in two forms—one for boys and one for girls. The attempts at transliteration are not happy—"Key ace kuss lah."

Lettres Persanes par Montesquieu. Adapted and edited by EUGÈNE PELLISSIER. (2s. 6d. Macmillan.)

This latest volume is an acceptable addition to Mr. Siepmann's "Classical French Texts." Montesquieu, though not much read nowadays in France, must always from his English affinities appeal to Englishmen, and he forms a link between French and English literature; and the "Lettres Persanes," from their easiness of style and pleasant humour, are of all his works the best adapted for school reading. The annotations are very full and thorough, and, if we accept the lines that the editor has laid down for himself, there is little in them to criticize. Three-fourths of them are grammatical, and the departures from modern French usage are carefully noted; but it seems

to us waste of labour and worse to give lists of nouns with different meanings in the singular and plural, or when masculine or feminine, and generally when a reference to any standard grammar would have sufficed. What we want, and rarely find, is notes on the subject-matter of the "Lettres," illustrations of the age, of the *ancien régime*, the Court, society, the literary world against which Montesquieu's shafts were aimed. The introduction gives a brief sketch of the author's life and works, ending with an apt quotation from Gerusez, all very right and proper (except that it makes Montesquieu a Councillor of the Bordeaux Parliament at the age of fifteen), but what the pupil wants to warm his interest is some account of the visit to England, of his friendship with Lord Chesterfield, of his influence on English literature, and especially that of the "Lettres Persanes," from Goldsmith's "Citizen of the World" down to Mr. Lowes Dickinson's "John Chinaman." Instead of Gerusez's "he was unostentatiously benevolent" and the weak paraphrase of his confession of faith, he wants the story of the boatman's father redeemed by Montesquieu from Barbary pirates in the very words. We offer in conclusion a few suggestions. The first grammatical note on the subjunctive after *le premier*, &c., needs correction. According to it, "C'est la seconde fois que je vous voie" would be good French. *Sacré* before the noun hardly amounts to "a blasphemy." Page 35, *de bons mots*, "good words"; but, on the next page, *des recuilles de bons mots* without a note. "*Autrui* etymologically = *de l'autre*" is a dark saying, and the only other philological note (for which much thanks) is an exploded piece of guesswork. To call *autre chose* masculine is a grammatical superstition. The appendix of parallel passages for translation into French is an excellent notion.

Michael Drayton: a Critical Study. By OLIVER ELTON.
(6s. net. Constable.)

Prof. Elton's name upon the title page prepares us at once for criticism that is scholarly and sound; and in "Michael Drayton" he has added to his customary accomplishment an enthusiasm which is infectious. Naturally, a considerable portion of the work is devoted to a study of "Poly-Olbion," the great poem of thirty songs in which Drayton endeavours to rescue from the oblivion into which they are falling the "delicacies, delights, and rarities of England and Wales." Prof. Elton happily compares the "Poly-Olbion to an over-freighted galleon which has foundered, and is now only brought to the surface in fragments by diving antiquaries and anthologists. But, none the less, we may remark that never, since those early years of the seventeenth century when it was penned, has the spirit that prompted the poem stirred the minds of Englishmen in the degree it does to-day. With one hand, indeed, we continue wrestling our material prosperity from earth and from air regardless of cost, but with the other we are attempting at least to ear-mark and preserve our antiquities. If we do not yet most effectively reverence the past, we at least have made it our fashion. Its votaries may not always be discriminating in their devotion, but that devotion is real and it is wide-spread. For the twentieth century has, in common with the sixteenth, something of that love of perfection, that protest against the inroads of the temporal on the eternal, which was life beneath the artificialities of the Renaissance. The footnotes and bibliography are alike excellent, and the student cannot but be grateful for the presentation of all that is known about the poet, and the upshot of countless small controversies about the incidents of his life, in a volume so attractive and compact. Yet the final appeal of the book is to a circle that is wider. The last three chapters contain a wise and discriminating estimate of Drayton's gifts as a whole, and the verdict that is given and the examples that are used cannot fail to commend him to the lovers of our literature. "His importance in the musical, and not only in the mechanic, evolution of our verse is real and distinct. He gave an accent of his own to nearly every measure that he practised; and he practised sextain, rhyme royal, sonnet, Italian octave, heroic couplet, short-lined ode, octosyllabic couplet, dithyrambic stanza, and alexandrines. There is not one of these that he did not sometimes write as well as any poet of the English Renaissance."

"The Muses' Library."—*The Poetical Works of Matthew Arnold.*

Edited by LAURIE MAGNUS. 2 vols. (Routledge.)

"The Muses' Library" is prettier outside than in. Its binding, in blue and gold, is quite attractive, but paper and print are common, and misprints, at least in the example before us, far more frequent than they should be. If the object of the edition was to popularize the poet, we do not think the manner in which he is presented to the public well calculated to serve that end. The editor's introduction is particularly unsatisfactory in this respect. It rather seems written as from one critic to another than as from an old admirer of the poet to minds comparatively untried; and, if Mr. Magnus wished to make a statement as to Matthew Arnold's relation to the expansion of England and other social developments in the nineteenth century, he should have been aware that this could not be done to any purpose in a score of pocket octavo pages. He aims chiefly at making the poet's limitations clear, and telling the reader what qualities the poems do not contain. The introduction to a popular edition is surely more likely to be useful if it proceeds by the contrary method, and stimulates the reader—who need not be presumed over-appreciative—to discover and enjoy what

qualities the poems do contain. In the work of a poet so great and man so great as Matthew Arnold these will not be few.

Radio-activity. By E. RUTHERFORD. Second Edition.
(12s. 6d. net. Cambridge University Press.)

The first edition of Prof. Rutherford's work on "Radio-activity" appeared little more than two years ago; yet in that short period so much of importance has been unveiled that the original book no longer represents the position of our knowledge of the subject, and this second edition has been prepared to supply a connected and up-to-date account of the information scattered so widely through many scientific journals. The scope of the work may be indicated sufficiently by saying that it treats in an exhaustive manner of the very complex phenomena exhibited by a number of substances of which radium and thorium may be taken as types. In this edition the development of the theory of disintegration as an explanation of radio-active changes and effects occupies a commanding position. Although some authorities cannot yet bring themselves to believe in the compound nature of the chemist's atom and in its liability to rearrangement of parts accompanied by the expulsion of a portion of its own material, yet this theory serves to connect many apparently isolated facts, not only qualitatively, but also frequently quantitatively, and at present it has no rival. The intensely interesting questions of the possibility of transmitting one element into another and of obtaining access to the enormous store of energy apparently locked up in the atoms themselves arise as a consequence of this theory, and now await solution. Prof. Rutherford is one of the pioneers in radio-activity, and advanced students of physics cannot afford to neglect a book written by one whose knowledge has been gained at first hand.

First Stage Physiography (Section I). Edited by R. W. STEWART.
(2s. Clive.)

This book contains an elementary experimental course of a very simple kind in those branches of physical and chemical science which must be at the command of the student who wishes to get a grip of physiography proper. The subjects treated are mechanics, heat, light, and elementary chemistry. The subject matter is presented accurately in clear and simple fashion, and represents the minimum equipment with which the intending student of physiography should start.

An Elementary Text-book of Inorganic Chemistry.
By R. L. WHITELEY. (2s. 6d. Methuen.)

For students taking the Elementary Stage of the syllabus in Chemistry issued by the Board of Education, this book may be recommended as accurate and full. It is written as a book of descriptive chemistry rather than as a mere laboratory guide, and is, of course, intended to be supplemented by practical work on the part of the student. We notice on page 23 that the ratio denoting relative density is inverted. The illustrations are numerous and clearly drawn.

Golden Numbers: a Book of Verse for Boys and Girls. Selected and Arranged by Mrs. P. A. BARNETT. (Longmans.)

There is much to commend this latest school anthology. Its chief distinction is the freshness and originality of the selection. Half of the poems included will not be found in similar books of poetry. Secondly, the compiler has rightly given the preference to narrative poems. A third canon propounded in the preface seems to us more doubtful: "The book begins with the more recent authors, and works back to the older." Surely the old is, as a rule, simpler and more intelligible to boys and girls than the new, and they will "get a liking" for "The Lady of Shalott" through "Kosabelle," not *vice versa*. For different reasons we should be inclined to blackball Tennyson's "England and America in 1782," Ebenezer Elliott's "Battle Song," the two historical ballads of F. T. Palgrave, and the fragment of Gray. But this is to say, in other words, that the great majority of the poems commend themselves to our taste and judgment. The notes err on the right side, by defect. Thus the first two poems named above will not be intelligible without some further explanation. "Who," the pupil will ask, "is 'the man sent out to rule by land and sea'?" "Hints on Scansion" had better have been omitted. We agree with the editor that English prosody should be taught in schools; but she attacks in a page a thorny subject to which Prof. Saintsbury has devoted one bulky tome, with promise of several more to come, and she takes for analysis a metrically difficult poem, on the scansion of which authorities would differ. Thus the first line is scanned

"Ri'ding | at daw'n, | ri'ding | alo'ne,"

but the corresponding line of the subsequent stanzas suggest rather a dactylic basis—

"Trumpeter, sound for the Light Dragons!"

The "Look about You" Nature Study Books. No. IV.
By THOMAS W. HOARE. (8d. T. C. & E. C. Jack.)

Mr. Hoare is an experienced teacher, and these object lessons on animal and vegetable life have been tested in the class-room. "Uncle George" once and again reminds us painfully of Mr. Barlow, and we resent his aspersions on trout-fishing; but this is the only fault we have to find with a book which is excellent both in method and in

matter. The coloured illustrations are admirable, and the name of the printers (Messrs. McFarlane & Erskine) deserves honourable mention.

Uppingham School Roll, 1824 to 1905. Third Issue.
(8s. 6d. net. Stanford.)

The thanks of all Uppinghamians are due to the Rev. G. H. Mullins—or rather, as the preface informs us, to Mrs. Mullins who has borne the main burden of bringing the school roll up to date. It is interesting to observe that the entries in 1853—the year when Thring entered on his head mastership—were 18, and in 1887 (his last year of office) they were 89. But for his self-denying ordinance they would doubtless have increased still more.

"Gateways to History."—Seven Books, from Book I., *Heroes of the Homeland* (10d.), to Book VI., *The Pageant of the Empires* (1s. 6d.). (Edward Arnold.)

These are a series of well written and well illustrated readers to suit the various standards. They are intended to be used with the series of geographical readers entitled "Home and Abroad" and with the "Steps Literature," both of which are also published by Mr. Arnold. Thereby it is hoped—and we do not think hoped in vain—that some sort of correlation will be produced between history, geography, and literature, the three best subjects with which to try the experiment. We begin with the "Heroes of the Homeland"—simple characters from domestic history, such as Alfred, Harold, Edward the First, &c., down to Victoria the Good; and the corresponding book in geography is "Glimpses of the Homeland"; while "Tales of the Homeland" is the book in literature. And so the subjects go on expanding till we have "The Pageant of the Empires"—the world Empires of the olden days and the more recent settlement of the nations—together with the volumes "The World's Trade and Traders" and "Glimpses of World Literature." The plan seems an excellent one. But the readers may be used quite independently, and no one is compelled to try it. Meanwhile we can recommend the "Gateways to History" as a very satisfactory series, well chosen, well written, and well illustrated. Boys and girls will, indeed, be hard to please who are not interested in them.

"The English Counties."—*Middlesex*. (8d. Blackie.)

This is one of a series of little books intended to interest children in their neighbourhoods. Each book gives a brief but well written account, historical and geographical, of the particular district with which it deals. It touches on the chief facts and features only, and tells its story in a plain and simple way. In the same fashion it is supplied with a few maps and pictures. It is well and clearly printed, and is eminently readable. A capital idea well carried out.

The Sir Roger de Coverly Papers. Edited, with Introduction and Notes, by R. G. WATKIN, M.A., Ph.D. (1s. net. Dent.)

This is an extract from the *Spectator* of the nineteen papers or so which deal with various episodes in the life of Sir Roger. It is well supplied by Mr. Watkin with a brief introductory preface and about fourteen pages of simple notes. It is well and tastefully printed and bound, and forms one of the volumes of Messrs. Dent's "Temple Series of English Literature." In its simple way it is well executed—as, indeed, are most of the other volumes of the series which we have seen.

Selected Poems from Matthew Arnold. Edited by RICHARD WILSON, B.A. (1s. 6d. Edward Arnold.)

Mr. Wilson has given us a very choice little selection of the poems of Matthew Arnold with an all too brief introduction of some six pages and about fourteen pages of notes. Here are almost all our favourites—"Sohrab and Rustum," "Balder Dead," "The Scholar-Gipsy," "The Forsaken Merman," "The Strayed Reveller," and those tender memorial verses to Wordsworth. The selection is intended for pupils in middle and upper forms of secondary schools, and it is hoped that the poems here included can be understood and appreciated to some extent by boys and girls under the guidance of a sympathetic teacher. The remarks in the introduction on Arnold's characteristics as a poet might well have been extended. The notes are for the most part brief and business-like, and care has evidently been taken to insert nothing in them which may draw the student's attention aside from the poem itself. That is the right mood in which to annotate the poems, and cannot fail not only to lead the young reader to appreciate them, but also to create a desire in him to know more about the author and his work. We wish this little book every success.

Plutarch's Lives of Coriolanus, Caesar, Brutus, and Antonius in North's Translation. Edited, with Introduction and Notes, by R. H. CARR, B.A. (3s. 6d. Clarendon Press.)

The chief difference between this edition and the well known one by Prof. W. W. Skeat (in 1875) is that the lives whose names are given above are given entire, and that, whereas Prof. Skeat quotes his selections from the 1603 edition, Mr. Carr gives his from the 1595, because he thinks, for various reasons—none of which are, he confesses, conclusive—that the 1595 was the edition which Shakespeare used. It is a nice point which we cannot decide. The system adopted in the notes is that mere references are given where Shakespeare appears

to have borrowed subject-matter only and full quotations where he appears to have followed North's actual language. An index is added giving a list of the references to the plays arranged in order under act and scene; all these references being to the "Oxford Shakespeare" edited by Mr. W. J. Craig. The introduction is fairly well done and gives all that is necessary about the life of Sir Thomas North, the translations of North and Amyot, and Shakespeare's use of North in the three plays referred to. This edition is intended for those who desire to study more closely Shakespeare's method of dramatic composition; but it will also be of service to those who do not care to go so closely into matters, but merely wish to see for themselves the general extent and character of his indebtedness as a whole to an original source. The book will serve equally well for either purpose. It is a good book carefully dealt with, and deserves a place in every Shakespeare library.

Outlines of British History for Catholic Schools. By E. WYATT-DAVIES, M.A. Illustrated. (2s. 6d. Longmans.)

This is intended to serve junior scholars in Catholic secondary schools as a preparatory book to the same author's larger "History of England." It is written on the same lines, and, while it does not unduly introduce matters of controversy, it still views things from a distinctly English Roman Catholic standpoint. It is a pity that history should require this editing, but, if it is to be done at all, no one could do it with more entire absence of offence than Mr. Wyatt-Davies. He knows his subject well and has produced a bright and readable little book—well illustrated and well printed—beginning with Julius Caesar and ending with the death of Queen Victoria in 1901. The book ends with a short chapter on the Colonial Empire and a full index.

JOTTINGS.

A RETURN of the comparative expenditure on education in the three kingdoms, which was asked for by Mr. T. O'Donnell last Session, has now been made by the Board of Education and published as a Parliamentary paper. We extract the following interesting statistics. The first column gives the Imperial Exchequer grants for all educational purposes; the second column gives the amount raised from rates; and the third column gives the amount received from the "whisky money" calculated per head of the population:—

	s. d.	s. d.	s. d.
England and Wales...	6 11	5 5½	0 6½
Scotland	6 11	4 10½	1 0½
Ireland	6 5½	0 1½	0 6¼

The Imperial grant, according to this year's Education Estimates, is, in round figures, £17,000,000, and the total raised from rates is £10,400,000. The number of teachers of all ranks in the public elementary schools of the United Kingdom is 209,926. The number of pupils per 100 of the population who are in attendance at secondary schools is '28 in England and Wales, '35 in Scotland, and '36 in Ireland. The average salary of an elementary head master is in England and Wales £161, in Scotland £179, and in Ireland £103. The salaries of head mistresses and of assistants show very much the same proportion.

DICTIONARY makers, as we have before remarked, are the least progressive of mortals. Dr. Feller's "Neuestes Taschen-Wörterbuch, Deutsch und Englisch," which we lighted upon at a remote Luxembourg inn, helped to beguile a rainy day. It has for the use of travellers an appendix of dialogues and colloquial expressions. Motors are unknown, and we still travel by stage coach. The lady asks the gentleman "to get a little further," and the gentleman answers: "A little; my neighbour here is rather stout." But in Part II. the pair are on more familiar terms. The lady allows that "she is sleepy, but cannot get into a convenient position." The gentleman answers: "Do not inconvenience yourself, Madam, if my shoulder is any accommodation to you." And then we leave them—no *Fortsetzung folgt*. "On board a steamer" the traveller fortifies himself against sea-sickness with a beef-steak, plenty of potatoes and port wine, and here we are given the sequel. "Oh dear, there lies the gentleman and the beef-steak!" "The lady at her toilet" is a delicate subject daintily handled. "Comb me carefully," she tells her maid; "I will not wear curls"; and, when handed her tooth-brush, asks: "Have you ordered the dentist and the chiropodist?" We should advise Germans to use with caution Dr. Feller's colloquialisms. "I was all up then" (*ich war ruiniert*), "bloody" (*sehr*), "to jump the broomstick," "to give the bullet," "cock" (*der Bursche*), "cockalorum" (*ein eingebildeter Mensch*), "jam" (*die Geliebte*), "lawful-jam" (*die Gattin*), "we are in a pretty mess," "a nice parcel" (*ein hübsches Mädchen*), "I have the run of my teeth there" (*Ich habe dort freies Essen*), "to lose one's

shirt" (*zornig werden*). Dr. Feller seems to have hats on the brain, and there are some dozen synonyms for a tall hat; but, if the traveller needs a swallow-tail coat or a suit of dittoes, he is left in the lurch.

THE School of Art Wood-carving, South Kensington, which now occupies rooms on the top floor of the new building of the Royal School of Art Needlework in Exhibition Road, has been reopened after the usual summer vacation, and we are requested to state that some of the free studentships maintained by means of funds granted to the school by the London County Council are vacant. The day classes of the School are held from 10 to 1 and 2 to 5 on five days of the week, and from 10 to 1 on Saturdays. The evening class meets on three evenings a week and on Saturday afternoons. Forms of application for the free studentships and any further particulars relating to the school may be obtained from the Manager, Miss M. E. Reeks, School of Art Wood carving, Exhibition Road, South Kensington.

THE Rev. Dr. Guinness Rogers writes to the *Times* insisting on the necessity for a clear definition of undenominationalism that may be incorporated in the Education Act itself, and he proposes tentatively: "The true Catholic faith such as we find in the Apostles' Creed or in the 'Te Deum.'" Dr. Rogers's *forte* is theology, and here we do not presume to criticize; but his foible is scholarship, and as scholars we do protest against the travesty of Juvenal which forms the tail-piece of his letter. "'Perdere vitam propter causas vivendi' can never be a wise policy."

THE new buildings of the Working Men's College in Crowndale Road are now complete except as regards laboratories, and the winter session was opened with a presidential address by Prof. A. V. Dicey. The classes now number nearly one hundred, and comprise nearly every subject of letters, art, industry, and commerce. The program includes two University Extension Courses on the "History of Architecture," by Mr. J. Bannister Fletcher, and on "Napoleon," by Mr. G. M. Trevelyan. Among the Saturday evening lecturers are Profs. Osler and Bozery, Sir F. Maurice, and Sir J. Cockburn.

A CORRESPONDENT of the *Tribune* submits a comparison between the administrative expenditure on education of Scotland and of London. The population of the two is very nearly the same—4,500,000—and the children on the school rolls are in thousands 804 for Scotland, against 753 for London. And yet London with its one central Council spends nearly three times as much as Scotland with its 972 School Boards—£296,830, against £108,400.

MISS DOWNS, formerly of King Edward's Girls' Grammar School, Bath Row, Birmingham, is returning to England, after having been for fourteen years Head Mistress of the State-endowed Grammar School for Girls at Rockhampton, Queensland.

TRANSLATION of a youthful *carabin* in a recent examination: "Il ne faut pas trop aimer la bonne chère."—"You must not spoon the nice nurses."

THE death of Mrs. Thring, which occurred at Uppingham on September 20, removes a link with the past. She was in her eighty-sixth year, and it is just fifty-three years since her marriage with Edward Thring, which followed closely on his appointment to Uppingham. She was the daughter of a Prussian Government official, and to her influence may be traced that infusion of the German element in the staff which has continued a distinctive feature of the school. To her rare qualities as a wife and a matron ample testimony is borne in Dr. Parkin's "Life of Thring."

MR. JOHN R. AIRBY, late Scholar of St. John's College, Cambridge, has been appointed Head Master of the new secondary school at Morley.

MR. T. R. TURNBULL has been appointed Head Master of the Humberstone Foundation Clee School.

As in France, so in England, Catholic laymen decline to follow the advice of their bishops. In an open letter by Mr. C. J. O'Donnell, addressed to the managers of the Catholic schools at Walworth, he pronounces the Education Bill "a monument to the fair-mindedness of Liberal Protestants," and, in particular, points out how far more advantageous to Catholic schools is Clause IV. as amended by the Government, which gives an appeal to the Board of Education, than the mandatory clause for which extreme denominationalists contended.

UNIVERSITIES AND SCHOOLS.

BEDFORD COLLEGE FOR WOMEN.

The Michaelmas term will begin Thursday, October 4. Students attend on Wednesday, October 3, at 2 p.m., to meet the Principal and lecturers. Students come into residence October 3. The Training Department for Secondary Teachers reopens Wednesday, October 3, 10 a.m. The Art School reopens Thursday, October 4, 10 a.m.; drawing from the draped model Mondays, Wednesdays, and Fridays; drawing from the figure model Thursdays.

UNIVERSITY COLLEGE, LONDON.

The courses of lectures for the ensuing term include special courses for teachers—"The Hygienic Needs of the Scholar," by Prof. Kenwood; "The Sixteenth and Seventeenth Centuries," by Prof. Pollard; "Recent Developments in Teaching of Arithmetic and Elementary Mathematics," by Mr. F. L. Grant; "Greek Literature," by Mr. Solomon; "Melody of French Verse," by Prof. Brandin. Full particulars as to time, &c., may be obtained from the Secretary. There is, besides, a course on "Phonetic Theory, with special reference to English Sounds," by Dr. R. A. Williams, beginning October 8.

OXFORD.

Last spring a small society was formed in Oxford with the object of providing Divinity lectures on Church of England lines, and of otherwise helping those who have to give religious teaching. It was felt that many of the teachers who were required to do this work had had no opportunities of special study, and also that of late years the difficulties of religious teaching had greatly increased. A fortnight's course of lectures was arranged to take place in September at Lady Margaret Hall, and, though the notices this year were only sent out after many people had made their plans for the summer, twenty students attended the course. The majority were teachers in secondary schools or engaged in private teaching, and some were doing social work. Of these, eight had formerly been students at Oxford or Cambridge. The course was divided into two parts for the convenience of those who could come for only part of the time. In the first week lectures were given by the Rev. Prof. Sanday on "The Inspiration and Symbolism of the Old Testament," by Miss Wordsworth on "The Characteristics of St. Luke's Gospel," and by the Rev. C. F. Rogers on "The Teaching of the Old Testament," followed by discussions. In the second week the Bishop of Salisbury lectured on "The Baptismal Office," the Rev. M. De la Hay on "The Epistle to the Colossians," and Miss Pearson on "The Epistle of St. James." Miss Powell and Miss Latham each gave an address on "Religious Teaching." All the lectures were of great interest, some dealing with general principles and others giving practical help. As difficulties of teaching were chiefly felt with regard to the Old Testament, the lectures on that subject were given a prominent place. Besides being a stimulus to further study, the course has been of great value, both from the opportunity it has given of informal discussion and also as affording a quiet time for reading and thought.

MANCHESTER.

The newly appointed Dean of Manchester (Bishop Welldon) has been elected a member of the governing body of the Manchester High School for Girls. The installation of the electric light in the school buildings is now complete. To the list of open scholarships recorded last month should be added two scholarships offered by the Corporation of Manchester on the results of the Matriculation Examination of the Northern Universities. Twelve girls from the school passed this examination in July. The post of second mistress is held this year by Miss Dora Limebeer, M.A., who is head of the classical side, and who has also for some years held the post of Hon. Secretary of the Manchester Branch of the Classical Association. The annual meetings of the parent association are to be held in Manchester this month, when the presidential address is announced to be delivered by Lord Curzon.

At the Pendleton High School for Girls the numbers have reached 162, and in consequence of the increase Miss Pears, M.A., has been appointed to a post on the staff. Both the Preparatory Department and the school are now full, and the kindergarten training provided at the school is proving successful. Four girls have passed the Matriculation Examination, and one has taken Honours in the Cambridge Higher Local.

At the Whalley Range High School for Girls Miss R. F. Palmer, B.A., and Miss C. Wharton have joined the staff. Much regret is felt at the loss of Miss Riddett and Miss Cox, both of whom have gone abroad. A leaving exhibition has been founded in the name of Miss Greener, B.A., who was Head Mistress of the school for twelve years from its foundation.

At the Manchester Municipal Technical School Miss Spears, M.A. St. Andrews, Miss Williams, B.A. Victoria, Mr. P. W. Shelford, B.A. Lond., and Mr. H. C. Welsh, B.A. Dublin, have joined the staff. Recent successes include a Matriculation Scholarship tenable at Manchester University, and two £50 scholarships tenable for three years at the School of Technology. Four girls obtained a First Class in the recent Matriculation Examination.

At the Salford Municipal Secondary School Mr. T. I. Cowlshaw, M.A., has been appointed first master; Mr. J. P. Hindley, M.Sc., has been transferred to the Mathematical Department on the Technical side. The number of boys has reached 270. Pupil-teachers' training now forms a definite part of the school work. The calendar of the Manchester Municipal School of Technology for the session 1906-7 has been issued, and contains a full syllabus of the courses in the various branches of technology, "directed more especially to the requirements of the industries of South East Lancashire, of which Manchester is the commercial centre." It is pointed out that not only may students now qualify for the degrees of B.Sc. Tech. and M.Sc. Tech., but that Masters of Technical Science are qualified to become candidates for the degree of Doctor of Science under the regulations of the Faculty of Science at the University of Manchester. In the Department for Women special courses are arranged for ladies desirous of becoming teachers of millinery, &c., and of domestic economy. All day students of the School of Technology become members of the Athletic Union, which comprises six athletic clubs.

With regard to the proposed reduction of the numbers of the Manchester Education Committee, Canon Nunn points out in a letter that, whereas formerly members outside the Council were nominated by special bodies, the new scheme only provides that twelve members with special experience in education should be appointed by the Council. The building of three new schools is contemplated by the Committee. Owing to the large number of successful students in the evening commercial schools, two evenings were occupied at the Town Hall in the distribution of prizes. Sir James Hoy presided on one occasion, and Mr. E. S. Broadfield on the other. The returns show that 6,337 were in attendance at the evening commercial schools—an increase of 1,166. The number of individual evening students at all the schools (excluding the School of Technology) was 19,191, and the number of distinctions won in the Advanced Examinations of the Society of Arts was larger than that won by any institution in the country. In the course of his address, Mr. Broadfield (who is now Chairman of the Governors of the Grammar School, and was for many years Vice-Chairman of the School Board) gave an interesting review of his twenty-eight years' experience of educational work in Manchester. After referring to the great strides in University and secondary education, he pointed out that, while in 1878 there were less than 37,000 children in the municipal elementary schools, to-day there were nearly 100,000. There were 90 schools then, against 171 now, and the proportion of average attendance to the population had increased from 10 to 15½ per cent. On the other hand, the number at the detention industrial schools had fallen from 609 to 457. Another gratifying feature was the marked decrease in the number of juvenile offenders.

The medical officer of the Committee reports eighty-five cases of defective eyesight in the schools, and points out that, in spite of the fact that a fund exists for the provision of glasses, parents will not take the trouble to make use of it. In connexion with the new school for blind children recently referred to in this column, it has been decided that the Committee may not only pay tram fares, but also provide guides for children in attendance. A decrease in the average attendance at the elementary schools of 426 has been explained by the prevalence of epidemics.

At the Salford Education Committee some time was given to the discussion of the case of a boy who had won a bursary, but who, through an accident, had had to have one leg amputated. The minutes of the Higher Education Committee recorded a resolution declining to award the bursary. An amendment led to a tie in the voting, and the chairman declared the amendment lost. The Board of Education had stated that, while they would place no obstacle in the way of the boy's training as a pupil-teacher, that did not prejudice the question of his fitness when he came to be examined under the Superannuation Act.

The Bishop of Manchester was present at the first of a course of lectures which are being delivered by Mr. H. T. Mark, M.A., B.Sc., at the University, for the benefit of Sunday-school teachers. The course has been arranged by the University Extension Committee, who have also arranged for similar courses at Bolton and at Rochdale.

Recent appointments at the University include the following:—
The University. A vacancy on the classical staff has been created by the appointment of Mr. W. B. Anderson, M.A., to the Professorship of Classics at Kingston University, Canada; Mr. John McInnes, M.A. Oxon., has therefore been appointed

Assistant Lecturer in Classics. Mr. W. S. Sedgfield, M.A. Camb., Litt.D. Melbourne, becomes Assistant Lecturer in English Language; Mr. H. B. Wallis, B.A. Oxon., Assistant Lecturer in Philosophy.

It is hoped that the new building for the Hall of Residence, known as Holland Hall, will be ready for occupation next Easter.

In the syllabus of courses in Education for the coming session, Prof. Sadler is announced to lecture on "Some Problems in the Organization of Education in England: an Inquiry to be conducted on the lines of the Reports drafted by Prof. Sadler since 1903 for certain Education Authorities." The other two courses under the heading "Advanced Study" are one by Prof. Findlay on "Investigations into Problems of Class Teaching and in the Study of Children," and one by Mr. H. T. Mark on "Philosophic Principles affecting Courses of Study and Teaching Methods in Schools." The courses will open with an introductory lecture on "The Study of Education" by Prof. Findlay. The museum lectures open with a lecture by Prof. Flinders Petrie on October 1 on the subject of "Hyksos and Israelite Cities."

At the Grammar School the entry of new boys has reached about 170, which is perhaps a record. The numbers of the new Preparatory School in North Manchester have reached 85. Among successes of Old Boys may be mentioned an entrance theological scholarship at Durham University, the Harvard Scholarship at Harvard University, and the appointment of Mr. B. Ingram as H.M.I. for Ireland. Mr. Paton, who has spent part of his vacation in visiting German schools, is to give a course of lectures at the University during the session on "The Teaching of Latin and Greek."

Rowing practice has commenced again, and is to continue till fall term. Mr. E. Hickinbotham, B.A., who has been appointed to a mastership at the Liverpool Institute, is succeeded by Mr. J. W. Richards, M.A. Lond.; Mr. S. B. Hartley, B.A. Oxon., who has been for a short time on the staff of the Preparatory School, has been appointed to a Classical Mastership; and M. J. Matruhot, B. ès L. Ph. Dijon, has come as the first of the student-teachers from France, though the school has had several already from Germany.

WALES.

The Welsh Education Authorities have not, so far, fixed upon a definite policy with regard to the situation created by the judgment of the Court of Appeal in the West Riding case. A conference, however, is summoned to meet at Cardiff next month, when an attempt will be made to formulate a plan of campaign to which all the counties will give their adhesion. In all probability the great majority will be disposed to avail themselves of the finding of the Court, and will refuse to pay the proportion of salary due for denominational teaching. Breconshire, in fact, has already come to a definite decision that the salaries of the non-provided teachers will not be paid in full. Derbyshire and Cardiff are more cautious, and, so far, have contented themselves with merely serving a notice on all teachers that the effect of the judgment will be a matter for consideration in the near future.

The Report of the Board of Education on the Welsh Intermediate Schools has been published. It is full of interesting and instructive statistics, derived of course mainly from the documents and returns of the Central Welsh Board. The total number of pupils in the schools is 10,413 (viz., 5,116 boys and 5,297 girls), and the permanent staff is 585 teachers, or a proportion of slightly under 1 to 18 pupils. The average salary of a head master is £327, and of a head mistress £278; the average salary of an assistant master is about £133, and of an assistant mistress £110. It is also worthy of note that only five head masters and one head mistress have salaries over £500, while but one assistant master is paid over £250.

The reports of the examiners and inspectors are again satisfactory, and a continuous improvement is noted in most subjects, though the examiners often found occasion for criticism, which should be helpful to teachers, and especially so under the present system of employing the examiners when possible at the inspections. The subject which is most adversely criticized is geography, and in many schools it apparently receives but scant attention. On the question of staffing the Board is not yet satisfied, as the number of assistant masters is still inadequate, and does not keep pace with the increase in the number of pupils. The qualification of masters, however, is rapidly improving, but there still continue to be too frequent changes, due no doubt to the insufficient salaries which are paid. The number of pupils attending the schools per thousand of population varies greatly throughout the Principality, rising to as much as 10.8 in Merioneth, and falling to 2.9 in Monmouth. The average is 5.1 per 1,000. The report concludes with an expression of its agreement with the Conference held at Shrewsbury on the training of teachers, which declared that any form of half-time system of training renders the work of the schools extremely

difficult, and is not fully effective for either educational or professional training.

The Central Welsh Board, for the first time, has published a full list of the successful Honours candidates at the recent Annual Examination. It is arranged in the order of the marks gained by the pupils in accordance with the maxima fixed in the Board's regulations. As, however, it is impossible to fix the relative value of such subjects as Latin and Physics, &c., the order can only very roughly fix the relative merit of the candidates. The Gold Medal given by the Chief Inspector to the boy who is highest on the list is awarded to Percy W. Dodd, of the Wrexham County School.

The primary teachers of Wales and Monmouthshire met at Shrewsbury on Saturday, September 15, to discuss the formation of a federation of all the N.U.T. Associations in Wales. They have undoubtedly been led to this step through realizing that one powerful organization is more likely to be effective in moulding public opinion than a number of scattered associations. And it is specially important at this juncture in Wales that the teachers should be in a position to give expression to their views through some such body as that which has been just formed. The new Federation declared itself in favour of the principle of a Welsh National Council. Though the speeches betrayed the anxiety which is felt as regards the attitude of the men who are likely to dominate its counsels, they were forcibly described by one speaker as "rampant democrats on the platform, but arrogant autocrats on committees." Further, the Federation, recognizing the futility of demanding the introduction of co-opted members on the Council itself, resolved to fight for co-opted members on the sub-committees, where expert knowledge is essential. So far, however, there are no indications that any professional teacher will be given an opportunity of advising any of these committees. What will become of the Council itself however is not yet certain—some predict that it will be killed in the House of Lords.

Mr. T. H. Jones, M.A., mathematical master at Cardiff Intermediate School, has been appointed Head Master of the Pembroke Dock County School in succession to Mr. T. R. Dawes, M.A.

SCOTLAND.

An article by a Scottish correspondent of the *Times* regarding the reform in the Scottish Universities has given occasion for a considerable amount of letter writing and discussion. The *Times* correspondent rightly contends that what the Universities require most is a considerable measure of freedom to develop, each on its own lines. The last Universities Commission not merely tied them too tightly together, but prescribed by ordinance far too many details which ought to have been left to each University to arrange and modify from time to time. So far practically every one is agreed; but there is great difference of opinion as to the extent of the freedom which the Universities ought to have, and as to the functions to be assigned to the various elements (Court, Senate, Faculties, General Council, &c.) in each University. An Act of Parliament giving freedom would inevitably be a very elaborate measure, and the House of Commons is not the most satisfactory place in which to settle disputes about the internal economy of the Universities. Probably no Government would introduce such an Act without previously getting the report of a Commission, and the prospect of a new Commission is dreaded rather than welcomed. As the chief defects of the present system are connected with the curricula for degrees and the length of the terms in the Faculty of Arts, many people think it better to seek merely for a modification of the main Arts Ordinance. If the Universities can agree as to the changes they desire, the Ordinance can be altered at their instance, with the approval of the Scottish Universities Committee of the Privy Council, without the active intervention of Parliament. As has been shown from time to time in this column, the Universities have been for some years engaged in discussion with a view to the drafting of an amending Ordinance, and the *Times* correspondent has therefore no justification for declaring that the Universities are relapsing into the state of torpor in which he says they were before 1889. Indeed, the Universities have never been more active and progressive than they are to-day. In spite of the defects in the work of the last Commission, it made such large and beneficial changes that the Universities have been enabled to develop more during the last fifteen years than they had done for generations before. This has been pointed out by some of the letter-writers: but it is a pity that the discussion has tended to pass into a wrangle as to whether Court or Senate is the more active body in promoting reform. Hitherto progress has been made mainly by the co-operation of Court and Senate, and nothing but harm can come from antagonism or jealousy between them.

These lines have to be written before the beginning of the Quatercentenary celebrations at Aberdeen, and it is therefore impossible to give any account of the ceremonies. A very full programme has been

(Continued on page 686.)

Longinus on the Sublime.

Translated by A. O. PRICKARD.

Caesar's Civil War.

Translated by F. P. LONG.

Selections from Plutarch's Life of Caesar.

Edited, with Notes, by R. L. A. DU PONTET. Crown 8vo, large type, 2s.

Tribune:—"A very useful medium for introducing middle forms to one of the most entertaining and instructive masterpieces of Greek literature. The selections cover all the essential points of the 'Life,' and, if read in conjunction with Caesar's 'Commentaries' as a Latin text, and with Shakespeare's 'Julius Caesar,' they should hold the attention and stimulate the intelligence of young boys. . . . It should be found exceedingly useful as an elementary text-book."

Tales of the Civil War.

From the third book of Caesar's Civil War. Edited by W. D. LOWE. Extra fcap. 8vo, 1s. 6d.

Teacher:—"The author is an academic writer of repute, who has produced a book which should have a double value for the student, affording him serviceable exercises in his Latin studies and at the same time an interesting insight into the period to which the 'tales' refer."

Cicero pro Marcello, pro Ligario, pro Rege Deiotaro.

By W. Y. FAUSSET. Second Edition. Crown 8vo, cloth, 2s. 6d.

Greek Reader.

Selected and adapted with English Notes from Professor Von Wilamowitz-Moellendorf's *Griechisches Lesebuch*, by E. C. MARCHANT. Crown 8vo, cloth. Vol. II. 2s.

Guardian:—"This book contains several pieces taken from out-of-the-way authors. . . . The titles are enough to show that it is full of good matter."

Kingsley's Water-Babies.

Slightly abridged. Edited by JANET HORACE-SMITH and MARION L. MILFORD. With Five Full-page Illustrations by JANET ROBERTSON. Crown 8vo, cloth, 2s. 6d.

The Journal of Education:—"The notes are excellent, and they are further elucidated by minute and careful drawings which do much to enhance their explanatory value. The best and most useful section is that which preponderates largely, and is concerned with definite points of natural history, descriptions of birds, beasts, and flowers."

Scenes from Old Play Books.

Arranged as an Introduction to Shakespeare. By P. SIMPSON. With an Illustration of the Swan Theatre. Crown 8vo, cloth, 3s. 6d.

The Oxford Treasury of English Literature.

By G. E. HADOW and W. H. HADOW. Old English to Jacobean. Crown 8vo, cloth, 3s. 6d. Vol. I. Vol. II. will contain the history of the English Drama to the Jacobean Age. Vol. III. will take up the record at the time of Milton and will continue it to that of Tennyson and Browning.

Times:—"The dominant feeling with which one puts down this book is one of pleasure and gratitude. There is everything to learn in it and everything to enjoy, and all the learning is only another kind of enjoying. Nothing could be better than the editorial introductions to the different sections. They are models of what such things should be."

The King's English.

By H. W. F. and F. G. F. Second Edition. Crown 8vo, cloth, 5s. net.

Author:—"The first part of this book, and especially the chapters dealing with syntax and punctuation, we make bold to recommend to such schoolmasters as take what is called by courtesy 'an English form.'"

Plutarch's Lives of Coriolanus, Caesar, Brutus, and Antonius in North's Translation.

Edited, with Introduction and Notes, by R. H. CARR. Crown 8vo, cloth, 3s. 6d. *Coriolanus*, separately, 1s. 6d.

Athenaeum:—"Mr. Carr's notes are full and excellent, both on the critical and bibliographical side. . . . His views are sound, and we should like to see this book adopted in the upper forms of public schools."

NEW VOLUME IN THE OXFORD HIGHER FRENCH SERIES.

Poésies Choies d'Alfred de Musset.

Edited by C. E. DELBOS. Fcap. 8vo, cloth, 1s. 6d.

Premières Notions de Vocabulaire et de Lecture.

MÉTHODE DIRECTE POUR L'ENSEIGNEMENT DES LANGUES VIVANTES. APPLICATION AU FRANÇAIS.

Par J. E. PICHON, Chargé de Cours à l'Université Tchèque, Directeur de l'Ecole Moderne de Prague. Edition Illustrée. Crown 8vo, cloth, 1s. 6d.

Historical Geography of the British Colonies.

By C. P. LUCAS, C.B. Vol. I.—*The Mediterranean and Eastern Colonies*. Second Edition, revised by R. E. STUBBS. With 13 Maps. Crown 8vo, cloth, 5s.

Educational Times:—"The pages of the present edition have been in practically every case revised, in manuscript or proof, by officers, now or lately in the colonial service, who possess special local knowledge of the dependencies to which they relate."

Oxford Geographies.

By A. J. HERBERTSON. Vol. II.—*The Junior Geography*. Crown 8vo, cloth, with 166 Maps and Diagrams, 2s. Vol. I., *The Preliminary Geography*, immediately. Vol. III., *The Senior Geography*, in the press.

Teachers' Aid:—"That this book has met with general acceptance may be gathered from the fact that a second edition has been rendered necessary to meet the increased demand. Dr. Herbertson's name is synonymous with all that is new and accurate in the presentation of geography. His methods are essentially educational, scientific, and exhaustive. The book should form part of every teacher's equipment."

Kinglake's Eothen.

With Introduction by D. G. HOGARTH. Illustrated, Fcap. 8vo, cloth, 2s. 6d. net; lambskin, thin boards, gilt extra, 3s. 6d. net. [Oxford Library of Prose and Poetry.]

Elementary Chemistry.

Progressive Lessons in Experiment and Theory. By F. R. L. WILSON and G. W. HEDLEY. 8vo, cloth, with many Diagrams. Part I., 3s. Part II., 5s.

prepared for the four days of festivity, and there has been issued a list of over 130 recipients of honorary degrees—nearly all of them men who are already well laden with academic honours. The Franco-Scottish Society is also visiting Aberdeen, and a party of about fifty ladies and gentlemen have come from France to attend the meetings.

ST. ANDREWS.—For the L.L.A. Examination in May, 1906, 989 candidates entered for examination at 73 centres, as compared with 975 candidates in 1905. 321 candidates entered this year for the first time, as compared with 310 in 1905; and, from the commencement of the Scheme in 1877, 6,858 candidates in all have been entered for examination. 89 candidates have this year completed the requisite number of subjects, and will receive the L.L.A. diploma of the University. In regard to the various subjects in which candidates entered, 1,442 papers were written, passes were obtained in 785 instances, and Honours in 179.

IRELAND.

The Royal Commission on Trinity College have had one meeting in London to consider the written statements sent into them before August 1. They will commence their regular sittings for the hearing of evidence in Dublin on October 16. The public correspondence on the various views put forward in the months of July and August has ceased during the past month.

The Intermediate Examinations. The results of the examinations held last June were published early in September. They show that 7,790 boys were examined, of whom 4,892 passed, or 62·8 per cent.; and 3,177 girls, of whom 1,995 passed, or 62·8 per cent. There are many complaints concerning the large numbers who this year have failed to pass the examinations through failing to pass in English literature and composition—no less than 1,862 boys. Last year the failures from this cause were under 695. The general percentage of passes last year was 70·2; this year it is only 62·8. The results in English literature and composition have been unaccountably disastrous since the new method of examining has been introduced. Prof. Magennis is the setter of the papers, and they are corrected by a number of assistant examiners according to strict rules laid down by him. Many of the papers set show an inability to understand the powers of school-children, and the standard adopted appears equally unsuitable.

There is a considerable diminution in the amount given in prizes and exhibitions. As usual the Roman Catholic schools achieve brilliant successes. The first four places among the boys in regard either to the exhibitions won or the total number of distinctions attained are taken by Roman Catholic schools, two leading Protestant schools taking the fifth and sixth places.

Among the girls' schools the first six places are also taken by four Roman Catholic schools and two Protestant.

The Board will proceed this month to draw up their rules and programme for 1908, when the points raised by the members in the House will have to be dealt with. In regard to this matter it may be noted that the Act of 1879 does not give the House of Commons the powers claimed by the Irish members. While the rules should lie on the table of the House for forty days, and are not valid till they are sanctioned by Parliament, yet the latter has no power to draw up rules or introduce changes. Every point must be initiated by the Board to whom the drawing up of the rules and programme is entrusted, and who are responsible for them.

The Board have circularized the heads of schools to know if they would approve a pass in two languages being made necessary for all students. The answer has been almost a unanimous negative, the conditions of passing being considered already too onerous. The Central Association of Irish Schoolmistresses have again memorialized the Board against the group system, and give as an additional reason for their disapproval the tendency it shows to discourage the study of classics and mathematics and increase the concentration upon the modern literature group. They give figures showing that the overwhelming majority take this latter group, and that, while before the introduction of the group system every exhibitor took either classics or mathematics, now many take neither, and roughly only about 50 per cent. take Latin or mathematics. They point out that, when success depends entirely on a special group of subjects, teachers and pupils fear to risk taking the heavier and more difficult groups. It is indeed hard to see what good the group system does, while its evils are manifest.

This year the schools have the rules for 1906, while they are using the programme for 1907, the rules of which were objected to by the Irish members.

The National School Buildings The last report of the Commissioners of National Education gives a shocking account of the state of the primary-school buildings, owing to the failure of the Treasury to supply adequate funds. The schools are dangerously overcrowded in the large towns, with utterly insufficient accommodation of every kind, while in the country they are often miserable hovels deficient in almost everything they should have. The state of the schools, in fact, threatens the health and lives of both pupils

and teachers and is ruinous to the physique of the mass of the people. There appears to be a complete dead-lock between the Treasury and the Board, after a controversy extending over ten years. The equivalent grant of £185,000 a year has been diverted to other purposes in Ireland, while in Great Britain the similar grants are used exclusively for education; nor has the Board the power to raise money through the rates. The treatment of Irish primary schools by the Government has become an intolerable scandal, causing serious practical injury to over three-quarters of a million of children, affected by the present state of things brought about by years of neglect and mismanagement.

SCHOOLS.

BATTERSEA POLYTECHNIC.—The Battersea Polytechnic commenced its work for the present session with the reopening of the Secondary Day Schools and Schools of Domestic Economy on the 11th ult. Additional premises have been acquired since last session in order to meet the increased demand for secondary education for girls in the district, and even with this increased accommodation it has been necessary to refuse many applications for admission. The Day College and courses reopened on Monday, the 17th ult. Instruction extending over two and three years is offered in mechanical, electrical, motor-car, and chemical engineering in preparation for University and professional examinations, secretarial and commercial work, and in art. The growth of the day work has been a remarkable feature in connexion with the work of the Polytechnic, last session over 1,530 students being on the registers of the day schools and classes. Increased accommodation has been provided for the motor engineering students, and a four-cylinder petrol motor and a new type Chelmsford bus chassis has been added to the equipment of the department. Some sixty students who desire to earn their living as chauffeurs, motor car attendants, &c., are trained each term in the principles and construction and management of motor cars, and this branch of the work of the Polytechnic has been of much benefit to many desiring employment in the rapidly increasing motor industry. The evening classes reopened on the 24th ult., and, in addition to the large number of classes offered in previous sessions, new classes are offered in motor-car engineering (honours), architecture, enamelling and art metal working, and industrial law. The Polytechnic offers numerous scholarships to persons desiring to attend the classes but unable to pay the fees, and particulars of such scholarships and prospectus of classes may be obtained gratis on application.

BUCKS, WYCOMBE ABBEY SCHOOL.—The Oxford and Cambridge Joint Board has awarded sixteen whole Higher Certificates on the results of the July examination. Nine Distinctions were gained—five in French, one in English, and three in Drawing; and four did sufficiently well in Trigonometry, Statics, and Dynamics to deserve mention. One girl passed in Latin and Greek, and eight in the French Oral Examination. Twenty-four are exempted from various parts of the Previous Examination at Cambridge, one from Responsions at Oxford, and four qualify for admission to the examinations open to women at Oxford. One girl completed her Cambridge Higher Local Certificate by taking a First Class in Group B (Latin, Greek, and French). This year's University successes have been as follows:—At Cambridge, D. M. Zimmermann, Historical Tripos, Part II., Class II.; J. M. Scrutton, Historical Tripos, Part II., Class III.; M. M. Dunlop, Classical Tripos, Part II., Class II. And at Oxford:—M. A. Pickford and G. Jones, Final Honours School in Modern History, both Class II.; M. M. Anderson (who took Classical Moderations with Honours, Class II., last year), Pass Finals in Classical Books, Ancient History, and German; and R. M. Harrison, Final Honours School in Natural Sciences, Class III. H. M. Oyler's Research Studentship, at Girton College, has been renewed for another year. T. C. Williams has passed the Cambridge Teachers' Examination, and has been appointed an assistant mistress at the Graham Street High School. The girls gave two very successful representations of the "Alcestis" in June. We much regret the loss of two mistresses—Miss Grierson, on her marriage; and Miss Whitelaw, on her appointment as Head Mistress of the Girls' High School, Auckland, New Zealand.

CLAPHAM HIGH SCHOOL.—In the Secondary Training Department the following have gained the Cambridge Teachers' Diploma:—Misses Baker, Dymock, Nicholls, Sprott, Abbott, in Theory and Practice, and Miss Craig, Theory and Distinction in Practice. The following scholarships have been gained:—G. Mowll, Goldsmiths' Scholarship for Science, £50 for three years, Newnham College; G. Inkster, St. Dunstan's Arts Exhibition, £60 for three years; M. Laborde, Domestic Economy Scholarship, Battersea Polytechnic; C. Ward, M. Holloway, and L. Downes, Intermediate L.C.C. Scholarships. Examinations passed: London Intermediate Arts—M. Abbott, G. Nicholls. London Intermediate Science—G. Mowll, B. Smith, M. Chandler. London Matriculation—Div. I., A. Reynolds; Div. II., M. Blower, E. Chaplin, E. Elligott, H. Hicks, M. Holloway, K. Kidler, G. Swift, L. Thomas, C. Ward. Cambridge Higher Local—D. Abbott, Groups A and B, Class III.; M. Kingsford, Group A, Class III., Group B, Class I., distinguished in spoken French, German, and spoken German; H.

(Continued on page 688.)

BOOKS TO NOTE

 **The outstanding features of BLACKIE & SON'S Publications are:—**

- I.—SCHOLARLY AUTHORSHIP AND EDITING.
- II.—BOLD, CLEAR TYPE.
- III.—ARTISTIC ILLUSTRATION.
- IV.—STRENGTH OF BINDING.

CLASSICS.

THE SECOND MACEDONIAN WAR.

From LIVY, XXXI.—XXXIII. A new volume of the "Illustrated Latin Classics." By W. J. HEMSLEY, M.A., and J. ASTON, B.A. 1s. 6d.

THE LATIN HEXAMETER.

Hints for Sixth Forms. Interleaved for Student's own Notes. By S. E. WINBOLT, M.A. 2s.

KEY TO LIDDELL'S GREEK GRAMMAR PAPERS.

By A. C. LIDDELL, M.A. 4s. 6d. net.

ENGLISH.

AN INTRODUCTION TO GOOD POETRY.

Selected and edited by E. F. DAVIDSON, M.A. 1s. 6d.
The Notes form a special feature of this book. They should serve a double purpose, in protecting the pupil against the danger of "learning" poetry without understanding it, and at the same time guiding the teacher in presenting the poems to the pupils.

BROWNING'S SAUL AND RABBI BEN EZRA.

With Introduction and Notes. Paper, 2d.; cloth, 3d.

READINGS IN ENGLISH HISTORY, from Original Sources.

Vol. I.: B.C. 55 to A.D. 1154. By R. B. MORGAN, B.Litt., and E. J. BALLEV. 2s.

BLACKIE'S ENGLISH CLASSICS.

SCOTT—KENILWORTH.

Edited, with Notes, by W. KEITH LEASK, M.A. 1s. 6d.

SCOTT—OLD MORTALITY.

Edited, with Notes, by W. KEITH LEASK, M.A. 1s. 6d.

SCOTT—QUENTIN DURWARD.

Edited, with Notes, by W. KEITH LEASK, M.A. 2s.

SCOTT—THE LEGEND OF MONT-ROSE.

Edited, with Notes, by W. KEITH LEASK, M.A. 1s. 6d.

SCOTT—THE TALISMAN.

Edited, with Notes, by W. KEITH LEASK, M.A. 1s. 6d.

MATHEMATICS.

ELEMENTARY MATHEMATICS.

By A. LEIGHTON. Containing Algebra up to Quadratics, and the substance of Euclid I. and III., with Similar Figures and Mensuration. 2s.

FRENCH.

LA VIE DE POLICHINELLE ET SES NOMBREUSES AVENTURES.

Par OCTAVE FEUILLET. 1s.

HISTOIRE DE LA MÈRE MICHEL ET DE SON CHAT.

Par E. DE LA BÉDOLLIÈRE. 1s.

The above two stories, popular with generations of French children, are reproduced with their own characteristic Illustrations, rich in number as in fancy. With full Vocabulary and Questionnaire, but no Notes.

MOLIÈRE—LES PRÉCIEUSES RIDICULES.

Edited by G. H. CLARKE, M.A. 8d.

DE VIGNY—HISTOIRE DE L'ADJUDANT.

Edited by CLOUDESLEY BRERETON, M.A. 4d.

[*Little French Classics.*]

CHOIX DE POÉSIES POUR LES ENFANTS.

By Mlle M. HUMBERT. 4d.

[*Little French Classics.*]

UN PETIT VOYAGE À PARIS.

By MARGUERITE NINET. With 12 full-page Illustrations and Vocabulary. 1s. 6d.

A brightly-written account of a first visit of two children to Paris, by the author of "The French Picture Primers."

LE LIVRE DES JEUX.

French Games, and Songs with Music, for Children. Miss A. C. W. TILLYARD. 1s.

HISTOIRE D'ALADDIN; OU LA LAMPE MERVEILLEUSE.

Par GALLAND. Illustrated by JOHN HASSALL. Edited by L. A. BARNÉ. With Vocabulary. 1s. 6d.

LABICHE—LE BARON DE FOURCHEVIF.

With Vocabulary and Questionnaire. 8d.

LE BAL DE PAPILLON. SUR LA MONTAGNE. LA FÉE ÉGARÉE. LA PETITE CHARITÉ.

Petits Contes pour les Enfants. Illustrated. Complete with Questionnaire and Vocabulary. 4d. each.

FRENCH AUXILIARY AND REGULAR VERBS.

For use as a Supplement to a Reader in Junior Forms. A. BOURDASS. 6d.

Please write for full descriptive Catalogue and Special Lists of Books suitable for Oxford and Cambridge Locals and College of Preceptors Examinations to

BLACKIE & SON, Ltd.,
50 OLD BAILEY, E.C.

Finsler, Group B, Class II., distinguished in spoken French, German, and spoken German; M. Hannay, Group B, Class II., distinguished in spoken German, Group C, Class III.; G. Leppan, Group B, Class II.; G. Mowll, Group B, Class I., Group E, Class I., distinguished in Elementary Paper—Chemistry, Practical Chemistry, Practical Physics (gratuity of £2. 10s.); M. Kestin, Groups C and E, Class II.; G. Hughes, Group C, Class III., Group H, Class II.; V. Noble and R. Whitten, Group D, Class III.; H. Kynoch, Group H, Class I., distinguished in French History; N. Seymour, Group H, Class II.; D. Ward and L. Williamson, Group H, Class III. In the Higher Certificate Examination 13 Full Certificates have been gained. In the Associated Board of the Royal Academy and the Royal College of Music, Local Centre: Intermediate Grade Piano—R. Barber. Advanced Grade Violin—G. Hepburn, E. Edgar. Local School Examination: Higher Division Piano—D. Woodhouse, F. Haldane. Lower Division—M. Grieg. In the annual examination of the Royal Drawing Society 16 Full Certificates, 238 Honour Certificates, and 128 Pass Certificates were gained. In the Board of Education Art Examinations 23 First Class and 29 Second Class Certificates have been gained. Eight works have been accepted for the Art Class Teacher's Certificates. On the result of the Examination in Design, Stage I., Sibyl Hitchcock has gained a King's Prize. A free studentship at the Royal College of Art has been awarded to Dorothy Dyer.

GRAHAM STREET HIGH SCHOOL.—At the Higher Certificate Examination of Oxford and Cambridge Joint Board, A. Fraser, C. Lane, F. Rolland, M. Spencer-Smith gained Certificates, and eight others Letters. M. Spencer-Smith gained Distinction in History and Scripture; H. Leach in Literature and Geology; M. Storrs in History; O. Macdonald and L. Troughton in Literature. At the Royal Academy and Royal College of Music Schools Examination six entered for Piano and all passed, S. Marston, with Honours in Senior Division. At the Royal Ablett Drawing Society's Examination 27 gained Honours, 31 passed, 13 failed.

HAILEYRURY COLLEGE.—The leaving exhibitions were awarded last August as follows:—Classical Side: C. H. Gidney, R. L. Yorke, T. H. E. Baillie, W. M. Wace. Modern Side: J. H. Mason. Mr. L. B. T. Chaffey, of the Modern Side staff, has left to undertake work at Eton. His place has been filled by Mr. S. M. Toyne, O.H., of Llandovery College.

PORTSMOUTH HIGH SCHOOL.—Miss Barter White, B.A., has left, and the classical work is now taken by Miss D'Arcy Thompson (First Class Classical Honours, Girton). Miss E. Wright, B.Sc., has also joined the staff, in the place of Miss M. Gough (Girton). In the Oxford and Cambridge Board Higher Certificate Examination full Certificates were gained by M. Brandebourg and M. Nedham; F. Simpson and A. Weeks obtained Letters. In the Oxford and Cambridge Local Examinations three Seniors and eleven Juniors were successful, two Juniors obtaining Third Class Honours. D. Slade obtained the certificate of the Elementary Examination of the National Froebel Union. D. Handley passed the Associated Board Singing Examination.

PURLEY (SURREY), RUSSELL HILL SCHOOLS.—Old Russellians' Day was Saturday, September 1, and proved a great success, Mr. Yates, one of the Board of Governors, being chairman for the day. The swimming prizes won by the girls and boys were distributed from the pavilion by Mrs. Yates, as well as the prizes won in the Old Russellian sports of the afternoon. An open-air concert took place on the terraces in the evening.

PRIZE COMPETITIONS.

HOLIDAY PRIZE COMPETITIONS.

Prizes for the Holiday Competition are awarded for

DRAWINGS.

Water-colour.—Bob, £1. 1s.; Evergreen, 15s.; Shaston, 5s.; M. O. Sharp, 5s.

PHOTOGRAPHS.

Architecture.—Cranliensis, £1. 1s.; XV., 10s. 6d.; Mel, 5s.

Family Group.—Thalassa, 5s.; M. E., 5s.

Nature Study.—Orotava, 10s. 6d.

TRANSLATION OF LYRIC.

Baerwalde, 10s. 6d.; Givry, 10s. 6d.; Rabe, 5s.; N. N., 5s.; Verblüht, 5s.

The competition in Art was much stronger than in Literature. No "Incident of School Life" was, in the Editor's opinion, deserving of a prize: most were commonplace; two were truthful records, and, therefore, interesting, but too *intime* for publication. Three "black

(Continued on page 690).

Manufacturers, Importers, and Dealers in
CHEMICAL & PHYSICAL APPARATUS

Rostron's Patent **OPTICAL LAMP** for Students.

ADVANTAGES.

- 1—It brings to a white surface on the bench a line of light which may be considered the path of a ray of light.
- 2—The Laws of Reflection and Refraction are obvious from the visible paths of light. No imagination is required as in "Pin" experiments.
- 3—It gives a source of light of desired shape, and screens it efficiently.
- 4—It is convenient in size and adjustments, no focussing is required, and it is coupled in place of the Bunsen Burner.
- 5—It serves instead of all Screens (except for image), their Stands, Pin-hole Camera, and Lamp and Scale for Mirror Galvanometer.

Price 15s. 6d.

One of H.M. Inspectors of Secondary Schools says of it:—"The Lamp is an excellent means of directly illustrating the principal Laws of Light, and it would prove very useful to all students of this subject."

MICROSCOPES and ACCESSORIES

by all the Leading Makers, including Beck, Leitz, Reichart, Zeiss, and also Messrs. Watson & Sons, of whose Instruments we hold a Large and Varied Stock.

BIOLOGICAL & DISSECTION INSTRUMENTS.

The "VICTORIA" Biological Case—Solid Walnut Wood Case, containing Three Scalpels, Three Forceps, Three Pairs Scissors, Three Dissecting Needles, Seeker, Section Lifter, Metal Blowpipe, Razor, Strop, and Triplet Lens.

Price £1 1s. 0d.

**VICTORIA BRIDGE,
MANCHESTER.**

and white" were amusing, but the drawing was feeble. Subjoined are notes on the translations.

By "GIVRY."

Die Blum' die heut' uns lacht
Morgen verblüht;
Das, was uns Freude macht,
Lockt uns und flieht;
Was ist das Glück der Welt?
Blitz, der die Nacht erhellt,
Dann rasch zerfällt.
Tugend wie ist sie schwach!
Freundschaft zu rar!
Liebe, für Hochmuth, ach!
Giebt Wonne dar.
Wir stehn und sehn sie ziehn,
Und ihre Freude fliehn,
Die unser schien.
So lang' der Himmel lacht,
Die Blume blüht;
Blick, der wird kalt vor Nacht,
Mit Liebe glüht.
Still gehn die Stunden Dein,
Träumend dann schlafe ein,
Wach' auf und wein'.

SHELLEY: "The Flower that smiles to-day."

By "BAERWALDE."

Zerschelle, zerrinne, du Meer,
An dem kalten, grauen Gestein!
Ach, dass doch die Zunge äussern könnt'
In Worten des Herzens Pein!
Wie selig die Kinder am Strand,
Die sich haschen in jauchzender Flucht!
Wie selig der Schifferknab',
Der im Nachen singt in der Bucht!
Und die stattlichen Fahrzeuge ziehn
Zum Hafen am Bergesrand.
Ach, nur einen Laut der verhallten Stimm',
Einen Druck einer liebenden Hand!

Zerschelle, zerscheit're, zerstieb'
Am Gestade der Klippen, du Meer!
Doch der holde Glanz des erloschenen Tags
Hat für mich keine Widerkehr.

TENNYSON: "Break, break, break."

"Man" has caught the spirit of "She sat and sang away," but the metre—second and fourth lines unrimed—halts.

"Fleet" begins the Marston sonnet well, but lapses into prose. The Sarah Adams lyric, with its peculiar metre, is impossible.

"Auragis."—"Va en riant" will not scan.

"Hirt" makes *singen* rime with *trinken*.

"Robin Hood."—Meritorious. "Ne dites pas" is weak for "we ask not" (read "nous ignorons"); and *brillez* hardly expresses "a blessing."

"F. C. D. W."—Blank verse is hardly a recognized form of French metre, and the last stanza is weak; otherwise very creditable. Mr. Du Maurier, in a version approved by Tennyson, had "les larmes oiseuses," obviously "le mot juste."

"Verblüht."—Needs only a little polishing to be quite good. In "Füg' auch du dich zur Ruh'" the *du* is superfluous; and for "Sich des Daseins noch freu'n" read "Der Welt sich noch freu'n." The identical rime *dort—verdort* is a questionable licence.

"J. Festus."—A good *prose* rendering of a passage from "Maud."

"Diana."—"Vielleicht ich werd' gedenken,
Vielleicht gedenken nimmer"

is a fatal ending.

"Givry."—Shelley's "The flower that smiles to-day" goes well in German. "Das was" is cacophonous; *Hochmuth* only half expresses "proud despair." The French version of the same lyric neglects alternate masculine and feminine rimes.

"N. N."—French prosody is faultless. "Le cours prédestiné des choses" for "the future" does not suit the context—the mirage that fancy sees.

"Fantail Pigeon."—*L'égiss* cannot rime with *nass*, and only stress of rime can excuse the final *lang*.

"G. S. M."—Gray's "Elegy" has been successfully rendered in French *verse* by M. Boiello and others.

"Fleurange."—"Il n'est plus pour moi de bonheur sans mélange" for "Oh, the difference to me!"; and "la Ramée" for "the Dove".

THE CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice President—THE LORD HARRIS.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, ESQ.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, ESQ.

Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

QUINQUENNIAL BONUS DISTRIBUTION, 1906.

Life Assurance Fund on 31st May, 1906 £4,292,691
Net Liability under Assurance and Annuity Transactions, computed on an extremely stringent basis 3,801,975

SURPLUS £490,716

Out of this Surplus the sum of £490,100 has been divided by way of Bonus, making, with £42,644 already paid as Interim Bonus, a Total Bonus Distribution among the Members of £532,744.

Total Bonuses distributed, £4,256,464.

SPECIMENS OF BONUS ADDITIONS TO A POLICY FOR
£1,000 in respect of the 5 years.

WHOLE LIFE POLICY.

Age at Date of Distribution.	Addition to Sum Assured.	Age at Date of Distribution.	Addition to Sum Assured.
30	£77	60	£102
40	84	70	144
50	90	80	215

ENDOWMENT ASSURANCE POLICY. A Uniform Addition of £100 at all ages.

Notwithstanding the lowness of premiums charged, the Society has always declared Bonuses at an exceptionally high rate.

NOTICE.

No Agents employed and no Commission paid for the introduction of business.

Assurances can be readily effected by direct communication with the Office,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

CUSACK'S DAY TRAINING COLLEGE,

WHITE STREET, FINSBURY STREET, and ROPEMAKER STREET, MOORFIELDS, LONDON, E.C.

(TELEPHONE NO.: 3379 WALL.)

Principal: Mr. J. CUSACK, LL.D.

The following Classes resumed study after the Holidays, and New Classes were formed on the dates given below:—

	ORAL.	CORR.		ORAL.	CORR.
OXFORD LOCAL —Senior and Junior	Sept. 1	Sept. 3	L.L.A. —Saturday	Sept. 8	
CAMBRIDGE LOCAL —Senior and Junior	Sept. 3	Sept. 3	Do. Evening	Sept. 3	Sept. 7
COLLEGE OF PRECEPTORS —1st, 2nd, and 3rd Class, every day	Sept. 3	Sept. 3	KINDERGARTEN , for National Froebel Union Certificate ...	Sept. 15	Sept. 7
NATURE STUDY —for Teachers	Sept. 8	Sept. 7	A.C.P., L.C.P., F.C.P.	Sept. 3	Sept. 3
CANDIDATES —Every day ...	Aug. 27	Aug. 28	OXFORD HIGHER LOCAL	Sept. 10	Sept. 11

COMMERCIAL, DAY, and EVENING CLASSES, all Subjects, August 27.

CIVIL SERVICE DAY CLASSES for MEN, BOY, and LADY CLERKS, August 27.

COMMERCIAL CLASSES for **TEACHERS** in Commercial Law, Banking and Currency,

METHODS AND MACHINERY OF BUSINESS, and **ECONOMICS**, September 8.

Students should apply at once for Prospectus and full particulars of the Classes they wish to enter. All applications to be addressed to Dr. CUSACK.

The attention of all teachers of English History is called to a

SUMMARY OF ENGLISH HISTORY.

BY
NORMAN L. FRAZER, B.A.,

LATE SCHOLAR CORP. CHRIS. COLL. CAMB.,
ASSISTANT MASTER IN WHITGIFT GRAMMAR SCHOOL, CROYDON.

Crown 8vo, Cloth, containing Fifty-three Illustrations and Twelve Maps.

2s.

SOME PRESS NOTICES.

"It is no mere date-book, but a useful guide to right methods of study, and a capital instrument for effective revision."—*Guardian*.

"This is a very good summary."—*School World*.

"It is a definite contribution to method, and has been well and carefully thought out. . . . Altogether an excellent book, well worth the price."—*The Journal of Education*.

"This delightful volume should make the learning of the facts of English History a joy for ever."—*Bookman*.

"The book is an unusually good one."—*Aberdeen Free Press*.

A. & C. BLACK, Soho Square, London, W.

BY THE

HON. LIONEL A. TOLLEMACHE.

Author of "Talks with Mr. Gladstone," "Benjamin Jowett: a Personal Memoir," &c.

EIGHTH EDITION.—Demy 8vo, pp. 460. With Photogravures of Hon. Lionel A. Tollemache and Hon. Mrs. L. A. Tollemache. Cloth elegant, gilt top, price 7s. 6d.

Safe Studies.

Contents:—Historical Prediction—Sir G. C. Lewis and Longevity—Literary Egotism—Charles Austin—Recollections of Mr. Grote and Mr. Babbage—Mr. Tennyson's Social Philosophy—Physical and Moral Courage—The Upper Engadine—Notes and Recollections of Sir Charles Wheatstone, Dean Stanley, and Canon Kingsley—The Epicurist's Lament—Poems by B. L. T. (Hon. Mrs. L. A. Tollemache)—Index to the Classical and other Quotations, with English renderings.

FIFTH EDITION.—Demy 8vo, pp. 262, cloth elegant, gilt top, price 3s. 6d.

Stones of Stumbling.

Contents:—The Cure for Incurables—The Fear of Death—Fearless Deaths—Divine Economy of Truth. **Appendices:**—Recollections of Mark Pattison (see note overleaf)—Mr. Romanes's Catechism—Neochristianity and Neocatholicism: a Sequel. Index to the Classical and other Quotations, with English renderings.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

"Agricola."—Spirited, but some weak rimes: *wild* and *Welt*, *Than* and *du*.

"Rabe."—"Mich treiben mit grausamer Tat" is weak for "I hustle me to and fro"; and for "im wilden Gedräng" read "das wilde Gedräng"; else very good.

"M. de C."—How is

"Belle paquerette qui pousse partout"

to be scanned?

"X."—*Sein* cannot stand for *seinem*.

"Pervanche."—A prose version.

"Marée basse."—A very happy paraphrase of one of Moore's Irish melodies, but not a translation.

"W. F. K."—Grammatical faults both in French and German.

"Megan."—

"O belle vierge, des fleurs les pieds t'embrassant !"

could hardly be construed without the key.

"Tanengro."—The Prize Editor cannot pretend to more than a colloquial knowledge of Welsh Rômani, and has referred the Omar Khayyâm translation to the King of the Gypsies for a second opinion.

M. Bulet writes to us suggesting that the word *nion* in the last French translation is a by-form of *gnon*, to be found in Bescherelle or Hatzfeld. He also takes exception to "underhand blow" in the prize version. *Coup fourré* is defined in Hatzfeld as "coup perfide où celui qui frappe l'autre est frappé en même temps."

A Prize of Two Guineas is offered for the best translation of the following passage from Nisard:—

De même, avant d'être précis, combien de fois n'est-on pas vague ! Que de termes qui n'appartiennent pas à la langue du sujet, et qui s'y introduisent par le relâchement de l'attention, par la mémoire, par l'imitation ! Que d'autres dont l'usage ou plutôt la mode du jour se sont emparés, et dont le sens est étendu à tant de choses qu'il ne désigne plus rien de distinct ! Que de tours languissants et embarrassés se présentent avant le vrai tour, le seul qui donne à la pensée sa physionomie et son mouvement ! Combien d'expressions qui ne déterminent pas les choses, et dont nous sommes si prompts à nous contenter, soit mollesse de conception, soit fatigue ou paresse ! Combien d'inexactitudes dans l'effort même que nous faisons pour être exacts ! Combien d'illusions dans l'emploi de ce que nous appelons les nuances,

lesquelles, au lieu d'être des aspects différents de la pensée, ne sont souvent que de vaines images qui nous la cachent !

Les figures, les métaphores sont des pièges du même genre, et dont il n'est guère plus facile de se garder. A qui n'en vient-il pas dans l'esprit par cette porte banale de la mémoire, toujours ouverte à tout ce qui est imitation et mode ? Notre langue ne souffre point ces ombres qui se placent entre notre pensée et nous ; c'est le premier devoir de l'écrivain de s'en défier, ou plutôt de les chasser courageusement, comme Enée dissipait les ombres avec son épée. Ces images sont le plus souvent des effets du sang, des fumées qui montent au cerveau. Les littératures les plus riches en images sont les plus pauvres en idées. Certains écrivains sont pleins d'images ; tout reluit, tout brille, tout étincelle ; mettez tout cela au creuset : pour quelques parcelles d'or, que de cendre ! L'image ne doit être que le dernier degré d'exactitude, ou plutôt elle ne doit être que la pensée elle-même exprimée en perfection ; mais, pour une qui remplit cet office, combien qui ne sont que des apparences de la pensée !

Enfin, quel esprit cultivé ne sera pas d'accord avec moi sur ce qu'il en coûte dans notre langue, pour lier le discours et n'y employer que les termes propres ? Pour la propriété, ce n'est pas assez d'être bien doué : il faut savoir la langue, et avoir pesé dans les écrits des modèles ce que valent les mots dont nous nous servons à notre tour. Il faut que l'étude les place dans notre mémoire, avec le titre qu'ils ont reçu des hommes de génie, lesquels font des mots une monnaie à effigie, dont la valeur est déterminée. Puis, c'est à l'inspiration de les en tirer, de les animer de notre pauvre vie, en sorte qu'ils aient une même valeur de circulation pour tout le monde et que, par l'emploi que nous en faisons, ils nous appartiennent en propre.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitors must reach the Office by October 16th, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Those in the First Class are entitled on application to a copy of "Essays in Translation."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

LONDON: GEORGE BELL & SONS.

THE TEACHING OF HISTORY IN SECONDARY SCHOOLS.

By F. J. WEAVER, M.A., F.R.Hist.S.

TEACHERS of history in schools may, perhaps, be permitted to hope that it is no longer necessary to apologize for their existence. That particular type of utilitarianism which regarded the history lesson as an intrusion was never remarkable for the modesty of its representatives; therefore we may conclude that the comparative absence of protests against the growing recognition of history as a school subject is a proof that its claims have at length been acknowledged. But, whatever the truth of this inference, it is at least equally evident that the actual teaching of history is still carried out in a somewhat haphazard manner, and that the teachers themselves are beginning to feel the need for co-operation and for a more general recognition of leading aims and principles.

The expression of this need, it is true, has generally come from those who have taken a special interest in the subject; but the need itself is all the more pressing in the case of the numerous schools where history is taught by each form master and taught frequently upon lines parallel only in the sense that they never meet.

It is interesting to note that our most candid friends are those official censors at whose instance we claim to have sacrificed so many of our pet schemes—namely, the examiners. Those whose painful lot it has ever been to prepare boys for answering "portmanteau" questions, in which the "brief life" and "a few facts about" appear with wearisome iteration, know how fruitful such questions are in providing "howlers" for the delectation of the examiner. As a matter of fact, the howler is frequently the result of haste or carelessness, and even when a ludicrous mistake is made from sheer ignorance the mistake itself is not necessarily any the worse for being ludicrous. But many examiners are now providing us with questions which make it possible to teach history rationally and prepare pupils for an examination at the same time, and we are bound to admit that the examiner has a better opportunity of appraising the general results of the teaching of history than any one teacher can possibly have.

The recent discussion in regard to the proposed abolition of the Teachers' Register has again brought into prominence the fact that secondary teachers as a whole are not enamoured of "training." The same remark would probably apply to teachers in elementary schools also if the special incentives to training in their case did not exist; but this is only by the way, and the suggestion, if erroneous, must be charitably ascribed to the writer's fraternal desire to suggest at least one argument for the abolition of invidious distinctions between A and B. Now secondary teachers must be either exceptionally conceited or exceptionally foolish if they are not willing to allow the possibility of improvements in their methods of teaching and anxious to discover how those improvements may be effected. As a matter of fact, and practical teachers of any standing and repute in their own circles will bear out the statement, the junior members of a staff are usually quite eager enough to benefit by the experience of their senior colleagues, even to a somewhat embarrassing extent. But perhaps it is not to be wondered at that the advice of those whose experience and success as teachers are well known should be sought in preference to the most comprehensive and minute directions of others whose actual work in the class-room is not a prominent factor in their qualifications.

If it is true, as suggested here, that the teaching of history in secondary schools leaves much to be desired, whilst the teachers are anxious to improve their methods in accordance with the experience of others, provided the latter have a knowledge of what is practicable as well as of what is desirable, there ought to be plenty of useful work in store for the new Historical Association. No one who was present at the inaugural meeting of that association could help being struck with the general unanimity of the views expressed as to the needs and possibilities of historical teaching in schools, and the total influence represented might almost encourage a timid hope that there was sufficient of it to make some impression even on a Government Department if necessary. The writer has ever since been haunted by a dream—a most preposterously

impracticable dream perhaps—of an Historical Association scheme for the teaching of history in secondary schools, sufficiently definite to be capable of adoption as a whole by such schools as approved it, and sufficiently flexible to allow for individual peculiarities. It is nothing more than a dream at present, and the suggestions which follow are not at all intended to body it forth—at best they can only provide a speck or two of dust towards its materialization.

It is hardly necessary to point out many advantages that would follow from having such a scheme, if at all widely adopted. We take it for granted that University professors and examiners would have a share in its production, and thus we might hope that there would follow some sort of continuity or connexion between the various examinations which must, almost necessarily, have an effect upon our teaching; and some sort of continuity, also, between the work done at the school and at the University. It would be possible to provide apparatus—books, pamphlets, atlases, maps, illustrations, lantern slides, &c.—more cheaply, in proportion to the wider demand for similar productions, perhaps even at subscription prices. There would be the minimum of loss to pupils passing from one school to another where a similar scheme was at work in both; and, in the same way, teachers might make a change within the bounds of the "federation" with the slightest break in continuity. Not the least advantage would be the existence of an organized affiliated body of teachers of history to urge the claims of such an unmercantile subject in this mercantile age. It is absolutely necessary, however, that such a scheme should give the widest scope to the individual teacher, and that its adoption by any school should be an entirely voluntary act. Any attempt to enforce a uniform system would—at least, in the opinion of the writer—end in the failure it deserved. The life of an historical conscript is hardly an enviable one. On the other hand, there are some of us who would willingly enlist in the ranks of an organized body of teachers, being ready to stand up loyally for the united wisdom of a representative committee even at the expense of some of our own favourite theories. Not the least important characteristic of such united wisdom would be a willingness to consider suggestions from all teachers specially interested in the subject, whose actual experience, though limited, might correct or modify in certain details the general conclusions of those of far greater qualifications and reputation; but any teachers who feel that they have practical suggestions to offer will be obliged to overcome their consciousness of personal insignificance, since that very insignificance makes it tolerably certain that they will never be heard if they wait to catch the Speaker's eye.

For the purpose of history teaching we may roughly divide a school into three parts—junior, middle, senior. The particular age at which the line of division between middle and senior should be drawn would of course depend mainly upon the leaving age of the senior pupils, since it would obviously be unwise to shorten the senior teaching out of reasonable proportion. For instance, even if it could be proved that constitutional history is unsuitable for the study of pupils under fifteen years of age, it would hardly be advisable to cut it out entirely from schools in which the scholars leave at the age of fifteen or sixteen, especially as it is in these very schools that the teaching of history is only in the most exceptional cases likely to be supplemented at a University. The junior division should perhaps consist of those forms in which the average age is under ten.

With regard to the teaching of junior boys there can hardly be any doubt about the advisability of using the history "Reader" as a basis. But the great difficulty is to get sufficient Readers of a suitable kind. Any who have had much experience of little children know that their vocabulary is much more limited than is at first apparent, since they will read quite readily, and even reproduce from memory in proper connexion, words and phrases that they do not in the least understand. The existence of one or two junior history Readers which are really capable of being understood without continuous translation into simpler language proves that it is not absolutely impossible to write such books, but an overwhelming majority of so-called history primers, first history Readers, and histories for junior forms display an almost grotesque ignorance of the capacities of the pupils for whose instruction they are ostensibly written. The selection and arrangement of facts and stories in

some of these books make them a useful guide to the teacher himself, and one or two are almost good enough to merit an attempt at word for word translation. No doubt it would require considerable courage to suggest the latter proceeding to either of the authors concerned, since the delicate compliment might be misunderstood; but in their present form it is worse than useless to put these books into the hands of the children, as an attempt actually to use them in class is likely to give the impression that history is an altogether unintelligible and uninteresting subject.

Very young children will always show a taste for the fairy-tale form of history; but the teacher may give his imagination too loose a rein, with the result that inessential or apocryphal details usurp the place in the memory which might have been occupied with more serviceable impressions. It is quite possible to give children of eight or nine years of age a very fair idea of the main facts in the history of their own country if care is taken to keep always before them a "time chart" on which the story they are reading or listening to at the time can be clearly marked. The writer is heretical enough to believe that a knowledge of the conventional "Dates of the Kings" is very valuable as a scaffolding from which to build up an understanding of the sequence of events in the several reigns, and that the ability merely to name two or three of the main facts in each reign is well worth the time taken up by junior pupils in acquiring it. As a matter of fact, young children delight in assisting the teacher to construct tables of dynasties—under another name—with the dates attached in the most correct manner, and, even if short lists of dates are set to be learnt, the definiteness of the task far more than compensates for the apparent want of interest, while the satisfaction of producing something quite correctly is sufficiently keen to allure the young scholar unaccustomed to such a luxury. But there is no need to set a task; if the first few minutes of each history lesson are spent in drawing up on the blackboard a list of sovereigns—say, from William the Conqueror—alternately with a genealogical table connecting the Conqueror with our own Prince Edward of Wales, the smartest will soon get to know the names and connexions without effort, and the dullest can hardly fail to gain in time some idea of the sequence of events. Spaces should be left between the names of the sovereigns roughly corresponding with the length of each reign, and the position on the chart of each story read or told should be indicated before the story is begun. The question of the succession to the throne plays such a prominent part in our history that the date of the accession of a new sovereign has frequently marked a vital change in its development, and the ability to construct a genealogical table connecting the sovereigns as simply as possible, with the less important names freely superseded by crosses, would provide plenty of material for interesting study later on.

Greater difficulties arise in arranging a scheme for the middle division. Obviously, it is in this division that the principal part of the grounding work must be done, and the arrangements need to be sufficiently systematic to avoid want of reasonable continuity. There are many arguments for "concentric" teaching—a rapid survey of the whole story, becoming more detailed in each higher form; but practical convenience has generally prevailed in favour of an arrangement by period, since it is impossible to cover the whole ground in every form within the short time a pupil remains in that form, especially in the larger schools, where there are many forms and removes are frequent.

The great objection to an arrangement by period is the possibility of certain periods being gone over several times, while others are only partly studied, or even missed altogether, by pupils who enter the school late or leave it early or who get a double remove, thus missing altogether the work of one particular form. A common complaint from those who have some special reason to wish they knew more about the history of their own country—unfortunately, the majority seem quite content to know little or nothing—is that they were always "doing" the same period or that they know nothing about the nineteenth century because they "dropped" history before they got to the form to which the study of it was allotted. Perhaps the somewhat morbid eagerness for the latest news, which urges some men to buy three or four editions of the same evening paper and makes yesterday's journal appear to be a thing of the remote past, may be looked upon as a violent reaction from

a study of history in which the Battle of Hastings played too prominent a part. There is, unfortunately, no doubt that the more modern periods are frequently neglected; and yet we most of us agree that it is just these periods which should receive special attention if any periods should.

The solution of the difficulty appears to lie in the adoption of a system which combines both "concentric" and "period" arrangements. If all the forms in that part of the school which we have labelled "middle division" were taking the same period in the same term, the pupils removing from one form to another would continue their work in chronological order, and those remaining in a form would do similarly. The length of time taken to complete the cycle might be fixed at three, or four, or five, or six terms; but, as the whole division would be following the same course, the only difference being that in the higher forms of the division the work done would be more advanced, each pupil would continue his work in regular order in whatever form he might happen to be. There seems to be no reason whatever for limiting each form to one particular period, unless it be to give the teacher an opportunity of specializing somewhat in that period where the whole teaching of history is not taken by a specialist; but the same advantage might be obtained by arranging for the history teaching throughout the middle division to be taken by different teachers in different terms, according to the period best known to each.

If this suggestion were adopted, it would not only be impossible for a pupil to miss a period entirely if he stayed a reasonable time in the school, or to be spending the whole of his time on one particular period, but the teacher would know what to expect from the pupils, with the exception of those quite new to the school. From the specialist teacher's point of view it would be a very great advantage to be able to concentrate attention upon one period at a time, as far as the majority of the forms were concerned, instead of having to prepare entirely different lessons for the various forms. The average teacher of history needs to refresh his memory from the old fountains of knowledge, and is at the same time anxious to be up-to-date with new discoveries and opinions. He finds he can hardly give too much thought and preparation to a lesson if the most is to be made of it, and many special arrangements for illustrating the subject in hand are made impossible in practice because they take up too large a proportion of the time possible for preparation when several periods are being taken concurrently.

The latter objection would apply especially to lectures illustrated by lantern slides, which might be much more frequent and regular if the same set of slides and the same special preparations involved could be used for several sets either in succession or in combination, without turning the lesson into a kind of entertainment, which it must inevitably be in the case of those pupils not taking the period illustrated. Many teachers, at present somewhat harassed with futile attempts to get together and to employ various sets of illustrative material, each of which would, in all probability, be used once only, would welcome a scheme which simplified their task and at the same time made the field of its application much wider. Finally, he is either a very inexperienced or a very unobservant teacher who does not during the course of a lesson, by the questions and answers of the pupils, gain some information which will help him to present the same facts more effectively another time, and the value of this experience is immensely increased if it can be utilized almost immediately. It is not necessarily laziness which induces a parson to preach the same sermon over and over again: though he, unfortunately, cannot test its effectiveness by catechizing his congregation.

In the senior division, where the time devoted to history is likely to be very limited, it is, perhaps, best to confine one's attention to the most modern periods, with references to the earlier history for illustrations and origins. It is usually impracticable to attempt the study of European history, as such, unless at least two hours a week is allotted to the whole subject; for much generally remains to be done in training the pupils to express themselves with reasonable clearness and accuracy. Something of the kind may have been attempted earlier by requiring written answers to periodical questions; but the average pupil finds considerable difficulty in taking notes of a lesson or lecture and reproducing them in the form of a continuous essay. Generally speaking, the first aim of the history teacher must be to make the most of his time—a

poor halfpennyworth of bread to an intolerable deal of scientific and mathematical sack; and for this purpose it will be well to prepare a syllabus of each lecture, arranged to correspond with a definite portion of the text-book in use, so that plain facts may be easily accessible, and the lecture itself be taken up with supplementing and illustrating the facts and making deductions from them. Occasionally the pupils should be required to make their own notes entirely, and even when a syllabus is provided for them it should be supplemented by notes taken during the actual lesson. But the imperative necessity of saving time makes a syllabus doubly advisable, since it dispenses with the ten minutes wasted in dictation and forms a ready-made outline for an essay; while its use in the lesson itself helps to indicate the main landmarks and to prevent the pupils (and the teacher) from losing their way in an undergrowth of detail.

Pupils who take a special interest in history will be encouraged to think and read on their own account if an alternative subject for the essay is announced, especially when the preparation of it involves the study of a book—which should be indicated—somewhat off the beaten track. This arrangement, with an occasional half-hour devoted to a class debate on some question of current interest suggested by the lesson, would at least have a refreshing effect upon the teacher himself, revealing a surprising amount of original thought in quarters where nothing better than dull acquiescence had been looked for. The latter recipe should, however, be avoided by teachers who are not prepared to hear their pet theories somewhat contemptuously scouted; for the youthful essayist and debater is delightfully absolute. Constitutional history ought to have a fair share of attention at this stage, though there is really no reason why quite young pupils should not find the study of it sufficiently interesting. If the teacher himself has a real interest in the subject and can capture enough of the spirit of Burke to make the dry bones live, he will have no more difficulty in carrying his audience with him in a study of the growth of the Constitution than in describing a battle to which neither he nor any of them ever saw, or are ever likely to see, anything similar.

The very soberest estimate of what is necessary to be done to place the teaching of history in schools on a sound working basis appears to demand so much from the teacher himself that he can hardly be expected to keep pace with it unless he is free to devote the whole of his attention to the subject. In many cases, no doubt, where history forms one of several subjects taken by the form master it is the only one which needs special preparation so far as actual study is concerned. But only one teacher here and there is willing to give such a disproportionate share of his time to this part of his work, and there is a natural temptation to regard the history lesson as a convenient break between such strenuous subjects as Latin and mathematics, to be spent in reading the history book as peacefully as the inquisitive boy will permit.

When teachers of history have set their own house in order they will be in a position to criticize those of others. They will remind the examiner of his responsibility in setting questions which have caused such a plague of synoptical cram-books and summaries, hardly justified by the ease and rapidity with which tabulated answers can be marked. They will claim a more adequate share of the grants for equipment, especially in those cases, happily growing fewer, where the antiquated idea still lingers that one book per pupil is "apparatus" enough. They will even dare to suggest to Whitehall itself that history is not necessarily a part of the subject of English because it happens to be written in that language.

SECONDARY EDUCATION IN FRENCH CONVENTS.

AMONG the public events of the year 1904 one deserving the notice of all who are interested in scholastic questions is the decision taken by the French Government to suppress all religious communities connected with the secondary education of women (*enseignement primaire supérieur*). With the ethical aspect of that education as given by the condemned communities we are not here concerned, and shall confine our remarks to the strictly scholastic side of the training given. Nor do we

intend to examine how that work has been carried on through previous generations—our aim is only to relate things as seen within the year, when a visit to Paris afforded us opportunities of personally examining several of the more important convents.

General Features.

Almost all religious schools carry out a double work. Side by side with, but entirely separated from, the boarding or day schools attended by girls of the upper classes, they have elementary day schools in which are taught children belonging either to artisan or to very poor families. It is only with the former that we are concerned in the present inquiry, as the free schools belong to the province of so-called primary education.

Formerly the decision as to the competence of teachers for their duties was left to the judgment and discretion of the superiors of the different communities, who chose among their members those who seemed best fitted for the task without being restricted by the necessity of public diplomas. Since 1879, however, the proportion of certificated teachers in the different schools is fixed by law, and ever since the convent teachers have qualified themselves for the teaching profession by going through the usual public examinations; and, like all other schools, whether public or private, convent schools have been periodically inspected by State officials.

The training in pedagogy and in the practice of teaching is usually provided by the communities themselves, whose new members have to serve an apprenticeship to their scholastic, no less than to their religious, life. This period of training, including, as it does, both theory and practice, varies in the different orders as to duration and methods. In one it extends over two years, during which the novices, alternately assuming the characters of teachers and pupils, are thoroughly drilled and criticized by experienced teachers; in others the young teachers begin by acting, so to speak, as occasional substitutes for the elder sisters. Nowhere do they plunge unaided into their new duties. The change is gradual, and, whatever may be in the different communities the customary appellation of the head of the scholastic department, her kindly guidance of the new teachers is as unwearying as her friendly supervision of the staff as a whole.

As age impairs the activity of a teacher her work is modified, being sometimes limited to her favourite subjects or to small classes until such time as her failing health will allow her to do service only in some less exacting occupation. The pupils are generally admitted from the age of five or six, rarely younger, and the leaving age is about seventeen or eighteen. The greater number, however, range between ten and fifteen.

The approximate number of girls educated in the eight convents under notice varies between sixty and two hundred per school, always divided into a large number of classes (in several instances nine, exclusive of divisions) so as to reduce the number of pupils in each to ten or twelve, twenty being almost the extreme limit, and in some cases there were only six girls working together. This condition, so advantageous to individual progress, is due to the large supply of teachers furnished by the communities without any addition to the school expenses. For this must not be forgotten—religious teachers are not salaried, and expect nothing more for their trouble than board, lodging, and the liberty of devoting themselves to the care of children and to the life of study they have chosen. Hence the large proportion of teachers as compared with the number of pupils; hence also the comparatively low scale of fees in even the best convent schools.

Whatever may be the number of classes into which the whole school is divided, the promotion of girls from one to another is decided according to the average of their work during the year: examination results are taken into consideration, but not solely. The individual opinion of each teacher who has had to do with the pupil, and also considerations of character, age, and health, are given their due weight. But the passing *en bloc* of one class into the next is never the rule.

A feature noticeable in all these schools is the careful co-ordination of the subjects forming the curriculum, the studies in one division being always carefully arranged so as to lead up to those in the next. In the junior classes it has even been found in several instances that they were so organized as to go over the same ground twice in distinct and yet parallel divisions, the second course being distinguished from the first by greater fullness of detail on the part of the teacher, whilst

greater fluency and thoroughness were exacted on the part of the pupil. In all schools an elaborate system of weekly and monthly examinations in different subjects keeps the pupil's mind on the alert. "Revision" in some form or other is indeed the constant practice everywhere.

Curriculum and Time-table.

The increasing custom for girls to pass public examinations has unified, to a great extent, the schemes of the different convent schools, which, at the request of the parents, readily send up for examinations any of their pupils. Those examinations (*Brevet élémentaire* and *Brevet supérieur*) being intended for girls of over sixteen and eighteen respectively, the result is that in the different convents there can be but little difference in the studies pursued by girls over fifteen if they work with a view of obtaining the *brevets*.

The characteristic feature of each scholastic community lies, therefore, in the middle school. In some schools most importance is given to history; in others to literature; while in one a third of the whole time is devoted to science. Thus a certain individuality is still preserved by the schools, entailing differences in the allotment of time, and showing itself throughout in the general tendency of the work. To follow these different peculiarities in all the intricacies of time-tables would be tedious, but some permanent features may be briefly recorded.

The Froebelian system, though known and studied by all interested in pedagogy, does not obtain in France to the extent that it does in England, and there was no trace of it in any of the schools visited. Reading, writing, counting, with interludes of singing, games, and hand-work, were, according to time-honoured custom, taught to the youngest children; and, whether owing to the small number of pupils entrusted to each teacher or to the system of renewing short lessons on the same subject every day, and even several times a day, progress seemed very rapid at that early stage. Children of seven and eight were found already able to carry on a whole range of studies, including grammar, geography, and arithmetic. The teaching was mainly oral, with a small amount of learning by heart, so as to train both memory and speech, which were further exercised by the reproduction of narratives taken from Scripture and from French history. Those young pupils had books well, and often profusely, illustrated; they even had each an atlas.

According to notes taken at one of the schools, children of nine and ten had a scheme of work including, in arithmetic, the four simple rules, the metric system with problems, and principles of fractions; in grammar, verbs and elementary rules with daily dictations and exercises in parsing, style, and elocution; in French history, a general survey from the origins to the Revolution, with a few leading dates; in geography, general knowledge of the globe and detailed study of France, physical and political; and, side by side with all this, religious knowledge, drill, drawing once a week, reading and writing, sewing and object lessons. Truly a list long enough for juvenile ambition! Yet some in addition must practise some musical instrument; if so, they generally curtail the time given to writing or sewing.

Before leaving the junior classes some points may be insisted upon—the daily, or almost daily, lessons in reading and writing; the importance attached to the study of the mother tongue, which, as well as arithmetic, appears every day in some form or other on the time-table; the care taken that from the beginning history should be considered as a whole, a general knowledge of its development being aimed at from the first.

When we examine into the work of the middle school divisions, or *cours moyen*, comprising pupils whose ages range from twelve to fifteen, we find that no one of the subjects previously studied is abandoned or even allowed to become momentarily forgotten; but it is treated in a fuller and more liberal manner. The study of the French language blends itself here with the study of French literature; the history of France leads to general history, ancient and modern; geometry and even algebra supplement arithmetic, carried on now to a more advanced stage (interest, discount, stocks, proportional parts and partnership, square root, areas of plane figures, &c.). Geography deals successively with the different parts of the World considered under the many aspects of their physical and political conditions. Chemistry and physical and natural sciences are also added to the list of subjects. It is at this period of school life that, as has been hinted already, the particular bent

of a school may show itself by the greater proportion of time allotted to one or other branch of knowledge. At no time does the time-table show greater variety, providing, as it does now in some cases, for modern languages and the outline of foreign literatures with a study of their most important works, possibly also Latin, which in one school appeared in the curriculum of four successive divisions.

When girls have reached the age of fifteen or sixteen they pass into the upper school; it is now time for them to think of public examinations. The first of these, or *Brevet élémentaire*, includes the French language, arithmetic, the history and geography of France, a few notions of natural and physical sciences, drawing, sewing, and principles of vocal music. Some, though by no means all, pupils, submit to this test, and the need to provide for both classes of pupils gives rise to different systems.

In some schools the candidates and non-candidates work separately, the former devoting themselves almost entirely to the official programme, whilst the other girls work according to a curriculum framed very much like that already mentioned in connexion with the middle school, but dealing with more advanced subjects, and comprising even in some schools the history of architecture, psychology, principles of jurisprudence, domestic economy, and ambulance courses. In other convents, where numbers are not so large, the girls continue to work together with a curriculum wider than that of the official programme, the matter of which occupies an amount of time varying in different schools.

Whatever the system adopted, the results, as tested by the *Brevet élémentaire*, are, as a rule, excellent. One school had no failure to report; another, out of 23 candidates, passed 21, and again 20 out of 22. For this first examination the special preparation, if any, occupied generally one scholastic year. To prepare for the next examination two years were not infrequently allowed, though in several cases this period was found to be very much reduced.

The second and final examination which girls may pass from the age of eighteen—the so-called *Brevet supérieur*—includes advanced arithmetic and bookkeeping, French language and literature (outline and set books), French and general history, French and general geography, chemistry, physical and natural sciences, principles of pedagogy and ethics, drawing, and one modern language (with set books). That here, again, pupils of convent schools could hold their own is proved by the following figures:—4 candidates passed out of 4, 9 out of 10, and 4 out of 5.

It will have been noticed that one foreign language figures on the programme of the *Brevet supérieur*; yet no mention was made of that subject in the regular school curriculum. It seems to have been treated as an additional subject, having allotted to it only what time could be spared from art and needlework until the special preparation for the *Brevet supérieur* was begun.

As a conclusion to these remarks on curricula may be added the following extracts from time-tables, showing the weekly amounts allotted to the different subjects:—

WEEKLY TIME-TABLE FOR PUPILS OF 8 TO 10.

French Language: dictation prepared and used as basis for grammar lessons: parsing, oral and written composition; elocution. 11 hours.

History of France: narratives and summaries from the origins to the fifteenth century. 3 hours.

Geography: revision of Europe; simple notions concerning other parts; division of France in departments with chief towns. 3 hours.

Arithmetic: the four simple rules with easy problems and mental calculation. 3 hours.

Object Lessons: food, clothing, dwellings. 1 hour.

Reading with explanations and used as subject matter for object lessons. 3 hours.

Writing: medium, with capitals. 2 hours.

Religious Knowledge, Catechism, Old and New Testament (parts of). 5 hours.

WEEKLY TIME-TABLE FOR PUPILS OF 15 TO 16.

French Language: special study of syntax and spelling peculiarities; historical grammar; historical, literary, and other compositions; literary analysis. 6 hours.

Outline of French Literature up to 1660; study of works of that period; special study of Corneille and La Fontaine (Fables). 3½ hours.

History: revision of Roman history (1 hour weekly); history of

France from Henry IV. to 1870, and simultaneously European history. modern and contemporary. 8 hours.

Geography: Europe thoroughly; physical France, orography, hydrography, revision of political France. 2½ hours.

Arithmetic: properties of numbers, divisibility, prime numbers, theory of fractions, square root, geometry (solids). 4 hours.

Science: mineral and organic chemistry, geology, botany, revision of animal physiology. 3 hours.

Reading: Mediæval and Renaissance authors explained.

Writing: running hand in all sizes, round and sloping hand. 1½ hours.

Religious knowledge: dogma, liturgy, revision of ancient text and Gospels, modern ecclesiastical history. 6 hours.

An obvious remark called forth by even a cursory examination of these time-tables is that no mention is made of optional or extra subjects. Yet a not inconsiderable amount of time is in every school set apart (in the afternoon, generally) for music, drawing, needlework, and kindred pursuits, the time-tables becoming then individual to provide for each girl's scheme of optional subjects. This, however, does not largely apply to the younger children, who do not yet attend the studio, and whose musical efforts may be still limited to singing in their classrooms with one of their mistresses, either as a recreation or as preparation to join in the singing which accompanies religious ceremonies at church or chapel.

In several schools musical instruction in theory and singing is given throughout the middle and upper divisions once or twice a week, the best voices being picked out, and, to a certain extent, trained for the benefit of the choir. Tuition in solo singing and instrumental music of all kinds is given at the wish of the parents, either by the regular staff or by visiting teachers at special fees and under supervision.

How every subject can be provided for seems at first difficult to understand, but we must bear in mind that the pupils either are boarders or spend nearly the whole day at school—from 8.30 a.m. till 6 or 6.30 p.m. in most instances. Classes alternating with individual work (English, preparation; French, *étude*) occupy the whole morning in the middle and upper school, and again the latter part of the afternoon, from 3.30 to 6 or 6.30. There is no free day in the week. Even Sunday comes in for its share of study, mainly in religious subjects.

The proportion of class work to *étude* is not quite easy to state: it varies with age and also from school to school. Thus in one we found that in the lower divisions class work amounted to five hours and *étude* to two and a half hours daily; whilst in the middle school the proportions were almost reversed—class three hours, *étude* five and a half hours. From this we may infer that, whilst the young people's work is mostly done *with* the teacher, the older ones are expected to practise a certain amount of initiative and self-reliance which goes on increasing with time. Whether the *étude* took place in the same room where the class was held, or whether pupils were for that purpose gathered in larger or smaller numbers in a special hall (*salle d'étude*), silence was always found to be the rule, a strict supervision preventing any idle disturbance or interruption of the work. The pupils during this time were not allowed to open their desks at will, but had to provide themselves from the beginning with all the books, &c., they wanted.

Recreation or Play-time.

Notwithstanding long hours of work, two and a half hours per day were usually allotted to recreation, and in the younger divisions there were, besides, short breaks both in morning and in afternoon work. All girls had recreation after the midday and evening meals; also before resuming school in the afternoon, so as to allow time for a light repast called *le goûter*, and partaken of in the grounds whenever the weather permitted. All these *récréations* seemed in every school to be employed in organized games, more or less compulsory, and even encouraged by special rewards. That those games are not of a very athletic character no one can doubt who has any knowledge of French customs and ideals. Yet there was croquet, even tennis, where space allowed, and in smaller grounds games involving great activity in running and jumping. The nuns supervising play-time join in the games, whether played in the gardens or in the spacious halls provided for that purpose.

Apparatus.

In all convent schools desks were provided either in both class and preparation rooms, or at least in the latter, these

desks being in many instances of a very modern and improved type. The younger children, however, frequently had tables. Blackboards were found everywhere. Maps constituted an important feature of school implements. Sometimes they remained hung on the walls of the class-rooms in which they were to be used, but there is a growing feeling that by this method the pupils' curiosity gets blunted and maps lose their teaching efficacy. Atlases were in the hands of all pupils, and map drawing formed in several schools a quite remarkable feature. Blank maps on large and small scales, raised maps of the newest kind, special maps for every branch of that rapidly developing science testified to the thoroughness and "up-to-dateness" of the schools with regard to geography.

The teaching of science was likewise helped by sets of diagrams and by herbaria and cabinets of minerals such as are rarely to be met with in any but purely scientific schools. Experiments were everywhere acknowledged as necessary to supplement and illustrate the teaching of physical science and chemistry.

It does not seem that experimental chemistry as understood in England is yet largely admitted into the curriculum, but it must be remembered that schools are in France expected to prepare the majority of girls only for their probable vocations in life, and that so far it is but an infinitesimal proportion of women who devote their energies to scientific pursuits.

School Buildings and Grounds.

All of the convents alluded to, whether old stately mansions modified within the last thirty years in accordance with modern exigencies, or new erections built at great cost during the same period, uniformly presented the same spacious outward proportions, with certainly more than the regulation allowance of light and air within doors. Some even could be considered as strikingly remarkable for their architectural beauty and for the lavishness and efficiency of all appliances conducive to health and comfort. For the use of boarders bathrooms are, of course, always provided, and in one instance we found them fitted with the most elaborate system of hydropathy and under the management of a specially trained nurse. The dormitories, with their countless windows and polished floors, were in several convents combined with the cubicle system, the elder girls enjoying even sometimes the luxury of a private bedchamber, an innovation due apparently to the fact that those convents number among their pupils many foreign girls. In one convent, however, the custom still obtained for the nuns and pupils to share the same dormitories.

Every one of the eight convents visited had playgrounds and gardens well shaded and adorned with well kept flower-beds. Every one of them had also, for rainy weather, large halls and covered galleries where the children could carry on their favourite and most noisy games without hindrance. Amid them great variety could be found. At one convent, right in the centre of Paris, the ancient cloisters of which have witnessed many vicissitudes, you would find the formal disposition of trees so characteristic of old French gardens; at another, further removed from crowd and noise, an undulating lawn shaded by well grouped trees and enlivened by song-birds. Elsewhere, again, far hidden in one of the poor industrial suburbs, you would see an unpretentious row of buildings, hardly noticed by the noisy stream of workers passing constantly to and fro; once behind the white closed gates you would catch a glimpse of long flower-lined paths, of a stately chapel reached either by shady walks or by a glass-covered verandah; and from the many wings added successively to the seventeenth-century mansion you would command a far-reaching view of the great city within the boundaries of which the original structure seems surprised to find itself now enclosed.

Conclusion.

These brief notes on convent schools suggest a few reflections. One concerns the adoption and development of the lecture system, some convents having organized courses given under supervision to the more advanced pupils by outside lecturers, some of whom are men of literary and scholarly repute. In one instance, at least, these courses were found to be largely attended by outside lady students, and, as they were combined with an excellent system of scholastic correspondence, the advantages they offered extended even to the girls who had left school. In one case only was the old system of learning by

rote still adhered to; the general custom was rather to place in the hands of the pupils some text-book, often compiled for the use of that school by some member of the community, the summaries of different chapters being not infrequently learnt by heart, and the explanatory text or notes being reproduced in the pupil's own language.

Much care was throughout bestowed on obtaining clear and complete answers from the pupils, monosyllabic or truncated sentences being tabooed from the first. The time and trouble spent in early days to ensure clear diction in reading and reciting were evidenced by the almost general fluency and distinctness of speech. The frequent drilling in verbal answers went always side by side with practical use of the blackboard, and, whether they had to solve a problem or to draw a diagram or a map, the girls seemed both eager and intelligent. As tending to the same end must also be mentioned the repeated occasions when girls speak, read, or recite before a large audience, including not only the whole school, pupils and staff, but also the older members of the communities, and even—at the Easter and summer school examinations—some outside scholastic authority. A few days are devoted by the pupils to preparing for these important occasions, during which preparation the *salle d'étude* is often exchanged for a shady part of the garden. In the examinations a large share of time is allotted to oral questioning; and it no doubt proves a valuable training for the more formidable ordeal of the public examinations, which in France always include a compulsory *viva voce*.

Literary and debating societies seemed most active, and, together with good libraries, tended to foster intellectual initiative. The best voluntary productions either in prose or poetry were granted by vote the honour of insertion in the academic records of the school. Gymnastics were everywhere optional. Needle-work was less of the ornamental than of the useful order. Garments for the poor were made by the pupils as soon as they had reached a certain stage. Later on darning, mending, cutting out to measurements, trained them in even a more practical way. Certain schools also expected from each girl or group of girls the regular performance of some slight household duties, some practice in cookery being gained by elder girls either as a complementary course, or on *fête* days and festive occasions awaited impatiently by the whole school.

That the pupils enjoy their school life there is abundant proof in the popularity of school magazines, the frequent and regular meetings of former pupils, and their readiness to join in any plan likely to benefit either school or schoolmates. Should further testimony be wanted, the most eloquent and pleasing was borne in the eagerness of girls to greet a teacher and answer her questions. This it was our welcome privilege to witness during the time spent in collecting information in these different convents, to whose authorities, religious and ecclesiastical, we are much indebted for the facilities so graciously afforded.

P.

OUTDOOR BOTANY.

A LARGE garden behind an old historic house, now turned into a public day school for girls, sweeps of velvet lawn rising in terraces to a small wood of elm and sycamore and fir, with mossy and varied undergrowth, the lawns themselves dotted with noble trees of venerable age, and edged with bright flower beds. In the lowest level a pond, overhung by trees; sedges and flags and loosestrife and marsh marigold growing in the water, and a perfect tangle of wild flowers round the edge of the pool. The back of the picturesque old house draped with various climbing plants pushing into every window.

Given such surroundings, the teaching of botany naturally suggests itself, and the mind at once leaps to the fact that it can be taught upon the spot, out of doors, living with the plants. It is easy to follow Nature in all her moods, to watch her in every stage of development, to observe and note the influence of sun and shower. Life in its wild and in its cultivated state stands ready, and lessons under such circumstances base themselves upon the natural features of the place. Soil and weather also receive their share of attention in the general scheme, and our laboratory is the outside world. The plan of the lessons follows the changes of the garden from month to month; and, in a spot of such variety, offering such

abundance of material, different lines can be taken up in successive years.

Lessons began in the spring of the year with pupils who were for the most part ignorant of botany, and, it must be noted, though living in the country, also curiously ignorant of the wild life around them, truly having eyes, but seeing not, yet eager to see. And in this eagerness, this readiness to be interested lay the chance for the teacher.

And now begins our work. The course planned covers the order of growth and sequence of the flowers. Each lesson is of three-quarters of an hour's duration, and each class consists of about twenty girls. It is time for outdoor botany, and they troop on to the lawn each provided with paper and pencil. No time is lost in preliminaries—the special object of the lesson's study is explained in advance. They divide into little sets of three or four, or sometimes two, and each goes straight to the appointed place and begins work instantly.

Each set has generally three or four plants to study in the time, the study consisting of close observation both with hand and eye of the plant in question; a summary of the points noted is written down at the time, and rapid drawings are made on the spot of every feature observed. Too much has to be done to admit of slow work, or of any conversation except that relating to the work in hand, and girls are seen stretched flat upon the grass the better to see, clustered eagerly round a bush or half hidden under masses of foliage, trying to penetrate the inmost secret of the plant. As each set finishes work upon its own particular plant it moves on in strict rotation to the next on the list, each one being carefully chosen with special reference to the subject set to be studied at the beginning of the lesson. Towards the end of the time allowed the class, which is scattered at work all over the garden, is called together, and special points are mentioned by the teacher and facts that might have been overlooked by the inexperienced student. The papers of notes and drawings are then collected, and these are read, commented upon, and returned before the next lesson.

In this manner various trees were studied—the beech, plane, oak, and sycamore. The opening buds of smaller plants claimed their turn, and careful notes and comparisons made as to their manner of folding, their colour, shape, size, texture, arrangement, methods of protection from wet and cold, their time of opening. From time to time the outdoor class began its work by visiting trees or plants previously studied in order to note change and progress. This tended to deepen earlier observations, to correct wrong ideas or prove theories, and it can very truly be said that it is difficult to forget what has been learnt in this way.

At the back, in the wilder part of the garden, in the sunny spaces between the trees, were patches in which the grass grew tall and free and wild flowers of many kinds grew, crowded thickly. These afforded work for several lessons. The flowering of the grasses, chiefly the pretty cocksfoot and the fox-tail, led to the study of wind pollination. It was noticed that the wild flowers grew in colonies, and particular attention was paid to any solitary intruding plant, instances of which occurred in almost every patch. It raised a question as to its survival or increase to be answered the following year. These wild patches illustrated the struggle for existence, the necessity for light and moisture and space, and comparisons were naturally drawn between their crowded life and the scanty growth beneath the wide and close-spreading beeches and firs.

The beds of honeysuckle swarmed with bees. Seated on the grass, near to the selected plants, the pupils followed the movements of the bees from flower to flower, which it was quite easy to do, and gained some insight into their structure and methods of work. The life of the bee, and cross-fertilization by its means, when studied later, gained in interest from the personal observations made. Climbing plants were studied in the same way, and here was abundant subject for study in the many climbers which draped the red-brick walls of the old house. The finger-like tendrils of the grape-vine; the long, slender twining cords of the wisteria, flung curling in every direction; the woody stems of the ivy, furred with climbing-roots, lent an almost human aspect to the plants in the minds of their observers as they watched their efforts to lift themselves higher, and how they stretched out their climbing organs, ready to grasp at any support. Afterwards, plants which had been studied earlier in bud and flower were revisited to note the change of flower into fruit, and the fruits compared with each other.

Here it may be remarked that no pupil was told to adopt the individual and personal form of recording observations, but, doing what really was original and individual work, of their own accord, they used this means of expression, and almost invariably their notes began: "In the plant I am observing," or some such form of recording their own work. In every case out-door work was supplemented by in-door lessons, in which deductions were drawn, careful, detailed descriptions made from the notes and drawings, and questions discussed to which the outdoor work had given rise. The outdoor botany was a living thing. Every girl came to her work with interest and worked well and hard. The work was never dull, and the time went all too quickly. Teacher and pupils worked with enthusiasm, and it was an inspiring sight to see the little groups scattered over the big garden, busy with paper and pencil, intent upon the work in hand, the teacher visiting each group in turn to answer questions, or to point out facts which had been overlooked.

It may be said that the conditions as described above were ideal. They were also, however, real. Exactly similar conditions may be difficult to find elsewhere, but there is little doubt that many schools exist in which botany might be taught in a similar manner, and which would do much to rouse a living interest in the subject which is often lacking, and which, one must admit sorrowfully, is too often owing to the dullness of the teacher. Not seldom do we find that the whole subject is regarded with distaste by the pupil, who studies the flower as a thing apart from its natural surroundings, who, indeed, shows up neat books, full of elaborate drawings, with dictated notes, but which, even on a casual observation, show a lack of the love and interest which should be there. Once let the pupil see the wonder and the mystery and the beauty underlying Nature in all her forms, and the study of plants will take its rightful place as a subject full of deep interest, something akin to ourselves, and a secret sympathy will endear to us each tree and flower because they too are alive.

But is outdoor botany possible except under these exceptional conditions? It may seem a paradox, but outdoor botany may to a large extent be brought indoors. And many even of our London schools have some garden attached, some trees, some walls upon which creepers hang. In the country it is easy enough. A lane or field can always be available, but in London can we not utilize the powers of observation to see what lies at our own doors, and gather subject-matter from our parks and commons, correlating every lesson with familiar outdoor features, which only need to be pointed out? The plane tree, with many others, is in our midst; the florist and the seedsman spread wide their windows to the common gaze. School gardens do much, and the earnest teacher will find that questions crowd upon each other merely from observing at all seasons the solitary tree in the school playground, or the growth of nasturtiums which he has himself planted in a pot. The true enthusiast can find material everywhere. If all heaven is mirrored in a single drop of dew, how many problems of life and Nature are illustrated by a single growing seed!

E. C. MATTHEWS.

BIRDS.

A FRIEND, who has found now the undiscovered country, still often brings a smile to me as I think of him and of his dreams, and whenever I rejoice in a chorus of wild songsters in which my ignorant ears cannot discriminate the individual notes, or watch a flight of happy winged creatures too far beyond my field of vision for recognition of their kind, I think of his quiet chuckle as he recounted one of his visions of the night. He came of a dreaming family. It was his younger brother who remembers casually leaving his body outside when he went into the big assembly where such disrobing was *de rigueur*, and, on returning to take it from the peg on which he had hung it up, could only find a body belonging to a certain shy and learned professor, which unfortunately was several sizes too small for him. But his own powers in that direction were more remarkable than those of his notable kinsman, and his experiences certainly lost nothing in the

telling of them. Only to a few privileged intimates did he confide how he dreamed one night of three old Circumstances altering cases and a proud young Exception proving rules.

The dream with which I most like to associate his memory was just the story of how he watched a company of birds flying past him, and, turning to a bystander in his sleeping fantasy, inquired: "What kind of birds are those?"—but was perfectly satisfied with the reply that they were just "common birds," as though bird life, when not abnormal in beauty or in strength, could be satisfactorily reduced to a common denominator and include any number of undifferentiated flying creatures belonging to no family in particular. How he loved the quiet humour of his own dream, and how whimsically the dear "common birds" are always reminding me of it—the little thrush-coloured baby robin that lately came within a few inches of my hand on an old lawn beneath a spreading cedar tree; the flocking sparrows, with their restless, impertinent movements; the finches and tits and other undistinguished and homely winged kinsfolk!

It was a very small bird indeed that, towards midnight lately, awoke me—a creature about the size of one of those white-bosomed Mother Carey's chickens that I learned to delight in on the wide Atlantic. The window of the room where I slept was wide open and a lamp burning. Perhaps the light had beckoned through the darkness to some homeless little brother that had lost his way. How gladly would I have soothed and comforted the eager, fluttering heart, stroked the soft brown plumage, and mothered the tiny quivering body. But fear stood between us as a dividing angel. The terror of the bird terrified me also, the whirring and swishing of the small wings made music of revolt and anguish, and the swift, violent movements were so blindly bewildering that it seemed, the next instant, they would beat into my face and buffet my eyes. How the vexed soul came there, or whither it vanished, will always remain a mystery; for, while I slipped out of the door to ask counsel of my more knowledgeable neighbour, the tiny wanderer fled through the window. But a symbol there seemed to be of many a human crisis in which some stormy spirit, communicating its passion to another with a stress of inexplicable moral whirlwind, may find the only kindness in a noiseless flight and silent farewell—such a farewell as must often bear within it an unspoken pledge of meeting on the shores of those far distant havens that wait for us in lives to come.

At the extreme limit of the other end of the scale in the gamut of feeling, is the peace of uplifting which comes through watching that flight of swallows across the sky which seems the very language of emotional mastery and triumphant attainment—

The perfect poise that comes of self-control,
The poetry of action, rhythmic, sweet—
That unvexed music of the body and soul
That the Greeks dreamed of, made at last complete.
Our stumbling lives attain not such a bliss:
Too often, while the air we vainly beat,
Love's perfect law of liberty we miss.

It is wonderful to think of that finely adjusted, disciplined effort, cleaving the air with a skill and precision on which mortal life depends, and to realize that there are moments when by any discontinuance of that ordered movement of the wings, that outstretched tension of guided and instinctive faith, the bird must inevitably sink to its earthly death, whether it fall into the drowning ocean or be dashed to pieces on the bruising ground. To me it was a wonderful thing when I first grasped the fact that only through the element they fought and breasted could the birds be borne onward, and that all that exquisite grace and gliding ease which we call flying was the transcendent outcome of sustained and joyous effort.

Sometimes a little do their pinions close,
A little moment do they sink to earth:
But in activity they find repose—
Such rest as we may hope for in that birth
The world calls death: or for a moment find
In some transcendent hour of holy mirth,
When love some holy secret has divined;
When pain and effort are a deep delight,
And joy is in the heart of grief enshrined.

Who can watch the migratory birds without recalling that splendid passage in "Faust" which reminds us that—

In every man is born that yearning
 Onward and upward evermore to rise
 When overhead the lark his song is learning,
 Lost in the azure spaces of the skies ;
 When, wide upon the air his wings extending,
 The eagle sweeps above the pine-clad height,
 And, far across the lakes and levels wending,
 The crane unresting fares in homeward flight.

But we need not cranes and eagles. There is an even more pathetic suggestion in the heroism and the joy of our own small English birds. As we watch them taking the wings of the morning when the dew lies heavy on the fragrant flowers, or brooding in the stillness of the noonday, or accentuating by their passing flight the mystery of the twilight merging in the glory of the sunset, as they move across the horizon into the clouded fires that seem to lie beyond, the whole earth becomes an altar in the Eternal City, and we realize that the veil of the temple is for ever rent in twain.

Two wings must bear us up, says the writer of the little book which has so long companioned Christendom: the one is simplicity, and the other is purity. Too often still we run and are weary, we tire and are faint. When shall we realize that we are curtailed by our own dullness, and, casting our own self-garmenting aside, may enter here and now into the ever-present radiance of the Divine Life, and shall no more need to say: "Oh! that I had the wings of a dove," but straightway in our onward upward progress "be forever at rest?" A. M.

EDUCATION IN MASSACHUSETTS.

A STATE which fixes the age of compulsory school attendance at sixteen years will probably present some points in educational policy worthy of special study. By the Constitution of 1780 Massachusetts set itself the following task:—"In all future periods of the Commonwealth, to cherish the interests of literature and the sciences and all seminaries of them": with what measure of success is denoted by the fact that two years ago 65 per cent. of the children in this State were kept voluntarily at school until the age of fifteen. From the beginning the people of Massachusetts adopted the principle of voluntary effort in education, compulsory subjects of instruction being few, optional courses many. In 1826 the State required its towns and cities to supervise their schools by means of specially selected officers or School Committees, and in 1837 a court of appeal for Local Authorities was established in the Board of Education.

Generally speaking, provision is made for the upkeep of the following grades of education:—(1) primary, ages ranging from six to eight years; (2) intermediate, ages ranging from nine to eleven years; (3) grammar, ages ranging from twelve to fourteen years; (4) high schools; (5) normal schools, where formerly the majority of teachers for high and elementary schools were trained; and (6) colleges, which now contain special departments for the training of teachers. In addition to these there are public kindergartens for children whose ages on admission range from three to six years.

The high schools are mainly recruited from the upper classes of grammar schools, and the entire system provides a complete ladder from the primary grades upward, one which every child of ability may climb. Massachusetts stands alone among the States in making full provision for a free high-school education, its law being that all towns containing five hundred families shall maintain such schools adequately equipped and providing a four years' course preparatory to the normal school and college requirements. When such conditions are fulfilled the State makes a special grant to the complying Local Authority, while in sparsely peopled districts the fees of such students as attend high schools in neighbouring towns are paid by the State. Of 353 towns or cities in the State all but 17, which are very small, support high schools. 10 per cent. of the total number of students in the State attend such schools.

Superintendents, appointed by the State, are special executive officers who supervise schools under the direction of School Committees. These appointments were formerly given to those who had rendered political service, and tenure of office was usually dependent upon the continuance of such service, but public opinion is now being aroused, and superintendents are expected to undergo a special course of training extending over at least one year in educational work at one of the colleges. Each superintendent is responsible for the organization of about one hundred teachers and the general direction of some thirty schools and their courses. The official is expected to keep in touch with each school by means of fortnightly visits.

The State regards the normal schools and the superintendents as the two most important instrumentalities for the training of teachers, the official opinion being that "every corps of teachers should feel the forceful influence of a thoughtful, judicious, growing superintendent—a man who is alive and sane." Notwithstanding this pronouncement, differences of opinion between superintendents and Local Committees are not uncommon, and, as the school tax amounts to 30 per cent. of the entire municipal tax, and the Local Authority provides more than 90 per cent. of the money spent on education, the power of the State official is more apparent than real. Possibly it is on this account that Massachusetts stands alone among the States in its freedom from State inspection and State certification. Its towns have repeatedly adopted independent school policies, which on being questioned have been promptly legalized by the State—a position of affairs in direct contrast with the veto exercised by our English law on the work of higher-grade schools under large School Boards in the Cockerton judgment. The duration of the school year as fixed by law is forty weeks—a demand which is quietly ignored—and the average length of the high-school year is thirty-eight weeks, the minimum for purposes of the State grant being thirty-six weeks. Throughout the United States the average number of school days per annum is 147.2. Oklahoma, with 89, has the least; Arkansas has 92, Texas 116, Massachusetts 186, while Rhode Island and Maryland possess the maximum of 190. In England the minimum allowed by the Board of Education for elementary schools is 200; but the average usually works out at 215, the average of grammar schools being about 190.

The abundance of holidays in the State probably accounts, in part, for the high average of attendance, which reaches 91 per cent. The attendance problem is dealt with by means of detention schools, where more than eighteen hundred children attend. Truants, who are mostly between twelve and thirteen years old, are generally committed for one year, and each boy is expected to earn 2,500 marks at the rate of 100 for every week. If a boy after discharge is returned to the institution, he is detained until 3,750 marks have been obtained. The boys are occupied in manual, Sloyd, cardboard, raphia, and basketry work, and in addition they do all the bread-making, gardening, washing, and mending in connexion with the institution. The cosmopolitan character of the children in reformatories is shown by an analysis taken from the Boston Parental School, where, out of 196 committals, 51 were the children of parents born in Ireland, 31 of parents born in the United States, and 15 of parents born in Russia.

Schools for defective children exist, but the accommodation is not equal to the demand for admission, as only cases are taken which give promise of improvement. The Waltham School for feeble-minded cases consists of a farm colony of 2,000 acres and four buildings, two of which were partly constructed by the inmates. In addition to the orchards and grazing land, 50 acres are under the plough, 21 acres under corn, and 20 acres under potatoes. The subjects of instruction include farming, Sloyd and manual training, printing in type, band practice, needlework, and bread-making; and a herd of milch cows is being raised on the farm.

Vacation schools are held during the summer holidays in order that education may be continued on recreative lines by means of well organized rambles and games. The advanced character of Nature-study work in Massachusetts is admittedly due in great measure to the splendid efforts of these temporary institutions. Evening schools are organized chiefly for the purpose of teaching the English language and the elementary subjects to such immigrants as are ignorant of them. The question of advanced work in such schools is one upon which much difference of opinion exists.

Another problem which exercises the minds of educationists in this State is the rush of the rural population to the towns. Among the subjects taught in rural schools are reading, writing, arithmetic, geography, grammar, history, music, and drawing; but in order to counteract the townward movement expert advisers are strongly advocating Nature study, manual work, and industrial training as additional subjects.

Of some fifteen thousand teachers working in the State there are few who have not passed through the high schools, while more than half have added attendance at normal schools and about fifteen hundred have attended colleges. Graduation is accepted as evidence of satisfactory attainments. There is no State pension, and qualified teachers are scarce. The average monthly salary paid to male teachers is £29; that in England being £11; the corresponding amounts for women being £11 in Massachusetts and £7. 10s. in England. Whereas in Massachusetts women teachers outnumber men in the proportion of 11 to 1, the proportion in England is only 3 to 1; and, owing to the continued reluctance of men to adopt the teaching profession, the feminine ascendancy increases annually.

The total yearly expenditure for all public-school purposes approaches £3,500,000, the average amount spent on each child being £8. One-fifth of the total expenditure is spent on repairs to school buildings, and the amount available for carrying on the actual school work is apportioned as follows:—Wages of teachers, 72 per cent.; fuel and care of buildings, 14.8 per cent.; books and supplies, 5 per cent.; administration, 4 per cent.; sundries, 2.7 per cent.; conveyance of children, 1.5 per cent.

Although each year records a steady increase in educational expenditure, the fact seems to be recognized in typical American fashion. A recent review of education by the State contains the following vigorous recommendations, among others:—(1) that the salaries of teachers should be immediately increased; (2) that retirement funds for teachers should be more generally established; (3) that an additional year of training should be required from teachers; (4) that a State normal school should be established to qualify teachers for vacancies in high schools. Which things prove that our cousins recognize well equipped brains as the true safeguard against national decay.

H. L.

CANADA.

THE story of Montreal might well be called a "tale of two cities." Two peoples, with their distinctive languages, customs, institutions, newspapers, religions, and educational facilities, make difficult the task of unification of public sentiment, and so desirable progress is very often hindered. Mr. Carnegie some months ago made a very liberal offer to the city for the building of a public library, but the prelates of the Roman Catholic Church opposed it strongly. This was to be expected; for the Roman Catholic Church has never been favourable towards the founding of institutions that provide for the education of the people. In a former letter I illustrated the grievance between the two peoples by referring to the curriculum of Laval, with its strictly classical content, and that of McGill, with its emphasis upon the scientific side. Another illustration of the difference is the conduct of the public schools. The law recognizes for school purposes the Roman Catholics and the Protestants, and the taxes for such purposes are divided accordingly. A new element has appeared in the application of the Jews for recognition. After various disputes as to whether the taxes paid by these people should be paid to the Protestant or to the Roman Catholic schools, it was agreed in 1890 to join the Protestants. In return, the Protestant Board received the children, appointed a teacher of Hebrew, and paid two thousand dollars per annum to the Baron de Hirsch Institute for receiving pupils of the Jewish faith who were unable to pay fees.

In 1899 the Jewish pupils had increased to 749. The cost of their education, beyond the net amount received from Jewish taxes and fees, represented a yearly loss of over 100,000 dollars, which, according to the Board, had in great part to be paid out of receipts from Protestant parents. In the scholastic year 1900-1 the number of Jewish pupils in the schools had risen to 1,153, representing a cost of 34,451 dollars and 64 cents. The

receipts from Jewish taxes and fees amounted to 11,016 dollars and 24 cents, the net loss being 23,435 dollars and 40 cents. The Protestant Board felt that it could not afford to provide instruction at such a great loss for children of another faith, and tried to terminate the agreement. A certain Paul Pinsler had a son Jacob who had won a free tuition scholarship which entitled him to instruction at the Protestant High School. He was refused admittance on these terms, and his father applied for a *mandamus* to compel the Protestant School Board to admit Jacob. Mr. Justice Davidson, in giving judgment, said that a person of Jewish religion, resident of the city, and not a school-tax payer on real estate owned by him, had no *status* under the present statutes relating to education, and therefore cannot claim as a right to have his son admitted to the schools of the Protestants or of the Roman Catholics. There are over 10,000 Jews in the city, and these, as well as others who are neither Protestants nor Roman Catholics, but who are property owners and taxpayers, have no access to public education for their children. Montreal, as far as education is concerned, is a city of the past ages, and wholly out of place in the enlightened city school organization and administration of this continent. The whole educational system of the province needs reorganization. The people have been asleep as to the progress that is being made all about them, and the discouraging part of the whole matter is that they are content to slumber on. The only chance of awakening them is by giving to the world the facts of education and comparing the conditions with those in less naturally favoured localities.

If the schools that are now in existence were in good condition, and taught by good teachers, there would be some hope that progress was being made, even though it was extremely evolutionary in its movement. Unfortunately this is not so; for one of the City physicians whose curiosity was aroused by the condition of some of the pupils whom he was called in to attend investigated the schools where they were studying. One school, fifty years old, was overcrowded by four hundred boys; there were no proper means of ventilation; the air was bad; the sanitary appliances were not only out of date, but were defective; and the lighting facilities were extremely poor. Another school was simply disgusting. Six hundred boys, mostly sons of labourers, were cooped up in a building where the plumbing was bad, and there was no ventilation worth the name. Personal hygiene seemed unknown; and it is no wonder that the report was that the boys were dull, listless, and stupid. Some of them seemed too heavy to think at all, forgetting names of streets and sometimes their own names; and there were external evidences of disease.

It is almost incredible that such conditions are possible in a city like Montreal; but the public is not awakened to the necessity of providing suitable habitations for their children during school hours. They have not yet emerged from the state of those who believe that schools and jails are in the same class. The most hopeful sign is that the Women's Club has taken up the question, and will investigate the conditions. There be many who speak disparagingly of women's clubs—who call them "gossip circles," &c.—but they cannot dim the everlasting glory that will come to these clubs for the work they have done in helping educational and social reform. Scores of cities in the United States owe their vacation schools, their cooking classes, their manual training classes, their school kitchens, school baths, and other educational adjuncts to the efforts of these clubs.

COLONIAL AND FOREIGN NOTES.

FRANCE.

We lately asserted that the testimonial system has its imperfections.

The report of a case recently decided on appeal by the Conseil supérieur de l'Instruction publique in

France may serve to indicate that it has also its dangers. M. X., the head master of a private school, employed as an assistant during the years 1903-4 and 1904-5 a certain Y., who had been condemned on September 21, 1897, to five years' confinement for offences against morality. By so doing M. X. exposed the children under his charge to constant danger for two years. He neglected to see that Y. was provided with the papers required by French law; and, although Y. had held a *brevet de capacité* for twenty

years, the head master was contented with illusory testimonials relating to a period of two months. Ultimately he sent the assistant on his way with an eulogistic certificate calculated to procure for the bearer admission to another school. The matter being brought before the Departmental Council, M. X., the head master, was prohibited by it from acting any longer as a teacher in the department. This judgment, appealed against, has nevertheless been confirmed by the Conseil supérieur. Such cases are, we believe, exceedingly rare in England; but a head master engaging an unknown man of mature years should protect himself and his pupils by asking for a tolerably full *curriculum vitæ*.

The *Bulletin administratif* of August 25 contains the terms of the agreement between France and England for the exchange of teachers. Although they may be known already to some of our readers, we give

them here—at the first opportunity that we have—in order that they may reach the knowledge of all. (1) The French Ministry is prepared to receive every year, in a certain number of *lycées, collèges*, higher primary schools, and primary normal schools, young English schoolmasters and schoolmistresses as “assistants.” The number of vacant posts will be communicated to the Board of Education not later than June 15 in each year. The Board of Education will make inquiry of heads of secondary schools or training colleges enjoying an established reputation to learn whether they wish to receive French assistants in their establishments. The Board will acquaint the French Ministry, by June 15 at latest, with the number of schools or training colleges that desire assistants of this sort. (2) English applicants for these posts must be, as a rule, graduates of a British University, or must have passed an examination required from candidates for a degree; but posts in primary normal schools and higher primary schools may be applied for by certificated (men or women) teachers in primary schools. Evidence of professional training, or practical experience in giving instruction, will be regarded as an additional qualification. French assistants, in order to obtain appointments in English or Welsh schools, must possess, as a general rule, the diploma of *licencié* (in Letters, Science, or History, &c.). A candidate for the post of an assistant in a training college will have to hold, at least, the *brevet supérieur*. (3) All assistants, French or English, will be deemed (apart from special private arrangements) to be engaged for the school year; that is to say, from October to July in France, and from September to July in England. (4) English assistants will receive, in the establishment to which they are attached, a suitable room, food, lighting and heating, and washing (except of body linen). For *répétiteurs* in primary normal schools the terms remain those fixed by the Ministerial circular of September 20, 1894: they pay a fee of £16 for board. French assistants in English schools where boarders are taken will be received on similar terms; or, in place of board and lodging, they must be paid a sum of at least £60 a year. (5) The assistants, whether in France or in England, are placed under the direct authority of the head of the institution to which they are attached. In secondary schools they must not be required to do more than two hours' work a day; in no way and under no pretext must they be called on to undertake the ordinary instruction of a class or supervision duty. The nature of their work is determined in France by the Regulations of February 15, 1904, and in England by the circular of the Board of Education dated June 1, 1905. They are to associate as equals with the rest of the staff, must be free to follow any of the courses that may be serviceable to them, and heads of establishments are to afford them every proper means of perfecting themselves in the language of the country. All letters in reference to the exchange of assistants are to be addressed, in England, to the Office of Special Inquiries and Reports, Board of Education, St. Stephen's House, Cannon Row, London, S.W.

For the convenience of head masters we set down briefly what they may expect to get, and for what. Two hours' French conversation a day—from an educated Frenchman who is a teacher, not a waiter, in his own country—

for his board and lodging, or an equivalent of £60 a year. To assistant masters or mistresses we would recommend a careful consideration of the advantages of the scheme to them. It offers an opportunity of learning French at the smallest possible cost. And, as we have said before, it is worth the while of a teacher to learn French. If he never has to teach or to use the language, yet it is the doorway through which he may look on the life and mind of an illustrious race with which our relations grow daily more intimate. No understanding can be truly cordial except between those who strive to know each other. Such endeavour being fairly made, it will become apparent that even small differences of manner and custom have their explanation in historical development. It has been the fault of teachers, both French and English, that they have seldom enforced—perhaps seldom realized—this simple truth. As soon as they generally learn and teach it, we may hope for an international concord not dependent on political exigencies, but based on sympathy, mutual good will, and the consciousness that two unlike forms of civilization may fertilize each other the more effectually

by reason of their very dissimilarity. The exchange of teachers is a step towards a great end.

GERMANY.

Are annotated editions of classical school books favoured in Germany?

About Notes. It would seem that no general answer to the question is possible. We have not been able to discover any official instruction to teachers upon the subject.

In one particular *Gymnasium* as to which we made inquiry we learned that nothing but a plain text was tolerated. On the other hand, it appeared that a common practice in the school was to read selections from a work, not the whole of it. Thus, in handling a speech of Cicero, the teacher would call on his pupils to render certain passages, filling up the gaps himself by means of translation or summary. It is a method that some will deem wise and others unscholarly; at any rate, it reduces the merit of discarding notes to small dimensions. Again, it must be borne in mind that the German teacher examines his own boys; he does not submit them to an examiner from without. Thus, he is free to pass over difficulties that an English teacher could not venture to ignore. On the whole, the expedient course would seem to be to leave an option in the matter to the individual teacher. A's method is not always the best for B. to follow.

Reports are in Germany matters of graver moment than in England.

How Reports are made. In the interest of readers of *The Journal of Education* we questioned a friend (who happened to be working at his reports) about the way in which they are drawn up. They are first written in a large exercise book. The report for each subject consists of one of the numbers 1-6, with, or more often without, a word of comment. The comment, when it is made, is short—e.g., “French, 4. End in view (the Leaving Certificate) not to be attained without more exertion.” The form master prepares this first draft, obtaining the numbers from his colleagues, and often having an informal discussion with them as to the number that is assigned. Now all is ready for the *Lehrerkonferenz*, a meeting of the masters at which every boy is considered with regard to his conduct, industry, and attentiveness. For each of these things a number is allotted. Moreover, a *Durchschnittsnote*, or average number, is determined on to express a general judgment upon the boy. In fixing the *Noten* the family relations of the pupil and all that may have affected his work and happiness are taken into account. The head master, presiding at the assembly, may, and often does, exercise a mitigating influence on the severity of his assistants. But he has no authority to overrule their verdict; nor may he make any addition when once the report has been approved by the meeting. It is the essence of the report that it is a *joint* judgment. At the head of the form stands: “*Auf Grund der Lehrerkonferenz vom . . . 19 . . .*” “Based on the masters' meeting of [date].” A letter, written by the form master, may follow the report; but this is rare. The limitation of the head master's powers, at first sight derogatory to his dignity, is in reality serviceable to him; for he ceases, owing to it, to be the single mark for the wrath of parents who deem their children unjustly estimated. And sober conference seems to us the best preventive of those two familiar evils of the English report—overlavish praise and epigrammatic cruelty.

In many English schools English history is taught in the lower forms, Greek and Roman history in the higher, dull text-books forming the means of instruction.

Of the Teaching of History. It may haply be that neither is the sequence just nor the method complete. At least, the German system of treating the subject is ordered otherwise. We give an outline of the Hessian scheme. The object of instruction in history is to give a sufficient knowledge and understanding of epoch-making events in general history (*Weltgeschichte*) and of the most prominent actors (Greek, Roman, and especially German) therein. Moreover, in a carefully limited degree, chronological accuracy and an acquaintance with the scenes of the events considered must be insisted on. In the two lowest forms, VI. and V., the most important sagas of Greek, Roman, and German history are related, whilst, in the closest possible co-ordination with geography, pictures from German history down to the reign of William I. are offered to the children. Instruction in Forms IV. and III. comprises the whole field of Greek, Roman, and German history down to 1815; but the treatment of the matter is only elementary. It becomes deeper in Form II. In Lower II. the summer half-year is occupied with the study of modern history to the present day, the facts being examined in groups; the rest of the year is given to Greek history. Upper II. devotes itself to Roman history down to the migration of the nations. In I., two years, the history taken up is that of the Middle Ages and that of modern times, with special reference to Germany and Hessen. At all stages concise handbooks (such as the “*Lehrbuch*” of Dr. W. Martens) are used as a basis of the teaching; but they are supplemented by oral instruction, the teacher giving short addresses on special points or groups of facts. It is strictly forbidden to burden the minds of boys or girls with many dates. From the outset the pupil must be called on to repeat in his own language the discourse of the teacher. Whatever has been learnt

must be impressed by means of frequent repetitions. And geography, studied also for itself, must everywhere serve as the handmaid of history.

Women at the Universities. The only German Universities that grant full matriculation to women are those of Baden and Bavaria, and also Tübingen and Leipzig. During the summer half-year there were on the register in all 211 women students, as against 137 in the summer of last year—a not insignificant increase. They were distributed as follows:—Freiburg, 58; Heidelberg, 57; München, 55; Leipzig, 27; Würzburg, 8; Tübingen, 5; Erlangen, 1. As to their studies, 108 were engaged with medicine; 66 with philosophy, languages, and history; 22 with natural science and mathematics; 10 with political economy; 4 with law; 1 with dentistry. Besides these fully (*rite*) matriculated students there were 1,274 women entered at German Universities as “guests” (*Hospitantinnen*) and “hearers” (*Hörerinnen*), as against 1,040 last year. The number of women desirous of pursuing higher studies is very large, but the means of preparation open to them are inadequate, and not at all *Hochschulen* are they welcome.

Military Education. A letter published in *Die Post* has attracted no little attention. The writer urges that the German has a natural gift for war, and that his capacity in this respect should be developed even during his school-days. It is proposed that one or two retired non-commissioned officers should be attached to every higher or lower school as military instructors. The matter of instruction should comprise the divisions of an army, the distinctive marks of the officers, a knowledge of weapons, gunnery, the use of cavalry, infantry, and artillery, &c. Military exercises, shooting, and fencing should be taught; whilst during walks undertaken for the purpose boys should be made to observe how the character of the ground can be turned to account in the operations of war. We do not believe that German pedagogues will allow the plan to be realized. As to England, perhaps in our dislike of Chauvinism in the school we are liable to forget that the youth of a country must be trained to defend it, as well as to moral and intellectual excellence.

AUSTRIA.

The University and Primary Teachers. From Austria, as from many other countries, we have news of a movement with which we have much sympathy—that to obtain for primary teachers access to the University. For long there have been those who have sought the establishment of practical pedagogic courses which the young man might follow after absorbing the faculty of philosophy, and so prepare himself for work in the primary school. As in England, they asked for bread and received a stone; when they demanded the University they were offered University Extension. Of late a striking change has been taking place. The prospects of employment in secondary schools are unfavourable, the candidates being many and the vacancies few; on the other hand, the pay of primary teachers has been augmented. Hence University men have begun to turn to the lower schools, finding there a modest, but safe, provision for life. In Bohemia alone there are now 286 primary teachers who have been educated at a University. A parallel development seems possible in England. London University equips the flower of the primary teachers with degrees. We see no reason why the older Universities should not furnish to the primary school teachers trained under the influence of great traditions. For the people the best is not too good.

UNITED STATES.

Dr. Harris. The retirement of Dr. Harris, the United States Commissioner of Education, after seventeen years' tenure of office, has been attended by numerous expressions of regret at his departure and acknowledgments of the good service that he has rendered. Under him the Bureau of Education gained a degree of importance to which it had never before attained, and many inquirers owed assistance to it. His pen was always busy, nor was it easy to find a considerable educational meeting at which he was not present. Readers of this journal are likely to know him best by his introductions to the various volumes of “The International Education Series.” Among the most notable tributes to his achievements is that of the American Institute of Instruction, which put on record a high appreciation of the active and honourable work done by him for the cause of education, adding: “for his high educational ideals, sound philosophy, varied learning, and wide and successful experience we honour him as our ideal in all educational affairs; and for his broad urbanity, purity of heart, sympathy and brotherly kindness everywhere and always we cherish the strongest affection towards him.” To him the trustees of the Carnegie Pension Fund have made their first award—and that of the largest sum that they can grant. He is to receive 3,000 dollars a year for life; and, if Mrs. Harris survives him, one half of that sum will be paid annually to her. To the many good wishes that he is carrying with him into private life we allow ourselves to add our own.

The new Commission of Education is Dr. Elmer E. Brown, hitherto Professor of Education in the University of California. He is described as a man whose whole life has been devoted to the study of education. Born

His Successor. in New York, he graduated first at the Illinois State University, afterwards at the University of Michigan, and attended European Universities in several different years. After some strenuous work in the public schools, he became a member of the Faculty of the University of Michigan, whence, in 1892, he passed to the University of California, and began, as assistant professor, to develop the Department of Education. In 1898 he was made full professor. Arriving in California at a time when a great interest in education was being awakened, he has been prominent in maintaining and directing it. Public opinion in general recognizes him as well qualified for the high office on which he now enters.

Philology and Literature. A recent number of the *Journal of Pedagogy* opens with a denunciation of the philological fetish in the teaching of literature. It is contended that in the use of literature as a means of education and culture France is far ahead of America. For much of the unprofitable teaching of English literature in secondary schools the colleges are primarily responsible, because of their insistence upon the philological aspect of the work, to the comparative neglect of the literary aspect. The teacher is trained rather in language and the *minutiae* of literary history than in literature. Hence he comes to the school as the inheritor of a bad tradition, and is incapable of inspiring love of the beauties of literature because he has never learned to feel it. “If a doctor emerges from the purlieus of Anglo-Saxon devotional translations or of Middle English doggerel romance with any capacity for forming or conveying general ideas, say, on Shakespearian drama or the poetry of Wordsworth, why, that is so much good luck: it is nowise nominated in his bond of appointment. Not only are hundreds of our graduate-students untrained as regards literature—they are also expressly trained away from any fruitful thinking on that topic.” The evil—both the cause and the effect—that the American journal deplores exists, as has often been pointed out, in England also, and is apparent in the teaching of classical, as well as of modern, literature. If a knowledge of the meaning of words is essential to all true study of literature, yet philology is a servant that must be kept strictly in her place. But the philological method is not to blame for all our failures in the teaching of the most difficult of subjects. A test paper recently set in an American college on Shakespeare's life and works elicited the information that the poet was the author of “When Knighthood was in Flower,” “Twisting of the Screw,” and “Three Gentlemen of Bologna.” A little instruction as to the significance of the word “shrew” might have saved the pupil from the baldly mechanical interpretation of “The Taming of the Shrew.”

CEYLON.

Reform needed and coming. The question of education in Ceylon has been attracting a great deal of attention of late, and, thanks to the personal interest taken in the subject by the Governor (Sir Henry Blake), it seems probable that before long education will be universal in that flourishing colony. As regards the children of the Tamil immigrants employed on plantations, out of 63,000 only 3,000 are receiving education. It is understood, however, that in the new Ordinance about to be dealt with by the Legislative Council provision will be made for establishing schools on every estate. Mr. A. G. Wise, a former Ceylon planter, has been in constant communication with the Colonial Office on this subject, and his letters to that Department have been included in papers laid before Parliament. It is to be hoped that the Government of India will not delay to deal similarly with the question of the education of children in Assam tea-gardens, for whom at present there is practically no means of education. In reply to a question in the House, Sir Charles Schwann was informed that this matter was under consideration.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council, of June 19, 1884, “The Journal of Education” was adopted as the medium of communication among members of the Teachers' Guild; but the “Journal” is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

The Council met on June 7. Present: the Rev. H. Wesley Dennis (Chairman), Miss H. Busk, Miss Cocking, Miss F. Edwards, Mr. J. N. Hetherington, the Rev. R. Hudson, Miss Kyle, Mr. Nesbitt, Miss Newton, Mr. C. E. Rice, Miss Tullis, and Mr. J. S. Wise.

Miss H. Busk and Miss Julian (Head Mistress of the High School for Girls, Tunbridge Wells) were appointed to represent the Guild on

the National Council of Women at the Conference of the National Union of Women Workers at Tunbridge Wells in October, 1906.

The draft of a Memorandum to be sent to the President of the Board of Education on the subject of the proposed abandonment of the Register of Teachers was read out and adopted. (The Memorandum was printed in full in the *Teachers' Guild Quarterly*, June 15, 1906.)

The Rev. H. Wesley Dennis was unanimously reappointed Chairman of Council for the Session 1906-7.

Mr. J. Arnold Turner, B.A., Member of Council, was unanimously selected for invitation to accept the post of Hon. Treasurer for the same period.

The Committees of Council for the same period were appointed.

The representations of the Annual General Meeting of the Guild, on May 22, were read out to the Council.

Instructions were given to the Political Committee with respect to certain sections of the Education Bill and to secondary school schemes generally, with special regard to the clauses regulating the tenure of head teachers and assistants.

The Education and Library Committee were instructed to consider and report on the suggestion about to appear in the *Teachers' Guild Quarterly* (leader, in June number) for systematizing the observations of the Mosely Commission students. The draft scheme of arrangements for the proposed General Education Congress was referred to the Organizing Committee to work out.

The Council met again on July 7. Present: the Chairman, Mr. H. C. Bowen, Miss H. Bask, Miss Cocking, Mr. H. V. Dawes, Miss F. Edwards, Miss J. Farquhar, Mr. C. Granville, Mr. J. N. Hetherington, Miss Kyle, Mr. Longsdon, Mr. Nesbitt, Mr. C. E. Rice, Miss Tullis, Mr. Trevor Walsh, and Prof. Foster Watson.

Mr. Bowen and Mr. Walsh were appointed as the representatives of the Guild on the Committee of the Professional Joint Agency for Assistant Masters.

Mr. A. Trice-Martin, M.A., Head Master of Bath College, was co-opted as a General Member of Council.

It was decided to offer the Vice-Chairmanship of Council to the Rev. A. F. Titherington, M.A., late Head Master of Brighton College.

Mr. F. Storr was reappointed as the representative of the Guild on the Teachers' Registration Council.

On the Report of the Education and Library Committee it was resolved—That, having in view the amendments proposed to Clause 25 of the Education Bill, this Council would regard with misgiving any reduction in the qualifying number in that clause.

It was decided to ask Mr. Birrell whether he would receive a deputation from the Guild to place before him our views on the subject of the Teachers' Register.

The Chairman undertook to send a letter to the *Morning Post* giving the views of the Guild on the proposed abandonment of the Register. (The letter appeared in that paper on July 17.)

The representatives of the Guild, at the first meeting of the Committee for the Organization of a General Education Congress were reappointed for the second meeting in September, 1906.

Fifteen members were elected at the two meetings of Council—viz.: Central Guild, 8; Manchester Branch, 4; Worcester, Malvern, and District Branch, 3.

Worcester, Malvern, and District Branch.—The annual business meeting was held in the College Hall of the King's School, Worcester, on November 29, 1905, at 5.15, preceded at 4.30 by tea, to which all members of the Guild were kindly invited by the Rev. W. H. Chappel. In the absence of the President, Mr. Chappel took the chair. The retiring members of the Committee, the Rev. W. H. Chappel and Mrs. Barnes, were re-elected. On the resignation of Miss Woodall as Secretary, Miss Burrow, proposed by Miss Woodall and seconded by Miss Beckingham, was elected to fill the post, and Mr. J. Campbell, proposed by Mrs. Barnes and seconded by Miss Moore, was elected as Treasurer to the Branch. Miss Farquhar was reappointed as representative on the Central Council, and Mr. Watts was re-elected as Auditor. On the arrival of the President, Mr. Chappel vacated the chair, and the meeting continued under the presidency of the Rev. S. R. James. The report of the Branch for 1904-5 was read and approved, the balance sheet showing a balance of £8. 7s. 1d. in hand. On the motion of Mr. Waters, seconded by Miss Woodall, the sum of £3. 3s. was voted to the General Fund of the Guild. On the motion of Mr. Waters, seconded, and carried with acclamation, a very hearty vote of thanks was accorded to Miss Woodall for her energetic work as Secretary to the Branch, expressing great regret at her resignation, but at the same time congratulations on her appointment as Head Mistress of Milton Mount College. After the transaction of business an address was given by Mr. H. B. Garrod, M.A. (General Secretary of the Teachers' Guild), on "Points of Interest to Teachers, with especial reference to Registration, Remuneration, and Tenure." A brisk discussion followed, the Rev. S. R. James and the Rev. W. H. Chappel, Mr. Waters, and Mr. Cook taking part, and traversing some of Mr. Garrod's remarks—especially on the subjects of tenure, the decline of quality in the men's branch of the teaching pro-

fession, and the desirability of compulsory Latin and Greek. The meeting then terminated. A letter was subsequently received by the Hon. Secretary from Mr. Garrod, expressing the thanks of the Council for the generous grant made by the Branch to the funds of the Guild. The representative of the Branch, Miss Farquhar, attended two meetings of the Council in London on April 8 and May 13, 1905. The business included discussions on the proposed College of Secondary Teachers and on the Revision of the Teachers' Register. The general report for the year 1905 was presented, and discussed by members of the Council.

A general meeting was held at Ivydene Hall, Malvern, on February 22, at which the subject for consideration was "The Teaching of Drawing in Schools." The President, the Rev. S. R. James, Head Master of Malvern College, took the chair. The minutes having been read and signed, Mr. T. R. Ablett, of the Royal Drawing Society, gave an address, commencing with a specimen lesson to a class, on "The Methodical Observation of Surfaces and of Partly Hidden Structures." After the lesson he passed on to the teaching of drawing and the best methods of obtaining from children the results of their own observation. He showed illustrations proving that each individual child invents, if allowed to do so, his own method of expression, and showed the futility of trying to force upon children conventional methods and the desirability, from an educational point of view, of drawing from children the knowledge they have obtained by their own efforts. At the close of the lecture the meeting was open for discussion. Mr. Buckingham, who was not a member of the Guild, expressed the views of those who still consider that the best educational method is to impress the teacher's view upon children, to put in knowledge rather than to draw it out. He conveyed the idea that mechanical accuracy of outline was of the first importance, and stated that he had no faith whatever in the power of children to observe or express life or motion for themselves. Mr. Lewis asked whether the drawings shown were not those of children of exceptional talent. Miss Burrow remarked that, from the eight hundred or more schools examined by the Society, a very large number of drawings were sent in every year, very nearly equal to, if not quite touching, the level of those shown. She also gave as evidence the opinion of the acknowledged masters in the teaching of design in this country, that, educationally, children should be taught from Nature alone, and not from decorative or conventional forms, in order that they should have a large stock of knowledge to draw upon for original decorative work in the future. The President brought the discussion together by remarking that, however far we differed as to means, all were agreed on the fact that the great aim in the teaching of drawing was to cultivate observation and to increase knowledge. He wished to express to Mr. Ablett the gratitude of the meeting for coming down from town to give so much help and information and to show how much could be done to help children forward. Mr. Ablett, in reply, said that from an educational point of view the method Mr. Buckingham advocated had been tried and found wanting. It was a fact that some exceptionally clever children did not fulfil the expectations formed of them, but two reasons suggested themselves for this: first, that, although they had fine powers of observation and of memory, and also sometimes of imagination, they lacked the intellectual force necessary to carry on their work; secondly, it might be that they fell under some strong influence which hindered, rather than helped, their individual development. These things were regrettable, but were not confined to the study of the subject of drawing. A most interesting meeting and discussion was brought to a close by the showing of many original and beautiful drawings done by children of all ages up to sixteen or seventeen, many of them being very remarkable indeed.

On March 28 a general meeting took place at the High School, where tea was provided by the kindness of Miss Outley. After the minutes had been read and new members elected Mr. Rupert Deakin gave an address on the subject of "The Teaching of Geometry," drawing attention to the changes of method which had taken place in recent years, and especially to the fact that drawing was now considered absolutely necessary for teachers of geometry, in order to make their work practical as well as theoretical. After some skilful demonstrations of teaching and sympathetic advice as to the management of a backward and ill-taught class, or a difficult pupil, Mr. Deakin closed his address with a few remarks on the value of definitions, and the thorny question as to whether or not they should be learned by heart. Canon Wilson, D.D. (formerly Head Master of Clifton College), then spoke on the subject of geometrical pattern making as a real inventive exercise, and made some suggestions of practical value. Mr. Waters expressed the thanks of all teachers to Mr. Deakin, not only for his address, but also for his valuable mathematical books—especially on algebra. The thanks of the meeting were most heartily accorded to Mr. Deakin for his address. In order to extend knowledge of the work of the Guild, invitations to this meeting were sent to a large number of teachers from the towns and districts round Malvern and Worcester. There has in consequence been a steady increase in membership, and a general revival of interest. Since the beginning of the year thirteen new members have joined the Branch, bringing up the membership to seventy-eight.

OCCASIONAL NOTES.

THE Government have been well advised in determining to carry the decision of the Court of Appeal on the West Riding case to the House of Lords. Of course, if the Bill passes, "cadit quaestio"; but it would be intolerable that for another year or more Local Authorities should be left in uncertainty as to how the law stood, and, if

they continued to pay for denominational religious instruction, be liable to the risks of another "Cockerton judgment." They have also in our opinion acted wisely—though this is a matter of tactics—in resolving to proceed at once with the Committee stage of the Bill in the House of Lords without waiting for the judgment of the Lords of Appeal. It is argued against this course that, if the decision of the Court of Appeal is upheld, the *raison d'être* of the Bill—the grievance of the passive resister—will have disappeared. But the answer is obvious. This grievance may have been the motive cause of the Bill; but to remove it is only one of many objects that the Bill includes, and, while delay might be fatal to its passing, no harm can ensue from remedying an injustice that, however real in the past, may prove for the future imaginary or non-existent.

AT the present stage it would be rash to forecast in what shape the Bill is likely to leave the House of Lords. Root and branch amendments have been announced by Lord Heneage and Lord Amptill, but we do not believe that the Lords intend to disfigure it as gypsies do their stolen children. However Conservative the Lords may be, they are not ecclesiastically minded, and certainly will not do as the Bishop of Manchester bids them. The pronouncement of the leader of the Opposition is on this point decisive. Speaking at Nottingham on October 12, Lord Lansdowne said: "It should be clearly understood that the Unionist

party did not object to popular control, that they did not wish to impose religious tests upon teachers, and that they certainly were not engaged in an attempt to run Church against Chapel." This much was indeed implied in allowing the Bill to pass its second reading, but we welcome none the less an authoritative declaration that this was not, as certain peers have not obscurely hinted, a Machiavellian move in the game. If the main principles of the Bill are accepted, there should be no insuperable difficulty in arriving at a compromise on the working out of those principles which shall be acceptable to both Houses.

THUS we think it might well be conceded that ordinary religious instruction shall be given in the compulsory school hours, provision being made for secular instruction as an alternative. The crucial point on which neither side is likely to yield is whether staff teachers shall be permitted to take part in giving the special religious instruction; but even on this a compromise seems to be possible. Why should not the permission be limited to existing teachers? The position of teachers in non-provided schools is safeguarded by the Bill as it stands. The concession that such teachers might give their services to carry on the work they are already engaged in would relieve managers of their immediate anxieties, and though it would be denounced by the one side as a sorry makeshift and by the other as a bowing in the House of Rimmon, it would commend itself to all but the extremists as a fair compromise.

THE Church Congress which met last month at Barrow-in-Furness did little or nothing towards a settlement of the education question. It would seem that between conservative Church clerics such as the Bishop of Manchester and the Dean of Canterbury and liberal Church laymen such as Mr. St. Loe Strachey and Mr. William Temple no *via media* is possible. The editor of the *Spectator* urged, first, that a national system of education must be religious to satisfy the aspiration of a Christian nation; secondly, that a national Church must be comprehensive, able to include within its body all who were willing and ready to be included. Mr. Temple supported undenominational teaching on the ground that the Church of England as a national Church was responsible for the religious instruction not only of its members' children, but of all children. These papers, however, provoked strong expressions of dissent in the reading, and were denounced as rank heresy by all the subsequent speakers.

THANKS mainly to the unflagging perseverance of Canon Bell, the Federation of Secondary Teachers is now fairly launched. The Council has held its first meeting, and passed certain resolutions, which have been communicated to the Board of Education and will, we take it, in due time be made public. Meanwhile, the scheme for holding annually a general educational conference hangs fire. At the last meeting of representatives of associations interested, held on September 27, it was agreed that it was too late to attempt anything for 1907. A list of questions was drawn up by the provisional committee to be submitted to the councils of associations which had given a provisional adherence to the scheme, asking for definite support and an undertaking to contribute to the expenses. We have already given our reasons for welcoming the scheme, and, now that secondary teachers are leagued together, it seems to us all the more desirable that all grades of teachers should find some common meeting ground.

THE Senior Wrangler is extinct as the dodo. At a Congregation held on October 25 it was resolved by 205 *placets* to 177 *non-placets* that the list of successful

**The Defunct
Senior Wrangler.**

candidates in Part I. shall be arranged in three classes, the names in each class to be arranged alphabetically. Cambridge will survive in spite of Lord Kelvin's vaticinations, and the study of mathematics will be pursued as vigorously, and more effectively, than in the past. The incidents of the campaign and the technical points at issue are sufficiently handled by our Cambridge correspondent. We need only add two general observations. The question was determined by the resident vote, not, as the Greek question and the women's degrees question, by the heterogeneous medley of country parsons and London lawyers who happen to have kept their names on the books. The constitution of the Senate cries for reform. Secondly, a system of examination which pits man against man and gauges merit by a mechanical addition of marks is injurious to the higher intellectual culture, and can only be justified when places or prizes have to be awarded by competition. A Tripos is not a sweepstake, and the old Mathematical Tripos was tainted with a suspicion of Newmarket.

THE London County Council has decided to ask the Government to raise its membership from 137 to 200. The proposed increase is to be effected by the sub-division

**An Enlarged
L.C.C.**

of the larger areas on the basis of population. At the same time the Council ask that provision should be made for rendering women eligible to serve on the Council, if it be found practicable. The last phrase should be noted, for it suggests what was maintained by some of the participants in the debate—that ladies had been introduced into the matter for show or for the sake of their votes next March. The very words seem to hold out the likelihood that it will not be found practicable to give to women the right to sit on the Council. That the numbers of the Councillors should be increased we have often maintained in these columns. The business has increased, and will still further increase. In the past year 1,700 Committee meetings have been held, including 333 meetings of the Education Committee and its sub-committees. And we would sooner see an increase in the general membership, if that will conduce to the better expedition of business, than a special addition of members elected to deal with education alone. As to the admission of women we have no doubts at all. They fully proved their worth as members of the late School Board, and their continued exclusion is a reactionary measure out of sympathy with the general feeling of the time.

INCREASED organization inevitably means the multiplication of officials. It is more convenient for an Education Committee or for their permanent staff to deal

**The L.C.C.
and the Board of
Education.**

with one person as responsible for the management of a school. Accordingly, the London Education Committee propose to put one head teacher in charge of each of the new mixed schools which are to be established. These schools are to have three departments: each department is to have its chief assistant, but all are to be controlled by a head teacher. The name "head teacher" does not of course apply fitly to the post: the duties will consist partly of inspecting, and chiefly, no doubt, of filling up returns for the digestion of the central office. The real work will be done and the real responsibility will be incurred by the three principal teachers. The post of head

teacher would seem to be an unnecessary creation of an official to stand between the real heads and the managers. The Board of Education have replied to the Committee's proposals by a carefully argued memorandum, showing that no teacher can be rightly considered responsible for the education of upwards of a thousand children, and urging that the chief assistant should be in fact as well as in name the responsible head of his department. The Committee are at present obdurate, and appeal to the Board to reconsider their decision. On this point we are with the Board. We do not believe in the establishment of mighty emporiums in education. Either unnecessary posts are created or else responsible work is done at unreasonable prices.

AT the Conference of the National Union of Women Workers held in Aberdeen, Mrs. Ogilvie Gordon propounded a scheme for an International Education Bureau.

**An International
Bureau
of Education.**

She would have in each country a number of local bureaux working in connexion with a central or headquarters bureau. The work of the centre would be to collect and disseminate up-to-date information, while the local bureaux would further give advice to members. Mrs. Gordon undertook to present a detailed scheme in a printed form, and without having the details it would be rash to pronounce judgment on its feasibility. No one will dispute the need of such an agency; but we agree with Miss Mair, of Edinburgh, that it cannot hope to be self-supporting.

AN article in the *Hibbert Journal*, by the editor, on "The Church and the World," deals incidentally with the education controversy. Half the arguments employed by Churchmen rest on the assumption,

**The Church
and the World.**

expressed or implied, that there exists an institution possessed of inherent powers to determine the religious beliefs of society. This is shown to be a vain imagining. The beliefs of society are determined by the whole spiritual movement in which the world is equally involved with the Church. "If authority were given to any group to teach what they would in the schools, it does not follow that the opinions so taught would form, or even greatly influence, the creed of the next generation. Were we able for instance to teach every child in the kingdom to believe in the literal truth of Noah's ark, the almost certain consequence would be that twenty years hence those same children, grown to be men and women, would not only have rejected Noah's ark, but lost not a little of their respect for the institution which guaranteed it." The moral that the writer draws is that the image of "the ravening wolf," the proselytizer, is an idle bugbear. Here we cannot agree. Wolves will never exterminate sheep, but they may work considerable havoc among the flock.

MR. G. G. COULTON (*Contemporary Review*, October) pulverizes the paradox of Abbot Gasquet and the *Catholic Times*, that in pre-Reformation England

**A Past
that never was
Present.**

education was all that heart could desire, that the Catholic Church taught religion and taught the Bible to clerics and to laymen. We will quote one sample from a record of an examination of a curate in the diocese of Salisbury *anno* 1222. "The curate of Sonning, who had been four years in priest's orders, was asked to construe the first words of the canon of the Mass—'Te igitur, clementissime Pater,' &c. The report is: 'He knew not the case of the word *te* nor by what it was governed; and,

having been bidden to look closely what part of the sentence could most properly govern *te*, he replied: "*Pater*; for He governeth all things." Moreover, he said that it seemed to him indecent to be examined by the Dean, since he was already ordained." A single sample like this can prove nothing; it is but one link in a chain of cumulative evidence for which we must refer our readers to Mr. Coulton's learned and interesting article.

MR. HENRY NEVINSON, the well known war correspondent, has been reporting for the *Westminster Gazette* on the educational campaign at home. For this purpose he has visited typical London schools of all kinds, provided and non-provided, and listened to the Bible lessons. So far from endorsing the Bishops' charge of agnosticism or infidelity, his complaint is that the teachers, for fear of giving offence, adhere too strictly to the orthodoxy of a past generation. The cosmogony and the morality of the Old Testament are taught without correction or comment. Yet, in spite of these drawbacks, he would retain Bible teaching, for the reason given him by one head mistress:

Without the Scripture I should not be able to teach any principles of morality at all. Whenever I introduce them into any other lessons—if I show it is wrong to drink, or fight, or lie—the parents always think that I am setting their children against them, and hinting at the vices of the homes. But in the Scripture lesson it is taken as a matter of course.

This has always seemed to us the true ground to take. Bible teaching must be retained in our schools as the common basis of morality.

THE REV. HERBERT THURSTON, S.J., in an article on "American Spelling" (*Nineteenth Century*, October), shows that the special characteristics ("honor," "traveler," &c.) are comparatively recent, and date from Noah Webster's "Dictionary and Spelling Book"—about the end of the eighteenth century: further, that they were deliberately designed by Webster to create an independent language. The rest of the article is taken up with a demonstration of the differences of pronunciation between Englishmen and Americans. This may be, as Mr. Thurston argues, sufficient ground for refusing to follow the American lead in spelling reform, but it does not go far to prove that we should have no reforms at all. If there were a reasonable prospect of establishing a uniform system of phonetic orthography in ten years on both sides of the Atlantic, Mr. Thurston would be an ardent reformer, but not otherwise. We hold, on the other hand, that, as we have reformed our spelling since Johnson's day, so we should continue, and, if phoneticians can quicken the pace, so much the better. Mr. Thurston considers uniformity the *summum bonum*; we, as protestants, plead for toleration—the *tolerances* of the French Minister of Education. There is now the same struggle for existence between "honour" and "honor," "programme" and "program," that there was in the last century between "publick" and "public," "aera" and "era." No one was or is the worse for it, and the fittest form survives.

MR. SIDNEY WEBB in two alarmist articles with a somewhat sensational title, "Physical Degeneracy or Race Suicide," has investigated the causes of the steady decline of the birth-rate in Great Britain from about the year 1875 onwards. This is not the place to discuss his statistics,

and his inferences from them, some of which appear to us to rest on far too narrow a basis. We are only concerned with his conclusion—that it behoves the State to encourage fecundity by adopting and providing for all children born of paupers. Food and, presumably, clothing are to be supplied gratis to all children whose parents demand it, and scholarships to boot for those who would pass beyond the primary stage. Surely the remedy is worse than the disease, if it be a disease. The effect will be to encourage the submerged tenth, the reckless, improvident, and incapable to "breed like rabbits," and, by the increased tax on income, to discourage still further the better class—those with brains and character—from undertaking family responsibilities. We require more cogent arguments before we accept the new decalogue which would substitute "Increase and multiply" for "Honour thy father and thy mother," adopt the communism of Plato's Republic, and add a "*Jus trium liberorum*" to our Statute Book.

MR. R. E. MACNAUGHTEN, of the McGill University, formerly assistant master at Harrow, pleads in the *Nineteenth Century* for the proper teaching of geography in our public schools. He asks for a modest two hours a week: one to be given to a lantern lecture, the other to drawing a memory map and filling in an outline map of the country lectured on. "The magic lantern supplies that one touch of nature which makes the whole world kin." We fear that, were the scheme adopted, this would be found true in Shakespeare's sense of the words, not in Mr. Macnaughten's. Seriously, an occasional lecture by a traveller or an expert is most stimulating, but it is ridiculous to suppose that geography can be taught by multiplying such lectures. "To be able to accurately delineate the immediate neighbourhood in which one lives is a habit which is easily acquired." We should hardly call mensuration or cartography a habit; but the habit or act or accomplishment—call it what you will—cannot be acquired by hearing lectures or seeing slides.

WE had no intention of intermeddling in the war which is raging between the *Times* and the publishers, but a letter from "Headmaster R. 7423" shows how closely not only authors of school books, but schools and scholars, are concerned. "Headmaster" states that he controls the selection of books in a secondary school of several hundred boys, and that he intends to boycott the books published by Messrs. Macmillan and other publishers who are on the *Times* black list. A more monstrous abuse of arbitrary power it is difficult to conceive, and it is a clear case for interference on the part of the governing body. School books, as a fact, are outside the quarrel, which affects net books only. But the question arises: Why should school books form an exceptional class, and continue to be published on the old terms, which permit the bookseller to give a discount of 25 per cent. to the purchaser? The publishers tell us that, as school books are taken in bulk they must in this case maintain the system which enables them to offer special terms to their larger customers. The whole arrangement seems to us unsatisfactory. Into whose pocket does the extra 5 or 10 or 20 per cent. go? Whether it be the head master or the house master or the general school fund that benefits, the scholar certainly gets his books no cheaper. He is charged in his school bills sometimes at the published price, sometimes with a discount of 10, and never of more than 25, per cent. Books in general, and school books in particular, are infinitely

cheaper than they were a generation ago, and it is paradoxical of the *Times* to maintain the contrary; but, to adapt the epigram of the Society of Authors, head masters may buy their cheap books from the publishers at a price too dear. These commissions and extra discounts come eventually out of the authors' pockets.

Why Girls are Unhappy. WE learn from Mrs. Creighton that girls are unhappy because they have no definite work to do; but that as soon as they take up some distinct work they become happy. Girls who rush about with hockey sticks or bundles of golf clubs are not really happy, but are restlessly searching for a peace which they do not find. It is, of course, quite true that happiness is best found in the full employment of the faculties. At the same time we must discriminate. The man in the street who watches the girl with the golf clubs is apt to think she is happier than the girls who trudge home wearied after eight or ten hours' work in a crowded and airless office or shop. And he would probably be right. Mrs. Creighton is perhaps thinking only of "young ladies of leisure." For such we agree that happiness will best be found in some definite work, paid or unpaid. But Mrs. Creighton rightly added a caution: if the work is of a nature that carries payment, it should not be undertaken at a lower salary than that at which others could afford to do it. One piece of advice that Mrs. Creighton gave to her audience is excellent and needs constant insistence. "It is the duty of a parent not to make the child into what he desires it should be, but to assist the child to develop its natural faculties." This is a matter of the greatest difficulty. Parents naturally desire a replica of themselves. Most childish sins and childhood worries come from this parental desire. When we are all imbued with a wish to produce a superman we shall perhaps be able to let our children develop naturally on their own lines.

One Education for the Rich and another for the Poor. THERE is one education for the rich and another for the poor, says Mr. H. W. Nevins in the *Westminster Gazette*. Yet we boast that there is one law for rich and poor alike. Whether the boast be founded on fact or not may be a subject of argument, but in education we make no pretence at equality. Hence it is that "we remain one of the least democratic people in the world, and it is hardest in England for the upper and lower classes to enjoy each other's society on equal terms." To the objector who would not have the lower classes educated out of their stations Mr. Nevins replies: "It is better to be educated above your station than below your mind." The indictment against the popular view of education is well deserved, and it is well that the matter should be forcibly expressed from time to time. There are two encouraging points that are not mentioned in the article from which we are quoting. In the first place, enormous strides have been made in recent years in the direction of giving wider opportunities to the child of poor parents, and secondly from a purely intellectual standpoint the education in the low-fee schools may be, and often is, just as good, or even better, than that given in the most costly. The former fail in the facilities for social intercourse. It remains unfortunately true that in most cases an almost impassable social barrier exists between those who have been educated in an expensive school and those who have only been through the "people's schools." We refuse to be discouraged, because we are advancing along the right lines, and change must be gradual. Education rightly understood is a commodity that no one can have too much of.

University Members. THE Plural Voting Bill in the Committee stage resolved itself into an animated debate on the preservation of University constituencies. It is idle to deny, as Mr. Harcourt attempted to do, that the Bill threatens the disfranchisement of the Universities. If for the sole reason that a contested election is there the rare exception, all voters with a dual qualification will elect to vote elsewhere, and, as Mr. Butcher argued, a contemptible little body of some 300 or 400 electors will certainly be snuffed out. The Opposition had no difficulty in showing that the Universities had returned many distinguished men and that some of them would not have found a seat elsewhere. On the other hand, they have rejected statesmen of the first rank and have returned a greater number of nonentities. We would gladly see members assigned to the Royal Society, the Colleges of Surgeons and Physicians, and other learned bodies, but the democracy will not tolerate fancy franchises. One telling point was made by the Chancellor of the Exchequer. A vote at Oxford and Cambridge is an affair of £ s. d., and Mr. Asquith himself is disfranchised because he was not prepared to pay the £25 fee for an M.A.

Moral Training. EVERY one is more or less convinced that the development of character is of greater importance than the acquisition of knowledge; and there is a growing feeling of uneasiness abroad that the school is not sufficiently utilized as an instrument of moral training, and for the building up of the character of the future citizen. Much has been written and spoken of late years to emphasize this need, and several memorials have been signed by leading public men. The suggestions that have been made are varied, but they all agree in desiring to make the period of school life more fruitful in regard to the formation of character. Prof. Michael Sadler now comes forward with a proposal to make an endeavour to focus this scattered experience and effort and to conduct a scientific inquiry by trained investigators. Committees are to be formed in the United Kingdom, the United States of America, France, Germany, Denmark, Japan, and elsewhere. An international committee will direct the investigations, and it is hoped that reports may be published in the autumn of 1907. Quite soberly we may expect very useful results from this inquiry. The reports should form a valuable body of literature of reference, showing what has been attempted and accomplished in different countries. With Prof. Sadler as the moving spirit the work is bound to be a success. No man unites wider knowledge and experience with greater enthusiasm and judgment.

THE NATIONAL SCHOLARSHIP PROVISION UNDER THE EDUCATION ACT, 1902.

By A. H. SPENCER.

MORE than a year ago Dr. Macnamara, M.P., called for a Parliamentary Return of what may be termed the lower grade of the National Scholarship Provision available under the Education Act, 1902. This Return has now been issued, but it must be said at once that it does not supply that general information which it is one of the functions of the Board of Education to provide upon this as upon other important sections of our educational system. Nor does the Return even focus or summarize in any form the details set forth within the compass of its own pages. It is true that the full details of the facilities afforded by each Local Education Authority are given; but it requires many hours of application,

calculation, and examination before the general bearing and full import of the material can be discovered. It is the purpose of the present article to make good some of the obvious defects of the Return in this direction.

In passing, it may be remarked that the same criticism applies, though in a less degree, to the Return dealing with scholarships in English administrative counties only (excluding London), prepared jointly by the County Councils' Association and the National Association for the Promotion of Technical and Secondary Education, and published in *The Record of Technical and Secondary Education*, October to December, 1905. Reference is made later to certain points in this return.

The Character and Scope of the Return.

The Order of Reference is set out as "showing the provision made by Local Education Authorities for enabling scholars of public elementary schools to proceed to secondary schools or to pupil-teacher centres and preparatory classes connected therewith by means of exhibitions, scholarships, bursaries, payment of tuition fees, payment of travelling expenses, maintenance grants, &c." The "provision" is divided into two tables: (1) aid to ordinary scholars of elementary schools; (2) aid to actual or pledged pupil-teachers.

The Reference is surely sufficiently wide to cover all forms of aid. The plan of dividing the "provision" into (1) and (2) is excellent. Beyond that there is little to commend. It seems that the compilers of this Return have fallen into the error of trying to differentiate between scholarships and bursaries; e.g., by allocating the total of fees and cost of books to the former, and to the latter if any sum exceeds that total (i.e., includes grants towards travelling expenses or maintenance). The details of the Return show that this classification cannot be consistently followed throughout, in view of the varying nature of the scholarship schemes of Local Education Authorities. It is, therefore, essentially misleading, and should not have been attempted. On the other hand, the compilers of *The Record's* Return have, sensibly enough, not attempted the classification, but "determined to exclude altogether the terms 'exhibition' and 'bursary,' and to fix definite headings under which every class of scholarship should be included, whatever its name in a particular county."

The plan of dividing the aid given to actual or pledged pupil-teachers from that to ordinary scholars is, as has been said, excellent, but it has not been carried out in such a way as to show what preparation for the training of teachers in the early stages has been effected by the County Councils since the abolition of the School Boards and the repeal of the Technical Instruction Acts by the Education Act, 1902.

The Return is, of course, rightly restricted to schemes in actual operation, and it is also designed to show to what extent the *passage* of scholars is promoted from one type of school to another: continuation scholarships are, therefore, omitted. Details as to the numbers, age limits, conditions of award, places and years tenable, and value during each year are given in the usual form. The omissions of the Return are many. There is no intimation that the provision made is an annual one. The financial year to which it applies is not stated; but, presumably, it is 1905-6. Again, apart from the value of individual scholarships, the financial side of the question is left untouched. No information is forthcoming as to the provision of funds allocated to the maintenance of scholarship schemes, especially as regards appropriations from local sources—a point of vital interest to the ratepayer, and one which the mover of the Return would certainly have included in view of his pronouncement at the Conference of the National Union of Teachers in 1904. Lastly, while there are alphabetical lists of Local Authorities who are acting or not, yet no attempt is made to tabulate the numbers or even to classify the Authorities in bulk. All these are defects which the Board of Education might well lay to heart and rectify in the future. Meanwhile, the results of an attempt to dissect and tabulate figures compiled from the Return is given below, the invidious distinction between "scholarships" and "bursaries" being dropped throughout.

The Extent of the Activity of Local Education Authorities.

At first sight the proportion of Local Education Authorities who are active as regards the provision of scholarships is disappointing; for, if the figures are considered in bulk, it appears

that of 1,196 Local Education Authorities in England and Wales only 192, or 16 per cent, directly provide scholarships, while over 1,000 stand aloof in the matter. But closer inspection, fortunately, reveals a better state of affairs; for, on the one hand, only 14 out of a total of 133 of the premier Authorities—the counties and county boroughs—do *not* offer scholarships. On the other hand, of the minor Authorities—boroughs and urban districts—only 73 out of 1,063 expend funds upon scholarships. As regards this apparently large disproportion, a word of qualification should be given. It is this: that the needs of, or the demands from, the scholars in the elementary schools in the great majority of the urban districts, and in a less degree in the boroughs, are supplied or met by the county scholarship schemes in operation.

The following tabular summary shows at a glance the action taken in this matter by each type of Local Education Authority (with percentages), i.e., providing or not providing scholarships:—

	(1) Providing Scholarships.	(2) Not providing Scholarships.	Total.	Percentages.
				(1) (2)
A. Counties	53	9	62	85 15
B. County Boroughs	66	5	71	93 7
C. Boroughs	42	212	254	17 83
D. Urban Districts	31	778	809	4 96
	192	1,004	1,196	16 84

Numbers of Scholarships awarded or Scholars aided.

In passing from the numbers of Local Education Authorities providing scholarships to the number of scholarships provided or scholars aided, attention may be drawn to some very interesting figures.

The total number of scholarships now annually provided by Local Education Authorities throughout England and Wales to facilitate the passage of pupils from elementary to secondary schools and pupil-teacher centres and classes is at least 23,450, more than half of this number being allocated to ordinary scholars and the remainder to actual or pledged pupil-teachers. The proportion of each of the two classes of scholarships definitely assigned to boys and to girls respectively and to both sexes jointly is shown in the following summary of percentages:—

	Boys.	Girls.	Both Sexes.
(1) To Non-Pupil-Teachers	43	38	19 per cent.
(2) To Actual or Pledged Pupil-Teachers	17	47	36 " "

A clear indication is here given of the great difference that exists in the extent of the assistance offered to boys and girls who are ordinary candidates for entrance to secondary schools and those who are actually pupil-teachers or who will become such. There is evidently considerable leeway to make up in the direction of encouraging the training of male pupil-teachers. The higher percentage of scholarships awarded to "(2) Both sexes of pupil-teachers" would not allow sufficient scope for the proportion available for boys to become equal to that for girls, as much the larger proportion of scholarships thus offered is probably taken up by females.

The following table summarizes and classifies the position throughout the country as a whole as regards the numbers of scholarships available in one year:—

	Numbers of Scholarships available for					
	(1) Non-Pupil-Teachers.			(2) Actual or Pledged Pupil-Teachers.		
	Boys.	Girls.	Both Sexes.	Boys.	Girls.	Both Sexes.
A. Counties	2579	2695	1018	752	1975	3280
B. County Boroughs	2332	1799	1221	1013	2802	695
C. Boroughs	260	237	60	78	259	36
D. Urban Districts	145	68	34	24	88	—
	5316	4799	2333	1867	5124	4011

From this table it will be seen that, while, as regards the counties at all events, the numbers of scholarships awarded to boys and girls as ordinary scholars under (1) are practically equal, and in the county boroughs the numbers of boys predominate, the moment the professional question enters in there is an overwhelming majority all along the line in favour of girls.

The question will naturally be asked: "What development has occurred during recent years in this section of the local scholarship provision?" In view of the other financial claims

of Local Education Authorities there has been marked progress. Since the publication of the Scholarship Return (relating to the year 1899-1900) of the National Association in *The Record of Technical and Secondary Education* in January, 1901, *i.e.*, within the space of six years, the number and value of ordinary scholarships tenable at secondary schools only, as well as the number of Local Education Authorities providing them, have been more than doubled, as the following comparative statement indicates:—

	County and County Borough Councils providing Scholarships.	Number of Scholarships provided.	Total Value of Scholarships.
1899-1900	56	5593	£77,000
1905-6	119	11644	£120,000 to £150,000 (estimated)

It should also be particularly noted that the eleven thousand odd scholarships provided for pupil-teachers represent an almost entirely fresh development in County Council work, inaugurated since the passing of the Education Act, 1902.

Age Limits.

In fixing suitable conditions for the award of scholarships, many difficulties arise. There are numerous questions which need very judicious treatment if a scholarship system in its component parts is to work well. For its practical success a great deal depends upon the decisions made in respect of the regulations governing the lower strata of the scholarship provision. Of these conditions, age must necessarily be a prominent factor. Local Education Authorities naturally and rightly try to strike that age when the scholar is emerging from his "elementary" stage, or, in other words, is ready to be drafted into the secondary school. The difficulty is to pick out the right candidate at the right moment, and then transfer him. Some variation in the age when this should be done must necessarily be allowed—primarily, because of the varying capabilities, bias, temperaments and destinies of the scholars, and, further, because of the distinctive character of the curricula of schools. The conditions fixed by Local Authorities show that these elements have been taken into consideration.

A careful classification of the age limits, given in the Return, imposed when scholarships are awarded, gives the following result. More than four-fifths, or 82 per cent., of the ordinary scholarships for candidates other than pupil-teachers are awarded to those between the ages of eleven and thirteen years, while only the remaining one-fifth, or 18 per cent., fall to those from fourteen to sixteen years of age. On the other hand, the practice changes considerably in regard to actual and pledged pupil-teachers. For, while only one-fourth, or 25 per cent., of the scholarships awarded go to those from eleven to fourteen years of age, three-fourths, or 75 per cent., fall to the older candidates in training for the teaching profession.

The Residential Qualification.

This is one of the most important conditions attaching to scholarship awards, for it may either make or mar the whole of a scholarship scheme. It was a statutory condition under the lately-repealed Technical Instruction Acts, and up to the present Local Education Authorities have seemed inclined to adhere to it, and to do so in accordance with pre-existing regulations. That is to say, they have shown no desire to shorten the length of the period of the residential qualification as one of the preliminary bases of award. It is clear that there must be a condition of the kind; for it would be unfair to offer scholarships indiscriminately to all comers within a given administrative area. The question is how far the condition is to go.

The view of the County Councils' Association evidently is that the condition should be brought within well defined limits—far more so than prevails in present practice. The recent decision of their Education Committee is that every regulation which requires a period of residence longer than six months is undesirable, and for this reason—that the object should be, on the one hand, to require a period long enough to ensure that a parent or guardian is a *bona fide* resident in the particular area, and, on the other hand, it should not be so long as to cause hardship to those classes whose occupations necessitate frequent changes of residence, often outside their own control.

This view seems reasonable enough; but, even so, if given effect, it will necessitate considerable modifications in the regulations at present in force. For, from the Return under

consideration, it is found that at the very least forty-five Local Education Authorities impose upon their scholarship candidates a longer period of local residence than six months. In fact, it appears that, of these Authorities, at least eighteen make the minimum period of residence one year, twenty-one Authorities two years, and six Authorities as much as three years. In these figures are included five, five, and four minor Authorities respectively. So that it will be admitted that, in all reasonableness, there is room for the early operation of the County Councils Association's recommendation.

Length of Tenure.

When the scholarship is awarded a great difficulty is to retain the scholar to the completion of the course of training, for the same reason, *i.e.*, that of constant removal from one district to another. The following tabular summary shows (approximately) at a glance the length of tenure attached at the time of award to the scholarships under consideration. Taking these scholarships as a whole, it may be said that two-thirds are awarded in the first instance for two to three years, and the remaining one-third for longer and shorter periods; in exceptional cases some scholarships are awarded for a tenure of five years.

LENGTH OF TENURE.

	1 Year.	2 Years.	3 Years.	4 Years.
To Non-Pupil-Teachers...	$\frac{1}{2}$ (or 17%)	$\frac{1}{3}$ (or 37%)	$\frac{1}{3}$ (or 33%)	$\frac{1}{6}$ (or 13%)
To Actual or Pledged Pupil-Teachers	$\frac{1}{4}$ (or 26%)	$\frac{1}{2}$ (or 55%)	$\frac{1}{6}$ (or 10%)	$\frac{1}{12}$ (or 9%)

Generally speaking, scholarships are forfeited upon removal from the area of the awarding Authority. This practice is doubtless a survival of the statutory condition of the Technical Instruction Acts that scholars must be ordinarily resident; but, by the Act of 1902, Local Education Authorities are freed from any such restriction. In view of this freedom, and of the existing difficulty of retaining scholars, it seems only reasonable to urge that the continuation of the residential condition might be entirely abrogated after the award of the scholarship, and the scholarship allowed to run to the end of its normal term, providing the other conditions are fulfilled.

These and other difficulties might be easily adjusted by some sensible scheme of co-operation between Local Education Authorities in different areas in the formation of, and subsequent procedure under, their scholarship regulations.

THE AGE OF ENTRY AND THE INCREASED GRANT.

ELEMENTARY schools have a definite age at which their pupils may be admitted and may leave; preparatory schools take care of boys between the ages of nine and fourteen; public schools look after the remaining four or five years of the school life of boys entrusted to them. All these schools have fairly distinct and well recognized spheres of work; none trenches on another's ground: elementary, preparatory, and public school courses are so many different and separate steps up. Whether the staircases are as well planned as they might be is outside our present investigation. The schools that vary most in the age at which pupils are admitted to them are the newer day schools, used by the sons of the middle classes—and others. These schools under public bodies and drawing their funds from public money are springing up in many towns; they will kill most of the private schools of the less expensive type and yet will not fill their places, unless they cater for boys from the age of nine or ten onwards.

Some private schools, even though inefficient, will survive; for many of us are wonderfully snobbish. Not a few prefer sending their sons to a "select academy" where morals, teaching, and drainage are deplorable to letting them go to a county borough grammar school that provides an excellent education, because the latter admits tradesmen's sons, which the former school excludes.

Certain Authorities recognize the fact that secondary education must rest on a sound basis, and plan preparatory departments to their new schools, as at Sheffield. Too many do not

grasp the fact that primary and bad "private" education will not fit into a secondary course unless boys trained in the elementary and other schools are transferred quite young to the higher school.

Education Authorities and their Officials.

It is a pity that school committees and their advisers should be, on the whole, more accustomed to branches of education that are primary or technical rather than secondary. Their productions in the way of higher schools are likely to be spoilt by tendencies fostered in them by connexion with elementary systems. Our way, as a nation, is to appoint amateurs to manage a difficult business and to let this ill-equipped body choose as their expert a man imperfectly acquainted with the details of the work on which he is to be consulted. A public office, too, is apt to become fussy and to neglect the broader view. The general complaint of teachers in London now is that they are suffering from officialdom. Have we not all had an opportunity to laugh at some pettiness of an Education Office? Perhaps, as managers, we have experienced a difficulty in extracting cheques to pay the wages of a cleaner of some village school, because it was not possible to retain the services of the same cleaner for long. With each change of name came a long delay in making the Office understand what was happening. At length, when the cleaners' pay fell months in arrears, a resolution was passed that in future every cleaner was to be called Mary Jones. Now the Office sends a cheque to pay a series of cleaners, all unknown to it; for the generic name quite satisfies the bureaucrats.

With a blindness to be expected from such officials, some education administrators seek to build up a secondary education on a primary basis by enforcing a late age for entry and by granting scholarships to boys aged almost fourteen. This is pleasing to Elementary Education Authorities and simplifies administration—a cardinal virtue in the eyes of many "directors."

Education officials have, too often, a knack of attempting to make themselves indispensable and grasping at power. A minor provincial body was once rather troubled by the too frequent visits of a clerk to the higher Authority. Stress of work induced the clerk to apply for a subordinate, in which request the minor body supported him, hoping that the lot of attending their not very important meetings would no longer fall on the chief clerk. Now they are sorry to find that both clerk and subordinate come together to their little gatherings, and wonder where the need for the extra assistance was when the lion and the jackal can be spared to hunt in company. Truly the ways of directors of education are sometimes as devious as those of Inspectors. Regardless of those who do not frequent elementary schools and yet have to go to the local secondary school, because the establishment of it has killed all private institutions, Authorities fix the age of entry sometimes as late as eleven or twelve.

Injustice to Rate-payers.

This decision is unfair to a large class of parents who may have good reasons to dislike elementary schools and who, as rate-payers, have a claim to be allowed to benefit by rate-aided schools, but who are left in the lurch. Schools thus constituted have to admit at the age of eleven or twelve boys very ill taught, who might have done well if they had been placed in the preparatory department of a secondary school at the age of nine or ten. Further, when these boys have at last settled down and been at work for two or three years they find the syllabus upset and the working of the school hampered by the influx of scholars from elementary schools who are not properly equipped for a secondary school course, entering, as many do, from "Ex-VII."

What are the reasons for thus excluding young boys belonging to parents of the better class who wish for a good education for their sons at a secondary school from the age of eight or nine? They seem to be due to (1) a dread of expense and (2) a desire to level class distinctions.

(1) The argument is that, as the "Board" only begins grants at twelve, it is impossible to provide education for boys for several years before that age; and that, as primary schools exist, no further provision is needed. This opens the question of fees. If the charge, when it is increased by the grant and the subsidy, is only sufficient to cover the cost, it is clear that a larger fee must be charged for boys who are too young to earn any con-

tribution from the Board. Many parents would willingly pay a fee large enough to make up the difference if their sons were admitted young to the schools under discussion. The obvious remark occurs: Are not the fees calculated on too low a scale throughout? It seems hardly fair that £3 or £4 a head should be spent on primary education, while in secondary schools charging £6 or £7 a year some £9 should be presented to each pupil out of public funds. Help may be given to deserving boys by means of scholarships, but the parents of other children should not be allowed to profit so largely as they do by fees that cannot nearly cover the cost of the education given. Any means that would abolish the greater deficit on boys who are too young to receive a grant under existing conditions, but who ought to be trained by a secondary school so that they could benefit by their stay in it from nine onwards, would be a godsend to many parents.

Here is an opportunity for the Board to help both secondary education and the middle classes, the long-suffering backbone of the nation. Let the increased grant which has been promised be made to cover the years ten and eleven, with the proviso that rate-aided schools under the Board must have a preparatory department where space admits, as all will have to do in the future.

(2) Another aspect of the question is put forward by the apologists for primary schools. All boys, they say, should be educated at one class of school: they must begin in elementary and continue in secondary. This does not obtain in countries where education is best understood, nor can it succeed in England. Further, no one but a dreamer would suggest that an education intended to carry on boys till the age of thirteen could be a suitable early training for pupils whose education will be completed at a University.

Primary Education no help to Secondary Schools.

If all boys were taught at primary till they could be admitted to secondary schools at the age of thirteen or fourteen, the results would be disastrous to higher education. It is by no means certain that we are on the right track with regard to elementary education in any case; most certainly it is no foundation for an education which differs from it in breadth and in intensity.

So far as systems go, the most logical one is that of France. There State secondary schools admit boys in some cases at four or five, in others at six or seven. These State schools, then, teach boys continuously till the age of eighteen or nineteen on a definite higher system, and the fee works out at an average of £3. 5s. a year. The Germans also admit boys to secondary schools at the age of five. Most countries recognize the need for a preparatory department for such schools. If America and Switzerland are quoted against the argument, it would be easy to show what special circumstances prevail in their case that differentiate their systems from ours. Any attempt to abolish class distinctions in schools is bound to fail. In Switzerland none who can help it go to primary schools; and in America education is still rather a doubtful quantity. The number of flourishing private schools there points to the dissatisfaction felt with regard to State schools.

The lack of secondary educational advantages in many places for the younger boys of our race who cannot afford preparatory boarding schools with high fees is handicapping a large class whom the nation cannot suffer to go imperfectly prepared for the careers they choose.

Let the Board come to the rescue!

We have received a circular inviting us as teachers to take shares in a certain Correspondence College, Limited. It is announced that in allotting shares preference will be given to clergy and teachers, and reasons are assigned: "The very fact that teachers are shareholders will tend to increase the business and profits of the College, as in their official capacity they will be in a position to introduce students, and, as investors, will naturally prefer to advance the prosperity of a concern in which they have a financial interest." The insult offered to the two professions is so gross that none, we should hope, will swallow the bait; but we should like to know whether the two clerical gentlemen whose names appear among the directors have sanctioned this circular.

TOWN STUDY: A COUNTERBLAST.

WE hear much in these days of Nature study. Let us pause for a moment and consider: What is Nature? Is it the grand whole, or, rather, such a part of it as poor humanity can grasp without strain; or is it the (no doubt) interesting, but often obtrusive or unsavoury, details? Which are the truer Nature lovers—those, among whom I rank myself, who prefer to revel in the expanse of hill and valley without a thought of their geological formation, to enjoy the “green thought in a green shade” beneath some spreading oak or majestic elm, without grubbing among its roots for larvæ; or to watch the river gliding by without the least desire to stir up the mud in the quest of tadpoles or caddis-worms; or are they the enthusiasts who “peep and botanize” in the loveliest glades, who insult the everlasting hills with a fossil-hammer and the fairy glens with a dredging-net and a pickle-jar?

It is a wide question, and I do not propose to discuss it now; but—to come straight to my point without more heroics—is Nature study the only form of observation worth teaching to the inquiring mind of youth? Granted, at once, that it is a good thing in itself; may it not easily be overdone, especially in the case of the town child, to whom so much of it is necessarily outside his daily life?

To take a concrete instance. One sometimes sees a big boy of seven or eight, belated in the kindergarten through a rooted distaste for spelling and the multiplication table, engaged with others of his kind in making awkward evolutions supposed to suggest the flight of birds, the movement of fishes, the growth of plants, or what not, with an air of unutterable boredom and a shamefaced desire to escape observation. Follow the little victims into the playground; see them playing at soldiers, tramcars, railway trains—something they are really interested in; there is no trace of boredom visible now. Go where you will, among children of any class, what are the games that you find them playing of their own initiative? The modern child, left to himself, plays as the world played in its childhood—at courtship and marriage, pursuit and capture, election of a leader by individual choice or by that most ancient form of casting lots, the counting-out rime, and the subsequent trial of strength between opposing factions; at everyday occupations, everyday joys, everyday griefs. Sometimes his play, with its traditional rimes and movements, harks back to ancestral days; sometimes he makes new games for himself by imitating whatever interests him most in the life he sees around him:

A wedding or a festival,
A mourning or a funeral;

a railway journey in a train of chairs, with the sofa for an engine and the waste-paper basket for a funnel; a motor ride with revolving umbrellas for wheels, or a coach ride with four prancing steeds. The only animals that I have ever seen a child voluntarily imitate in his games are the horse and the bear—the latter of the man-eating variety, capable of producing delightful thrills by the realism of his growls, but suggesting a prehistoric legend rather than a common object of the countryside.

What of the older children? In “Mankind in the Making” Mr. Wells draws a picture of the little high-school girl going through the streets of a busy town, in her hand a botany specimen, exotic—at all events to her—which she examines, dissects, classifies, while all the while her eyes are blind and her ears deaf to the wonderful sights and sounds about her. This is not, of course, to be taken as a literal description of fact. Rare indeed in real life must be the high-school girl so devoted to botany as to pursue it in this absorbed manner out of regulation hours, nor is it true that she has no attention to give to the busy world around her. But does it receive the right sort of attention? Why should this field of observation be considered less educational than the other? Froebel taught that the study of geography should begin with knowledge of the native place. Should not the same principle be applied to the cultivation of the observing faculties?

It is well for the child to know how the bird builds its nest and the bee makes its comb. Is it less well for him to watch the steady progress of a great building from the foundations

upwards? The first growth of the oak from the acorn is seen with interest; the interest is in no way diminished when the massive trunk of another and older oak can be watched in the timber yard falling into planks under the strong teeth of the circular saw. The boy or girl who can look up into the winter sky and point out the Great Bear, the Pole Star, and the Lion has learned something; so has the child who, watching the glow of the furnaces reflected overhead, can distinguish the ruddy flicker at one point from the steady bars of light that cleave the sky at another and tell what sort of furnace produces each. This sort of knowledge may be less permanently useful than the other; but it is certainly not less interesting. One must, perhaps, be born and brought up in a manufacturing town to realize fully the element of charm and mystery that the great works, the forest of chimneys, the clouds of smoke, and the leaping flames possess for a child. One would not cultivate smoke-stacks for educational purposes, certainly; but, since they are there—“God made the country and man made the town,” if you will; but God made man too, and man has sought out many inventions.

The wonders of city life are too much of a commonplace to our children. The train goes thundering by overhead on its long embankment and many-arched viaduct—a marvel still to the grandparent who can remember when the harnessing of the giant Steam to a coach was still a new and marvellous thing. Is it not possible to spare a little time from the habits of the hedgehog and the dormouse (who, after all, are seldom seen by the city child) to explain, or at least to draw attention to, how this has come to be? The nursery child will probably take small interest in the tea-kettle part of the story, but will listen eagerly to a more or less accurate exposition of the parts played by guard, engine-driver, fireman, pointsman, signalman—to say nothing of station master, ticket inspector, porter, and carriage cleaner. True, the ordinary child will “play at trains” without teaching; but, if games have any educational value, they may as well be played right. Then the electric cars! To the parent and teacher they are still a comparative novelty, but the small children were born to them. A short time ago I heard of a small boy spending a week (like Kipling’s “Brushwood Boy”) at the delightful place called “Oxford-on-a-visit,” asking curiously what *that* was—meaning a horse omnibus—and complaining of the infrequent appearance of motor-cars. To explain the mechanism of an automobile or the mysteries of overhead traction is beyond most of us; but the infinite wonder of it all—surely we can feel that strongly enough to make the children realize it, too.

To some of them this sort of observation comes more naturally than the other. One ten-year-old of my acquaintance, devoted to gardening, is so almost entirely for the joy of working with tools, wheeling a barrow, and getting dirty without being scolded. There is no evidence of Nature study in his operations beyond a keen desire to know when his radishes and lettuce are fit for the table—and this in spite of the example of a four-year-old sister, whose desire to understand the sprouting of scarlet runners was so strong that, in the true scientific spirit, she dug up not her own beans, but his! His interest in the vegetable kingdom is strictly limited to the pea family and other esculents. On the other hand, his acquaintance with the tramcar family is varied and peculiar. No change in the arrangement of the “through” routes escapes his notice. He knows exactly which lines run single-deckers, double-deckers, or covered cars; he can tell, and show by an accurate drawing, the difference in the three and in what they differ from the cars from a neighbouring town. At the age of seven he could draw a car or a locomotive, feebly, indeed, but with more truth—I had almost said to “Nature”—than most adults. When taken into the country he looks out, not for flowers, trees, rabbits, or squirrels, but for railway lines and signals, bridges and sidings, and the ventilating shafts of a tunnel, when pointed out, lend a charm previously lacking to a wild hillside. The only natural phenomenon in which he has been known to betray an interest is a volcano, and the domestic habits of the volcano are, fortunately, difficult to study at first hand in this happy land of England.

Say that such a child—typical, I am convinced of many—should be taught to take an interest in Nature. The answer is simple: he has been so taught, and he doesn’t. On the other hand, what of the child beloved of the theorist—the child of the butterfly net, the *vasculum*, and the pickle-jar? Should not he or she be led at times to turn from the microscope, the

hortus siccus, and the aquarium, and realize the true inwardness of the stirring times we live in? Is a spider-web more wonderful than the telephone, or the song of a bird than the wireless telegraph?

It is, perhaps, superfluous to state that these criticisms proceed not from a teacher, but from a member of that despised race the parents. It may be that they originate mainly in laziness—who knows?—for in these days “Mother” is required to satisfy the young idea on every topic outside lessons, from the details of the latest railway accident to the construction of a flying-ship and the working of Mr. Maskelyne’s latest mystery. If only she had been taught these things in her youth, instead of botany and physiography—do they teach physiography nowadays?—life would be an easier matter than it is; but, then, to be up-to-date one would need to have been born too late to be the parent of the rising generation. No doubt it is because children are taught so much more intelligently now that they demand so much more of their parents; and the parents are not ungrateful, even if at times they sigh for the old *régime*, when the duty of a mother was comprised in the running of endless tucks, the boiling of jam, and the giving of powders, and that of a father in the administering of pocket-money and of personal chastisement.

ALICE HALL.

HASTE AND SPEED IN SCIENCE TEACHING.

IT is well to ask ourselves, when considering any particular subject in the school curriculum: What is its *ultimate* use to the pupils? With science this is specially necessary; for of all subjects this needs the right introduction to the young beginner. And on the end in view will the manner of the beginning depend. Few subjects besides the elements of science can be so spoilt or have their aim so utterly frustrated by the inability or the indifference to appreciate their real purpose.

What, then, can science do for pupils who take it as part of their course? To impart knowledge during the first two years of a science course in a secondary school should only be a subordinate aim. The acquisition of facts at the early stage is of comparatively little value; for they will probably be forgotten in a few years; but science can give that which does not dwell in the realm of memory. The chief aims which should direct and underlie science teaching may be summarized as follows:—

First, to train a habit of investigation concerning other matters beyond science. This habit would give the mind a tendency to look at things in a scientific spirit, that is, a spirit of inquiry. It would emphasize, and help the carrying out of, the mandate: “Prove all things; hold fast that which is good.”

Second, to teach the sense of law and order in the universe. It gives a shock of surprise to those who have not had a scientific *training* to find that every single occurrence comes in obedience to definite fixed laws; that not a leaf moves from one place to another without a cause for its going from here to there. The surprise should not come when our present-day pupils are older; for not only leaves and chemical reactions, and everything in the so-called “natural” world, but actions and characters, will, with the right teaching, inevitably and naturally be seen to be controlled by law and order.

Third, to arouse and sustain a feeling of *wonder*—of wonder at the mysteries, sublime and minute, of the universe and life. As “Kappa” says: “What, then, is the fundamental task of a liberal education? What should be its constant endeavour? Surely to awaken and keep alert the faculty of wonder in the human soul. To take life as a matter of course, whether painful or pleasurable, that is the true spiritual death.” And, again: “Teach youth to see, to understand, to wonder; then let it judge for itself.”

Fourth, to inculcate habits of observation and accuracy and truth-telling. Science is a hard task-mistress regarding these qualities, and, if the *exact* truth concerning experiments and their results be insisted on, the exact truth concerning other matters will come more readily. It is so easy for pupils to say that what they expected or wished to happen did actually happen: this is a fault which may be checked in almost every detail of science work.

None of the above objects can be attained unless the science work is done slowly and thoroughly, unless every part is clearly understood, and, what is more important, unless each detail and each side issue have been presented in the right way. If there is a certain inelastic syllabus which has to be “got through” each year, irrespective of the class, then the lessons often become the mere mechanical mastery of facts, which in the first stages of science work is rather worse than useless.

If the pupils are going on with chemistry or physics after a two years’ course, then those facts which are necessary can be taught—facts without which they could not proceed. But these could be reiterated so often that it would be impossible that they should be forgotten in a year. The reiteration need not become monotonous. The same thing could, and should, be approached in several different ways, and presented in many different forms. If other sciences follow in later years, then facts illustrating something in those sciences could be taught. In either case, whatever facts are taught, the progress, if they are dealt with in the right way, will be slow. This can best be shown by an example, such as the following:—

The principle of Archimedes is usually finished in two lessons—the writer has known it done in one! With the following method it should take four or five lessons. The children need only have found out beforehand that 1 c.c. of water weighs practically 1 gram.

FIRST LESSON.—(a) Weigh a cube of metal in air and then in water. Note loss of weight, and how much it is. (b) Weigh another cube of same volume but different weight in air and in water. Note loss. Repeat this once, twice, or thrice. (c) Tabulate results, and pupils will note that loss of weight in each case is practically the same. (d) Elicit that amount of loss of weight does not depend on weight of cube; for this is different in each case, whereas loss is same in each case. What does it depend on, then? Some one may suggest volume. How can we prove this?—By weighing other cubes of different volume.

SECOND LESSON.—(a) Have cubes of a different size from the others. If the cubes in the first lesson were 1 c.c. in size, choose larger cubes; if they were larger than 1 c.c., then take 1 c.c. cubes. (b) Repeat experiments of first lesson, with object of proving whether number of grams lost in water depends on volume of object weighed. By the time this is finished some will have noticed as well that number of grams lost is practically same as number of c.c.’s in volume. (c) Test above suggestion by weighing cube intermediate in size. This shows that loss of weight in grams is same as the volume in c.c.’s. But 1 c.c. of water weighs 1 gram. Therefore the loss of weight is equal to the weight of water displaced. (This last step is rather difficult for some pupils to comprehend.)

THIRD LESSON.—To prove the last thing suspected in second lesson. This can be done in a shorter lesson by teacher only, using the small bucket and cylinder specially made for the purpose, which shows that the exact loss of weight in water is equal to the exact weight of water displaced. Then between this lesson and the next the pupils could be required to try to reason out *why* things weigh lighter in water.

FOURTH LESSON.—(a) Why do things weigh lighter in water? After many amusing and interesting suggestions the upward pressure of the water will be suggested, though not in those words. (b) Imagine a c.c. of water congealed in centre of beakerful, and obtain answers to following questions:—What holds it up? If it could possibly be removed, would that make any difference to the pressure of the water below it? If a c.c. of another substance were placed there, would the water exert any pressure? &c. (c) Pupils will see now that by weighing any object in air and water we can obtain the weight of water displaced, thence the volume of water displaced, and thence the volume of object. Thus they will easily see that we can obtain the density or specific gravity of any substance by this method.

In this way the pupils will have been taught to look at the problem before them from all sides, to propound all possible theories, and to accept only what has been proved. By making each step a real step, not a leap in the dark, the pupils will understand, which is more important than remembering. Memory can be aided by reiteration. But, even if they forget every detail, their minds will have obtained what cannot be lost. We cannot usually make our laboratories things of beauty, but they can become joys for ever by giving lasting benefit to the workers therein.

E. M. WHITE.

THE ROYAL COMMISSION ON TRINITY COLLEGE, DUBLIN, AND DUBLIN UNIVERSITY.

THE Commission have published, as an "Appendix to the First Report," the statements and returns procured by them in July and August as a preliminary to the hearing of evidence which has been proceeding in Dublin during the past month. They form a Blue Book of some 150 pages, and give a very clear picture of the problems the Commission have to meet.

The most important portion consists of the returns submitted by the Provost of Trinity College, giving information hitherto almost entirely inaccessible as to the revenues and expenditure of the College, the numbers of the students, &c., together with important statements from the Board, the Junior Fellows, the Professors, and the heads of the various Schools on the changes they would disapprove and the reforms they consider needful. The rest of the book contains statements equally important from the Roman Catholic bishops and laymen, giving the Catholic claims; while the views of other religious denominations—the most pressing of which is the statement of the Protestant Episcopal Church in regard to the Divinity School—are also given. Out of such a mass of evidence only a few important points can be noted.

The Provost's financial returns extend over the five years ending October 31, 1905. In the latter year* the real total income of Trinity College was £76,360. 18s. 5d., and the real total expenditure £70,027. 5s. 8d. The total receipts of the seven Senior Fellows were £9,917. 15s. 8d., and of the twenty-five Junior Fellows £18,909. 15s. 6d. The Provost's net income (1904-5) was £3,539.

It is to be regretted that the total of the expenditure in salaries to professors, lecturers, &c., who are non-fellows is not given, and the totals given of the expenditure on the various Schools—Divinity, Medicine, &c.—do not seem to harmonize with the account of the expenditure on the salaries in those Schools. The total expenditure on the Divinity School in 1905 is given at £2,991. 10s.; on the Law School £825. 7s.; on the Medical School £8,806. 4s. 2d.; and on the Engineering School £1,751. 13s. 5d. On the Library £2,937. 0s. 3d. was spent; on "Commons and Kitchen" £3,010. 7s.

In regard to the sources of the income of Trinity College we find that from the estates and investments £56,436. 11s. 10d. was received, and from students' fees in Arts and in the various Schools and for degrees £16,485. 15s. 8d.

On the erection of buildings the sum of £70,496. 13s. (including nearly £8,000 contributed by graduates to the Graduates' Memorial) was spent from October 31, 1890, to October 31, 1905.

These financial details were not procurable before this publication and were refused by the Government several times in Parliament. They are now given very fully and clearly. It will be generally agreed that a better distribution of the funds would, in many ways, be possible.

In regard to the students, we find that the average numbers entering declined from 304.7 in the years 1860 to 1870 to 259.7 in the years 1890 to 1900—a decline due to social conditions in Ireland. In 1902-3 only 211 entered. Since then the numbers have risen. In 1904-5 they were 320 and in 1905-6 266. The increase is not wholly to be accounted for by the admission of women; for the number of those residing within the walls has risen from 246 in 1901 to 263 in 1905. The number of students residing outside College was in 1905 853; and the total number on the books is this year 1,114, while in 1903 it was only 936. Out of this 1,114 only 99 are Roman Catholics. The number of women who entered from July, 1904, to July, 1906, was 81. From 1904 to 1906 441 B.A. degrees and 280 M.A. degrees were taken by women.

Turning to the "Joint Statements," we have one only which is signed by the Provost and Senior Fellows. It is also, roughly speaking, signed by all the Junior Fellows and Professors—a strong protest against a college for the benefit of Roman Catholics being established under Dublin University. The signatories point out that such a college would be "subject to powerful ecclesiastical influences, internal and external, and therefore would not possess the same intellectual freedom,

either in kind or degree, as prevails in Trinity College"; that the two ideals are wholly incompatible, and would introduce dissensions, a lowering of public confidence in the fairness of elections and examinations, and in the efficiency of the education. They add to this protest the proposals already made by the Board to meet the needs of Roman Catholics.

One only of the Senior Fellows does not sign this statement—Dr. Mahaffy, who was perhaps the first to propose the "two colleges" scheme, and is believed to have lost the Provostship on account of his supposed advocacy of it, nor does Dr. Mahaffy, the ablest of the Senior Fellows, submit any statement of his own in this Blue Book. (It may be noted in passing that a second edition of Dr. Mahaffy's valuable book "An Epoch in Irish History," giving an account of the foundation and early years of Trinity College, has, very opportunely, been published—a work which shows both his erudition and his deep attachment to his University.)

The disapproval of the two colleges scheme is manifest. Not a voice is raised in its favour, and powerful personal statements against it are put in by Mr. Grey, Mr. Gwynn, Dean Bernard, and others.

One of the joint statements gives an elaborate scheme for making the College more acceptable to Roman Catholics. It is signed by twelve Junior Fellows and eight Professors, and is in harmony with the statement in the Blue Book submitted by 473 influential Roman Catholic laymen. Both are repudiated in the statement of the Roman Catholic bishops, who absolutely condemn every form of mixed education. These statements were described in the September number of *The Journal of Education*.

The other statements of any importance deal only with internal reforms in the constitution of the College. It is plain that there is little belief within the walls in the possibility of "nationalizing Trinity College" by means of large concessions to the Catholic claims. If the latter mean doing what the bishops approve, this scepticism is justified; for nothing, except the two colleges scheme would be accepted by the Church, and that scheme Trinity College declines.

No one scheme for internal reforms is put forward by a large majority. The most detailed is signed by only seven Junior Fellows and thirteen Professors. But there is a general agreement on certain constitutional changes. (1) That the Board should be made elective, the members holding office for a term of years and being eligible for re-election. The electors should represent all the Faculties and the whole body of Fellows. (2) The Fellows should be chosen (a) by examination, or (b) preferably on the grounds of original work, skill in teaching, or other credentials. (3) The status of Professors should be improved. Many statements suggest they should be Fellows chosen by method (b). They should have a voice in electing the Board, and form consultative committees to which the Board would delegate the details of their special departments. (4) Both Fellows and Professors to be appointed for a probationary period of three years after which they should hold their posts *ad vitam aut culpam*. (5) The appointment from among the more able moderators of "Readers," i.e., temporary assistant lecturers with light centres as an encouragement to post-graduate work and a training for future Fellowships. (6) Greater encouragement and provision for research. There is no doubt such changes would be eminently desirable and could be readily introduced.

It is impossible to enter into the recommendations for changes in the professional Schools, or the very serious question of the position of the Divinity School. Two points are noticeable by their almost complete absence: the omission of complaints by any class of inadequate payment or monetary injustice; the other, how little is said of detailed reforms in the books, curriculum, &c., or even of such a practical question as the tutorial system. Mr. Culverwell, in his interesting statement, deals most fully with such points. Probably this silence on detailed reforms is due to the belief that, with a reformed constitution, such minor improvement would naturally and certainly follow.

The Irish Association of Women Graduates put in a statement in which the history of the opening of Trinity College to women is narrated, and the present position of the women students is described with approval, while tables are given of the numerous prizes and honours they have already won. Miss White, the Head of Alexandra College, puts in a statement in

* In the year 1905 there was an unusual source of income from the fees paid for *ad eundem* degrees by women from Cambridge and Oxford.

which she criticizes the curriculum and teaching of women Pass students, and recommends that they should be sent to Alexandra College for lectures, and for the benefit of social collegiate life.

The Blue Book, which is admirably arranged, is full of interest to all concerned in University work.

THE TEACHING OF *MORALE* IN FRANCE.

IT is refreshing to turn from the dust and heat of the educational battle in England to see how things are managed in France. At present no religious teaching is given in the State schools of France, primary or secondary. *Morale* is a subject of long standing in both types of schools. The most interesting debate on the subject took place in 1880 when Camille Séc introduced in the Chamber the law under which the girls' *lycées* were established. The Church party opposed the establishment of these schools, but directed its main resistance to the teaching of *morale* in the new schools. The discussion was on broader grounds than the present education struggle in England; for it was not a question of what form of Christian doctrine should be taught in the schools, but rather a question of whether any dogmatic religious truth should be permitted in State schools. The argument of the supporters of the Bill was that "there is one system of moral philosophy only to which ministers of all creeds give their support, but to which no one religion can make exclusive claim," and that this *morale* should be taught in the schools. It is true that the clergy have only themselves to thank for the bitter hostility shown to them during the last two decades of French history. They have too often abused the liberty to give religious instruction which they enjoyed in their *écoles congréganistes*, by an absolute disdain for historic truth. A glance at some of the catechisms in use in these schools (e.g., the "Catéchisme de Persévérance") recalls Ruskin's dictum that "the worst romance is not so corrupting as false history." Still, the event has justified the arguments of the opposition of 1880. "La neutralité religieuse que vous proclamez," said M. Barthélemy Saint-Hilaire, otherwise an ardent supporter of the law, "n'est qu'une chimère, et votre éducation sans Dieu deviendrait par la force des choses une éducation contre Dieu." The "morality untouched by emotion" of the *lycée* of to-day has certainly become an anti-religious force in France.

As things exist there are, of course, no tests for the teacher of *morale*. He may be Jew, Turk, infidel, or heretic. His official instructions are "to implant in the minds of the pupils the fundamental ideas [*notions essentielles*] of morality, without any allusion to creed." The syllabus for the primary schools is as follows:—

Section Enfantine (5-7 years).

Stories and talks; poetry; songs; "historiettes morales," followed by questions and explanations.

Cours Élémentaire (7-9 years).

Reading and explanation of stories, fables, &c.

Cours Moyen (9-11 years).

Lessons on the following points:—

I. Family life: duties towards relations, duty towards servants, duty at school. The Fatherland: "La France, ses grandeurs et ses malheurs."

II. Duty towards oneself and to others: cleanliness, temperance, economy; courage in danger; danger of passion; Loi Grammont, sociétés protectrices des animaux; justice, charity, &c.

III. Duty towards God. The teacher is to touch two points only: (a) he is to teach the children to think with respect of "la Cause première"; (b) he is to teach the child that to honour God he must obey the laws of his conscience and of reason.

Cours Supérieur (11-13 years).

Talks, readings, and practical exercises and lessons emphasizing "La Morale Sociale" under the headings: (1) "La Famille," (2) "La Société," (3) "La Patrie."

One hour a day is given to this instruction in the elementary school, and very minute directions are given to the teacher as to his mode of procedure. No books are used in the early stages of the teaching, but from the age of twelve little books are used dealing with such subjects as the evils of intemperance or the duty of honesty. There is none of the dry humour of "Plain Jane" and other worthies about these books, and the illustrations bear the stamp of unreality. For example, we

have before us a cut representing a plumber, supported on the shoulders of a comrade and fitting up a lightning-rod on a church steeple. The picture shows a stream of molten solder falling on the comrade's hand, and yet we read: "Il ne fit pas le moindre mouvement, sachant bien qu'il aurait précipité son camarade d'une grande hauteur." Such an example of reflex action is well worth the notice of psychologists. Again, the man who saved the *sous* he had habitually spent on tobacco until he got a competence was doubtless an estimable, and certainly a typically French, citizen; but we cannot quite see why he should be held up as a shining light from a moral point of view. Voltaire is a strange apologist for Christianity, one would think; but under the title "Devoirs envers Dieu" the children learn by heart the well known lines:

C'est le bien sacré de la société . . .

Si Dieu n'existait pas, il faudrait l'inventer.

Besides the instruction in *morale* proper there is a course of *instruction civique* given in connexion with the history teaching.

In the secondary schools the course of *morale* does not begin until the age of fifteen or thereabouts. In the girls' schools it is in three divisions; for the first year *notions préliminaires* are given in such subjects as moral responsibility, free will, duty, law, virtue. Then the domestic virtues are dealt with, and finally the duty of the family towards the State. The method is generally the lecture method—though some teachers encourage a sort of debate—and a short dictated *résumé* follows or precedes the lecture. In the fourth year a general idea of the systems of great philosophers is given, with illustrative readings from Plato, Aristotle, Epictetus, M. Aurelius, Montaigne, Pascal, Bossuet. There is then a special treatment of the philosophy of the eighteenth century leading up to a study of Kant's work. In the fifth year there is a course of psychology applied to education. The writer heard several excellent lessons to elder girls in this subject.

The programmes of the boys' secondary schools have gradually lessened the time given to *morale*, and at the present time it appears as a separate subject in two classes only (*quatrième* and *troisième*). The method adopted is the same as in the girls' schools, and the subjects treated include the following:—"La sincérité, le courage, la délicatesse morale, la probité, la bonté, l'éducation de soi-même, la solidarité, justice et fraternité sociale, la famille, la profession, la nation, l'état et les lois, l'humanité, liberté individuelle et discipline sociale."

The teaching of *morale* is beset with difficulties. It is difficult for the professor to avoid dryness; for, if he touches polemic or religious controversy, he is "out of bounds." The programme warns him that he is to usurp the function neither of priest nor of father. One German critic, with unconscious humour, says that the subject demands in the teacher "une connaissance parfaite du cœur et du monde."

We do not doubt that the subject was never intended to be anti-Christian, but rather to be anti-clerical. But some knowledge of the sixth form *lycée* students in the towns will convince the observer that *morale*, as at present taught in the schools, has been an agent in creating the freethinking, speculative type of citizen who is so often characterized by a corresponding freedom of thought, word, and deed.

W. A. TODHUNTER.

OVER-INSPECTION OF SECONDARY SCHOOLS.—In presenting the prizes at the Central Foundation Boys' School on Wednesday, October 17, Lord Davey remarked that he quite believed in the necessity of inspection. Public Authorities could not be expected to make grants to schools without assuring themselves, through their Inspectors, that the money was properly devoted to the purposes for which it was intended. Further than this, inspection might be of great service in indicating any directions in which it might be possible to effect improvements; but inspection might be carried too far, and had been carried too far by some over-zealous Inspectors. When an Inspector allowed himself to make too minute criticisms there was a danger that he would interfere with the freedom and power of initiative both of the head master and the governing body. Such a procedure would have the disastrous effect of reducing all secondary schools to one level of uniformity. Sir Owen Roberts (Chairman of the Governors) said that he was very glad to hear Lord Davey refer to this most important matter. While giving full credit to the officials for their desire to discharge their duties efficiently, he fully agreed that they had gone too far, and it was time that a strong protest should be made. He did not know whether his remarks would find their way into the press, but, whether they did or not, he would see that the matter was brought before the proper authorities in a very forcible manner.

CURRICULA AND LOCAL NEEDS.

THE ineffectiveness of elementary education is a constant theme at the present day. The children for whom it provides gain, on the whole, no initiative. They cannot even cipher or write neatly outside their school. Their manners are wanting. Their knowledge is so mechanical that it is almost useless. Such scholars abandon all study at the very earliest time the law allows; all desire to improve is absent from them.

Two facts may serve to explain this in a large degree. Our system is national; our children are not. There is an enormous divergence between scholars who are the offspring of different classes and the product of different localities. A single general curriculum, arrived at by *a priori* reasoning, is forced upon all. There is a very slight recognition of the immensely varied nature of home conditions and of the surroundings beyond the school. A difference in the degree of excellence demanded does exist. There is no definite modification of curricula to meet the defects of local temperament, of social and economic conditions.

A consideration of the East London child in many poor districts will show this clearly. He is overstimulated by the excitements of town life, and his capacity for concentration is thus vitiated. The work to which he must turn in the future often indicates no clear value in knowledge. A great temptation lies before him to neglect study, to leave school early, and to earn money as soon as possible. Yet he is forced through a curriculum in general most aridly conventional and dull. Little wonder that he not only leaves school as soon as he may, but that he does so with a distaste for education and with no satisfactory answer to his question of "Wot's the good of it?"

Yet in such children there is good material upon which to work—a keen, if misdirected vivacity, an affectionate disposition, and a strong sense of emulation. Thus a time-table which recognized and made concessions to defects of character might work wonders. It could not remedy the evils of poverty; it could not be a substitute for a healthy home life; it would not remove the need for the most pressing of all reforms in elementary schools—the reduction of the numbers in a single class. But much might thus be done towards the production of better results, physical, intellectual, and moral.

A mixture of the humanistic and the manual and a prolongation of kindergarten and concrete principles seem alone suitable for primitive and abnormal children such as have been described. There should be as little unattached scholastic drudgery as possible. The needed concessions to temperament and physique can be effected without omitting from a proposed time-table any of the elements of the existing course. In certain cases some curtailment would be made.

Let us take, for example, a school week of thirty hours, such as is at present customary in higher grade departments. For the writer would affirm that a universal extension to this limit would be advisable in the districts under discussion, if the curriculum were modified as he is going to propose. It must of necessity include arithmetic, the English language and literature, history, geography, and composition. The elements of natural science, physics, and chemistry deserve a place. Scripture should not be omitted. (The Bible is at present often the only real book our scholars read.) Some degree of instruction in drawing and music is necessary. But, beyond these, the writer advocates a special attention to manual training, physical culture, and the reading of real and interesting books, instead of the dry bones of text-books which always disgust scholars in the end.

Eight and a half hours would give all that is necessary for the English studies. This would permit an hour a day for history or geography alternately, one hour twice a week for composition, and half an hour three times a week for literature and grammar. The usual daily hour would be kept for arithmetic. But we might be satisfied with three quarters of an hour twice a week for natural science, and an hour each for freehand and model drawing and for music. With care very much might be done in these times if the child came fresh to the work. Scripture might be reduced to one and a half hours a week. A total of nineteen and a half hours would thus be made up.

The remaining ten and a half hours might be allocated to manual training, reading and discussion, and to drill. Two

periods of two and a half hours a week might most profitably be allotted to the first. The conventional curriculum is at present too often drudgery, for both teacher and taught. It cultivates no taste for learning and is forced on by dint of punishment. The manual training, with the invaluable rules of neatness and accuracy which it inculcates, is always followed out by the pupils of whom I am speaking with keenness and emulation. They carry home their productions with pride and are eager to excel one another. Such a laudable ambition might well be given more scope.

For this purpose every school would require a special room, instead of the present limited number of centres. If we assume the accommodation to be forty (the general maximum), that would mean that two hundred scholars could be instructed during the school week. They would need to be organized into five classes of forty each, say from the three upper standards, as is the present rule, or as far down the school as the numbers in attendance would permit. It would be useful also to devise some form of manual instruction for the junior standards. The present custom of leaving a blank in this respect between the infants' department and Standard V. or the age of twelve is indefensible. These proposals would naturally lead to increased expense. Yet the cost would be more than compensated for by the skill attained and, above all, by the cultivation of an ability to perform sustained and concentrated work with energy and interest.

The reading should be from real books of real interest, and not from aridly concise text-books, naturally lifeless from their general character as second-hand information. It should take place with as little mechanical correction and interruption as possible. The task of finding such books for all standards would not be impossible. The best literature of folk-lore and fairy tales could lead up to Dickens and Scott, to stories of travel, and to biographies. Part of the time occupied with these works should be set apart for a discussion of them and their meaning and moral. Yet silent reading might be allowed as often as reading aloud; but, above all, the book must be interesting. It would be advisable, also, to put this lesson at the end of the school session. The child ought to leave school with a sense of pleasure experienced—not only to have learnt something, but to have enjoyed the learning. We might hope then for a wise continuance of reading after leaving school, instead of scholars dropping the whole irksome drudgery as soon as they attain the age of fourteen. The necessity of attempting to direct the taste of scholars will be shown by a single instance. The writer recently asked a class of forty Bethnal Green children to compose for him an essay upon their "Favourite Book." With one exception they all declared for a certain low class halfpenny periodical devoted to stories of the crudest sensationalism. The main point of this article—that different districts need different treatment—is further proved by the fact that a similar subject in a much better district brought a series of praises of books by Kingston, Ballantyne, Henty, &c. Good reading comes by habit more than nature; good fiction leads pleasantly and inevitably to a higher learning.

Without in the least degree possessing the moralizing atmosphere which is repellent to the average child, these lessons would give the teacher many opportunities for the inculcation of better principles and manners.

Physical culture is the next thing which demands more attention. Here it is absolutely essential that there should be no greater interval than twenty-four hours between lesson and lesson. Twenty minutes a day is the minimum allowance. These undersized, badly developed children require regular organized exercise daily if it is to have a valuable effect. An occasional ten or twenty minutes during the week is not sufficient. The squads, also, should be small enough for the teacher to be sure that he is enforcing real effort in the performance of the exercises. The principles and objects of the movements should also be taught; the child should know exactly what he or she is doing. Scientific terminology need not be used, but the attention of children should be directed to the particular muscles used. They should be taught to notice them tighten and relax. Thus more will and interest might be brought to bear upon their work. Much physical exercise in elementary schools at the present day is purely formal.

Ten minutes for recreation would have to be made up by a deduction from the end and the beginning of the two middle lessons of each session. This would not alter the main

arrangements of the time-table. As far as the accommodation will permit, the middle of the session is also the most suitable time for drill.

To give effect to the above proposals it would be necessary to omit, taking a typical curriculum, such subjects as shorthand, French, clay-modelling, and algebra, as well as to curtail somewhat certain other subjects. Yet the physical and mechanical improvement in the condition of the scholars, the greater interest they would take in their work, and the elements of culture they would acquire would far more than compensate for these reductions and omissions. The loss in the present would bring incalculable gains in the future. It would not require a very integral modification of this plan to bring it within the present time limit for ordinary public elementary schools—twenty-seven and a half hours. The reduction of drawing to one hour, of natural science to one hour, and of history and geography to two hours each per week would effect the necessary change.

The circumstances of a particular school with many classes and with separate rooms for art, science, and manual work would, of course, demand a good deal of shifting in the lessons, but a time-table for a typical standard on the thirty hours basis might be worked out as follows:—

	MON.	TUES.	WEDNES.	THURS.	FRI.
9-9.30	Scripture	Scripture	Literature	Scripture	Music
9.30-10.25	Arithmetic	Arithmetic	Arithmetic	Arithmetic	Arithmetic
10.25-10.35	Recreat'n	Recreat'n	Recreat'n	Recreat'n	Recreat'n
10.35-11.30	* Geog.	History		* History	Geography
10.35-11.5			Drill		
11.5-11.30			C'mposit'n		
11.30-12	Read'g,&c.	C'mposit'n	C'mposit'n	C'mposit'n	Read'g,&c.
			Interval		
2-3	Manual	Drawing	* Science ($\frac{1}{2}$ hr.) Grammar ($\frac{1}{2}$ hr.)	Science	Manual
3-3.25	Manual	* Drawing	Geography or History	Drill	Manual
3.25-3.35	Recreat'n	Recreat'n	Recreat'n	Recreat'n	Recreat'n
3.35-4	Manual	* Drawing	Geography or History	Grammar	Manual
4-5	Manual ($\frac{1}{2}$ hr.) Music ($\frac{1}{2}$ hr.)	Read'g,&c. Drill ($\frac{1}{2}$ hr.)	Read'g,&c.	Read'g,&c.	Manual ($\frac{1}{2}$ hr.) Drill ($\frac{1}{2}$ hr.)

The saving of half an hour where asterisks have been placed on the above time-table would reduce the total to the lower maximum of 27½ hours. A summary of this proposed division of hours would give

	Higher Limit.	Lower Limit.
Scripture	1½ hours	1½ hours
Arithmetic	5 "	5 "
Geography	3 "	2 "
History	2 "	2 "
Composition	2 "	2 "
Grammar	1 "	1 "
Literature	1 "	1 "
Science	1½ "	1 "
Drawing	2 "	1 "
Music	1 "	1 "
Drill	1½ "	1½ "
Manual	5 "	5 "
Reading, &c.	3½ "	3½ "
Total	30	27½

From this summary small deductions for recreation would need to be made from such lessons as chanced to cross into the time suggested for it.

The more depressed any section of the community may be, the more does it require a liberal education. Would not a few years of a curriculum, such as is here proposed, lead to a marked improvement in regard to the affection of the scholars for their schools, to their tastes, and their physique? The pupils would gain more appreciation of the value of skill and knowledge. The teacher would have far more opportunity than at present for influencing his charges. Great would be the gain from such a consideration of local requirements.

E. BRUCE FORREST.

CHRISTMAS BOOKS.

Puck of Pook's Hill. By RUDYARD KIPLING. (6s. Macmillan.)—A history, a geography, an anthology, a fairy book, a new "Midsummer Night's Dream"—something of all these and yet at the same time a work of art with a unity of its own—such in brief is the Christmas book of the year that none but Mr. Kipling could have given us. The book is redolent of the soil, and he has drawn his inspiration from the South Downs, the Ithaca of a new Ulysses.

"See you the dimpled track that runs
All hollow through the wheat?
O that was where they hauled the guns
That smote King Philip's fleet.
See you our little mill that clacks,
So busy by the brook?
She has ground her corn and paid her tax
Ever since Domesday Book."

So says Puck, who acts as showman and introduces Dan and Una—another Tom and Maggie—to Wayland the Smith, the Norman Knight, the Roman Centurion, the Jewish Usurer, and the other characters in the historic masque. It is a delightful jumble—a phantasmagoria, if you will. There is no more attempt at antiquarian lore than in Shakespeare's "Dream," and we feel no incongruity when the Centurion gets a hurt from a boy's catapult or the fairy ring is broken by the fall of a rocketing pheasant. Only Puck's *scholia*—"Aque Solis [?Sulis] that's Bath; Regnum's Chichester"—offend us as inartistic. The verse is good and indifferent—none of it bad, but none supremely good. The prose could hardly be improved. We have space but for one specimen: "Three cows had been milked and were grazing steadily with a tearing noise that one could hear all down the meadow; and the noise of the mill at work sounded like bare feet running on hard ground. A cuckoo sat on a gate-post, singing his broken June tune 'cukoo-cuk,' while a busy kingfisher crossed from the mill stream to the brook which ran on the other side of the meadow. Everything else was a sort of thick, sleepy stillness, smelling of meadow-sweet and dry grass."

The Orange Fairy Book. By ANDREW LANG. (6s. Longmans.)—If Mr. Lang believes that no one reads prefaces but critics to save themselves the trouble of reading the books themselves, he should, from prudential considerations, take his prefaces a little more seriously, and not offer to his critics stones for bread. Fairy tales, he tells us, were obviously composed mainly for children, which accounts for the absence of the "improper" element. Is it so? Were the fairy tales of Circe, Calypso, and the Cyclops composed for children? How, he asks, is the family likeness between the "stories of the remotest people" to be accounted for? Partly they have been disseminated by warriors, travellers, and missionaries, and in part "the uniformity of human fancy in early societies must be the cause." Verily these be stones, and we can only suppose that Mr. Lang has determined to prove his sense of humour—a quality which he allows is not common in authors—by treating his critics as Rhea did Cronos. In one case at least he has succeeded. One critic has not, to be honest, consumed the Gargantuan feast spread before him, but he has tasted all the courses and found some dainty and appetizing, and nothing that could be rejected as unwholesome food for children. The first in the book, a native Rhodesian tale, is spoilt by a tame and pointless ending, but the second is not only a good story, but interesting as showing the mythopoeic instinct exercised on so recent an event as the advent of the white men. Take again two stories towards the end of the volume—"The Princess Belle-Flor" and "The White Slipper"—there are curious points of likeness between these and the tales of Psyche and Cinderella, and we should like to know whether the resemblances are psychological or historical. To the illustrations we can award unmixt praise: they are well imagined, correct in drawing, and harmonious in colour. Mr. J. H. Ford has surpassed himself.

Electricity of To-day, its Work and its Mysteries. By CHARLES R. GIBSON. (5s. net. Seeley.)—This is a sequel (*Fortsetzung* is the exacter word) to the author's "Romance of Modern Electricity." While still avoiding technical language, he describes more fully the various phenomena and applications of electricity and brings the subject-matter up to date. Thus, by easy stages, the lay reader is led from Galvani's frog and Volta's piles to X-rays and wireless telegraphy, and is given a partial answer to the unanswerable question: What is electricity? How many of the thousands who are using the telephone every day, almost every hour, of their working lives could give even an approximate account of the means and method of the transmission of sounds? After reading Mr. Gibson, an intelligent office boy would be able so to do. The frontispiece is a remarkable photograph of a toy bicycle embedded in a child's throat.

The Children's Odyssey. By the Rev. A. J. CHURCH. (5s. Seeley.)—The "Odyssey" is so simple a story that any kindergarten teacher might tell it to a class of children; but to tell it so that it shall at

once delight the child and satisfy the Greek scholar is a task that demands a rare combination of qualities—sympathy with the child's mind, scholarship, and literary skill. Take, for instance, the story of Nausicaa, a princess washing the household linen, who encounters a naked mariner and brings him home with her—how hard to be "naked, loving, natural, and Greek," to steer between Fénelon and Samuel Butler, propriety and vulgarity! Mr. Church has hit the happy mean, and we prophesy that his new "Odyssey" will be as popular in the nursery as his first version was in the play-room. It is a pity that the illustrations are not more adequate.

Disenchanted (Désenchantées). By PIERRE LOTI. Translated by CLARA BELL. (6s. Macmillan.)—Revelations of a Turkish harem have been a popular theme for poets and novelists from the days of "Don Juan" and earlier, but Pierre Loti's treatment of the subject is quite original. His object is to show the utter misery of the modern harem, the rent produced by a patchwork of Western culture and Oriental polygamy. Whether there are many harems whose inmates read Kant and Nietzsche, play Beethoven and Grieg, and speak faultless French and German we may well doubt; still more whether many of "my dear friends the Turks" are eager to break the gilded chains and follow the spirit of their prophet "all compact of light and charity." This doubt, however, does not affect the charm and beauty of a well-conceived romance, which, quite apart from its setting, is a true and vivid picture of Stamboul. Our modern Don Juan, the hero of the romance, is immaculately proper, and one glimpse of the heroine's face is the consummation of the platonic love-making. Lady Bell is an admirable translator, but the title has been for her too hard a nut to crack.

Great Britain in Modern Africa. By EDGAR SANDERSON. (5s. Seeley.)—Mr. Sanderson has already made his mark as an Imperial historian, and portions of this work are taken from his "Africa in the Nineteenth Century," but these have been carefully revised and brought up to date. As a faithful chronicle of events the book deserves high praise. The style is simple and sometimes graphic, with no attempt at fine writing. A history it can hardly be called, that is to say, there is little attempt to trace in broad lines the forces at work in the scramble for Africa or to diagnose the political and social problems that are awaiting solution. Mr. Sanderson is frankly Imperialist, and his last sentence—"British energy and virtue, exerted in and after that righteous conquest, . . ."—gives the key-note. The reference is to the conquest of the Soudan, but the same judgment is passed on the Boer War. Even Chinese labour is accepted as an obviously beneficent institution that needs no defence, and the heroic Joubert is simply "a coarse-looking, self-educated man of the Covenantor type."

Children's Tales from Scottish Ballads. By ELIZABETH GRIERSON. (6s. A. & C. Black.)—Ballads are a new treasure-house of stories not rifled by that universal provider, Mr. A. Lang, and Miss Grierson has turned them to good account. She can tell a story, and her prose is pleasantly archaic, with nothing of Wardour Street about it. We think she would have done better to incorporate fragments of the text when the ballad rises to perfect poetry; but this is a matter of taste. "Late yestreen I saw the old moon in the sky, and she was nursing the old moon in her arms. It needs not me to tell thee, for thou art as weather-wise as I am, what that sign bodes." Excellent prose; but why turn poetry into prose?

Among the Dark Mountains: or, Cast away in Sumatra. By DAVID KER. (3s. 6d. Blackie.)—A rattling tale, as full of adventures as an egg of meat. In the first chapter we have the two boys besieged on a coral reef (Mr. Ker should know better than to talk of coral insects) by a shark and rescued when they are knee deep; and so in twenty-two chapters they pass through more perils and adventures than St. Paul, Ulysses, and Robinson Crusoe combined till the climax is reached—the Krakatoa eruption, which leaves them stranded, like Noah on Mount Ararat. The interest of the tale is heightened by the author's assurance: "All the adventures are taken from life, and most of them occurred to myself." There is not a petticoat in the story, but boys will play the Desdemona to such an Othello.

Pouchet's The Universe. New edition, revised and edited by J. R. AINSWORTH DAVIS. (Blackie.)—It is pleasant to see this old favourite of our youth rejuvenated like Eson. The comparison is not very apt, for Mr. Davis has wisely refrained from wholesale cutting up, and contented himself with some paring and a few added touches. The prints have an old-world look about them, but at the price it is a wonderful cyclopædia of natural science.

The Ladder to the Stars. By JANE HELEN FINDLATER. (6s. Methuen.)—We are given to understand that Miriam Sadler is one of "the golden children" who sometimes spring from "silver parents." "I hear you're a bit different, Miss Sadler—risen in the scale, so to say," remarks James the footman; but he confides in the housemaid that she "as given me the shivers up me back." We sympathize with James. Miriam's cleverness, which takes people by storm, is too little apparent; but her selfishness and inconsiderateness are too glaringly obvious, and we doubt if she at all deserves her success. Her progres s

to this desirable position is a somewhat crooked one. Many of the minor characters are more attractive and truer to life, and the book owes its interest—an interest which is certainly not lacking—rather to these than to the somewhat unconvincing heroine.

No Friend like a Sister. By ROSA NOUCHETTE CAREY. (6s. Macmillan.)—There is plenty of movement and life in this novel, and we are certainly never bored through its four hundred odd pages. Most of the characters are well drawn, and it seems a pity that the book should be marred by some unnatural ones. Mrs. Warburton, supposed to be so aristocratic, shows almost as much lack of taste and manners as the ladies of fashion in "Evelina." Auguste is of somewhat the same type, while Frances's placid self-confidence and capability would have been distinctly irritating in real life. But there are still left us some half-dozen characters full of life and reality, and it is to these the book will owe its success.

Things seen in Japan. By CLIVE HOLLAND. (2s. net. Seeley.)—We have rarely come across a more dainty and charming little volume than this, with its fifty photogravure illustrations. The text forms a running commentary on the pictures, which are truly artistic and show a real feeling for the beauties of Japan.

Percy Vere. By EVELYN EVERETT GREEN. (Cassell.)—Percy Vere is a little Australian who, on account of an accident, spends several happy months with an English family before he goes to school. His adventures are many and varied, and likely to suit the taste of both boys and girls. Why, may we ask, need the poor boy be called Percy Vere? Is it solely in order to preach the moral of perseverance? It is a feeble joke at best. The illustrations, by R. Lillie, are distinctly good; only Maidie's smile throughout suggests the Cheshire cat.

Popular Natural History. By HENRY SCHERREN, F.Z.S. (Cassell.)—This is an old friend with a new title-page, familiar under the title of "Popular History of Animals." No reason is assigned for the change, and the old seems to us preferable. Two pedagogic principles clash, and the author has elected to proceed from the known to the unknown rather than from the simple to the complex. He begins with man and ends with sponges. His object is to amuse; not to instruct. The young reader will learn little of zoology, but much of the peculiarities and habits of animals. The book is profusely illustrated.

A Little Brother to the Birds. By F. W. WHILDON. (6s. Methuen.)—The story of St. Francis is here retold for children, but with such directness and simplicity that it will appeal to grown-ups no less than to children. The illustrations are worthy of the text.

Paradoxes of Nature and Science. By Dr. W. HAMPTON. (6s. Cassell.)—We have no hesitation in placing this first among what may be called the serious Christmas books of the year. To have read and digested this volume will have taught a boy more science than all the science lectures recommended by Mr. Lyttelton for the age of unreason. The contents of themselves will stimulate curiosity. Here is a sample of the headings:—"A Carriage which on level ground is more easily drawn Loaded than Empty"; "A Sailing-boat which moves more swiftly than the Wind which is driving it"; "A Pound-weight balancing a Hundredweight"; "Ice melting while growing colder"; "A Clock which is never wound and never stops"; "The Cab-horse as a Ballet Dancer." The childhood of philosophy began with asking riddles; but these were mostly verbal puzzles. Dr. Hampton's conundrums will no less attract the youth of to-day, but in working out the answers and verifying them by his own experiments he will be laying the basis of a scientific education.

A Heroine of France. By EVELYN EVERETT-GREEN. (2s. 6d. Nelson.)—No woman's name has filled so large a space in history, in poetry, in the drama, and in romance as that of Joan of Arc. The facts have been thoroughly sifted, and all we can look for is some fresh combination. Mrs. Everett-Green has struck out a new way by putting the story into the mouth of a contemporary knight. She is thus enabled to accept without questioning the miraculous elements. Jean de Novelpont sees at starting the halo round the Maid's head, and he sees at the finish the dove ascend from her pyre. No attempt is made to preserve the colour of the times. The very first words—"The age of chivalry is dead"—are an anachronism, and "the dreamy stillness of the autumn woodlands" recalls Froide rather than Froissart. But, though the atmosphere is modern, the scenes are simply and vigorously portrayed.

In the Days of the Comet. By H. G. WELLS. (6s. Macmillan.)—Mr. Wells has before now sketched several rough drafts of the untrodden world as it gleams before his moving fancy. His machinery has been now a sudden cataclysm, and now a gradual evolution. He clearly finds a difficulty in adapting the old world to his new needs, and has, up till now, been reduced to a mere suggestion of reform, or to a frank pessimism, as in "The Time Machine." His last cataclystic invention, "The Comet," is written in his usual forcible and distinctive style. It is, too, an advance on his earlier work in the thoroughness with which he has identified himself with his leading character. But the new society he has evolved is unconvincing. It is crudely socialistic,

(Continued on page 738.)

THIS ATLAS—

*the Largest, Newest,
Most Complete, and
Cheapest in the World—*

READY TUESDAY, OCTOBER 30.

Size of Maps, 18½ ins. long by 14 ins. wide.

THE need for a good Atlas at a reasonable price has long been felt by all sections of the reading public, and by none more than the great body of men and women of whom the teaching profession is composed. Practical teachers have many faults to find with existing Atlases. The larger ones are too expensive; while those within the compass of a modest purse are incomplete, and fail to respond to the requirements of modern geographical instruction. Several well known Atlases, too, are based on German works of a similar character, with the result that British interests do not receive the attention they deserve. Another serious defect in existing Atlases is that they are not up-to-date and do not embody the latest decisions of boundary commissions and the latest discoveries of explorers. The HARMSWORTH ATLAS will be found to satisfy the requirements even of the most exacting, representing as it does the last word in map-making. The maps which it contains have all been prepared at the London Geographical Institute by Messrs. George Philip & Son, whose name is a guarantee of the highest quality and accuracy. A glance at the points enumerated below will convince any practical teacher that in the HARMSWORTH ATLAS he will find an investment that will repay him tenfold.

500 MAPS AND DIAGRAMS, beautifully coloured and printed from engraved copper-plates, are comprised in the contents of the HARMSWORTH ATLAS. Its 208 pages of large maps—18½ ins. by 14 ins.—represent what has hitherto been obtainable only in large folio volumes selling at £15.

105,000 GAZETTEER REFERENCES supplement the maps and diagrams, giving descriptive and statistical notes concerning every place in the World about which information is likely to be required. No such Gazetteer Index has ever before been compiled.

NOVEL FEATURES attempted by no previous work of a similar kind are to be found in the HARMSWORTH ATLAS. Its unique scheme of commercial maps, for example, render it an indispensable part of the equipment of an up-to-date business office. Another novel feature is the treatment of large-scale reference maps, which are dealt with in such a manner that the details of each important country are given on a scale otherwise only possible on a large wall map.

ISSUE IN FORTNIGHTLY PARTS is now a recognized form of publication for standard works, but this is the first occasion on which an atlas has been published in a form so convenient to the large public who cannot afford the large outlay involved in the purchase in one sum of a great work of reference.

THE LOW PRICE constitutes an absolute record so far as works of this class are concerned. The HARMSWORTH ATLAS gives the equivalent of £15 for the modest sum of one guinea. Each of the 36 fortnightly parts costs but 7d., so that the work is within the reach of any one who can spend or save the trifling sum of ½d. a day.

This Form, handed to your Newsagent to-day, will secure all the 36 Parts.

....., 1906.

and leaves us with a deep sense of thankfulness that the Comet has not yet been reported from the Lick Observatory.

Jack Haydon's Quest. By JOHN FENNIMORE. (5s. A. & C. Blackie.)—The adventures of a schoolboy suddenly called from the playing fields to search for the clue to his father's mysterious disappearance in Burmah. With two trusted companions, Jack throws himself heart and soul into his work, and forthwith plunges into all kinds of dangers and difficulty, carrying the excited reader with him in breathless haste. He is, from the first, dogged by the enemies who have kidnapped his father, and narrowly escapes being the victim of an ingenious, but singularly unpleasant, method of torture and death. Some of the coloured illustrations by J. Jellicoe come out well.

With Roberts to Candahar. By Captain F. S. BRERETON. (5s. Blackie.)—The story opens with the massacre of Sir Louis Cavagnari and his mission in the Balla Hissar, and then follows the fortunes of a young lieutenant acting as *aide-de-camp* to Sir Frederick Roberts in his expedition to Cabul to punish the Afghans. Between his duties as *aide-de-camp* and the private investigations as to the fate of his father, who was with the mission, young Dennison leads a life of perpetual danger; and no boy could fail to be interested in his hairbreadth escapes and the indomitable pluck with which he pursues his aim. The many admirers of "Bobs" will find this presentment of him thoroughly satisfactory. The frontispiece and the illustration facing page 242 are good, but in others there is a want of vigour in the action, and the light and shadow are not well distributed.

An Original Girl. By ETHEL F. HEDDLE. Illustrated by GORDON BROWN. (3s. 6d. Blackie.)—This new edition is a wonderful three and sixpence worth. The original illustrations are reproduced, and the printing and get-up of the book very satisfactory.

The Car of Destiny. By C. N. and A. M. WILLIAMS. (7s. 6d. Methuen.)—It is a bold idea to make a motor car the central figure in a romantic story, and the authors are to be congratulated on the skill with which they treat their difficult subject, endowing the "Gloria" with something of a personality, and keeping all unpleasant details, such as the smell of petrol, noise, and dust well in the background. The ardent Spaniard who pursues his lady love through countless dangers at once enlists our sympathy. The English girl is somewhat tame, and much less attractive than Maria del Pilar. The scenery is described in a vivid and picturesque fashion, and the numerous photographs taken from well chosen points of view add much to the attraction of the book.

The Life Story of a Fox. By J. C. TREGARTHEN. (6s. A. & C. Blackie.)—This new volume of the "Animal Autobiographies" will appeal to all lovers of animals and of an outdoor life. It is written in a simple and natural way, and we seem to breathe the fresh country air as we read. There are some excellent descriptions of the ways of wild creatures of the moorland, and a graphic account of "the great run" from which our Fox escapes alive, because his battered and exhausted condition touches his worst enemy with compassion. This should be a welcome gift to any child. The illustrations are often good as to colour, but fail in clearness.

The Carroll Girls. By MABEL QUILLER-BOUCH. (5s. Hodder & Stoughton.)—A pleasantly written story, the interest lying in the development of character in four girls whose selfish mother contrives for a time to shift the burden of bringing them up to a distant cousin. This is the salvation of Esther, the eldest girl, who has suffered most from the mother's mismanagement. Her difficulties and struggles with her jealous tendencies are well described, but there is a touch of exaggeration in her behaviour to Penelope, and the melodramatic scene with the cattle is a hackneyed means of conversion. Still there is much that girls will find amusing.

Messrs. Blackie send us a new edition of *Lords of the World*, by A. CHURCH (3s. 6d.). Paper, print, and illustrations are good.

Chums. By JOHN HASSALL. (2s. 6d. Nelson.)—Billy and Reggie give an account of their sports together, with free remarks on each other interspersed. This serves as a very suitable comment on the clever illustrations. Mr. Hassall's work is always full of vigour and originality. If we may criticize such excellent work, we should say the treatment of the trees, such as those on page 6, was not altogether successful.

Blackie's Children's Annual. (3s. 6d.)—A book of which small children will not soon tire, for it has so much variety both in the printed matter and illustrations. Altogether a bright and attractive book.

The Motor Book. (1s. Nelson.)—The very name will thrill the heart of the modern boy. The illustrations, if not highly artistic—and how could they be?—will doubtless appeal to the youthful imagination.

The Sleeping Beauty. (1s. Nelson.)—The illustrations in this are very harmonious in colouring, and the story is shortly and simply told.

The Wonderful Voyage. By RUTH COBB. (3s. 6d. Nelson.)—A wonderful voyage indeed, in which is seen anything from a red Indian to Vesuvius in eruption. The illustrations vie with the letter-press in its wild flights of fancy. Who would not go on such a Cook's Tour?

Robinson Crusoe. (1s. Nelson.)—A brightly illustrated edition, which will serve well to replace old copies.

C. A. JONES' "CAJAC" Extension Ladders.

(Patent applied for.)

Registered Trade Mark "CAJAC."

Made in TWO SECTIONS only.

HARDWOOD TREADS.

Stocked in Eight Sizes
up to 30 feet (extended height).

Possess the following advantages

over all others:—

1. Greater constructional rigidity.
2. No iron clutches.
3. No possibility of catch getting out of order.
4. Catch bound always to take the tread on its underside, along its entire length, thus preventing wearing of treads.

THE COMPLETE PHOTOGRAPHER. By R. CHILD BAYLEY. With over 100 Illustrations. Demy 8vo, 10s. 6d. net.

"The Complete Photographer" deals primarily with photography as practised to-day, both as a hobby and as a valuable help to the student, the engineer, and the scientific man. An historical sketch of the processes and of the apparatus is given, and sufficient of the theoretical basis of camera work to enable the reader to understand the why and wherefore of the methods that later on are described in detail.

THE COMPLETE RUGBY FOOTBALLER. By D. GALLAHER, Captain, and W. J. STEAD, Vice-Captain, of the New Zealand ("All Blacks") team. With many Illustrations. Demy 8vo, 10s. 6d. net.

In this essentially practical work, Mr. Gallaher, as he says, for the first and only time gives away every secret of the peculiar formations and tactics of the side that he commanded, explaining lucidly each movement and the precise functions of each player, both from the theoretical and practical points of view, and illustrating his text with numerous diagrams and photographs.

SECOND EDITION.

CHARLES DICKENS. By G. K. CHESTERTON. With Portraits. Demy 8vo, 7s. 6d. net.

"Mr. Chesterton undoubtedly has something very like genius, and some of his flashes of intuition in this book are wonderful."—*Spectator*.

"Full of good things and genuine appreciations."—*Manchester Guardian*.

"Mr. Chesterton has produced a book of extraordinary interest."—*Daily News*.

"Quite a remarkable book."—*Westminster Gazette*.

"It is a remarkable book, so brilliant, so vigorous and vital."—*Daily Telegraph*.

"It is all excellent writing . . . a delightfully unconventional book."—*Punch*.

ST. CATHERINE AND HER TIMES. By the Author of "Middlemarch." With 28 Illustrations. Demy 8vo, 7s. 6d. net.

This book is not only a biography of the saint, but is also a picture of Italy in the Trecento. The author first tells the story of Catherine's girlhood, her domestic troubles, and the discovery of her semi-miraculous powers. Then follow chapters on her entrance into politics, her appearance in Avignon, her marvellous influence, her conversion of the Pope, and her return with him to Rome. The final chapters describe her life in Florence and in Rome.

THE CHILDREN OF THE NATION. By the Right Hon. Sir JOHN GORST. Demy 8vo, 7s. 6d. net.

This book calls attention to the national danger involved in neglecting the health of the nation's children. It discusses Infant Mortality, the over-work and under-feeding of children in the elementary schools, medical inspection of schools, children's ailments and medical aid, the sanitary condition of schools, the mischief done in infant schools, hereditary diseases, child labour in factories and mines, and housing in town and country.

A CHILD'S LIFE OF CHRIST. By Mrs. PERCY DEARMER. With 8 Illustrations in Colour by E. FORTESCUE BRICKDALE. Large crown 8vo, 6s.

Numbers of parents have felt the need of a life of Christ for their children, but nothing has yet been written which has at all come near the position of a school-room classic. This new life is from the pen of Mrs. Percy Dearmer, who is well known as a writer of books both for and about children; it aims at providing a narrative that is simply and dramatically written, and at the same time combining with the story that teaching of Christ that forms so large a part of the four Gospels.

THE RHINE. By S. BARING-GOULD. With 56 Illustrations, of which 8 are in Colour. Crown 8vo, 6s.

A sketch of this notable river from Cleve, where it passes into Holland, to Mainz. The importance of this river cannot be realized without a knowledge of the part it has played in history, and of the three great electorates on its banks, and of the noble families that built their castles overlooking it. The whole is dealt with in a pleasant, gossiping style.

THE HEALTH OF THE SCHOOL CHILD. By W. LESLIE MACKENZIE, M.D. Crown 8vo, 2s. 6d.

A LITTLE BROTHER TO THE BIRDS. By F. W. WHELDON. With 15 Illustrations, 7 of which are by A. H. BUCKLAND. Large crown 8vo, 6s.

This is a life of St. Francis of Assisi for children, retold from the early lives and legends in a simple and pleasant manner. There is so much in connexion with the sweet saint of Assisi that should appeal to the unsophisticated minds of childhood and youth that it is strange the attempt to interest children in him has not been made before.

SECOND EDITION IN THE PRESS.

A WANDERER IN LONDON. By E. V. LUCAS. With 52 Illustrations, of which 16 are in Colour by NELSON DAWSON. Crown 8vo, 6s.

"It is a work of infinite solace and comfort, a literary joy, a companion."—*Morning Leader*.

"Mr. Lucas knows his London well, and all its treasures, and one could not have a better-informed nor a more genial guide."—*Tribune*.

"Suggesting, revealing, enlightening, instructing."—*Daily News*.

THE ROYAL SOCIETY: or, Science in the State and in the Schools. By Sir WILLIAM HUGGINS, K.C.B., O.M., D.C.L., F.R.S. With numerous Illustrations. Royal 8vo, 4s. 6d. net.

The four Presidential Addresses treat of subjects of great and general interest, namely, what science, as represented by the Royal Society, has done in the past, and is doing now, for the nation; and the place and importance of science in education.

A SAILOR'S GARLAND: Poems of the Sea. Collected by JOHN MASEFIELD. Crown 8vo, 3s. 6d. net.

In this anthology of poems of the sea, Mr. Masefield has gathered together a large number of poems and ballads, old and new. It contains many poems by living writers, and a series of poems illustrating our sea history from the fourteenth century until the present day. Other sections of the anthology contain chauties, or sailors' working songs; ballads of pirates and of the wonders of the sea; and ballads of the joys and hardships of the sailor's calling.

AIMS AND IDEALS IN ART. By GEORGE CLAUSEN, A.R.A. With 32 Illustrations. 5s. net.

This book contains eight Lectures, delivered to the students of the Royal Academy in 1906, and deals with questions of composition, of style, and of the choice and treatment of subject, rather than with the problems of execution. Their aim is to lead the mind of the student to the consideration of matters which are apt to be overlooked in the ordinary routine of school work: to make the student think.

SIX LECTURES ON ART. By GEORGE CLAUSEN, A.R.A. With Illustrations. Third Edition. 3s. 6d. net.

A GLOSSARY OF TERMS USED IN ENGLISH ARCHITECTURE. By THOMAS DINHAM ATKINSON, Architect. With 264 Illustrations. Fcap. 8vo, 3s. 6d. net.

The size and general style is the same as the author's "English Architecture." About 800 terms are explained. Some of these are merely defined, but of many an historical account is given. The book is intended for those who are not members of the profession, and minute technical detail is avoided.

FRANCISCAN DAYS. By A. G. FERRERS HOWELL. Crown 8vo, 3s. 6d. net.

THE GOSPEL ACCORDING TO ST. MARK. Edited by J. C. DU BUISSON, D.D. With a Map. Fcap. 8vo, 2s. 6d. net. [*Churchman's Bible*].

ANTONY AND CLEOPATRA. By WILLIAM SHAKESPEARE. Edited by R. H. CASE. Demy 8vo, 2s. 6d. net. [*Arden Shakespeare*].

LOVE'S LABOUR'S LOST. By WILLIAM SHAKESPEARE. Edited by H. C. HART. Demy 8vo, 2s. 6d. net. [*Arden Shakespeare*].

TWO GENTLEMEN OF VERONA. By WILLIAM SHAKESPEARE. Edited by R. WARWICK BOND. Demy 8vo, 2s. 6d. net. [*Arden Shakespeare*].

Please write to Messrs. METHUEN for their New Illustrated Catalogue and Announcement List, which are sent post free to any applicant on receipt of name and address.

A GREAT NEW WORK.

READY IN A FEW DAYS.

CASSELL'S NEW GERMAN DICTIONARY.

By **KARL BREUL,**

M.A., Litt.D. (Cambridge), Ph.D. (Berlin), Cambridge University Reader in Germanic.

Upwards of 1,300 pp. Demy 8vo, cloth, 7s. 6d. net; half leather, 10s. 6d. net.

This great Dictionary has been in preparation for over seven years, and will be published during November.

Dr. BREUL has had the advantage of the current edition of Cassell's famous "German Dictionary" as a basis, and has produced, as a result of the most earnest, protracted, and systematic labour, a new Dictionary of the highest importance and value.

1. Not only have many thousands of new words and phrases been added, but a large number of the old renderings have been corrected and rearranged.

2. Words etymologically connected have, as a rule, been grouped under the same heading; but in many cases homonyms of different origin, which had been confused in the former edition, have now for the first time been separated.

3. The forms of all the strong and irregular verbs have been entered in their alphabetical place in the main part of the Dictionary.

4. In the German-English part the German accentuation has been indicated: in the English-German part, and in the lists of the German strong and irregular verbs, the latest official spelling of 1903 (as adopted by Germany, Austria, and Switzerland) is

given. This spelling, which will probably be generally adopted in the future (*Efeu, Tür gibt, imstande sein*), has hitherto not been given by any other English-German dictionary.

5. The special difficulties experienced by English-speaking people in writing German have received great attention, and the editor's extensive collections of such difficulties have been largely drawn upon in order to give characteristic instances of different usages of words, and to provide suitable renderings.

6. A great improvement on the old edition is the insertion, in brackets, of the case required by all German prepositions that take more than one case. The want of such information is the frequent cause of mistakes in German composition, and the means of avoiding these errors are not always discoverable in larger dictionaries.

7. The cases have also been added in the case of reflexive verbs such as *sich denken, sich einbilden, sich verschaffen*.

8. In the English-German part great care has been bestowed upon the rendering of foreign terms by their German equivalents. In conformity with the moderate principles of the "Allgemeiner Deutscher Sprachverein," German renderings are generally given alone, or in the first place, where in the previous edition the English word had merely been rendered by a German homonym.

9. Among the new words and phrases admitted will be found many thousands of idiomatic phrases, well known proverbs, and familiar quotations; many ordinary colloquial expressions and a number of German slang terms in common use that often prove puzzling to English students; also some very important dialect terms in both languages. Moreover, the new cycling terms, ordinary postal, military, tennis, historical, geographical, phonetic, and linguistic expressions, newspaper terms and advertisements, the chief technical terms of commerce, education, literature, and poetry. Some space was gained by the omission of some lengthy translations of unimportant Biblical passages, some vulgarisms and rare technical terms.

10. The very full indexes of names and abbreviations and the lists of strong and irregular verbs in both parts are for the most part new, and will, it is hoped, greatly add to the usefulness of the book.

A Prospectus, giving Specimen Pages of CASSELL'S NEW GERMAN DICTIONARY, will be sent on application.

CASSELL & COMPANY, Limited, La Belle Sauvage, London, E.C. ;
PARIS; NEW YORK; and MELBOURNE.

Messrs. Constable's List

A History of the Ancient World. By

GEORGE STEPHEN GOODSPEED, Ph.D., Professor of Ancient History in the University of Chicago. With numerous Illustrations (many in colour), Maps, and Plans. Large crown 8vo, 7s. 6d. net.

Guardian.—"A work of great merit. . . Both students and teachers will find the book useful and suggestive. May be cordially recommended to both teacher and student."

Oxford Magazine.—"As a school book this history will be very valuable. . . The very best possible introduction to the reading of history. Any one teaching a single period of history wants such a sketch. The style is precise and clear, and the book equipped with plans, maps, charts, bibliographies, outline reviews, and excellent illustrations."

Cambridge Review.—"This is one of the most useful and sensible histories of antiquity for the use of students that we have seen."

Daily Mail Gazette.—"Although primarily designed for teachers and schools, it will be read with delight by all studious persons outside academic walls."

A Short History of Ancient Egypt. By

PERCY E. NEWBERRY and JOHN GARSTANG. With 4 Maps. Crown 8vo, 3s. 6d. net.

Athenaeum.—"A book which furnishes to any one unacquainted with Egyptology a better idea of Egyptian history than he would be likely to gather from the study of many more pretentious volumes."

Tacitus, and other Roman Studies. By

Professor GASTON BOISSIER. Translated by W. G. HUTCHISON. Demy 8vo, 6s. net.

Time-Table of Modern History. By M.

MORISON. Oblong folio, cloth, 12s. 6d. net.

CONTENTS.—Parallel Tables, Genealogical Tables—Ruling Monarchs—General Chart of Ancient and Modern History—Index—Maps showing Europe at various Periods.

A History of Education. By JOHN DAVIDSON.

Second Edition. Crown 8vo, 5s. net.

Great Englishmen of the Sixteenth

Century. By SIDNEY LEE, Litt.D., Author of "A Life of William Shakespeare," &c. Illustrated with Portraits. Demy 8vo, 7s. 6d. net.

CONTENTS.—Preface—The Spirit of the Sixteenth Century—Sir Thomas More—Sir Philip Sydney—Sir Walter Raleigh—Edmund Spenser—Francis Bacon—Shakespeare's Career—Foreign Influences on Shakespeare—Index.

NEW AND POPULAR EDITION.

Boswell's Life of Johnson. Edited by

AUGUSTINE BIRRELL, K.C., M.P. With Frontispieces in Photogravure. 6 Vols. Fcap. 8vo, cloth, paper, label, 6s. net the set.

Spenser's Faerie Queene. Edited by KATE

M. WARREN. In 6 Vols. Fcap. 8vo, cloth, 1s. 6d. net per Vol. Presentation Edition, with Photogravure Frontispiece. Cloth gilt, 15s. net the set.

Natural History in Zoological Gardens.

By FRANK E. BEDDARD, F.R.S., &c. Being some account of Vertebrated Animals, with special reference to those usually to be seen in the Zoological Society's Gardens in London and similar Institutions. Illustrated by GAMBIER BOLTON and WINIFRED AUSTEN. Crown 8vo, 6s. net.

Extinct Animals. By Prof. E. RAY LANKESTER,

F.R.S. With a Portrait of the Author, and 218 other Illustrations. Demy 8vo, 7s. 6d. net.

Westminster Gazette.—"Will not only delight juveniles, but interest and instruct adults as well."

Illustrated London News.—"A book that must be read."

BOOKS BY ERNEST THOMPSON SETON.

Animal Heroes. Being the Histories of a Cat, a

Dog, a Pigeon, a Lynx, Two Wolves, and a Reindeer. With 200 Illustrations by the Author. 8vo, 6s. net.

Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

IDOLA PULPITORUM.

THE PITFALLS OF THE PRACTICAL TEACHER.

By Prof. JOHN ADAMS.

WHEN Dr. Johnson maintained that all there is to be known about education has been known long ago he did not necessarily imply that this knowledge is widely spread. Even if it be true that there is no room in education for fresh discoveries, there may be a crying need to bring within the reach of those who require it the knowledge at present available. Experienced teachers have often had to win for themselves, as individual gains, truths that ought to be the commonplaces of their profession. Training can, no doubt, provide the intending teacher with a great body of established truths, and can anticipate a certain number of the errors to which all teachers are prone at the beginning of their life-work. But once that work has been begun there are many opportunities to make further errors, and little or no provision to call attention to them, to say nothing of correcting them.

The schoolmaster, like every other professional man, learns his business by making blunders and rectifying them. But blunders differ widely in the range they allow the blunderer before their consequences call him to account. Some must be paid for on the spot, and these, after all, are the least dangerous. It is the blunder that runs up a long bill against us that we really ought to dread. Teachers often go on repeating the same blunder year after year, simply because nothing has happened to show up the blunder as a blunder. Many teachers go through life without ever once receiving a word of friendly technical criticism on their professional methods. No doubt they hear a good deal of vague fault-finding from parents, school governors, members of commissions, and "others interested." But all such criticism is given from the point of view of one testing the results; not of one who is interested in or capable of giving a judgment on the methods. It is true that under the new scheme of inspection of secondary schools there is now a chance for the teacher to receive criticism from

a Government officer who has had wide experience as a teacher. But our profession is not particularly happy at this prospect of technical criticism. Everything, of course, depends upon the spirit in which the criticism is offered. But under the best conditions the sensible teacher is more willing to profit by such criticism than to thank the critic, or to admit that the critic is in the right. A generalized printed criticism, applicable to the world at large, is doubtless of much less value to the individual teacher than the direct criticism of a man on the spot, but it has the great compensation of getting at weak points without injuring the self-respect of the teacher. It has the further advantage that, in so far as it is successful at all, it succeeds in the right way; for the teacher who adopts a critical attitude towards his own work is in a much healthier state of mind than the teacher who accepts, with the best grace he can, the criticism forced upon him from without.

It has occurred to the editor, therefore, that it would probably be a useful thing to get some experienced teachers, each one particularly conversant with the teaching of a special subject, to deal with the errors that are most common in the teaching of the subjects ordinarily taught in a secondary school. Those who will contribute the articles are teachers who are not only specialists in their subjects, but have had exceptional opportunities of seeing the subject taught under all sorts of conditions. It is not enough that a writer should tell, as the manner of some is, how he himself deals with a particular subject. He must have tried all manner of experiments, and have seen and studied the methods and experiments of many others. The purpose of the articles will not be to provide a "How to teach So-and-so" series. It seems more likely to be profitable to point out the lines of probable error than to seek to indicate what may be claimed to be absolutely the best lines to follow. There are many ways that may be claimed to be right, more or less; the degree of rightness depending upon the suitability of the way in question to fit in with the qualities and circumstances of the person using it. To determine the best method in a given case we must have a complete knowledge of all the circumstances of that case. On the other hand, there are certain methods in all subjects that are inherently bad. They are bad under all circumstances, though their badness may sometimes be cloaked by the excellences of the teacher who uses them. Such a teacher often produces good results in spite of his bad methods; but, obviously, he would produce still better were he freed from the drag of his errors. It is not uncommon to find intelligent and earnest teachers confessing that they have followed wrong methods for years, and have only realized the fact when their attention was drawn to it by some accidental circumstance, frequently by a casual remark of a fellow-teacher.

It is true that some teachers maintain that there is only one right way of teaching any subject. Such teachers are apt to add that from their experience of their pupils it seems that human nature is not likely to accept the true method till it has tried all the wrong ones. They are therefore likely to ask: Why suggest wrong possibilities? Why not give the right method, and let those who are in error correct themselves by the perfect pattern? But, while a teacher may be sure that certain common methods are wrong, he may not be sure that he knows the absolutely best method. It is therefore more modest to adopt the plan of indicating popular lines of error. Besides, it is more interesting. Finally, it is what our contributors are asked to do.

The rest of this article will be given to the consideration of certain common errors in method that have come under the writer's observation, errors that are not confined to any particular subject, but are common to most subjects. Sometimes error arises from what must be regarded as culpable neglect of the literature of our profession. Surely it is inexcusable for a master at one of our great public schools to expose his ignorance of the elements of modern psychology by seeking to cultivate the memory of his pupils by giving them verses to learn by rote. Errors of this kind are becoming rare. More usually the error is perpetuated because the teacher's attention has never been called to it as an error.

There are certain faults in teaching that are painfully familiar to every one who has occasion to see teachers of all kinds at work. Probably the most universal error in teaching is talking too much. If Mr. H. G. Wells is right in his contention that "the pressing business of the school is to widen the range of

intercourse," the average teacher must be accused of interfering with this pressing business by making the intercourse in school so one-sided that it is hardly worth the name. This excess of speaking has many causes, some of them more creditable than others. The least discreditable is the desire to leave nothing unsaid that may elucidate the point under discussion. But, unless he hopes to exhaust the universe, the teacher can never hope to say the last word that can be said on a given subject. He must accept the poet's warning and reject the theory that "nothing of itself will come." His plan is to say just as much as will set the pupil-mind working in the right direction. Every additional word is a blunder.

One obvious effect of the teacher's ceaseless babbling is the loss of the power of commanding attention. It is very difficult for a class to believe that a teacher who is talking all the time is worth taking seriously even when he appears to be in earnest. One form of unnecessary talking is particularly harmful in inducing inattention on the part of the class. This consists in the very common tendency teachers have to repeat the answers they receive from their pupils. Among young teachers, at any rate, no habit is more difficult to eradicate than this. The explanation is not hard. In the first place, the repetition is favoured by the natural tendency common to all of us to imitate. The teacher's echo is almost an organic reaction to the stimulus of the pupil's voice. But, further, there is the relief due to the filling in of the time that must elapse before the teacher is ready with a further remark or a new question. The teacher is very commonly unconscious of the repetition, and even denies it when challenged. The habit is quite common even among experienced teachers, who only need to have their attention called to it to realize its evil effects on the attention of a class. To eradicate this habit usually means a considerable effort; but the result is worth the trouble.

On the other hand, a cold and calculating taciturnity is to be avoided. The teacher has to remember that true progress implies an intellectual glow in the reaction between pupil-mind and teacher-mind. Though the teacher can speak too much, he cannot speak too clearly. It is such a platitude that no one cares to father it; but it would be well if teachers would realize that more bad teaching is due to lack of clearness of speech than to any other half-dozen causes. One of Her Majesty's Chief Inspectors of Training Colleges used to spend most of his official time in impressing this truth on young teachers, and who shall say that he did amiss?

Too many teachers talk as if they did not quite mean what they say—a fatal blunder. The pupil must be made to feel that the teacher always means something; but this feeling cannot be cultivated if the teacher is always talking and seldom seems to mean very much. A special form of this lack of force in speech is connected with a habit that goes deeper than the mere manipulation of the voice. Many teachers, particularly those with a tender conscience in intellectual matters, are very fond of "asides." They make a general statement that is quite true for the stage at which the pupils at present stand; but no sooner is the statement made than an exception occurs to the mind of the teacher, and he at once proceeds to make a side reference to the exception—mainly to satisfy his own conscience. The relation of the rule to the exception opens up a stimulating vista to the man in search of errors in methods, but the special point here is that, whether the exception is to be dealt with or not, it is certainly a wrong way to introduce it in an aside. The thing is either worth saying or it is not.

The question of asides brings up the common fault of confounding class teaching with individual teaching. It is quite possible to deal with a class as a group of individuals, as in the case Mr. Quick tells us of, in which the master spent a whole hour daily in hearing his boys repeat their memory work one after the other. This is seldom done now in a wholesale fashion; but any one who is familiar with class work from within is aware that there are apt to be lapses from class teaching to individual teaching. Such lapses are always blunders. The skilful teacher knows that he may teach the individual through the class and the class through the individual; but the moment the teacher does a little instruction for the sole benefit of an individual he has lost his grip of the class as a class, and is in error. Teachers cannot be too careful in guarding against such lapses.

A very common error made by painstaking and enthusiastic teachers is to judge of the success of a lesson by their own

sensations. After a lesson for which a teacher has made special preparations, and during which everything has happened just as the teacher has planned that it should, he is apt to go away with the impression that he has taught particularly well. It is quite possible that he has; but the question is not how he feels about it, but how much of the work have the pupils done themselves. The real test of genuine work in school is whether the pupil is doing his fair share. This does not mean that the pupils must find the work disagreeable. We have surely got beyond the stage of Mr. Dooley when he tells us that it really does not matter what children learn at school, so long as they find it disagreeable enough. The pupils may have enjoyed the work as much as the teacher has, and yet they may have done genuine, profitable work.

It is a common error with the more painstaking teachers to prepare their lessons in too great detail. It is probably impossible to prepare a lesson too well, but is quite common to prepare it in such detail as to interfere with the natural working of the pupil-mind. Certain dull minds no doubt require the subject to be presented to them in very minute portions at a time; but certain others are ready to take half a dozen steps for the dull person's one. In dealing with a class, no doubt, the teacher ought to take account of all the little steps that the dullards find it necessary to take; but at the same time he ought to be prepared to let the clever boy omit as many of these steps as he likes, so long as he is going in the right direction. Since he is the teacher of a class, however, the master must contrive to give the clever boys such additional exercises as shall cover the intermediate steps. In this revision work the clever boy is getting practice in applying what he has already learnt, while the dull boy is learning the facts for the first time. In this way each member of the class gets appropriate work, and still the class is treated as a class.

With regard to the use of illustration, there is a greater danger of defect than of excess. The second line of danger is more important, and consists in the very common tendency to lack of variety in illustration. Resisting the temptation to expand on this theme, I would limit myself to the commonest error—that connected with what is called the "awful example." This is never in place where there is not a standard within the pupil's reach. A mis-spelled word, for instance, should never be brought before the pupil to show him how not to spell it. On the other hand, a bad drawing may be used to illustrate a good one, since the matter can be placed before the pupil, and the decision left to his eye. To the eye *feild* looks as comely as *field*, but a drawing of a house with contradictory vanishing points is unconvincing even to the novice, and can be demonstrated to be wrong.

One is tempted to go on with details about little practical errors, such, for example, as omitting to make sure at the beginning of a lesson that all the pupils know what the subject of that particular lesson is. Nothing tends so much to secure careful preparation and intelligent attention as the invariable habit of insisting upon each pupil knowing exactly what the lesson for the day is to be. But it will probably be of more advantage to deal with a very common error of a fundamental kind based upon the coercive power of a popular word. This word is "thorough." No one will blame teachers for insisting upon thoroughness as the essential element in any method of carrying on their work. There is none the less serious danger of error in this pursuit of thoroughness. Everything depends upon the stage at which the thoroughness is tested. It may well be that thoroughness in detail may mean inefficiency in the subject as a whole. There are two tendencies among teachers dividing them into opposing camps. The first set of teachers practically claim a monopoly of the word "thorough." Their principle is to keep their pupils at one small piece of work till that piece has been perfectly done *once*, and then they proceed to another piece which they treat in the same way. The other set select a fairly wide range in a given subject and take the pupils rapidly over it, without insisting upon a great degree of accuracy on the first occasion, but returning over the whole field again, time after time, with ever increasing degrees of accuracy. At the end of a sufficiently long period it is claimed that by the second method results are attained that are better than those attained by the first, even in respect of the thoroughness on which the first set lay so much stress.

The idol of "thoroughness at every stage of progress" is a very dangerous one, inasmuch as it imperils the very thorough-

ness it claims to foster. The usual argument is: "A little bit thoroughly learned is infinitely better than a great deal only imperfectly mastered." With regard to certain matters the argument is unassailable. There are certain things that we either know or do not know. A paradigm or a chemical or a mathematical formula must be thoroughly known, or it is worse than useless. But the second, or rapid impression, method does not propose that the pupil should learn anything carelessly or inaccurately. Its principle is a regulation of the incidence of attention with regard to the subject as a whole. On the first occasion of covering the whole field selected the attention is admittedly confined to certain suitable points; but these are mastered. Certain other points are treated more or less cursorily; certain others are not touched at all. At each repetition of the whole course different points are emphasized, but all the points are kept in close relation to each other and thus help to explain each other and the whole of which they form a part. It is this interaction of the parts that forms the special value of the rapid impression scheme. Very frequently some point that is of great difficulty in a particular unit of the subject becomes quite easy in the light of what comes in the next unit. A common figure of speech with those who recommend the "thorough" method is that the pupil must liken himself to an invading army which must never leave an untaken fortress in the rear. This, indeed, is the dangerous part of the theory. Very often a particular difficulty is practically insurmountable till a certain later stage has been reached. It is bad policy to sit down before a difficulty and waste valuable time over it, when by going a little bit forward the difficulty disappears. The "thorough" system is the educational application of the good old frontal attack that led to such peculiar results in South Africa. Besides, even the figure is antiquated. The Germans were fairly successful in 1870-1 when they masked Metz and Strasbourg and made straight for Paris.

Obviously this is not a mere matter of the *ary*. It calls for a decision at the beginning of each term. A certain amount of matter has to be got up during the term, and the teacher must make up his mind regarding the method of his attack. Experience has shown that it is an error to follow strictly the "thorough" method. What is wanted is a selection of the details to be thoroughly mastered, and a correlation of those details in such a way as to lead to the most thorough co-ordination of them all by the end of the period selected, whether that period be the term or the session.

[The subjects that are to be dealt with in this series are the teaching of English, the classics, mathematics, modern languages, science, geography, and history. If any reader of *The Journal* has any point to which he wishes special attention directed, or any question to ask, the editor will be glad to forward any communication to the contributor dealing with the particular subject concerned.]

CORRESPONDENCE.

THE LONDON COUNTY COUNCIL AND ELEMENTARY TEACHERS.

To the Editor of The Journal of Education.

SIR,—I venture to suggest that the pessimistic tone of "L. B.'s" letter in your September issue is not justified by facts. During the last five-and-thirty years elementary education has monopolized public attention, and it cannot be denied that a vast improvement has taken place in all that relates to the status both of the teacher and of the scholar. It may be conceded that more might have been done, and that much might have been done in a better way; yet we may well be thankful for past mercies and full of hope for the future.

The interests and well-being of the elementary teacher are so bound up with those of the body politic that it would be a matter of sincere regret to the public if he (the teacher) should feel with justice—to take but two points out of your correspondent's letter—that his influence and co-operation were disparaged, and that he was not awarded an adequate remuneration for his labours.

Looked at in a broad way—the only satisfactory mode of regarding the question—it would appear that the first charge

cannot be sustained. These teachers, in combination, form a powerful association, more than 60,000 strong; they publish a widely distributed organ; they, alone of all educational bodies, maintain two or more Parliamentary representatives, who exercise an enormous influence in the shaping of educational politics, whilst they persistently keep a shrewd eye on the narrower field of the interests of their clients.

This does not look as if the elementary teacher were denied his due share of initiative and criticism. In the interests of the community at large, it were much to be desired that the forces of secondary education were consolidated in the same way, and with the same success.

In respect of salaries, the question becomes comparative. Naturally we should all like to have a larger salary, one commensurate with our own views of our importance and deserts; but we must not forget that we are merely units in a vast industrial army. To prove that we are underpaid, we should be required to show that we were placed at a disadvantage compared with those engaged in similar work. The fairest thing, therefore, in this case, is to contrast elementary with secondary teachers. In respect of teachers in secondary schools, both public and private, the matter is complicated by the fact that many receive board and lodging as part of their salary; but, taking all classes of such schools into account, and making necessary allowances, I doubt very much whether the average salary for men and for women respectively exceeds £135 and £100. Moreover, I could a tale unfold as to the woes of assistants in secondary schools with reference to their unrecognized status, insecurity of tenure, long hours of work, indifferent prospects as they advance in years, &c., but I will leave all these things to the imagination of your readers.

My argument, in the present connexion, leads me to accentuate very strongly the fact that, as members of the middle and professional classes, the education of these men and women, through all its stages, has to be met from their own resources; and that, if they go to a University, they cannot even begin to earn a salary before they are twenty-two or twenty-three years of age. The question of endowments and scholarships does not materially alter the case.

Per contra, what do we find? The elementary teacher is provided for by the community from the first: his schooling is free, his education at pupil-teachers' centres is free (even his travelling expenses being paid); his training college course is largely free, whilst he is bountifully helped out of public funds if he wishes to obtain a University degree. Further, he commences to earn at an early age; his salary is assured and regularly paid; he incurs no bad debts; if he be active and successful, he can run up to a considerable maximum (£800 and £600 for men and women respectively, in London). Thus, in exceptional cases, of course, the emoluments drawn by husband and wife together, where both have attained to the headship of departments, may be anything from £1,000 to £1,400 per annum.

Of course, I am aware that many elementary teachers are getting but from £40 to £50 a year; in these cases, however, the requisite qualifications are of the simplest description, and in respect of such teachers we are justified in asking the question—What would persons possessing such a slender equipment be worth in any other employment?

Again—to proceed once more to generalities—"L.B." is not required to hire a schoolhouse, to pay a large rent for a residence, to provide for assistant teachers out of his own income, to pay rates and taxes on school premises, to advertise or tout for pupils, to supply prizes and treats out of his own pocket, to pay for substitutes when he takes a holiday, to bear the loss entailed by epidemics, to provide a fee when his candidates go in for examination. His school is inspected and his pupils are examined, free of all charges, by gentlemen of refined manners and of lofty intelligence, who, in the kindest and most benevolent manner, deign to point out the weak places in his teaching and discipline, and who even condescend to pay "surprise visits," so anxious are they to take every opportunity of ministering to his gratification and instruction. Still, again, he works but five hours a day, and but five days a week; he spends from six weeks to two or three months in holidays, free from all care (sometimes even more than three months, when the school is closed by reason of sickness) and without any deduction from his pay however long the school may remain shut. Lastly, when he is tired of his work he can lay it down

at the age of sixty-five, and, in a certain number of cases, can then enter into the enjoyment of a comfortable pension.

Furthermore, without being called upon to reimburse the community one farthing for the money expended in his education, he can leave the profession whenever he can secure a better berth—as Inspector, clerk to some Local Education Authority, master of higher-grade or of secondary school, publisher's traveller, or the like.

Even if he wished to be put upon the Teachers' Register, this was effected without any trouble on his part, inasmuch as he was automatically placed on the list at the expense of his poorly paid secondary brother, who, in addition, had to take very elaborate steps to apprise the Registration Council of his credentials.

"L.B." has a special grievance against the London County Council Education Committee; but it must be remembered that that Committee has to deal with men who are largely members of a powerful trade union, and it is hardly to be supposed that the demands of such a body could be granted, in full and at once, by a Council expressly appointed to safeguard the interests of the general public. Further, the temper of the L.C.C. would hardly be improved by the advice tendered, by one in authority, to members of the N.U.T. to the effect that they should hesitate before entering the service of such an inefficient and retrograde Authority.

I confess I smiled when I read "L.B.'s" reference to "pert lads" at the Council House. (They were not "L.B.'s" past scholars, I hope.) The representatives of elementary teachers were never tired of girding at the "local manager" of past time. I will say nothing of the sympathy and counsel so frequently associated with such a neighbour and friend; but, taking matters in this connexion at their worst, the prophecy is swiftly coming true which many of us felt impelled to make in face of the creation of these same Authorities—viz., that their little finger would be thicker than the loins of the benevolent despot of the past. I fear it will be no consolation to "L.B." to be told that the administration of elementary education will tend to fall more and more into the hands of these same "pert lads," who ought, indeed, in that position of central authority, to represent the fine flower of the Council schools.

The facts I have adduced are but rarely marshalled before the eyes of the public, and (witness "L.B.'s" letter) are altogether ignored by those representatives of elementary teachers who touch on questions of salary; but, in the face of the persistent endeavours of the N.U.T. to force up salaries and to pit one Local Education Authority against another, it is but fitting that these same facts should be taken into account by all concerned.

When this is done it will be seen that the elementary teacher—apparently without knowing it—is really the favoured child of fortune, seeing that the education he receives at the public cost provides for him a higher social grade, an easier work, and a larger income than is the case in respect of those of his kin who have elected to follow the occupation of their fathers. It is perfectly clear, likewise, that, in many important respects, he is better off than his secondary brother, and, in the matter of money alone (taking into account the pecuniary help he receives from the first), that every £100 of his salary is really equivalent to £150, or even £200, in the case of the latter.

I trust that the considerations adduced will lead "L.B." to the conclusion that he is better off than he thought. At all events, he will have the consolation of knowing that, after all, discontent is divine and that it furnishes the greatest spur to progress. In that case, it would seem that "L.B." will go very far.—I am, Sir, faithfully yours,

SCHOOL MANAGER.

September 14, 1906.

DR. W. T. HARRIS.

To the Editor of The Journal of Education.

SIR,—You have already paid a warm tribute to Dr. W. T. Harris, who has recently retired, after seventeen years of distinguished service, from the post of United States Commissioner of Education. Will you allow me to add that his work has placed under special obligation all who are studying educational questions in this country? The thick black volumes of the Commissioner's Annual Report are among the hardest worked books on the shelves of any one who is engaged in the comparative study of educational systems. With considerate

liberality, the United States Government places the valuable reports of its Bureau of Education within the reach of every responsible educational worker throughout the world. Our own Treasury has not yet realized how much good will a nation gains by a wise generosity in thus distributing the scientific results of its official investigations.

The establishment of the office of Director of Special Inquiries and Reports at the Board of Education, when Mr. Arthur Acland was the Cabinet Minister responsible for our educational policy, would never have taken place had not the work of the United States Bureau at Washington served as a convincing precedent for the formation of a similar Department in this country. The high position and authority now enjoyed by the U.S. Bureau of Education are due in no small degree to the wide-minded superintendence which Dr. Harris has given to its work.

When he began to publish in his reports occasional studies on English education it became clear that no other American writer since Emerson had shown such deep insight into the conditions of our educational life. As a result of his work, and through the influence of President Murray Butler, Dr. W. H. Maxwell, Prof. Hanus, and others, American writing upon English education is now distinguished by a degree of technical knowledge and of sympathy which has done not a little to strengthen the ties of personal friendship between the two countries.

To all English students of education visiting Washington Dr. Harris has given without stint the benefit of his counsel and many-sided knowledge. He has also accorded to them a welcome the courtesy and geniality of which remain among their pleasantest memories. It is a stimulating and memorable experience to discuss the social and philosophical bearings of some great educational problem with this descendant of Roger Williams. *Vivat!*—Yours faithfully, M. E. SADLER.

Eastwood, Weybridge, October 19, 1906.

A SCIENCE SYLLABUS FOR PREPARATORY SCHOOLS.

To the Editor of The Journal of Education.

SIR,—Might I request a little space in order to plead for a reform in the Elementary Science papers alternative with Latin verse set at the Common Examination for Entrance to Public Schools. I have before me some of the series taken at random. One paper consists of Part I., Mechanics and Hydrostatics, and Part II., Botany—the latter plain and straightforward, it may be admitted; in another one notices reference to the claws of a cat or dog, full moon, metals of railway lines, barometer, and stratification of rocks; again, a third takes the physiological side of botany, the range further including caterpillars and their jaws, birds and their eggs, and questions on physiography. Such variety might meet the requirements of a paper on general knowledge in elementary science, but I would submit that teachers are thereby discouraged in their endeavours to give their pupils a systematic and efficient training in elementary science such as would lead up to the work of the modern side.

I would therefore urge that, following the example of other examining bodies, a good syllabus should be drawn up, so that candidates need not depend on the various odds and ends picked up promiscuously in or out of school. And this, after all, would be only fair; for Latin verse is a clearly defined subject—there is no mistaking the road to Parnassus; the track is well beaten and there are plenty of sign-posts—but, while I am convinced that there can be no desire to discountenance science by flank attack, yet, as the matter stands, this concession to modern tendencies is to all practical purposes a dead letter; for one can well conceive boys being carefully prepared in this subject and nevertheless finding themselves confronted by a paper containing a minimum of questions bearing upon their tentative curriculum.—Yours &c.,

E. J. PETITFOUR.

UNIVERSITY TRAINING FOR PRIMARY TEACHERS.

To the Editor of The Journal of Education.

DEAR SIR,—Your Austrian correspondent in the "Colonial and Foreign Notes" in your last issue expresses a wish that Oxford and Cambridge should follow the example of Austria and obtain for primary teachers access to the University. He says: "We see no reason why the older Universities should not furnish to the primary school teachers trained under the influence of great traditions."

Will you allow me to inform him that what he regards as a possibility became an actuality in Oxford fourteen years ago? In 1892 the college which I have the honour to represent was established in order to enable intending elementary teachers to receive the necessary training for their professional career while at the same time they are full members of

the University qualifying for their degree. From that time onward we have been continuously sending men thus qualified out into the country—few indeed, but, we trust, fit. Two-thirds of them have taken Honours in the University, five getting First Classes and twenty or more Second Classes. We have this year had our power for doing our work thoroughly increased by some liberal benefactors, and are this month enrolling a record number of students. We cordially accept your correspondent's motto: "For the people the best is not too good."

I may say that the sister college at Cambridge came into existence either at the same time as ourselves or very shortly afterwards.—I am, Sir, yours very truly,

October 12, 1906.

G. R. SCOTT,
Acting Principal, Oxford University Day
Training College.

DOGMA V. ATMOSPHERE.

To the Editor of The Journal of Education.

SIR,—Your correspondent "L. P." in his short note on my letter published in the August number of *The Journal of Education*, has expressed a desire, which many others must share, for a religious atmosphere, a "recognition of higher things" in the schools, which he truly says find their place among the most "helpful recollections" of school life. Whilst heartily agreeing with him on this point, I should like to reiterate the opinion expressed in my former letter, namely, that the teacher whose own conviction has taken definite shape, and whose imaginative sympathy is rooted in his own personal experience, is best able to give religious instruction in a way to produce reverence and "atmosphere" and to avoid the destruction of Christian charity.

Your correspondent has raised the practical question, and I should like to add a word or two on that subject. First, it is true that even the simplest Bible teaching is in a degree dogmatic, and that all lessons, including those on religion, imply an acknowledgment of authority. But, secondly, my position by no means implies over-emphasis on dogmatic teaching; rather I wished to lay stress on the fact that a deeper and wider educational basis can be laid by a teacher who approaches the religious question from a definite standpoint. Thus I deprecate any attempt to place at a disadvantage the convinced teacher belonging to the Church of England and other definitely professing religious bodies, on the ground that the influence of the intellectually convinced religious life is a valuable educational element.—I am, Sir, &c.,

E. F. J.

SLOMAN'S LATIN GRAMMAR.

To the Editor of The Journal of Education.

SIR,—Would you kindly permit me to offer a word of explanation with regard to my Latin Grammar, reviewed in your last issue? You criticize the limitation of the book to the literary dialect of a few standard authors. But my Grammar is expressly written for those who wish to pass examinations and win scholarships. From such this model of Latin is required by examiners, and all deviations therefrom militate against success. If this be wrong, it is the fault of the examiners, not of a grammar intended to meet their requirements. May I remark, in conclusion, that "sensit medios delapsus in hostes" is included as an example of a Hellenism, while

"Amantium irae amoris integratio 'st"

is excluded as a bad model for Ciceronian prose?—I am Sir,

A. SLOMAN.

SIMPLIFIED SPELLING.

To the Editor of The Journal of Education.

SIR,—Your sympathetic article on the Spelling Ukase deserves the thanks of educationists. Whilst the common spelling needs to be modified for ordinary purposes, a thing which every one can do for themselves if they will make a beginning, none dare hinder, there is much more need for a thoro reform rather than simplification for school purposes. In this domain the fonetic factor needs to be put into force. The time is more than ripe for practical measures being adopted, so that the excessiv waste and indifferent results may be curtailed; further, once introduced into the schools it will pave the way for the natural adoption of similar innovations in ordinary riting and printing.

It is pleasing to learn that the Senatus of the London University is endeavoring to get the Education Department to appoint a Committee of Investigation relativity to voice and speech training.—Yours, &c.,

Laburnum Hous, Hetton-le-Hole, S.O.

October 19, 1906.

H. DRUMMOND.

JOINT MATRICULATIONS.

To the Editor of The Journal of Education.

SIR,—The obvious inconvenience to schools of an incomplete system of interchanging Matriculation Examinations is so great that I make no apology for making an appeal to your readers. Now that Oxford and Cambridge accept the London Matriculation, on the one hand, and the Joint Matriculation of Manchester, Liverpool, Lee's,

and Sheffield, on the other, it seems absurd that the London and Joint Matriculations are not interchangeable. May I beg your readers to urge teachers' associations to approach the interested Universities and press on them the importance of removing one more hindrance to efficient work in schools?—I am, yours sincerely,

Bootham School, York.
October 16, 1906.

ARTHUR ROWNTREE.

TEACHERS' GUILD NOTES.

[By a resolution of the Council, of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but "The Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

To the active supporters of the Teachers' Guild and its broad general aims it has always been interesting—sometimes painfully interesting—to watch the rapid development of sectional associations of teachers, each with its own special ends, during the last twenty years or so. They could see that in each case there was a valid motive and much justification for the concentration of particular classes in the profession into groups working for particular aims, but they also have noted that each such segregation tended to weaken the profession as a whole in dealing with administrators and outside influences generally. To them, therefore, it has not been a source of any surprise that, now that almost every kind of teacher has his or her own association, there should emerge a new centripetal tendency, taking the shape, mainly, of attempts at federation in larger groups, still, however, of a more or less sectional character, whether the bond be that of locality or that of kindred interests. Of the former class instances are supplied by the efforts to bring London teachers or North of England teachers together, as such; of the latter, by the overtures which various associations of secondary-school teachers have been making to each other. The disadvantage of the former class of tendencies is that it leads to the multiplication of units which are largely identical, distributed about the kingdom; of the latter that it sets two large groups of teachers, the primary and the secondary, in opposite camps, engaged to a large extent in attempts to thwart each the other's aspirations. Both tendencies are opposed to that unity which is necessary if teaching as a profession is to take its proper place among our great activities. It is the business of the Teachers' Guild "to obtain for the whole body of teachers the status and authority of a learned profession." Unless it keeps that aim steadily before it, it has no right to exist under its present constitution.

THIS is the reason why the Guild is anxious to promote the movement which has been set on foot for the establishment of an Annual General Education Congress, in which *all* associations of teachers, whether primary or secondary, shall be entitled to take part. Such a Congress would obviously contain the element of impressiveness by mere weight of numbers. There are more than eighty associations which have a claim to be invited to support it. It would attract the attention of those who are responsible for the organization and the curricula of our schools of all kinds—public and private, secondary and primary. It would also be of great moral weight, as showing that all teachers, *qua* teachers, have certain broad interests in common which are only put in the background, not obliterated, by the too numerous subdivisions which now exist among their associations. In order to hold itself together with any permanency it would have to discuss broad questions of education, and only these, in full conference; but the special educational interests of sections of the profession would find their media of expression in sectional meetings held during the Conference week. The annual business meetings of different associations could also be held in connexion, as to date and place, with the General Congress.

THE Provisional Committee which is attempting to start the

organization of a General Education Congress has sent out a circular letter quite recently to the various educational associations, with the following questions:—

1. Does your Association think that the establishment of a General Education Congress is desirable?
2. Is your Association prepared to support such a Congress—(a) By nominating a representative to a Joint Committee for the Congress? (b) By circulating information (full Programme, &c.) about the Congress among *all* its members? (c) By endeavouring to arrange its Annual General Meeting in connexion with the Congress? (d) By contributing to the expenses of the Congress, if required to do so?
3. If January does not seem suitable, what alternative period or periods of the year does your Association suggest?

A scheme for the Congress is appended to the letter, giving suggested date, place, time, and character of meeting. The General Secretary of the Guild is acting as Hon. Secretary of the Provisional Committee.

THE next meetings of the Teachers' Guild Education Society will take place on Monday, November 12, and Monday, December 3, at 7.45 p.m. The subject of discussion in November will be "The Teaching of Arithmetic," opened by Mrs. White, D.Sc., and Mr. A. Kahn, M.A., University College, London; in December, "The Teaching of Local History" (with special reference to London), opened by Miss Spalding, Goldsmiths' College. The paper read by Miss Gray, of St. Paul's Girls' School, on "The Teaching of Systematic Grammar," at the October meeting, will be published in the next number of the *Teachers' Guild Quarterly*.

JOTTINGS.

THE Cambridge University Press announces an important work in preparation, "The Cambridge History of English Literature," to be completed in fourteen volumes. It will follow the lines of "The Cambridge Modern History," each chapter being written by a specialist. The names of Dr. A. W. Ward and Mr. A. R. Waller as editors are a guarantee of accuracy and thoroughness. A considerable reduction is offered to subscribers for the complete work.

WE wish God speed to the Rev. Cecil Grant, who is starting a co-educational public school at Harpenden, having outgrown his quarters at Keswick. He has found his prophet in Mr. E. Curtis, an old pupil, who, in "An Uppingham for Boys and Girls," proclaims that the mantle of Thring has descended on Grant and that the world's great age is to begin anew at Harpenden. Mr. Grant is a modest man, and he will be embarrassed by being told that he is as Skiddaw is to Keswick, and "St. George's School is ready, swept and garnished," is not a happy phrase. But, after discounting hyperboles, the pamphlet is a signal testimony to the success of Keswick, and we are glad that the experiment is to be repeated on a larger scale.

MISS CONNOLLY, who has been for thirty years the Head Mistress of Aske's Hatcham Girls' School, has resigned. Miss Connolly was one of the original founders of the Teachers' Guild.

THE Calendar of the University of London, 1906-7, is in three stout volumes, each about the size of an Oxford or Cambridge Calendar. Vol. I. contains the constitution and complete lists of students, graduates, &c.; Vol. II. is of special interest to internal students and contains regulations, curricula, and scheme of examinations, courses of instruction, &c.; Vol. III. gives the regulations for external students. The price of Vols. I. and II. is 5s. each; of Vol. III., 2s. 6d. Orders should be addressed to Financial Secretary, University of London, S.W.

THE Cambridge University Calendar, 1906-7, grows in bulk. The current volume contains 1216 pages, besides nearly a hundred pages of advertisements. The price is 7s. 6d. net, the publisher G. Bell.

PROF. VIÉTOR's answer to the question proposed in *Modern Language Teaching*—How are howlers ("sinnlose Übersetzungen") to be avoided?—resembles *Punch's* advice to those intending matrimony. It is, in a word, by not translating. Translation, he tells us, is an

invention of the Devil ("ist vom Übel"), a survival of the old Adam. Schoolboys will welcome the new dispensation.

LORD ROSEBURY ON LIBRARIES (October 26).

Death duties are a tax upon the living,
Our rarest books to Pierpont Morgan giving.
Let Mr. Asquith give some fraction back
To save art treasures from the wolfish pack.
This modest claim, I know, aside he'll thrust—
What Chancellor frames his Budget to be just?
"A University," so spake Carlyle,
"Is a good library." He makes me smile.
To make a British regiment tip-top
It only needs a well stocked butcher's shop!
Students should not indefinitely browse
Like bison, but be tethered like Dutch cows.
Without a guide they'll fill themselves with chaff;
Nine-tenths of all our books are husks and draff.
One word to end this casual oration:
I'm an outsider and I know my station;
But, *faute de mieux*, I will serve the nation
As Royal Commissioner on Book Cremation.

Les Langues Vivantes is a fortnightly review for the use of schools (price ½ franc). Each number has a descriptive and a literary review, and there is an English, French, German, Italian, and Spanish part. The English spelling is not immaculate, and "Some great shepherds driving their flocks of houses (Victor Hugo)" is not a model translation. It has, however, some distinctive merits—e.g., the politics of the fortnight for each country. Burns & Oates are the English publishers.

THE University of Rennes offers special advantages to foreign students. We have before us the programme for the winter term, December 15 to March 15. Nine hours a week are assigned to practical instruction in French—phonetics, reading, translation, and grammar, and there are complementary courses in French literature, history, geography, and institutions. A diploma is awarded on examination at the end of the course. The tuition fee, including matriculation, is £4. M. Feuillerat, 31 rue de Fougères, Rennes, will supply further particulars.

MR. G. E. S. COXHEAD, assistant master in the Liverpool Institute High School, has been appointed Head Master of Hineckley Grammar School. Mr. Coxhead is a past President of the I.A.A.M., and he has taken a leading part in the formation of the English Association.

By an oversight we omitted last month to record the tragic death of Dr. Richard Lloyd. He was attending the Esperanto Conference at Geneva, accompanied by his daughter. One day he did not return to his hotel, and a fortnight afterwards his body was found in the Rhone. To most of our readers he will be known as a linguist and a phonetician. He was a constant, though occasional, contributor to *The Journal*, and a letter of his which appeared in our September number must have been his last public utterance. Few who read his criticisms in *Fach* journals or heard his lectures were aware that he was an active man of business as well as a professor. He was a man of many activities, and both in business and in municipal life he showed the same untiring energy and thoroughness that he did in scholarship and research.

WE hear much of the beggarly pittance of two lessons a week which the Bill provides for denominational instruction. It is instructive to compare the time actually given to religious instruction of all sorts in secondary schools which have a free hand and when the time-table is determined by the head master, more often than not a clergyman. Prof. Sadler's report on Essex gives the curricula of twenty-three secondary schools. The average time per week set down for religious instruction works out at exactly 1½ hours. The highest figure (at a private school) is 3 hours, and in four schools there is none.

"RECONSTRUCTION of the Cabinet. Dr. Macnamara to take Mr. Birrell's place." This wild *canard* was started by the *Manchester Courier*. The editor of the *Schoolmaster* may in time succeed "Obiter Dicta"; unlikely things have happened, but

"Thy wish was father, Harry, to that thought."

THE following lectures have been arranged for November by the Childhood Society. The lectures are given at the Parkes Museum, Margaret Street, W., at 8 p.m.:—November 1, Mrs. Kimmins, "The Hospital School"; November 8, Prof. Earl Barnes, "Children's Sense

of Humour"; November 22, Mrs. Kimmins, "An Experiment in Vacation Schools."

THE Modern Language Association propose to arrange a course of six lectures on Practical Phonetics, with special reference to French, to be held during the second week in January. Each lecture will be followed by a class. As the numbers of the class will be limited, teachers desiring to join should send in their names to the Hon. Secretary, Mr. W. O. Brigstocke, Berkhamsted School.

"CAN any of your readers tell me of a German Dictionary similar to the French Dictionary by Pierre Larousse?—X."

HERE is a new arithmetical puzzle. The sum was actually set the other day to a class of children: "On a farm there are 752 animals; 49 are horses, 562 are sheep. How many cows are there?"

A WELL deserved tribute was paid to Mr. Alfred Goddard on his retirement from the public service. Mr. Goddard was Clerk to the Newcastle-upon-Tyne School Board from its inception in 1871 to its close, and since then he has been Secretary to the Education Committee. Sir Walter Plumer, in presenting the resolution of thanks, said the name of Alfred Goddard would be handed down as inseparably connected with the history of education in Newcastle.

WE learn from the *Age* (Melbourne) that the colony of Victoria has taken the first step in introducing compulsory military training into public schools. Every boy over the age of thirteen will henceforward have to undergo a course of military training lasting not less than two years. The Government will supply rifles and military instructors.

THE Primate in the peroration to his speech on going into Committee had one very happy simile and one unfortunate literary allusion. He compared the Bill to a patient who has been maimed and mangled on the battle field, patched up by Army surgeons and mismanaged by hospital nurses, and is brought at last to the great consulting physician (the House of Lords) who has to make the best of a bad job. But he went on to compare it to Wordsworth's maid, "Whom there were very few to praise and very few to love." What higher compliment could he have paid to a Bill which he had just been pronouncing unjust, unintelligible, and unworkable?

WE are asked to state that the writer of the article "Secondary Education in French Convents," signed "P.," is Mlle. Pécontal.

THE Solicitor to the London County Council must be a humourist. Authorized by some sub-official of the Council during the vacation to take counsel's opinion on the bearing of the West Riding judgment, he went to Sir Robert Findlay, the Law Officer of the Crown responsible for the legal aspects of the 1902 Bill. How Sir Robert must have chuckled as he wrote: "In my opinion the judgment of the Court of Appeal is erroneous!"

THE REV. E. C. SELWYN has announced his intention of resigning the Head Mastership of Uppingham, which he has held since the death of Mr. Thring in 1887.

THE *School Guardian's* comments on Mr. Nevinson's *Westminster* articles to which we call attention elsewhere are delightfully naive. It takes quite seriously the writer's Socratic confession that he knows nothing about education, and proceeds to prove it by showing how false are the inferences that he draws from his facts, which are not disputed. Mr. Nevinson found no practical difference between a Scripture lesson given in a provided and in a non-provided school. True, replies the *School Guardian*, the difference may be imperceptible to an outsider, but "the same lesson given in a provided school would, if given in a Church school, become denominational, and therefore practical, by the mere fact of being given in the latter." "O tu tremendi religio loci!" The writer notes the difficulties felt by both classes of teachers in giving lessons on the Old Testament. Such difficulties, replies the *School Guardian*, cannot exist for Churchmen: they are all solved by a reference to the Calendar of the Church. "O sancta simplicitas!"

THE National Association for the Feeble-minded have arranged for a Conference to be held at Denison House, Vauxhall Bridge Road, S.W., on November 8. Dr. Boulenger (Belgium), Sir E. Brabrook, and Dr. H. Ashby will read papers.

M. EDMOND BARBIER, B.A. (Honours, Wales), fourth son of Prof. Paul Barbier, has been appointed Assistant Lecturer in French Language and Literature in the University of Birmingham.

UNIVERSITIES AND SCHOOLS.

OXFORD.

The academic year opens with a new Vice-Chancellor, Dr. Merry having resigned after holding office for barely two years. The duties of the Vice-Chancellor are plainly becoming increasingly onerous, and no recent tenant of the chair has completed his natural term. A simple and conclusive test of the growth of University business in recent times was forcibly put by Dr. Merry himself in his formal address to Convocation on laying down his office. The Statute Book of thirty years ago, he reminded us, was a volume of 392 pages; to-day it numbers 651, and, when it is remembered that a mass of obsolete provisions has been repealed, it is safe to say that the body of University law has been more than doubled in a generation. What he did not, and could not, say, though it is increasingly evident to the body of residents, is that the clumsy device of governing a University, in the last resort, by non-residents is becoming daily more unsuited to the present conditions of academic needs and growth. It may be said, broadly, that where Convocation agrees with Congregation the reference is a waste of time; where it differs Congregation is uniformly wrong.

The new Vice-Chancellor is Mr. Warren, President of Magdalen. He belongs to the so-called "Liberal" academic party, though, as everybody knows, these names have had very little real significance in University politics for many years past. He would probably be described as a "moderate progressive"; but more important than these vague labels is the fact that for years past he has steadily worked on several of the most important delegacies and other administrative bodies. In the last *Calendar* he appears as a delegate on all the strictly educational bodies—viz., University Extension, Local Examinations, the "Joint Board," and the Training Delegacies, both elementary and secondary. He is also on the Board of Faculty of Arts, the Board of Modern Languages, the Delegacy of the Museum, and the Delegacy for Instruction in Forestry; and, finally, he is a Curator of the Botanic Garden and of the Common University Fund.

This list will perhaps be felt to err, if at all, rather by excess than defect: but, at any rate, since the Vice-Chancellor is *ex officio* on all Delegacies and Boards, it must be an unmixt advantage to him on taking office to have had so varied an acquaintance with the work, and the workers, in so many different departments of academic activity.

The deaths of Oxford men reported since June are as follows:—Mr. G. H. Morrell (Exeter), formerly M.P. for Mid-Oxon. (61); Rev. H. F. Leigh (Merton); 46; Rev. T. B. Cornish (Oriel), Hon. Canon, Chester (91); F. H. Joyce (Christ Church), formerly Tutor (77); A. J. Forman (non-collegiate), barrister-at-law (52). To these must be added the name of Miss A. C. Maitland, Principal of Somerville College—a loss which, though technically unconnected with the University, is the subject of deep regret both in academic circles and among all interested in education. Her able administration of the college, attested by its rapid growth, is widely known; and the tributes which have appeared since her death have revealed something of the wisdom, sympathy, and untiring effort which were always at the service of the students, both past and present. It is clear that her place will be very difficult to fill, and the provisional arrangements made in view of her illness continue for the present.

In regard to legislation, there is nothing new as yet to note. Two statutes are before the University, one introduced last year to rearrange the duties of the Registrar, which has been through its earliest stages; and one making English a possible alternative in Responsions for Greek or Latin for non-European British subjects. The latter has a certain interest as another example of the numerous minor adaptations required to meet the needs of students from all parts of the world, British or foreign. The movement has been stimulated by the Rhodes bequest and its consequences, but other causes have co-operated.

I observed some time ago that the encouragement of new studies by the institution of diplomas was leading to one rather unexpected and very desirable result: namely, the employment in the newer studies of teachers in the older schools who were known to have special knowledge or aptitudes that could be made available. The lecture lists of this term show striking examples of this. Thus, in Economics, besides the economists by profession, we have the following teachers in Philosophy, History, and Literature contributing lectures, namely: Messrs. Blunt, Marriott, Carlyle, Ball, and Wakeling; in Geography, Messrs. Grundy and Myres; and in Anthropology, besides the Professor of the subject, Messrs. Blunt, Myres, Ball, Farnell, and Marett, and Profs. Rhys, Morfill, Bullock, and Vinogradoff. The chief danger of a special study is narrowness; and nothing could be better than that highly distinguished teachers (like those above mentioned) should present the study from their own points of view, and thus reveal connexions and supply illustrations at first hand which might otherwise remain imperfectly grasped, or even unsuspected, by the special student.

The Long Vacation is usually the building-time *par excellence* of the colleges: and this year much has been done since Commemoration in completing or continuing additions. Balliol has refaced the old

library, and is rebuilding to the north of the tower in St. Giles; Merton has finished a new wing, and is building the Warden's new house adjoining the south end of University; Lincoln has opened a new library in the garden, near Brasenose; Jesus is extending its buildings along Ship Street; and Hertford is beginning a new chapel. The verdict on the effect of the new buildings seems so far to be favourable.

The following are among the announcements in the *Gazette*:—

Deputies of the Vice-Chancellor: Rector of Lincoln, President of Trinity, Principals of Brasenose and Jesus. University Scholarships: Geographical: N. de L. Davies (Jesus). Hebrew: Junior Kennicott—M. H. Segal (non-collegiate); Pusey and Ellerton—J. D. Lewis (non-collegiate).

Lectures: Romanes Lecture—W. P. Ker (All Souls), Professor of English Literature in University College, London. Lord Curzon at first accepted the appointment, but later wrote to resign; and Prof. Ker was appointed in his stead. Lecture to be given November 24, on "Sturla the Historian (Iceland and Norway in the thirteenth century)." Special Professors' Lectures: A. J. Evans, on "Minoan Civilization," Wednesdays, at 5; Prof. Sayce, "Recent Assyriological Discoveries," November 6, at 2.15; C. J. Ball, "Babylonian Conceptions of Deity," November 8, 5.45; F. Ll. Griffith, "Herodotus in Egypt," Thursday, 5 p.m.; Prof. Mackail, "Chaucer," November 9 and 16; Prof. Holmes, six lectures on "Raphael," Wednesday, at 6.

SOMERVILLE COLLEGE, OXFORD.

The Council of Somerville College has awarded a Fellowship to Miss Florence Isaac (Girton College, Cambridge, and Society of Home Students, Oxford), who has undertaken an investigation of the refractive indices and other properties of crystallizing solutions and a study of the early stages of crystallization.

Miss Bruce has been appointed acting Principal till Christmas.

CAMBRIDGE.

During the Long Vacation we have lost Prof. Marshall Ward, a botanist who won his high name by his own energy and powers of intellect. An interesting notice of his life is in the first number of the *Cambridge Review*—an article which will add to the respect felt for his memory.

The creation of the Quick Professorship of Biology meant a chair to be filled at the beginning of this academic year, and it has been filled to every one's satisfaction by the promotion of Mr. Nuttall from the Readership in Hygiene. During the last few days another chair has seemed likely to become vacant by the appointment of Dr. Kirkpatrick to the Deanery of Ely. Dr. Kirkpatrick became Regius Professor of Hebrew at the early age of thirty-three. He held the chair till 1903, when he rose to Lady Margaret Professorship of Divinity; while he has been Master of Selwyn for eight years. It is probable that both positions will be vacated by his removal to Ely.

Ely took Dr. Chase from us last year, and during the Vacation his successor in the Lodge of Queens' College was appointed. It is hard to think that there can be any other feeling in Cambridge than pleasure at the thought of Mr. Fitzpatrick following Dr. Chase from Christ's to Queens'. His character and personality command the respect and friendship of all who know him, and his Cambridge friends will hope to have him long with us.

We have matriculated 1,021 freshmen, while Newnham and Girton between them have 80 or 90 fresh students. People who affect cynicism pleasantly inquire what it is that brings students to Cambridge rather than elsewhere. It does not, somehow, occur to them to compliment professors and lecturers on their attractive powers. It can hardly be the scenery, the climate, or our much maligned water supply. The only suggestion is that it must be all due to the Bishop of London's revelations of the drunkenness of Oxford.

Even so early in the term we have had an excitement. A war of flysheets, thick and fast, culminated in the abolition of the Senior Wrangler on Thursday, October 25, 1906. For an hour and a quarter we voted on grace after grace, till grace 9 was carried by 206 to 169; and now, as soon as the due formalities are put through, there will be no more Senior Wranglers. It was a case of "stat magni nominis umbra," and it is no loss to have done with a form from which all or most of the reality had ebbed away. It will be a picturesque touch the less at the June Congregation, and, let us hope, a new opportunity for the study of mathematics unencumbered by traditions.

BEDFORD COLLEGE FOR WOMEN, LONDON.

The Council have appointed Miss M. B. Strachan, M.A., as assistant in the Department of English; Miss N. F. Wetherston, B.Sc., as

assistant in the Department of Physics; and Miss Hilda Gibb, Mathematical Tripos, Cambridge, as assistant in the Department of Mathematics. The Council have awarded a Research Scholarship in Physiology to Miss May Tweedy, Natural Science Tripos, Cambridge, and the Deccan Scholarship in Arts to Miss Florence Place, of the Queen Elizabeth School, Mansfield.

Three public lectures will be delivered during the Michaelmas term on Thursdays, at 5 p.m.: November 1, "Plato," by E. D. A. Morshead, M.A.; November 15, "Expression in Greek Sculpture" (lantern illustrations), by Prof. E. A. Gardner; December 6, "The Parthenon" (lantern illustrations), by A. B. Cook, M.A., Lecturer in Greek, Bedford College. These lectures are open free. Cards of admission are not required.

In the Training Department for Secondary Teachers three scholarships of the value of £20 each for one year are offered for the course beginning January, 1907. The scholarships will be awarded to the best candidates holding a degree or equivalent in Arts or Science. Applications should be sent not later than December 15, 1906, to the Head of the Training Department, from whom the necessary entrance forms and other information can be obtained.

ROYAL HOLLOWAY COLLEGE.

The entrance scholarships have been awarded as follows:—Scholarships of £60 for three years to M. Y. B. E. de Ternant, French and German (with credit for Pure Mathematics), Church Company High School, Streatham; L. K. Ellis, German and French, University College, Bristol; W. M. Seville, Mathematics and Chemistry, Notting Hill High School; M. E. White, Mathematics, South Hampstead High School. Scholarships of £50 for three years: O. C. Beach, Classics (with credit for Pure Mathematics), Mary Datchelor School; M. M. Green, History and English (with credit for French), St. Winifred's, Eastbourne; D. Menzies, Chemistry and Botany (with credit for Pure Mathematics), North London Collegiate School; E. P. Padfield, Botany and Chemistry, Mary Datchelor School; M. N. Roberts, French and History (with credit for English), Elwy Hall, Rhyl; W. Wright, Mathematics, Durham High School. Scholarship of £40 for three years to E. I. Hartnell, Classics, Kensington High School.

Miss J. L. Coates has been appointed Staff Lecturer in German.

A lecture on "Botticelli," with lantern slides, will be given by Mrs. Burton Brown on November 22, at 8 p.m.

ST. MARY'S HOSPITAL MEDICAL SCHOOL.

The following awards have been made as the result of the entrance scholarship examinations held on September 24, 25, and 26:—Open scholarships in natural science: G. Roche Lynch, St. Paul's School, and R. G. Sparkes, Felsted School (equal, £145 and £78. 15s., the sum of the two scholarships equally divided); A. Murray Stuart, Cheltenham College (£52. 10s.); P. Withers Green, Epsom College (£52. 10s.). University Scholarships: W. D. Hopkins, B.A. Trinity Hall, Cambridge (60 guineas); F. G. Caley, B.A. Pembroke College, Cambridge, and G. H. Drew, B.A. Christ's College, Cambridge (equal, 60 guineas). The Epsom College Scholarship (value £145) has been awarded to T. W. W. Powell, a student of the College, on the nomination of the Head Master.

MERCHANT VENTURERS' TECHNICAL COLLEGE.

Owing to the kindness of the Bristol Education Committee, it has been found possible to carry on the work of the College, notwithstanding the serious damage lately done to their main building by fire. The Committee has placed at our disposal the Castle Council schools, embracing large buildings which accommodated over a thousand children. These schools are being fitted with the necessary lecture theatres, laboratories, and workshops with all possible speed, and, meanwhile, other institutions in Bristol are lending their lecture theatres and laboratories; so that most of the day students and nearly all the evening students will be able at once to continue their practical work.

Fortunately, a large part of the newest machinery of the Engineering Department, especially the experimental engines and dynamos, which cost over £2,500, have been saved, as they were placed in a separate building containing many of the College workshops and situated at some distance from the one injured by the fire; moreover, the basement of the main building has suffered comparatively little, and in this are the mechanical and electrical engineering laboratories and the engineering workshop. Most of the apparatus and machinery in these departments will be available for use in a relatively short time, as some parts of them are undamaged, while others have sustained damages which can be speedily set right. The engineering students, who form the most important section of the Technical College day classes, will, therefore,

be deprived of the opportunity of doing practical work for only a short period.

SCOTLAND.

The Quatercentenary celebrations at Aberdeen University in the end

Aberdeen.

of September were in every way successful, and, in the general opinion of those who were present, the ceremonies as a whole made the finest and the most admirably managed academic festival that has taken place in Great Britain for many years. There were more than 230 delegates, bringing addresses from Universities and learned societies in Great Britain and Ireland, Canada, Australia and New Zealand, India, South Africa, the United States, South America, Japan, Austria-Hungary, Belgium, Denmark, France, Germany, Holland, Italy, Norway, Russia, Sweden, Switzerland, and Syria; and about 130 other men of learning came as guests of the University. The celebration began on the morning of September 25 with an impressive service in the beautiful chapel of King's College, and in the afternoon of the same day the University, with the delegates and guests, walked in procession through the streets of Aberdeen to the Strathcona Hall, a temporary building, where addresses were presented and brief speeches of congratulation were made by delegates representing the various nations. On the following day, honorary degrees were conferred in the Mitchell Hall, Marischal College, and on Thursday, September 27, the new buildings at that College were opened by the King and Queen. On the evening of the same day Lord Strathcona, Chancellor of the University, entertained to dinner the whole University, including the governing body, the staff, the officials, the graduates, and the students, along with the delegates and the guests of the University. About 2,500 people attended, and the arrangements were so excellent that the banquet passed off without a hitch, although the size of the hall made speech-making practically impossible. Among the other festivities were a dinner given by the Town Council, several receptions and garden parties, a students' dance, a students' symposium, a torchlight procession, and various excursions. During the four days of the festival the weather was perfect, and in the bright sunshine Marischal College, which is now one of the finest granite buildings in the world, was seen at its best. The building opened by the King completes an extension which was begun about 1892, and which has cost nearly a quarter of a million, raised almost entirely by subscription.

Mr. Gilbert Austin Davies, M.A., Gladstone Professor of Greek in

Glasgow.

the University of Liverpool, has been appointed by the University Court to the Chair of Greek in Glasgow University, vacant by the transference of Prof. Phillimore to the Chair of Humanity. Prof. Davies was educated at Owens College, Manchester, and Trinity College, Cambridge. In 1892 he was elected a Fellow of Trinity. Before he went to Liverpool in 1898 he was an assistant lecturer at King's College, Cambridge, and he also taught for eight years at Newnham. Many brilliant men have occupied the Greek Chair at Glasgow, and Prof. Davies's career encourages the expectation that he will fully maintain the traditions of his new office.

In his opening address at St. Andrews University Principal

St. Andrews.

Donaldson announced that the Rector, Mr. Andrew Carnegie, had offered to the University £10,000 to build an addition to the library, and £12,500 for a physical laboratory in connexion with University College, Dundee. Principal Donaldson devoted his address to the advocacy of spelling reform.

On October 16 Mr. Carnegie formally opened the new Engineering

Edinburgh.

and Physical Laboratories which have been built at Edinburgh University. The Engineering Department has been in use for about a year, and the Physical Laboratories, which have cost £24,000, contributed by the Corporation of Edinburgh, the Carnegie Trust, and others, are now approaching completion. In his speech Mr. Carnegie made a vigorous onslaught on theology, philosophy, and classics, and held up to admiration the American Universities, on account of their devotion to scientific research. His strictures on the older Universities of England drew a retort courteous from Mr. A. J. Balfour, who presided as Chancellor. In a witty speech he convicted Mr. Carnegie himself of metaphysics, and indicated the remarkable scientific achievements of Cambridge, in spite of the "contemptible" amount of Greek which it still exacted from its entrant undergraduates. In connexion with the opening of the buildings, honorary degrees were conferred on Lord Elgin and Mr. Carnegie.

On October 19 Mr. Haldane, Rector of Edinburgh University, formally opened the additions which have been made to the University Union. The extension includes a debating hall, a dining room, a lesser hall, a library of eight thousand volumes, two fives courts, and a billiard-room; and the total cost has been £26,000. Addresses were given by the Rector and the Chancellor, and Mr. Haldane was afterwards entertained at a house dinner in the Union.

IRELAND.

The only event of importance in Irish education during the past month is the beginning of the sittings of the Royal Commission for the hearing of evidence. They began on October 16 and concluded, to every one's surprise, on the 24th. They were held in the

The Royal Commission on Trinity College.

Board Room, Trinity College, the office to which letters are to be addressed being 16 Ely Place, Dublin. The next sittings will take place in London early in November; it is not announced whether there will be any further sittings, or how soon the Commission will conclude its work.

The small number of witnesses called and the shortness of the present sitting have given rise to a general belief that the Government have already decided on what changes they will propose, and on the settlement of the whole Irish University question they will put forward. Sir Anthony Macdonell, the central figure in a host of mysterious political legends, is credited with the authorship of the scheme, and the Commission is said to be a mere cover to serve as an introduction of the measure. These, however, are but rumours.

A vast mass of evidence was taken by the Commission of 1901, which the present Commission will make use of, but that evidence was not given in reference to Trinity College, and a very different body of opinion might have been brought to light had the witnesses considered it possible that the solution of the University question could take place through changes in the constitution of Trinity College. It is just this mode of settlement that the present Commission ought to consider thoroughly before proceeding to recommendations which may only issue in legislation adding another page to the history of the mistaken and abortive attempts to settle the question in the past.

A pretty big Blue Book of evidence, given as written statements sent in, has been published, and from this evidence it would seem that two possible solutions must be abandoned if both extremes are to be satisfied. The Church absolutely declines education for Catholics within the walls of Trinity College where Protestants and Roman Catholic teachers and students would mix together, no matter what concessions or safe-guards Trinity College may offer. The authorities of Trinity College decline with equal firmness the scheme of a Roman Catholic college under Dublin University. Nevertheless, this is the very scheme Sir Anthony Macdonell is believed to have decided on. Such an *impasse* raises the question how far the Government would go in disregarding the wishes of the present Fellows and Professors, and whether, even with their big majority, they could carry recommendations in opposition to these wishes into practical effect by legislation.

The evidence has been taken privately, but will, no doubt, be published in the next Blue Book. The chief witnesses have been the Provost (at some length) and Dr. Tarleton, among the Senior Fellows; Mr. Culverwell (twice) and Mr. E. Gwynn, from among the Junior Fellows; Mr. Justice Madden, Vice-Chancellor of Dublin University; Dean Bernard (twice); some of the representatives of the Sciences and of the Medical School; several witnesses, including Lord Justice Fitzgibbon, on the important question of the Divinity School; Mr. McMordie, representing the Northern Protestants' Education Reform Society; Miss Lucy Gwynn, the lady Registrar, who gave evidence as to the position of women students in Trinity College; and Mr. Synnott, representing the views of the Catholic Laymen's Association, who desire mixed education within the walls of Trinity College. It is remarkable that no other representatives of the Roman Catholic side were examined. They probably declined, the Bishops and Dr. Delany, the Head of University College, having previously submitted written statements.

The Commission have invited additional comments and objections in reference to the statements in the Blue Book to be submitted to them before November 1.

An additional proof of the hostility of the bishops to mixed education is a recent pronouncement from Maynooth, in which they prohibit Roman Catholic students attending technical or agricultural schools from residing in houses where Protestant students live. The bishops thus do their utmost to keep up the separation between Protestants and Roman Catholics that is so disastrous in Ireland. In the same manifesto they warn Catholics against doing anything to disturb the control of the primary schools by clerical managers in the growing agitation to obtain popular control for the schools. This agitation is one of the signs of the rising national democratic spirit in Ireland which will soon have to be reckoned with.

Much regret is felt for the death of Dr. Molloy, the Rector of University College—a distinguished man of science and educationist. He was accomplished in many ways, kindly and broad-minded, and very popular with all classes and creeds. He died suddenly at Aberdeen, where he was attending the recent celebrations.

WALES.

At the last meeting of the Court of Governors of Cardiff University College the Earl of Plymouth was elected President for the next five years. Reference was made at the Courts of Governors of both Bangor and Cardiff to

The University Colleges.

the urgency of increasing the annual Treasury grant, and resolutions were adopted approving the action of Parliament in pressing the matter upon the Chancellor of the Exchequer, so that adequate provision might be included in the next Estimates. It was urged that, unless more funds are available, it will be difficult to maintain the colleges in a thoroughly efficient state, and that further expansion of their work will be practically out of the question. Hitherto the salaries paid to the staff have in many instances been so small that their best men are continually migrating to similar institutions in England—a practice which must eventually tend to impair the efficiency of the work of the colleges. Principal Griffiths, however, appears to be sanguine that the appeals to the Chancellor will prove successful.

The efforts of Principal Griffiths to found a first-rate School of Mining at the College are being well seconded by some of the County Councils of South Wales—Glamorgan-shire in particular having pledged its enthusiastic support to his scheme.

If the necessary funds are forthcoming, there appears to be no reason why this school should not rank as one of the most important of its kind in the kingdom; for Cardiff, situated near the centre of the mining industry, should be able to provide facilities for training in the practice of mining which shall be quite unique.

The Governors of Cardiff and Bangor have adopted a motion emphasizing the desirability that in all examinations for appointments under the Civil Service provision should be made for the inclusion of Welsh in the

list of subjects, in view of the systematic teaching of the language now given in the secondary schools and colleges of Wales. At the Cardiff Court Mr. Tom John, the ex-President of the N.U.T., secured the adoption of a further resolution, to the effect that the Civil Service Commissioners should be asked to delegate their powers of examination and appointment—as far as Welsh candidates are concerned—to some Education Authority in Wales. It is by no means clear, however, what is meant by this proposal, because it would surely be absurd to ask the Commissioners to organize a distinct examination for Welsh candidates, and therefore, of course, to reserve for them a certain number of places in the service. The time is probably far distant when we can hope for separate departments of State staffed solely by Welshmen.

The conflict between the Swansea Education Authority and the Board of Education has at last entered upon an acute stage.

The Board had intimated to the Local Authority that it could not recognize any reason for differentiating between the salaries paid in the provided and the non-provided schools in the borough. The difference in the scales of salaries, in spite of this warning, has, however, been maintained, and so the Board has resolved to retain all grants due to the voluntary schools. As a measure of retaliation and in pursuance of their policy of no-rate aid, the Local Authority has now intimated to the managers that they will cease to be responsible for the schools after November 1. But whether this drastic measure will be carried out or not depends largely on the success of certain negotiations which are understood to be proceeding with the Board of Education.

The primary teachers all through the Principality are seriously concerned about the general treatment of the teachers in the non-provided schools. With the exception of Cardiff, all the Welsh counties have adopted a harassing policy against the voluntary schools, and the tension is so great that the efficiency of these schools is being seriously impaired. In no part of the kingdom is the spirit of unrest so manifest as in Wales at the present day in matters affecting primary education. The denominational managers, however, are not inclined to take their treatment lying down; for it is rumoured that they are prepared to contest in the Courts any attempt to supersede them or to assume managerial functions.

About a year ago the Cardiff Education Committee resolved to make the teaching of Welsh compulsory in the lower standards of all the elementary schools in the city.

They have, however, lately taken a much more serious step in the direction of strengthening the position of the language, by insisting that it shall in future be regarded as a compulsory subject for all candidates entering the Pupil-Teacher Centre. The difficulty of providing a sufficient number of Welsh teachers in order to make their former resolution effective is probably responsible for the latest move. But that there is a considerable doubt as to its wisdom is proved by the fact that the resolution was only adopted by the casting vote of the Mayor. The probable effect of this resolution will be that the centre will be composed mainly, if not entirely, of Welsh boys and girls; for experience has shown that the number of English boys and girls who acquire Welsh for any purpose is infinitesimal, and especially is this the case in towns like Cardiff. One must also be inclined to doubt whether it is possible during a period of two or three years to acquire a sufficient knowledge of any language to teach it effectively, unless, of course, the pupils have a very considerable previous acquaintance with it. The present experiment, however, is worth watching.

(Continued on page 752.)

MACMILLAN & CO.'S EDUCATIONAL BOOKS.

Trigonometry for Beginners. By Rev. J. B. LOCK, M.A., and J. M. CHILD, B.A.
Globe 8vo, 2s. 6d.

LONDON:

GEORGE BELL & SONS, YORK HOUSE, PORTUGAL STREET, W.C.

The omission of the Central Welsh Board Senior Certificate from among the list of examinations which will be accepted as qualifying students admitted to a training college in 1907 to be prepared for an examination forming a recognized stage towards a University degree has been much discussed lately. The Central Welsh Board do not appear to know why this examination has not been inserted, as its standard is higher than that of some of the examinations which the Board of Education is prepared to acknowledge. The action is quite inexplicable. Representations, however, have already been made; but so far their result is not known.

The Board of Education has asked for the opinion of the local managers on the advisability or otherwise of separating the dual schools. As the majority of these bodies are strenuously opposed, on grounds of finance and efficiency, to the policy of the County Authority, it is not likely that the proposed separation will take place immediately. The local bodies should, one would have thought, have been consulted in the first instance by the County body.

Mr. D. A. Thomas, M.P., has created a mild sensation by his statement at Aberdare that there is not the remotest possibility that the Education Act when placed on the Statute Book will include a Council for Wales. He appeared to have good grounds for his utterance.

SCHOOLS.

ACTON COUNTY SCHOOL.—The Monson and King-Baker Scholarships are held by Webb and Johnson. The following additional masters have been appointed:—Mr. Balcomb, B.A. Cantab.; Mr. Ungood, B.A. Cantab.; and Mr. A. G. Fayers. The numbers have risen from 83 to 170.

CROYDON HIGH SCHOOL.—The following scholarships have been obtained:—A. Bate, the Deccan Scholarship for Science, £60 for three years, Bedford College; F. Macrae, the Jephson Scholarship for History, £50 for three years, Lady Margaret Hall, and also bracketed with two others for the Russell Gurney Scholarship for History, Girton College. A. Bate has passed the London Intermediate Science. The Previous Examination, Cambridge, was passed by J. Earle, Class I, and E. Ferguson, Class II. In the Cambridge Higher Local the following were successful:—Group E: A. Bate, Class I; F. Pfundt, Class II. Group A: F. Macrae, Class II. Group H: A. Strickland,

Class II., distinguished in English History. Of these, three have completed their Honour Certificates. The Oxford and Cambridge Joint Board has awarded twelve full Certificates and one Letter. Six girls passed the Oral Examination in French, and distinctions were obtained in Biology and History in the Oxford Senior Examination.

EDGBASTON CHURCH OF ENGLAND COLLEGE FOR GIRLS.—At a recent meeting of the Council the Chairman (Sir Walter N. Fisher) reported, with regret, the resignation of Miss L. Landon Thomas, the Head Mistress, on account of continued ill health. The Chairman feelingly referred to the long and able services rendered by Miss Thomas from the opening of the College more than twenty years ago, and said he was quite sure his colleagues, as also parents and pupils, would join him in warm recognition of Miss Thomas's valuable services and a fervent hope that with rest and change she might again be restored to health and strength. He was sure that they parted with Miss Thomas with feelings of extreme regret. Arrangements were made for the appointment of a new Head Mistress (see advertisement column).

HARROW, JOHN LYON SCHOOL.—The usual winter season of fortnightly lectures, &c., commenced on October 20, when a dramatic and musical recital was given by Mr. and Mrs. E. Kent Parsons. The other fixtures for this term are "Shakespearean Music" by Mr. A. Gurney, "Relics from the Ruins of Babylon" by Mr. H. Spencer (of the British Museum, and "Round about Old England," by Mr. E. C. Blomfield.

LIMPSFIELD (SURREY), CHURCH MISSIONARIES' CHILDREN'S HOME.—October 6 was the annual prize day: the Lord Bishop of Mombasa took the chair at the distribution. Evelyn Ball, Mary Fyson, Margaret Neve, and Frances Jones passed in the History Group of the Cambridge Higher Local Examination, the first three obtaining Second Classes, and F. Jones a Third. M. Neve and F. Jones had but just reached the required entrance age. All passed in Arithmetic.

LONDONDERRY, STRAND HOUSE SCHOOL.—At the Matriculation Examination in June last Jane Elmere won the University Scholarship (£90); at the Intermediate Belle Jamison won a Modern Literary Exhibition, First Class (£15), and a special prize for German (£3). Frances Clements won a First Class prize (£3), and a Victoria Bursary (£8), also the medal for first in Ireland in History and Geography in the Middle Grade. Violet Acheson won the medal for the same subject in the Junior Grade, which distinction has come to the school for the third year in succession. Jennie Stewart won a Victoria Bursary (£8), Junior Grade, and a £1 prize Science Side.

MR. EDWARD ARNOLD'S NEW BOOKS.

ARNOLD'S SHILLING ARITHMETIC.

By J. P. KIRKMAN, M.A. and J. T. LITTLE, M.A.,
Assistant Masters, Bedford Grammar School.

viii + 184 pages. With or without Answers, **1s.**

This little book has been written on the lines suggested by recent reforms. Those parts of the tables not in common use have been omitted. Decimal notation for fractions has been introduced at an early stage, mainly to avoid the creation of difficulties consequent on their treatment after "Vulgar Fractions." Plenty of problems, such as occur in ordinary life, have been made to replace the heavy calculations common in text-books twenty years ago. Contracted methods and approximations have been freely used.

A SECOND GEOMETRY BOOK.

By J. G. HAMILTON, B.A.,

Lecturer in Mathematics at the Froebel Educational Institute and at the Stockwell Training College,

AND

F. KETTLE, B.A.,

Head Master of the Clapham School.

viii + 300 pages. With or without Answers, **3s. 6d.**

THE ELEMENTS OF PLANE GEOMETRY. By

THE NEW PHYSICS AND CHEMISTRY :

**A Series of Popular Essays on Physical and
Chemical Subjects.**

By W. A. SHENSTONE, F.R.S.,

*Senior Science Master in Clifton College, Author of "The Life and Work of
Justus von Liebig," &c.*

* * Mr. Shenstone is known to the Royal Society as a skilful investigator, to Clifton College as a successful teacher. Uniting first-hand knowledge with a gift of lucid exposition, he gives to the general reader in these papers—which originally appeared in the pages of the "Cornhill Magazine"—a clear and suggestive account, free from unnecessary technicalities, of the essential substance and methods of the new conceptions which have revolutionised chemical and physical theories.

THE CALENDAR OF

The College of Preceptors

FOR 1906.

The Diploma Papers of the College of Preceptors (for Fellow, Licentiate, and Associate) are to be had only in the Calendar. The Calendar contains also the Papers for the Certificate, Lower Forms, and Professional Preliminary Examinations set in 1906.

LONDON: FRANCIS HODGSON, 89 FARRINGTON STREET, E.C.

LONDONDERRY, VICTORIA HIGH SCHOOL.—The successes of this year include the Irish Society's Girtton Scholarship of £100 a year for three years, tenable at Girtton. Miss Margaret Rentoul Brown is the winner. The last Girtton Scholar of the school, Miss Charlotte Warner, who took her Tripos in May, obtained a medical scholarship of £100, which she holds at Manchester University. Miss Mabel Dickey gained the Drapers' Scholarship of the value of £105, tenable at the Royal University of Ireland. In the Intermediate Examinations there were twelve exhibitions, one of which was the only mathematical exhibition in the Senior Grade. The First Exhibition in Ireland and the Second Exhibition in Ireland in the Experimental Science Group fell to the school. There were four medals, four special prizes in German, and two prizes in English Composition. In Music there were three passes, one with Honours in the Advanced Grade of the Associated Board, three passes in the Intermediate Grade; four passes (two with Honours) of the Incorporated Society of Musicians, in various grades; three passes, with two in Honours, in Trinity College, Intermediate and Junior, with an exhibition to Marie M. E. M. Newman in the Junior for Pianoforte Playing.

PURLEY (SURREY), RUSSELL HILL SCHOOLS.—Last month we had two important visits here, one from Mr. Swain, B.Sc., of the Board of Education Secondary Branch, an informal inspection for the purposes of Column B of the Teachers' Register; and, on the same day, Mr. Marshall, the President of the Festival Dinner, 1907, at the Métropole, London, visited both sides of the schools, and was given pictures of our work and aims here. The system of occasional outdoor excursions to places of interest for the purposes of history or geography and Nature study is doing good in our Lower School. The Sheridan Dramatic Club visited us on the 20th.

RUGBY SCHOOL.—Jex-Blake Prizes for English Literature: (1) G. C. Faber, (2) H. J. B. Wanstall. Cordery Prizes for Homer: (1) L. G. Butler, (2) P. Guedalla. Sixth Form Mathematical Prizes: (1) T. J. E. Sewell, (2) G. T. Garrett and J. J. Welch. Bowen History Prizes: W. M. Langdon and F. H. B. Sandford. Old Rugbeians will hear with regret of the death of James Gilbert, the Chapel Verger. "Old Gilbert," as he was familiarly called, has been a well known figure to many generations of Rugby boys. His connexion with the chapel began in 1830, in the early days of Dr. Arnold's Head Master-ship, when he was admitted into the choir—at that time a professional body—and continued in various capacities till his death on September 27, 1906.

UPPINGHAM SCHOOL.—R. C. Rome passed direct into Woolwich; G. Selwyn, J. L. Cheyne, and R. F. Lewis passed direct into Sandhurst. The Rev. G. Christian has been succeeded by Mr. W. St. B. Griffith (First Class in the Natural Science Tripos), Trinity College, Cambridge. Mr. J. E. Monckton has moved from the Lodge to Ridgate, in succession to Mr. Christian; whilst Mr. H. Puckle has succeeded Mr. Monckton. The Rev. C. Creighton has become house master of the Hall, in place of Mr. Hockliffe. A new edition of the "School Roll" has been published. The thanks of the school are due to Mr. J. P. Graham, who has edited the "Roll" with great care and thoroughness, aided by the kindly help of Mr. G. H. Mullins.

WINCHESTER COLLEGE.—We welcome the return of Mr. Quirk and Mr. Robertson. Mr. Fletcher, of University, and Mr. Midewall, of King's, Cambridge, have also joined the staff this term. The Prefect of Hall is R. M. Y. Gleadowe. On September 26 Dr. Ashby gave a lecture to Sixth Book on "Recent Excavations in the Forum of Rome." The Debating Society has declared itself opposed to cricket reform by 34 to 12, and to the reform of English spelling by 57 to 11. Mr. Max Hambourg and his brothers, by the invitation of the Warden, gave a recital in the Music School on October 16, which was much appreciated by the school.

PRIZE COMPETITIONS.

The Translation Prize for October is awarded to "Warwick." The winner of the Translation Prize for July is John M. Fletcher, Esq., 9 Stanhope Street, Hyde Park Gardens, W. Winners of Holiday Prizes are:—

Water - Colour Drawings.—Miss G. Pitcairn-Bookless ("Bob"), The Pentlands, Eastbourne, Sussex; Miss Eniline Stokes ("Evergreen"), St. Gabriel's College, Carmont Road, Camberwell; Miss A. E. Ellis ("Shaston"), Freshfield, Christchurch Road, Bournemouth; Miss M. O. Sharp ("M. O. Sharp"), 10 Park Road, Beckenham.

Photographs.—W. Gordon Lloyd, Esq. ("Cranliensis"), 22 Hurler Crescent, Clifton, Glos.; Miss Boyer Brown ("XV."), Mayfield House, Southgate, N.; C. S. Johnson, Esq. ("Mel"), Church Mount, Sutton-on-Hull, E. Yorkshire; J. H. Taylor, Esq. ("Thalassa"), Little Trinity, Cambridge; Miss M. Evers ("M. E."), Aldborough Vicarage, Boroughbridge, Yorks; Harold W. Atkinson, Esq. ("Orotava"), Erwood, Beckenham, Kent.

Translation of Lyric.—E. C. Hannah, Esq. ("Paerwalde"), 17

(Continued on page 756.)

Woolley, Sons & Co^{LD}

Manufacturers, Importers, and Dealers in
CHEMICAL & PHYSICAL APPARATUS

Rostron's Patent **OPTICAL LAMP** for Students.

ADVANTAGES.

- 1—It brings to a white surface on the bench a line of light which may be considered the path of a ray of light.
- 2—The Laws of Reflection and Refraction are obvious from the visible paths of light. No imagination is required as in "Pin" experiments.
- 3—It gives a source of light of desired shape, and screens it efficiently.
- 4—It is convenient in size and adjustments, no focussing is required, and it is coupled in place of the Bunsen Burner.
- 5—It serves instead of all Screens (except for image), their Stands, Pin-hole Camera, and Lamp and Scale for Mirror Galvanometer.

Price 15s. 6d.

One of H.M. Inspectors of Secondary Schools says of it:—"The Lamp is an excellent means of directly illustrating the principal Laws of Light, and it would prove very useful to all students of this subject."

MICROSCOPES and ACCESSORIES

by all the Leading Makers, including Beck, Leitz, Reichart, Zeiss, and also Messrs. Watson & Sons, of whose Instruments we hold a Large and Varied Stock.

J. POOLE & CO.,

(ESTABLISHED 1854)

104 CHARING CROSS ROAD, LONDON W.C.

The Crescent, Birmingham ; Mrs. Louise Maude ("Givry"), Ladywell, Great Baddow, Chelmsford ; Miss Margaret J. Robertson ("Rabe"), 11 Chelsea Court, S.W. ; Leopold Goldschild, Esq. ("N. N." and "Verblüht"), 61 Patshull Road, N.W.

De même, avant d'être précis, combien de fois n'est-on pas vague ! Que de termes qui n'appartiennent pas à la langue du sujet, et qui s'y introduisent par le relâchement de l'attention, par la mémoire, par l'imitation ! Que d'autres dont l'usage ou plutôt la mode du jour se sont emparés, et dont le sens est étendu à tant de choses qu'il ne désigne plus rien de distinct ! Que de tours languissants et embarrassés se présentent avant le vrai tour, le seul qui donne à la pensée sa physionomie et son mouvement ! Combien d'expressions qui ne déterminent pas les choses, et dont nous sommes si prompts à nous contenter, soit mollesse de conception, soit fatigue ou paresse ! Combien d'inexactitudes dans l'effort même que nous faisons pour être exacts ! Combien d'illusions dans l'emploi de ce que nous appelons les nuances, lesquelles, au lieu d'être des aspects différents de la pensée, ne sont souvent que de vaines images qui nous la cachent !

Les figures, les métaphores sont des pièges du même genre, et dont il n'est guère plus facile de se garder. A qui n'en vient-il pas dans l'esprit par cette porte banale de la mémoire, toujours ouverte à tout ce qui est imitation et mode ? Notre langue ne souffre point ces ombres qui se placent entre notre pensée et nous ; c'est le premier devoir de l'écrivain de s'en défier, ou plutôt de les chasser courageusement, comme Enée dissipait les ombres avec son épée. Ces images sont le plus souvent des effets du sang, des fumées qui montent au cerveau. Les littératures les plus riches en images sont les plus pauvres en idées. Certains écrivains sont pleins d'images ; tout reluit, tout brille, tout étincelle ; mettez tout cela au creuset : pour quelques parcelles d'or, que de cendre ! L'image ne doit être que le dernier degré d'exactitude, ou plutôt elle ne doit être que la pensée elle-même exprimée en perfection ; mais, pour une qui remplit cet office, combien qui ne sont que des apparences de la pensée !

Enfin, quel esprit cultivé ne sera pas d'accord avec moi sur ce qu'il en coûte dans notre langue, pour lier le discours et n'y employer que les termes propres ? Pour la propriété, ce n'est pas assez d'être bien doué : il faut savoir la langue, et avoir pesé dans les écrits des modèles ce que valent les mots dont nous nous servirons à notre tour. Il faut que l'étude les place dans notre mémoire, avec le titre qu'ils ont reçu des hommes de génie, lesquels font des mots une monnaie à effigie, dont la valeur est déterminée. Puis, c'est à l'inspiration

de les en tirer, de les animer de notre pauvre vie, en sorte qu'ils aient une même valeur de circulation pour tout le monde et que, par l'emploi que nous en faisons, ils nous appartiennent en propre.

By "WARWICK."

So, too, how vague we often are before we reach precision ! How many terms we use which are inappropriate to the matter in hand, but which slip in when attention flags—tricks of memory or imitation ! How many more which custom, or rather the fashion of the day, has pounced upon and applied to so many different things that meaning loses all definiteness ! How many weak and halting phrases occur to us before the right one, the only one which gives the thought its true character and force ! How many expressions which do not fit the facts, but which we are so readily satisfied with—from mental slackness, perhaps, or weariness, or sloth ! How many inaccuracies, even when we are really trying to be accurate ! How much self-deception in the display of what we call the "nine shades," when, instead of being different aspects of the thought, they are often only meaningless fancies which conceal it from us !

Figures of speech and metaphors are snares of the same kind, against which it is almost as difficult to guard. Who does not find them pouring into his mind through the vulgar gate of the memory, ever open to anything in the nature of imitation or fashion ? And yet our language will not tolerate these shadows that come between our thought and ourselves ; it is a writer's first duty to challenge them, or rather to drive them boldly away, as Aeneas scattered the shadows with his sword. Such flights of fancy are, as a rule, mere heat of the blood, fumes that cloud the brain. In literature lavish use of images spells poverty of ideas. Certain writers are full of picturesque touches—all flicker and sheen and sparkle ; but put the stuff into the crucible, and how few the grains of gold to what a quantity of ashes ! An image should give the final touch of precision, or rather it should be the thought itself in its most perfect expression ; whereas, for one that is really such, how many are but make-believes for the thought ?

Finally, what cultivated person will not agree with me as to the earnest effort required in our language to get strict logical connexion, and to use the right word and nothing else ? For such rightness it is not enough to be talented : we must know the language, we must have weighed the words used by our model writers and ascertained their value before we use them ourselves. Study must fix them in our

(Continued on page 758.)

The text follows the well known **JUNIOR SCHOOL SHAKESPEARE**, omitting everything undesirable in class reading.

The Series will include :—

The Merchant of Venice.
Jullus Caesar.
As You Like It.
Henry V.
Coriolanus.

Richard II.
Richard III.
Midsummer Night's Dream.
Tempest.
Twelfth Night.

Hamlet.
Henry VIII.
King John.
Macbeth.
King Lear.

BLACKIE & SON, Ltd.,
50 OLD BAILEY, E.C.

By FRANCIS STORR, B.A. Camb.,

Occasional Inspector to Board of Education, Scotch Board of Education, and Central Welsh Board;

Examiner to: Oxford and Cambridge Joint Board, Cambridge Higher Locals,
Scotch Board of Education, Civil Service Commission,
University of London, &c., &c.

EIGHTH EDITION. With Supplementary Easier Exercises.
Fcap. 8vo, cloth, interleaved. Price One Shilling.

Hints on
French Syntax.

Extract from Author's Preface.—At the request of several Masters and Mistresses who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

SECOND EDITION. Crown 8vo,
cloth. Price One Shilling.

French Words
and Phrases.

CHEAPER EDITION. Demy 8vo,
paper cover. Price Sixpence net.

German Declensions
and Conjugations

BY HELP OF REASON AND RHYME.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

memory, together with the superscription they have received from men of genius; for they it is who make words into a current coinage stamped with a definite value. It is then for inspiration to take and breathe into them our own poor life, so that they may have the same circulating value for everybody, and become, by the use we make of them, our very own.

By "MENEVIA."

And in the same way, how often one is vague before one succeeds in being precise! How many are the terms which do not belong to the vocabulary of the subject, and which are introduced into it by momentary inattention, by a trick of memory, or by imitation! How many others which have been taken possession of by custom, or rather by the fashion of the moment, and whose meaning has been extended to so many things that it no longer connotes any one distinct thing! How many dragging, awkward turns of phrase present themselves to us before the true one, the only one which gives character and movement to the thought! How many expressions which do not define things, and with which, either from feebleness of conception, weariness, or laziness, we are so easily contented! How much inexactness there is in the very effort we make to be exact! How many illusions in the use of what we call shades of distinction, but which, instead of being different aspects of thought, are often but empty images which conceal it from us!

Figures of speech, metaphors, are snares of the same kind, against which it is almost equally difficult to be on our guard. Who does not know how they enter one's mind by the hackneyed gate of memory, ever open to all that savours of imitation and fashion? Our language does not admit of these shadows, coming between us and our thought; and it is the first duty of an author to mistrust them, or rather to drive them courageously away, as Aeneas dissipated the shadows with his sword. These images are most often the result of overheated blood, vapours mounting to the brain. Those literatures which are richest in images are poorest in ideas. Figures of speech abound in certain authors; everything glitters, gleams, and sparkles. But put all this into the melting-pot, and, for a few particles of gold, how much of it is ashes! A figure should be only the last degree of exactness; rather, it should be the thought itself expressed to perfection. But, for one figure which performs this function, how many are only the semblance of a thought!

Finally, what cultivated mind will not agree with me on the difficulty,

in our language, of framing a well connected discourse, and using only the correct expressions? To attain correctness, it is not enough to have talent: we must know the language, and have studied in classical models the exact value of the words which we are to use in our turn. We must have fixed them in our memory by study, with the standard value given to them by men of genius, who make of words a minted coinage whose value is fixed. Then it is for inspiration to draw them forth, to animate them with our own poor life, so that they may have the same current value for everybody, and at the same time, by the use we make of them, be our own peculiar property.

We classify the 202 versions received as follows:—

First Class.—Warwick, Baloo, Chota Pagul, Good Creature, Roggenfeld, Norman, Laird, J.C.P., O.L., Parling, Glenleigh, Hilly, Ouf, Menevia, W.G.M., S.R.D., Item, Oudeis, W.L.B., Ferdinand, Emil, St. Michael, M.S.B., R.J.P.

Second Class.—C.W.M., Clotilde, Seabury, Worley, A.B.S.A., Niphetos, Gaby, Waanische Meisje, Mnestheus, A.P.W., W.H.S., Pat, Prig, Tête Blanche, Mair, Sheaf, X.Y.Z., J.I.B., Ilex, Malahide, Baffled, Devantia, Theta, Bladud, West Countree, N.B., F.A.J., Maidenhythe, Altnacaille, Memo, Hasel Jane, Hamish, Fortes et Fideles, Pudsey, Rursus, Silver Pen, Bertram, Sirach, M.S.C., Annecy, Paillet, Hasta, Cottage, Horace, X.Y.Z., J. Caesar, Amasis, Megan, Eicarg, Sitapur, Senator, Amry, G.W.H., Gothicus, J.B.P., Carol Ward, Arelate, Tacitus, Magnusium.

Third Class.—Bia, Thérèse la Lisieux, Lusitia, Aiglon, M.E.P., M.G.C., E.C.A., V.M.S., V.E.M.H.C., Sans Espoir, Cosy, E.D.K., H.C.E., Duffer, Jap, Juif, Reymond, M.B., N.N., Jod, Ellis, Pearl, Ffestiniog, Gleamingwood, St. Clair, Excelsior, H.M.S., Rayon de Soleil, S.G.D., Great Western, A.M.W.B., Mike, C.L.M., H.B.W., Ephesian, D.M.I., Anon, A.M.L., Iota, Atir, Wilts, Susan, Mow, De la Vire, Felicia, E.M.W., T.V.D., Typist, Excelsior, Helen Jackson, F.T., M.T.B.E., Comet, Singhalese, Clev, Toinette, Mickie, Carl, Gem, Double O., E.E., York, G.M.H., S.A.G., Ulysses, H.C., Keep, Edina, Manuel.

Fourth Class.—Irene de Rusett, Coelebs, Dickie, R.J., K.E.B., Falaise, E.M.B., Emilia, G.A.R.C., J.I.P., K.L.M., Broom-stick, Faerie Queenie, Rustic, B.M.D., Scarecrow, Stedye, M.G., Geo. T. Sampson, D.S.G., O.M.R., Woodburn, Herbert, S.A.M., Chambers, Crusoe, Codex.

(Continued on page 760.)

A. & C. BLACK'S

SECOND AUTUMN LIST.

THE LIFE STORY OF A FOX.

By J. C. TREGARTHEN, Author of "Wild Life at the Land's End."

Containing 12 full-page Illustrations in Colour from Paintings by the Countess HELENA GLEICHEN.

Large square crown 8vo, cloth, gilt top, price 6s.

In the same Series of Animal Autobiographies:—*The Dog, The Cat, The Black Bear, The Rat.*

THE CHILDREN'S BOOK OF EDINBURGH.

By ELIZABETH W. GRIERSON. Containing 12 full-page Illustrations in Colour from Paintings by ALLAN STEWART.

Large square crown 8vo, cloth, gilt top, price 6s.

CHILDREN'S TALES FROM SCOTTISH BALLADS.

By ELIZABETH W. GRIERSON. Containing 12 full-page Illustrations in Colour from Paintings by ALLAN STEWART.

Large square crown 8vo, cloth, gilt top, price 6s.

JACK HAYDON'S QUEST.

By JOHN FINNEMORE. Containing 8 full-page Illustrations in Colour from Paintings by J. JELICOE. Large crown 8vo, cloth, gilt top, price 5s.

A. & C. BLACK, Soho Square, London.

CHARTS.

For the teaching of Science it is essential that the Demonstration Charts should be clear, accurate in detail and colouring, and sufficiently bold to be clearly visible in a Class Room.

W. & A. K. Johnston's range of Large Wall Charts, size 50 ins. by 42 ins., mounted on cloth and rollers, and varnished, will be found to fully answer the requirements of the Class or Lecture Room.

Astronomy, Botany, Chemistry, Human Anatomy, Hydraulics, History, Hygiene, &c.

Free Handbook with each Chart.

DRAWING CHARTS.

For Nature Study Charts suitable for Pencil, Crayon, and Brush, as well as for class lessons on Nature Study, W. & A. K. Johnston's four sets, with three sets of Brush Drawing Charts by Ansell, will be found very suitable.

In the first four sets there are 20 Charts to each set.

In the other three, " " " " " " " "

Free Handbook accompanies each set.

MAPS. GLOBES. ATLASES.

W. & A. K. Johnston have every confidence, in inviting teachers to inspect their very extensive range of these, that their publications will be found very suitable for their various purposes.

Catalogues and Illustrated Lists free on application.

Advanced English, Parisian French, German, Mathematics, Latin, very good Music, Performer (Piano, Organ), Singing, Elocution, Painting (Oil and Water), Calisthenics, Needlework.—5031 B, Hooper's, 13 Regent Street, London.**WANTED a Post as TEACHER** in Horticulture, Botany, Sports, &c. Full qualifications (Gold Medalist, Royal Horticultural College). Apply to Miss L. FRENCH, Meopham, Kent.**PRACTICAL DRESSMAKING** taught by a Lady fully qualified. Schools, Classes, or Private Pupils visited. Town or country. Address—K., 33 Dorset Square, London, N.W.**A.R.C.M. (Piano)** requires Post in good School at once. Experience three years. Good disciplinarian. Games. Churchwoman. Communicant. 440 and laundry.—M., Hertford Lodge, Church End, Finchley.**EXPERIENCED ASSISTANT MISTRESS** requires Re-engagement. Cambridge Higher Local Honours Certificate. Registered Column B. Conversational French (two years France). Literature, Arithmetic, History, elementary German.—Miss WHITTON, Castle Hall School, Northampton.**L.R.A.M. (Teacher), A.R.C.M. (Performer)**, Piano, desires Post after Christmas. Ten years' experience. Great success in preparation for Exams. Subjects: Piano, Singing, Violin, Harmony, Theory.—B., Old Grammar School, Thame, Oxon.**RESIDENTIAL GAMES and GYMNASTIC MISTRESS** (Diploma and Gold Medals, Southport Physical Training College). Subjects: Drill, Gymnastics, Games, Swimming, Massage, Class Singing, and Junior Piano. Would take small salary at large School for the sake of experience.—Miss MINNION-SENHOUSE, 155 City Road, Birmingham.**FRENCH GOVERNESS** (Diplôme) wishes to teach French in good School or Family. Write—Mlle. FAVRE, 7 Hartfield Square, Eastbourne.

Fifth Class.—Blurette, Munks, Geo., Cal, Bella, Serviette, S.O., Titana, D.A.T., Niente, Lassie, David, T. Wells, Miscreant, Planche, Tours, N.O.N., Française, Ellis, Sixteen, Umbra, F.A.T., Herts.

We received last month a typical protest from a contributor, pointing out errors in the prize version and informing the editor that learned French professors to whom he had submitted both versions had pronounced his own the better one. The editor was compelled to refuse the appeal asked for: his judgments were fallible, but he could acknowledge no higher court. It is hardly necessary to point out that the prize is determined by style no less than by accuracy, and that a "faultily faultless" translation stands but a poor chance of winning. As a case in point, we print this month two versions for comparison.

Howlers were rare, and the Fifth Class is comparatively empty. The commonest were: *que de*, "what" for "how many"; *s'en défier*, "to defy" for "to mistrust"; *à effigie*, "in effigy"; *du sang*, "of blood" or "of the race." "Which custom, or rather the prevailing fashion, have seized upon" was a strangely common fault of syntax. The first sentence, too, was often misrendered: "How often one is vague rather than precise!" The misspelling of "Aeneas" showed that the allusion to the Sixth "Aeneid" was not known to several.

To pass to the real difficulties of the passage. For *sa physionomie et son mouvement* Shakespeare's "form and feature" might serve. *Ne déterminent pas les choses*: "do not indicate with precision the things intended" is cumbrous, but it is not easy to give the full and exact meaning more briefly. *Cette porte banale*: "hackneyed gate" is a strained phrase, and "vulgar gate" is slightly affected; either "wide gate" or "common high road." *Effets du sang*: "humours of blood" in Shakespeare's phrase, or, if this is too archaic, "faults of temperament"; "heated blood" may be implied, but is not expressed. *Lier le discours*: "to produce a well knit composition," the "callida junctura" of Horace. *Les animer de notre pauvre vie*: "to revivify them with our own personality, however humble." Here a literal rendering misses the mark, and some such paraphrase is required.

A Prize of Two Guineas is offered for the best translation of the following passage from Edmond Scherer:—

Il y a d'abord une étude de style. Mais le style même de l'auteur n'est pas un. Il est quelquefois spontané, coulant de source, portant

le sceau d'une inspiration toute personnelle; d'autres fois, et le plus souvent peut-être, il trahit des intentions, des reminiscences: c'est une manière et un pastiche. M. Cherbuliez, formé à l'école des Grecs et à celle des écrivains français du XVII^e siècle, reproduit, dans un mélange qui n'est pas sans grâce, la phrase ample et flottante des uns, le tour à la fois naïf et recherché des autres. Il s'exhale de ses pages comme un parfum où se confondent Platon et Madame de la Fayette. Il a repris la tentative de Courier. On croit parfois, en lisant ses causeries, se retrouver dans le salon de la comtesse d'Albany.

Ce n'est pas tout cependant. Sous la syntaxe, il y a le vocabulaire. Le double pastiche dont je viens de parler se complique d'une étude lexicologique. L'écrivain s'est plu à bigarrer son livre d'une multitude de mots insolites. Et je ne parle pas seulement des termes techniques qu'il prodigue çà et là avec trop de complaisance: il aime en toute circonstance à étonner son lecteur d'une expression imprévue. L'homme superficiel méconnaît-il le mérite supérieur, ce sera "le grain de rassade bien serti qui dédaigne le calochon!" Il est telle partie du volume qui exige le secours du dictionnaire. Les vastes lectures de M. Cherbuliez, sa grande mémoire l'ont bien servi dans cette fantaisie. Car il n'y faut voir qu'une fantaisie. Il est impossible qu'un écrivain aussi admirablement doué que celui dont nous parlons donne définitivement dans la manière, et dans une pareille manière; il est trop puissant et trop sincère pour cela. Il a voulu s'amuser, et il se gardera de recommencer. Il se contentera, à l'avenir, de nous donner des dialogues pleins de trait et de vivacité, des paysages aux lignes gracieuses et aux couleurs éclatantes, des dissertations qui tour à tour pétillent d'esprit et étincellent de verve. Il laissera là Paul-Louis Courier: il sera lui.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by November 16th, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Those in the First Class are entitled on application to a copy of "Essays in Translation."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

PRIZE DISTRIBUTION,

Christmas, 1906.

The Educational Supply Association

HAS NOW IN STOCK

**AN IMMENSE ASSORTMENT OF
REWARD BOOKS,**

for the selection of which its greatly enlarged Showrooms afford every facility.

ARNOLDIDES SCHRAG.*

DR. BESSERDANK, whose good fortune it has been to have his memoirs edited by Dr. Arnold Schrag, was a cousin of the immortal Teufelsdröckh and a lineal descendant on the distaff side from Lemuel Gulliver. He was also *Gymnasialdirektor* in the important Swiss centre of Bergdorf, and was sent as an educational expert on an official visit to Eldorado in order to report upon the pedagogic ways of that distant land. His adventures are entertaining, and so is he; for he has wit, humour, style, and a very decided flavour. But we must confine our notice to that which he went out for to see and what he saw.

He was astounded, first of all, to find nothing at all astounding. The school system struck him as very familiar indeed—very like the Swiss system, but without its latest improvements. The Eldoradans, it seems, like the Japanese, have learned from the Europeans, and the good Doctor's first impression is that they have learned, so to say, from antiquated text-books. A conservative, almost a reactionary, state of things revealed itself. For instance, how much time do they devote in their *Obergymnasium* to classics and literature? No less than twelve hours every week! And they presume to defend this waste of time by asserting that these studies are the best they know for the development of intellect and character. They claim, too, that no other branch of study is so splendidly equipped with the means of good learning and right teaching as this. The dictionaries leave nothing to be desired; the grammars are excellent; the publishers outbid one another in the production of admirable texts with admirable notes. Now that we have attained such perfection in our tools, they ask, are we to throw them away? And Besserdank finds nothing to say in reply.

Another of their theories is that the *Oberrealschule* is as worthy an institution and has aims as high as the *Gymnasium*. The question which is the better type of school is not discussed in Eldorado. They set themselves to make both types as perfect as possible. But their conception of a perfect *Realschule* is terribly old-fashioned. The terms which they use in expanding it are enough to betray this—such terms as “literary,” “humane,” “culture.” They give six hours every week to the study of the Eldoradan language, and six more to a foreign language—twelve precious hours that might be divided between practical chemistry, commercial geography, book-keeping, experimental physics, and other useful subjects. They have a maxim, “depth, not breadth,” and they carry it so far that they refuse to introduce a second modern language. It is better, they obstinately maintain, to learn one thoroughly than to dabble in two. Here we are, they say, on an overloaded raft. We are very sorry to throw anybody overboard, but, still, we had rather sacrifice the whole of our friend A., than B.'s leg, C.'s arm, and D.'s head.

These heresies prepare the adventurous *Gymnasialdirektor* for the greatest shock of all. With kindergartens, outside the kindergarten, they will have nothing to do.

Learning means working—learning well means working hard. When I read in your educational papers of your plans to make instruction as easy as play, and in this way to induce boys to take pleasure in it—to make study a game; for that is what it all comes to—I can only express my earnest conviction that this would be in Eldorado a morbid phenomenon. What we want is an earnest race, fond of work. Why should we make full steam towards the softening of the rising generation and the bringing up of a race that is fond of play? To learn in play? To play at learning? No, no! To learn by learning: that is our method.

This intolerance in the Eldoradans is surprising. But what are we to think of their tolerance? They teach vocabularies and dates without a qualm. Mere memory loading, mere ballast! Why not? they ask. What is the memory for, if not to carry such loads? What is better than the right kind of ballast in the right place? And when they want to test the results of their teaching and the proficiency of their scholars

they hold examinations, and are not ashamed. Likewise they have inspectors and inspections, and prizes and prize-days.

It goes without saying that the conversation method in the learning of languages has not been introduced in Eldorado, and that “prep.” still flourishes in that golden land. All these things, Señor Rodrigo, of the *Realschule*, admits, are capable of abuse—examinations, prizes, “prep.” memory-work, and all; but that they have their uses he does not understand how any sane man can doubt. And Señor Navarrete, of the *Gymnasium*, and Inspector Blanco cordially agree with him. Nothing is said about punishment. Perhaps, in such a country as Eldorado the problem does not arise; or, perhaps, they have not solved it, even there.

The elementary schools are free, but no others; though fees are remitted whenever that seems necessary. A direct request to that effect is required; for, if out of taxes paid by the well-to-do the poor receive such a splendid gift as a free education, some little acknowledgment is due in return. These are the views of the Minister of Education. “It hardly needs saying,” remarks Besserdank, “that such an arrangement and such a way of regarding it seemed to me monarchical and antiquated.”

It is encouraging to know that so many English schools might be transplanted to Eldorado without any material change.

A VISIT TO SWEDEN.

ONE phase of the movement in favour of international friendship which has set in so strongly of recent years is the series of international visits organized by Miss Butlin (Old Headington, Oxford). The object of these visits is to enable English men and women, in the short space of a fortnight, to get an insight into the national institutions and social conditions of a foreign country, which the ordinary tourist, as a rule, finds it impossible to obtain unless he can afford time and money for a prolonged stay.

For the last four years these meetings have been held successfully in Copenhagen in August, and this year a meeting was arranged in Stockholm as well. With the help of a committee of Swedes and the co-operation of a large number of Swedish men and women, drawn chiefly from the ranks of those interested in social questions and taking an active part in educational and social work, an interesting course was arranged. Lectures were given on the different aspects of Swedish national life, dealing in turn with political and social conditions, industry, education, literature, and art. The lectures were followed by visits to places of interest—to schools, crèches, workhouses, old-age homes, &c., where detailed information about the working of the institutions could be gained from the officials. The educational part of the programme included a lecture from Dr. Lagerstedt, a member of the Swedish Board of Secondary Education, and a lecture on “The People's High Schools”—adult schools for the peasantry to which we have no corresponding institution in England. Visits were paid to Upsala University, to a boys' secondary school, to a Board school, and to the Royal Gymnastic Institute, where thirty women students, of whom five or six are always foreigners, are received annually, free of charge, to train as gymnastic teachers. In addition to the visits and lectures arranged for the course, visitors who wished to make a more detailed study of any particular form of national life were placed in touch with those from whom they could most easily get reliable information.

The success of the meeting in Stockholm justifies its repetition next year, and after that Miss Butlin will probably extend the range of her activities to Norway. The widespread recognition that these visits have met with shows that they supply a long felt need in providing a means whereby the people of different nationalities can easily be brought into touch with one another. They show too that people are beginning to realize how much more interesting foreign travel can become when it includes a knowledge of the people as well as of the landscape, and when it is possible to penetrate through the crust of hotel life to a perception of the national activities going on around.

SCHRAG.

REVIEWS AND MINOR NOTICES.

An Introduction to Greek Epigraphy. Part II.: *The Inscriptions of Attica.* Edited by E. S. ROBERTS, M.A., and E. A. GARDNER, M.A. (21s. Cambridge University Press.)

It is eighteen years since the first volume of this work saw the light, and with the times its own character has somewhat changed. The first volume contained a history of the Greek alphabet, with inscriptions which illustrated that subject. This volume contains a representative selection of Attic inscriptions, classified according to their matter. There is obviously no reason why these two books should be called two volumes of one work. The work as originally planned was a "Handbook to a Complete Corpus Inscriptionum Graecarum," which to carry out would need several other volumes dealing with the other parts of the Greek world and illustrating dialect as well as history and antiquities. Such a work is, indeed, badly wanted, and we consider it a great pity that the plan has been given up, as the editors now tell us. Every year the mass of inscriptions increases upon us: they are so scattered in so many different publications as to be inaccessible except to the specialist. Yet their importance is great, as we need not say, for all classical students. We hope that some one else—and why not Mr. Tod?—will take up the torch which our editors have dropped.

And now, as regards the book before us, taking it as a whole, it is admirably done. It is true there are omissions and oversights; but to avoid all such in a work like this would be impossible. The work also appears to have been a long time in the press; so that in some cases later discoveries might have been used to throw further light on the text had not the earlier sheets been printed off. We confess also that we should have been glad to see a fuller account of the alphabet. New discoveries have corrected or supplemented the views held by Mr. Roberts—1887: in particular, the Cretan discoveries throw some light, if a dim and uncertain light, on the history of several of the Greek letters. A few pages are given here to the Attic alphabet (xi-xvii); but that is all.

The most valuable part of the work is the commentary. Here the editors break new ground. Such a commentary as the "Corpus" affords is not enough to smooth the path of the learner; but in our volume the greatest pains are taken to give him all he can need to appreciate the meaning and the bearing of the inscriptions. Topics of general importance are treated in "Remarks" or longer notes. Amongst these may be mentioned formulæ of decrees, Attic numeral signs, public secretaries, the ephebic inscriptions, treasure and tribute lists, list of demes and demotics, Attic dates. Some of these—such as the dates—are complicated in a high degree, and the learner should be most grateful for the help here given.

The commentary must have cost enormous labour—it is full of learning and research. There is also a full index of more than sixty pages. The printing, as we expect from the University Press, is excellent. We cannot understand, however, why editors persist in using brackets for restored portions of the text when a different type would be just as useful, and brackets are most irritating to the eye. This ugly practice was borrowed from Germany, where typography is in a parlous state. With a little taste and ingenuity how much better the thing might be done!

We hope that the learned appearance of this book will not frighten the schoolmasters, who need all the instruction they can get; for there is no department of ancient life, and probably no ancient author, for whose elucidation epigraphy is not useful. The historian knows this well, and so do the archaeologist and the philologist; but the literary student pure and simple would be pleasantly surprised if he ventured to expend his guinea upon this book. Demosthenes and Aristophanes in particular are elucidated by the inscriptions again and again. And, best of all, we seem to come in contact here with the ancients almost at first hand: we see them in their habit as they moved; we hear them speak in parliament; we follow them to the temples in health and sickness, take part in their work and play, see their piety and their vanity. There is no study more fascinating, once its initial difficulties are mastered, and these are not great, especially with the help of Messrs. Roberts and Gardner's excellent manual.

The German Universities and German Study. By FRIEDRICH PAULSEN. Authorized Translation by FRANK THILLY and WILLIAM W. ELWANG, with a Preface by Prof. M. E. SADLER. (15s. net: Longmans.)

It would be impertinent for an English reviewer to criticize a work which a quarter of a century ago, in its first shape appeared and has been accepted as a classic written by "the greatest living authority upon the history of higher education in German-speaking lands"—so the author is justly described by Prof. Sadler in his preface. He will rather follow Prof. Sadler's lead and ask what are the essential differences between the British and the German Universities. First, the German Universities are more homogeneous. There is no such difference in organization between the greatest and the smallest, the oldest and the most recent of German Universities—between Heidelberg and Munich, Berlin and Greifswald—as there is between Oxford and Aberdeen or London and Durham. It follows, partly from this homogeneity, that there is not in a German University the same *religio loci*. Migration from one University to another is very common in Germany and exceptional in England. Secondly, the dominant note of a German University is the spirit of scientific investigation. Paulsen, with justifiable pride, points the contrast. "Think of what the single University of Halle, with its ridiculously small endowment (up to 1786 only 7,000 thalers per annum), with its poor students and poorly paid professors, has done for science and for the culture of the German people, compared with Oxford, spending its inherited millions in hereditary indolence." Thirdly, the tendency of the German University is to foster specialism; though it must be borne in mind that the evils of specialism at the University are less in Germany, where the organization of the secondary schools guarantees that the student before entering has had a broad, general culture. Lastly, as Prof. Sadler puts it, "though the German student has no deeper feeling of patriotism than the Englishman, he has a stronger sense of his direct obligation to the State." Here, it seems to us, the gain is not on the side of Germany. Paulsen, who may be roughly classed as belonging to the left centre, highly approves the compulsory year of military service; he looks somewhat askance at debating societies where politics are not barred; he defends students' duels, or fencing bouts, as he prefers to call them, and even holds that the duel proper is a necessary evil. We are content to record the fact without argument.

There is hardly one of the pedagogical or educational problems of the day on which the book does not throw light. State control and subsidization; technical institutions and their connexion with the Universities; examinations, their conduct and influence; professorial and tutorial teaching; scholarships, and the cost of higher education—we can only name some, and send our readers to the book itself.

We are bound to add that such as know German would do well to have the original at hand, like the traditional Oxford man who read his Kant in "Bohn's Library" but turned to the "Kritik" as a crib. Americanisms and Germanisms abound—"to quiz," "to happen along"; "earnest" for "serious"; "sick" for "ill"; "the man of active affairs feels himself constrained to affiliate with a party"; "the social betterment work." These are trifling defects; but what sense can be made of such sentences as the following, unless they are mentally retranslated into the original?—

If one may judge from the photographs of the exteriors and interiors of the society houses, which are now so often to be seen in all stories of fraternity-life, and in which the dice-box appears with the utmost regularity of the *Kneip*-room, it would seem that the use of the very humblest means of social intercourse has increased rather than decreased during the last generation.

The old maxim "Speak so I can see you!" is still significant. And yet there are certain dangers in this complete freedom; no other method affords prejudice, either previously conceived or arising at the moment, so much opportunity for unjust treatment and judgment. Furthermore, accidental advantages or disadvantages of the outer or inner attitude of the examiner cannot be brought out more unfairly anywhere than just here.

Prof. Robertson at the York meeting of the British Association pointed to the United States as the Promised Land of German scholarship. He would not, we take it, choose this translation as one of the fruits whereby we may know it.

(1) *Selections from the Septuagint.* By F. C. CONYBEARE and ST. GEORGE STOCK. (7s. 6d. Ginn.) (2) *Lucian: Selected Writings.* By F. G. ALLINSON. (6s. 6d. Ginn.)

We have here two volumes of the American "College Series of Greek Authors," the books being, like their predecessors in the series, printed with good type, convenient in form, and edited by competent men.

(1) "Selections from the Septuagint," as will be apparent to our readers from the names of the editors, crossed the ocean to find a publisher. Are our University Presses so eager for earning profits that they grow shy of taking risks for scholarship? Or is it that American booksellers, with a protective tariff, can offer better terms to authors? We know not, and will only say that the work of Messrs. Conybeare and Stock would have done credit to any publishing house. They give us an introduction, a tolerably full grammar of Septuagint Greek, and selections (in Swete's text) from the Septuagint, with a running commentary at the foot of the page. And all that they give is of excellent quality. With regard to their treatment of the subject, it has something of novelty. Hitherto, as they say, the Septuagint has been regarded only as an aid to the understanding of the Hebrew text; yet it has traces of older readings, and they look to the Hebrew merely as an aid in the interpretation of the Septuagint. We recommend their book to students of theology—not to schools, lest haply classicists should charge us with a design of extruding Greek by jesuitical means. The page open before us reminds us that even a Dindorf could let Euripides use ἡμῶν as the imperfect of εἶναι! What boys would write after a good long course of Septuagint we fear to think.

(2) *Selections from Lucian*, is, in like manner, exposed to the objection that the language is not always such as the young should imitate in their composition exercises. Yet the author is found acceptable in schools. And of his purely artificial Attic Greek the late Prof. Sir Richard Jebb wrote: "It is easy to find blemishes in the grammar; but, as a whole, in general texture and in spirit, it is the most remarkable and the best sustained *tour de force* ever achieved—not to say by a foreigner—but by any post-classical writer of the language." In fact, the gravest deviations from true Attic usage can be collected in a few warning pages. This is done, and well done, by Dr. Allinson, Professor of Classical Philology, Brown University, in the book under review. His work has other merits. The collection of pieces is the best that we know, albeit that, with the editor, we must mourn for the exclusion of the "Cock," dear of old to French boys. Great pains have been taken to digest many of the newest relevant tracts, and much thought has been expended on the settling of the text. On the other hand, we observe a few faults. In spite of "the keen scholarship that has accompanied the exacting scrutiny of the proofs at the Athenæum Press" misprints have been left uncorrected. Thus Henry Vaughan appears as "Vaughn"; and on page 130 the reference should be to "Ach." 235, not 325. Again, occasionally we feel at liberty to differ from our editor as to exegesis. In the words ἐλέγχο αὐτὸς ἐν τῇ ἀναπλασθείσῃ ὑφ' αὐτοῦ πόλει οἰκεῖν (page 67) we are not minded to take αὐτὸς as "alone"; and of the phrase τοῦτ' ἐκεῖνο (page 129), "There's that old dodge again!" an alternative rendering might have been offered. Not flawless, the notes are, moreover, generally of the kind called "thin," nothing but a few points of philosophy being explained with much thoroughness. They do, indeed, appeal to a wide range of authorities. Mark Twain is cited as well as the Vedas, and Uncle Remus supports an illustration from Plato. But the passages adduced are not so instructive as they are various and far-fetched, and they are not so invariably instructive that there are none with which we could dispense. To indicate one more fault, the language employed in the commentary and in the introductions is often too picturesque for our taste. It is thus, for example, that Prof. Allinson conveys to us the fact that Lucian was versatile: "He slips off his Oriental pajamas to masquerade with glee in the many coats of many colours hanging in the wardrobe of the imperial theatre." Nevertheless, for all the imperfections that we have pointed out, the book as a whole has sound knowledge to impart, and is likely to be useful both in America and in England. There seems to be just now a revival of interest in Lucian. These new selections from the witty Syrian should profit by that freshly awakened interest and stimulate it further.

"The Temple Greek and Latin Classics."—*The Aeneid of Virgil.* Translated by E. FAIRFAX TAYLOR. With Introduction and Notes by C. M. FORSTER. 2 vols. (5s. net. Dent.)

It has been a pleasure to re-peruse in this convenient shape, with the text facing the English version, Mr. Taylor's scholarly translation of the "Aeneid." It reminds us in many ways of Worsley's "Odyssey," which still holds its own as the most readable verse translation; and the Spenserian stanza, common to both, with its "linked sweetness long drawn out," is better suited to Virgil than to Homer. There is necessarily some diffuseness and prolixity, and there are occasional stop-gaps, showing stress of metre, but these are rare. And sometimes Mr. Taylor is even more concise than the Latin. Thus, in Book VII., six lines of Virgil are perfectly rendered in five:

From Nersa's hills, by prosperous arms renowned,
Comes Ufens with his Aequians in array.
Rude huntsmen these; in arms the stubborn ground
They till, themselves as stubborn. Day by day
They snatch fresh plunder and they live by prey.

The First Book, of 756 lines, is done into ninety-nine stanzas or 891 lines. The final Alexandrine is often skilfully contrived to coincide with the climax. Thus in the first few stanzas we have:

Whence rose the Alban sires and walls of lofty Rome.
How can in heavenly minds such fierce resentment dwell?
So huge, so hard the task to found the Roman State.
Rolls heroes, helmets, and shields whelmed in one watery grave.

The great merit of the translation is its even excellence, and a single stanza, which is all that we have space to quote, hardly does it justice. We select one the original of which will be familiar to all Latin scholars:

Pensive he stood, and with a rising tear:
"What lands, Achates, on the earth but know
Our labours? See our Priam! Even here
Worth wins her due, and there are tears to flow,
And human hearts to feel for human woe."
"Fear not," he cries, "Troy's glory yet shall win
Some safety." Thus upon the empty show
He feeds his soul, while ever and again
Deeply he sighs, and tears run down his cheeks like rain.

It is easy to pick holes. The second line is weak and fails to render the *plena*—"every land rings with our doughty deeds"—and *haec* is missed—"the renown you see here depicted"; but the whole is a true Virgilian echo.

There are many slight slips and weaknesses which the translator would doubtless have corrected had he lived to bring out a second edition. Thus, in the First Book,

Pushed the hollow mountain on its side
is far astray from

Conversa cuspidem montem

Impulit in latus.

Horsed astride a surge's crest rock pendent o'er the deep
is a Dryden-like expansion of "hi summo in fluctu pendent."

The broken billows shivered into sleet

wholly fails to give the exquisite vignette of the haven of rest. The stranded mariners cannot have had "millstones" to grind their corn, and *viscera* are not "entrails." But, as we said, such blots are rare.

The editor is more alive to Virgil's weaknesses than to his supreme merits. His last word is to warn us against accepting Tennyson's portraiture as "too tearful or too mellow." "The episodes of Nisus and Euryalus, and of Camilla, though somewhat tedious, are very real in parts." As a critic of poetry we prefer Tennyson to Mr. Forster. In the Latin text we have noticed some misprints.

C. Plini Caecili Secundi Epistularum liber sextus. By J. D. DUFF. (2s. 6d. Cambridge University Press.)

The younger Pliny may have been, as the Earl of Orrery says, a singular instance of primitive simplicity, integrity of manners, and sweetness of disposition. He certainly was a singular instance of naive vanity and shallowness. Of these last two characteristics the second has been transmitted in most cases to his editors; indeed most men would seem to be able, after reading his letters over night, to dash off a "selection with commentary" between luncheon and dinner next day. We

have several of these improvisations before us; they are alike in many of their details, but, above all, in their superficiality. Mr. Duff's edition of the Letters, Book VI., belongs also to the class of the thin. His preface does not tell us even what text he has borrowed or on what principle he has constituted his own. Thus in 25, 4, where Keil (1870) and C. F. W. Müller have "certe non ipse, non quisquam ex servis eius apparuit ut ne Robusti quidem. Experiamur tamen, accersamus, &c.," he goes back to Keil's earlier reading "apparuit. Ut ne in Robusto quoque idem experiamur. Tamen accersamus, &c.," nor does he explain what induced him to do so. Teachers look for information on such points, if boys can dispense with it. Again, Mr. Duff seldom has an illustrative passage; yet a quotation or two would have been at least as useful as, for instance, the easily got list that he gives of all the letters directed by Pliny to Caninius Rufus. We must estimate him, however, rather by what he professes to have done than by what he has left undone. The Sixth Book contains some interesting letters, particularly the two to Tacitus on the eruption of Vesuvius and the death of Pliny the Elder. The new editor has prefixed to it an introduction, and added notes for the use of those who are not far advanced in Latin, pointing out, amongst other things, how the syntax of Pliny differs from that of Cicero. Thus his thinness has some excuse in the kind of readers that he is addressing. The work, its aim being taken into account, is of good quality. There are some small matters at which, as we read, we felt a little discontent. The text has "Verginius Rufus," the introduction "Virginius Rufus." Is it right to say that *quamquam* is always used by Cicero with a verb in the indicative? Never with a subjunctive? In 20, 7, "quodque in pavore simile prudentiae," Schmid, the German translator's, "was bei Furcht den Anschein von Klugheit hat" pleases us better than (Jebb's) "a point in which panic resembles prudence." In 11, 2 we are willing to believe, if we must, that "constantia salva" is ablative; yet we feel that the rhythm of the sentence makes for Keil's reading of it as a nominative. Sometimes Mr. Duff modernizes injudiciously, or uses modern illustrations of small illuminating power. "In the language of the Stock Exchange, there was a 'boom' for land in Italy, a 'slump' in the provinces," is a note that might be cut out; then space could be found for one on "recepta cognitio est" (22, 2; cf. Pauly-Wissowa, IV. 219). The rendering "sandwich-box" for *panarium* distressed us. We had been brought up to hold that sandwiches are the one thing that Englishmen did, beyond dispute, invent. From what we have said it will be seen that, whilst we launch a grumble or two at our editor, we have no very serious fault to find. Perhaps the chief merit of his little book is that the young reader of it is expected to keep an eye as much on his own English as on Pliny's Latin. This suggests the use to which we suggest that it should be put. Fourth and fifth form boys have no time to read Pliny, nor is it well that they should do so. But for the sixth in the last hour of a hot afternoon to turn a few letters into good English were a salutary, and not too laborious, task. Let them have Mr. Duff's text and be free to consult his notes. Their style should be improved without harm to the purity of their Latin.

The English Hymnal, with Tunes. (In cloth, 3s. net. Henry Frowde.)

We cannot do better than quote, with some abbreviations, the opening paragraph of the preface.

"The English Hymnal" is a collection of the best hymns in the English language, a companion to the Book of Common Prayer for use in the Church. It is not a party-book, but an attempt to combine in one volume the worthiest expression of all that lies within the Christian creed, from the "ancient Fathers" down to contemporary exponents.

As on the Committee of Editors High Churchmen predominate, some such manifesto was not superfluous, and we are pleased to testify at starting that the new Hymnal is catholic in the best sense of the word—that it includes Newton and Cowper, Watts and Wesley, though J. M. Neale is far the largest contributor, and 170 of the hymns are translations from the Latin. That one bishop has prohibited its use in his diocese only shows that all bishops have not a catholic mind.

One other signal merit is justly claimed by the editors. The original authors are assigned, and the hymns are printed as

nearly as possible as the authors or translators wrote them. The last generation of hymnologists, of whom the late Bishop Bickersteth is a type, had no literary conscience. We would, however, that the compilers, before beginning their task, had set themselves to define a hymn. It would be rash on our part to attempt a definition, but we may without presumption lay down that not a few of the 656 here included are not hymns; they could not with any propriety be sung by a congregation. Among them are beautiful lyrics that we should be loth to lose, but these should be relegated to an appendix. Such are Christina Rossetti's "In the Bleak Midwinter," Phineas Fletcher's "Drop, drop, slow tear," Charles Wesley's "Come, O thou Traveller," and Tennyson's "Strong Son of God." The loveliest of Paul Gerhardt's lyrics, "Nun ruhen alle Wälder," is even less a hymn than Milton's "Ode on the Nativity," and the four stanzas here translated give little idea of its beauty. For other reasons we should exclude Ebenezer Elliott's and Mr. G. K. Chesterton's hymns, each with a pronounced political connotation.

The simple faith and fervour of the primitive hymn writers will excuse much that is quaint and repugnant to modern religious sentiment, but nothing can excuse the frigid conceit and bathos of "The Ancient of Days is an hour or two old." Such lapses are, we gladly confess, rare.

Needless to say we miss many old favourites—Dean Stanley's "Ascension Hymn," far finer than the two of his included; Milman's "Thou art gone to the grave," for example—but when nearly all is good such complaints are idle.

For the music, the names of W. J. Birkbeck and R. Vaughan Williams, the musical editor, are sufficient guarantee. We hope the manager of the *Times* Book Club will note the price. Fifty years ago it would have been considered cheap at twice the sum.

The Greek War of Independence (1821-1827). Being a Greek Text for Beginners, with Notes, Exercises, Vocabulary, and Maps. By CHARLES D. CHAMBERS. (Sonnenschein.)

This book is at once felicitous in design and able in execution. No episode in modern history is so little known, even to studious boys and youths, as the Greek War of Independence; yet it contains incidents of thrilling interest, apart from its European importance. The cause which set Shelley's brain on fire, and for which Byron and Hastings died, has not, of course, lacked its historian. When Finlay sheathed the sword and took up the pen something of the genius of Thucydides, and something also of his despondency, came upon him. But that, even in a classical sixth form, hardly a boy knows how the massacre of Chios was avenged, how Canaris steered the fire-ship, how and by whom the cavern on Parnassus was held, and how, seventy-nine years ago to-day, as we write, Codrington and his allies closed the account with Ibrahim at Navarino, is a sufficient proof that our Greek studies have been strangely mishandled and truncated. Mr. Chambers aims at patching this absurd rent in our historical curriculum without departing from the linguistic form to which our boys have been accustomed. He has, to put it briefly, written an account of the War of Independence in the Greek of Thucydides: just over fifty pages, thirty lines to a page, have sufficed him for his task. Two maps and five admirable photographs of historic scenes are subjoined: that of the Langada (facing page 51) is particularly fine, and makes the heart of the Greek tourist crave to tread once more the exceedingly *παλαιόσσαν ἀρσπὸν* from Mistra to Kalamata. As a specimen of Mr. Chambers's skill in reproducing the grave Thucydidean style, the account of Byron's arrival in Greece and of his too early death (pages 44-46) is excellent: these are its closing words:—

Οὗτος δὲ πλείστα εἰς ἀνὴρ ὠφέλησε τοὺς Ἕλληνας καὶ ἐτιμᾶτο ὑπ' αὐτῶν ὡς οὐδεὶς ἕτερος τῶν καθ' ἑαυτὸν καὶ ζῶν ἔτι καὶ ἀποθανόντων. ἔθαπτον γὰρ αὐτὸν ἐν τῇ Μεσολογγίᾳ πᾶσι τοῖς νομίμοις, οἷς χρώμενοι τιμᾶσι τοὺς ἀρετῇ διαφέροντας, καὶ οὐ μόνον ἐν ταύτῃ τῇ πόλει ἀλλὰ καὶ κατὰ τὴν ἑλληνικὴν Ἑλλάδα ἐνόμιζον αὐτὸν σωτῆρα τῆς πατρίδος γεγενῆσθαι.

Perhaps, in the first sentence it would be more picturesquely true to have written *τιμᾶται* for *ἐτιμᾶτο*. Nor is it exactly true to say that Byron was buried at Mesolonghi, except in a very temporary sense. The notes (pages 59-91) are concise and simple, and the exercises (pages 93-140) ample and useful. There is a double vocabulary—i.e., Greek-English and English-Greek—which not only facilitates the reading of the text, but will,

we think, be useful for Greek composition in general in its earlier stages. There is, in our opinion, a future for books of this type—books classical in language and modern in subject-matter and fitted out with the requisite amount of accident and idiom, in place of a bewildering jungle of superfluous grammar.

Religion in the Schools. By Canon H. HENSLEY HENSON.
(Macmillan.)

We have more than once referred to these addresses at the time when they were being delivered at St. Margaret's, Westminster, and we are pleased to possess them in a permanent form, with a preface pointing out their direct bearing. They were given before the Education Bill was introduced, but Canon Henson has found nothing to modify of the broad principles he then enunciated either in the Bill itself or in the denunciation of the vast majority of his clerical brethren. "It will provide, in my judgment, a working and substantially just arrangement which the members of the National Church might receive with a good conscience. . . . The financial arrangements appear to be just, and, when all the circumstances are considered, even generous."

When the Bishop of Manchester and his congeners talk of the Bill as a blow aimed directly at the Church they mean not the Established Church of England, the Church which is not only Catholic, but Protestant and founded on the Bible, but the Church of a section, of a sect within the Church, of Anglicans, like themselves. No common measure of national education can satisfy this section; and Canon Henson is willing and anxious that special provisions should be made to meet their case and that of Romanists. But he appeals to them not to wreck a settlement which will satisfy nine-tenths of the nation in the hope of enforcing the extravagant claims of a small minority. That every parent has the right to dictate to the State what religion shall be taught to his child is a preposterous claim. A pauper might, with equal justice, claim to prescribe what shall be the diet of the workhouse. Cowper-Temple teaching may be a spare diet, but those who think that cakes and ale are a necessity of life must make provision for themselves.

Lastly, Canon Henson addresses an earnest warning to the extremists both of the Anglicans and of the Free Church. If some such compromise as that offered by the Bill is not accepted, the only alternative is secularism, $\delta \mu \eta \gamma \acute{\epsilon} \nu \omicron \iota \tau \omicron$.

First Steps in Mental Growth. By Prof. DAVID R. MAJOR.
(5s. net. Macmillan.)

This is a careful and accurate record of a child's mental growth from birth to the end of the third year. The number of such records may still be counted on the fingers of one hand, and the number of psychologists who have the time, opportunity, and patience to observe must always be small. For progress in child study we must rather look to mothers who have had a scientific training, though, if Dr. Stanley Hall's figures may be relied on, even this class of observers can never be common.

Prof. Major was well advised to abandon his first intention of giving a bare transcript of his note-books. Observations are of little value unless their object is made clear, and this implies some theory to start with and also some suggestion of the inferences to be drawn; for no one, *ceteris paribus*, is so competent as the observer himself to draw them. We only wish that the author had gone further in this direction. He modestly professes to give only a presentation of empirical data, which may serve as materials for the psychologist of the future, and at the same time to furnish a model for similar records of parents. He really has done much more, and his comments on memory, imagination, consciousness of personality, &c., show real psychological acumen. On the other hand, the observations would bear weeding: in some at least we fail to see any physiological or psychological significance.

Prof. Major is apparently not a philologist. The value of the observations on the child's language is impaired by not using any phonetic script. Thus we are led to believe that at the twenty-ninth month the German *ich* was correctly rendered. In the second year nouns stand to verbs in the ratio of 120:8; but who in child language can distinguish a noun from a verb?

To descend to trifles, Compayré is robbed of his accent *passim*; "timber" for *timbre* looks strange; and the American

use of "sick" in the story of the hippopotamus at the Zoo is likely to mislead English readers.

The Odyssey in English Verse. Books IX.-XVI. By J. W. MACKAIL.
(5s. net. Murray.)

The second volume of this translation confirms the judgment that we passed on the first. FitzGerald's quatrains are not a happy medium for rendering Homer; but Mr. Mackail, by his Circe wand, has almost perverted our judgment. The quatrain is a unit: there is a pause, a moment of reflection in the third unrimed line, and the final rime clinches the argument and welds together the sentence. Now it is even less possible to break up Homer into quatrains than into couplets, and Mr. Mackail has not attempted it; but in riming one quatrain with another he has, so it seems to us, thrown away what is the distinctive virtue of the Omar metre. As a fair specimen we will take a famous simile from the tenth book:

So said she, and with courage well content
To the swift ship and the seashore I went,
And by the swift ship found my trusty crew
In lamentation and in languishment;
While from their eyes the big tears fell away,
Even as calves amid the farmyard play
Around their mothers coming back to fold
When they have grazed their fill at close of day;
And from the folding-pens they overflow
And lowing loudly round their mothers go;
Thus, when their eyes beheld me, round me they
Pressed weeping; and it seemed me ever so
As if to their own land and city led
They saw the isle where they were born and bred,
Rough Ithaca; and in the lamenting wise
Accosting me, in winged words they said:

We have here, to take Matthew Arnold's touchstone of Homeric translation, the plainness and directness of style and diction, the nobility, but not the rapidity, of Homer. The metre, most will feel, not only breaks the smooth current, but makes us pause in the wrong places.

Thucydides, Book I. Edited by E. C. MARCHANT. (3s. 6d. Macmillan.)

We ought perhaps to have called attention to this little book sooner. It contains a life of Thucydides, some account of his predecessors and contemporaries, and an analysis of the first book of his history, with brief papers on his mind and style, on his use of speeches, and on the chief manuscripts in which his work is preserved. The text is printed with side headings. A hundred and thirty pages of it are followed by a hundred and forty pages of annotation; for difficulties are numerous and the editor is liberal in explaining them. He writes: "I could wish that my notes might be thought illuminating, but have no ambition whatever that any one should think them learned." They are certainly illuminating, and we see no reason to describe them as particularly learned. They are, in any case, the production of one who has been long engaged with his author and is genuinely interested in him. Those who are familiar with Mr. Marchant's editions of Books II., VI., and VII. will know what to expect from him. We are pleased to see that Macmillan's "Classical Series," to which this book belongs, gains steadily in strength. And as to Thucydides—to say that Greek might well be banished from the schoolroom is not to maintain that the culture of men has nothing more to get from Hellenism. "We have not done with the Hellenes yet."

Herodotus IV. Edited by E. S. SHUCKBURGH. (4s. Cambridge University Press.)

This edition of the Fourth Book of Herodotus is made on the same plan as Dr. Shuckburgh's editions of the Fifth, Sixth, Eighth, and Ninth Books. Prefixed is an introduction treating chiefly of the geography of Scythia; the text is broken by means of headings to the chapters; there are notes at the back, which deal mainly with explanations of meaning and construction; whilst two indexes, one historical and geographical, the other verbal, complete the whole. We will only say that this new volume of Herodotus is of the same character and quality as those that have preceded it; but that it lacks the account of the Ionic dialect that some of the others contain. Now that death has taken Dr. Shuckburgh away, criticism is for the time hushed. Rather than probe his work we would dedicate here a few words to his memory. To describe him as a *great* scholar would be extravagance of praise. The first edition of his "*Lysiae Orationes XVI.*" was issued, it is well known, in a slovenly state; and the true spirit of *Forschung* can hardly be said to have been given to him. He was, however, a very *capable* scholar, and, as the list of his published works makes clear, a man of unusual industry. How he taught, when he did teach, with the spoken word, we know not; with the written word he did much service to education and some to letters. Leaving his books to attest his merit, he now rests from his beneficent labours—

ἱερὸν ἔργον.
κοιμᾶται. θνάσκειν μὴ λέγε τοὺς ἀγαθοὺς.

- (1) *Arithmetic for Schools and Colleges*. By J. ALISON, M.A., and J. B. CLARK, M.A. (4s. Oliver & Boyd.) (2) *The Winchester Arithmetic*. By C. GODFREY, M.A., and G. M. BELL, B.A. (3s. Cambridge University Press.) (3) *Junior Arithmetic*. By W. G. BORCHARDT, M.A., B.Sc. (With Answers, 2s.; without Answers, 1s. 6d. Rivingtons.) (4) *A New Junior Arithmetic*. By H. BOMPAS SMITH, M.A. (2s. 6d. Methuen.) (5) *A Shilling Arithmetic*. By S. L. LONEY, M.A., and L. W. GRENVILLE, M.A. (1s. 6d., with Answers. Macmillan.) (6) *Arnold's Shilling Arithmetic*. By J. P. KIRKMAN, M.A., and J. T. LITTLE, M.A. (7) *Examples in Arithmetic*. By C. O. TUCKEY, M.A. (3s., with or without Answers. G. Bell.) (8) *Arithmetical Examples*. Edited by J. LOGAN. (1s. Sonnenschein.)

(1) In this book the authors have endeavoured to present a sound and full discussion of the theory of arithmetic, to include many of the details which belong to purely commercial arithmetic, and to satisfy both those who claim and those who object to a large measure of reform; and, though their aim is a wide one, a careful perusal of the book shows that it is practically attained. The sixth chapter, on laws of operation, is a specially useful one. Long examples on recurring decimals are omitted. In length and square measures poles and square poles are retained; but in reducing 3 m. 3 f. 3 p. 4 yds. to yards the 3 poles are replaced by $16\frac{1}{2}$ yards and the 27 furlongs are reduced at once to yards by multiplying by 220. There is a good, and not too lengthy, section on graphs, and also a valuable series of problems, which, unfortunately, are, with a few exceptions, classified under the usual headings.

(2) In "The Winchester Arithmetic" we have probably in rough outline the subjects that will be chiefly taught for many years to come. Logarithms and graphs receive full attention, while chain rule, recurring decimals, &c., are omitted. The book is a collection of exercises, led up to, whenever necessary, by sets to be worked orally. A conspicuous feature of the exercises is their freshness: we meet but rarely with old friends; a very large number are entirely new, and many are interesting. On the other hand, the sets are frequently too short, and they are not always well arranged. For instance, there are only sixteen examples on contracted multiplication of decimals, excluding those on the applications of the method, while in the first of the set the multiplier is a decimal. Pupils who work through this book may understand the subject, but they will hardly receive that training in accuracy and concentration of attention which is so valuable a result of the ordinary arithmetical course.

(3) Mr. Borchardt's "Junior Arithmetic" is founded on his well known "Arithmetical Types and Examples," and therefore hardly requires commendation. By connecting decimals and the metric system, the former subject is treated so that it may be taken before vulgar fractions. The examples on length and square measures are arranged without reference to the fractional number of yards in a pole or square yards in a square pole. A point is made of introducing rough checks of accuracy whenever possible. Some of the problems are classified under such headings as work and pipes, averages and mixtures, and clocks; but there is also a set of sixty miscellaneous problems. The book concludes with a series of fifty-five test papers.

(4) In many recent books on arithmetic the authors assume that a good teacher is at hand to amplify and explain their texts. Mr. Bompas Smith considers that the explanations should be so full that his readers should understand them with the least possible assistance; but also that the intelligent perception of the theory should not result in the neglect of rapid and accurate calculation. The natural effect of following these principles is the omission of some subjects that are usually included in a junior course. The book should be helpful to solitary students and young teachers.

(5) Shilling editions of well known text-books on arithmetic are becoming popular. In the one before us both the text and examples of Mr. Loney's "Arithmetic for Schools" are drawn upon. The early chapters of the latter are replaced by a series of exercises for revision, and not much of any consequence seems to be omitted; for the shilling course covers the ground as far as stocks and approximate methods. The authors state that the scheme recommended by the Mathematical Association has been generally followed, though they adhere to poles and square poles, and have not altogether relinquished examples on recurring decimals, and make no reference to graphs. For the price, however, the book is one of the best we have seen.

(6) Messrs. Kirkman and Little have, we think, attempted too much in their "Shilling Arithmetic." The text is condensed, and the type examples are frequently printed in double columns. There is a lengthy chapter on graphical arithmetic, an unnecessary one on the solution of problems by algebra, and some old-fashioned examples are included, such as "10 fowls cost as much as 7 ducks, 2 ducks as much as 1 goose, 9 geese as much as 5 turkeys. If a turkey costs 18s., what is the price of a fowl?" Decimals are disposed of in seven pages, while two are given to the contracted method of finding the square root of a number. The book (for there is much that is good in it) would be improved by omitting some passages and expanding others.

(7) A useful collection of examples, with occasional notes on method, including, besides the usual subjects, sections on applications

to geometry and physics, and work with tables of logarithms and trigonometrical ratios. The collection of problems and some of the miscellaneous sets seem to us especially good.

(8) A series of six hundred examples in sets of ten, about one-third of them being original. Direct questions on rules are avoided as far as possible, those being preferred which offer scope to the pupil for devising abbreviated methods or which require thought in their solution. The examples are well chosen and arranged, and form a desirable supplement to the ordinary text-book.

We have also received several other collections of arithmetical exercises.—*Chambers's "Thorough" Arithmetics* (Scheme B). By W. WOODBURN. (Books IV. and V., 3d. each; Books VI. and VII., 4d. each; Teacher's Books, No. III, 9d.; Nos. IV. and V., 10d. each.) These contain very numerous and varied examples. In the teacher's books the left-hand page is identical with the page bearing the same number in the scholar's books, while the right-hand page contains the answers, notes for young teachers, and a graduated series of oral exercises leading up to those on the opposite page.—*The Three Term Arithmetic*. By J. W. ILIFFE, M.A. (Book IV., 4d.; Book V., 3d.; Books VI. and VII., 5d. each. Jack.) The four books before us cover the ground from compound rules onwards to stocks, &c. They include many exercises for practical work and graphs.—*The Primary Arithmetic*, Parts II. and III. (6d. each, Clive), consists of series of exercises, prefaced by brief notes and rules, beginning with the compound rules and ending with stocks and the mensuration of the circle, cylinder, and cone. *Blackie's Model Arithmetics* (Three Terms, Scheme B) and *Oliver & Boyd's New Number Exercises* contain numerous well graduated exercises for use in elementary schools and are adapted to secure accuracy in mechanical work.

De l'Enseignement des Langues vivantes. Par A. SIGWALT.

(3 fr. 50. Hachette.)

In this volume M. Sigwalt, Professor of German in the Lycée Michelet, has brought together a number of review articles and *discours* published or delivered by him in the course of the last five years. Some of them possess only an historical interest, referring as they do to conditions of teaching or examination that no longer exist; and the work in general will appeal mainly to French readers, as there is scarcely a single reference to foreign countries and no attempt to compare other systems of modern language teaching. Yet there is much to interest the student of pedagogics, and, though the conditions differ, the same questions both of aim and of method are being agitated in England as in France. "The ideas of an old professor dedicated to the young" (so runs the sub-title) indicate pretty clearly the author's standpoint—that of Bacon's "State super antiquas vias et videte si quid melius"—in other words, he adheres to the old (not identical with the classical) method of modern language teaching, but is ready to accept what there is of good in the new. Few will quarrel with his definition of the object—"to teach our pupils to read, write, and, as far as is possible, to speak the vulgar tongue [*la langue usuelle*]." It is when these terms are further defined that the two schools are seen to differ. Thus M. Sigwalt insists that conversation as carried on in class must necessarily be artificial and limited in its topics, and that real ability to converse can only be acquired by foreign residence. Here we are with him. He pooh-poohs phonetics, evidently with an eye to German. Here we cannot follow him. He claims "Le Bourgeois Gentilhomme" as belonging no less than "Le Gendre de M. Poirier" to *la langue usuelle* and at least equally worthy of study.

A Literary History of Persia from Firdawsi to Sâdi. By EDWARD G. BURNE. (12s. 6d. net. Fisher Unwin.)

Many who, like the present reviewer, are ignorant of Persian have read and relished Prof. Burne's previous volume, which traces Persian literature from its *incunabula* down to Firdawsi, or about 1000 A.D. This continuation carries us through the next three centuries, and ends with the most generally popular, if not the greatest, of Persian poets, whose "Gulistan" is known, at least by name, even to the English reader. We turn instinctively to Omar Khâyyâm, and find in the index (under "Umar") some twenty-five references; but, though most are aware that in the "Rubaiyyat" there is as much of Edward FitzGerald as of Omar, it will surprise them to learn that in his own country Omar was more famous as an astronomer than as a poet, and, further, that the quatrains, the majority of uncertain authorship, are wholly disconnected, the arrangement and verses being entirely due to FitzGerald's genius. The work represents four years of unflagging toil, interrupted only by professorial duties (Cambridge, as others besides Prof. Burne have found, is not a good place to work in), and it abounds with names of authors and books which can only interest the Oriental student; but in the translations and literary criticisms there are abundant gleanings for the general reader.

George Herbert and his Times. By A. G. HYDE. (10s. 6d. Methuen.)

In these days of much book-making the author of "George Herbert and his Times" has been happy in his selection of a subject that is by no means exhausted. Possibly his conviction of the fact leads him to be a little too discursive; nevertheless the greater part of his record is of interest. He has certainly succeeded in indicating the background of Herbert's life and many of the characteristics of his contemporaries.

The historical element is indeed the best part of the book. Mr. Hyde has chosen the right poems to quote, and has, we are glad to say, quoted them usually in full. Moreover he himself has largely appreciated the rare and subtle qualities of Herbert's work: his choice of poems alone would convince us of that. But he has not succeeded in communicating a new appreciation to his readers. He has not, in fact, conveyed, in treating either the man or the poet, a sense of the pure vein of mediæval and mystical feeling interwoven in this fabric of more or less ordinary Elizabethan accomplishment. What we ask to be told about Herbert is not where he coincided with, but where he differed from, his friends and contemporaries. For it is in his most personal and intense, and generally least regular and accomplished, writing that his special qualities are felt. Useful as is the publishers' ideal of producing biographies of men set in a background of their times, is it not applicable rather to men of action than to those of contemplative minds? Probably the latter are only to be painted against a background that is more universal and interrelated. In considering Shorthouse's statement, in the preface to his edition of "The Temple," "Herbert showed the English people what a fine gentleman who was also a Christian and a Churchman might be": Mr. Hyde, in saying that Baxter's appreciation of the poems was probably uninfluenced by their author's "gentility," surely is understanding "fine gentleman" in rather too elementary and restricted a sense.

Contemporary France. Vol. II., 1873-1875. By GABRIEL HANOTAUX. (15s. net. Constable.)

Philosophical and historical students alike will find much of deep interest in this, the second, instalment of what is in truth a vast undertaking. Apart from a great deal of historical information that is new, there is a complete, though necessarily undetailed, survey of modern French thought. But perhaps the most moving and distinctive part of the whole volume is that in which the writer deals with the delicate and spiritualized patriotism which survived the rigours of the winter of 1871 to blossom again in the warmth and harvests of 1872-1874. "One and indivisible": writes M. Hanotaux, "the Revolution saying is the base, the formula, of the French Constitution. Nothing can alter its authority or touch the spontaneous union of all those who, either publicly or in their hearts, perpetuate this adhesion. And it was this latent faith which enabled France to bear the sentence of Frankfurt. A conquest had taken place, but there was no separation. Souls could fly across the frontier." We feel in this book the reality of conception of George Meredith's "France, December 1870":

"O she that made the brave appeal
For manhood when our time was dark,
And from our fetters drove the spark
Which was as lightning to reveal
New seasons, with the swifter play
Of pulses, and benignant day;
She that divinely shook the dead
From living man, that stretched ahead
Her resolute forefinger straight,
And marched toward the gloomy gate
Of earth's Untried. . . ."

Browning and Dugma: Seven Lectures on Browning's Attitude towards Dogmatic Religion. By ETHEL M. NAISH. (4s. 6d. net. G. Bell.)

Miss Naish has made a most conscientious study of her subject, and has given so much thought to its arrangement and elaboration that it is with regret we feel obliged to record our verdict in the negative as to the result actually attained. It is important to have a true view of Browning's religious theory; but it is better to conceive inadequately of this than, in the effort to compass it, weary of Browning altogether. No one reading Miss Naish's ponderous sentences would dream that Browning was a humourist. Whilst human nature remains untranslated, and man is possessed of ratiocinative faculties, the nasal intonation and logical and grammatical lapses of the preacher, though they may be condoned, can hardly be ignored." Browning expresses the matter not less clearly, and with a lightness of touch which Miss Naish's painstaking exegesis lacks:

"As for the sermon, when did my nap end?
Unless I heard it, could I have judged it,
Could I report—as I do, at the close—
First, the preacher speaks through his nose:
Second, his gesture is too emphatic:
Thirdly—to waive what's pedagogic—
The subject-matter itself lacks logic:
Fourthly, the English is ungrammatical?"

Does the prose explain the verse, or vice versa?

The First Half of the Seventeenth Century. By HERBERT J. C. GRIERSON. (5s. net. Blackwood.)

This is a scholarly treatise on a great subject, and is in every way worthy of the notable series to which it belongs. The immense scope of the volume necessitates a certain heaviness of treatment; for it is impossible in a book of this kind to be lively without a little discursiveness, and any straying here is sternly forbidden by exigencies of space. But, clearly, the fault lies in circumstance, and not in the mind of the

writer; for his "conclusion" shows him to have a broad and delicate grasp of his subject.

Studies in Poetry and Criticism. By JOHN CHURTON COLLINS, Professor of English Literature in the University of Birmingham. (6s. G. Bell.)

Of the seven essays included in this volume six are reprints, and attention therefore naturally centres on the seventh—dealing with "The True Functions of Poetry"—which is new. Prof. Collins mentions in his preface that he has ventured in this essay "to restate and bring home what once were truisms, but what will now appear—and to too many—paradox and extravagance." We must venture, in return, to express our belief that Prof. Collins has formed of his contemporaries a more depressed estimate than he need. We have heard the fine things that the Professor quotes from Hesiod and Plato, from Aristotle and Longinus, from Bacon, Sidney, Browning, Shelley, and Matthew Arnold—that "poetry is the breath and finer spirit of all knowledge," that it delivers "authentic tidings of invisible things," we have heard, and in our heart of hearts believe not less fixedly than he does. And, to be perfectly sincere, the great sayings of these great men are so familiar to us that we are tempted to wonder, in reading Prof. Collins's essay, whether that essay gives them quite the kind of endorsement that they need. It is likely enough that our common attitude both to poetry and to life itself is unworthy of these great sayings; but, if they are so, it is not because we ignore them, but because they are too high and we cannot attain to them: and in this shortcoming we think the Professor's essay shares. Prof. Collins quotes Ruskin as having said "he dare not read Keats" on account of his sensuousness. There is a passage in "Modern Painters" where, after quoting the exquisite line

"How cam'st thou over the unfooted sea?"

Ruskin notes he does not dare read Keats because his flawless craftsmanship robs him of all pleasure in his own work. Can this be the passage to which the Professor is referring?

Stratford-on-Avon. By SIDNEY LEE. (6s. Seeley.)

This new and revised edition of a standard work that has just come of age is plentifully illustrated by Herbert Railton, E. Hull, and other artists. We turn naturally to the chapter on "School Discipline," and find good illustrations of the exterior and interior of the Stratford Grammar School. Unfortunately, of Shakespeare's schooling absolutely nothing is known except by inference, and his masters—Walter Roche and Thomas Hunt—are mere names.

A Scientific Geography. II.: The British Isles. By ELLIS W. HEATON, B.Sc. (1s. 6d. net. Ralph, Holland.)

This is only an instalment. The whole work will consist of five booklets—The World (broadly treated), The British Isles, Europe, North America, and The British Empire. It is more of the nature of a handbook to help those whose work is chiefly in map-construction than as a book to be studied on its own account. Its author is Principal of the Secondary School and Pupil-Teachers' Centre at North Shields. His aim is not only to associate those facts in a way that makes them interesting, but also to afford at least some explanation of the facts—to be suggestive rather than exhaustive. A glossary of common geological terms is given at the end. It is divided into two parts. Part I. consists of general considerations in eight chapters. These should be read in conjunction with good maps of the geology, physical features, climatic conditions, and industries of the British Isles. Part II. is divided into twenty-one sections, each giving all the materials required for a sketch map such as examiners ask for. It seems to us well and wisely framed. It is illustrated with numerous small diagrams—especially those of the internal communications by river, canal, and railway—and with larger full-page maps. Altogether it is a businesslike production.

General History for Colleges and High Schools. Revised Edition.

By PHILIP VAN NISS MYERS. Illustrated. (7s. 6d. Ginn.)

The first edition of this was published, we are told in the preface, seventeen years ago. It gave, in a shortened form, the original texts of two large works by the same author. The present issue contains several fresh chapters, an entirely new series of coloured maps, many new illustrations, and carefully selected lists of books for further reading at the end of each chapter. The text is brought down to the close of the Russo-Japanese War and the elections of the first Russian Parliament. The book is one of those universal histories for which, though we may earnestly long for something of the kind, we never find time in our schools; but which in America they have leisure to write and to publish, and possibly also to study in their luckier schools. It is divided into two parts—Ancient History and Mediæval and Modern History. The former deals with the Eastern Empires—Assyria, Persia, &c., and then more fully with Greece and with Rome. The latter treats of the Middle Ages and the Modern Age. The former is divided into two—the Dark Ages and the Age of Revival; the Modern Age consists of the Era of the Reformation and the Era of Political Revolution—which latter, after passing through the French Revolution, the Napoleonic era, and the subsequent changes, ends up, as we have said, with the first election of the Duma. It is excellently mapped out,

excellently illustrated, and excellently written, especially the part that is occupied with the Modern Age—the only part we have read with any special care. But we in England cannot consider it as a practical book for our schools. It is too long for them and not nearly full enough for our Universities. Nevertheless, it is a careful and scholarly performance. There could not be a better book for those of us who left school some time ago, and yet still wish to know something (not too long) about the doings of the world in the past and in the present. To such we can recommend this book very heartily as containing very much that will considerably help their need.

"Stead's Gradual Reading Books." Edited by T. KIRKUP.—(1) *Little Snow-white, and other Tales*. By the Brothers GRIMM. (2) *Holiday Stories*. By GLADYS DAVIDSON. (3) *Animal Stories*. Illustrated by BRINSLEY LE FANU. (4) *Favourite Fairy Tales*. (5) *Æsop's Fables*. (4d. net each. Stead's Publishing House.)

These reading books have been well and wisely edited, illustrated, and graded to render them suitable for supplementary readers for children of various ages. They are capitally chosen stories, and well within the reach of children's purses—or, at any rate, the purses of their grown-up friends. The small folk will thank Mr. Stead for his enterprise.

Progressive Course in English Grammar and Composition. (Part I. for Junior Classes, 6d.; Part II. for Senior Classes, 9d. Oliver & Boyd.)

These are capital little books. The principle underlying both of them is to get the pupil by extensive practice to understand and appreciate the function of the parts of speech before he is asked for a definition. The sentence is the basis of everything, and the part of speech of a word is decided on according to the function which it performs in a sentence. Similar ideas are used in working out analysis. The older book also contains subjects for essay writing, punctuation, and word building. In fact, both are well done.

"Oliver & Boyd's Continuous Readers."—(1) *The Pilgrim's Progress* (abridged). (2) *Selected Lives from Plutarch*. (3) *The Story of Prince Charlie* (from Sir W. Scott's "Tales of a Grandfather"). (With Frontispiece, 3d. each.)

These are well and clearly printed little volumes—which for another penny you can get in limp cloth. They are well selected and well edited, with brief introduction and "notes and meanings," and run, with the juvenile group, to some twenty-six in all. They are expressly printed in cheap form to bring the best works of our best writers within the reach of school-children, that thereby a love for good literature may be fostered. They are well fitted to secure their aim.

An Outline History of the English Language. By O. F. EMERSON, Ph.D. (3s. 6d. net. Macmillan.)

Dr. Emerson is Professor of Rhetoric and English Philology in Western Reserve University. He has written and published several larger works on his subject. In this Outline he has chronicled the general facts of our language development, the special influences of different periods, and the more important changes in the forms of words. He has endeavoured to make his book of use in the study of English grammar and English usage. There can be no doubt that the pupil who studies its pages will gain much to help him in the correcter use of language, and will acquire, moreover, a wider knowledge of the historical reasons for much that is at present dark to him. It would be out of place to attempt here to go too deeply into matters; but very much can be learned of the beginnings and the development of a standard language from the old speech, of the changes in the forms of words, and of the sources from which English vocabulary has been formed—which has made the language not a mere hodge-podge in its word stock, but something marvellously expressive in all realms of thought and feeling. The outline of all this is laid remarkably clearly before us in this small book, with much knowledge and thought. Then follows a section on the "Simplification of English Inflections, especially in the cases of the Noun, Adjective, Pronoun, and Verb." We cannot do better than quote what Prof. Emerson says at the conclusion: "Simplification of inflectional forms has brought no loss of power in expression. An analytic language is as expressive in its way as one with numerous inflections. The two merely employ different means for the same effects—clearness and force. The inflectional changes in English, therefore, represent development as truly as do those in any language of different type. Indeed, no one can rightly study the great literature of modern English without believing that the English language, with its greater simplicity, is an even better medium of expression than at any time in the past." The book ends with a well constructed index. It is indeed an excellent outline.

Messrs. Longmans send us specimens of their series of *Natural History Wall Pictures*. The coloured pictures have been reproduced from drawings by G. E. LODGE. They measure 16 in. × 14 in. and the price of each is, unframed, 2s. 6d. net; framed, 7s. 6d. net. They combine, in a singular degree, fidelity to Nature and artistic merit. We advise principals of schools to order "Waterhens and Nest" or "Long-tailed Titmouse, Young and Nest," and we are

confident that they will purchase, or be tempted to purchase, the whole series.

Mary Wollstonecraft's Original Stories. With five Illustrations by WILLIAM BLAKE. With an Introduction by E. V. LUCAS. (2s. 6d. net. Frowde.)

Mr. Lucas says in his preface: "I have no information regarding the success of the 'Original Stories' in their day, and such spirited efforts as are now made to obtain them by collectors are, we know, due rather to Blake than to Mary Wollstonecraft." It will perhaps be also chiefly to Blake that this reprint will owe its sale. Certainly it should bring very real pleasure to lovers of that artist. Yet, besides the reasons mentioned by Mr. Lucas which, apart from their original purpose, make the tales themselves interesting, they should prove so as an expression of the moral outlook of the writer, if we care about her and the world in which she moved. It is an atmosphere clear, if cold. Some details of Mary Wollstonecraft's life and a quotation from her "First Lessons for an Infant" make an interesting preface to the tales. More of such matter and rather less of Mr. Lucas's feelings with regard to Mrs. Mason would have made these pages a still more fitting introduction—not but what they are very readable. The book is in uniform binding with Wordsworth's "Literary Criticism," "Guide to the Lakes," Blake's "Lyrical Poems," &c. Neatly and well got up, and with good print.

We have received Part I. of the *Harmsworth Atlas and Gazetteer*, to be completed in thirty-six fortnightly parts, price 7d., or one guinea for the whole work. The most noticeable feature is the Gazetteer Index, which is calculated to include over a hundred thousand names. By help of easily understood abbreviations, a great deal of information is packed into a line (three columns to the page). Thus: "Aston, Warwickshire, Eng., par., part of Birmingham, r. sta., pop. 201,562." The first part contains five map plates, 18½ inches by 14. The colouring is harmonious, and the place names are clear, though in the map of East England they are necessarily crowded. The maps of routes and of products have been specially designed for the study of commercial geography. It promises to be a good guinea's worth.

COLONIAL AND FOREIGN NOTES

FRANCE.

Some little while ago French schoolmen, or, more particularly, the

Punishment

Society for the Study of Questions of Secondary Education, discussed the matter of punishment and forms of punishment. Their deliberations may have some interest for English readers. Let us first state what the punishments allowed in *lycées* by the French regulations are. (1) A bad *note* may be given; (2) a boy may be required to learn a lesson again, in whole or in part; or (3) to do written work over again; (4) a written task may be set as an imposition; (5) detention on Thursday or Sunday may be inflicted; (6) leave to go out may be stopped; (7) a boy may be excluded from class-room or study; or (8) he may be sent away from school for a time or expelled absolutely. Now the great question raised by the Society—the application to English relations will be obvious—was: Who punishes? The *répétiteurs* punish only by means of *notes* submitted to the head master or some other official. *Professeurs* (masters, teachers) may inflict any of the first five punishments, and the seventh in exceptional cases and with immediate report to the head master. It is the head master only that may stop leave of absence. Moreover, he has control of all punishments: when signs of penitence are shown he may remit or reduce a penalty *after conference with the teacher*; or, if many impositions have been incurred, he decides whether they should be merged into one, done successively, or replaced by a more severe punishment. All punishments, of whatever kind, given in class must be entered in a special register, which is examined and signed every week by the head master. A critical point is, of course, the phrase "after conference with the teacher"; for which the Society proposed to substitute "with the concurrence of the teacher." This done, it would be clear that the teacher punished for all minor offences; the head master for graver.

That we take to be a sensible view of the matter. The teacher should be free to make, as it were, his own by-laws, and to enforce obedience to them by his own action. And, in general, *mala prohibita* belong to his sphere. But to the head master should be referred the *mala in se*; for on him, in particular, does the moral government of the school depend. Again, the French have, what we have not, a Council of Discipline. It now meets every three months to consider the moral condition of the school. The Society suggests that a case should always be submitted to the Council if a teacher demands it, and that the Council should be specially summoned to consider any urgent case.

We pass on to the punishments of girls. It seems that in the *lycées de jeunes filles* few are used. The chief are bad *notes*. *Notes* are given every fortnight—it is not universal, but the usage in many schools—and every bad *note* strikes off one from a maximum of twenty. A pupil

getting from six to eight bad *notes* in a fortnight is deemed to be very bad. The *notes* are inscribed on a report, which has to be signed by the parent. A heavier punishment, seldom inflicted, is to deprive a girl of the right of following a course of lessons; and it sometimes happens that a girl seen to be *enervée* is sent for a moment out of the class-room. Girls are much more sensitive than boys, and may therefore be controlled with a lighter hand. In few girls' schools is any regularly organized system of detention found to be necessary.

Much is being done in France for secondary education as applied to girls. M. Ernest Lavisse, speaking a short time ago at a distribution of prizes, related how one Sunday afternoon last spring he found three thousand persons assembled in the amphitheatre of the Sorbonne. The occasion was a *fête* given by the pupils of the girls' *lycées* in Paris to their parents and their friends. "*Lycées* for girls!" exclaimed M. Lavisse. "Who would have said fifty years ago that France would have *lycées* for girls? In 1869 I was secretary to M. Duruy, Minister of Public Instruction. My great and illustrious master, full of ideas, which were all good, took in hand the establishing of courses of secondary instruction for girls. The project was applauded by some. But in those days the idea of the supremacy of the man was dominant. It was believed that very little instruction sufficed for girls and that to give that little instruction lay in the province of the Church. Thus, when M. Duruy had made known his intentions a storm broke out to the uproar of which bishops in great number added their voices. The world has moved on. In the year just ended there have been in prosperous activity for young girls forty-two *lycées*, fifty *collèges*, and sixty-nine secondary courses. The number of pupils attending has been 30,831. In 1896 the girls receiving secondary education numbered only 14,709; so that in less than ten years the number has more than doubled itself. It is proposed to establish next year four, perhaps five, new *lycées*, and nine, perhaps ten, new *collèges*. In these girls' schools instruction is given almost entirely by women, prepared for their duties by a long education and discharging them conscientiously and with delight."

Those of our readers who may be disposed to sympathize with the French bishops in their present troubles will perhaps remember that bishops, like other people, often reap according to their sowing. Forty years ago few of the higher clergy in France cared aught for the claims of women. When the progress of a race is concerned suffering is properly the badge of a minority. The more highly educated French women are deaf now to episcopal wailing. They plead their own case, heedless of ecclesiastical wrongs that once might have moved them. What their case is may be told in the words of Mme. Dejean de La Bâtie, Head Mistress of the Higher Primary Normal School of Fontenay: "Our ideal of woman is not the old ideal. Mindful, above all, of sincerity, truth, harmony, and justice, we think that woman has a right to unrestricted moral and intellectual development; that she ought to be educated and instructed for herself, and solely to her own perfection. We do indeed desire that our girls should become wives and mothers, but most earnestly we wish—since modern society, imperfectly organized, does not always allow them to be wives and mothers—most earnestly we wish that, as wives, as mothers, or solitary in life, they may have the full enjoyment of their own individuality, the full possession of their own value."

Be it not supposed that all the French clergy have been and are hostile to the claims of women, or that all French women, any more than all English women, demand what is reasonable in language that is measured and sober. Our own view—this is a journal of education, be it remembered, not of politics—is that woman is indeed entitled to free physical and mental development; and we go so far as to say that he who would refuse this to her is an enemy of the race. Her first and great aim should be to secure it.

GERMANY.

In October the Commercial University (*Handelshochschule*) of the Berlin Corporation der Kaufleute began its work. It represents the first attempt made in Germany by a private corporation to support a University. Other great cities, notably Köln, have commercial schools of the highest class: the new institution differs from others in that it has the advantage of a site in the German capital and vast wealth at its command with which to draw eminent teachers. Prof. Dr. Jastrow, of Berlin University, has been chosen as Rector for the first three years. Among his colleagues will be Prof. Werner Sombart, of Breslau, an authority on national economy; Dr. Schær, of Zürich; and other instructors of known ability. The subjects dealt with in the *Handelshochschule* will be: political economy and sociology; the doctrines of coinage and currency; ethnology; the transport of goods overland; railways, post and telegraphs; marine affairs, and the sending of goods by sea. Moreover, there are to be both lectures and practical courses to impart instruction on all that relates to the printing and publishing of books and newspapers. Since the object is to make the bookseller

and the pressman aim at the highest, the public as well as the printed matter trade is likely to be benefited by this department of the *Handelshochschule*. Its general activity should be serviceable directly to commerce, and indirectly to liberal education, which gains, as we have often said, when to the bread-winning arts is allotted a separate home.

We communicated in due course the news that an increased payment was to be called for from foreign students attending a German polytechnic or technical *Hochschule*. The justification for the increase is that these institutions cost the State a large sum to maintain, and that a foreigner can hardly claim to derive advantage from taxes to which he does not contribute. At the Karlsruhe Technical *Hochschule* the entrance fee is now raised for him from 10 to 20 marks, examination dues from 50 to 75 marks, whilst he must make an extra payment of 50 marks every half year to the academic chest. Similar demands are put forward by other polytechnics. But it is an erroneous report that has gone abroad that the German Universities are charging, or intend to charge, higher fees to foreign students. "We have no manufacturing secrets," said Rector Diels, of Berlin. "Our knowledge suffices, like the seven loaves in the Gospel, for many thousands; and the more there is taken from it the richer is the blessing that flows." Last summer half-year the number of foreigners at German Universities was 3,888, as against 2,192 ten years ago. Their presence is a testimony to the efficiency of German academies; the liberality with which they are treated attests a true and broad-minded zeal for learning.

The obligatory continuation schools in Berlin contained in October, according to a rough estimate, twenty thousand pupils grouped in about six hundred classes. For the housing of so large a number ten school buildings are employed, one for each of ten school districts into which the town is divided. Four buildings are used exclusively for continuation schools; in these instruction begins at 7 o'clock in the morning. In the other buildings, occupied during the day by ordinary schools, the continuation schools cannot get to work until late in the afternoon. A striking detail in connexion with them is that there is a sort of informal co-operation with employers of labour. Thus for some trades the school hours are, at the desire of the employer, shortened in summer and lengthened in winter. We hear from several quarters of similar co-operation, to which we attach very great importance. If the continuation school is open all day, the employer may be consulted as to the hours when his boys can most conveniently be spared; and, in any case, his wishes may be heard with regard to the matters of instruction. In Charlottenburg the workmen's guilds are strongly in favour of the continuation schools; but they desire to see them united with the handworkers' schools, and to have all instruction given in the evening. Workmen and apprentices could then be taught at the same hours and be free to work together in the day. The guilds urge, moreover, that in the schools trades should be taught by master workmen. German workmen, it would seem, are conscious of the value of efficiency and know the means by which it is to be obtained.

The new *Lehrplan* for the higher schools of Württemberg has been brought into its final shape and comes into effect with the school year 1906-7. Since it embodies the latest views as to the distribution of time and other matters, we devote a few lines to it. An attempt has been made to satisfy two parties: those who hold that the schoolboy is overburdened and those who urge the claims of "modern" subjects. Accordingly the hours assigned to classics have been reduced in number; yet more time has been found for English, drawing, and shorthand. We confine ourselves here to the *Gymnasium*, and print a table that shows the hours a week given to the three obligatory languages. We may explain that IX. is the highest form, and that the totals are got by adding the hours a week spent in each form.

	I. (- Sextal)	II. (- Quinta, and so on)	III.	IV.	V.	VI.	VII.	VIII.	IX.	Total.	Hitherto.
1. Latin ...	10	10	9	8	8	8	7	7	7	74	81
2. Greek ...	—	—	—	6	6	6	7	7	6	38	40
3. French ...	—	—	—	4	3	3	2	3	2	19	18

It will seen that in the highest form the time allotted to classics is 13 hours a week. Since the hours of instruction are 30, if we take the normal English school week as 26 hours, it will appear that the English sixth form classical boy, treated like the German *Gymnasiast*, would be taught classics for less than two hours a day. Some months ago we made the same calculation on the basis of the Prussian time-table. Those who know English public schools will see that, rightly or wrongly, classics have in them a weight that is not attached to them in German *Gymnasien*. We offer next a table illustrative of a very important subject—the proportion of home-work to school instruction

The Würtemberg plan fixes it thus :

	I.	II.	III.	IV.	V.	VI.	VII.	VIII.	IX.	Total.	Hitherto.
Hours a week of instruction in school	25	26	29	29	29	30	30	30	30	258	266½
Hours a week for home-work	6	6	9	9	11	12	12	12	12	89	—

Thus the youngest boys must do, on an average, one hour of preparation every day ; not more than two are required from the oldest. As hitherto, no lessons must be set for Sundays, festivals, or holidays.

We read a few days ago that classics were triumphing all along the line. In no case known to the writer of this note has Greek gained during the last fifteen years. Humanists of the old school would weep at the language of the new *Lehrplan*: "The aim of instruction in Greek is that the pupil may be able to read Greek prose and poetry with understanding. Grammar and written exercises have no other object than to give and maintain the linguistic knowledge necessary for this end. Sufficient is grammatical training within the limits of Kägi's 'Short School Grammar,' with the omission of not frequently occurring irregularities." Are all our fine compositions nought ?

AUSTRIAN EMPIRE.

The value of home-work and the amount of it that may properly be exacted are themes upon which discussion never entirely fails. In Austria it has recently been urged that written exercises in foreign languages (especially under the New Method) done at home have but small worth, and that they are morally undesirable in that they induce dishonest practices. As a document for the use of readers interested in the question of home-work, we give the regulation now in force in Hungarian secondary schools (*Gymnasien* and *Realschulen*). Written exercises are allowed as follows:—In Hungarian: Classes I.–III., 2 a month in school ; Class IV., 2 a month in school or at home ; Classes V.–VI., 6 a year at home and 3 in school ; Classes VII.–VIII., 1 a month at home. In Latin: Classes I.–II., 2 a month in school ; Classes VII.–VIII., 2 a month in school or at home. In Greek: Classes V.–VI., 2 a month in school ; Classes VII.–VIII., 1 a month in school. In German: Classes I.–IV., 2 a month in school ; Classes V.–VI., 1 a month in school in the *Realschule*, 2 in the *Gymnasium* ; Classes VII.–VIII., 1 a month in school or at home. In French: Classes III.–V., 2 a month in school ; Class VI., 1 a month in school and 1 at home ; Classes VII.–VIII., 1 a month in school or at home. It appears, then, that in the lowest classes no written home-work of any kind is required ; whilst for the highest classes it is compulsory only in the case of the mother tongue. We add that we are merely reporting facts ; we express no opinion here on the much-debated subject. And, by the way, secondary schools in Hungary are said to be very bad.

UNITED STATES.

A singular feature of education in our own times is the extent to which it is carried on by means of essays. We do not speak of the ordinary school essay on "The Choice of a Profession" or "How the Holidays were spent," but of more formal compositions to which children are induced by stimulus from without the school. If a society wishes to protect animals from cruelty, to promote the Imperial sentiment, or to maintain the strength of the Navy, it offers to school-children a prize for a paper on the best means of furthering its special object. We have no grave objection to make to the system ; its worst fault would seem to be that it encourages in the young a certain spirit of commercialism, a precocious desire to get from labour not knowledge, but money. The latest application of it in America is not, however, to the very young. Prizes amounting in the aggregate to 1,000 dollars are offered by the Merchant Marine League of the United States at Cleveland, Ohio, for the four best essays on "How to build up our Shipping in the Foreign Trade"—only students in high schools, technological schools, colleges, and Universities in the United States being eligible to compete. There will be four prizes, viz., one of 400 dollars, one of 300 dollars, one of 200 dollars, and one of 100 dollars. Students desiring to compete for these prizes must register their names and the institutions that they are attending with the League in order to have their essays considered. Essays must not exceed 2,500 words. If we were judges in the competition, we should wish them to be still shorter. It would be well if some humane society would arrange for members of Parliament, lawyers, and others a contest in which the palm should be awarded to him who packed most meaning into a score of words. As to the American competition, we observe with interest that candidates may advocate either protection or free trade. This brings us to the gist of our note, which is that the best opinions for the young are those that they form for themselves. A school essay, of whatsoever sort,

should be commended in proportion as it reflects the writer rather than his parents. It is on independence of thought in the child that the ultimate formation of sound public opinion depends.

We quote from the *School Journal* a suggestive paragraph : "The school day in Minneapolis is to be shortened fifteen minutes. The schools will close at three o'clock in the afternoon instead of three-thirty. Half of the time thus lost will, however, be made up in the morning, when the schools will open at a quarter to nine instead of at nine o'clock. The departmental sixth, seventh, and eighth grades will open at half-past eight. The school playgrounds will be kept open until half-past three in the afternoon for the use of children whose parents ask that they be allowed to play there during the half hour after school. Superintendent Kendall believes that the fifteen minutes of extra time in the morning, when both pupil and teacher are fresh, is more than worth the half hour lost at the end of the day, when both are likely to be fagged out. By training pupils to apply themselves more thoroughly while in school, Mr. Kendall expects, also, to lessen the amount of home study."

Superintendent Kendall seems to us to have the root of the matter in him. What is most important in education is the effort of the pupil. Where that effort is made is a secondary consideration. The proper business of the teacher is to stimulate intellectual effort by his words, and moral effort by his example.

CEYLON.

We have just received the report of the Director of Public Instruction for 1905. The total number of pupils returned as attending school is 263,233 ; of these 226,755 are in Government and grant-in-aid schools and 36,478 in unaided schools. If we take the three classes of schools together, the increase for the year is 16,851. Only the unaided schools have declined. The Director regrets to say that no further steps have been taken towards the introduction of definite moral teaching into the schools. Perhaps the most general interest attaches to the report of the Superintendent of School Gardens. We extract from it the following paragraph :—"I am able to report a more satisfactory state of affairs in school gardens generally as the result of a better understanding of the objects and requirements of the scheme on the part of teachers. To them the innovations introduced by it were not altogether welcome, as revolutionizing the time-worn order of things, and imposing additional responsibilities on themselves, while some difficulty was undoubtedly experienced in reconciling the schoolboys to the outdoor work required of them. It is now, I think, realized by both teachers and boys that book study and Nature study may appear in the curriculum of a village school without impropriety, that gardening is as suitable a form of recreation as any village pastime, and that, so far from being a degradation, manual work when efficiently performed is as creditable to the worker as the performance of a school task. The most encouraging sign of all is that a healthy spirit of rivalry has sprung up between one school and another, and that as a result there is now an *esprit de corps* which was sadly lacking during the first few years of the operation of the scheme. The decided views of his Excellency the Governor as to the village lad acquiring a training that will not disqualify him for a rural life are generally known and appreciated, and vernacular teachers are, to a considerable extent, modifying the old hard and dry routine of the school to suit the requirements of the new order of things. Altogether I think there is reason to believe that a beginning has been made through the school garden scheme and by object-lesson teaching in educating the sons of village cultivators on lines more in keeping with their environments and future responsibilities."

CHINA.

A silent change is going on in China—silent, but possibly of great significance. The establishment of elementary public schools of a Western type has been made obligatory on the various provincial officials. More schools involve a demand for more teachers. Now China, dazzled by the recent successes of Japan, seeks inspiration and new life from her once despised neighbour. Her officials, in the lack of teachers, are sending large numbers of men to Japan for a short course of training. Others resort thither of their own impulse. It is estimated that at the beginning of January, 1905, there were about 2,400 Chinese students in Japan. Since then they have been pouring in at the rate of five hundred a month ; so that the number now will exceed ten thousand. It is not deterrent to the Chinaman eager for knowledge that he must learn the Japanese language before he can profit by Japanese teaching. Since the students generally remain but a short time, their attainments must be superficial. But it is an interesting chapter in the history of civilization—this introduction of Western ideas and Western culture, as it were, through an Eastern conduit. Politically, China, by the process of learning from Japan, will be drawn more closely to her. And, indeed, the future of the one State can hardly be separate from the future of the other.

BOOKS OF THE MONTH.

Art.

Aims and Ideals in Art : Eight Lectures delivered to the Students of the Royal Academy. By George Clausen, A.R.A., R.W.S. With 32 Illustrations. *Methuen & Co.*, 5s. net.

JANUARY TO DECEMBER, 1906.

OCCASIONAL NOTES.

"LE Registre est mort; vive le Registre!"—To Clause 26, abolishing the Register, was added, on the motion of Lord Monkswell, and accepted by Lord Crewe on behalf of the Government:

The Teachers' Register.

Provided that it shall be lawful for His Majesty, by Order in Council, to constitute a Registration Council representative of the teaching profession, to whom shall be assigned the duty of framing and keeping a Register of such teachers as satisfy the conditions of registration established by the Council for the time being, and who apply to be registered.

The Register shall contain the names and addresses of all registered teachers in alphabetical order in one column, together with the date of their registration and such further statements as regards their attainments, training, and experience as the Council may from time to time determine that it is desirable to set forth.

The words need to be carefully scanned; for their full import may not be apparent to the uninitiated. "It shall be lawful," we need hardly explain, is the Parliamentary form of the categorical imperative. "Representative of the teaching profession" is not equivalent to "composed of representatives," as we believe the clause in its first drafting ran. As far as the Bill is concerned, there is no reason why the Council as at present constituted should not continue in office. For the Educational Council recommended by the Bryce Commission and pressed for by the Teachers' Guild we have still to wait. But there is one vital difference between this clause and Section 4 of the Board of Education Act of 1899, under which the present Register was established. The present Registration Council have only administrative powers, and those strictly limited. They differ in no respect from other officials of the Board, except that they are unpaid and not dismissible at will. Nor can the Board itself act except on the advice of the Consultative Committee. All this cumbrous machinery has resulted in a deadlock, and it is now scrapped. The future Registra-

tion Council, however constituted, will be autonomous. It will administer the regulations it has itself framed. How the transition from the old to the new is to be effected we will consider in our next number.

ALL who are interested in the registration of teachers (and what teacher is not?) should read "The General Medical Council, its Powers, and its Work"—an address delivered by the President, Dr. Donald MacAlister, at the Manchester University, October 2, and now published as a pamphlet. We have never blinked the fact that there are radical differences between the professions of medicine and teaching; but, in spite of these, it cannot be disputed that the medical art is at once a precedent and an exemplar for teachers. We too need a representative body which is at once "a Council of Education and a Board of Registration." How the General Medical Council has become a Council of Education, though it neither teaches nor examines, is shown in Dr. MacAlister's historical sketch, and the record is most instructive to teachers. The Council is representative and so constituted as to command "the full and complete confidence of the profession." Hence, without coercive powers it has been able, by using "peaceable persuasion in a reasonable manner," gradually to raise the standard of medical education throughout the kingdom. Why should there not be an analogous General Educational Council? How long shall we be content with a Consultative Committee which is nothing but a safety-valve for the Board of Education?

THE debates in the House of Lords do not simplify the problem of the abolition of tests for teachers in public elementary schools. The Archbishop of Canterbury seems to voice the general feeling when he insists that under no circumstances should the teacher be compelled to give religious instruction against his will. We are all for freedom nowadays. We do not want to put a premium upon hypocrisy by inquiring into a man's religious beliefs. But it is equally clear that tyranny lurks in forbidding a man to give religious instruction if he desires to do so. Therefore, says the Archbishop, let us have no compulsion; let a teacher be free to give this instruction or not as he may decide. But, later on, the Archbishop says that no one can give this instruction so well as the trained teacher and that in many places there will be no one else qualified to give it. The necessary result, therefore, will be that the teacher will be appointed just because he is willing to give denominational instruction. In this way are introduced religious tests. We have no wish, say the managers, to inquire into your religious beliefs, but we require a man willing to give such and such instruction. The problem is insoluble. So long as there are denominational schools, managers must endeavour to get teachers in sympathy with their particular denomination. To prohibit teachers by law from giving this teaching will be to cause a great hardship to many men and women who consider it a privilege to give religious instruction, and it will render religious instruction almost impossible in many schools. To allow the teaching is practically to impose tests. We see no escape from the dilemma, and can only trust to time and general good will to lessen the difficulties.

IT is, in our opinion, distinctly a wise move on the part of the London Education Committee to admit reporters and the general public to its meetings. When the Educa-

Education Committees and the Public.

tion Committees, under the Act of 1902, were constituted many and loud were the outcries that the publicity attaching to the previous School Boards had been exchanged for hole and corner meetings hidden away from the light of public criticism. Gradually bolder counsels prevailed; one Committee after another decided to admit the press. London is, we believe, the last, or one of the last, to give way to the popular demand. Henceforward both reporters and the public generally, so far as accommodation permits, can attend the meetings of the Education Committee in Spring Gardens—for it appears that the London Education Committee does not meet in the old Council Chamber of the School Board on the Embankment, but in the hall of the County Council. Some people are puzzled to discover why there is the option of publicity in the matter of a public body. The explanation is this: the meetings of public bodies, but not of their committees, are public; the Education Authority is a Committee of the Local Authority. On the general question there can be little hesitation in saying that it is a prudent move to admit reporters. There will always be much criticism of the actions of the Education Authority, and this criticism is made more acute and becomes more damaging in proportion as difficulties are placed in the way of the papers getting full information.

TO many people free and compulsory education brings as its corollary the provision of free meals. Sir John Gorst has constantly reminded us of the cruelty as well as the uselessness of working the brains of underfed children. Such is apparently the view of the advocates of the "Education (Provision of Meals) Bill" which is now before the House of Commons. The problem is not an easy one to solve. It is in accordance with English methods to take the first short-cut remedy that presents itself without searching deeply into causes or inquiring what is the real scientific cure. Certain children come to school apparently hungry: to endeavour to teach a hungry child shocks our feelings of humanity; therefore, feed the child. As voluntary charity is uncertain and troublesome, make the provision of meals the function of the Education Authority, and, to pacify the rate-payer, establish a machinery for recovering the cost from the parent. This, in brief, is the case for the Bill. Mr. Loch, on the part of the Charity Organization Society, has some strong arguments to the contrary. These arguments go much nearer to the root of the matter, and the resultant proposals are much more logical and scientifically correct. But they will not produce an immediate and tangible result. Therefore, they are likely to be overlooked, and we may in our desire to produce a facile remedy for an admitted evil do an incalculable harm to an ever increasing section of the population.

THE position advocated by the Charity Organization Society is briefly this. In the first place, the evil is not of very large dimensions. It can be met by voluntary agencies. It lies not so much in actual poverty and inability to provide the necessary food as in ignorance and carelessness. The real need is to improve the home conditions. "Is it not a mockery," asks Mr. Loch, "to give a child a dinner and to send him back to injurious and unhealthy conditions at home which are continuous in their effects, and to modify which no measures are at the same time taken?" It reminds us of the philanthropists who hug the belief that they are relieving the hardship of

the very poor by providing a hamper of Christmas fare once a year. The result of the Bill would be twofold: it would inevitably stop all voluntary subscriptions; therefore all voluntary agencies for the purpose of looking after the very poor school-children would cease their activities. Secondly, to put this form of relief upon the rates would be to turn it into an iron system which might gradually undermine the independence of and tend to pauperize an increasing class, but which could have no beneficial result in improving the conditions of home life. Far better to have voluntary agencies, which, in conjunction with the school doctors and the teachers, can investigate each case, give immediate relief where necessary, and gradually improve the conditions of home life. This remedy is more thorough, but less rapid in its apparent fruits. The remedy proposed by the Bill lends itself to advertisement on socialist and labour platforms, but it is only a palliative at best.

THE deputation of doctors, headed by Sir Thomas Barlow, which waited on Mr. Birrell urged three points: (1) the recasting of the syllabus of science teaching in elementary schools so as to embody the principles of hygiene and temperance without introducing a new subject; (2) the teaching of hygiene and temperance to all intending teachers; (3) a mandate to Inspectors to include hygiene and temperance in their reports. Mr. Birrell's answer, though guarded, was heartily sympathetic. In the last two resolutions the doctors were battering at doors ajar, if not wide open. Hygiene was already a compulsory subject at all training colleges, and Inspectors, as a matter of course, reported on the working of the Board of Education scheme for lessons in hygiene when it was followed. As to the first resolution, he invited the cooperation of the doctors in amending the Board's scheme, but cautioned them against excess of zeal. Temperance must not be interpreted as total abstinence: public opinion is not ripe for such doctrine. Hygiene must signify plain rule of health—the virtues of soap and open windows—without any technicalities or learned jargon. Lastly, he pointed to the opportunities for educating both teachers and parents that were offered in his Education Bill by the medical inspection clause.

MR. BIRRELL, as President for the year of the Salt Schools, Shipley, apologized for not delivering a set address; but his speech, though discursive, had one central idea—the unity of the profession. He deprecated, in particular, any rivalry between the secondary and elementary schools. That there is not the slightest indignity in being an elementary teacher is a platitude that, in the mouths of some speakers, would mean no more than the pious aspiration of the Primate that Dr. Clifford might have a seat in the House of Lords. But Mr. Birrell has proved his faith by his works. With increased facilities for education class distinctions are bound, sooner or later, to disappear; but Mr. Birrell can, and will, quicken the process.

A CASE of the greatest importance to head masters and assistant masters in secondary schools in reference to tenure is likely to come before the courts for decision. The points at issue are somewhat similar to those that were brought forward in the famous Grantham case some years ago, but which remained undecided after the inquiry. It is hoped that a decision may be obtained as to whether assistant

Class Distinctions.

An Important
Tenure Case.

masters in endowed schools are the servants of the governors or of the head master. This is important from many points of view, and in particular as to liability for payment of salary. Secondly, the important point will be raised as to whether or no the resignation of a head master terminates *ipso facto* the engagements of the assistant masters. The case has arisen in Richmond Grammar School, Yorkshire. A new head master was appointed in the course of the summer holidays. On September 10 he wrote to each of the four assistant masters that he had decided to commence work on September 21 with an entire change of staff. The men in question, therefore, appear to have received ten days' notice of dismissal from the incoming head master. It does not seem necessary to introduce any personal feeling into the case. There may have been several reasons why it was well to have a change of staff, and, if the new head master had accepted the existing staff and given all the masters notice in September that their engagements would terminate at Christmas, he would have been acting within his legal rights according to the scheme.

THE Head Master of Richmond Grammar School, Yorkshire, probably assumed that the engagements of the staff terminated with the resignation of his predecessor, or his predecessor may have given formal notice of termination of the engagement. On these points we have no information. According to the usual scheme, the head master appoints assistants and dismisses them at pleasure. It does not seem that assistants are servants of the governing body, although the responsibility for payment of salary is generally admitted to lie with the latter. To unprejudiced people it must seem an anomaly that when the head master of a school dies or resigns the whole staff should fall with him—a state of affairs that is never admitted at the public schools; nor, of course, could it apply to the newer municipal or county schools. Whatever one's views may be, it would undoubtedly be an advantage to have the matter definitely settled. Assistant masters demand, and, in our opinion, rightly demand, that they shall be held to be servants of the governing body. This was one of the findings of the Joint Committee over which Sir Edward Fry presided. Incidentally, it may be possible to have a decision as to what constitutes the usual notice, as in the present case it seems the men dismissed will claim that they received ten days' notice. The whole question of the tenure of assistant masters is in a condition of fog, and any decisions that will throw light on the position will be welcome. When assistant masters know exactly how they stand in the eyes of the law they will know how to work for the reforms that they desire.

SOME months ago the Surrey County Council and the Quarter Sessions appointed a Joint Committee to inquire into instruction in military drill and in rifle shooting in all schools aided by public funds. The report has features of general interest. As regards public elementary schools, the decision is that physical drill is more useful to the children, seeing their age, than instruction in rifle shooting. It is, therefore, recommended that public money should not be devoted to the latter object, but that where rifle clubs exist and are supported by voluntary subscriptions they should be continued, but should be limited to children over twelve years of age. In the secondary schools the Committee strongly advocate the formation of cadet corps. One such corps, at the Richmond County School, already exists, and

it is recommended that the remaining nine schools should go and do likewise and that the corps should be supported out of public funds. A further recommendation dealing with evening schools is somewhat of a novelty. It is recommended that drill and rifle shooting should be included in the curriculum of these schools and should be paid for out of public moneys, so far as students of the age of fourteen to seventeen are concerned. At the age of seventeen those who have the taste can join a Volunteer corps. The suggestions seem to us eminently sound. Children at elementary schools are much better employed in a general scheme of physical training than in the specialized form known as military drill; but in evening schools the inclusion of drill and of rifle shooting would form a useful attraction and would certainly be popular. The boys would be just of the right age to get the benefit. Other counties will, no doubt, also consider the matter.

MR. CYRIL JACKSON, in his report on the education of Man, to which we refer more fully on another page, gives an account of a school that would shock the professional educationist. It is a boarding school—a home for orphans, truants, and the like. There are sixty-two children, ranging in age from one and a half years to sixteen years. There are two industrial-school boys, four truants, eleven Poor-Law children, and forty-five miscellaneous orphans of both sexes. These are taught by one teacher, who is apparently a woman. There is no workshop nor any kind of industrial training for the boys; the girls scrub and clean the house. We are, of course, in error in saying that the children are taught by one instructress. The words of the report fit the case better: "One teacher attempts single-handed the impossible task of teaching the whole number. . . . She is doing her best." In fairness to the people of Man we must add that Mr. Jackson found the home excellently managed in all other respects; there are playroom, playground, and garden; "the children are thoroughly well cared for, and seem happy." It is only the intellectual education that falls short of the desirable. The report adds, with some point: "The time when any kind of schooling was considered good enough for the waifs of society has gone by, and it is now recognized that they need to be thoroughly well equipped if they are to succeed in after life." It might be added: "if they are not to be an avoidable burden upon, and danger to, society."

WE learn from the *A.M.A.*—the new form of the circular to members published by the Association of Assistant Masters, and now issued to the public—that a fresh clause dealing with examinations is being inserted into some schemes for endowed schools. The important words are these: "Once at least in every two years there shall be, at the cost of the foundation, an examination of the scholars by, or under the direction of, a University or other governing body, with the assistance, if the governors think fit, of any of the teaching staff of the school." We could laugh at this remarkable change of front when we recollect that only a very few years ago it was considered quite impossible for any teacher to have anything to say in the examination of his own pupils. But latterly we have been reminded of the example of Germany, and—still more important—we have had the action of the London University, which in its school examinations seeks the genuine co-operation of members of the staff. The fact is we are suffering from a natural reaction brought on by a surfeit of outside ex-

Military Drill in
Surrey.

Branding our own
Herrings.

aminations conducted without any special reference to the work or the conditions of the school. If a school is examined by the staff alone, there is a difficulty in maintaining the standard of work. We need a combination of the two systems—an outside body to supervise the papers and see that the standard conforms to the general standard of work in secondary schools, and inside advice to ensure that the papers shall be within the curriculum of the school.

MANY people have charged Prof. Sadler with a sudden change of front in regard to the education of children of well-to-do parents before they reach the age of twelve years, and much discussion has resulted. Ideally, we would all admit that children might attend the free schools until the age of eleven or twelve, when they would pass on to the secondary school to receive the advantages of their share in grants of public money. Practically this cannot be in society as it is constituted at present. And Prof. Sadler would not advise parents who can afford to do better for their children to send them to the public elementary schools, on the ground that the small proportion of teachers makes it impossible to give the individual care that is desirable. He argues therefore that parents must themselves pay the whole cost of education of their children up to the age of twelve years. To many this is a hard saying, seeing that all parents alike must pay rates and taxes. But we see no way out of the dilemma. In a few cases there are endowed schools that take children at nine years of age, or even earlier. These children get their share of the endowment, but they get no direct Government grant until they reach the age of twelve years. Except in the case of old endowed schools, we cannot doubt that Prof. Sadler's position is unassailable. Avowedly to provide, at the public expense, one kind of education for the poorer classes and another for the privileged classes would be impossible in a democratic age. Unless the public elementary schools have their staffs at least doubled, parents who can afford it must pay for the education of their children until they are old enough to enter a public secondary school.

A REPORT written by Dr. James Kerr, Medical Officer to the Education Committee of the London County Council, on "Bathing Arrangements in Schools in Germany and Holland" shows that we in England have much leeway to make up in this matter. It has been our custom to vaunt ourselves on our bathing proclivities, and even to hint scorn at the neglectful habits of other nations. Yet the traveller from the States is horrified to find in his hotel bedroom a tin saucer instead of the fitted bath to which he is accustomed in his own country. In town life baths mean money—not only the water rate, but the cost of space. In Germany every child has the opportunity of a hot bath at school once a week, except in villages where no permanent water service is available. In Holland the facilities are almost equal to those in Germany. The system usually adopted consists of washing in some sort of trough in water heated to 95 degrees Fahrenheit, followed by a shower gradually cooling to 65 degrees. The children must stay in school for a time after the bath to lessen the risk of catching cold. Everywhere the same testimony is given with regard to two results—it is more easy to keep the class-rooms fresh, and the children are invigorated and can work better.

"One Law for the Rich,..."

Bathing
in Elementary
Schools.

A CORRESPONDENT writes: "As I was having my hair cut the other day I inquired what had become of an assistant—a rather dreamy-looking, imaginative German, who was no longer in the shop. 'Oh, he has gone to manage So-and-so's shop,' said my informant, 'but he won't get much custom—he knows too much to get on.' And then he added: 'These Germans, they're all alike—they know too much.' Two things struck me in this *obiter dictum* of a man in the street. In the first place, his experience had taught him that the Germans were much better educated than himself; and, secondly, his remark implied a strong contempt for education as an instrument tending towards success in life. A wider experience would have enabled him to discover that Germans do 'get on,' and that this success is not unconnected with their education. But the interesting point is that he, typical of many of his fellows, has not realized the use of education in the battle of life. This may be the result of obtuseness and of the obstinate belief of Englishmen that they will get along all right by the exercise of their 'common sense,' not always to be dignified with the name of 'native wit'; or it may be because the education given in many schools does not result in giving a boy the conviction that his wits have been sharpened by the process." Against our correspondent's suggestion we may place the large numbers of men and women who, born to no special privileges, have found their elementary education the stepping stone to a career in which a practised brain and a well stored memory have won success.

LOCAL AUTHORITIES.

READERS of Mr. Cyril Jackson's report on the secondary and higher elementary education of the Isle of Man will feel regret that the services of such an able and clear-sighted Inspector have been lost by the English Board of Education. The report shows the disabilities under which the Manx schools, and the education generally of the island, are suffering; but it is in the suggestions for improvement, and in various remarks scattered here and there through the pages of the report, that Mr. Jackson shows how completely he is abreast with the most modern educational methods and organization, and how fully he realizes that education to-day is democratic and must be based on public feeling and adapted to the needs of every class. "Scholarships," says Mr. Jackson, "should be looked upon as an investment by the community in the brains of its best members." Any local councillor or rate-payer who wished to contest this might be reminded of the fable of the body and the members. "The true aim of the teaching of English," we read, "is the development of the power to use books, and not the memory of the contents of a few Readers." We fancy Mr. Wells would agree with this; and, if examinations allowed teachers to realize the truth of the maxim, many children would leave school far better equipped than at present for the battle of life. The following words give a wise hint to the Authorities:—"Aptitude, not knowledge of a few facts, is required; the commercial man demands from his employees intelligence, not a smattering of theoretical book-keeping; the result aimed at in manual training is handiness combined with a grasp of constructive principles, not the knowledge of a few carpenter's joints; science teaching is directed towards the acquisition of a scientific spirit, not of a store of chemical formulae."

THE present provision for secondary education in Man, and the extent to which it is made use of, would imply at first sight a more satisfactory state of affairs than careful analysis would endorse. The statistics show that 13 per 1,000 of the population are in schools where higher education is given. The population is unfortunately decreasing, and is now taken to be about 54,000. The number of pupils is 747; but of these 129 are boarders in King William's College whose homes are outside the island. Taking away these, and adding 88 pupil-teachers, we get 706 Manx pupils, which gives 13 per 1,000. If, however, we take away the 187 pupils under twelve years of age, the proportion is lowered to 9.5 per 1,000. Besides King William's College there

The Existing
Provision.

is one other non-local school—for girls, with 29 pupils. There are four endowed schools, boys' grammar schools at Douglas and Castletown and Ramsay, and a girls' high school at Castletown. There is one "public secondary" school at Douglas taking boys and girls. There are also six private schools. The report shows how some of the grammar schools have fallen on evil days, one in Peel being completely closed, and urges that changes in organization and much more liberal support are urgently necessary. King William's College has the reputation of an English public school, but the other endowed schools have suffered badly for want of funds, while the provision for girls' education is sadly lacking. In Douglas alone do we find a secondary school of the modern type, supported by the town and inspected by the Board of Education. Here boys and girls have equal opportunities. Incidentally Mr. Jackson remarks: "On general lines both boys and girls require the same training in their early years."

Mr. JACKSON sees, of course, that more money from public funds must be found. One source yet untapped so far as higher education is concerned is the grant from Excise, better known as the whisky money. But

Remedial Measures.

more important than money is the need for insisting that pupils shall make a longer stay at the secondary schools. The charts showing the duration of the school-days of the boys who have left school during the last two years are more ragged than any similar charts we have ever seen. In no case is there a solid block from the ages of twelve to sixteen, not even from thirteen to fifteen. Boys come early and leave early, or they come late for a year's "finishing." With entries and leaveings at all ages it is impossible to scheme a satisfactory schedule of work. There is no definite local industry, and therefore no direct need for technical education. What is wanted is a general education that will encourage self-reliance and enable pupils to adapt themselves to new conditions. Before anything can be done satisfactorily, the administration should be altered. The Council of Education of the island should have wider power and real control over the schools. The area is too small for a number of Education Authorities. The educational endowments are not at present well used. They should be centralized and devoted to scholarships, or to the aid of secondary education in some form. More secondary schools, especially for girls, should be founded and supported by the Local Authority. Supplementary classes in elementary or higher elementary schools should be formed. To some extent the report deals with elementary education and we note two useful suggestions: more instruction should be given in household management; and, in order to encourage children to stay longer at school, leave of absence should be given during the tourist season, which is not long, and in which the elder children are required for work of various sorts.

THE report of Dr. James Kerr on the bathing arrangements in schools in

Hot Baths at school.

Germany and in Holland, which the London County Council has issued, is full of interest. About 85 per cent. of the children in all schools in Germany and Holland, in districts where there is a permanent water supply, have a weekly bath. The very young children are excluded because of the difficulty of dressing them, and the elder girls sometimes give up the habit. There is no compulsion, and the chief objectors are in Catholic districts, in schools where the arrangements are not considered sufficiently private. The usual system is to have a dressing room to accommodate about thirty; some of these have separate dressing boxes for all, some for a few elder children. The baths consist of a number of shallow troughs in which the washing takes place. This is always followed by a shower bath. In some schools each child has a separate bathing cell and dressing cell. The space occupied by these is not large, as the bathing trough need not be above 2 feet square. In no case is the installation exceedingly costly. Dr. Kerr considers that a dressing-room to hold about twenty-five, with a few curtained cells at one end, and a bathroom for the same number with a few curtained bath cells, is sufficient for the use of a large London school. The testimony of teachers and doctors is strong as to the beneficial results of the introduction of school bathing. The air in the class-rooms is better, the children are better able to work, and there is a great improvement in their underclothing and general habits of tidiness. In one school visited there was a special installation for the use of the staff. There is nothing said about the use of the baths in the holidays. Perhaps this would prove impossible, as it might mean having a teacher always present for disciplinary purposes.

WE have received from the Kent Education Committee the fourteenth report and a copy of the "Directory for Higher Education." The latter document gives a most useful account of the opportunities afforded to the inhabitants of the county in the matter of scholarships,

Secondary Education in Kent.

and especially with regard to help and information in agricultural pursuits. Few counties have an institution like Wye College able and willing to help the farmer and gardener in a variety of ways. From the report of the Committee we learn that a large expenditure will be necessary in

the next few years on the provision of new secondary schools. Eight districts are in need of schools for girls. These are to be built by, and remain the property of, the Council. In the existing secondary schools that are under the control of the Council all the teachers are to be formally dismissed, in order that they may be reappointed under the new conditions of appointment. The appointment of head teachers is to be subject to six months' notice on either side, such notice to expire at the end of a term. The conditions relating to assistant teachers ought to be welcomed by their associations, as they seem exactly what assistants have been asking for. After one month's probation, the appointment is to continue during good behaviour, until terminated by written notice on either side, such notice to be given not later than the end of the first week in term. Of course, if this condition is rigidly exacted by the Committee, some assistants may regret the old *régime* under which a head master could generally be induced to waive his right to notice in case the assistant was offered promotion at the end of term or even in the holidays. The scale increase of salary is to be given annually, subject to the Committee's approval, and payment is to be six times a year.

It is impossible in a paragraph or two to do justice to the many activities referred to in the Annual Report of the Manchester Education Committee. We pick out for notice here some of the Committee's work that

Care of Children in Manchester.

deals with the child out of school. Children are taken without payment to the Corporation swimming baths, under the charge of a teacher. They may go by themselves at a cost of $\frac{1}{2}$ d. There are at present no arrangements for hot baths in the schools, but perhaps Manchester may be the first city in England to adopt the German plan. With regard to playing fields, a Committee is engaged on a scheme by which it will be possible for the elder children to have one afternoon a week in the playing fields under supervision, this to count in the time-table. In addition, several school playgrounds are open from after school to dusk in summer. The difficulty with regard to playing fields is to find space, either in public parks or elsewhere, that is not too costly and too remote from the schools. The country school has had a useful and pleasant season of work. Some twelve hundred children and teachers have enjoyed a fortnight in the country. The work has been carried on by a voluntary Committee who have made themselves responsible for the greater part of the cost. Special arrangements for the cure of stammering have been made, and the report shows that a great success has been attained. Prof. Léon Berquand was engaged to give a course of lessons to ten children. These were cured and a subsequent examination after some months showed that no relapse had taken place. The children who stammer are now under the care of Miss Mona Clay, who recommends a course of five weeks—three for uninterrupted instruction and practice and two more for occasional reunion. The savings bank continues to be an important feature. More than £20,000 has been deposited during the year.

THE Manchester City Council has adopted a new scheme for the constitution of the Education Committee, which has been forwarded to the Board of Education for approval. Under this scheme there will be twenty

Constitution of the Education Committee.

Council members, as against thirty at present. Three are to be recommended by the Withington Committee, and two are to be representatives of the Moss Side wards. Thirteen co-opted members will replace the twenty-one under the previous scheme. They are to be persons of experience in the management or administration of elementary education in provided or non-provided schools, of technical and commercial education, of secondary schools, and of University education. The Withington Committee is to have the right of nominating one of the co-opted members. Thus the total number of the Committee will be reduced from fifty-one to thirty-three. A smaller Committee is certainly more business-like than a larger one, and, assuming that the Committee is strong enough in numbers to provide sufficient members for the necessary sub-committees, the change should be beneficial. There is one clause of the new scheme that we do not deem sufficiently generous. Two at least of the co-opted members must be women. We can only hope that "two at least" will not be taken to mean "two only." Two women out of a Committee of thirty-three have not a fair opportunity of impressing their views, even if they are the most regular of attenders; nor does this scanty number make it possible to give to women all the sub-committee work for which they are specially suited. We have also received a copy of the "Directory of Evening Schools and Classes in the City of Manchester," which contains full information as to time-tables, fees, and other matters of the city's work in this direction.

THE annual report of the West Riding Education Committee,

The Annual Report of the West Riding.

which we have just received, is a modest, tersely written document, and yet so full of evidence of useful work accomplished and necessary problems tackled that we can hardly realize that the Committee have only been at work under present conditions for two years,

and that this is only their second report. No less than £6,000 have been spent in helping existing teachers, both elementary and secondary, in gaining further qualifications or in making good deficiencies owing to lack of earlier opportunities. The pupil-teacher scheme is fully organized, but there is still a want of sufficient training-college accommodation, and the Committee intend to remedy this. The building of eight new secondary schools has been undertaken. Three of these are for girls, and the remainder are dual. The report realizes the disadvantage of children entirely dropping their education when they leave the elementary school, and only coming back to the evening school after the lapse of a year or more. At first they are proud of their new independence, and perhaps find their new work so arduous that they have little energy for book-learning in the evening. The result is disastrous. When the children begin to realize their own ignorance they come to the evening schools to find that they have forgotten much and lost the habit of study. The teachers are then inclined to do over again the work of a primary school. With regard to the elementary schools, the Committee have taken to heart Mr. Marvin's report of the previous year, that the least satisfactory portions of work in the elementary schools are at the top and the bottom. Much has been done to make up deficiencies in both respects. A sum of £5,275 has been granted to Leeds University and £2,320 to Sheffield.

Education in Plymouth. THE Plymouth Education Authority is hard at work organizing and supplementing the provision for secondary education in the borough. It is intended to establish a new public secondary school, and this will necessitate a revision of the present arrangement with the school that is permitted to take the title of the Corporation Grammar School. The Committee find so much difficulty in the restrictions imposed by the Board's Minute on Higher Elementary Schools that it has been determined to work the intermediate school as an upper standard public elementary school. There are some eighteen hundred children attending private and proprietary schools in the town, and the Authority rightly thinks that it ought to control and guarantee the education given in these schools. Free inspection by the Board has accordingly been offered: two schools are already recognized by the Board as efficient schools, and it is hoped that the others will be inspected during the coming year. In connexion with the elementary schools a useful fund known as the "School Children's Fund" has been started by private generosity. The objects are to provide meals, wearing apparel, spectacles or other hygienic appliances, to give treats to afflicted children, and to grant small sums to head teachers for miscellaneous wants. An interesting case has been heard in the Courts during the year. The Authority made a rule that the marriage of women teachers should be equivalent to three months' notice of termination of appointment. Claim was made by one teacher against this rule and damages were awarded, but on appeal the decision was reversed. The medical officer reports again as to the unsuitable character of the seats and desks in the majority of the schools. "No support," he says, "is given to the back, and there are no means of altering the angle of the desks." The ophthalmic surgeon finds so many traces of eye trouble that he says the present system of cursory inspection is of no help to the children, though it may be of use in compiling statistics. He says that neither he nor the other hospital surgeons can possibly cope with the work if it is to be done thoroughly. He, therefore, suggests that about two hundred cases each year should be properly examined and fitted with glasses, and that, if this were done, in a few years the number of cases in the schools could be reduced to reasonable limits. We have also received from the Plymouth Authority the "Education Directory" for the present session. The book is clearly arranged, admirably produced, and enlivened with many illustrations showing the art rooms, workshops, and domestic rooms provided for the students.

The City and Guilds Institute. THE City and Guilds of London Institute presents a report dealing fully, amongst other matter, with the new situation created by the proposed establishment of the "London Charlottenburg." Partial arrangements have already been made by which the students of the Royal College of Science and of the Central Technical College have used the same laboratory, thus avoiding the expense of duplication for two colleges that are situated close to one another. The Institute has appointed a Committee to confer with the Departmental Committee, and it remains for the Board of Education to take the next step. The rest of the report deals with the work of the colleges managed by the institution. The work they do is undoubtedly of the highest utility, and many engineers owe their excellent equipment to it. Yet the report recognizes that there is a greater demand for the highest skilled teaching than can be met under existing conditions. On one point we would venture to offer a suggestion. The students come straight from the secondary schools, many at the age of sixteen or seventeen. As the report points out, this necessitates the provision of a first year's course of a general character in mechanics and mathematics, physics and chemistry. It might be better, in that it would relieve the college of a

certain amount of non-technical work, if the age of entrance were raised and the entrance examination stiffened. Against this proposal we have the Dean's report, in which he finds great fault with the work done by students before their admission. "Far too little," he says, "is done to inculcate exact and careful habits of working; it rarely happens that a student comes to us who knows what an experiment is." But with the improvement of secondary education and its equipment which is rapidly going on all this ought to be altered. We have also received from the same body a report on the work of the Department of Technology.

The Glasgow and West of Scotland Technical College. THE first section of the new building of the Glasgow and West of Scotland Technical College has now been formally opened, though it had previously been used for classes. When completed, the structure will be the largest of its kind in Britain. Like all institutions for higher education, there is a difficulty in getting adequate funds no less for capital than for income charges. In the United States, to which country the Secretary and Director, together with the Professor of Mechanics, were recently sent on a tour of investigation and inquiry, it is found that the equipment is generally better than in England because of the more ample provision of funds. Some £250,000 have been subscribed for the Glasgow College, but more is wanted. It is also pointed out in the report that this college will be the only institution of its kind standing quite by itself and not incorporated with any University. The college at Bristol, which at present is independent, will be incorporated in the projected Bristol University. It is therefore probable, or at any rate possible, that the governors of the Glasgow Technical College may come to some arrangement with the University of Glasgow.

Warwickshire. THE Warwickshire Education Committee find considerable fault with the new Government Regulations for special subjects, especially in reference to cookery classes, on these grounds: a serious loss of grant, a considerable waste of teachers' services, a serious reduction in the number of children who will be able to receive instruction in cookery, or, if the present instruction is continued, a need for a large increase in expenditure upon additional premises and teachers, and the impracticability of giving instruction in cookery to children in small rural parishes. These new Regulations were issued within one month of their coming into operation. As all efforts have failed to reduce the Board to greater leniency, the Committee has circulated the correspondence among the other counties with a request for support as against the Board. In the matter of scholarships it was felt that the existing arrangements were not satisfactory and new regulations have been issued. Major and minor scholarships are to be tenable for three years. To meet the increased expense the numbers have been reduced—twenty-four minor and sixteen intermediate. The maximum age limit for minor scholarships is to be twelve years, and the joint examination that had been held with Somersetshire is to be given up and a special examination for Warwickshire is instituted.

Other Reports Received. WE have also received the quarterly report of the Staffordshire Education Committee, dealing chiefly with ordinary routine matters. The Northampton Institute sends us a bulky volume giving its educational and social announcements for the session. The report contains illustrations of the various departments and gives a most attractive programme to induce the dweller of East London to spend his (or her) evenings pleasantly and profitably. The Northampton Institute is in John Street, E.C. The Borough Polytechnic sends us a similar volume, though not quite so lavishly prepared. We have also to acknowledge the receipt of the report of the Medical School of St. Mary's Hospital, which gives a full account of the facilities offered to students. From Gloucestershire we have a volume of nearly three hundred pages dealing entirely with the receipts and expenditure on elementary and higher education, and similar statistical information. The prospectus of the Bradford evening schools and classes shows that that city is not behind others in the facilities it offers to its inhabitants. The West Riding of Yorkshire sends us a further handbook dealing with elementary education; and from the London County Council we have a prospectus and time-table of the School of Photo engraving and Lithography, in Bolt Court, Fleet Street.

GRAY's "Elegy" was published within a few years of Johnson's Dictionary, and it is instructive to note how far his orthography differs from modern usage. In "Munro's Translations," reviewed in another column, the original spelling is preserved. Gray wrote: *curfew, tinklings, mopeing, echoing, huswife, ile (aisle), sooth (soothe), rhimes, Hamden (Hampton), wreath's (wreathes).*

DOROTHEA BEALE.

MARCH 21, 1831—NOVEMBER 9, 1935.

*Reminiscences.**

ALREADY so much has been written on the subject of Miss Beale's work and her striking personality that we almost fear to force the note of praise by a fresh attempt to portray her and to estimate the value of her work; but no record that is sincere and at first hand can be deemed superfluous. She had early grasped most of the principles now accepted by all educational reform; she was able also to test those principles in practice, and at the end of a long life, devoted to one centre of work, she could formulate her observations and draw from them authoritative conclusions. While welcoming new developments in method and encouraging every form of individual experiment in teaching that was likely to arouse intelligence in the pupil, she adhered in the main to several broad, unchanging principles in the arrangement of school work. These may be roughly formulated: (1) The importance of the study of Scripture, as a means of quickening the sense of duty and strengthening the will; (2) mathematics, as providing mental gymnastics; (3) history and literature, as kindling and regulating the imagination; (4) languages (with some philology and grammar), as conducive to clearness of thought; (5) much and frequent written work, so as to cultivate the "gift of utterance"; (6) importance of the training of teachers; (7) the necessity laid on each to dedicate herself to a life of usefulness.

There is so much to remember, when asked for reminiscences of Miss Beale, that the task of selection becomes bewilderingly difficult. Our perception of her greatness has been a thing of such unconscious growth that it is almost impossible to analyse the grounds of our admiration and trust. Yet a few of the secrets of her personal influence seem gradually to be becoming clear. As in all great characters, so in hers, a variety of opposite qualities found space for co-ordinate development. She was prompt to decide, had a firm belief that her decisions were right, adhered to them with tenacity, and embodied them in action. Yet, on the other hand, she would, with most engaging readiness, listen to the proposals, even to the criticisms, of her staff. And very often, with almost naïve simplicity, she would accept and act upon the advice of a subordinate. In dealing with the Guild of Old Girls (of which she was *ex officio* President) this paradox of combined firmness and readiness to yield was often exhibited. The most striking case, I think, was in connexion with the corporate work of the Guild. Soon after its formation a general desire arose to join in some central effort of social service, besides the various local utilities in which individual members were engaged. Miss Beale wished this corporate work to have its centre at Cheltenham, and, if possible, to be connected with the College. But this restricted aim found no favour, and in the end a College Settlement—now known as St. Hilda's, East—was founded in Bethnal Green. Later, when this Settlement had proved its usefulness and the general interest taken in it justified the choice of the Guild, Miss Beale frankly acknowledged her mistake, and gave warm and generous support to the undertaking.

In the exercise of her authority as Principal she "ruled with diligence," and maintained a personal supervision over every department of her large College. Some have called her an autocrat, and she did not deny the name. One old pupil came nearer the truth when describing her as a "benevolent despot." There were few of her subjects who wished for a limitation of prerogative. Yet, together with this inflexible assertion of authority, she granted to her subordinates a quite unusual degree of independence. When convinced of their capacity and their loyalty to high standards of work she withdrew all immediate control. And every mistress knew that within the little kingdom of the one class confided to her she might exercise individual judgment and plan out her own time-table of work. This permission to organize within given limits added an extraordinary interest to the work of teaching, and enabled Miss Beale to demand sacrifices of her mistresses such as few other Heads would venture to expect. But, while granting such a measure of freedom to her teachers as to secure their affectionate allegiance, Miss Beale never relaxed her vigilance.

* A fuller record of Miss Beale's life and work will appear next month.

Much of the school work was carried on in large halls subject to unconscious supervision. Every class-room had a glass door through which the controlling eye could note any sign of disorder or inattention; every week a register of marks was submitted to her, and she pronounced weighty words of praise or blame upon the work of each individual pupil.

This unceasing vigilance, this unflinching exercise of control over ever increasing numbers, this attitude of command, gave to Miss Beale's manner a certain abruptness that aroused in some a feeling akin to fear. Even to those who knew her well there was an outward appearance of hardness that often concealed the kindlier feminine instincts which lay below—instincts deliberately held in check so that her hand might be the steadier for holding the sceptre of rule. That she recognized and regretted this hardening effect of a life-long repression of feeling may be touchingly illustrated by her own words about a photograph of herself. A very successful one, part of a group taken in 1897, has often been reproduced, and is a favourite with us all. In 1899 what seems to some an even more pleasing one appeared in a group photograph of that year. On my expressing the opinion that it was the best yet taken, Miss Beale agreed, adding: "I think I look gentler in this one than in the other."

That she could be gentle and extraordinarily sympathetic all those who came into close contact with her know well. Once a young mistress received a sudden summons in a case of family trouble. Miss Beale saw in a moment the whole bearing of the situation, and gave immediate leave of absence for as long as might be required. A midnight journey was necessary, and the flurried young teacher on reaching the station found a servant sent to see her off, and to put in her hands a basket of fruit and delicacies. No doubt others can tell similar tales of Miss Beale's practical sympathy. As to her sallies of humour, her playfulness in hours of relaxation, they came upon those fortunate enough to be of the company with a shock of pleasure. Sometimes, also, to her "children" she would show this lighter vein, and at the biennial Guild meetings her final address—a retrospect and a panegyric—was always provocative of universal laughter and gaiety.

Her love for the College was almost humorous in its intensity, but to her so serious that one dared not take liberties with so sacred a passion. To the College she sacrificed much of what to others seems worth having—family ties, the cultivation of friendships, the attractions of society, amusement, ease. To one who sometimes visits the College—a shrewd observer—this sacrifice of ease appeared specially pathetic.

Those who have seen her fighting with fatigue, as she sat on many occasions listening to the lectures she could not hear, will not wonder that she aroused in the hearts of those who understood her an enthusiasm too subtle to be explained. Her love for the College was almost fierce; the thought of leaving it, of relaxing her clinging grasp and retiring into inactivity, was the one great fear of her courageous heart. She spoke of it sometimes, always with unconcealed dismay. And yet she had looked this terror in the face; and we can perceive plainly now that she had contemplated the possibility of a surrender of her work. We rejoice that she has been spared this intolerable pain.

Those who remember the last play, produced for the Guild meeting in July, 1906, will recall many phrases which even at the time seemed prophetic. The story of the great Queen Hatshepsut, whose energy had conferred blessings on her people, was in itself most suggestive. We quote a few striking lines:

Egypt is richer through her enterprise,
Our women nobler through her energies.
Her mouth hath spoken great words, and her hand
Lifted the cup of knowledge to your lips.

Then Hatshepsut, conscious of growing opposition, and the secret schemings of her son to remove her from the throne, gives utterance to her thoughts:

Yes, daughter, I am old. Custom demands
That, being woman, I should be called old—
I have held fast the reins of government,
But the King, having attained full manhood,
Chafes for power. I have been long a Queen.
My land, my people, claimed my energies.
And I have given you the gems of life,
Wise teachers, noble women, liberty.

And, again, on the approach of death :

Many a danger have I stemmed before,
Holding the helm of State with tireless zeal,
But now, an aged Queen, I bow the knee
Before thee, Searcher of the heart, for aid.

Miss Beale did not write this play herself ; but she issued her commands, and it was written, and staged and acted, all in a manner so impressive that, in the light of present events, the remembrance of it haunts the mind.

More positive, however, than any hints in the play are Miss Beale's own words on the occasion when her portrait by Mr. J. J. Shannon was presented to the College in 1904. In these, however, it is the prospect of death (not of retirement) of which she speaks with such equanimity. We quote from her address :—

I am touched by the fact not only that so many have cared to subscribe for a portrait of their old schoolmistress, but that so many have come long distances to present their gift to the College, and that in dark November days. . . . You have all come here moved by loyalty to your College. Loyalty is not a personal matter, as we saw on Sunday. Tribute was due not to Tiberius, but to Caesar ; so you wanted a portrait of a Lady Principal—not of the person, but of the representative—and the Principal has a great advantage over the person in that the former lasts on when the latter passes away. Loyalty outlasts life—"Le Roi est mort ; vive le Roi !"—so I look on your gift as a page of College history. . . . But not only have you brought a present for the College : I find also a beautiful book for my own personal self—not my official self—a record of affection from my children which warms my heart and makes me long to be more worthy of it. . . . But, if the affection of those we love is an energizing power, it produces a moral tension, not unmingled with fear : "None is happy till his death." . . . But, as I have said, the Principal does not die. Like the Llama, she is reincarnated : in her, if the body perishes, the *esprit de corps* survives. As Aeneas saw in vision those who should establish the glory of the City of the Seven Hills, so I look forward to the time when another shall reign in my stead on Bayshill, and the pictorial history of the College shall be continued, and a procession of rulers greater than their ancestors—

"Illustres animas, nostrumque in nomen ituras"—

shall see developments which we cannot foresee—

"This fine old world of ours is but a child
Yet in the go-cart. Patience ! Give it time
To learn its limbs : there is a hand that guides."

M.

At the memorial service at St. Paul's, held November 16, the address was given by the Bishop of Stepney. The great congregation gathered under the dome testified how wide and deep was the influence on her generation exercised by a great woman, a great teacher, a great Christian. It had been his privilege to be present at the last of those great gatherings when hundreds of the girls and women met to take counsel with her whom they regarded as their queen and prophet. He should never forget his converse with her then, and he might claim to be a link between that centre of their national Christianity which was proud to do her honour and the College—that record of a wonderful venture of courage, that achievement of resolute purpose with which her name was identified. Of her personal character he would say little : none would have disliked such reference more than Miss Beale herself. She was a woman who bore the impress of rare distinction—a nature moulded and working upon a large and generous scale ; a great dreamer, a great visionary, and yet a most capable administrator ; tenacious of purpose and masterful, yet with a deep inner tenderness ; frank and open, yet holding in reserve (like all strong natures) more than she gave out ; with the strength of a great leader, yet retaining to the last something of the love and simplicity of the child. But he would rather dwell on the great ideals to which her life bore witness. These ideals were embodied in the great College that she erected. Cheltenham College was one of those institutions that bore the mark of a single personality. It embodied her ideal of culture, wide and far reaching in its aims, yet accurate in its methods, and in teaching was true to the definition of Edward Thring—the transmission of life from the living to the living through living. She gave proof that the personality of the teacher was the most indispensable and enduring power in education. The main object of all her work at Cheltenham and elsewhere was not so much to instruct the mind as to inspire the character. Lastly and chiefly, her aim was that the mind and character should be inspired with the spirit of religion—not the development of a single faculty, but the consecration of all our faculties kept at the highest point of energy. She was not wont to speak much of religion, but

chose rather to reveal it in conduct. She was filled with the reverence of a great reserve. When she retired to undergo the operation which was destined to prove fatal she gave orders that no disturbance was to be made in the daily work of the College. Was it not her voice that spoke to them in the appointed lesson : "Therefore, my beloved brethren, be ye steadfast, knowing that your labour is not in vain in the Lord" ?

COLONIAL AND FOREIGN NOTES.

FRANCE.

Of the professional training to be required henceforth from candidates for the *agrégation* we have already written. Now that the measure of it is fixed by official decree, it presents itself to us as being by no means excessive. The *stage pédagogique* contemplated by the regulation of June, 1904, shall comprise, says the new decree, theoretical preparation and a professional apprenticeship. The theoretical preparation is to be given by means of twenty lectures relating (1) to secondary education in general (its history and its organization, both in France and abroad) ; (2) to the various disciplines of secondary education (literature, history, mathematics, &c.). The lectures of the first group will be attended by all candidates ; from those in the second group each will choose such as deal with the special subject in which he seeks the *agrégation*. Professional apprenticeship, now that it is defined, appears as attendance at, and progressive participation in, class work in a *lycée* or *collège* either for at least three weeks continuously or during a whole quarter at the rate of, for a minimum, two lessons a week. Candidates in modern languages must attend for *two* quarters. The lecturers and the teachers to be charged with the direction of the professional apprenticeship will be nominated by the *Recteur*, to whom, also, will be sent a report of the way in which the probationer has gone through his course, and of the aptitude that he has shown. As to "the progressive participation," the intention of the Ministry seems to be that the probationers should go to a class not singly, but in groups of two or three—first as mere visitors, then to be entrusted with a gradually increased share in the teaching, the time of their probation being divided between the first and the second cycle. Not the least valuable part of their training will be the private counsels given to them by the experienced teachers under whom they are placed. Our readers will observe, with approval or disapproval, that of abstract or general pedagogy—the science, that is, of the principles that should underlie all educational methods—there is no mention. Perhaps the French think that the science has not yet been formulated with sufficient certainty for practical ends. Yet we are loath to believe that the study of it, even in its immaturity, is unworthy of pursuit.

This is a day of exchanges. Nations profit by exchanging ideas ; they are growing conscious that a very practical way of exchanging ideas is to exchange persons, the bearers of ideas. Germany exchanges professors with the United States. France exchanges teachers with Germany and with Great Britain ; she has likewise been organizing the means of exchanging boys and girls. Rich men have long been wont to send their children abroad for the sake of the educative effect of the foreign language and life. Why should not the ordinary citizen be able to do the same ? If he would do it, there is the Société d'Echange inter-familial to help him. Founded four years ago, it has already brought about the exchange of 492 children between France on the one hand and Germany, England, Austria, Spain, and Italy on the other. With Germany an exchange of children for the holidays has become a familiar practice. Private in its character, and so unfettered in its action, the society receives a small grant from the State. We regard its work—which, it has been pointed out, gives a natural complement to *correspondance interscolaire*—as likely to be beneficial. But are not all these exchanges prejudicial to *Volksstumpfpädagogik*—the pedagogy that seeks to foster, above all, the sentiment of nationality ? Of which we, for our part, have not spoken with extravagant praise, albeit not hoping blindly for the cosmopolitanism that would be the logical result of the new educational movements ?

In spite of the progress that is being made with the providing of secondary education for girls, the supply is not yet everywhere equal to the demand. In Paris the teachers of the *Lycée Voltaire*, following the lead of those of the *Lycées Lakanal* and *Buffon*, are themselves offering, since no *lycée* for girls is conveniently near, secondary courses for young girls. The courses were begun on October 5 at the *Lycée Voltaire* itself. The Ministry of Public Instruction and the Municipal Council of Paris subsidize them.

The chief topics among French schoolmen at present are the supervision required from teachers (*professeurs*) and the extraordinary confusion caused by the ministerial permission to withdraw children from school last July on the 14th, although the holidays did not formally begin until after

The Exchange of Children.

Assistance for the Girls.

Of the French Parent.

the distribution of prizes on the 28th. Neither of these things is likely to interest readers of *The Journal of Education*. The parent is always interesting to the teacher. We wrote a few months ago about the British parent—perhaps intemperately, since indignation should have been softened with humour. But look at French parents. A petition is being circulated among some of them containing this clause: "Since Greek is not as indispensable to those destined for Science as for those who will make Letters their career, of the five hours a week allotted to Greek one might be made optional, and given by the former to chemistry." That is to say, having themselves elected that their boys shall study Greek, they propose to reduce the hours devoted to it by 20 per cent. But the strongest objection to Greek in the school is that the discipline is too hard for most of those with whom it is employed, and that the brief time that can be spared for it prevents them from reaching a serviceable degree of attainment.

GERMANY.

This is—the remark is not new—a changing world. Your old-time pedagogue usually based his claim to teach on some rudimentary knowledge of the Latin tongue. In Germany to-day, with Latinless schools pouring their pupils into the Universities, care has to be exercised lest those should teach without Latin for whom Latin is almost essential. Baden has revised the conditions under which it admits candidates to the examination for the *Lehramt* (office of teacher) in higher schools. Admission is granted only to those who hold the Leaving Certificate of a *Gymnasium*, *Realgymnasium*, or *Oberrealschule*, and have pursued their professional studies at a German State University for at least eight half-years. Those who have the Certificate of an *Oberrealschule* (which is Latinless) and offer themselves for examination in German, French, English, or his'ory are required to show that they possess some acquaintance with Latin—such an acquaintance as is necessary for the understanding of the historical development of German, French, or English, or for the reading of the Latin authorities for history. They must prove that they took optional instruction in Latin whilst at school, or followed the supplementary courses provided by the University. The new regulation in Baden has something of suggestiveness for us. Of two men who know, let us say, French well enough to teach it, the one that has the more Latin should be preferred as a teacher of the language. On the other hand, the ancient view that the possession of a classical degree forms a qualification for teaching French has, we hope, been everywhere renounced. For this particular purpose a French scholar without Latin is better than a Latin scholar without French. But Baden refuses even to examine a man's capacity for teaching any modern language, unless he first brings evidence that he has made some study of Latin, guarding history too with the same exclusiveness. Nor are we prepared to maintain that Baden is wrong.

During the winter half-year, 1905-6, the total number of students of all kinds (fully matriculated and not) in German Universities was 46,688. In technical *Hochschulen* the number was 15,069; so that the latter attract nearly one-third of the number drawn by Universities. It must be remembered that there are also veterinary *Hochschulen* and agricultural *Hochschulen*. [We interpolate here a remark that *Hochschulen* are not, as some of the journals suppose, high schools; and that, if foreign words are used in these columns, it is usually because no just English equivalents exist.] The foreigners in the technical *Hochschulen* numbered 2,294! But let us confine ourselves here to Universities, as to which the German daily press has provisional statistics for the summer half-year of 1906. In all they had then 44,964 students (including 211 matriculated women); to whom must be added 2,381 men "hearers" and 1,274 women "hearers." The most popular Universities are still Berlin, München, and Leipzig, with 6,569, 5,734, and 4,147 students respectively. Bonn has also more than 3,000; then come, with between 2,350 and 1,920, Freiburg, Halle, Göttingen, Heidelberg, and Breslau. The further order is Marburg, Tübingen, Münster, Strassburg, Jena, Würzburg, Kiel, Giessen, Königsberg, Erlangen, Greifswald, and Rostock—this, the smallest German University, having, nevertheless, its 661 students.

The newspapers have communicated the details of the contest that is being waged in Posen. The German authorities insist on giving religious instruction in German; the Polish parents demand that it shall be given in Polish, and encourage their children to reject the official teaching. Of Archbishop Stabilewski's circular letter on the subject we would say that his contention that religious instruction should be given in the mother tongue (better put, in the language of the mother) is pedagogically sound. Yet we are aware that politics have something to do with the Polish opposition. To some English readers we transmit the suggestion which the Archbishop makes to his flock. If in religious matters the school does not teach what is to your liking, get the business done at home or in the church. "Eure Häuser mögen fortan eine heilige Schule sein." But that is a solution of the religious difficulty

that might not suit every one—the making of the home itself into a school of holiness. In Gnesen the struggle led to a scene which would have been humorous had not the occasion been solemn. When the teachers prayed in German the children set up rival prayers in Polish! Or is the humour enhanced by the solemnity of the occasion?

SWITZERLAND.

The foreign schoolboy is often expected to continue his education during the holidays, not by means of "holiday tasks," against which Continental Europe has set its face, but by devoting himself to physical culture.

Auf der Alp Morgenholz.
The Swiss, to realize this idea, have set about establishing *Ferienheime*, or holiday homes, not only for poor, sickly children from primary schools, but also for the strong and vigorous pupils of higher institutions. Thus a gymnastic society of Basel has called into existence one of these homes on the Alp Morgenholz, Gemeinde Nieder-Urnen, in Glarus. Thither for some years past the boys of Basel have repaired, in parties of sixty, each party remaining for fourteen days; thence they have made excursions far into the Tödi district and in other directions. Since the holidays at Basel last only from the middle of July to the middle of August, the founders of the home are willing to let it to others at the low rate of 50 centimes a head per day for rent, food being reckoned at cost price. Advantage of this offer has been taken by German boys, whose expenses, travelling included, have averaged about three shillings a day. We tender to English public schools the suggestion that they should turn the hint to account in some part of Switzerland, founding, if need be, their own homes. They might gain in several ways if they addressed themselves to teaching the young how to travel, and how to study the lives and lands of foreign people.

UNITED STATES.

Dr. Elmer Brown has entered on his work as United States Commissioner of Education with every sign of energy. One of the most important subjects with which his Bureau is engaged is an investigation into the state of musical instruction in the country. His first public address was delivered before the School of Pedagogy of the New York University, September 22. He took for his subject: "Teachers and Politics." The speech was, in effect, an exhortation that the "members and makers of the profession of teaching should be politicians." Dr. Brown hastened to explain that by a politician he meant one who set the public good above private advantage. He urged teachers to make their business truly a profession, a profession being distinguished from a trade in that it served public as well as private ends. Their profession, like theology, medicine, and law, should determine its own codes of practice, standards of attainment, and professional ethics. It should aim especially at the uplifting of public morality. The agencies through which it might work were its associations and professional schools. But, above all, it was the individual teacher who, labouring to promote the public welfare, could prove himself worth more than his pay, and raise his class to honour.

We are pleased to observe that he commended to his hearers the question of education for exceptional children, "with which the improvement of our system of education for all children, good, bad, and indifferent, bright, dull, and mediocre, is inextricably bound up." A paragraph in which he sketched the modern history of education is full of interest and truth; yet it will provoke criticism. We leave our readers to supply their own commentary, and give the Commissioner's words as we have them. In connexion with the visits to America of the Mosely and the Prussian Commissions—visits made with industrial ends in view—he delivered himself thus: "We have here a notable shifting of the centre of gravity in the movement of world education. In the seventeenth and a large part of the eighteenth century the prime impulse to education was religious; in the latter part of the eighteenth century and the greater part of the nineteenth the political impulse in considerable measure replaced the religious, and education became to a wonderful degree a movement of democracy. Now, in these later years the political and democratic movement has undergone a subtle change, and the prime impulse to education, speaking in the broad and large sense, is an economic impulse; or, better expressed, perhaps, the political movement has passed into a more distinctly economic phase. Where the men of the seventeenth century talked of public education in the interest of a learned ministry, and of a preparation for an understanding of the way of salvation; where the men of the American and the French revolution and their successors talked of education which should make men capable of bearing the responsibilities of political freedom, the men of to-day are talking of education for commercial and industrial efficiency, and education which shall enable the home land to compete successfully in the markets of the world. I do not say that this is the whole of modern education; for it is not: I do not say that it is the most important thing in modern education; for that may be seriously questioned: but it is undoubtedly that aspect of modern education

which comes to the front in the great national discussions of education in our day, and it is largely with a view to this aspect of education that the nations are making some of their greatest educational expenditures."

But to another subject. That the commercial spirit has made its entrance into one American place of higher learning is proved by a circular which the *Educational Review* publishes—to expose the matter—in its October number. A certain college has been posting to heads of schools "a copy of our testimonial booklet; also a copy of our new catalog." Scholarships at the institution have been offered to young ladies at school, the selection having been made in such a way as to secure "a most representative class of patrons." Would the esteemed principals go further, and (in brief) recommend the college to young ladies "who would make desirable pupils and patrons"? But the spokesman of learning is not illiberal:—"I shall offer you, as also each of the principals who will thus favour me, 50 dollars for each pupil whose application you send me—money to be paid you on entrance of pupil in the fall. Of course, the young lady accepting the scholarship cannot be reckoned in this proposition. I make the offer as I cannot presume to ask your word and influence for nothing."

The writer of the circular goes on to explain that he is able to submit this handsome proposal because he is "taking out less magazine advertising than usual." If we knew his name, we would give him an advertisement without imposing any tax on his resources. But such a "college" is, of course, exceptional in the United States, and its procedure excites there the same feeling as it would excite in England. Look at a more pleasing sort of college. In the new Teachers' College at Syracuse University the degree of Bachelor of Philosophy and Education will be offered to students after a three years' course in Arts and one year of professional studies in the Teachers' College. Those who give two years to Arts and two to professional studies may compete for the degree of Bachelor of Pedagogy. Moreover, a special course is arranged to prepare students to act as supervisors of music in public schools. We see here a confession of three principles:—(1) that training is valuable to secondary teachers; (2) that the University should supply it no less willingly than instruction in science and art; and (3) that attainment in educational science is as worthy of recognition as attainment in some branch of natural science. Not that we ourselves should wish to have a number of new degrees introduced into England. The simplest of certificates serves for the recognition.

NEW ZEALAND.

The Report just received deals with the year 1905, and is the first since the Education Act of 1904. Its features are of a satisfactory character. If we look, first, to the pupils in public schools, we find that the total average attendance, which in 1904 showed an increase of 3,459 over the previous year's return, rose in 1905 to 120,265—a number which exceeds the total for 1904 by 3,759. The increase for the year thus shown is greater than any occurring since the year 1894. As to the standard of regularity of attendance, it compared favourably with that of any country in the world, being 86.9 per cent. of the average weekly roll number. There were (counting 90 half-time schools as 45) 1,806 public schools open, or 21 more than at the end of 1904. We turn next to the teachers. In December, 1905, there were employed on the primary staffs in the public schools of the colony 3,816 teachers, of whom 3,137 were adults and 679 pupil-teachers; the corresponding numbers for December, 1904, were 3,059 adults and 649 pupil-teachers. Of the adult teachers at the end of 1905 1,302 were men and 1,835 women; of the pupil-teachers 151 were male and 528 female. The number of adult male teachers was 30 more, and of adult female teachers 38 more, than in December, 1904; and the number of male and female pupil-teachers increased by 7 and 23 respectively. The average number of children to one teacher for 1905 was 31.5. Salaries show a tendency to rise, the average for an adult male teacher being, at the end of the year, £174. 14s. 9d.

New Zealand has shown itself much in earnest with the cadet movement, and has taken for a motto the celebrated order: "Don't hesitate to shoot." At the risk of converting ourselves into a target we reproduce

what the Report has to say on the subject. "The Education Act provides that 'in public schools provision shall be made for the instruction in military drill of all boys'; and it is declared to be the duty of the Board in each district 'to cause physical drill to be taught to all boys and girls over the age of eight years attending the public schools in the district.' The number of children returned as receiving instruction in drill in the public schools of the colony at the end of the year was 127,386. The term 'drill' here must be taken to include physical and disciplinary exercises. There were on March 31, 1906, 264 cadet corps, with a strength of 14,115 members, equipped with the 'model rifles' (dummies) which have been imported by the Department for the purposes of drill, and with a percentage of miniature Martini-Henry rifles for target practice."

Those miniature Martini-Henry rifles would scare the House of Commons out of its wits, without scaring the wits out of the House of Commons. We seek next for information as to the progress made with the extension of free education to secondary schools. At the end of 1905 there were twenty-one endowed secondary schools giving free tuition; and the number of free pupils attending these schools was 1,949, as against 1,595 for the previous year. There were in addition about 428 holders of scholarships and exhibitions given by these schools, by Boards of Education, or by the endowed secondary schools not coming under the conditions. There were also 2,872 qualified pupils receiving instruction in the secondary classes of the district high schools. It will thus be seen that there has been a considerable increase in the total number of pupils receiving free secondary education, namely, 5,249 in 1905, as against 4,273 in the previous year. At the end of 1901, before the Secondary Schools Act and the regulations made thereunder came into force, the number of free pupils was only 963.

To judge from the figures before us the Maoris are not dwindling. The number of children on the rolls of the village schools for natives at the end of 1905 was 3,863, as against 3,754 at the end of the preceding year.

These schools were taught by seventy-three masters, twenty-one mistresses in charge, eighty-seven assistants, and fifteen sewing teachers, the assistants and the sewing teachers being generally members of the teacher's family, employed to give assistance with some part of the day's work. Besides the ordinary school subjects manual training has a place in the village schools. During the year five new workshops have been established, all of them with the assistance of the Maoris and at a small expense to the Education Department. A beginning has been made with instruction in cooking, the utensils being such as are in general use in Maori *kaingas*. For the secondary education of Maoris there are six boarding schools, founded by the various Churches in New Zealand.

To Maori children attending public schools who pass the fifth standard before reaching the age of fifteen scholarships of the value of £20 a year are granted, to enable them to attend a secondary school or to become apprenticed to a suitable trade. Under these conditions there are seven scholars attending secondary schools and seven boys serving apprenticeships. Further advance has also been made in regard to what are known as "nursing scholarships." There are now (1906) three probationers—one each at the Napier, Wellington, and Auckland Hospitals—while arrangements have been made for admission of three scholars as day-pupils. Six scholarships are offered by the Government to Maori youths to whom it is considered advisable to give University training. Three of these are reserved for those who wish to study medicine, and the remaining ones are open. At present there are three scholarships being held, one student taking the Medical course, one Arts, and one Law.

CHRISTMAS BOOKS.

The Enchanted Land: Tales told again. By LOUEY CHISHOLM. (7s. 6d. net. T. C. & E. C. Jack.)—This is a companion volume to the "In Fairyland" of 1904. We have Hans Andersen's "Snow Queen," Miss de Morgan's "Toy Princess," Herr Baumbach's "Christmas Rose," Dr. Joyce's "Four White Swans," and Fiona Macleod's "Laughter of Peterkin" (we give a specimen of each class of fairy tale) retold in the simplest words. Mrs. Chisholm is an adept in child language, and the tales lose nothing in the process of simplification. The book is prettily illustrated in colours by Miss Katharine Cameron.

Animal Heroes: being the Histories of a Cat, a Dog, a Pigeon, a Lynx, two Wolves, and a Reindeer. By ERNEST THOMPSON SETON. With 200 Illustrations. (6s. net. Constable.)—Mr. Seton is the genuine Proteus of our generation: he becomes in turn bear, wolf, reindeer, pigeon, and revives our faith in lycanthropy and metamorphosis. In reading these animal stories we are reminded of a sentence in M. Alengry's "Psychologie," reviewed on another page:—"Qu'importe que vos contes fassent parler les plantes et les animaux? L'enfant est-il choqué de voir les animaux parler? Pas du tout. Les animaux lui parlent et il leur parle. Il les comprend, ou du moins il le croit. Vos fictions lui paraissent naturelles." Doubtless no such thought inspired Mr. Seton, but, consciously or unconsciously, he has provided for children the very food that M. Alengry commends. The true story of the homing pigeon is as pathetic as La Fontaine's "Les deux Pigeons." The border illustrations, by Mrs. Seton, are bold and most effective—a few strokes hit off the situation. The full-page illustrations, *incur i auctoris*, are comparatively weak.

The Adventures of Merrywink. By CHRISTINA G. WHYTE, with Drawings by M. V. WHEELHOUSE. (6s. Hodder & Stoughton.)—The *Bookman* offered a prize of £100 for the best illustrated story-book for little children; and this is the prize story. It is Cupid and Psyche transferred to Elfland—only here it is she the loving and he the loath. The interest is well sustained, and the drawings are really illustrative; those of the beasts show real imagination. The perspective is weak, not from bad drawing, but from want of gradation in tones.

The Bolted Door, and other Stories. By Mrs. MOLESWORTH. (3s. 6d. W. & R. Chambers.)—A series of short stories told in Mrs. Molesworth's pleasant fashion. With the exception of Genevieve's escapade, which strikes us as rather absurd (if the child had gone to the length of running away, "Granny" would certainly have asked advice at once as to what to do with her), they are just light sketches of faults and their results; or, on the other hand, of unselfishness and its reward, unexpected acts of kindness, and the like: but they are prettily told and nicely illustrated.

The Lost Treasure Cave. By EVERETT MCNEIL. (5s. W. & R. Chambers.)—This is the second in a proposed series of stories recounting the very startling adventures of Dick Orson and Harry Ashton, who set forth to join an expedition to take possession of a vast treasure, a small part of which they have already carried off, and who on the way have a most exciting time at a Colorado ranch, to which cowboys, Indians, and desperadoes all contribute. There is some obscurity as to what it was that so startled Bill and Scar-Face at the mouth of the cave. Men of their stamp are not easily frightened. Anyway, it led to a desirable result in ridding the search party of two of their foes. The story is illustrated by W. M. Cary.

Jasper: a Story for Children. By Mrs. MOLESWORTH. (4s. 6d. Macmillan.)—Jasper himself is a very attractive little person, his thoughtfulness and old-fashioned ways seeming natural enough in a child who has always been delicate and more or less snubbed by his elder sisters. Leila and Chrissie, on the other hand, are almost too unattractive, and, though, no doubt, the family reverses would tend, with such characters, to bring out all their worst points, it is hard to imagine why they were allowed to become so selfish and rude. Things come right in the end, and we leave the family party much happier than we found it. There are some excellent illustrations by Gertrude Demain Hammond, who succeeds perfectly in the representation of Chrissie as a little termagant.

The Lost Explorers. By ALEXANDER MACDONALD. (6s. Blackie.)—A capital story of gold mining in Australia. The two boys make their start with no knowledge of their companion, and, in the case of Wentworth, little consideration for their belongings; but events justify them, and a better friend in need than Mackay could scarcely be found. The author claims to have passed through like experiences, and describes them with vigour and in a way that compels interest. Where he fails is in the imaginary part. The unknown tribe and their valley of gold and gems do not attract us; they are altogether too sketchy, and are neither satisfactory romance nor reality. Happily they occupy but a small portion of the book, and the rest is thoroughly to be recommended. The illustrations are effective.

The Enemy's Camp. By HUGH T. SHERINGHAM and NEVILL MEAKIN. (6s. Macmillan.)—A very pretty piece of fooling, brimming over with high animal spirits and innocent fun. "The Enemy's Camp" is a boat-house party of five young men who moor on the opposite bank to the tent of a City gentleman with nieces and a wife. It is a comedy with the *leitmotif* of Tennyson's "Princess." The humour is broad, without a touch of coarseness, and the conversations ripple andicker like a brook in June.

The Running Horse Inn. By L. T. SHEPARD. (6s. Macmillan.)—A story of the reign of George IV. which follows history closely in the description of the Spa Fields riot. A soldier who has served in the Peninsular War and has been given over by his family as dead returns to find his elder brother married to his betrothed. The three minor characters are finely conceived, and the resulting plot is well worked out, but there is one unnecessarily realistic scene, and for the catastrophe we must seek a parallel in "Hamlet." It is a powerful novel; but we miss the "vim temperatam," the purifying power, of the Aristotelian tragedy.

Tention! By G. MANVILLE FENN. (5s. W. & R. Chambers.)—A book all boys will love. The two whose adventures in one of the Peninsular campaigns are here recorded are thoroughly good specimens of the English breed. Pen Gray is a gentleman by birth and education, though forced by circumstances to enlist as a private in the 1st Rifles; and Punchard, the bugler, matches him in pluck and straightforwardness. Though, in the limits of the story, they take part in no great battle, they are so natural and lifelike that the reader follows them in fancy to the further career which must surely have been theirs, and there is variety, and to spare, in this episode of their lives. Wounded, fugitive, prisoners, now befriended and now betrayed, they

never lose their hold on our interest. There are some good illustrations.

The Boys of Brierley Grange. By FRED WHISHAW. (3s. 6d. W. & R. Chambers.)—The plot of this story must have been suggested by the disastrous fire at one of the Eton masters' houses a few years ago, though in this case the sleep-walker who is not unnaturally suspected is proved to be quite innocent, and the author ingeniously works out a rather doubtful theory, and brings his story to an unexpected conclusion. Barnes's hatred of Formby is almost too venomous to be natural, but most of the boys are excellently drawn and the story has plenty of go. Harold Copping's illustrations are extremely good, with the exception of a doubtful bit of drawing in little Benson's arm as he is being lowered from the window.

The Escape of the Mullingong. By G. E. FARROW. (Blackie.)—The great attraction of this book lies in the numerous Gordon Browne illustrations. The animals are very cleverly drawn, and Girdle makes a charming little figure in many of the sketches. The story has been written on the lines of Lewis Carroll's "Alice." Comparisons are odious, but it is impossible not to recall the Hatter when the Toucan asks unanswerable conundrums at table. Of all the animals the Puffin really displays most originality, when he explains how economical it is to give a dinner party in the middle of a maze—because so few people ever find their way there. Children will enjoy the way in which a good many strange animals are brought into the story.

Uncle Remus. By JOEL CHANDLER HARRIS. With Coloured Illustrations by HARRY ROWNTREE, and Pen and Ink Pictures by RENÉ BULL. (5s. Nelson.)—There surely was never a child who did not love Uncle Remus and his stories, and Mr. Rowntree's illustrations are as admirably suited to them as Tennyson's to "Alice," or Hugh Thomson's to Miss Austen's novels. It is difficult to choose among so many excellent pictures: perhaps the one where "Brer Fox holler wa-hoo" is the best—the subject is so inspiring. It is not fair to relegate the pen and ink pictures to the background—they are full of life and vigour. The little bits of landscape are the only unsuccessful parts.

The House that Glue built. By C. A. WILLIAMS. Illustrated by G. A. WILLIAMS. (3s. 6d. Chambers.)—This consists of seven pictures of unfurnished rooms, &c., to be furnished by pictures of objects cut out from thinner coloured sheets. Directions are given in story form. Children will certainly enjoy the game, but it seems an expensive one, for once glued always glued.

Told by Uncle Remus: New Stories of the Old Plantation. By JOEL CHANDLER HARRIS. (Hodder & Stoughton.)—Uncle Remus has grown older and staidier in his old age, but he is one of the immortals, and, though we miss "the first sprightly running" of the Tar Baby, yet the new stories have some of the quiet humour, with an added touch of pathos. The little boy to whom these stories are told is a son of the old auditor and of a different temperament—dreamy, thoughtful, and sedentary. Uncle Remus, a true student of child nature, fits himself to his audience, and the way in which he excites the boy's curiosity and fixes his attention is no bad lesson in pedagogics.

The Golden Staircase. Poems chosen for Children by LOUVY CHISHOLM. (7s. 6d. net. T. C. & E. C. Jack.)—This is a splendid volume in a richly gilt binding with sixteen beautiful coloured illustrations by M. Diddin Spooner. "Too good for the nursery," will be the common verdict; but that is not our opinion. In these days of cheap ephemeral books, which are served as Christmas toys, it is a godsend for a child to possess a volume that he will treasure as his elders do a family Bible, read, mark, and learn as children (of the last generation) did their Bibles. The staircase is planned to lead from four to fourteen, twenty steps each year, not counting an appendix of sacred poetry. The editor possesses in a high degree what he rightly lays down as the first qualification for the task—love and knowledge of her little readers. She has not been afraid to draw on the simple novelists who have now gone out of favour—Eliza Cook, Mary Hewitt, Jane Taylor, Mrs. Hemans, Isaac Watts; and we are sure that for children these goody-goody tales have not lost their charm. So, too, we are glad to find the best of "Wildstruvel Peter"; but why in the comic vein is there no verse from the "Alice" and why is Hood represented only by "Queen Mab"? The book, as is natural, will appeal more to girls than to boys, and boys will look in vain for "Ben Battle," a specimen of "The Ingoldsby Legends," of Praed, Calverley, and of the famous "Harrow Songs." A more serious complaint is that, good as the selection is, not more than a fourth of the pieces, on the most liberal calculation, could lay claim to be poetry of the first order. "Für die Schule nur das beste ist gut genug," say the Germans; and, though it would be absurd to press the saying so as to exclude Longfellow and Macaulay, yet we cannot help regretting that there is not a line of Spenser or Milton, of Keats or Shelley. We have known children often delight in the magic of "The Cloud" and "La Belle Dame sans Merci." The child can love and admire what he only half understands.

Britain's Sea Story, B.C. 55—A.D. 1805. Edited by E. E. FREIGHT.

B.A., and R. MORTON NANCE. Illustrated. (5s. Hodder & Stoughton.)—This is a capital story of British heroism in voyaging and sea fight from Alfred's time to the Battle of Trafalgar. It is made up of extracts from the writings of authorities on the subject, such as Southey, Sir H. H. Nicolas, H. O. Biggar, Hakluyt, Purchas, William James, and many others. To these the editors have prefixed about fifty pages on "The Building of the Ship," which is well written and interesting, and deals with the development of the structure of sailing ships from the earliest times. The illustrations—four of which are in colour—are from paintings by Mr. R. Morton Nance. Altogether the book is well put together and illustrated, and will be eagerly read by boys and girls, either as a "reader," or, still better, as a gift-book. The story of British seafaring is so vast and so much of it is so well written, that one can't go very far wrong in making selections from it. The question is whether the best selection has been made. The "Defeat of the Spanish Armada" and "The Last Fight of the 'Revenge,'" from Hakluyt's "Voyages," "Raleigh on the Orinoco" (by himself), the letter from Will Adams in Japan, and Purchas's account of the discoveries and death of Henry Hudson are all excellent. Excellent, too, are Southey's accounts of the Battle of the Nile and that of Trafalgar—both taken from the "Life of Nelson." But there is room for some doubt as to the other selections—at least there may be. But, on the whole, after reading and enjoying them, we cannot bring ourselves to express it—certainly not as to the subject-matter. They are excellently done for the most part, and well chosen. They afford us delightful glimpses at what life on the sea was like in those far-off days, and will attract attention to many books which are well worth reading. There are one or two bits of poems inserted—"Ye Mariners of England!" at the beginning, and Longfellow's "The Old Haven" ("My Lost Youth") at the end, and Cowper's "Loss of the 'Royal George'" and a few verses from Dryden in the body of the book. There is also a "chronological outline" affixed, which helps to fill up the gaps. The book is well done and should be a success. This is its second edition, and it was only published last year.

Adventures in the Great Deserts. By H. W. G. HYRST. Illustrated. (5s. Seeley.)—Mr. Hyrst describes his volume as "romantic incidents and perils of travel, sport, and exploration throughout the world." He has chosen his adventures from the journals and other records of some twenty-four travellers in the great deserts, or waterless places, during the last hundred years or so—Bruce, Humboldt, Moorcroft, Burton, Palgrave, and others. The stories are well selected and well told, and the illustrations—sixteen in number—are sufficiently blood-curdling to satisfy the appetite of any boy who is curious about such matters. But the stories are not by any means all of this type. Many of them contain interesting descriptions and scenes of wild life and customs in far-off lands—the Llanos, the Sahara, the Persian Desert, the Pampas, Siberia, Africa, and Arabia. Indeed there is something to meet all tastes, and he must be hard to please who does not find something to his liking in its various pages. It is difficult to single out any adventures for special praise; but we think the doings of Barth or of Burton, or the account of Dr. Clarke's expedition to the Holy Land, with its risks from the Bedawin, and the saving of the whole party by the ready wit of the Italian, are as good as anything in the book. We can cordially recommend to any one who has a delight in such matters this collection of true stories of courage, endurance, and resource, which cannot fail to fire the young with a desire to do likewise.

The Romance of Animal Arts and Crafts. By H. COUPIN, D.Sc., and JOHN LEA, B.A. Illustrated. (5s. Seeley.)—The writers of this volume wanted to draw up for us an "account of the spinning, weaving, sewing, paper making, pottery making, raft building, road making, and various other industries of wild life"; and so have taken the various creatures whose works may roughly be classed under these and other like names, and have woven a very interesting set of twenty-four chapters about them and their ways and modes of life. The classification makes no pretence at being more than one of convenience, and is in no sense scientific, but is readily intelligible, and very suitable for a book of this kind. All through the book they have been careful not to attribute human motives and reason where they have no grounds to suppose that such things exist—although at times something better than mere instinct seems to guide the workers in their constructions. The consequence is that their book has a far more businesslike look than is usually the case, and is extremely interesting. Every kind of bird, animal, and insect is represented—though of course in a book of this size every individual is not—and in some cases the information is very clear and full. There is a good index appended to the volume. In a word, the book is complete as far as it attempts to be so, and what is told us about the various creatures is so alluring and well put that one reads on and on as one does a fairy tale—only here the fairies are all real beings doing real things as wonderful as if they were the work of fairies—and the whole world becomes more and more mysterious and more and more full of beauty. We thank the authors for giving us so much pleasure.

Deerfoot in the Mountains. By EDWARD S. ELLIS. (2s. 6d. Cassell.)—This is the third volume of the "Deerfoot" series. The famous Clark

and Lewis expedition of 1805 is the nucleus of fact round which the fiction is woven. The two elements have not been very skillfully combined, and the young novel reader will, we fear, skip the portions that would elevate his mind and improve his geographical knowledge.

Christina and the Boys. By AMY LE FEUVRE. (Hodder & Stoughton.)—The story of the development of a timid, delicate, motherless child into a more healthy and vigorous little person under the influence of a step-mother and two boy companions. A fresh little story, whose attractions are added to by Mr. Gordon Browne's clever illustrations. To see his children is to love them.

The "Little Folks" Series. By S. H. HAMER. (2s. 6d. each. Cassell.)—This series includes six books, the "Little Folks" Book of Wonder, Nature Book, Adventure Book, Fairy Book, Animal Book, and Book of Horses. The titles explain the nature of the books. All are made up of short stories very brightly told and fully illustrated, and we feel that incidentally the *Little Folks* may become small prodigies of useful and interesting information.

One of Clive's Heroes. By HERBERT STRANG. (6s. Hodder & Stoughton.)—There could hardly be a better background for a historical romance than India in the days of Clive. The struggle for supremacy between the English, represented by the East India Company, the French, and the native princes opened up endless possibilities in the way of adventure and intrigue, and Mr. Strang has woven out of these materials an enthralling story; it makes a fat volume, but no one would wish to shorten it by even one of its four hundred pages. Two characters stand out with special distinctness besides that of Desmond Burke, who, without being impossibly wise and brave, has sufficient of these qualities, combined with a touch of Irish recklessness, to make a very satisfactory hero; these are the villain of the piece, Diggle—whose favourite song, "Says Billy Norris, Masulipatam," has a trick of sticking in one's memory—and Bulger, whose iron muscles as well as his hook not unfrequently save the situation. The capture of Gheria and the battle of Plassey are vividly described in detail, and there is a clear map of the latter. There are, besides, some excellent illustrations by W. Rainey.

Samba. By HERBERT STRANG. Illustrated by W. RAINEY. (6s. Hodder & Stoughton.)—We are glad that a writer who has already won for himself a reputation for good and vigorous work should have taken up the cause of the rubber slaves of the Congo. He has tried to do for them what Mrs. Beecher Stowe did for the negroes of America, and we wish that he may win a like success. "Samba" is a story, but founded on fact. The horrible cruelties practised on the natives are not made too prominent, they are not described in a manner which would unfit the book for a "boy's book," and the adventures of Jack Martindale and his uncle give it plenty of variety and brightness too, while Barney is always ready with some Irish fun. The native songs in Mr. Strang's version have a natural ring, and remind us of parts of "Hiawatha." Samba in his short life and heroic death shows what a Congo native can be when he is decently treated. But in the background of all is the abuse of unlimited power, the despairing cry of those who have no helper. Well may the Congo proverb say: "Rubber is death."

The Story of an Eskimo Dog. By MARSHALL SAUNDERS. (Hodder & Stoughton.)—The story of Alpatk and his rescuers is very well told. Thaddy's good intentions of feeding the waif out of his own share of food are forestalled by his stepmother's self sacrifice. She stints herself of food lest the growing boy should suffer for his kindness to the dog. There is real pathos in the little story. It is prettily got up, with the marginal illustrations now so much in vogue—it is a pity the same ones are frequently repeated. There are also four full-page pictures.

Peggy Pendleton's Plan. By E. M. JAMIESON. (Hodder & Stoughton.)—Peggy's plan is to befriend a small girl whose life seems very lonely and joyless, and she perseveres in it notwithstanding the cold water thrown on it by her family, and the extremely discouraging attitude of the child herself. The Pendletons are full of "plans," and their fertility in devising amusements for the holidays will appeal to all children; even Nora falls in with them at last, greatly to her benefit. Most of Gordon's Browne's illustrations are charming, but in the last but one Nora has suddenly grown some sizes larger, and in quite the last he has surely forgotten that it was a fixed principle with her to wear nothing on her head.

A Girl of the Eighteenth Century. By ELIZA F. POLLARD. (3s. 6d. Nelson.)—Sophie Courtenay is hardly a typical girl of the eighteenth century, for few girls of those days would have been allowed to take their own way and devote themselves to art instead of to the fashionable amusements of the time in the society of those of her own rank. She has a talent for sculpture, and her friends take her to Paris and allow her to study there and make acquaintance with several noted artists, becoming a close friend and companion of Elizabeth Vigée. The story is very nicely written, and Sophie's development from an eager, im-

SOME RECENT TEXT-BOOKS

ISSUED BY THE

University Tutorial Press.

Adopted in numerous Training Colleges and Centres.

PRINCIPLES AND METHODS OF TEACHING. By J. WELTON, M.A., Professor of Education in the University of Leeds. Present price, 4s. 6d.

"This valuable and thoughtful book."—*Speaker*.

"From title-page to *finis* it is well informed, carefully expressed, and contains stimulating thought and sound educational doctrine."—*Education*.

"An excellent book. . . . A sound philosophy of education."—*School*.

A carefully graded course of 4,000 examples, affording a thorough preparation for the Oxford and Cambridge Preliminary and Junior Locals, and for similar Examinations held by the College of Preceptors.

OLIVE'S NEW SHILLING ARITHMETIC. Edited by WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and R. H. CHOPE, B.A. 1s. With Answers, 1s. 3d.

"A very useful class book."—*Teachers' Aid*.

"The exercises are well chosen and progressive."—*Schoolmaster*.

Specially prepared for Candidates taking Experimental Science at the Preliminary and Junior Oxford and Cambridge Local Examinations.

JUNIOR EXPERIMENTAL SCIENCE. By W. M. HOOTON, M.A., M.Sc., late Senior Science Master at Middlesbrough High School. 2s. 6d.

"Those who have charge of the science teaching at the ordinary preparatory school will welcome the advent of this volume. The experiments are illustrated by very clear diagrams, and the definitions are carefully put together. A good feature of the book is the number and usefulness of the questions set at the end of each chapter."—*Preparatory Schools Review*.

Suitable for London University Matriculation, and Senior Oxford Local Examinations.

MATRICULATION GEOMETRY. (Being Sections I.–IV. of Geometry, Theoretical and Practical, and containing the subject-matter of Euclid, Books I.–IV.) By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.

This work is also published in SECTIONS as follows:—SECTION I. Introductory Course. 9d. SECTION II. Rectilinear Figures (Euclid I.). 1s. 6d. SECTION III. The Circle (Euclid III. 1–34, IV. 1–9). 1s. SECTION IV. Rectangle-Theorems and Polygons (Euclid II., III. 35–37, and IV. 10–16). 1s.

For the Preliminary Certificate Examination. (Board of Education.)

ELEMENTS OF THE DUTIES AND RIGHTS OF CITIZENSHIP. By W. D. ASTON, B.A. Camb., LL.B. Camb. and Lond. 1s. 6d.

"A very readable treatise on the nature of citizenship, the citizen's standing before the law, and the general rights and duties of citizenship."

"Students using this book need have no fear in facing any searching examination in this part of their syllabus."—*Teachers' Aid*. —*Education*.

For the Preliminary Certificate Examination. (Board of Education.)

ELEMENTARY SCIENCE: GENERAL SECTION. Edited by R. W. STEWART, D.Sc. Lond., and WM. BRIGGS, LL.D., M.A., B.Sc., F.C.S. 2s.

"Well adapted to meet the requirements of pupil-teachers."—*School World*.

For London University Matriculation.

MATRICULATION GRAPHS. By C. H. FRENCH, M.A., and G. OSBORN, M.A., Mathematical Masters of the Leys School, Cambridge. 1s.

"This is a practical manual of graphs. It contains instruction of the highest value imparted with admirable precision."—*Schoolmaster*.

"The explanations are remarkably clear."—*Secondary Education*.

Specially prepared for the First Stage Examination of the Board of Education.

FIRST STAGE HUMAN PHYSIOLOGY. By G. N. MEACHEN, M.D., B.S. Lond., M.R.C.P., M.R.C.S.; Lecturer in Physiology at the Tottenham Polytechnic; Exhibitioner in Anatomy, Physiology, &c. 2s.

"A plain, clear, and sensible introduction to the study of human physiology from the hand of a thoroughly competent man."—*School Guardian*.

"A most valuable text-book compiled upon the best lines."—*Teacher*.

A Treatise for use in Secondary Schools and Technical Colleges. Based on Potential and Potential Gradient.

THE SCHOOL MAGNETISM AND ELECTRICITY. By R. H. JUDE, M.A. Cantab., D.Sc. Lond., Head of the Mathematical and Physical Department, Rutherford College, Newcastle-on-Tyne. 3s. 6d.

"A thoroughly sound and useful manual."—*Schoolmaster*.

"A useful text-book that seems much sounder as regards fundamental conceptions than most elementary works on electricity."—*Oxford Magazine*.

A Full and Complete Course of Practical Work in Physics for use in Secondary Schools, Technical Schools, and Colleges.

PRACTICAL PHYSICS. By W. R. BOWER, A.R.C.S., Fellow of the Physical Society, Head of the Department of Physics and Electrical Engineering, Technical College, Huddersfield; and J. SATTERLY, B.Sc. Lond. 4s. 6d.

"A useful addition to the already numerous books on physics. The authors are evidently familiar with the difficulties experienced by beginners in the subject."—*Practical Teacher*.

"Admirably designed. We recommend the book strongly."—*Knowledge*.

pulsive girl, rather self-absorbed, to a thoughtful woman, whose life is filled with care for others, is well worked out. After all her dislike to the Methodist teaching it is John Wesley himself who teaches her what brings true happiness. There are four illustrations in harmonious colours.

Roger the Bold. By Captain F. S. BRERETON. (6s. Blackie.)—A spirited story of some English gentlemen adventurers in the reign of Henry VIII. who set sail for Mexico to try and forestall the Spaniards in the capture of gold and gems. They have with them a golden disk engraved with picture writing which gives a clue to the hiding-place of the priests' treasure in Mexico. It is a dangerous possession and nearly costs the life of Roger de Luce, a gigantic young crossbow-man in the service of the Earl of Essex. This youth, being quick-witted and of dauntless courage, soon rises to the leadership of the expedition, and from that to the command of Guatemozin's troops. It is only fair to say that the honours thrust upon him cause him as much surprise as the reader can feel, but he rises nobly to the occasion and does his best to save Mexico. The defence of the city and Roger's other adventures make an attractive volume, and there are some vigorous illustrations by Stanley L. Wood.

For the Admiral. By W. J. MARX. (6s. Hodder & Stoughton.)—This is the story which won the £100 prize offered by the *Bookman* for the best story for boys. It is well told and full of interest. The Admiral is Coligny and in following him and the other Huguenot leaders there is no lack of exciting scenes in which the hero takes part. The disaster at Jarnac, the success near Arnay-le-Duc, and the scenes in Rochelle are vividly pictured and the reader's attention is held throughout. The hero has many hairbreadth escapes, not the least being his rescue during the Massacre of St. Bartholomew by an opponent whom he had spared. From an heroic point of view it is a mistake to let Edmond and Felix look on passively during the murder of the Admiral with Guise and Angoulême standing by. The illustrations are effective, but in the one facing page 160 the artist has forgotten that the guide lay between the men who commandeered him.

Doris Hamlyn. By R. O. CHESTER. (2s. Nelson.)—It is really refreshing to re-enter the land where people are "radiant in rose velvet," "resplendent in violet velvet," look "better than their best" in "a skating costume of black velvet"; a land where the villain's face is "convulsed with passion," and the hero carries "a superb half-hoop ring of sapphires and diamonds" in his waistcoat pocket, all ready for the heroine, who faintly asked "What did he mean?" when he gently but firmly pressed it on her finger (we trust they were her favourite stones). Romance—of a sort—is emphatically not dead.

The Magic Beads. By HAROLD AVERY. (1s. Nelson.)—This exciting, though highly improbable, little story is written in a way quite sufficiently convincing to carry the reader along with it, and make him enter into the three children's feelings of mixed delight and fear at being the sole occupants of their aunt's big country house during several days. He almost forgets to marvel at their extraordinary temerity and cleverness in outwitting the burglars.

The Last of the Peshwas. By MICHAEL MACMILLAN. (2s. 6d. Blackie.)—Aleck MacCulloch, like a hero of romance, enlists in the service of the East India Company in order that he may search for the missing brother of the girl he loves. She, by the way, combines in a curious way a taste for fine language and a practical desire that he should have a good breakfast. He is a rash young man in spite of his Scotch blood, and, his search being of necessity perilous, he is continually in danger of torture and death. Most of the characters are too fond of making long speeches at inappropriate moments, and Aleck himself stops to admire the view while seeking for the dungeon where his friend is imprisoned, but he fights bravely in the battle which broke the Maratha power. There are some spirited illustrations by Paul Hardy.

The Defence of the Rock. By E. EVERETT GREEN. (5s. Nelson.)—Miss Everett Green's stories are always well written and pleasant to read. In this case we follow the fortunes of two boys—one a soldier, the other a sailor—fast friends, whom the chances of war bring together at the defence of Gibraltar. Both are good fellows and equally ready to guard the interests of their country at any cost. The siege is described in detail, and of course gives endless chances of distinguishing themselves to Mervyn and Duff. Lulu, though she might have been the pet and plaything of the place, could hardly have had so much of her own way. There are several coloured illustrations, of which the last is the most effective.

The Children's Book of Edinburgh. By E. W. GRIERSON. With Coloured Illustrations by ALAN STEWART. (6s. A. & C. Black.)—Edinburgh has cast its spell on many a generation, and its charms are described in a very simple and attractive way in the pages of this book. The illustrations are clever and effective, both those of modern Edinburgh and those illustrating tales of Queen Mary and other historical characters connected with the city.

Fairy Gold: a Book of Old English Fairy Tales. Chosen by ERNEST RHYS. Illustrated by HERBERT COLE. (5s. net. Dent.)—As we read in the preface, "a fairy tale, like a cat, has nine lives. . . . You may cut off its head, or drown it in sentiment or sea-water, or tie a moral to its tail; but it will still survive. . . ." In their present form the tales are neither sentimental nor moralizing, and they are genuine old English born and bred. Mr. Herbert Cole is most successful in his illustrations, both as to composition and colouring. A few of the pen-and-ink sketches show a tendency to over-elaboration: e.g., that on page 11.

Our Sister Maisie. By ROSA MULHOLLAND; illustrated by A. DEMAINE HAMMOND. (6s. Blackie.)—An attractively impossible story. Maisie and an Irish nurse, six children and a baby, a small island property and £100 a year, with friends and lovers thrown in—such are the ingredients. Take a glance at Maisie in ball attire on page 59, and it becomes impossible not to follow the fortunes of such a charming young person till her affairs are in a somewhat less precarious condition.

The Land of Play. By Mrs. GRAHAM WALLAS; illustrated by GILBERT JAMES. (3s. 6d. Arnold.)—A set of four short stories about which there is decided freshness and originality. "Professor Green" is the best of the four, and it is with relief we leave the learned gentleman—rescued from a watery grave—with a prospect of finishing his "History of the Universe"—dull though he be.

Girl Comrades. By E. F. HEDDLE; illustrated by A. DEMAINE HAMMOND. (6s. Blackie.)—A book for idle hours. We are introduced to any number of people in all stations of life, and we view the drama of these hurrying lives contentedly from our Christmas fire-side—a drama that savours of melodrama; but what of that? The illustrations are charming. The artistic feeling and careful finish of Miss Hammond's work are always a fresh delight.

The Land of Oz. By L. FRANK BAUM. Illustrated by JOHN R. NEILL. (Hodder & Stoughton.)—This is a thorough fairy story in which it is always the impossible which happens. Tip and his strange companions—Pumpkin Head and the Saw-horse he has brought to life by a magic powder—have many strange and exciting adventures, which are told with a good deal of spirit; so that it brings real satisfaction at the end to find that they have managed to outwit the old wizard Mombi, with the help of their friends Scarecrow and Woodman and the good fairy Glinda. The illustrations of these queer creatures brought to life are, many of them, both clever and amusing.

Across the Spanish Main. By H. COLLINGWOOD. (5s. Blackie.) This is a rattling story of adventure in the reign of Elizabeth. It has all the qualities which appear in Henty's earlier works. The hero sails with Cavendish's fleet, and while prisoner on a Spanish fleet gets hold of a very ingenious cypher. This he succeeds in translating after many attempts, and while he and his friend are waiting torture at the hands of the Inquisition he escapes and finds the treasure told of in the cypher. The book is illustrated by William Rainey with some very spirited drawings.

Tommy Smith's Other Animals. By EDMUND SELOUS. (2s. 6d. Methuen.)—This, as the name implies, is the continuation of an earlier volume, "Tommy Smith's Animals." It is natural history put into a dialogue form. Though Tommy is not much more than a "questioning machine," there is plenty for children to learn and enjoy of the habits and natures of animals in the conversations which are supposed to take place between the boy and the various wild creatures he comes across. And other people besides children will be interested to know why the water-vole, for instance, has the greatest objection to being called a "water-rat"; or how the night-jar claps his wings, catches his prey, and feeds his young. The weasel gives a graphic description of some of the adventures into which his bloodthirsty disposition leads him.

Nature's Carol Singers. By RICHARD KEARTON. Photographs by CHERRY and RICHARD KEARTON. (6s. Cassell.)—"Carol Singers" is taken in the largest acceptance of the word, and includes "the swallow twittering from its straw-built shed" as well as the night-gale. The photographs are as good as ever, and Mr. Kearton has never surpassed the frontispiece "A Nightingale and its Mate," which would have delighted the heart of Keats. In his preface Mr. Kearton puts a whole page of questions to which no answer will be found in any ornithological book with which he is acquainted. Some of them, as "How do birds know of a coming change in the weather?" are probably insoluble. Others, as "Would a chick that had never heard the song of its own species be able to sing it when it grew up?" have been answered. Mr. G. Romanes tried the experiment of isolating chickens as soon as hatched, and the untaught cocks crowed no less lustily than their educated brethren.

The Best Books for Boys.

***The Head Master of Harrow* writes:—**

"I have read it, and think it a very good book. The historical accuracy is really wonderful, and the local India colour well preserved. Mr. Strang is to be congratulated."

By general consent the author of "Tom Burnaby" has succeeded to the place among the writers of boys' books held by the late G. A. HENTY. He has achieved this pre-eminence during the past four years by the sheer excellence of his work—his capacity to write a story at once inspiring, informing, and interesting.

Field-Marshal Lord

***Wolseley* writes:—**

"Just the sort of book I would give to any school-boy, for I know he would enjoy every page of it."

HERBERT STRANG

***The Head Master of Clifton* writes:—**

"One of my boys, to whom I lent it, pronounced so favourably that I read it myself. . . . Interesting and thoroughly wholesome, so that I shall have pleasure in recommending boys to read it."

is "not only the best living writer for boys, but a born teacher of history," says the *Speaker*. "We rank Mr. Strang above Henty in many respects," says the *Academy*; "he tells a story infinitely better," says the *Guardian*; among boys' writers "Mr. Strang is first of them all," says the *Saturday Review*.

***Sir A. Conan Doyle* writes:—**

"I think it is a really excellent picture of African life."

***Dr. R. P. Scott* writes:—**

"... Interesting, vivid, healthful, and helpful. I can cordially recommend it to boys."

HERBERT STRANG

New Books this Season.

***Professor Oman* writes:—**

"Pray accept thanks from a historian for having got historical accuracy, combined with your fine romantic adventures."

One of Clive's Heroes:

A Story of the Fight for India. 6s.

Samba:

A Story of the Rubber Slaves of the Congo. 5s.

Jack Hardy;

or, A Hundred Years Ago. 2s. 6d.

***The Head Master of the Grammar School, Carlisle,* writes:—**

"The story is well told, full of movement, and of thoroughly manly tone. I think it will be keenly appreciated by the healthy British boy. I shall take steps to place this writer's books in our school library."

HODDER & STOUGHTON, WARWICK SQUARE, LONDON, E.C.

A New Writer for Girls.

Those who are confronted with the difficult task of choosing suitable Rewards or Gift-Books for Girls over twelve years of age will be glad to hear that a new writer of extraordinary promise has entered the field in the person of

MISS CHRISTINA GOWANS WHYTE,

the winner of the Prize of £100 offered by the *Bookman* for the best Story for Girls. Her Story is just published, under the title

THE STORY-BOOK GIRLS.

Beautifully bound in cloth, and illustrated with Designs in two printings.

Price 6s.

The £100 Prize Story for Boys.

In the *Bookman* Competition for Boys' Stories the £100 Prize was won by

MR. W. J. MARX,

with a rattling Story of France in the days of Coligny, entitled

FOR THE ADMIRAL.

This Story, elegantly bound in cloth and illustrated with a series of spirited Designs, is now issued.

Price 6s.

Two Great Books of Real Adventure.

BY E. E. SPEIGHT AND R. MORTON NANCE.

THE ROMANCE OF THE MERCHANT VENTURERS. BRITAIN'S SEA STORY.

Illustrated in Colours. **Price 5s. each.**

These are ideal Books for Boys. The naval chronicles of England have been ransacked for the most stirring and romantic episodes in our history, and the events are told so far as possible in the words of the adventurers themselves.

HODDER & STOUGHTON, WARWICK SQUARE, LONDON, E.C.

Seeley.)—Mr. Williams's geographical explorations extend from Herodotus to Purchas's Pilgrims. We have in succession the pilgrimage of Arculf, the Vikings, Marco Polo, the Friar Odoric, Prince Henry, Columbus, Balboa, Magellan, Pizarro, Cortez, Cartier, Willoughby, Frobisher, John Davis, and numberless less known explorers. Mr. Williams has ransacked the rich storehouse of the Hakluyt Society's publications, and composed from them an entertaining and instructive volume. (2) "Great Rivers" include the Yellow River and the Glacier du Trient; and it is obvious that there can be no more unity in the book than if Mr. Stead had taken for his subject "Travellers in the First Half of the Alphabet." This discursiveness is not likely to offend the adventurers by proxy, whose appetites may even be whetted by a mixed fare.

Chums, 1906. (8s. Cassell.)—We are glad to welcome an old acquaintance in such first-rate condition, more substantial by two hundred pages than at this time last year. There is generally excitement enough and to spare in the *Chums* stories; but these seem to beat the record. Leighton, Daniels, Whishaw, Frith, and Rigby are names that speak for themselves, but the less familiar authors fill their part well. Besides the serials, there are over two hundred complete stories, the greater number illustrated by Gordon Browne and Paul Hardy, whose spirited work is well known. S. Walkey contributes a series of startling adventures under the title of "Under Nelson's Flag," and the yarns of "Caravan and Tent," by H. Barrow-North, are a mixture of tragedy, humour, and pathos. Sports, the hunting of big game, stories of living leaders of various nationalities and widely different pursuits, interviews, and the inevitable prize competition help to swell the attraction of this imposing volume. Many of the full-page pictures come out extremely well.

We are glad to see a new edition of G. A. HENTY's excellent story *With Clive in India*. (3s. 6d. Blackie.)

The Wonder Children. By CHARLES J. BELLAMY. (6s. Macmillan.)—"Nine old-fashioned fairy stories in a modern setting" is the appended description, but they would be more accurately characterized as moral tales in a fairy setting. Thus in the opening story of a Christmas tree a child receives a magic wishing knife and is taught that it is more blessed to give than to receive. The illustrations are feeble.

"The Children's Heroes."—No. 5, *Chalmers of New Guinea*, by JANET H. KÉLMEN; No. 10, *The Story of Lord Clive*, by JOHN LANG; No. 13, *Bishop Patteson*, by EMMA PAGET. (Each 1s. 6d. net. T. C. & E. C. Jack.)—We have already called attention to this series, and need only state that there is no falling off in the coloured illustrations or general attractiveness of the volumes. Nos. 5 and 13 are of missionaries—both heroic, but in *Patteson* there is more of the knight errant, and Miss Paget has told the story in a way that will appeal to boys. An excellent piece of work. "Clive" is a well worn theme, and Mr. Lang lays no claim to originality, but his outlines are bold and clear. A map and some plans of battlefields would have made the narrative clearer.

VOX CLAMANTIS.

A *vox clamantis* cried: "I'll give
This Bill a broadside. Can it live,
Battered and riddled like a sieve?"

"Clause 1. The Board will have to try
Each teacher in Divinity;
Thank God, I'm not an H.M.I.!"

"Clause 2. Beneath a dual reign
The caretaker is torn in twain;
I do not envy Betsy Jane.

"And, if, as oft, the school house stood
Within his garden, 'twould be rude
Upon the Vicar to intrude.

"Clause 4. The teacher's in worse plight;
Whate'er he teaches can't be right,
With masters three or four to fight.

"His pay is docked; it's rather rough.
'See Clause 13,' you say. What stuff!
One million! Four were not enough."

Thus in the *Times* was heard the *vox*
Clamantis. Was it Box or Cox?
O no! The signature was K—x.

CHAMBERS'S XMAS BOOKS. BEAUTIFULLY ILLUSTRATED.

BOOKS for BOYS and GIRLS by
L. T. MEADE,

"It would be difficult to find a better guide than this volume. The whole work is of the highest order: lucid and practical and exact in detail."—*Land and Water*.

EXTINCT ANIMALS.

By PROF. E. RAY LANKESTER, F.R.S.

With a Portrait of the Author, and 218 other Illustrations. Demy 8vo. Price 7s. 6d. net. [2nd Edition.]

"Every boy and girl who heard the author's lectures will wish for a copy of this charming book; and those who did not will now read with delight the pictured story of extinct animals for themselves; nor will the 'old boys' fail to take it up also. . . . We give the book a hearty welcome, feeling sure that its perusal will draw many young recruits to the army of naturalists, and many readers to its pages."—*Nature*.

PETER: A Christmas Story.

By MRS. EDWIN HOHLER.

Author of "The Bravest of Them All," &c.

Illustrated by HELEN STRATTON. 3s. 6d.

A charming story of a "real" boy and a "real" dog; everything that happens is natural, and yet interest in the doings of Peter and his companions remains at a higher pitch than if the incidents were of a sensational nature. Humour is conspicuous throughout the tale.

THE ROYAL STORY BOOKS.

Few books can have received higher praise than these. Mr. LAURENCE GOMME's collections of genuine extracts from the whole range of English romantic literature, illustrating the reigns of English monarchs from the Conquest to Queen Victoria, have met with an enthusiastic reception from young and old alike. The Author's hope that they would enable readers to be acquainted with some of the gems of English romance has certainly been fulfilled. Now reissued in a new and handsome binding, gilt back and side cover design in colours, and burnished edges, price 3s. 6d. each.

THE KING'S STORY BOOK. Illustrated by HARRISON MILLER.

"A more striking collection of stories of daring and valour was never got between two book covers."—*Pall Mall Gazette*.

THE QUEEN'S STORY BOOK. Illustrated by W. H. ROBINSON.

"A pageant of historic romance which it would be difficult to equal."—*Pall Mall Gazette*.

THE PRINCE'S STORY BOOK. Illustrated by H. S. BLANKS.

"The Prince's Story Book" is the story book of the year."—*Weekly Sun*.

THE PRINCESS'S STORY BOOK. Illustrated by HELEN STRATTON.

"It is far excellence the volume for a gift book or prize."—*World*.

A LITERARY HISTORY

For the Use of Students
and General Readers.

By CHARLES T. CRUTTWELL, M.A.,
Hon. Canon of Peterborough Cathedral.

OF EARLY CHRISTIANITY.

In 2 Vols., large 8vo, cloth, 21s.

"Mr. Cruttwell has accomplished his task with remarkable success. His history is eminently readable. . . . It abounds in eloquent passages on subjects which have a deep interest for men of all times."—*Athenaeum*.

THE MAKERS

A Critical Inquiry into the Philosophy
and Religion of Ancient Greece.

In crown 8vo, cloth, with over 720 pages,
printed on specially thin paper, 10s. 6d. net.

OF HELLAS.

By "E. E. G."

With a Preface, Notes, and Conclusion by FRANK BYRON JEVONS, M.A., Litt.D.,
Principal of Hatfield Hall.

"The seven hundred pages bear eloquent witness to the author's wide reading and love of sound learning. . . . It is a mine of information on all kinds of questions connected with the archaeology, the mythology, and the literature of Ancient Greece."—*Athenaeum*.

PREHISTORIC

In large 8vo, handsome cloth,
gilt top, 21s.

ANTIQUITIES OF

THE ARYAN PEOPLES.

By Prof. O. SCHRADER,
of Jena.

Translated from the Second German Edition by FRANK BYRON JEVONS, M.A.,
Litt.D., Principal of Bishop Hatfield's Hall, University of Durham.

"Dr. Schrader's great work."—*Times*.

"Mr. Jevons has done his work excellently, and Dr. Schrader's book is a model of industry, erudition, patience, and, what is rarest of all in these obscure studies, of moderation and common sense."—*Saturday Review*.

A MANUAL OF

Second Edition, revised, fully
illustrated, 16s.

With Bibliography,
Appendices, and Indices.

GREEK ANTIQUITIES.

By PERCY GARDNER, M.A., Litt.D., Prof. of Classical Archaeology and Art in the
University of Oxford; and F. B. JEVONS, M.A., Litt.D., Principal of Bishop
Hatfield's Hall, University of Durham.

"Modern archaeological research has rendered a new survey of Hellenic antiquities indispensable to the student of Greek history and literature, and few men are better qualified to undertake such a survey than Prof. Gardner and his colleague."—*Times*.

A MANUAL OF

Seventeenth Edition. Crown 8vo,
10s. 6d.

ROMAN ANTIQUITIES.

By WILLIAM RAMSAY,
M.A.

Revised by Prof. R. LANCANI, D.C.L. Oxon., LL.D., F.S.A., assisted by
Prof. E. DE RUGGERO, both of the University of Rome.

With 2 Photogravures, and Map and Plans prepared by Prof. LANCANI to illustrate
the most recent discoveries relative to the Topography of Ancient Rome.

"The chief interest in the new edition centres in the chapter on Roman topography,
which has been entirely revised and partly rewritten by Prof. Lanciani."—*Athenaeum*.

"THE PUBLISHER, THE JOURNAL OF EDUCATION OFFICE, 3 BROADWAY, LUDGATE HILL, E.C." Money and Postal Orders, on the Post Office, Ludgate Circus, E.C., should be made payable to WILLIAM RICE; Orders and Cheques may be crossed, "The London City and Midland Bank, Ludgate Branch." Postage stamps can only be received at the rate of thirteen to the shilling.

If a receipt is required for an advertisement under 10s., a postcard or a stamped envelope must be enclosed.

Notice must be given of all remittances through the Post Office from abroad, stating full name and address of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

LONDON: WILLIAM RICE, 3 BROADWAY, LUDGATE HILL, E.C.

MR. BIRRELL AND THE HOUSE OF LORDS.

BY a happy coincidence, while the House of Lords were resting from their labours—they have sat sometimes till close upon midnight, and nearly half of their members have sometimes been present—Mr. Birrell, on the same day, was speaking at the Colston Banquet. Few even of our readers can have had the patience to follow the twists and turns, the doublings and shufflings and markings of time as the Bill has dragged its slow length along in Committee of the Upper House, and we are grateful to Mr. Birrell for expounding in plain language the sense of the amendments so far carried and their consequences. We will attempt to summarize his exposition and add a few comments of our own on the general outlook.

To the first section of the Bill, which secures general public control of public elementary schools, the Lords have added a rider enacting that some portion of the school hours of every day must be set apart for religious instruction. Mr. Birrell points out that the rider is both unnecessary and futile—unnecessary, since out of 5,796 county schools in England (Wales is a peculiar people) there were on January 1 only seven that failed to provide for religious instruction or observance; futile, for a Local Authority which set apart ten minutes each day for religious instruction, but appointed no one to give it, would satisfy the law. This may appear only a lawyer's quibble, but no redrafting of the language can so define "religious instruction" as to coerce a recalcitrant school Authority.

Clause 2 as amended runs: "The Local Authority shall, if required by the owners, continue any existing voluntary school as a school provided by them." In case of refusal an appeal is granted first to the Commission of Three (the "Star Chamber" of the Opposition) and then to the Board of Education. Mr. Birrell tells us that the estimate made in the Office of the probable number of appeals that are likely to come before him is over seven thousand.

Clause 3 (the ordinary facilities clause) provided for the giving of denominational instruction in transferred schools on two days of the week. The Lords have altered this privilege to "for not less than a clear half-hour each morning," and again an appeal is allowed to the Board of Education. Mr. Birrell comments: "So that whatever leisure time is left me after disposing of the seven thousand appeals will, I imagine, be cheerfully and agreeably occupied by questions between Local Authorities and irate clergymen as to the time and number of days per week they are to carry out this particular bargain."

Clause 4, granting special facilities, is made mandatory; the restriction to urban areas with a population of over five thousand is withdrawn, and "parents of at least four fifths of the children" is altered to "a bare majority." And once more there is an appeal to the Board. No wonder that Mr. Birrell says in all seriousness that any President who attempted to carry out the duties imposed on him by the Bill would be within twelve months either a worn-out corpse or a raving lunatic.

Never was there a more conspicuous illustration of the proverb "Give an inch and take an ell." Clause 4 is an *enclave*; it is as though a gipsy settlement were left undisturbed on an afforested estate or a railway company diverted its line to spare some ancient manor house. It was a generous concession made by the dominant majority to meet special cases of hardship—those of Roman Catholics and Jews. And now the minority turn on their benefactors, and, taking the exception as their standpoint, press it to all its logical conclusions. Well may Mr. Birrell complain that those who should have supported him with gratitude have, by their over-reaching, made it difficult for him to retain the concessions that he had won for them.

Mr. Birrell is no *intransigent*. He does not pretend that his Bill as it left the Commons is a work of plenary inspiration or incapable of amendment. He tells the Lords plainly that their Bill as it at present stands is impossible—that the House of Commons will not even look at it. But there is still the report stage, and he still hopes that saner counsels may prevail. The hope, we fear, is slight. In the *Times* of the next day there appeared a letter from the Bishop of Southwark headed "The Lords and the Education Bill." It is enough for our purpose to quote from it one phrase—"a Bill which takes so much and gives nothing"—and the postscript, which states that the letter was written before Mr. Birrell's speech at Bristol had appeared. The Bishops move on a different plane, and all Mr. Birrell's home-thrusts are idle against a ghostly foe.

But before we leave the speech two pronouncements of general principles have still to be noticed. First, Mr. Birrell reaffirms his adhesion to a Christian education. He nails his colours to the mast, and will not be driven even by Lord Halifax and the irrefragable doctors to the secularist solution. More important is his declaration that he has abandoned for good and all the solution to which he was at first inclined of "all-round facilities." He has been convinced not only by his friends the Nonconformists, who he allows are merely a section, not only by the representatives of the old School Boards, who educate only one half of the school population, but also by the teachers, who are the best judges of the case, that any scheme on these lines is unworkable. Lord Lansdowne had coquetted with it, the Bishops had all hugged it, but the Duke of Devonshire had blown upon it and puffed the Circe—Dryden uses a stronger word—away.

We need not pursue in detail the further amendments that have been passed since Mr. Birrell spoke at Bristol. The statutory disability of teachers to give religious instruction in Clause 3 schools has been swept away, and the right to test the capacity of intending teachers to impart such instruction has been enforced. On the other hand, the Archbishop's claim that all non-provided schools should be permitted to contract themselves out of the Act and survive as State-aided schools has been waived.

If we look outside Parliament, the auguries for a peaceful solution are somewhat more hopeful. The *Saturday Review*, with a charming frankness, brushes aside all the make-believes of the Bishops. In an article entitled "Mended and Ended" the first sentence runs: "The House of Lords have improved the Education Bill off the face of the earth." It is argued indeed that in so doing they have merely amplified and developed certain features of the Bill, carrying them to their logical conclusion; but with this aspect of their action we are

not now concerned. The point we desire to note is the acknowledgment in an organ of the Opposition that "compromise was never in their [the Lords'] minds from the beginning." "Had they been intent on a compromise with the Government, they would at any rate have had a very good pretext for shrinking from a change which the Government obviously could not accept."

The *Spectator*, on the other hand, regards both Mr. Birrell's polemics and the Lords' amendments as nothing but the ordinary exaggerated language of hagglers who are on the point of clinching a bargain. Mr. Birrell's argument as to the small number of Local Authorities who need to be coerced into giving religious instruction is double-edged, and shows that there can be no great hardship in coercion. The "shall" of Clause 2 is logical, but the machinery for enforcing it is cumbrous. The "clear half hour" is a bagatelle not worth quarrelling about. As to the permission for teachers to give denominational instruction, that is a point on which the Lords might well give way.

A more encouraging sign is the answer of the Archbishop to the *Spectator* deputation of Moderate Churchmen. The Archbishop dealt only in generalities; but, without committing himself to any particular withdrawal of claims, he said that the Church had abandoned much in passing the second reading of the Bill, and was prepared to make still further sacrifices for the sake of peace. We gather that the bare majority of Clause 4, as it now stands, will not be pressed, and that a compromise restricting to acting teachers the licence to give sectarian instruction would be accepted. The Archbishop cannot play the part of the Duke of Wellington in the Reform Bill, and say: "My lords, attention! Right about face!" but he can act as a mediator and a moderator, and he is sincere in his desire for peace. We look to the report stage with hope belied by fears.

REVIEWS AND MINOR NOTICES.

The Children of the Nation. By the Right Hon. Sir JOHN E. GORST. (7s. 6d. net. Methuen.)

We have often speculated what part Sir John Gorst would have taken in the education debates of the last Session, and wondered on which side, when freed from the trammels of office, he would have employed his weight of experience and his trenchant logic. Not even Mr. Paul ventured to quote his rejection at Cambridge in favour of Mr. Butcher as a parallel case to the rejection of Mr. Gladstone in favour of Sir J. Mowbray; but both Liberals and Unionists must regret Sir J. Gorst's absence in the present crisis, and it is only a partial compensation to read in print his views on the aspect of national education. The full title runs: "The Children of the Nation: how their Health and Vigour should be promoted by the State." The book, it will be seen, is not directly educational, and, according to the definition which, till quite recent years, was laid down at Whitehall, has nothing to do with education; but it was the chief merit of Sir John Gorst when in office to widen the scope and function of his Department, and to prove to his superiors (we cannot say "convince") that the State in undertaking the education of the children must include other duties than the mere schooling. "It is no part of the duty of the Board to see that the children come to school properly clothed or properly fed"—so said the President of the Board of Education under the late Government; and it speaks well for their mutual tolerance that so unequally yoked a couple as the President and the Vice-President lived together without an open breach. On current politics the book does not touch, and there is only one passage that throws light on the speculation with which we started—

In 1902 an unskilful attempt, likely from the first to prove abortive, was made to fit voluntary schools into a national system, and thus utilize the zeal which so long carried on national education by itself. Now it is proposed that the nation shall assume the whole responsibility for national education and the entire management of the public schools, so long entrusted to others, and that voluntary agency shall altogether disappear.

The context leaves no doubt, though it is not expressly stated, that Sir John Gorst heartily approves this endeavour, and accepts without reservation at least the first clause of the Bill.

On the religious question that threatens to wreck the Bill there is no pronouncement, but there is one significant allusion in the chapter on overworked school-children. In submitting the Education Estimates for 1899 Sir John laid before the House the return prepared by the Department at the instigation of Mr. Hoare of children *in statu pupillari* employed in wage-earning labour—a gruesome record of barbarism which it still makes one's blood boil to read. Sir John stated the facts as they are here restated, and tried to awaken the conscience of his hearers; but he preached in vain—

The House of Commons refused to pay any attention to the subject; it went off into a discussion of alleged improper teaching of the Church Catechism to Nonconformist children and of the exact personal relations then subsisting between the Vice-President and his official superiors, and passed the miserable condition of overworked children by as unworthy of the attention of the Legislature in comparison with party and personal squabbles.

Can we doubt that Sir John would now re-echo Mr. Roger's of Bishopsgate "Hang theology and let us get to business"? The sequel to the debate of 1899 is instructive, and may be briefly given. A Joint Committee of the Board of Education and the Home Office was appointed in 1900, and a Bill was introduced in 1902 and passed in 1903. The Act which became law on January 1, 1904, permits Local Authorities to frame regulations for the restriction of child labour; but it is only permissive, and up to date only 90 out of 261 Local Authorities have availed themselves of it to frame by-laws, and many of these are wholly inadequate. Berlin in this respect is a century in advance of London.

Among the many social and economic problems that are here discussed we can select only one or two of the most pressing importance. On the question of free meals Sir John takes a middle position. He unhesitatingly rejects Mr. Sidney Webb's postulate that all children have a claim to be fed at the expense of the State. He calculates that the cost would ultimately amount to over £15,000,000; but it is not so much the expense that alarms him as the reckless overthrow of parental responsibility, the squandering of home care and home love that no public institution can replace. Sir John is a Socialist, but no Communist. On the other hand, he holds that the State can do, and is bound to do, far more than it has done in the past both to enforce on bad parents their parental duty and to see that in any case the sins of the fathers are not visited on the innocent children. The official circular issued to guardians in April, 1905, pointing out their obligation to relieve starving school-children, irrespective of the condition or conduct of their parents, has produced some effect, but is only a palliative. An instructive instance of its working is here given. A list of over 3,000 underfed children was sent at the beginning of this year to the board of guardians in a large city in Yorkshire. At the end of two months less than half the cases had been investigated, and of these only 331 had received relief. It is to be hoped, says Sir John, with caustic irony, for the sake of the starving children that the procedure in Parliament will be more rapid than that of the Yorkshire guardians.

This leads us to consider a grave defect in our machinery of local government the evils of which are here clearly pointed out. In matters of medical inspection and attendance, of the prevention and checking of infection the duties of the guardians overlap and hamper municipal action. The waste in national health and strength cannot be exaggerated; but we think that here Sir John overlooks what the more advanced County Councils—Surrey, for instance—have already done to provide a systematic medical inspection of school-children. Elsewhere he points out that no legislation is required for the provision of playgrounds; but in both cases we need more than permissive legislation.

With nearly all that is said on the treatment of infants under five, and on military drill in schools, we are in entire accord, and we should have no objection to the proclamation on Alcoholism put forth by the "Assistance Publique" at Paris being posted up in every public place in England—with a proviso that the errors in French were first corrected. It is a sign of the times that the book is dedicated to the Labour members of the House of Commons.

"The Oxford Treasury of English Literature."—Vol. I.: *Old English to Jacobean*. By G. E. HADOW and W. H. HADOW. (3s. 6d. Clarendon Press.)

The object of the work of which this volume is the first instalment is "to indicate the chief landmarks in the progress of English literature"—in other words, to give the student a bird's-eye view of the whole. Of the two obvious alternatives that present themselves to the editor—to cite the largest possible number of authors with short extracts from each, or to give longer quotations from a chosen few—the authors have taken the latter, and their judgment needs no defence. But there is another choice of Hercules, not so easy to decide, of which the preface tells us nothing. Is the editor to choose such specimens as most appeal to him for beauty of form or weight of thought, and supply such introductory matter or notes as he thinks the study will require for their proper appreciation, or is he first to frame in his own mind a scheme of English literature—a chart, a map, a genealogical tree, call it what you will—and then illustrate it by the most telling and characteristic examples he can find? The first is the method of Chambers and several recent publishers who have sought to rival or supersede Chambers. Of the second method Taine is the most conspicuous example, and, in spite of its French subjectivity and one-sidedness, Taine is still the most readable history of English literature as a whole. We will not attempt to decide which is the more excellent way, but content ourselves with noting that the joint editors have steered a middle course, inclining more to the expositor than the theorist. The introductions to the (13) chapters—somewhat arbitrary divisions—are closely packed and well expressed essays, though the style is, to our taste, too metaphorical. Thus of Chapman's translations: "They are rough, strong, vigorous, far more like Homer than the silken verses of Pope; they are beaten out like iron under a sledge-hammer and thrown down into a clattering ringing heap as they are finished." Sometimes there is a lack of precision, as in the treatment of the sonnet. The sextaine, we are told, "might have two rhymes or three, according to the fancy of the writer, and might arrange them in any order he pleased"; and a note adds that "this form [Petrarch's] may be illustrated by the habitual practice of Milton and Wordsworth." The student would gather that Milton has only one form of sonnet, and also from the same paragraph that Shakespeare is peculiar in his use of the final rhyme; whereas it is found in twelve out of thirteen sonnets here given from other writers.

A French student who only knew his Montaigne would hardly realize what an essay of Bacon is like from the following account:—"His conception of the essay is firmer and more concise than that of Montaigne, whom, nevertheless, he follows in the matter of arrangement." Nor would an English student gain any notion of the periodic, and in parts rhetorical, style of the "Advancement" either from the text or the two specimens of Bacon here given.

To have done with small fault-finding, we think a word-for-word version would have been more helpful than the blank verse rendering of "Beowulf"; at any rate, in "The Grene Knight" the "rhyming tag," as the distinctive feature of the metre is somewhat harshly called, should have been preserved. It is hard on George Eliot to stereotype an unfortunate slip of the pen; and euphuism is not, at least by educated people, confounded with euphemism.

To sum up our general impression of the volume, the extracts are chosen with sound judgment, and by the help of brief *précis* where omissions have been made sufficient masses of Chaucer and Spenser are given to enable the beginner to appreciate and relish our early poetry. As the work proceeds the task will grow harder, and, if the authors will accept a hint, we would suggest that in Vol. II, which is to give the early history of the English drama, they should take it for granted that all their readers possess a Shakespeare, and so gain space for fuller extracts from the less familiar playwrights.

Translations into Latin and Greek Verse. By H. A. J. MUNRO. (6s. E. Arnold.)

Many scholars have sighed and sighed in vain for a copy of Munro's privately printed "Translations," and will be grateful to Mr. J. D. Duff for supplying their need. He contributes an introductory note which, by its point and brevity, would have

pleased Munro. Mercifully suppressing the name, he tells the story of the Oxford Gigadibs who measured swords with Munro in *Macmillan's Magazine*, and was routed no less signally than was W. Boyle by Bentley. He tells another story, new to us, how Munro once competed for the Porson Prize, and was disqualified, with two other Shrewsbury men, on the ground that their exercises were handed in to the Vice-Chancellor after 10 p.m., when the academic day had ended. It is even more astounding to learn that Munro was soundly rated by William Cory, the author of "Ionica," for including "that doggerel of Shelley's"—to wit, "The Skylark." What impresses us most in Munro as a translator is his solidity. He faces the problem squarely, omits nothing in the original and adds nothing of his own. T. S. Evans, in a felicitous letter composed in Horatian hexameters, here quoted, says that Munro's "Elegy" suggests Aeschylus set down to write Latin elegiacs. An apter comparison would be Ennius in the shades interpreting to his countrymen an English anthology. The result is never quite so perfect as Jebb or Calverley at his best, but in each case there is the English poem rendered into Latin that an old Roman could have understood.

It would be a good lesson for the young scholar who prides himself on his elegant elegiacs to compare Munro's version of the "Elegy" with that of J. H. Macaulay in the "Arundines Cami." We will give a few typical examples of the new and the old style of latinity:

Aeriumque tenent otia dia polum.
Et passim coelos occupat alta quies.
Velatove hederis illic de culmine bubo
Nubilus ad lunam rusticitatis agit.
Ni forte ex hederâ vicinâ in vertice turris
Noctua luctisonos integret aegra modos.
Metaque mors, quoquo gloria flectit iter.
Ipsius ad tumulum ducit Honoris iter.

Next to Lucretius, Catullus is Munro's favourite poet, and there is nothing better in the volume than the Glyconics of "Il Penseroso" and of "Deborah's Song." He is not always happy in his choice of metres, and English lyrics like Shelley's "Remembrance," which cry for a lyric rendering, are forced into longs and shorts. In this version, too (we have found no other instance), the sense is once mistaken. There is, it is true, another instance in the "Elegy," where, in our judgment, the letter killeth:

Cunctaque dat tenebris, dat potiunda mihi.

We have spoken only of English, but there are several versions from Dante and Goethe, and a noble rendering of the poem of Lucretius into Greek hexameters.

Memories and Thoughts. By FREDERIC HARRISON.
(8s. 6d. net. Macmillan.)

This collected volume of essays and reviews derives its chief interest from the fragments of autobiography contributed to the *Forum* in 1890 and now brought up to date. Mr. Harrison has lived a long and busy life: he has been in turns a college tutor, a lawyer, a professor, a historian, a minister of religion, a County Councillor, a novelist, and a playwright; but all these occupations have subserved his main vocation, that by which alone he will be remembered—a *littérateur*. With strange self-ignorance, half modesty and half pride, he disclaims for himself the title of a man of letters. He is only the amateur who takes up his pen for relaxation as the hard-worked man at the end of the day takes up his billiard cue or his garden rake. Or else he writes out of a sense of duty: he has a message to deliver and "feels ready to burst" till he has got it off his mind. Fortunately for us, he has not followed his own advice to intending authors—never to write except from a stern sense of duty—or three-fourths of this present volume would never have been written. He has no message to deliver, and, if he belongs to the school of the prophets—of his masters, Comte, Carlyle, Mazzini, Ruskin—he can only count as a very minor prophet. Now and again he fulminates, but his bolts are all levelled at small game—fast young ladies, motorists, game-preservers, bridge-players, smokers, and such small deer—and these are not his happiest efforts. When we read: "I have at no time in my life lost faith in a supreme Providence, in an immortal soul, in a spiritual life," we rub our eyes and wonder how such a confession of faith is to be reconciled not only with

Positive orthodoxy, but with some of Mr. Harrison's earlier deliverances, and we search in vain through the volume for any explanation or reconciliation.

It is when Mr. Harrison is discoursing on historians or on the scenes of his travels that we see him at his best. Of King Alfred, of Oliver Cromwell, of Gibbon and Carlyle, of Switzerland and the Eastern Riviera he has much to say, and he says it well. In literary criticism he does not shine, and his corrections of Tennyson's pronunciation and metre are grotesque. He thinks that "Boadicea" is written in "pure hexameters" and gives us—

'Tis the | voice of the | sluggard I | heard him com | plain

as a model of dactylic metre. If Mr. Harrison was amused at "the absurdity and ill manners" of a remark addressed to him by Tennyson, could Tennyson have listened to Mr. Harrison's sarcasm, the amusement would have been reciprocal. We have noticed several slips in scholarship, such as *Reisebilde*, "Coelum, non vitam, mutant," and there are too many forcible-feeble epithets which need pruning (Thackeray is "a jolly man of the world"); but Mr. Harrison writes good nervous English, and his "Memories" are well worth preserving.

Plato: Euthydemus. By E. H. GIFFORD. (3s. 6d. Clarendon Press.)

The value of the "Euthydemus" has been variously estimated. Some deem it unworthy of the Platonic spirit—an empty mockery of the empty art of Eristic; others prize it as the oldest treatise on logic, or because it shows philosophy, not sophistry, as the true and efficient teacher of youth. Whatever be the worth of the piece, Dr. Gifford, when he edited it for University students and the upper forms of schools, rightly thought that to such readers the broad comedy and dramatic humour of the dialogue would not prove distasteful. The interest of his book—our notice of which has been accidentally delayed—is largely of a personal kind. Freed from his office of archdeacon, he returned, for the solace and adornment of his age, to the studies in which he had won in youth the highest distinction. It is possible to discover faults in his work. In 276c, for example, he turns *ἐκδεξιμενος* by "taking up the discourse"; yet worthy at least of mention was that other view which joins *καλῶς τε καὶ εὖ τὸ μεράκιον ἐκδεξιμενος*, "taking the young man cleverly and neatly in hand." In 276e the attempt to defend the *ὅτιν* of the MSS. against the conjecture *ἡμῖν* seems to us forced. Again, sometimes the books to which he sends us are old-fashioned. Far be it from us to speak irreverently of "Hermann ad Vig.," but the matter covered by the reference is often to be got elsewhere in a newer lighting, and few young men to-day own a copy of Viger's once famous book, with or without Hermann's notes. It is not strange that Dr. Gifford, amid multifarious occupations, should have failed to keep himself abreast of American studies in Greek syntax. The note on ἀπαλλαγῆς (282c) is wrong. The aorist participle is not "required to express a single and, as it were, momentary action," but has its justification in the principle of "coincident action" (Goodwin, "Moods and Tenses," §150). And optatives without *ἄν*, such as the editor upholds in 292c and 299a, are now most usually, so far as Attic prose is in question, discredited and emended. But, in spite of occasional blemishes, the book merits to be described as good and scholarly. The introduction is clearly the product of much thought and care; and the commentary, inspired by a judgment generally sound, contains an abundance of useful knowledge. We recommend the book as likely to be serviceable to education: it is, at least, the best English edition of the "Euthydemus." As to the editor, we must not forget to say that he was once a schoolmaster. The possession of such scholars as Dr. Gifford is a strength to the Church of England; his life as he fashioned it was a light and an example to all his countrymen.

The Romance of Plant Life. Interesting Descriptions of the Strange and Curious in the Plant World. By G. F. SCOTT ELLIOT, M.A., B.Sc., &c. Illustrated. (5s. Seeley.)

Mr. Scott Elliot has certainly brought together much that is curious and wonderful in plant life, and has set it before us in a very striking narrative. Plants which attack animals, which prey on other plants, climbing plants, flowers of the water, vegetable demons, plants and ants, and so on and so on—story and description follow one another through twenty-nine chapters, and yet the author tells us he has only just touched on the outskirts of the subject, and has related only a few of the wonders. But perhaps the most extraordinary of all is the account given of the plant life in the scrub and semi-deserts of Africa and elsewhere, and of the ways in which plants adapt themselves to the conditions which surround them and develop new characters to meet a change of circumstances, or drop old habits no longer necessary or even advantageous. We are given fairly full accounts of the various plants useful to man as food or clothing—such as tea, cocoa, coffee, tobacco, &c., where they are got and from what, and the various modes of cultivating them. Nowhere, however, does Mr. Scott Elliot go deeply into matters. He gives us just enough to make us aware of

some of the striking points of the phenomenon we are examining and to let us understand some of the most noticeable of the facts referred to. The rest we must get elsewhere. He, in fact, supplies us with a popular account and nothing more, but an extremely interesting and astonishing account, of what is to be seen and known of the romance of the vegetable world, which in many ways is so strangely like the animal world, and which is so wonderful in itself. At the end of the book we are given six pages of a good index, and at the head of each chapter is placed a brief summary of its contents. The illustrations are fairly good, and most of them are taken from photographs. The book is not a school book and is not a student's book, but will be read with delight by one who has made a beginning and wishes to know what lies before him.

Cicero: Orationes Caesarianae. By W. Y. FAUSSETT. (2s. 6d. Clarendon Press.)

This is, in the main, a reprint of the little book published by the Clarendon Press for the same editor in 1893. But a few corrections and additions have been made, and an appendix shows the most important passages in which the text presented differs from that of Mr. A. C. Clark's edition. Neither the changes that have been made nor the matter that has been added would justify a great expenditure of our space in discussing them. Enough if we say that three speeches naturally connected with each other—the "Pro Marcello," "Pro Ligario," and "Pro Kege Deiotaro"—are here brought together in a single volume, and illustrated with a commentary suitable for the upper forms of schools. Mr. Faussett's work will be approved by all who use it. Of the "Pro Marcello," by the way, there exists a version done by Sir Charles Selley. It does not vindicate the opinion ascribed to King Charles the Second, that Sedley's style, either in writing or in discourse, would be the standard of the English tongue. The badness of the translation is matched by the clumsiness of the phrasing and the ponderosity of the rhythm.

The Principles of English Verse. By CHARLTON M. LEWIS. (5s. net. G. Bell.)

Books on English metre spring up as fast as Jonah's gourd, and most of them wither as fast. Each metricist has his say, and we seem no nearer to an accepted theory of English scansion. The *differentia* of Prof. Lewis's book is that he has no theory of his own to propound, and the pupil who consults him with a view to scanning the verses set in the next London Matriculation paper will pronounce the book a fraud. But the reader who feels and yet fails to analyse the distinctive charm of Milton's and of Tennyson's blank verse, the strength and weakness of Swinburne's and Browning's anapaests respectively, the function of rime and of alliteration, will welcome Prof. Lewis as a friend in need. He has what, we feel, is lacking in most of his predecessors—a true ear. He has given us an essay, not a treatise. There is no attempt at completeness. Shakespeare's blank verse is barely mentioned. But it is an essay full of fruitful hints which we hope to see more fully worked out. The price is high, but we will not say that it is dear at the price.

Aue's Advanced German Grammar. Revised and Enlarged Edition by OTTO SCHLAPP. (Chambers.)

It is appropriate that the "Grammar" of a master in the Edinburgh High School should be revised by a Lecturer in the Edinburgh University, and Dr. Schlapp, who is famed both as a scholar and as a teacher, has done his work of revision thoroughly and conscientiously. Yet we cannot help feeling that it is a patch on an old garment—that the Grammar cannot be fitted to the new preface, which prescribes reading and speaking as the centre of interest and of instruction. Surely there should be some direct connexion between the reading and the grammar, and the pupil who, according to the editor's recommendation, has read "a considerable amount of German prose" before starting on the exercises will be neither interested nor instructed by being set to translate sentences none of them longer or harder than "The citizen, whoever he may be, must obey the laws"—the last sentence set. The Grammar, however, can be judged independently of the exercises, and, though no sensible teacher would set it to be learned, if used as a book of reference, with its full tables and paradigms, will be found most useful.

We have received from the Librarian of the Finsbury Public Libraries a *Descriptive Handbook to Juvenile Literature*, compiled by him primarily for the convenience of local readers, but incidentally to inform and guide a larger public. The "Handbook" is in two parts, an Author Catalogue and a Subject Catalogue. The second is very fully classified, and shows at a glance the available books on any given topic from the Battle of Hastings down to Centipedes. The first part is imperfect, only including authors of fiction. There are, of course, many *lacunae*, and Class J, Poetry, is singularly meagre. We hope the Librarian may be induced to publish an enlarged edition, giving not an actual, but the ideal, Children's Library. Meanwhile this volume may be had on application to Mr. H. G. T. Cannons, Central Public Library, Skinner Street, E.C., price 1s. 4d., 10 tags included.

We have received from Messrs. Sanders & Crowhurst, 71 Shaftesbury Avenue, W., a selection of their *Nature Study Specimens*. These are butterflies and moths in their natural surroundings, mounted in sealed boxes with glass fronts. They should prove an invaluable aid to lecturers and teachers. A catalogue, with photographs of the objects, will be supplied on application.

Letts's Diaries maintain their supremacy in the face of keen competition. We recommend No. 31, Rough Diary (2s. 6d., with blotting paper), and No. 10, 7½ × 4¾ inches, three days on page (4s. 6d.); but our readers should apply for Messrs. Cassell's list, which gives a choice of a hundred varieties.

In review of Burne's "Literary History of Persia" (November, page 776), for "arrangement and *verses* being entirely due to Fitzgerald's genius," read "nexus"; and, in review of Mackail's "Odyssey in English" (page 775), for "riming one quatrain with another," read "running one quatrain into another."

MUSIC IN SECONDARY SCHOOLS.

THE Board of Education has issued an important Memorandum offering suggestions on the place of music in the general scheme of education, and on the best methods of obtaining the results to be aimed at. The following is a summary.

The primary appeal of music, as of all the rhythmic arts, is through the senses to the subconscious mind, and its educational function is to develop imaginative power. Since the effect on character cannot be expressed by examination, the teaching of it is apt to resolve itself into the training of fingers or voice, and the neglect of the more important side that appeals to the emotions, awakens the imagination, and cultivates rhythmic sensitiveness. For this purpose music must begin in the form of singing. The sense of musical rhythm must be trained from the earliest years. This sense may be helped not only by beating of time, &c., but by responsive movements of the whole body as in dancing, marching.

In early years the aim should be to develop the capacity for response to artistic expression in *all* children. All should be trained *how to listen*, not by lecturing, but by concrete experience. In kindergartens ample time is provided for singing and marching. In the next stage, from seven to twelve or thirteen, there should be some singing every day, and sight-singing and ear-training at least twice a week. From twenty to thirty minutes a day will suffice. After this age the time may be safely decreased.

In most public schools for boys first-rate musicians are employed to superintend the music; but, owing to the neglect of the subject in preparatory schools, no foundation has been laid, and even boys who come from musical homes forget what they once knew. Musical competitions should not be encouraged: they tend to develop the more showy side, and degrade the artistic sense of harmony.

Class Teaching.

The traditional song literature of a nation is the national foundation. Such songs are largely used in elementary schools, and the use of them in secondary schools would form a common basis of musical culture for all classes. The Swedish system of breathing exercises is recommended as a preliminary. Children who drone or sing out of tune should be made to stand out and listen. In most the sense of tune will gradually develop. No child has a natural alto voice, and the use of the lower register in childhood is positively injurious to the adult voice. Therefore in the lower classes unison singing should be the rule. The elementary schools alone have recognized that sight singing can be profitably begun at the same age as reading and writing, and in all these subjects the later the beginning the greater the difficulty.

The best results have hitherto been obtained by teaching the staff notation through the tonic-sol-fa method. In the lower school to national songs should be added selections from the great German classical song literature, still sung in unison. Ear training should be continued by means of musical dictation. During the change from childhood to adolescence there should be as little singing as possible both for boys and girls.

In boys' day schools there should be a minimum of two separate half hours a week up to sixteen in classes, and also an assembly of the whole school once or twice a week for fifteen or twenty minutes for songs in unison. In boys' boarding schools the Harrow system of evening house singing and the performance of choral masterpieces is approved. In girls' schools there should be some part music in addition to unison singing, care being taken (as above) as to changing voices. As in boys' schools, pupils and staff should join at least once a week in a unison performance.

Individual Teaching.

Authorities should insist on a thorough preliminary training in sight singing, rhythm, time, &c., before a child is allowed to touch a musical instrument. Backward children should be drilled individually in

them. No child should be allowed to begin the piano till he can name notes on a large diagram of the great staff in the treble and bass clef as easily as he can read the letters of the alphabet. In the beginning children should be shown the phrasing and form of every piece of music heard, however easy. Transposition to easy keys can be learnt from the beginning. During the last year of middle school, or in the upper school harmony should be begun with those who learn solo instruments.

JOTTINGS.

THE Admiralty has set a good example in the liberal scale of salaries fixed for assistant masters at the Royal Naval College, Dartmouth. Four heads of departments receive £450 a year, rising to £650 by annual increments of £20. Senior masters (number not determined) receive £400, rising by £10 a year to £500. For the rest of the staff a fixed sum is determined by the Admiralty, to be distributed at the discretion of the Head Master. Further, every master is credited with £80 a year as deferred pay, the total to be handed over to himself on his retirement or to his estate in the case of his death.

"WHEN I went to Aldershot, in 1867, Sunday was a show day in stables, which gave rise to a Horse Artilleryman's curious request. A young soldier, going up to his commanding officer, said: 'Please, sir, I want to change my religion.' 'What's up? What do you want to be?'—'I want to be a Roman Catholic.' 'Priest been at you?'—'No, sir; no priest.' 'Woman?'—'No, sir.' 'Well, I shall not allow you to change your religion.'—'Please, sir, any man may be any religion he likes in the Army.' 'Yes, but I have got you noted down as being a Church of England man, and I don't mean to allow you to change without giving me some reason.' The man then admitted his real object: 'Well, you see, sir, a Roman Catholic always goes to church at eight o'clock, and I think, if I was a Roman, it would give me a better chance with my 'arness.'"—Sir Evelyn Wood's "Life."

WHO is the author of the famous lines attributed to an assistant mistress?—

"Miss Buss and Miss Beale
Cupid's darts do not feel.
How different from us
Miss Beale and Miss Buss!"

Who, by the same token, wrote the doggerel that we heard last month quoted with unction?—

"The rain, it raineth on the just
Alike and on the unjust fellow,
But wets not the unjust because
He's stole the just man's umbrella."

LORD LYTTON ON LATIN AND GREEK VERSE.—"The system of instruction prevalent at all our great public schools when I was a boy at Harrow (1845-8) appeared to me like a huge practical joke played off by the masters on the boys. For what could be more grimly facetious than to compel a helpless, unhappy youth to waste some three or four precious years in trying to imitate the hexameters or the alcaics of Horace when the knowledge of the language he is working in is still so imperfect that it does not enable him even to perceive that *solis trabes* is not the Latin for "sunbeams," and that *commutatio condimentorum* does not mean "the alternations of the seasons"?"

ONE amendment to the Education Bill in the Lords approached perilously near to the ridiculous. Had it been carried, the definition of a public elementary school would have run: "a school controlled by the Local Authority, giving religious instruction and flying the Union Jack."

WHAT appears to be an amusing misprint appears in the *Times'* report of Mr. Birrell's great speech at Bristol on November 13, in which Mr. Birrell is reported to have said that it was no use "scorning the nights and living laborious days." It is possible that Mr. Birrell was thinking of all-night sittings, and so deliberately said "the nights" instead of "delights." Whatever his defects may be, Mr. Birrell knows his Dr. Johnson.

IN the Report of the Cambridge Training College for Women, 1905-6, we read: "As was to be expected, the steady increase in the number of students of the last two years has been arrested by the proposed abolition of the Register. It is impossible to trace the working of this with any degree of certainty, but five students whose applications had been formally made and accepted withdrew their applications and took posts at once."

BOOKS OF THE MONTH.

FIXTURES FOR JANUARY.

- 1, 2, 3.—National Association of Head Teachers, Leamington.
- 2, 3, 4.—Friends' Guild of Teachers, Scarborough.
- 3, 4, 5.—London County Council Conference of Teachers.
- 4.—Royal Drawing Society.
- 4, 5.—Modern Language Association, Durham.
- 9, 10.—Association of Directors and Secretaries for Education, London.
- 10.—Private Schools Association, College of Preceptors, 3 p.m.
- 10, 11.—Incorporated Association of Head Masters, Guildhall.

- 11.—Association of University Women Teachers.
- 12.—Public Schools Science Masters' Association, Head Master of Eton in the Chair.
- 12.—Incorporated Association of Assistant Mistresses in Public Secondary Schools, Dr. Williams's Library, Gordon Square, W.C.
- 26.—Mathematical Association, King's College, Strand, 3 p.m.

[Fuller details will be given in January.]

UNIVERSITIES AND SCHOOLS.

BEDFORD COLLEGE FOR WOMEN, LONDON.

The Council of Bedford College have appointed Miss M. J. Tuke, M.A., Tutor to the Women Students and Lecturer in French, University College, Bristol, to be Principal of the College, in succession to Miss Ethel Hurlbatt, M.A., who is leaving shortly to take up the position of Warden of the Royal Victoria College (McGill University), Montreal. Miss Tuke entered Newnham College in 1885, and took a First Class in the Medieval and Modern Languages Tripos in 1888. She acted for a time as secretary to the late Miss A. J. Clough, and afterwards to Miss Helen Gladstone. In 1892 she was appointed Staff Lecturer in Medieval and Modern Languages at Newnham College, and in 1896 became Head of the Modern Language Department. In 1905 Miss Tuke was appointed Tutor to the Women Students and Lecturer in French at University College, Bristol.

At the annual general meeting, held at the College on November 16, the Chairman of Council, the Right Hon. A. H. D. Acland, in the chair, the Principal reported that within the last two or three years nine former students had been appointed head mistresses of public secondary schools; and two important headships, hitherto held by men, in the chief girls' schools of Edinburgh and Glasgow had been given to old students. Also that in recent additions to the teaching staff of the College four old students had been appointed. Of the five recent appointments of Women Inspectors under the Factory Department of the Home Office four had been given to former students of the College Hygiene Department. Within the last five years twenty students of Bedford College who had proceeded to the London School of Medicine for Women had taken the London degree in Medicine.

The last of the course of public lectures on classical subjects will be given by Mr. A. B. Cook, Lecturer in Greek, Bedford College, on "The Parthenon," on Thursday, December 1, 5 p.m. These lectures are open free. The course has been specially arranged with a view to interesting girls in the study of classics.

In the Training Department for Secondary Teachers three scholarships, of the value of £20 each for one year, are offered for the course beginning January, 1907. The scholarships will be awarded to the best candidates holding a degree or equivalent in Arts or Science. Application should be sent not later than December 15 to the Head of the Training Department, from whom the necessary entrance forms and other information can be obtained.

OXFORD.

In the last month there have been but few losses by death of present or former members of the University, but two at least have been, in very different ways, men of distinction. Lord Cranbrook, as Mr. Gathorne Hardy, represented the University for thirteen years, from 1865, when he was returned also for Leominster, but naturally preferred the far safer and more honourable seat as Burgess of the University, till 1878, when he was raised to the peerage. He was an able and industrious official, and at different times was President of the Poor Law Board, Home Secretary, Secretary for War, Secretary for India, and, finally, President of the Council. He died at the age of ninety-two. The Hon. Auberon Herbert, who was at one time M.P. for Nottingham, abandoned politics after three years' trial, and was chiefly known in later years for his earnest advocacy of various and rather heterogeneous causes, such as liberty, voluntary taxation, sanitary dress, habits, and houses, and the evils of examination. He was not exactly a practical reformer, but he was a warm-hearted man of many gifts, and had a wide circle of friends and admirers.

Apart from statutes and decrees dealing with minor points of administration, which are of no public interest, the term has been devoid of any legislation which can be called important. A word may be said about one small statute proposed at the end of October, as an illustration of one of the difficulties reformers have to meet. An old statute provides that examiners should make a declaration before the Vice-Chancellor, before entering on their duties, to the effect that they will do their work without prejudice or favour ("omni odio et amore sepositis"). In the old days when examiners were usually resident, so that the requirement caused very little trouble, plausible arguments

(Continued on page 826.)

NELSON'S NEW GIFT BOOKS

BOOKS FOR THE YOUNG.—"Probably no firm has established a sounder reputation for the excellence of their literature for the young than Messrs. NELSON. A high moral tone pervades all their books, and they are produced with such exquisite taste, combined with amazing cheapness, that, as literature for the young minds, they are unsurpassed."—*The British Monthly*.

EVELYN EVERETT-GREEN.

THE DEFENCE OF THE ROCK.

5/- With Six Coloured Illustrations, cloth extra, bevelled boards, with beautiful Colour Design, gilt top.

JOHN FINNEMORE.

A CAPTIVE OF THE CORSAIRS.

5/- Six Coloured Illustrations by JOSEPH FINNEMORE, and beautiful and novel Cover Design, cloth extra, bevelled boards, gilt top.

HAROLD AVERY.

FIRELOCK AND STEEL.

5/- Six Coloured Illustrations by WALTER G. GRIEVE, cloth extra, bevelled boards, gilt top.

R. S. WARREN-BELL.

THE DUFFER.

5/- Six Coloured Illustrations, cloth extra, beautiful Colour Design, gilt top.

C. W. WHISTLER.

A SEA-QUEEN'S SAILING.

3/6 Beautiful and novel Coloured Cover Design. Four Coloured Illustrations by W. H. C. GROOME.

ARCHIBALD WILLIAMS.

HOW IT WORKS.

THOMAS NELSON & SONS, 35 & 36 Paternoster Row, London, E.C.; Edinburgh; Dublin; and New York.

might be found for not abolishing an ancient, if useless, custom. But, to-day, with a much greater multiplicity of subjects and a higher standard in regard to the selection of the best men to examine, and, we may add, more facilities for travelling, many more non-resident examiners are yearly wanted. It is obvious that in these conditions the requirement became increasingly troublesome—especially as the duties of Vice-Chancellor and Proctors are greatly more numerous. The proposal to abolish the declaration, strongly backed by the late Vice-Chancellor, and approved by the Council, who are certainly not a revolutionary body, might have been expected to pass without opposition. But it was opposed at every stage: and we had to listen to highly respected and sensible men expatiating on the danger of removing moral safeguards: and even the *Oxford Magazine* speaks of the value of their "solemn reminder of the responsibilities of an examiner." Yet all the while nobody really doubts the *bona fides* of examiners, or believes that, if it were wanting, it would be secured by such a declaration. The statute was carried in a very small House, but only by two votes.

The class lists of last August contained the names of the first batch of Rhodes Scholars who have passed the Final Honour Examinations. The facts have been collected by the *Oxford Magazine*, and they are both interesting and encouraging. Fifteen were entered: seven obtained a First Class, five a Second, one a Third, one a Fourth, and one was unclassified. Further, three qualified for the B.C.L. degree: one in the First Class, two in the Third. Beside these classes, the Ireland and the Vinerian Scholarships, the Gladstone Prize, a B.Sc. Research degree, and two diplomas in Economics (with Distinction) were awarded to Rhodes Scholars. The local distribution of these honours is also interesting. Canada wins one First Class, the Gladstone Prize, and the Ireland; Australasia has five First Classes and the Vinerian; America has two Firsts and the Research B.Sc. It is safe to say that, if a prophet had three years ago foretold these successes, he would have been thought rash, if not wild. Certainly both the Rhodes Trustees, who organized the selection of the scholars, and their teachers, both at home and in Oxford, deserve congratulation.

The Annual Conference of the National Union of Teachers is to be held next Easter in Oxford, and we are informed that about two thousand members will probably attend. Last time the N.U.T. met in Oxford, which was in 1894, about three hundred men were accommodated for the week in certain colleges, and it is hoped that similar arrangements may be made next year. We understand that some colleges have already given a general assent to the idea of lending rooms for the purpose, though no details are at present settled. There are certain difficulties, as the authorities are almost all away from Oxford in the middle of the Easter Vacation; but these are not insuperable, and it is earnestly to be hoped that they may be overcome. Last time, largely owing to the efforts of Mr. Arthur Acland, who was then in residence, a great deal was done to show the sympathy of the University residents with this Union, the largest educational body in England. Besides the accommodation provided by the colleges, several members of the University were present at the meetings, gave assistance in the matter of arrangements and visits to the places of interest in Oxford; and honorary degrees were conferred upon some of the leading officials of the Union. Nothing could be better both for the N.U.T., the University, and, we may add without exaggeration, for the cause of education, than that such efforts should be made; and they were fully appreciated by the visitors. Since 1894 there has been time for much change in Oxford views, and no doubt many of the difficulties which Mr. Acland had to meet are no longer formidable. I hope to be able a month hence to report progress in this matter.

Many lectures of special interest have been delivered in Oxford this term. Mr. Mackail, Professor of Poetry, on "Chaucer" (November 9 and 16); Prof. W. P. Ker, Romanes Lecturer (November 24), on "Iceland and Norway in the Thirteenth Century"; the inaugural lecture of the new Linacre Professor of Comparative Anatomy, Prof. Bourne (November 17); and Prof. Sir Hubert Parry and Prof. Holmes's lectures, on "Music" and "Fine Arts" respectively, were all worthy of special mention, if we had space. But it is no disparagement to these to say that the greatest general interest was aroused by the lecture (November 15) of Dr. B. P. Grenfell, of Queen's College, on "Recent Discoveries at Oxyrhynchus," which drew a large and eager audience to hear details about the latest batch of unearthed treasures—the new Pindar fragment, the portion of a lost Gospel, the new Historian's chapters—for all which the public must wait till the next volume of Papyri.

It is always interesting to the historian, whether of education or of anything else, to note the fact, often trivial and insignificant in itself, which marks the end of an epoch. Such an incident has just occurred in Oxford, in regard to women's education, which is probably unknown to the general public (and, even if known, would, perhaps, be uninteresting); but, as Pindar says, is "full of voice to those who understand." A word of explanation is needed to make the point clear. In 1879—the year when Somerville and Lady Margaret were opened—one college lecturer only admitted women students; to-day 203 University and college lectures are open to them. In other words, practically every University and college lecture which the tutors of the

women students would have wished them to attend is available for the purpose. In almost every college the matter was left to the lecturers, to admit or refuse as they thought best. Hardly any one refused. In one college only—which gratitude for the recent change debars me from naming—the governing body prohibited the lecturers from admitting women to their lectures. I don't suggest that this was a tyrannical act, because most of these lecturers, if not all, were members of the college meeting which so decided. It might even be represented as a heroic adherence to principle, since the fee (£1 per woman student attending) was nobly dismissed from consideration, or, at any rate, did not prevent the decision, which has remained unshaken for twenty-seven years. To-day it is rescinded; and henceforth every college or University lecturer who is willing to admit women to his instructions is at liberty to do so.

The following awards have been announced in the *Gazette*:—University Scholarships and Prizes: Craven Fellowship, T. E. Peet, B.A. (Queen's); Craven Studentship at Athens, G. Dickens, B.A. (New College); Burdett Coutts Scholarship, J. A. Thomson, B.A. (St. John's); Eldon Law Scholarship, J. C. V. Behan, Rhodes Scholar (Hertford); John Locke Scholarship, W. Brown, B.A. (Christ Church); "Greatly distinguished in the Examination," H. B. Butler (Fellow of All Souls).

SOMERVILLE COLLEGE.—The Principalship of Somerville College has been filled by the appointment of Miss Emily Penrose, Principal of the Royal Holloway College. Miss Penrose entered Somerville College in 1889, gained a First Class in the School of *Literae Humaniores* in 1892, was Principal of Bedford College, London, from 1893 to 1898, and has since then been Principal of Holloway College.

[In my last letter, first paragraph, last line, "Convocation" was misprinted (or miswritten) "Congregation."]

CAMBRIDGE.

In my last letter I chronicled the passing of the resolutions to amend the Mathematical Tripos by majorities that varied from 17 to 76 during an hour or more of steady voting. It was an animated scene, though most of us were tired of it before it was over. Still the irreconcilables *non-placé*-ed away, and we voted again and again. The redeeming features were the opportunities afforded for a good deal of conversation between handing in our voting cards and the sense of getting something carried at the last. But the stalwarts now tell us they are going to bring it all up again when the regulations embodying the resolutions are proposed. These regulations appear in the *Reporter* for November 20. To be quite frank, it is the front-rank mathematicians who wish the change put through, while it is opposed by men who are chiefly or only known as teachers or coaches, and who have otherwise made no great mark. It is the function of a coach so to train an impossible candidate that he may, while still a Junior Optime, be 55th instead of 67th, and avoid a place among the "Apostles." But the whole thing is symptomatic of the academic mind. It would be almost impossible to conceive of any kind of man attaching a fraction of the importance to examinations that teachers do. It is a kind of religion with them, though they all complain that examinations ruin those very qualities that make good teaching—elasticity, freshness, and independence.

Meantime the memorialists who petitioned the Council to try to co-operate with Oxford in some joint entrance examination are informed that it will not be done. The memorial was referred to the Studies and Examinations Syndicate, who approached the Oxford Vice-Chancellor and got his consent to a conference. The Council then appointed representatives, who met envoys from Oxford on June 13 and presented a report. In view of this report, the Council considered joint action with Oxford impracticable, and are going to do no more.

Another petition has been presented to the Council to have Science made compulsory in the Little-go and to do away with the paper in Latin and Greek grammar. And yet another is on foot—a memorial to request the Council to appoint a syndicate to consider the advisability of instituting a Diploma in Architecture.

The Financial Board announces that the incomes of the several colleges, subject to percentage for the University contribution, amount to £231,063. 19s. 5d. The Board has fixed the percentage at 13 per cent., and will take £30,038. 6s. 3d. It seems a lot of money, this income of ours; but it should be remembered that a great section of it goes in scholarships, which, however, are paid to the scholars without deduction of the percentage, which is then wholly paid out of the balance. Thus, to take a special case, the taxable income of St. Catharine's is £5,475 odd, and the college pays £711. A millionaire who took a spite against the college could at once ruin it by giving it a million for scholarships. This would add, say, £40,000 a year to the taxable income, and the additional tax of £5,200 would swamp the entire sum available for tuition, for payment of fellows, lecturers, tutors, and everybody else. Benefactors cannot be too careful. Some one ought to demand—or endow—a school of Scientific Beneficence. It is to be remarked that Selwyn College Hostel pays no tax. The £30,000, it is popularly

(Continued on page 828.)

SONGS for SECONDARY SCHOOLS

Edited by JOHN FARMER.

Upwards of 160,000 copies of "Gaudeamus" and "Dulce Domum" have been called for.

GAUDEAMUS.

Containing 100 Songs for Colleges, Schools, and the Home. Extra crown 4to, cloth, 5s.
Words only, Paper, 6d.; cloth, 9d.

"'Gaudeamus' is an excellent collection, in which a lover of a good-going and well-known song will find all the old favourites. The work may be heartily recommended to students everywhere."—*Scotsman*.

DULCE DOMUM.

134 Songs for Children. Crown 8vo, Two Parts (Tonic Sol-fa and Old Notation and Words), 6d. each.

"Many of the songs are admirably adapted for school entertainments, and teachers as well as parents ought to make themselves acquainted with what is really a veritable golden treasury of household rhymes and children's songs."—*Leeds Mercury*.

CHEAP EDITION. Price 1s. 6d.

SCARLET AND BLUE; or, Songs for Soldiers and Sailors.

Containing 106 Songs. Words only, royal 32mo, paper, 6d.; cloth, 9d.

"Well printed and otherwise tastefully got up, with the music on one page and the text set forth in good readable type on the opposite, the book is one which will doubtless prove very acceptable."—*Westminster Gazette*.

CASELL & COMPANY, Limited, La Belle Sauvage, London, E.C.

Ready Shortly.

A NEW

FRENCH GRAMMAR.

By R. H. ALLPRESS, M.A.,

Master on the Modern Side at the City of London School,

AND

J. LAFFITTE, B.-ès-L.,

Principal French Master at the City of London School.

Price 1s. 6d.

This book consists of three parts, viz. *Reader*, *Grammar*, and *Exercises*. It is intended for pupils who have already acquired some slight knowledge of French, and are ready to be taken through a systematic course.

The *Reader* is largely illustrated.

The *Grammar* aims at completeness in dealing with the essentials of the Accidence; it includes the more common exceptions only. But, on the other hand, those points of syntax an acquaintance with which, even at a comparatively early stage, experience has shown to be indispensable have been included.

The rules are illustrated for the most part by examples taken from the text; the examples are as simple as possible and are designed to strengthen the learner's grip of the rule.

Exercises. These consist of:—

1. Questions in French on the text, mainly for oral practice.
2. Exercises designed to drill the pupil on each particular section of grammar.
3. Grammatical questions of a general character for revision of matter already learnt.
4. English sentences and connected pieces of prose, based on the text, for translation into French.
5. Subjects for free composition with the help of data.

Ready December 5th.

CASELL'S

NEW GERMAN DICTIONARY.

By KARL BREUL,

M.A., Litt.D. (Cambridge), Ph.D. (Berlin), Cambridge University Reader in Germanic.

Upwards of 1,300 pp. Cloth, 7s. 6d. net; half-leather, 10s. 6d. net.

Dr. KARL BREUL has been engaged in the preparation of this great work for the past eight years. He has had the advantage of the current edition of Cassell's famous "German Dictionary" as a basis, and has produced, as a result of the most earnest, protracted, and systematic labour, a new Dictionary of the highest importance and value.

A Prospectus, giving Specimen Pages of Cassell's New German Dictionary, will be sent post free on application.

Cassell's Unrivalled Dictionaries.

CASELL'S NEW FRENCH DICTIONARY. (French-English and English-French). Cheap Edition, Newly Revised. 745th Thousand. 1230 pp. Cloth, 3s. 6d.; half-morocco, 5s.

CASELL'S GERMAN DICTIONARY. (German-English and English-German). 362nd Thousand. Cheap Edition. 1220 pp. Cloth, 3s. 6d.; half-morocco, 5s.

CASELL'S LATIN DICTIONARY. (Latin-English and English-Latin). 162nd Thousand. Cheap Edition. Cloth, 3s. 6d.; half-morocco, 5s.

Cassell's Educational Catalogue will be sent post free on application.

CASELL & COMPANY, Limited, La Belle Sauvage, London, E.C.

believed, goes chiefly to maintain the fabrics and staffs in Science. In addition the colleges are required either to have so many professors among their fellows or to pay an equivalent sum for the maintenance of professors.

Incidentally it may be said that a Cambridge man has it in his power to do a little service to his University by proceeding to higher degrees when he can. At two Congregations held this term for the giving of degrees there has been such a falling off in the number of men coming up for M.A. that the University has received £500 less in fees than on the corresponding days last year. The numbers always fluctuate, and there appears to be no known law for discovering why they should. Clergy and schoolmasters are the classes most apt to "proceed M.A.," and they have the satisfaction of knowing that they are thus doing something for the University.

The General Board has proposed a scheme for using the Brereton bequest. Mr. R. P. Brereton, of Jesus College, left a sum which is at present bringing in about £280

Various. a year to be applied to the promotion of classical studies. It is proposed to found a Brereton Readership, and to appoint to it Prof. Ridgeway, and "his duty as Reader shall include the delivery of lectures on Classical Archaeology for Parts I. and II. of the Classical Tripos." This proposal should please all who take archaeology seriously and know Prof. Ridgeway's work. His professorial stipend is at present an endowment of some £97 a year.

The Fitzwilliam Museum has received a fine collection of Greek coins, exceeding five thousand in number, from Mr. John R. McClean, M.A. of Trinity, who is following in the footsteps of his father, to whom we owe the McClean bequest. Many of the coins have not been published, and more still are unexampled at the British Museum. Mr. McClean has added to his kindness by undertaking to write a catalogue of them.

The Classical Society has been discussing "Verse Composition in Classical Examinations." Though no plan of action was resolved on, the general feeling was that "verses" are overdone. We hope something may follow.

The election of half the Council of the Senate fell this November. Two "tickets," as usual, were issued by the parties known in academic affairs as Liberal and Conservative—

"Strange that such difference should be
'Twixt Tweedledum and Tweedledee!"—

and then two separate independent candidates were "run." The "tickets," however, captured all the places. Dr. MacAlister and Mr. R. F. Scott are restored to the Council; but the Master of Christ's, after some thirty years of service on the Council, was unfortunate enough to lose his seat.

Appointments:—W. Durnford, M.A. King's, member of Town Council; A. C. Seward, M.A. Emmanuel, Professor of Botany; E. A. Benians, M.A. St. John's, Fellowship of St. John's; E. Gold, B.A. St. John's, Fellowship of St. John's; P. C. T. Crick, B.A. Pembroke, Fellowship of Clare; R. P. Gregory, M.A. St. John's, Senior Demonstrator in Botany.

Prizes, &c.:—O. H. B. Starte, B.A. Clare, Bhaonagar Medal; F. A. Potts, B.A. Trinity Hall, Mark Quested Exhibition.

WALES.

A meeting of this Association was held at Shrewsbury on November 1 and 2. The President, Miss Collin, of Cardiff, in her address, dealt with the phenomenal growth of the intermediate schools during the twelve years of their existence—the numbers at present attending them being probably in excess of twelve thousand. This was a fact whose significance could scarcely be misinterpreted, except perhaps in one direction—they were, unfortunately, only too well aware that far too great a proportion of these pupils were mere birds of passage. More than a fourth, however, were sufficiently well prepared to enter for the Central Welsh Board Examination, in a stage of work the minimum requirements of which were in advance of those of the Junior Locals of Oxford and Cambridge Universities. Nearly 1,100 were candidates at the Senior stage and 214 at the stage of the Honours Certificate. There were no available statistics from other schools with which to compare those of the intermediate schools, but, from her own experience of English high schools for girls, she was convinced that the work of the county schools compared very favourably with that of schools of the same type. In conclusion, Miss Collin spoke of the earnestness and enthusiasm which had inspired governors and teachers to secure the best in education, and, in her opinion, members might, with confidence, trust to their governors to help them through all the difficulties which will confront them in the future.

Prof. Findlay read a paper, "The Trend of Educational Reform in our Large Cities," in which he dealt exhaustively with the causes which have led to the present decentralization of authority in education. The underlying idea of this devolution of control is to secure a greater

diffusion of interest. Unfortunately, owing to the practice of Local Authorities of relegating the direction of their education machinery to officials, the tendency has been for that personal interest in the schools to disappear. We should be on our guard against that uniformity which is the inevitable result of this bureaucratic system. To counteract it, Prof. Findlay would extend the principle of devolution still further—not only must it go from Whitehall to Local Authorities, but to local managers as well. Dealing with the part which teachers should play in the governing work of education, he urged that they should be content with seeking advisory powers, and they should not claim a voice in the general educational policy of the Committee.

An interesting and valuable discussion on this vexed question was initiated by Mr. S. J. Evans, M.A. In his paper the arguments in support of the paramount claims of Welsh in County Schools. Welsh to fuller recognition in the county schools were set forth with great moderation and lucidity.

Some of the statistics he incorporated in his address are well worth careful consideration. Thus he stated that Welsh was only taught in 56 out of 95 schools, and that not quite one-fifth of those presented at the annual examination were sufficiently trained in this vital part of their education to sit in it for the Junior Certificate of the Central Welsh Board. Mr. Evans, however, recognized that the difficulties in the way of making adequate provision for the teaching of Welsh in many districts—in the bilingual districts especially—were great. For instance, it is well-nigh impossible to find a sufficient number of teachers with the necessary qualifications to teach it systematically and scientifically. His views as a whole met with general acceptance, though one or two speakers were inclined to think that he had not sufficiently recognized the influence of that Welsh sentiment that permeated the atmosphere of all the schools. Even though there was no actual teaching of the Welsh language in some of them, Welsh history, literature, &c., were taught generally, and their effect on the pupils' minds must be considerable.

It was an unfortunate feature of the present campaign in favour of the introduction of Welsh into the schools that its advocates should deem it necessary to minimize the value of a knowledge of French to a Welsh boy or girl. When our intermediate schools were being established, some twelve years ago, it was the fashion to impress on Local Authorities and head masters the urgent need of assigning due prominence in the curriculum to modern language teaching, and especially to French. The innate capacity of the Welsh boys and girls to acquire a foreign language was duly emphasized, and much used as an argument for demanding that every opportunity in this direction should be afforded to them. But to-day, in the interests of Welsh, a determined attempt is being made to show that all, or nearly all, our work in modern languages is only a mere waste of time.

It was resolved: "The Association should communicate with the Secretary of the Joint Board of the Northern Universities with regard to the interchange of their Matriculation Certificates with the Senior Certificate of the Central Welsh Board."

The half-yearly meeting of the Board was held at Shrewsbury on November 16. Considerable discussion followed on a recommendation of the Executive Committee in regard to the form in which the examination reports should be issued. The typewritten reports which used to be sent to the schools contained more detailed and technical criticism of the work than the printed report. To save expense, the Executive Committee now recommended the discontinuance of the former type of report. To this proposal many members objected, as they feared it might tend to destroy the freedom of the examiners as regards criticism, and, therefore, minimize the value of their reports. The motion, however, was ultimately adopted. There was also presented a report from a sub-committee on the need of making the Central Welsh Board a centre of information for careers for Welshmen. The claims of the Civil Service as a career were strongly urged by the Chairman, Prof. Anwyl.

In his general report the Chief Inspector stated that the number of pupils had increased during the past year from 10,413 to 11,577, and that since the first report of the Board was issued, in 1897, there had been an increase of 80 per cent. Many of the schools had therefore now to contend with the difficulties of organization which are incidental to a sudden influx of new pupils; and the question of increased accommodation had become a very urgent one in many districts. There were indications that the increase in the permanent staff had not kept pace with this increase in the number of pupils. Dealing with some statistics relative to the position of Welsh, the Chief Inspector made the interesting suggestion that one method of improving the status of the language in the county schools would be to use it as a medium of instruction in Scripture. It was, however, pointed out that the Sunday schools supplied sufficient opportunities for learning the Scripture in Welsh.

The difficulty arising out of the refusal of the Board of Education

Swansea Education Authority. to pay the voluntary schools grant has been temporarily settled. According to Mr. Birrell's statement in the House, there still remain some points of the dispute on which the opinion of the Law Officers of the Crown will be asked.

The Board of Education now accept the possession of the Senior Certificate of the Central Welsh Board as a guarantee of the suitability of candidates entering training colleges in the autumn of 1907 to be prepared as part of their course for examinations forming a stage towards a University degree. This concession is a very important one.

The Glamorgan Education Committee have wisely resolved not to establish an intermediate school at Maesteg, as they are of opinion that small schools are not desirable.

Welsh National Council. The rejection of the clause establishing the Council by the Lords will occasion no surprise, as it had been generally anticipated. Their Lordships based their objections to the proposal on the well known grounds, viz., absence of reasonable guarantees to the minority, the unsatisfactory nature of the financial proposals, and the bad drafting of the clause, &c. One feature of the debate which is worthy of notice was the fervour with which the Bishop of St. Davids eulogized the Central Welsh Board and its work. His Lordship is understood to agree to the principle of autonomy in Welsh education, though he strenuously opposes the proposed constitution of this Welsh Council. As there is a fairly unanimous agreement among Welsh educationists that some form of an Education Board for Wales is desirable, we shall probably see another attempt before long to establish one.

SCOTLAND.

The fiftieth anniversary of the induction of Emeritus Professor Campbell Fraser to the Chair of Logic and Metaphysics in Edinburgh University was celebrated on November 7. At a meeting held in the class-room in which Prof. Fraser delivered his inaugural lecture in 1856 addresses were presented to him from the Senatus and from Honours graduates in Philosophy and former assistants. In the address from the Senatus allusion was made to the remarkable success of Prof. Fraser's pupils in the philosophical world: "No fewer than

seven of his pupils have held Chairs of Philosophy in the Scottish Universities, while nine others have been professors in the Universities of Australia, India, Canada, and the United States. The Chair of Green in Oxford and the Chair of Sidgwick in Cambridge have both been filled by philosophers of his training. In the kindred study of Theology are to be counted, in like manner, at least six principals and six professors, who received from him their first impulse to philosophic thought." Prof. Fraser, who looked younger than his years, made a characteristic reply to the addresses, and Emeritus Professor David Masson, who has seen nearly as much service and as many years, was also welcomed by Principal Sir William Turner in name of the audience.

The General Council of Edinburgh University at its meeting in October discussed the question of autonomy for the Scottish Universities, on the basis of a plan proposed by its Business Committee. The plan was subjected to severe criticism, but the general idea commended itself to the Council, and the matter was remitted to the Committee for further consideration and report.

The Edinburgh University Court has appointed Dr. G. H. Melville Dunlop to be Lecturer on Diseases of Children, in room of Dr. T. M. Burn Murdoch, resigned.

The late Mr. C. B. Black has left £4,000 to Edinburgh University for the foundation and endowment of two scholarships in Greek; and the late Miss Donaldson, of Auchairne, has left money for the foundation of a bursary in Arts.

Profs. Phillimore and Davies devoted their inaugural lectures at Glasgow to the defence of classical study in the Universities.

The quatercentenary of George Buchanan has been celebrated at Glasgow University by a most interesting exhibition of books and portraits of Buchanan, including the books bequeathed by him to Glasgow University and many valuable editions of his works. At a meeting in the Bute Hall an admirable address was given by the Rev. Principal Lindsay, of the United Free Church College, on Buchanan's life and works.

In recognition of the honorary degree conferred on him last April, M. Rodin has presented to Glasgow University a beautiful work of his in bronze representing St. George.

Mr. J. A. Campbell, formerly M.P. for the Universities of Glasgow and Aberdeen, has given £500 to Aberdeen University for the encouragement of athletic exercises and outdoor recreation among the students of the University. Mr. Andrew Carnegie has also given £500 to Aber-

Examiner to: Oxford and Cambridge Joint Board,
Scotch Board of Education,

Cambridge Higher Locals,
Civil Service Commission,

University of London, &c., &c.

EIGHTH EDITION. With Supplementary Easier Exercises.

Fcap. 8vo, cloth, interleaved. Price One Shilling.

Hints on French Syntax.

[May be used with advantage with any French Grammar.]

"A capital little book, which we have no hesitation in recommending to French students."—*The Pall Mall Gazette*.

Extract from Author's Preface.—At the request of several Masters and Mistresses who have used the *Hints* with their classes, I have added an Appendix with easier examples. In them more French words are supplied, and more references are given to the rules which they illustrate. The method of pitfalls is rightly discredited, and it is generally allowed to be a more fruitful discipline to prevent a pupil from making blunders than to rap him over the knuckles for making them. Even with the references the happy-go-lucky boy and the cocksure boy will both be caught tripping.

SECOND EDITION. Crown 8vo, cloth. Price One Shilling.

French Words . . . and Phrases.

"In the hands of an intelligent teacher the book will become a valuable aid to the study of French."—*The Bradford Observer*.

CHEAPER EDITION. Demy 8vo, paper cover. Price Sixpence net.

German Declensions and Conjugations

BY HELP OF REASON AND RHYME.

London: WILLIAM RICE, 3 Broadway, Ludgate Hill, E.C.

deen University for the foundation of a class library in connexion with the Modern Languages Department.

IRELAND.

The Royal Commission held sittings at 5 Old Palace Yard, Westminster, for the examination of witnesses from November 7 to 13 inclusive. Among those examined were Lord Dunraven (largely the author of the "two colleges" scheme), Dr. Mahaffy, Mr. Gray, Mr. Beare (Fellows of T.C.D.); Dr. Delany (University College); Dr. McWeeney (Catholic School of Medicine); Dr. Maginnis, F.R.U.I. (representative of the Catholic Graduates' and Undergraduates' Association, the President of the three Queen's Colleges); Miss White, LL.D., of Alexandra College; and Miss Homan, B.A., and Miss O'Farrelly, M.A., representatives of the Irish Association of Women Graduates and Candidate Graduates.

It is stated that the Commission will give a narrow interpretation to the vaguely worded terms of reference, and confine themselves to recommending certain changes within Trinity College itself, and to such recommendations in regard to the general question as are directly connected with Dublin University—that is to say, the possible solution of "nationalizing T.C.D." by modifying its government and teaching to make it acceptable to Roman Catholics (as proposed by certain T.C.D. Fellows and Professors, and the Association of Catholic Laymen, but refused by their Bishops), or the establishment of a second college under the University of Dublin (strongly disapproved by the members of Trinity College, but approved by the Bishops and most of the Roman Catholic party, with perhaps the exception of Dr. Delany, who naturally would prefer to see his own college endowed under the Royal University). Considering the *impasse* that exists, it thus seems likely that the Commission will produce no greater changes than some internal reforms in the government, the mode of election of Fellows, and on other points.

Meanwhile, in quite another direction, a most hopeful movement has been started in Cork. Since his appointment as President of Queen's College, Cork, Dr. Windle has shown that he is not content to acquiesce in the condition of University education in Munster. He has laid before the Royal Commission proposals to raise Queen's College, Cork, to a University for the South of Ireland under popular control, as autonomous as possible, and providing for the needs of all creeds and classes. His views have been warmly taken up in the South, and on November 17 a public meeting was convened by the Lord Mayor of Cork, at which the project was agreed to with enthusiasm. At the meeting Mr. William O'Brien, M.P., in a characteristically generous and sanguine speech, drew a picture of the University that would be founded, wholly under the control of the people, and, while safeguarding the religion of every class of students, yet drawing all the intelligent youth of the South into beneficial intercourse and generous rivalry in learning. He then announced that he and his wife—Mrs. O'Brien is a lady of large means—had decided to leave their entire fortune as an endowment to such a University. He proposed that a sum of £50,000 should be raised at once to establish the University by a local rate of less than ¼d. in the £, all of which would be repaid on the death of Mr. and Mrs. O'Brien. He pointed out that they already had buildings and an endowment of £10,000 a year, and, above all, the man who had so largely helped to accomplish a similar work in Birmingham—Dr. Windle.

Thus aided by the generosity of Mr. O'Brien, a solution of the Irish University question, often talked of vaguely, may be practically begun. Its invaluable merit is that it will draw forth the initiative and hearty interest and co-operation of the people themselves. There is no doubt that, if a similar scheme were successfully started in Dublin for the rest of Ireland, the Government would not refuse either a charter or endowment. Mr. O'Brien, indeed, in his speech stated that he had the sympathy and approval of several members of the present Ministry and of the late Unionist Government. No party, indeed, desires to oppose a genuine scheme initiated and desired by the people themselves—a very different thing from giving an institution demanded, and to be controlled by, the Bishops, while the laity remain silent and apathetic. It remains to be seen how far the Church will approve, and be willing to leave free, such a University.

Conferring Day passed off quietly enough this year. The Senate had drawn up statutes enabling them to disqualify for proceeding to degree, and even to deprive of a degree already obtained, any one taking part in such conduct as that of last year. They also very strictly limited the number of tickets of admission given to graduates and undergraduates, while police and barriers were provided to prevent forcible entry. An indignation meeting was held outside in the midst of heavy rain, but the wagonette containing the orators and the attendant crowd were made to "move on" relentlessly, and did not effect much. Dr.

(Con'tinued on page 834.)

MR. EDWARD ARNOLD'S

List of Books for Examinations in 1907.

College of Preceptors, 1907.

BUXTON PHYSICAL TRAINING COLLEGE

(Non-residential).

Principals—MRS. BELL and Miss RALPH HALL.

Assisted by Miss HEIKEL,

Gymnastic Director from Arvedson's Institute, Stockholm.

THE aim of the College is to train educated women as Teachers of Gymnastics (Ling Swedish System), Dancing, Swimming, and Games, and to enable them to take cases for Massage and Medical Movements. Also to train Teachers as Health Mistresses and Lecturers of Hygiene. The College Course lasts two years, and includes Educational and Medical Gymnastics, Theory and Practice, Massage, Anatomy, Pathology, Physiology, Hygiene, Dancing, Swimming, Games and Elocution. The Staff consists of Trained Certificated Teachers, and each subject is taught by an experienced Teacher who has made a speciality of the subject. At the end of the Course the Students have to pass examinations in both Theoretical and Practical Knowledge, also Advanced Physiology and Hygiene (Board of Education). In all cases the Students have been most successful in obtaining work and in each instance before leaving the College. For further information apply—

Address—

GEORGE OVER, THE RUGBY PRESS, RUGBY.

Delany even prevented the students assembling on the steps of University College by means of police. This drew forth a formal condemnation of the President by the students, and considerable agitation has been going on in University College since, some students being censured and one rusticated by the Council.

The Senate of the Royal University conferred honorary degrees on Dr. Douglas Hyde and Prof. McClelland, the distinguished physicist. They also passed a resolution that they considered the concentration of the control of higher education in one University would be disastrous to education and injurious to the welfare of the country.

Some disparagement of the science courses in secondary schools under the Department having been expressed by one witness, several representatives of the schools attended in London to give evidence, which goes to show the value of the teaching and the success of courses and the management by the Department.

Profound regret is felt for the death of Mr. W. Haslett, the Head Master of St. Andrew's College, Dublin, at a very early age. Mr. Haslett was a man of distinguished attainments and of fine and lovable character. In a comparatively short time he raised his college to the very front rank among Irish schools. He took an active part in public educational work, and was peculiarly gifted as a master and teacher of boys. His death is a deep loss to secondary education in Ireland.

SCHOOLS.

BERKHAMSTED GIRLS' GRAMMAR SCHOOL.—On November 8 Miss Penrose, Principal of the Royal Holloway College, gave away the prizes and certificates. In all, upwards of a hundred and fifty certificates were gained during the year. Amongst the year's successes attained by old girls were Second Class Natural Science Tripos by M. Stephenson, of Newnham College, and a Cambridge Higher Local Honours Certificate by E. Batterbury, now a mistress on the school staff. Miss Penrose, in the course of an excellent address, urged the girls above all to cultivate an intellectual conscience. Viscount Peel, who opened the new buildings in 1902, came over to see the further extension made this summer, and also spoke. The Chairman of the Governors, Sir John Evans, K.C.B., spoke of the loss the school had

sustained by the death of one of the governors, Miss Maitland, the Principal of Somerville, and of Miss A. M. Stephenson, who was lately appointed to the Head Mistress-ship of the Preston High School.

BROMSGROVE SCHOOL.—Entrance scholarships were won by R. N. Smith, W. A. D. Goodwin, and B. S. Rea, and exhibitions by R. Dunbar Steer, L. Underhill, and R. M. Spence. School prizes have been awarded as follows:—Wattell's Prizes: Latin Verse, R. Hartley; French Prose, R. G. Tasker; English Essay, C. Whitley; German Prose, T. Seebold. Masters' Reading Prizes: Senior, R. G. Tasker; Junior, N. T. Sieven. Natural Science Larger Medals: Gold, F. J. G. Whittall; Silver, E. Page. Distinctions outside the school are as follows:—W. G. Beloe, open exhibition, Classics, Brasenose College, Oxford; C. Whitley, open scholarship, Natural Science, Balliol; J. C. M. Collier, Bible Clerkship, All Souls; H. B. Barker, N. Forde, and E. L. Routh, Royal Military College, Sandhurst; D. N. Macleod, Foundation Scholarship, Caius College, Cambridge; J. R. T. Booth, Cadetship Indian Civil Service (6th place); H. N. Mackintosh, Public School Medal for Fencing, Aldershot. The following are the changes in the staff:—Rev. F. E. Duckworth, *vice* Rev. F. G. Orchard; Mr. J. K. Jameson, *vice* Mr. E. T. Jones; Mr. B. Delbos, *vice* Mr. J. H. Round. Prizes were distributed on speech day by Admiral Sir N. Bowden Smith, K.C.B., who gave an interesting address on the military duties of citizenship. The preacher was the Right Rev. Bishop Mylne, Rector of Alvechurch. The Head Master, in his address to parents and visitors, dwelt upon the tendency for boys who are not going to a University to leave at an earlier rather than a later date; and urged that boys who are not going to any advanced place of learning are just those who should be allowed an extra year or two at school. A year or two in the sixth form with monitorial responsibilities offered many of the advantages of University life. True, public-school life implied the presence at the top of the school of a sufficient number of boys of eighteen or nineteen, and this condition was not always readily supplied now, as compared with fifty years ago, when the great majority of public-school boys went on to Oxford or Cambridge, and stayed at school till they were nineteen.

ELY, THE KING'S SCHOOL.—Among distinctions gained in the school during the past eighteen months may be mentioned two First Classes in Cambridge Local Seniors; Potticary Gold Medal, 1906 (Classics); a senior classical scholarship (open) at Queens' College,

HIGHER ARITHMETIC. 128 pp. Paper, 6d.; cloth, 8d. With Answers, cloth, 11d. Answers separately, 8d.

Full Educational Catalogue sent post free on application to—

WILLIAM BLACKWOOD & SONS,

45 George Street, Edinburgh; and 37 Paternoster Row, London, E.C.

Cambridge; and a classical entrance scholarship to Malvern. T. J. Kirkland succeeds F. E. Maynard, B.Sc., as science master. The first year has seen the erection of new laboratories, art room and modelling studio, gymnasium, and workshop.

HAMMERSMITH, GODOLPHIN AND LATYMER GIRLS' SCHOOL.—With the entry of 85 new girls this term, the number of pupils has reached 327, and the school is now quite full in the fifth term of its existence. On November 9 Mrs. Wiles, one of the lady governors, distributed the certificates gained by the pupils of the school during its first year. These included one London Matriculation certificate and eleven Cambridge Local certificates. In the annual examination of the Royal Drawing Society, 71 girls gained Honours, 94 passed, 12 failed. Six girls entered for the Schools Examination of the Associated Board of the Royal Academy and Royal College of Music, Lower Division, and all passed; and one girl passed in the Local Centre Examination, Advanced Grade.

KIDDERMINSTER, KING CHARLES I. SCHOOL.—On the resignation of the Rev. Dr. H. de B. Gibbins (who has been appointed Rector of Lennoxville University, Canada,) the governors elected Mr. W. H. Witherby, M.A., formerly Scholar of St. John's College, Oxford, late assistant master at Shrewsbury School. The usual celebration of Founders' Day, the birthday of Charles I., took place on November 19. The boys marched to the ancient parish church, in the still existing chantry of which the school was formerly carried on, and a special choral service was held, an eloquent sermon being preached by the Rev. Canon Carnegie, Rector of the Cathedral Church, Birmingham.

LIVERPOOL, GIRLS' PUBLIC DAY SCHOOL TRUST.—On September 27 H.R.H. Princess Louise distributed the prizes to the pupils of the Liverpool High School, the East Liverpool High School, and the Birkenhead High School, at the Philharmonic Hall, Liverpool. Sir William Bousfield, Chairman of the Council, presided. Amongst others present were the Duke of Argyll, the Earl and Countess of Derby, Lady Digby, and Mr. R. G. Tatton. A vote of thanks to her Royal Highness was proposed by the Lord Mayor of Liverpool, and seconded by the Rector of Liverpool (Rev. Canon Kempthorne). The Duke of Argyll replied on behalf of the Princess. A vote of thanks to the Chairman was proposed by the Mayor of Birkenhead, and seconded by Mr. Wm. Crossfield.

NEWPORT INTERMEDIATE SCHOOL FOR GIRLS.—At the annual speech day, on November 21, Viscount Tredegar presided over a

large audience in the school hall, and an admirable address was delivered by Miss J. D. Montgomery, Hon. Warden of the Royal Albert Memorial College Hostel, Exeter. The Head Mistress reported that in the Central Welsh Board Examination twenty-six girls had gained Junior Certificates, Hilda Lewis gaining Distinction in every subject. There were four Senior Certificates, and Susie James had gained an Honours Certificate in English Language and Literature and English and European History. Three girls had passed the London Matriculation Examination. In the Royal Drawing Society's Examination there were 71 Pass Certificates, 35 Honours, and 3 Full Certificates. Mary Leonard had been awarded an open exhibition at University College, Aberystwyth, for Mathematics and Botany, and Hilda Probert an open exhibition at University College, Cardiff, for Botany and Chemistry. The School Leaving Scholarship of £20 per annum was awarded to Mary Leonard. An Associated Board Scholarship for the Pianoforte has just been awarded to Emmie Gregory—the scholarship is tenable at the Royal College of Music—and Emmie Gregory was first on the list for the whole country.

NORTH LONDON COLLEGIATE SCHOOL FOR GIRLS.—The annual concert of the above school took place in the Clothworkers' Hall in the school. There was a large audience of parents, pupils, and their friends, and the windows and platform of the hall were gay with chrysanthemums. Much appreciation was shown for the excellent performance of the pupils; their playing was accurate, and in some places touch and expression were very good, and often showed promise of brilliancy of execution. Altogether the thoroughness with which they had mastered difficult music was deserving of high praise. Though some of the music—for instance, a "Prelude" by Rachmaninoff and a "Sonata und Fuge" by Mozart—was of a classical nature, there were also lighter pieces, such as Chaminade's "Pas des Amphores" and Raff's "La Fileuse," while many others were well known and well loved—like Chopin's "Second Nocturne" (violin solo) and "Fantaisie Impromptu." The choir sang four-part songs with a lightness and precision which made them really charming.

PORTSMOUTH HIGH SCHOOL.—D. Cooke has passed the London Matriculation Examination, Division II. On November 16 the prizes and certificates were distributed in the Town Hall by Mrs. Crowder, a member of the Council of the Girls' Public Day School Trust. The chair was taken by the Very Rev. the Dean of Winchester.

[Our Manchester letter is unavoidably held over.]

PRIZE COMPETITIONS.

The Translation Prize for November is awarded to "Gibeonite."

Il y a d'abord une étude de style. Mais le style même de l'auteur n'est pas un. Il est quelquefois spontané, coulant de source, portant le sceau d'une inspiration toute personnelle; d'autres fois, et le plus souvent peut-être, il trahit des intentions, des réminiscences: c'est une manière et un pastiche. M. Cherbuliez, formé à l'école des Grecs et à celle des écrivains français du XVII^e siècle, reproduit, dans un mélange qui n'est pas sans grâce, la phrase ample et flottante des uns, le tour à la fois naïf et recherché des autres. Il s'exhale de ses pages comme un parfum où se confondent Platon et Madame de la Fayette. Il a repris la tentative de Courier. On croit parfois, en lisant ses causeries, se retrouver dans le salon de la comtesse d'Albany.

Ce n'est pas tout cependant. Sous la syntaxe, il y a le vocabulaire. Le double pastiche dont je viens de parler se complique d'une étude lexicologique. L'écrivain s'est plu à bigarrer son livre d'une multitude de mots insolites. Et je ne parle pas seulement des termes techniques qu'il prodigue çà et là avec trop de complaisance: il aime en toute circonstance à étonner son lecteur d'une expression imprévue. L'homme superficiel méconnaît-il le mérite supérieur, ce sera "le grain de rassade bien serti qui dédaigne le cabochon!" Il est telle partie du volume qui exige le secours du dictionnaire. Les vastes lectures de M. Cherbuliez, sa grande mémoire l'ont bien servi dans cette fantaisie. Car il n'y faut voir qu'une fantaisie. Il est impossible qu'un écrivain aussi admirablement doué que celui dont nous parlons donne définitivement dans la manière, et dans une pareille manière; il est trop puissant et trop sincère pour cela. Il a voulu s'amuser, et il se gardera de recommencer. Il se contentera, à l'avenir, de nous donner des dialogues pleins de trait et de vivacité, des paysages aux lignes gracieuses et aux couleurs éclatantes, des dissertations qui tour à tour pétillent d'esprit et étincellent de verve. Il laissera là Paul-Louis Courier: il sera lui.

By "GIBEONITE."

First we must study style. But there is no uniformity even in our author's style. At times it flows spontaneously and naturally, bearing signs of an entirely individual inspiration; at others—perhaps most often—we can feel that it is intentionally reminiscent: it is assumed and deliberately imitative. M. Cherbuliez, trained, as he is, in the Greek school and that of the French writers of the seventeenth century, reproduces and blends not ungracefully the noble, untrammelled diction of the first and the elaborately simple manner of the second. His pages are fragrant with mingled memories of Plato and Madame de la Fayette. He has tried once more what Courier tried. Sometimes, when we read what he has to say of men and books, we can almost imagine ourselves back again in the drawing-room of the Comtesse d'Albany.

But this is not all. Below the arrangement of the words lie the words themselves. Close study of the dictionary adds to the complexity of that twofold imitation of which I have just spoken. The writer has taken a delight in studding his book with numbers of unusual words. Nor am I speaking only of the technical terms which he lavishes only too freely in one place after another: he never likes to miss a chance of astonishing his readers with some unexpected phrase. The superficial man who despises superior worth becomes "the well-set bead that scorns the uncut gem." This is the part of the book that demands the help of the dictionary. M. Cherbuliez' wide reading and vast memory have served him well in this passing whim. For we are bound to see in it nothing but a passing whim. It is impossible that a writer so wonderfully gifted as the one of whom we are speaking should become definitely addicted to a mannerism, especially such a mannerism as this: he is too full of power and sincerity for that. He wished to amuse himself, and will take care to avoid affectation in future. He will be satisfied henceforth to give us dialogues full of character and sprightliness, landscapes graceful in outline and bright of colour, essays now scintillating with wit, now sparkling with fancy. He will leave Paul Louis Courier where he is: he will be himself.

We classify the 194 versions received as follows:—

First Class.—Vlaamsche Meisje, Handmaiden, Alteryn, Nougat, Paulinus, A.G.J., Norman, A. Guttmell, Bia, Gwen, Cosy, Pythias, Menevia, Rosa, Dickoya, R.J.P., Primrose, Gibeonite, B.B.B., Garlies, Peripatetic, Fortes et Fideles, Isca, Gothicus, Ion.

SOME PRESS NOTICES OF

Qu'est = ce que cela veut dire?

By H. P. SLIGO DE POTHONIER.

SANDS & CO., 23 Bedford Street, London, W.C.

"All who study or teach French should have it, as it shows
exactly what the pupil is deficient in."

ATHENÆUM, 12th August, 1905.

"This is a collection of idiomatic French phrases intended for the guidance of advanced students, and, from its comprehensiveness and the essentially modern character of the language employed, it seems well adapted to that end. The author's suggestion that it ought to be studied in the intervals of actual conversation with French people is sound, and should lead to good results."

SUNDAY TIMES, 6th May, 1906.

"The careful English student of the French language may have mastered its grammar, its syntax, its pronunciation, and its idioms; he may pride himself on being an adept in French conversation, and yet, when in actual intercourse with Frenchmen, he may find himself again and again pulled up by some particular phrase which has a nicety of meaning that he is quite unable to grasp. It is to relieve difficulties of this sort that Mrs. H. P. Sligo de Pothonier has gathered together in a handy little volume a large number of difficult words which are scrupulously indexed and set in sentences that explain their significance. . . . Mrs. de Pothonier's phrase book, which is entitled *Qu'est-ce que cela veut dire?* will serve as a most informing and indeed invaluable guide to students."

"I have read *Qu'est-ce que cela veut dire?* and beg to congratulate you on admirably executed work. My own experience is that Englishmen who are fair French scholars fail chiefly in knowledge of vocabulary and in purity of expression. Your volume will greatly assist them in overcoming these difficulties. Your excellent selection of phrases and idiomatic expressions demonstrates the fact that the more one studies the French language the more apparent is its subtlety and intricacy."—

MALLINSON, 228 Gloucester Terrace, W.

MISTRESSES, thoroughly experienced Languages (abroad) desire Engagements; also MUSIC MISTRESSES, Certificated and experienced. JUNIOR MISTRESSES desire Engagements on mutual terms. Particulars on application to MILLARS', Scholastic Agents, Bath Street, Glasgow.

JUNIOR FRENCH MISTRESS, Protestant, requires a post in January in good School. Educated at the Jersey Ladies' College, and Lycée de Jeunes Filles, Rennes; London Matriculation Certificate and Brevet simple. Highest references. Apply—P. BISSON, Les Fougères, St. John's, Jersey.

A LADY desires Re-engagement as MATRON, in January. Eleven years in a Boys' Preparatory School. Able to assist in teaching Music and elementary subjects.—M. M., 11 Clarence Drive, Harrogate.

POST required as MODERN LANGUAGE MISTRESS. French and German (acquired abroad). Cambridge Higher Local (Honours Certificate, History, History, and Languages). Address—M. B., 95 Lincoln Road, Peterborough.

LADY HOUSEKEEPER requires Post in Girls' School. Well recommended. Churchwoman. Moderate salary. Address—Miss S. A. STONER, 39 Hampton Place, Brighton.

School and Teachers' Advertisements are continued on pages 841, 842, 843, 844, 845, 846, and 847.

Betty, 100,000, Prig, E.J.S., Kamanita, Aliquis, H.J.M.B., Feu-follet, V.A.N., Cottage.

Third Class.—S.G.D., K.C.B., Eulalia, Nessko, F.A.J., Hilly, Rachel, Broom-stick, Bootle's Baby, Rest, Gem, A.W., M.A.K., Excelsior, Caradoc, Bice, Glück auf!, E.M.B., Erin, Alice, Mazurka, Coelebs, Aliena, E.W.H., Viator, Fimbria, Laud, J.P., F.T., Paillet, Scripsi, T.V.D., J.B.A., Saw-See, Calcaria, B.M.R., Dix, St. Padeburga, M.E.E.R., Tête Blanche, Cos ($a+b$), Un Rassade, C.W.M., Hazel Jane, Nil Desperandum, L.E.R., S.A.G., Philologos, Dickie, B.M.D., Cyrano, Carol Ward, Memo, Zilpah, E.M., Megan, Ben Bolt, Emil, V.M.S., Onehouse, Macve, Theta, Peace, E.S., Lilius.

Fourth Class.—Elsie, Felicia, Skylark, Gunhilda, Aiglon, B.E.K., Sweet and Twenty, Atala, Senator, 11,976, G.M.E., G.R.M.C., M.E.P., N.B., Acorn, Wilts, Sorbonne, O.Vacquier.

Fifth Class.—X.Y.Z., Le petit Chose, O.M.K., Occiput, Faido, U.L., Par, Uda, S.L.A., Fille, Mahm, N.O.T., Unco, P.M.R., Lapis, Uvula, Nil, Unguent, R.A.T., Simple.

The main difficulty in translating the Scherer was one of vocabulary. I am not referring to the complaints of competitors who could not find *rassade* in their pocket dictionaries and left the phrase in which it occurred as a quotation or made wild shots at the meaning, but to the half-dozen French words for which there is no exact equivalent, as is proved by the fact that they have been half naturalized in English. It is not possible to prescribe any general rule, and I will deal with them *seriatim* in my comments.

By reason partly of the absence of the context the first sentence was commonly bungled. "There is first a study of style" is ambiguous. Read: "First we have to study our author's style, and this, again, is not a single style." *Coulant de source*: "original" gives the meaning; but why not preserve the metaphor, "straight from the fountain head"? *Des intentions*: "a fixed purpose," or, more freely, "it follows a set plan; it is an echo." *Pastiche*: "imitation" will serve; but *pastiche* has good authority, Swinburne among others. *La phrase ample et flottante*: "the large and liquid utterance of the Greeks" (Keats's phrase will help us here). *Le tour naïf et recherché*: "the exquisite simplicity." *Recherché* combines the two notions of careful search and daintiness. *Il s'exhale*: "his pages are impregnated with a subtle aroma, a blend, as it were, of Plato, &c." Several mistook the *il* for a personal pronoun. *Causeries*: "informal essays" would be the best paraphrase; but it is better to keep the French word, which every one understands and which cannot be accurately rendered.

Sous la syntaxe: "behind." "Is complicated by a lexicological study" is a wooden word for word-rendering which is hardly intelligible; rather "involves an inquiry into the author's use of the dictionary." *Le grain de rassade*: few saw that, unless dictionary words are used in English, the point is lost. "The flashy bezzelled bugle that mocks at the uncut chrysoprase" might serve. *Il est telle partie*: "there are certain parts," not, as prize version, "such a part as this." *Trait*: "strokes of character," or simply "character." *Verve*: "animation," not "imagination," as many.

Four Prizes of Half a Guinea are offered for the following:—

For a Latin Couplet or a French Epigram:—

My dear father used to say to me: "Do you want to get at new ideas? Read old books. Do you want to find old ideas? Read new books."—(Letters of Robert, first Earl of Lytton.)

For Latin Elegiacs:—

Sound, sound the clarion! fill the fife,

To all the sensual world proclaim:

One crowded hour of glorious life

Is worth an age without a name.—(Scott.)

For English Verse:—

Une immense espérance a traversé la terre;

Malgré nous vers le ciel il faut lever les yeux.—(Musset.)

War' nicht das Auge sonnenhaft,

Wie könnten wir das Licht erblicken?

Lebt' nicht in uns des Gottes eigne Kraft,

Wie könnte uns das göttliche entzücken?

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners will be required to send real names for publication.

All competitions must reach the Office by December 16th, addressed "Prize Editor, THE JOURNAL OF EDUCATION, 3 Broadway, Ludgate Hill, E.C."

Those in the First Class are entitled on application to a copy of "Essays in Translation."

Translations sent with an addressed and stamped envelope and six penny postage stamps will be returned corrected. Foreign postage stamps are not accepted.

THE CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

FOUNDED 1828.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.

President—THE BISHOP OF LONDON.

Vice President—THE LORD HARRIS.

Trustees—THE ARCHBISHOP OF CANTERBURY; THE DEAN OF YORK; SIR PAGET BOWMAN, BART.; GEORGE T. BIDDULPH, Esq.

Chairman—THE DEAN OF CANTERBURY.

Deputy-Chairman—SIR PAGET BOWMAN, BART.

Secretary—W. N. NEALE, Esq.

Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE on highly favourable terms to
THE CLERGY AND THEIR RELATIVES.

QUINQUENNIAL BONUS DISTRIBUTION, 1906.

Life Assurance Fund on 31st May, 1906 £4,292,691
Net Liability under Assurance and Annuity Transactions, computed on an extremely stringent basis 3,801,975

SURPLUS £490,716

Out of this Surplus the sum of £490,100 has been divided by way of Bonus, making, with £42,644 already paid as Interim Bonus, a Total Bonus Distribution among the Members of £532,744.

Total Bonuses distributed, £4,256,464.

SPECIMENS OF BONUS ADDITIONS TO A POLICY FOR £1,000 in respect of the 5 years.

WHOLE LIFE POLICY.

Age at Date of Distribution.	Addition to Sum Assured.	Age at Date of Distribution.	Addition to Sum Assured.
30	£77	60	£102
40	84	70	144
50	90	80	215

ENDOWMENT ASSURANCE POLICY. A Uniform Addition of £100 at all ages.

Notwithstanding the lowness of premiums charged, the Society has always declared Bonuses at an exceptionally high rate.

NOTICE.

No Agents employed and no Commission paid for the introduction of business.

Assurances can be readily effected by direct communication with the Office,

IDOLA PULPITORUM. THE PITFALLS OF THE PRACTICAL TEACHER.

II.—CLASSICS.

By H. G. HART, sometime Head Master of Sedbergh.

IN accordance with the plan proposed in *The Journal of Education* for November, the aim of this paper will rather be to point out certain errors commonly noticeable in the teaching of classics than to set forth what may seem to myself the methods most confidently to be recommended.

At the outset I would disclaim any expectation or intention of enlightening the experienced teacher. He has doubtless duly fallen into his pitfalls, and it is to be devoutly hoped that he has extricated himself from them. At any rate, I am not presumptuous enough to level my warnings at his head. I shall be well content if a suggestion of mine here and there may haply confirm a young teacher in some conclusion at which he was himself arriving, or may lead him to realize some mistake into which he was in danger of falling. Many of the errors that will be mentioned are common to the teaching of any subject, but, inasmuch as they seriously affect classical teaching, it would be wrong to exclude all notice of them in this paper.

Grammar.

The first danger that confronts the teacher of Latin or Greek arises from the vast mass of inflexions and rules contained in the grammars of those languages. He is aware that sooner or later his pupils will have to master these details, and, if he is impatient, he will be apt to make too serious demands on their powers of memory from the first. Nowadays, he probably will not adopt the old plan of refusing altogether to allow them to translate until they know the whole grammar; but he may easily go too far in that direction.

Translation.

With regard to translation, I believe that most young boys, if taught brightly and patiently, are inclined to enjoy the task of puzzling out the meaning of a passage; but in the process they need constant help and encouragement to lift them over their difficulties, and this implies that much preparation of translation lessons away from their form master is, in the case of beginners, a great mistake.

Not that all wrestling with difficulties is to be avoided even for young boys, but care should be taken to prevent their coming to a standstill and being disheartened—a frame of mind which leads directly and rapidly to an active dislike of a troublesome and hopeless subject.

The teacher's aim, then, at first will be to provide his pupils as early as possible with an easy Latin or Greek translation book, which, if not exactly thrilling, shall, at any rate, not be dull, and to help them fully to understand it, while he never omits by reference and explanation to apply to their translation the slender knowledge of grammatical forms and rules which they are gradually acquiring in merciful and manageable quantities. By such means he may hope to avoid overburdening the memories of his pupils or reducing them to blank despair.

But, if we ought to help our beginners freely, we must be rigorously strict in requiring them to do their part. To be lax in this respect often means to injure them not only intellectually, but, it may be said without exaggeration, morally. Not long ago I heard a boy translate "Suave salutis causa" by "For the safety of their cause." I looked to see some forcible explosion proceed from the outraged master. There was not even an expostulation. He did not realize the enormity of the crime, and, as long as this blindness continues, his form will suffer grievously.

After the easy translation book, which is generally a collection of short stories, often containing much wit and wisdom, a boy is introduced, as a rule, in Latin to Caesar, and in Greek to Xenophon, and here too frequently the mistake is made of using the author as a *corpus vile* on which to practise the recently mastered rules of grammar, and nothing more. Treated in this way, the histories lose all human interest, and the hapless boy plods over parched and weary wastes, with a growing distaste for classics in his heart, because his master has not, by means of maps and explanations or illustrated editions, led him into the green pastures that all the while were bordering on his track.

But, while he will make the most of Caesar and Xenophon as histories of true human interest, the teacher will be mistaken if he keeps his pupils too long engaged with these authors. He has not now the excuse of forty or fifty years ago. He has a wide choice of selections, through which he can introduce his boys to the easier portions of Livy or Ovid, of Greek plays or Thucydides, and, if he holds them back longer than is necessary in Caesar or Xenophon, he is losing a chance of a rapid and profitable advance.

In the earlier stages of his classical training the boy has necessarily moved slowly, and it has been too common to keep him at the same pace, even when he can make out much of the authors just named. The drag is applied and kept on in the interest of "thoroughness"; but thoroughness, like many other good things, may be overdone, and it is quite possible from the fifth form onwards to read one part of a term's work slowly and with constant regard to grammar and scholarship, while another part is read rapidly, with a view to catching the general drift of the author and acquiring facility in the language. It is not contended that Latin or Greek read thus rapidly will bear the test of an examination; but there can be little doubt that it will do far more than the more deliberate method to stimulate the intelligence of the learners and to engage their interest. If so, it seems to be the duty of every classical teacher in the higher forms of a school which have been accustomed to submit the whole of their classical work to examination to obtain exemption for at least one author from a disabling, not to say paralyzing, tyranny, and to read him for his own sake, not for the sake of an examination.

But in the attempt to read rapidly the most disappointing fact for a classical teacher is the discovery that boys, even in the fifth or lower sixth form, have so astonishingly poor a vocabulary. No weakness in the old system of teaching is more conspicuous than this; and, if the adherents of the oral method of teaching classics, whose voices are beginning to be heard in the land, prove themselves able to do much towards conquering this universal difficulty, the general acceptance of their system is, I believe, only a question of time. Few schools, however, have as yet adopted the new methods, and those who hold back are supported in their hesitation by scientific champions of the old system, who maintain that it is a fallacy to suppose that you can teach a dead and a living language on the same lines. However this may be, a great part of our failure in the past has arisen from our not having recognized the extent and the seriousness of the weakness. Had we done so, we should have devised expedients specially designed to correct it. But in any movement for reform an individual teacher, who has to pass his boys on to a higher form after a term or two, can do little by himself. The whole staff must concentrate attention on the desired end, and act together, and then, whether by constant retranslations from English into the original Latin or Greek, by a systematic but not unmerciful use of a vocabulary, with which all the upper half of the school should be familiar, or by other means, there is no doubt that a great improvement would be speedily effected, and a long step would be taken towards meeting the old taunt that after seven or eight years of classical teaching boys of average ability remain quite unable to understand a straightforward passage of Latin or Greek.

But the stage of reading selections should be reduced to the lowest limits. It may well be defended as affording variety after Caesar and Xenophon, and serving as a stepping stone to the fuller study of more difficult Latin or Greek. Too often, however, the stepping stone is never crossed, and boys leave school without ever having read a solid amount of any single author.

It is in the case of those who do surmount this stage that the heaviest responsibility will be incurred by the teacher. In the lower forms, if earnest and accurate and painstaking, he may often obtain admirable results. With more advanced classes, unless he both loves the work himself and allows his boys to see that he loves it, he cannot hope for any high measure of real success. A man may be an excellent scholar, and may keenly appreciate the beauties of classical literature, yet, if from oversensitiveness he shrinks from displaying his real feeling to a class whom he expects to be unsympathetic, he is doomed to comparative failure. He is not hereby exhorted to be gushing, but only to be natural. Unless he is willing to reveal to his boys what he has in his heart, and on proper occasions to "let himself go," he will never be more than a scholarly teacher; for

he will never inspire them with enthusiasm: in short, he will never give them of his best.

Into the details of the more advanced translation work it is not proposed to enter. The master who is an enthusiast, and is not afraid to show it, will know best what authors he can teach with profit; but a warning already suggested in the case of lower forms may be repeated in connexion with the highest. Here the consequences of carrying thoroughness too far are more than ever to be deplored; for the class can now move more quickly, and the remaining days of school life are growing few and precious. Once more then, and with still more emphasis, I would urge that, while part of the work is read with the utmost care and minuteness, in the rest the aim should be to cover as much ground as the powers of the form allow, and that in this portion no scruple should be felt about dispensing with examinations. The contrary policy is too common, and a sixth form is weakened by being kept too exclusively in leading-strings.

In addition to reading some of their work rapidly in school, I believe that a sixth form should be encouraged to read largely for themselves, as is the practice in some schools. Whether this independent work should be done with a translation or without is a difficult question. For my own part, I should recommend a boy to refer to a translation only when he had really struggled with a passage to no purpose; but to read largely even with a translation is infinitely better than not to read privately at all, which, it must be feared, is too generally the rule.

My last word of warning in connexion with translation lessons is that boys should not be made to translate a passage until they have read over the original. Time, no doubt, is gained by omitting to read it; but the time is dearly bought if the form never hears the sound of the Latin or Greek sentence, nor the pronunciation of the words composing it. Moreover, an unnecessary burden is laid on boys when they are called on to translate without first reading over languages so different in structure from English as Latin and Greek.

Composition.

In the teaching of Latin or Greek prose it is commonly found difficult, especially in the lower part of the school where forms are often large, to see each boy separately about his work. The usual practice is, after marking the exercises, to hand them back to the writers, and then to address some comments to the form at large. But, whatever the difficulty, time should somehow be made for at least a few words with each boy in the class. In the upper forms such individual attention is the rule, and it cannot be omitted in the lower without sacrificing much of the value of the lesson.

In the earlier stages of this work the teacher's course is fairly clear, being almost entirely confined to questions of grammar and phraseology; but, if he extends this simple treatment to the prose, especially the Latin prose, of his advanced pupils, and neglects to show them how to take each long sentence to pieces and to arrange its component parts in due order of logical sequence, he will stop short just where the study acquires its highest intellectual value. His boys may write a series of grammatical sentences, but they will not write anything that deserves the name of prose.

Verse composition, both Latin and Greek, is disappearing with such startling rapidity that it seems hardly worth while to write at any length about it. Every lover of Latin or Greek would be sad to think that the art will be wholly lost, that future ages will never produce a "Sabrinae Corolla" or an "Arundines Cami," that the present roll of brilliant verse writers will dwindle year by year and will not be renewed. Few, however, will lament the prospect of emancipation for the bulk of our versifiers from the bondage of Beaton and Gepp and Penrose and their ingenious brethren. For my own part, while I rejoice that six or more hours a week will no longer be devoted by the dullest and prosiest of boys to such puzzles as screwing a couplet out of such frankly "reconstituted" English as

Or the bear, covered as to limbs with white hair,
Grows threats with unfed mouth,

I hope that the most promising scholars will be encouraged to continue the study on different lines, disregarding the use of verse books, and, after a little preliminary scanning and a few rules and explanations, plunging boldly into the translation of

real English poetry. The laudable practice of giving fair copies of all composition, prose or verse, is nearly universal; but there too often the matter ends. The boys are not always required to learn the copies by heart and inwardly to digest each point in them. Thus, after the expenditure of much time and trouble, a great opportunity is frequently thrown away.

I must not conclude without shortly referring to a number of errors which many years of teaching, and some of school inspecting, have forced on my notice. If the list seems long, I would plead in excuse that, while every profession affords constant opportunities for error, none perhaps provides so large a variety as the profession of teacher.

It will seem possibly too obvious a truism to remark that, if a teacher is to avoid failure, he must have complete control over his form. Yet a very little experience will prove that that complete control is by no means so invariably the rule as might be expected. There are so many ways in which it may be lost, and so many reasons why it may never be gained, that it is worth while to go into the matter in some detail.

The first and most common reason why a teacher does not gain a hold over his class is a simple one: it is because he does not look at them. If he allows himself to be nervous or not quite at his ease, he is apt to look straight in front of him, instead of having his eyes constantly in all parts of the room; or he may be dreamy and fix his gaze on the ceiling or out of the window; or he may be too anxious about marking each question, and turn his attention too frequently to his mark book; or he may forget that when he is ardently engaged with his black-board his form is no longer sitting in front of him; or, worst of all, perhaps (though I hardly venture to hint at such a possibility), he has not always prepared his lesson, and therefore must keep an anxious watch on his Tacitus or his Thucydides instead of being free to fix a kindling eye on the thirty faces before him.

Again, many a teacher forgets that faults or peculiarities of manner may have a distracting or irritating effect on boys. The point is worth attending to, even though the boys' objections are not always reasonable. For instance, I have known a boy complain that he "could not bear Mr. —," or work for him because of his horrid accent." As the poor man happened to be a French master, the criticism, even if it had reached the offender's ear, would not have produced instantaneous reform. Nevertheless, where it is possible to avoid the causes of offence, often trifling in themselves but unreasonably magnified by sensitive or irritable boys, it is a manifest duty to avoid them. To take an instance similar to the absurdity just mentioned, tricks of "humming and hawing," or other forms of hesitation, such as the repetition of two or three words in almost every sentence, are faults capable of producing results upon a form quite out of proportion to their essential turpitude. Again, the habit of perpetually pulling a boy up with some correction or objection, instead of waiting till he has finished translating, is very annoying to some boys and discouraging to others. As a general rule, too, the master who constantly interrupts will find that he has to do all the talking in the lesson, and, what is worse, all the thinking as well.

This last danger—of saving boys from the necessity of thinking—may be incurred by an entirely different method of treatment. If, whenever a boy hesitates, the right word or answer is suggested by the master, no motive or encouragement is left for the boy to use his own brains. Again, when printed notes or plans are liberally supplied to a form, and no pains are taken to see that the form does its part and really studies what is thus provided, a process of spoiling takes place quite as hurtful intellectually as a better known form of spoiling can be in the moral sense.

It is too often assumed that, because the young are proverbially thoughtless and light-hearted, therefore it is not easy to damp their spirits. No reasoning could be more fallacious, and the teacher who should be careless about keeping up the cheerfulness of his class would be throwing away one of his most powerful instruments. No one, of course, ever wishes to rob his boys of their spirits in order to secure their attention or obedience, but many an earnest teacher fails to keep in mind the various ways in which he may depress his form. Were this not the case, we should not, for instance, so constantly meet with dreary teaching. Men would be more keenly alive to the deadening effects of dullness in manner or matter, and would

set themselves to avoid it with the utmost vigilance. Again, they would remember to conceal any despondent feelings of their own regarding things in general, or their form's work in particular, if they realized that few maladies are more infectious among the young than pessimism. And, as they would conceal their mental ailments from their boys, so would they prevent them from suspecting their physical infirmities, their headaches or their weariness, or other similar trials.

But, without actually depressing his form, a man may lose its attention or waste its time in various ways if he is not on the watch. For example, if he habitually speaks indistinctly, the form will insensibly, but surely, relax their keenness; if he makes long pauses between his questions, their interest will flag; if he passes every question from boy to boy with a conscientious "Next," "Next," for each, he may show a scrupulous desire to allot his boys' marks with exact fairness, but he is making a very unscrupulous use of their time, which is far more valuable to them than their marks.

In this connexion it may be observed that, while the "taking of places" seems to me to be too sweepingly condemned by some modern critics, the practice clearly ought to be avoided where it involves the delay of scaling inaccessible desks or squeezing through inconvenient spaces. But when a class stands round a master's desk, or is so seated as to have freedom for movement, the venerable expedient of place-taking appears to be unobjectionable. The form, however, must not be kept standing too long, or the effect on their work and their spirits will be disastrous. I have seen a large class made to stand round the master's desk for three-quarters of an hour, long before the end of which it was evident to every one present (except the master) that interest and power of thought were altogether gone, while discipline and attention were only retained by fear of consequences, and not very effectually retained even under that stimulus.

In all these cases the teaching suffers because the master is not sufficiently alive to the boys' point of view. For a similar reason he may fall into a somewhat different form of error: he may allow his class to repeat phrases without ensuring that they understand them. I confess that it always fills me with alarm to hear a class glibly employ such imposing expressions as "virtual *oratio obliqua*," or "adverbial clause," and the like; and alarm rapidly ripens into suspicion unless the teacher frequently tests the meaning attached to the words by those who use them.

A no less culpable laxness is shown by a master who countenances a slipshod style in translation. He may be an excellent scholar and not wanting in a literary sense; but, if he allows his boys always to translate *peto* by "I seek," *iter* by "a journey," *militēs* by "soldiers," and so forth, he is losing one of the best chances of improving their English and cultivating their taste.

In conclusion, I would urge that the only sure basis of successful teaching is a good understanding between the master and his class. Nowadays such an understanding is no rare thing; but, unfortunately, it does not always exist. Perhaps the boys lose confidence in a master because he will not frankly acknowledge a mistake if he commits one; perhaps they are estranged by a cold and unbending manner, or are irritated by an excess of fault finding. Whatever the cause of the misunderstanding, there is little question that the master is much more frequently to blame for it than the boys, and that "Mea culpa" is a far safer working motto for him than "Quousque tandem?"

I am aware that some of the faults to which I have drawn attention may at first sight appear to be trivial; yet I cannot think that any of them in their consequences can afford to be disregarded. Not a few, as I have already remarked, are met with in almost any branch of teaching; but, since all are incidental to the teaching of classics, I did not feel at liberty to omit them in this article. I will only add that no mistake has been mentioned which I have not either seen committed by others, or, alas! am conscious of having committed myself.

In response to an invitation from the Head Master, on November 7, Mr. Winbolt, of Christ's Hospital, lectured successfully to a large audience of Etonians on the subject of "Latin Hexameter Verse Composition." He carried the war into the enemies' country by delivering his numerous quotations from Virgil in the reformed pronunciation now recommended by the Classical Association.

THE TEACHING OF GEOMETRICAL EXERCISES.*

By CHARLES DAVISON, Sc.D., F.G.S.

NO part of the work of geometrical teaching is so interesting or so difficult to acquire as that of teaching deductions. It is so easy to set deductions that are far too hard for even the brightest members of a class; so difficult to find those which are within, and yet not too much within, the range of the majority. There must, of course, be one or two which all can do, or the lesson would end in discouragement. At the same time, the deductions from which our pupils learn most, as a rule, are not those which they can do, but those which they *can just not do*.

The object of work in deductions is twofold. In the first place, we use them as mere exercises in order to secure a thorough knowledge of the theorems—to enable our pupils to keep their knowledge ready for use. And, secondly and chiefly, the object of deductions is to encourage, so far as may be possible with boys and girls, the process of original thought. It is in this latter respect that geometry possesses so great an advantage as a means of mental training. An incidental advantage is that many theorems are learned in the best possible way—theorems which are worth knowing, but are hardly of sufficient importance to find a place in the text.

Keeping these objects in view, then, our deductions should follow three stages:—(1) They should be the simplest exercises directly on a given proposition, without any construction whatever being required; (2) they should be set on some definite theorem, but should require a simple construction, such as drawing a line; and (3) they should not be set on any definite theorem, and the construction may be more elaborate. Under this heading we have, of course, deductions of every degree of difficulty, from those that may be given after the first term or two's work in theoretical geometry to those which are set in the entrance scholarship and tripos examinations at Cambridge.

How many deductions should be given in one lesson is a matter which can only be determined by experience with each class. If they are merely exercises on the propositions, and if they are done for the same lesson as a new theorem, then one or two will be found sufficient; if a separate lesson is allotted for deductions—and this is by far the best arrangement after the first term or two—then about five will be found a fair allowance.

There is one thing to be remembered in deduction work. In the case of pupils who are below the average of the class, it is quite possible that they may work hard for some time without seeing the least light on a question; there may not be more than one or two simple methods of solution, and they may be on the wrong lines altogether. The difficulty may be met in two ways, either of which is worth trying. One or two more deductions may be given than are required, so that some little choice is allowed; or an easy alternative deduction may be offered for those who fail to do the harder ones.

At any rate, it is well as a general rule to insist that in the case of failure all attempts should be shown up. Possibly the attempts may not be absolutely worthless; they may stop short of success by only one or two steps; but when the remainder of such an incomplete solution is suggested more is learned by the failure than by many a correct solution. From the teacher's point of view these attempts are useful: they show whether a real effort has been made to solve the question, and the teacher himself learns by studying the roads to failure.

Should any help be given in the solution of deductions? The answer depends entirely on the nature of the help desired. If a pupil brings up a solution and asks if it is correct, the answer should without doubt be a refusal. One of the chief uses of a deduction is to compel a boy to form his own chain of reasoning, to make sure that each step follows from what has gone before, and refers only to well recognized theorems which have been proved already. Unless the author of a proof has confidence in its accuracy, it possesses little value for him.

It is, however, a good plan in the case of a difficult deduction to note the various ways in which it is being attacked. If it is obvious that, after some fair trial, no one is anywhere near the

right road, then some help might be given with advantage. It need not take the form of an actual hint. It will generally be found that the failure is due to the whole or partial neglect of some statement in the enunciation. A good deduction should contain no superfluous statement, and therefore everything given in it must at some time or other be used in the proof. It will often be found to be quite sufficient hint to point out which statements have been used and which have been neglected.

Typical Exercises.

In the first lessons a few easy deductions must be worked before the class, in the nature of type examples, to explain what is to be done and how the problem is to be attacked. As an introduction to all those on the first proposition (Euc. I. 13), the best example is, perhaps, to prove that: If two angles BAC , QPR are equal and if BA , QP are produced to D and S respectively, then the angles CAD , RPS are equal. It forms an easy introduction to those which are usually given, such as: If in a triangle the angles B , C are equal, and if BC is produced both ways, or if the sides AB , AC are produced, then the exterior angles so formed are equal.

As a typical exercise on the second proposition (Euc. I. 14), the following might be worked:—From a point O in the straight line AB two straight lines, OC , OD , are drawn on opposite sides of AB so that the angles AOC , BOD are equal: to prove that COD is a straight line. The lines OC , OD should be drawn as dotted lines; otherwise beginners are apt to assume that COD is a straight line.

It will be noticed that both of these exercises are of importance in themselves. The first is to prove that the supplements of equal angles are equal; the second is the converse of Euc. I. 15. Indeed, it is a good plan to give as type examples, whenever possible, either discarded theorems in Euclid or propositions which just fall short of inclusion in the text. If they are copied and kept for reference, they may thus be made to serve two purposes. For instance, Euc. I. 21 may usefully come in twice: the first time as an example on Euc. I. 16, to prove that, if O be a point inside a triangle ABC , the angle BOC is greater than the angle BAC ; and, later on, as an example on Euc. I. 20, to prove that the sum of BO , OC is less than the sum of BA , AC .

As a rule, typical exercises need only be given at the very beginning, or when some new group of problems is to be attacked, such as locus problems or difficult problems of construction.

The Best Deductions to set.

All good modern text-books contain a large store of exercises, far more than can ever be worked in class. A selection must be made, and they should be chosen not at random, but so as to satisfy certain definite tests.

(1) The results should be interesting. No theorems are so well remembered as those of which we have discovered the proofs ourselves; and the deductions should therefore be chosen so as to include as far as possible those theorems or problems which are of value in themselves—such, for instance, as the theorem that a straight line drawn through the intersection of the diagonals of a parallelogram bisects the parallelogram, or the problem of bisecting a triangle by a straight line drawn through a point in one of its sides.

(2) They should involve the use of different theorems. Some theorems are followed by a large number of good exercises, others by very few, and the latter are in danger of being so little used that they become forgotten. While the larger number of deductions would naturally be set on the important theorems, attention should frequently be drawn to those on the neglected propositions. The inequality theorems (Euc. I. 24 and 25) belong to this group, and for the mere sake of exercise in them there is use in such a deduction as: ABC is a triangle in which AB is greater than AC ; if P be any point in the median through A , then PB is greater than PC .

(3) But, above all, deductions should, if possible, admit of more than one solution; while those which possess only one simple solution should be avoided, at any rate at any early stage. As an example of the first class we might take the exercise: ABC is a triangle, and the side BC is produced to D , so that CD is equal to AB : to prove that AD is greater than BC , which may be done either by Euc. I. 20 or by Euc. I. 24.

An example of the second class is: Any two sides of a triangle are together greater than twice the median drawn to

* The substance of a lecture delivered to the candidates for the Secondary Teachers' Diploma in the University of Birmingham, on May 23, 1906.

the third side. Here, there is only one simple solution, depending on Euc. I. 4 and 20. The theorem is merely unsuitable at an early stage, and should certainly, on account of its importance, be given later. One reason for avoiding such a deduction at first is that, if there are two or more roads to the desired end, there is a greater chance of one of them being discovered. Another is that in solving the deductions at the next lesson in class it is often useful to give not only what seems to be the best solution, but others suggested by different members of the class. It is well to look at a problem from many points of view, and it shows our pupils that their work may be of value, but, nevertheless, may admit of improvement.

(4) Occasionally a problem which can be solved in more than one way may be made to throw light on different but connected theorems; or two or more problems may be set together so as to employ each of a group of propositions, such as the different theorems on the congruence of triangles or the different tests of parallelism of lines. Illustrations of these groups of exercises will be given in the next section.

Solutions of Deductions.

I propose now to give a few solutions of deductions, partly to show how they may be attacked, but chiefly to illustrate the mode of drawing lessons from those which have previously been given for work in class.

Example 1.— ABC is a triangle, in which $AB = AC$; the angles B, C are bisected by straight lines meeting in O . Prove that $OB = OC$ is an isosceles triangle.

The two facts we are given are: (1) that $AB = AC$, (2) that OB, OC bisect the angles ABC, ACB . Both of these facts must be used, and we may feel sure that any attempt which omits one of them must be wrong. Now, to prove that $OB = OC$, we may employ one of two tests. We may show either (1) that $\angle OBC = \angle OCB$, or (2) that OB, OC form corresponding sides of two congruent triangles. Let us take each method in turn.

(1) (Fig. 1.) We are given that $AB = AC$. From this we know that $\angle ABC = \angle ACB$. Then, from the fact that OB, OC are

Fig. 1.

Fig. 2.

bisectors of the angles ABC, ACB , we know that $\angle OBC = \frac{1}{2} \angle ABC$ and $\angle OCB = \frac{1}{2} \angle ACB$. But halves of equal things are equal, and thus $\angle OBC = \angle OCB$, and therefore $OB = OC$. In class these steps would be plotted out by a series of questions, and the class might then be told to write out the solution in proper form.

(2) (Fig. 2.) A second method that is sure to be suggested by some member of the class is to join OA , so as to obtain two triangles of which OB, OC are corresponding sides. It would be well to follow out the suggestion. Asking what elements of the two triangles are known to be equal, we shall be told that side $AB =$ side AC , side AO is common, $\angle ABO = \angle ACO$; therefore the triangles ABO, ACO are congruent, and therefore $OB = OC$. This leads at once to the detection of one of the commonest errors in deductions, and some one is sure to point out that ABO, ACO are not the angles included between the pairs of equal sides. More, however, is learned by the mistake being actually made than by the teacher in the first place warning the class of the pitfall.

Retracing our steps, it should be asked what are the angles included by the pairs of equal sides, and then, if we know that, these angles BAO, CAO are equal. It will be recognized that this is not the case, but that we can prove that they are equal as soon as we have shown that $OB = OC$. For in the tri-

angles ABO, ACO the elements we now know to be equal are side $AB =$ side AC , side $OB =$ side OC , and side AO common: thus the triangles are congruent, and therefore

$$\angle BAO = \angle CAO.$$

Or, again, we might take the elements: side $AB =$ side AC , side $OB =$ side OC , and included angles ABO, ACO equal, and thus the triangles are again shown to be congruent.

Example 2 (Fig. 3).—If the perpendiculars drawn from two

Fig. 3.

angular points of a triangle to the opposite sides be equal, the triangle is isosceles.

We are given (1) that BE is perpendicular to AC and CF to AB , and (2) that $BE = CF$. To prove that the triangle is isosceles, we may prove (1), directly, that $AB = AC$; or (2), indirectly, that $\angle ABC = \angle ACB$. For these purposes, we have two pairs of triangles available—either the triangles ABE, ACF or the triangles BEC, BFC . Let us take each pair in turn.

(1) In the triangles ABE, ACF what elements have we equal? Side $BE =$ side CF , right $\angle AEB =$ right $\angle AFC$, also $\angle BAC$ common; therefore the triangles ABE, ACF are congruent, and therefore $AB = AC$.

(2) In the triangles BEC, BFC we have hypot. BC common, side $BE =$ side CF , and angles BEC, BFC are right angles; therefore the triangles BEC, BFC are congruent; therefore $\angle BCE = \angle CBF$, and therefore $AB = AC$.

It will be noticed in working these two exercises that we have used the four principal cases in which two triangles are congruent, and at this stage they should all be summarized. In fact, the two exercises may be taken as a lesson on the congruence of triangles. In the extension of the first exercise we have used two tests—(1) the three sides, (2) two sides and the included angle. In the second exercise we have used (3) two angles and a corresponding side, and (4) the hypotenuse and a side of two right-angled triangles. A common mistake in writing out the last case may be pointed out (after it is made)—namely, writing “right $\angle BEC =$ right $\angle BFC$,” instead of “angles BEC, BFC are right angles”; for the test depends on the angles being right angles, and not on their equality as right angles.

Example 3.— E, F are the mid-points of the sides AC, AB of a triangle ABC : to prove that FE is parallel to BC and equal to $\frac{1}{2}BC$.

In many modern books this is given as a proposition; but, if it should be set as a deduction, it will probably be found advisable to give the construction in outline in order to bring the exercise within the powers of most classes. The simplest

Fig. 4.

construction is, perhaps, to join FE and produce it to G so that $EG = FE$, and join GC . It is then not very difficult to prove the congruence of the triangles AEF, CEG , giving $CG = AF$ and $\angle ECG = \angle EAF$, from which it results that CG is equal and parallel to AF , and therefore to FB , and

hence that FG is equal and parallel to BC , or FE parallel to BC and equal to $\frac{1}{2}BC$.

It is worth while noticing another proof, depending on Euc. I. 39. Joining BE and CF , it may be shown that each of the triangles BEC , BFC is equal in area to half the triangle ABC , and therefore that FE is parallel to BC . Then, by bisecting BC in D , it may be shown in the same way that ED is parallel to AB ; so that $BFED$ is a parallelogram, and FE therefore equal to BD or $\frac{1}{2}BC$.

It may then be pointed out that these two proofs make use of the three principal tests of the parallelism of two straight lines, the first employing those contained in Euc. I. 27 and 33, and the second that in Euc. I. 39.

Example 4.—The straight lines which bisect the angles of a parallelogram enclose a rectangle.

Fig. 5.

We have to make use of two facts: (1) that the opposite sides of a parallelogram are parallel; and (2) that AP , BQ , CR , DR bisect the angles of the parallelogram.

First Solution.—Since AB is parallel to DC , therefore $\angle BAD + \angle CDA = 2$ right angles. Since AP , BQ bisect the angles BAD , ADC , therefore $\angle SAD + \angle SDA =$ a right angle; therefore $\angle ASD$ is a right angle, and similarly for the other angles of the figure $PSRQ$; therefore $PSRQ$ is a rectangle.

Second Solution.—Since $ABCD$ is a parallelogram, therefore $\angle ABC = \angle ADC$, and $ADS = \frac{1}{2}\angle ADC$, $AQ = \frac{1}{2}\angle ABC$. But $\angle AGD = \angle GDC = \frac{1}{2}\angle ADC$; therefore $\angle AGD = \angle ABP$; therefore BP is parallel to DR . Similarly, AP is parallel to CR . Thus, $PSRQ$ is a parallelogram, and, as before, it may be shown that it is a rectangle.

It might be pointed out that the first solution is better than the second, because in the latter it is necessary to prove, after all, that one of the angles P , Q , R , S is a right angle.

Among the different figures that are drawn for this exercise it will probably be found that in some all four angular points of the rectangle $PSRQ$ lie inside the parallelogram $ABCD$; in others one pair of opposite angular points lie outside the parallelogram, while in one or two the parallelogram $ABCD$ may be drawn with its adjacent sides so nearly equal that the bisectors of opposite angles are almost collinear. It may be interesting to notice the different cases that may occur.

Since $\angle DEA = \angle BAE = \angle DAE$, we have $DE = DA$, and, similarly, $CF = CB$. Thus, if CD is greater than twice AD , P lies outside the parallelogram; if CD is equal to twice AD , P lies on CD ; if CD is less than twice AD , P lies inside the parallelogram. Now, starting with CD greater than twice AD , let CD gradually diminish; then P , from being outside the parallelogram, lies on the side AB , and then inside the parallelogram. Finally, when $DC = DE = AD$, the parallelogram becomes a rhombus, the bisectors of opposite angles are collinear, and the rectangle $PSRQ$ becomes a point, or, rather, a point-rectangle.

Example 5.— A and B are two points on opposite sides of a straight line CD : to find a point P in CD such that the angles APC , BPC may be equal.

A problem of this kind introduces us to the most general method of solving problems of construction. In this case we suppose P to be the required point, such that $\angle APC = \angle BPC$. Then we see that, if we draw BE perpendicular to CD and produce it to meet AP in F , $BE = EF$. Hence the construction: Draw BE perpendicular to CD and produce it to F so that $EF = BE$. Join AF and produce it to meet CD in P , and join PB .

It should be noticed that the problem may be possible, inde-

terminate, or impossible, according to the positions of A and B with respect to CD . (1) If CD bisects AB at right angles, every point in CD is such that $\angle APC = \angle BPC$, and the problem is indeterminate. (2) If A and B are equally distant

Fig. 6.

from CD , and AB not perpendicular to CD , then EF is equal and parallel to the perpendicular from A to CD , and therefore AF is parallel to CD , and the problem is impossible. In all other cases the problem is possible.

Common Errors in working Geometrical Deductions.

In working geometrical exercises the errors generally fall into several well defined classes: (1) unnecessary steps are given, and previous propositions are sometimes proved; (2) the meaning of terms is misunderstood; (3) mistakes are made in applying propositions; and (4) the conclusion to be proved is assumed in a more or less veiled manner.

(1) Unnecessary steps are given as a rule only by beginners, and they generally arise from the pupil trying to copy methods of proof in the book too closely. In other words, they show a want of independence of thought, which soon passes away. For example: "A triangle ABC has the angles B , C equal, and DE is drawn parallel to BC to meet the sides in DE : to prove that the angles ADE , AED are equal." The proof is frequently given as follows:—

Since AB meets the parallel lines DE , BC , therefore $\angle ADE = \angle B$. Since AC meets the parallel lines DE , BC , therefore $\angle AED = \angle C$; therefore $\angle ADE + \angle B = \angle AED + \angle C$.* Now $\angle B = \angle C$; therefore $\angle ADE = \angle AED$.

Fig. 7.

Fig. 8.

The statement marked with an asterisk is of course unnecessary, and is also incorrect, and its insertion is probably due to a recollection of the proof of Euc. I. 15.

(2) Mistakes in understanding terms are also given only by beginners, and they also soon disappear. The commonest mistake of the kind is with respect to the distance of a point from a straight line. In the exercise "Any point on the bisector of an angle is equidistant from the arms of the angle" the usual mistake is to cut off equal parts AH , AK from AB , AC , and then prove that $PH = PK$.

(3) Mistakes in applying theorems are sometimes made after the initial stage, and they almost invariably occur in applying two propositions. The first is that triangles are assumed to be congruent when two sides and the angle opposite one of them are equal, an instance of which has been given already. The second case occurs in applying the inequality theorems (Euc. I. 18, 19), and arises from the pupil not understanding that the two sides or two angles must belong to the same triangle.

In the exercise " BC , the base of an isosceles triangle ABC , is produced to any point F : show that AF is greater than either of the equal sides" the solution given runs: $\angle ACF > \angle ABC$; therefore $\angle ACF > \angle ACB$; therefore $AF > AB$. The mistake may be guarded against by always requiring at first the triangle in which the two angles occur to be named: for example, "In the triangle ABF , $\angle ABF > \angle AFB$; therefore $AF > AB$."

(4) The fourth mistake of assuming the conclusion is also to be found at a somewhat advanced stage. Lines obviously equal in a figure (and really so) are assumed to be equal without

Fig. 9.

Fig. 10.

proof; a line is drawn and assumed without proof to pass through a particular point; or lines are assumed to be in a straight line when their collinearity ought to be proved. The remedy in these cases is to insist that a quadrilateral should never be drawn as a parallelogram, or a parallelogram as a rhombus; that when a point is to be taken in a line it should not be taken near the mid-point; or that when two straight lines are to be shown collinear they should be drawn as dotted lines, &c. Rather a common mistake occurs in the exercise "To prove that each of the angles at the base of an isosceles triangle is an acute angle." The construction is sometimes given: "Draw BE , CF perpendiculars at B , C to BC ; then $\angle ABC < \angle EBC$, and therefore $\angle ABC$ is acute."

It will be found, I think, that these errors seldom, if ever, occur at all frequently in any one class. They are generally due to misapprehension on the parts of individual pupils. Mistakes of the first and second classes, as already mentioned, soon disappear. Those of the third and fourth classes—of misapplying theorems and assuming the conclusion—are best corrected by putting such faulty work on the black-board, and turning the whole class on to discover the mistake. Not infrequently the boy who made the mistake is the first to find it out.

The study of errors and failures seems to me of great use to the teacher. It shows him, in the first place, the points in which his explanations may have been deficient or lacking in clearness; but the chief advantage is that it provides an ever-present interest in teaching. To observe the different ways in which different pupils look at the same old difficulties is one way of avoiding the fatal defect of staleness. Another and equally effective method is to keep in sympathy with our pupils' first efforts at original thought by continuing our own efforts in the same direction, either by frequently working at the harder riders in scholarship and Tripos papers, or by endeavouring to discover for ourselves some of the endless, if already known, properties of the triangle, circle, and parallelogram.

PUBLIC SCHOOLS AND THE TRAINING OF ENGINEERS.

DURING the last few years two opposing forces have been at work in determining the course pursued by those who choose engineering for their profession. On the one hand there is a growing appreciation of theory, or, more accurately, systematized knowledge of principles, by those engaged in practical engineering; and on the other hand there is the impatience of the modern British parent to see his son earning a living somehow or other as soon as he has left school.

These two tendencies are both natural products of the struggle for existence, but they are utterly antagonistic, and I propose to discuss which should give way to the other in the interests of the country, of the profession, of the budding member, and even of his parent.

As every year sees competition growing keener and keener and margins of profit reduced, the manufacturing engineer has to call in science to help him to produce something better (or as good and cheaper) than his rivals, and the amount of thought and systematic experiment now devoted to some small improvement would stagger most engineers of thirty years ago. It is therefore highly important that the modern British parent should realize that engineering is not a trade that he can lightly put his son to when other openings are closed, but that it is a profession which is becoming more exacting, with, perhaps, even greater rapidity, than the medical. And, if there is one person whose business it is to realize this fact, and to impress it on the parent, it is the schoolmaster, and particularly the head master. The parent does what everybody does, even head masters and engineers—he tries to get his result as quickly and cheaply as he can in reason. The result for him is a son beginning to get his foot on the ladder. He knows little of the exactions of the profession later on, and to him it seems the earlier the start the earlier must come all the steps of promotion. We hold it is for the schoolmaster to study the requirements of the profession, to form his opinion as to how they are to be met, and to act according to his convictions, instead of yielding to the parent's ignorance and letting him live in a fool's paradise as to his son's equipment and prospects, to be rudely awakened when it is too late to start afresh.

It is becoming generally accepted that an engineer's training should include some years in works and some years at a technical college. The report recently published by the Institution of Civil Engineers (see also *Nineteenth Century* for June, 1906) recommends that a boy leave school at seventeen, spending one year in shops chiefly learning "men," then three to four years at college, followed by two to three more in shops or on works of construction, to be "ready for a job" at twenty-four—a total training of seven years after leaving school. During this period—nearly a third of his life up to date—the apprentice in the shops is working at his trade nine and a half hours a day, and, we hope, two hours on some evenings; and the student at the college devotes six to six and a half hours to lectures, class-room, and laboratory, and, we hope, two to three hours in the evening. Does it not seem positively inhuman to work boys at such pressure that they can be turned out of school at eighteen fit to compete with the products of this normal training (the professed aim of at least one public school), and does it not seem unfair for those who know—or who should make it their business to know—to allow parents to believe that the average boy will have an average chance in the coming race?

What is the function of the course through the shops of a factory? To teach the use of tools? Partly, but much more to show how they may be used; to breed a familiarity with materials, with the tools (including machines) used upon them and the processes they are subjected to, with the ways and character, intelligence and reliability of the men using these tools, with the organization of men and ordering of processes, and to breed a sense of how in nearly every detail the time factor is the governing consideration in practical work, *i.e.*, money-making. This catalogue, if accepted, should show that a school workshop could as easily replace the real thing if it turned out its models in cardboard, which would be cheaper, and far more delightfully sticky.

And, above all, nothing can replace the rubbing shoulders with the British mechanic and the getting to know something of the sterling qualities and high moral character of a gentleman—every inch of him—who keeps a wife and family "respectably" on 30s. a week, and who, as an associate, is often vastly the superior of the boy lately freed from the restraint of a public school.

What is the function of the college course? In the first place, to breed an intimate sense that theory is *not* different from practice, still less something more complex and "high-falutin'," but it is on the contrary only a small part of practice, or separation of the more essential parts of actual things and conditions from obscuring details, so that the bearing of each part upon the whole can be examined and judged of: it should

be the aim of this teaching to deal quantitatively with its facts from the very outset, and so cultivate the sense of proportion. The college course should, from first to last, be a training in how to think, how to keep simple principles steadily before the mind, how in investigation to look for them in actual complex conditions, how to follow a line of definite inquiry through a maze of distracting unexpected facts, or how, in design, to see to it that certain chosen principles are observed, and definite features essential for the end in view are retained while sundry minor considerations which press in from all sides clamouring for places in the scheme are weighed and rejected if found incompatible.

The college course is the greatest opportunity the engineer ever has of setting his mind in order under the guidance of men who know what that means. It is much more important to use it for constructing and classifying the mental pigeon-holes—or, if we are to be up to date, the card indexes—than for filling them with data. Data are of to-day only, obsolete to-morrow; whilst methods of using and of discarding them are good for all time. To teach scientific method should be the first aim of the technical college, and it should show that scientific method can be pursued in mathematical work on paper, in arranging and using apparatus in a laboratory, in sorting the facts obtained and in drawing conclusions from them, and in that detailed discussion of actual works and designs by a professor in touch with his profession, which gives such value to the third-year and "post-graduate" courses.

This should be the first aim of the college—and the last. It is more than enough. If the college sends its students forth filled with questions, definite questions, knowing why they ask them, and what they want to do with the answers, these answers will soon be obtained in practical engineering if the data exist at all, and the answers will be those of to-day rather than of ten to twenty years back. The college course is all too short to make the most of its special advantages in men and apparatus to this end; yet in the college of to-day a large portion of the space, of the time table, and of the salary list is devoted to the elementary mathematics, elementary physics and chemistry, and geometrical and machine drawing, which do not utilize the college "specialities," and which could be just as well taught thoroughly at school if the time available were not partly spent in leaping over several stages, and shirking the so-called dull drudgery, in order to play with real live engines, so as to "stimulate the interest" of the boys, and lead their parents to believe they are getting a professional training.

At leading colleges in this country, most of which are on the scale of one department of a representative German or American institution, an entrance examination is required, presupposing one or two years' work at science alone. In the engineering department of such a higher college surveying and work with an experimental engine are not reached until the third year, when a whole day is needed for obtaining the data, and a second for working out the results. When such facts are fairly looked at it must surely be obvious that where public schools indulge themselves in such advanced luxuries they must be shirking the drier part they are perfectly fitted to teach in favour of the pleasanter part which they can really do little more than play at, and herein are not doing quite fairly by the parents. We repeat that the parent has a right to look to the schoolmaster for some guidance in the matter, and head masters should make themselves familiar with the exacting demands of the profession. The father of many is torn between the desire for immediate relief, such as the earning of a salary at eighteen would afford, and the wish that his son's future promotion should be as rapid as the start is early. It is the head master's business to know and preach that these two desires are in direct antagonism; that the opportunities of the shops and college period will never recur; and that against a delay in starting wage earning from eighteen to twenty-four he should set the probability of that salary doubling itself every ten years, instead of remaining at the bare living wage of the man who starts prematurely on work for which he is as yet unfitted, and whose whole energies are directed not to the improvement of his position, but to the struggle for keeping it.

For the case where no wait is possible the worker has to be a student in the evening if he is to "improve his position." He must try and learn in the course of years of attendance at evening classes what his more fortunate brother acquires by daylight. But, to our thinking, the preparation by the

schoolmaster should be just as careful and discriminating in this case. The progress at evening classes will be slower than that at day classes, and few subjects may be touched, but that is no reason whatever why the grounding in that which schools can best teach should be more perfunctory; and, if it is difficult and wasteful in day classes to go over the work which has been shirked by the schoolmaster, the difficulty, waste, and discouragement resulting from having to do so in evening classes of two hours at the end of a long and tiring day are far greater. The schoolmaster is the man to force fresh boys through the drier subjects, and he should leave to his colleague of the evening classes all he can of the more interesting and varied experimental novelties with which to capture the attention of tired pupils who come to learn thirteen or fourteen hours after they begin to work in the morning.

GUY E. LLOYD.

THE TEACHERS' GUILD OF GREAT BRITAIN AND IRELAND.

[By a resolution of the Council, of June 19, 1884, "The Journal of Education" was adopted as the medium of communication among members of the Teachers' Guild; but the "Journal" is in no other sense the organ of the Guild, nor is the Guild in any way responsible for the opinions expressed therein.]

The Council met on November 1. Present: the Rev. H. Wesley Dennis (Chairman), Mr. Bowen, Miss H. Busk, Mr. R. F. Charles, Miss Cocking, Mr. C. Granville, Mr. J. N. Hetherington, Mr. Kahn, Miss Kyle, Prof. Lyde (Glasgow Branch), Mr. A. Trice-Martin, Mr. Nesbitt, Miss Newton, Miss Penstone, Miss E. L. Potter (Brighton Branch), Miss K. Stevens, Mr. Storr, and Miss Tullis.

Seven applicants for membership were elected, viz.: Central Guild, 4; Bath and East Somerset Branch, 3.

The General Secretary submitted a circular letter which he, as Acting Secretary of the Provisional Committee for the proposed General Education Congress, had been instructed to send out widely among educational associations in England and Wales. The letter runs as follows:—

PROPOSED GENERAL EDUCATION CONGRESS.

DEAR SIR,—On May 17, 1906, representatives appointed by fourteen of the chief associations of teachers in England and Wales—viz., the College of Preceptors, the National Union of Teachers, the Teachers' Guild, the Training College Association, the Private Schools Association, the National Association of Head Teachers, the Froebel Society, the Assistant Masters' Association, the Association of Assistant Mistresses, the National Federation of Assistant Teachers, the Federation of Teachers in Pupil Teachers' Central Classes, the Mathematical Association, the Modern Language Association, and the Geographical Association (the Head Masters' Conference had appointed representatives, but none of them were present) met in the offices of the National Society at Westminster to consider the desirability of establishing a General Education Congress. After careful discussion, the representatives agreed to the following resolution:—"That, in the opinion of this meeting, it is desirable that a General Education Congress be established for the discussion of purely educational subjects."

The representatives undertook to submit this resolution to their respective executives, and to invite them to appoint representatives to attend a meeting or meetings of a Provisional Committee which should carry the matter further and settle a draft scheme for such a Congress.

The Provisional Committee (on which the Head Masters' Conference was personally represented) met on September 27, 1906, and agreed that it was desirable to hold a General Education Congress in London in the month of January; and they further agreed to send out widely to educational associations in England and Wales the following questions, which you are now requested to lay before your executive:—

(1) Does your Association think that the establishment of a General Education Congress is desirable (the Congress, if successful, to be repeated annually)? (2) Is your Association prepared to support such a Congress (a) by nominating a representative to a Joint Committee for the Congress; (b) by circulating information (full programme, &c.) about the Congress among all its members; (c) by endeavouring to arrange its Annual General Meeting in connexion with the Congress; (d) by contributing to the expenses of the Congress if required to do so (see last paragraph of scheme)? (3) If January does not seem suitable, what alternative period or periods of the year does your Association suggest?

It was fully recognized by the Committee that it will not be possible to organize such a Congress for the Christmas holiday, 1906-7.

I subjoin a copy of the scheme for such a Congress which was approved by the Committee. It should be understood that this scheme is put forward merely as a general outline of the sort of meeting which is in contemplation by the Committee. Any criticisms of the scheme

will be welcome. Please send me the reply of your executive before November 17, if possible; otherwise, directly after its next meeting.—I am, dear Sir, yours faithfully,

HERRBERT B. GARROD.

[The Scheme for the Congress was appended to the letter.]

The Council answered all the questions under heads 1 and 2 of the letter in the affirmative. To Question 3 they answered that the first ten days of January appeared to them the best period of the year for holding such a Congress.

It was agreed, subject to her consent, to appoint Miss C. von Wyss, of the London Day Training College, as the representative of the Guild on the Executive Organizing Committee of the Third International Congress for the Development of Drawing and Art Teaching.

The question of providing a fund to meet the cost of dilapidation repairs on the expiration of the lease of the Offices of the Guild at Michaelmas, 1911, was referred to the Finance Committee.

The Political Committee reported that, under the powers given to them by the Council at their last sitting, they had drawn up and forwarded to the President of the Board of Education the following memorandum:—

TO THE RIGHT HONOURABLE THE PRESIDENT OF THE BOARD OF EDUCATION.

SIR,—The Council of the Teachers' Guild are encouraged by your letter of July 17, 1906, to Mr. T. B. Napier, and by your answer to a question asked by Lord Balcarras in the House of Commons on July 30, to hope that you will be ready to accord a full consideration to their views on the subject of the Register of Teachers, both as to what should be its character and as to how it should be kept.

They recognize, of course, that they cannot look for any definite pronouncement on the subject from you until the clause of the Education Bill abolishing the present Register has become law, but are anxious, meanwhile, to put before you what they believe to be the best solution of the present difficulty.

They have already sent you their own scheme for a comprehensive Register, and their criticisms of the "Memorandum on the Registration of Teachers and the Abolition of the Register" issued by your Board, and can understand the dissatisfaction of the Board with the present Register. They are anxious, however, in common with many other associations of teachers, that, should that Register be abolished, a new one should be speedily established, which, in your own words, "must be satisfactory to the teaching profession as a whole," and must, therefore, not classify teachers according to the grade of school in which they have been teaching. It should also have as its leading characteristics (1) the fullest guarantee of professional preparation; (2) the requirements of an academic standard as high as possible.

Such a Register, they hold, would be best kept by a statutory Educational Council on the lines laid down by the Royal Commission on Secondary Education, whose Chairman is a member of the present Cabinet.

The establishment of an Educational Council seems to them to be likely to afford the best means for the creation of a real profession of teaching; and, if constituted as the Royal Commission proposed, with a proportion of members elected by the whole body of recognized teachers, it is bound to supply a fresh motive for registration. Teachers would thus obtain some real influence over matters affecting their qualifications and status, and, through such a Council, might hope that delicate professional questions might be satisfactorily adjusted. To it all the work of the present Consultative Committee would also naturally be entrusted. The fact that material considerations will probably never attract the best talent of the country to the profession of teaching makes it, in the opinion of our Council, all the more important that its dignity and status should be scrupulously guarded, and it is only through such a policy that they can see any prospect of an adequate supply of teachers in the future.

They desire at this juncture to lay their views on this subject more fully before you, and to have an opportunity of answering objections that may be raised. They therefore hope that you will consent, at your earliest convenience, to receive a deputation from them.—We are, Sir, yours very faithfully,

ALEX HILL; H. WESLEY DENNIS; FRANCIS STORR.

The memorandum had been acknowledged, and the decision as to the reception of a deputation had been held over. The General Secretary was instructed to ask that the Guild be heard informally if a deputation should be refused.

On the report of the Finance Committee, bringing up, among other things, an estimate of receipts and expenditure to the end of 1906, and a sketch of the balance sheet of 1906, it was decided, in order that a better percentage of capitation payments to reported numerical strength among the Branches should be realized, to send down to Branches a decision of the Bath and East Somerset Branch that the publications of the Guild should not be distributed to members whose subscriptions should not have been paid before March 31 in any year, with the expression of the cordial approval of this rule by the Council.

The reports of the Organizing Committee and of the Modern Languages Holiday Courses Committee were received and adopted. The latter of these showed that 146 students had attended the courses

at Tours, Honfleur, and Neuwied in 1906, and that a substantial balance remained in hand after all expenses had been met.

On the report of the Education and Library Committee it was decided to hold an Educational Conference in January next, the detailed arrangements being left to the Committee to work out. The present state of these arrangements is as follows:—

The Conference will occupy three sittings—on Friday, January 11, 1907, 2 to 5 p.m., and on Saturday, January 12, 10 a.m. to 1 p.m. and 2 to 5 p.m., in the Lecture Hall, College of Preceptors, Bloomsbury Square, London, W.C. The subject for discussion on the 11th will be "Health in Schools," under the following heads:—(1) The Need and Opportunity for Systematic Observations and Records in English Schools; (2) Suggestions as to the Teaching of the Principles of Hygiene. Miss Alice Ravenhill, F.R.San.I., will open the discussion under both heads. Miss N. C. Barker will join in opening the discussion on (2). The name of the seconder of (1) cannot yet be announced.

On the 12th the subject will be "Elementary, Higher Elementary, and Secondary Schools," under the following heads:—(1) The Functions of the Elementary, Higher Elementary, and Secondary Schools; (2) The Differentiation, in point of Curriculum, of Higher Elementary from Secondary Schools; (3) The Passage of Pupils from Elementary Schools to (a) Higher Elementary Schools, (b) Secondary Schools.

Mr. Marshall Jackman, Head Master of the Faraday Street Council School, Walworth, a past President of the National Union of Teachers, and another speaker, will open the discussion on No. 1; Mrs. Bryant, D.Sc., LL.D., Head Mistress of the North London Collegiate School, and another speaker, will open the discussion on No. 2; and Mr. Rowland Jones, Head Master of North End County School, Hampstead, and Miss E. E. Kyle, B.A., Vice-Principal of the Home and Colonial Training College, Highbury Hill, will open the discussion on No. 3.

Admission to the meetings will be free to members of the Teachers' Guild and its allied societies, and to members of the College of Preceptors. Tickets of admission will be required. They can be obtained by writing to the Offices of the Teachers' Guild, 74 Gower Street, London, W.C.

It is hoped that there will be a full attendance of members on both days, as the subjects of discussion are of immediate practical importance. The Program of the Conference will be sent to all members with the *Teachers' Guild Quarterly*, December 15, 1906.

The Education Society of the Teachers' Guild will hold its third meeting of the Autumn Session at 74 Gower Street, London, W.C., on Monday, December 3, at 7.45 p.m. Subject: "The Teaching of Local History," with special reference to London. Paper by Miss Spalding, of the Goldsmiths' College, S.E.

Manchester Branch.—At the annual meeting of the Branch, held in the Girls' High School on October 26, Prof. J. J. Findlay, of Manchester University, was elected to the Presidency for the coming year. Mr. H. A. Johnstone being the retiring President. Miss A. R. Nuttall, M.A., Girls' High School, Manchester, and Mr. W. J. Chatterton, B.A., Grammar School, were appointed Hon. Secretaries, the latter being also appointed Hon. Treasurer. Prof. Findlay, in a paper on "How Children become Good," criticized proposals emanating from the Moral Instruction League which have found favour with the Board of Education, and have been adopted by the West Riding Education Committee. These proposals have resulted in the drafting by the West Riding Authority of a syllabus of ethical teaching, varied according to the standard to be taught. Prof. Findlay argued that, by putting morals into a compartment and labelling it as a subject of instruction, teachers were in danger of repeating one of the common errors of the Churches—were in danger of having specialists in morals, with the resulting selection of certain special parts of ethics or views of life which were different from the real thing. The teaching of ethics could not be part of the school course: it was the school course. The corporate life of schools was the one supremely important matter in the moral training of boy or girl. There should be close attention to the environment, organization, and management of the school, so that it was easy for children to be virtuous. There should be an ample supply of the best literature and the best pictures, these things being regarded as a supplement to, rather than a substitute for, daily experience. And, lastly, there should be reliance always on the existence of conscience in the child. Mr. J. L. Paton, High Master of Manchester Grammar School, and others joined in the discussion of the paper.

In the Chemical Theatre of the Manchester University on November 16, before a crowded audience and under the presidency of the Vice-Chancellor (Dr. Alfred Hopkinson), Prof. Karl Pearson, F.R.S., gave a lecture to a combined meeting of the Manchester Branches of the Child Study Association, the Froebel Society, and the Teachers' Guild, on "The Inheritance of the Physical, Moral, and Intellectual Characters in Man." Prof. Karl Pearson said it was not without some hesitation that he spoke to his audience. He did not hesitate because he thought we were not possessed of a great number of facts and had not knowledge of a great deal that followed from these facts about the social conduct and even municipal and State action, but it was extremely difficult in the brief space of an hour to put his hearers in possession of even the merest outline of what was now known of the facts of inheritance, what our modern methods were able to deduce from those facts,

and how our knowledge indicated directly in many ways the proper line of conduct in social matters. His purpose was to tell some of the facts and indicate some of the methods, and wind up with a little moral. If he were asked for a definition of what we understood by "inheritance," he would say it was in some way a measure of the degree of resemblance we found between people, or organisms, which were descended from the same individual. He proceeded to show by lantern-slides and many diagrams how great is the point of resemblance, say, in the eggs of one clutch and in people who have the same blood in them. For instance, he said, if you took a thousand mothers and a thousand daughters and measured any character of the parents and any character of the offspring, wrote each character on a card, mixed the thousand mother-cards up in one bag and those of the daughters in another, you would have cases in which there was absolutely no resemblance, and on the other hand you would have cases in which the daughter was exactly like her mother. In one case there was a zero degree and in the other a perfect degree of resemblance, and the method of measuring these degrees showed the average to be rather less than half. A like degree of resemblance had been found to exist in cattle, horses, and even in insects. This degree of resemblance was found in intellectual and moral qualities not less than in physical, and the degree lessened as the relationship extended. The reducing factor was about two-thirds between one generation and another, and it was the same in all forms of animated life. What was the lesson? It was that a bad start morally and intellectually went on producing morally and intellectually inferior stock. "Education," he said, "is an extremely good thing, but it is no good unless you have good material to work upon. It is no good taking bad steel to the grindstone and expecting anything will come of it." Now, if we admitted these points we got an extremely definite fact, which told us the whole life of nations depended on how we bear in mind these facts of inheritance. The facts as to the productivity of our race gave us, he submitted, much food for grave reflection. 75 per cent. of the population produce 50 per cent. of the children. That meant that certainly more than half of the next generation were coming from the least fit. That was a most vital question. The more professional men you had in a community the fewer were the children; the greater the standard of luxury the fewer the children; and as you descended the scale and came to poverty and a low standard of health and mentality the greater the number of children. The more paupers there are the more children. The more lunatics the more children. The greater the death-rate of children the greater was the number of those who survived. "I think," Prof. Pearson said, "all these things ought to warn us, without being pessimistic, that we stand on the verge of a rather dangerous slope. There is not the slightest doubt in my mind that the unthrifty, the physically unfit, and the improvident, those who are careless of child life and of themselves, are producing the great bulk of the next generation. Years ago the unfit were worried and swept out of existence. They were hustled and could not take their place in the community as they do now. No one in these days proposes to go back to those old times of struggle for the survival of the fittest; but you may go to the opposite extreme, and by making it easy for the unfit to survive you may destroy your race within two or three generations. That, I think, is the main point we have got to bear in mind, and it seems to me the problem which has to be considered in every place by every thinking man and woman in the course of the next few years. I cannot help thinking it is far more important than squabbles as to the form of theological teaching you can give the children. It is not a question of what the children shall be taught, but a question whether we shall have children in the future worth the teaching."

CORRESPONDENCE.

A SCIENCE SYLLABUS FOR PREPARATORY SCHOOLS.

To the Editor of The Journal of Education.

SIR,—Your correspondent Mr. E. J. Petitfour brings forward in your November issue a proposal which is both detrimental to the true interests of science teaching, and which has already been rejected deliberately by a body of science masters well qualified to express an opinion. Some three years ago, immediately after the establishment of the Common Examination for Entrance to Public Schools, there was appointed by the Public Schools Science Masters' Association a sub-committee for the purpose of considering what form of science teaching was best suited to preparatory schools. Of that sub-committee I had the honour to be chairman, and thus (apart from requests received on the present occasion) it devolves upon me to ask you to insert this reply.

I need not enter into a detailed account of the labours of our sub-committee. Our report embodied a scheme of work suitable to preparatory schools, and was published in the *Preparatory*

Schools Review for March, 1905. The scheme extends over seven pages in double column, and is arranged (1) under the headings "Botany," "Zoology," and "General"; (2) as a working calendar for guidance of teachers. Each section was prefaced with a caution advising the teacher to select only such portions as seemed appropriate to his own circumstances. It was further stated in a list of recommendations that "*definite courses of botany, zoology, physiography, &c., are to be avoided*" (the italics are my own). The above will make it clear that Mr. Petitfour's suggestion has been considered and rejected as unsound. To the best of my recollection not one voice was raised in favour of such proposals either at any meeting of the sub-committee or at the general conference of the P.S.S.M.A.

To turn to the reasons on which our decision was based:—(1) at preparatory schools trained science masters are rare, and the work must generally be in the hands of an amateur. There are plenty of amateurs with a taste for some branch of natural history or science, and such will be able to use their own hobby as a successful instrument of education. It is most essential that the work be undertaken *con amore*. (2) The object of preliminary science work is above all things to develop the powers of observation, and to arouse an intelligent interest in natural phenomena, but not to impart a *systematic* training. In fact its very purpose is to establish the habit of picking up the "odds and ends," of which Mr. Petitfour speaks so contemptuously, at all times both in and out of school. The imposition of a cut-and-dried schedule of science work upon preparatory schools could result only in disastrous cramping of opportunity and quenching of the spirit of inquiry which is inborn in every healthy child.

So far from the science at present approved by the managers of the Common Examination having a discouraging effect upon the preparatory schools, my experience is the exact opposite. I have marked the papers of candidates for Charterhouse on several occasions, and, speaking generally, the number of those offering science is steadily increasing, and the standard of attainment improving in a very encouraging degree.—Yours, Charterhouse, Godalming. OSWALD H. LATTER.

THE LONDON COUNTY COUNCIL AND ELEMENTARY TEACHERS.

To the Editor of The Journal of Education.

SIR,—"School Manager's" letter in your November issue is utterly worthless, as it betrays gross ignorance, or a desire for wilful misrepresentation. He indulges in vague generalities, and leaves points to the imagination of his readers, and has allowed his own imagination full flight. He evidently knows nothing of the L.C.C. service as to hours of work per day, amount of holidays, or salaries for head teachers. He knows literally nothing of pensions. He gives hours as "but five per day," whereas it should be nearer six and a half. These are strictly recorded daily in the Time Book. Nominal hours are from 9 to 12 and 2 to 4.30, *plus* fifteen minutes for teacher in charge and ten minutes for every teacher on staff to see children in lines before 9 and 2. Five, six, or seven classes of fifty to seventy children are not got out of school in no time. Then there are detentions for the idle, late, and troublesome; exercise books have to be rigidly kept up to date with marking and correction. This adds on another thirty minutes almost daily.

As to holidays, "School Manager" ignorantly or mendaciously states they may amount to three months. Why not give the true facts: viz., Midsummer, one month; Christmas, a fortnight; Easter, one week; Whitsun, odd days, and other odd days (sports, school used for election) may total up to two months, but never to three? Epidemics occasionally affect schools, and are on the decrease.

As to the unrecorded hours of service teachers give for their children, they are innumerable—Nature-study expeditions, organizing for sports, teaching swimming, &c. Again, night after night, winter after winter, the teacher is attending art, science, and degree classes to raise his status in the hope of attaining to one of those headships which "School Manager" writes of as if plentiful as blackberries, but which the majority of teachers, however "energetic and successful," will never attain—they are, alas! so few.

Re salaries, "School Manager" trots out the old lie about the big maximum, "£800 men, £600 women"; this is the result of

NOW MADE IN FIVE COLOURS.

adding married couples' salaries *plus* gross exaggeration. Here is the latest *improved* scale under the L.C.C. Any one sending three halfpenny stamps to L.C.C. Education Offices for *Gazette* can verify it.

GRADE.	ACCOM.	MEN.	WOMEN.
I. ...	1-200 ...	{ £10 more than Scale for Assistants }	ditto
II. ...	201-400 ...	£200-300	£150-225
III. ...	401- ...	£300-400	£225-300

He is evidently ignorant that the Union of Teachers used to be limited to elementary teachers, and was known as the N.U.E.T., but more than a dozen years ago the "E." was dropped, secondary teachers were invited, and many joined, and all will be heartily welcomed to share the present and future representation of the N.U.T., whose two M.P.'s (who were elected by *outside* voters as well as teachers) look very closely after secondary as well as elementary teachers' interests.

"School Manager" is also absolutely ignorant of the true meaning of the word "secondary" as used in the educational world. He simply confuses private adventure schools with secondary schools recognized as such by Education Authorities and the Board of Education. He is also ignorant of the fact that the elementary teacher has always been in touch with and his record kept by the Board of Education; hence he had the difficulty in getting on the Register, whereas the secondary teacher had to prove his status and qualifications for getting on the Register. Pray what claims has such an ignoramus to the *nom de plume* he uses?

As to "comfortable pensions," again he betrays gross ignorance. Mine is a typical case. If I continue as a teacher till I am sixty-five years of age, I shall have had forty-three years' service as a trained certificated master (fifty years' service counting pupil-teacher and college) and my pension will be £47 per annum. Now please, "School Manager," don't add o to it when you next quote it. If I die before I reach that age or leave the profession, except in case of breakdown, all the money I have paid, and shall pay, will be lost to me and my family.

The pity of it all is that there are persons of the calibre of

"School Manager" who write and speak airily, glibly, and, alas! ignorantly and untruthfully of scholastic affairs. I am thankful our advantages are no less and our disadvantages no more, and still more thankful that the power has been taken from the hands of such as "School Manager" and transferred to L.C.C. and other Education Authorities—we are far better off. I have no hesitation in subscribing myself as yours faithfully,
L.C.C. School, Flora Gardens,
Hammersmith, November 15, 1906.
JOHN RHODES.

GERMAN-GERMAN DICTIONARY.

To the Editor of The Journal of Education.

DEAR SIR,—Your reader who inquires, in the "Jottings" of the November number, about a German-German dictionary, may perhaps be glad to know of P. F. L. Hoffmann's "Wörterbuch der deutschen Sprache" (M. 4.20. Leipzig: Friedrich Brandstetter). It is a fairly good book for school purposes—at any rate, as regards price, size, print, and binding. The definitions are not, however, quite as simple as one could desire. In this respect perhaps F. A. Weber's "Handwörterbuch der deutsch-n Sprache" is better; but it costs M. 7.50 unbound, and contains rather fewer words than Hoffmann's.—I am, yours truly,
M. P. ANDREWS.

3 Lisle Terrace, Guernsey, October 9, 1906.

THE NATIONAL FEDERATION OF TEACHERS IN PUPIL TEACHER CENTRAL CLASSES.

To the Editor of The Journal of Education.

DEAR SIR,—At a meeting of the Committee of our Federation, held a few days ago, attention was drawn to the following statement, which appears in your July issue on page 406:—"It is notorious that the mixed classes for pupil-teachers in London and other large cities have led to grave moral evils." I am desired by our Committee to repudiate most emphatically the allegation made, and to state on their behalf that the suggestion is untrue and most offensive.—Yours faithfully,

Pupil-Teachers' Centre, Stockport,

November 8, 1906.

JAMES BELL,

Hon. Secretary.

[We gladly publish this contradiction, to which we give due weight, though it might have been more courteously expressed.—Ed.]
